MAHZOR VITRY, halakhic-liturgical composition by Simhah b. Samuel of Vitry, a small town in the department of Marne, France. Simhah was an outstanding pupil, or even a colleague, of Rashi and apparently died during his teacher’s lifetime (i.e., before 1105 – see Gross, Gallia Judaica, 196). His son Samuel married Rashi’s granddaughter and he was the grandfather of the famous tosafist, Isaac of *Dampierre

(Urbach, Tosafot, 115). Like his colleague Shemaiah, Rashi’s secretary, he occupied himself with the arrangement of his master’s halakhic rulings, and later authorities sometimes confused their names. There is however no basis for the assumption of some scholars that there existed two works, one by Shemaiah and one by Simhah, both entitled Mahzor Vitry (Urbach, *ibid.*, 33). Mahzor Vitry belongs to the group of works from the school of Rashi (e.g., the Pardes, Sefer ha-Orah, Siddur Rashi) which are based upon Rashi’s rulings and usages, but which are expanded with additions from other authorities, sometimes even discussing and criticizing their views, in order to defend those of Rashi. Mahzor Vitry is in the form of a halakhic-liturgical work, the purpose of which was to give the halakhic rulings of the liturgy for the whole circle (mahzor) of the year, weekdays, Sabbaths, and festivals, and connect them with the accepted formula of the prayers. The fact that it also includes laws of Sabbath, *eruv*, marriage, and ritual slaughter makes it wider in scope than the siddurim of *Amram and Saa- diah* *Gaon*, which were also sent to various communities at their request. The Mahzor Vitry, referred to by 13th-century authorities, such as the Sefer Mitzvot Gadol of Moses b. Jacob of *Coucy (Positive Commandments 27) and the Or Zarua* (part 1, p. 55) of Isaac b. Moses of *Vienna exist in various versions which differ considerably from one another both in scope and arrangement. Apparently it gained instant acceptance and it was enlarged, as was the custom of that time, by successive additions. There does not yet exist a critical edition based on all available manuscripts. The published edition (by S. Hurwitz, 1889, 1923) is from the London manuscript (Margoliouth, Cat. no. 655) containing many additions, some indicated by the letter 'N' most of them apparently from Isaac b. Durbal, a contemporary of Jacob Tam, but also including later responsa and extracts from the Sefer ha-Terumah of Baruch b. Isaac. It reflects the state of the work in the 13th and 14th centuries. The Oxford manuscript (Bodleian Library, Ms. Opp. 59) omits most of these additions in those fragments preserved in two manuscripts. On the other hand, they contain compilations which have no connection with the mahzor. A more original text occurs in the Reggio manuscript (now in the library of the Jewish Theological Seminary of America) which has as yet not been examined because of its poor state of preservation, and the Parma manuscript (B. Pal. 2574).

Contents and Form

The halakhic portion of the Mahzor Vitry precedes the liturgical formulae, and includes commentaries to the prayers taken from the aggadah. The Reggio manuscript includes the following topics: weekday prayers (with their relevant laws), the night prayer, the order of prayers for the Sabbath and its conclusion, the New Moon, the Sanctification of the Moon, Hanukkah, Purim, Passover Haggadah, and the Aramaic translation of the reading for the 7th day of Passover (Ex. 13:17–15:26) and the laws of Shavuot with a similar Aramaic translation. (Both these Aramaic translations are much enlarged and are to be found in many medieval mahzorim.)
MAIER, JOSEPH (1911–2002), U.S. sociologist. Born in Leipzig, Germany, the son of a rabbi, Maier studied in Germany and in the U.S. He received his M.A. (1934) and his Ph.D. (1939) from Columbia University. After the War, Maier did voluntary service in Germany and participated in the Nuremberg Trials, becoming chief of the analysis section of the Interrogation Division. In 1947 he was appointed professor of sociology at Rutgers University and became chairman of the department until his retirement in 1980. Maier was a specialist in the sociology of religion and became widely known as the author of a weekly column in the New York German-language Jewish newspaper Aufbau dealing with the application of halakhic wisdom to contemporary social problems.

With Werner Cahnman, Maier established the organization for the Preservation of Jewish Cultural Monuments in Europe, later called the Rashi Association (1978). From 1980 on, he served as its president, helping to establish such projects as the Institute of Judaic Studies at the University of Munich.

MAILER, NORMAN (1923– ), U.S. novelist and essayist. Born in New Jersey, Mailer grew up in New York City and attended Harvard College. His two years with the U.S. Army in the Pacific theater during World War II provided him with the background for his bestselling novel The Naked and the Dead (1948), whose violent dialogue and often lyric prose that evoked the fears and passions of men at war made him an overnight literary celebrity. Barbary Shore (1951) was a semi-surrealistic political novel set in a Brooklyn rooming house and The Deer Park (1955) a novel about Hollywood; in both of these books, which he himself called “existential,” he revealed his growing fascination with the individual who intellectually, physically, or morally feels compelled to drive himself to extremes beyond the norms of human conduct in order to experience his own individuality. Mailer’s increasing impatience with the novel as a medium for expressing his extraordinarily fertile if undisciplined mind and his ability to yoke together ideas of the most varied political, psychological, and philosophical nature led him in the 1950s to turn more and more to the essay, of which he published several collections: Advertisements for Myself (1959), The Presidential Papers (1963), and Cannibals and Christians (1966). Why Are We in Vietnam? (1967) represented an experiment to deal in symbolic fictional terms with a burning political issue of the day. In 1968, Mailer wrote Armies in the Night, an eyewitness account of an anti-Vietnam demonstration held in front of the Pentagon in Washington whose melange of reportage, social and political speculation, and personal confession, written in a wildly exuberant prose, established his reputation by general critical consensus as the most brilliant virtuoso stylist in the United States. A second documentary, Miami and the Siege of Chicago (1968), about the Republican and Democratic nominating conventions of 1968, was again a masterpiece of its kind.

Mailer’s interest in radical politics took him from Socialism to anarchism to a generalized hostility toward the regimentation and mechanization of modern life that he labeled “radical conservatism.” Always partial to publicity, he sought to popularize his ideas by running in the New York mayoralty campaign of 1969.

A Fire on the Moon (1970) was about the implications of the U.S. space program. In 1971, Mailer’s The Prisoner of Sex was published, drawing the ire of the feminist movement. In 1980 Mailer was awarded the Pulitzer Prize in fiction for Executioner’s Song, which offered a detailed account through an ensemble of characters of the life and execution of Gary Gilmore, a convicted murderer. Ancient Evenings (1983), a novel, is set in the Egypt of the 13th to the 12th century B.C.E.

Evaluations of Mailer often return to his fascination with violence and sexuality. Mailer’s reading of violence in “The White Negro” (found in *Advertisements for Myself*) is a good example. Mailer argued that the Negro could survive his perilous American existence by accepting the desires of the body, living sensuously within the present moment. This creation of the self through action leads to the existential recognition of the self, in part, as body. The existentialist “must be able to feel oneself … to know one’s desires, one’s rages, one’s anguish …” Jazz, for Mailer, the endowment of “orgasm;” became one of the commanding achievements of the African-American, and spoke to, and of, “instantaneous existential states to which some whites could respond.” The hipster’s consecration of the present, his living his hatreds, his seeking the end of cultural and political repression through a life outside bourgeois mores, would be shaped in the future by the African-American’s winning equality, a “potential superiority” that was feared, providing the background for domestic politics. Mailer’s essay cemented into a mosaic the Holocaust, the concentration camp, African-American humiliation, endurance, and self-renewance. Its affirmative violence coupled with sexuality provides a clue to some of Mailer’s other work, most notably “The Time of Her Time” (found in *Advertisements for Myself*), *An American Dream* (1965), and possibly his life (he stabbed his second wife, Adele, in 1960).

His place in American literature is large, though his place in American-Jewish writing is problematic. (In her “Toward a New Yiddish” (*Judaism*, Summer 1970) Cynthia “Ozick believed that he would become a minor, if not forgotten writer because he did not write within the liturgical and moral richness of Jewish tradition.) On the one hand, his sharp indictments of the alliance among American politics, commercialism, and violence are insightful and enduring. His choice of characters and their novelistic development concentrate one version of American culture within the psychological and social existence of his subjects (whether fictional or actual; whether individuals or actual events). On the other hand, his influence on the American-Jewish novelist is, perhaps, that of craft. He is at ease in developing a realism in both its narrow and extreme senses—a focus on the empirical furniture of experience as well as a concentration on American myths and cultural directives informing the way we perceive, and act upon, the world.

**Maimon, Simon** (d. 1497), a rabbi from Segovia, in Castile, who found refuge in Portugal. Maimi was martyred when *Manuel I, king of Portugal, tried to force him to accept Christianity, thinking that if the chief rabbi set the example all the Jews could soon be baptized. The attempt to convert Portuguese Jewry occurred during the spring of 1497, following the promulgation of the edict of expulsion on Dec. 4, 1496. Maimi and about eight leading personalities— including his son-in-law, and probably Abraham b. Jacob Saba, Abraham b. Samuel Zacuto, and Isaac b. Joseph Caro— were thrown into a dungeon and buried up to their necks. The group refused to yield, and when the wall was torn down a few days later Maimi was dead. His body was stealthily taken by several Marranos who, at the risk of their lives, succeeded in burying him in the Jewish cemetery near Lisbon.*

**Bibliography:** Roth, *Marranos*, 60; N. Slouschz, *Ha-Anusim be-Portugal* (1932), 9, 63.

**MAIMON (Fishman), ADA** (1893–1973). Israeli labor leader, member of the First and Second Knessets. Born in Marculești, Bessarabia, Maimon was the sister of Judah Leib Maimon, who was a member of the United Religious Front in the first Knesset. Ada Maimon received a traditional and general Hebrew education. In her youth she joined a movement that was connected to Ha-Po’el ha-Za’ir. She settled in Erez Israel in 1912, and worked as a teacher in Petaḥ Tikvah, Rehovot, Nes Zviyonah, and Ben Shemen. In 1914 she was sent to open a Hebrew girls school in Safed. In 1913–20 Maimon was a member of the Ha-Po’el ha-Za’ir Central Committee, and was a delegate to the Prague conference in 1920 at which the Hitahdut—the union between Ha-Po’el ha-Za’ir and Ze’irei Zviyon—was established. She participated in the founding conference of the *Histadrut* in 1920, and was elected to its Executive Committee. She was one of the founders of the Women’s Workers Council (*Mo’ezet ha-Po’alot*) and its secretary in 1921–20. In 1930 she founded the Ayanot Agricultural School near Nes Zviyonah, and headed it for many years. In 1946–47 Maimon headed the Immigration Department of the Histadrut, and in this capacity visited displaced persons camps in Germany and British detention camps in Cyprus. In 1949 she was elected to the First Knesset on the Mapai list. In the First and Second Knesset she was a member of the Constitution, Law and Justice Committee, and actively participated in initiating and passing legislation concerning the status of women. Unlike most other women labor leaders, she was also a member of the Executive of World *w1zo*.

[Susan Hattis Rolef (2nd ed.])

**MAIMON (Fishman), JUDAH LEIB** (1875–1962), rabbi and leader of religious Zionism. Born in Marculești, Bessarabia, Maimon studied in Lithuanian yeshivot and, after being ordained, served as a preacher (*Maggid meisharim*) in Marculești
and in 1905–13 as rabbi in Ungeni. In 1900 he met Rabbi Isaac Jacob *Reines, founder of *Mizrachi, and afterward took an active part in the founding conference of Mizrachi, which was held in Vilna, and in its first world conference in Pressburg (Bratislava). Beginning with the Second Zionist Congress, he participated in all the subsequent Congresses and was for many years a member of the Zionist General Council. From 1935 he served as Mizrachi’s representative on the Zionist Executive, was vice chairman of the Executive, and headed the Department for Artisans and Retail Business as well as the Department of Religious Affairs.

Maimon settled in Erez Israel in 1913 and was among the founders of the educational network of Mizrachi there. At the outbreak of World War I he was imprisoned and expelled by the Turkish authorities. He went to the United States, where he was active in the effort to strengthen Mizrachi and published hundreds of articles in the press. He returned on the first ship to reach the shores of Palestine after the war and met Rabbi *Kook, with whom he became very friendly. Together they established the chief rabbinate of Palestine, and Maimon formulated the rabbinate’s constitution and organized its founding ceremony. In 1936 he established the Mosad ha-Rav Kook, which published hundreds of books. His private library contained over 40,000 volumes, among them many very rare books, first editions, incunabula, and the only extant copies of many important manuscripts.

Although he maintained his adherence to the organized framework of the *yishuv, Maimon often expressed his sympathy with the secessionist organizations, Irgun Zevi’s *Le’ummi (1912) and Loḥamei Herut Israel (Leḥi), and gave evidence on behalf of 121 prisoners. He proclaimed the right of every Jew to bear arms in his own defense and in the defense of Jewish rights in Erez Israel. When the Haganah began actively to suppress 121 (1944–45), Maimon expressed his opposition to these activities. On "Black Saturday" (June 1946) he was interned as acting chairman of the Jewish Agency Executive. His imprisonment aroused a great furor, since the British had compelled him by force to desecrate the Sabbath, and after great pressure he was released by special order of the high commissioner.

In the first years after the establishment of the State of Israel, Maimon advocated the institution of a Sanhedrin as a supreme religious authority, but this attempt aroused opposition in many religious circles. He was appointed minister of religions and minister in charge of war casualties both in the provisional government and in the first elected one; and was a member of the First Knesset. He later relinquished his political activities and devoted himself entirely to literary work.

Maimon was a prolific author. His first work was Ha-Noṭen ha-Yam Derekh (1903). His second work Hadar Horati, a collection of articles on halakhah, Maimonides, and aggadah, was published ten years later. He also published other articles and biblical investigations. In 1907 he began to publish the talmudic-literary journal, Ha-Yonah, which was banned by censorship, however, and its publication discontinued. In 1921 Maimon founded the Mizrachi weekly, Ha-Tor, whose publication was continued for 15 years. He later founded and edited the monthly Sinai, of which he issued 50 volumes. His major work, Sarei ha-Me’ah (6 vols., 1942–47), describes the greatest Jewish scholars of the last century. His other writings include Le-Ma’an Ziyyon Lo Ḥeshesh (2 vols., 1954–55), Middei Ḥodesh be-Ḥodesho (8 vols., 1955–62), Haggim u-Me’udim (1950), Ha-Ziyyonut ha-Datit ve-Hitpatteḥutah (1937), Rabbi Moshe ben Maimon (1959), Toledot ha-Gra (1954), and an edition of Judah b. Kalonymus’ Yihusei Tannaim ve-Amora’im (1942).

[Itzhak Goldshlag]

MAIMON, SOLOMON (1753–1800), philosopher. Maimon was born in Sukoviburg, Poland (now Belarus). He was a child prodigy in the study of rabbinical literature. Married at the age of 11 and a father at 14, Maimon supported his family by working as a tutor in neighboring towns. In his spare time he studied Jewish philosophy and Kabbalah; he adopted the name “Maimon” in honor of Maimonides. His attempt to demonstrate that the Kabbalah is based on philosophy caused theHashidim with whom he associated to regard him as a heretic. He turned to the study of secular subjects and left his home and family to study in Berlin. In about 1777, after many hardships, he arrived at the gates of Berlin but was refused entry by officials of the Jewish community. After six months as a mendicant he arrived in Posen (Poznan), where he was received and aided by the rabi, Zvi Hirsch b. Abraham. He taught for two years in Posen, but, finding the religious atmosphere of the community stifling, he made another trip to Berlin; this time he was able to enter the city.

In Berlin he became a member of Moses *Mendelssohn’s circle, but was abandoned by Mendelssohn a few years later because of the dissolute life he led. Forced to leave Berlin, he moved first to Hamburg and then to Amsterdam. In Hamburg he beseeched a Lutheran pastor to convert him to Christianity, yet he confessed his disbelief in Christian doctrines. The pastor retorted that Maimon was too much a philosopher to be a Christian. Thereafter, between 1783 and 1786, with the help of some benefactors, he was able to study at the gymnium of Altona. Still poverty-stricken, he moved from Altona to Berlin, then to Breslau, and in 1787 back to Berlin. There he studied Kantian philosophy and under its influence wrote his first work in German, Versuch ueber die Transzendentalphilosophie (1790). He sent a manuscript of the book to Marcus *Herz, who sent it to Immanuel *Kant. Kant remarked in a letter to Herz (May 26, 1789) that it was clear to him from a cursory study of the book that its value was very great, and that nobody understood his philosophy as well as Maimon (E. Cassirer (ed.), Immanuel Kant’s Werke, 9 (1918), 415). Kant’s letter determined Maimon’s future. He found a publisher for his book and scholarly journals accepted his articles for publication. From 1796 to 1795 Maimon was supported by a benefactor, Count Adolf Kalkreuth, at whose residences near Berlin.
and Freistadt, Silesia, he lived. When Maimon died, he was buried outside the Jewish cemetery as a heretic.

Other Works
In 1791 Maimon published a philosophical lexicon, containing a series of essays on the principal points of philosophy (new edition 1970). In 1793 he published his *Streifereien im Gebiete der Philosophie*, followed by three works on the history of philosophy: *Über die Progresse der Philosophie* (1793); *Versuch einer neuen Logik* (1794; 1812), in which he attempted to expound a system of logic; and *Die Kategorien des Aristoteles* (1794, 1798). In 1797 his work *Kritische Untersuchungen ueber den menschlichen Geist* was published.

Maimon also wrote the following works in Hebrew, but only the first was published: *Givat ha-Moreh* (1791; ed. by S.H. Bergman and N. Rotenstreich, 1966), a commentary on the first part of Maimonides' *Guide of the Perplexed*; *Tâalumot Hohkmah*, on mathematical physics; and *Heshik Shelomo*, which was divided into four parts, namely *Ma‘aseh Nissim*, on the 12 sermons of Nissim b. Reuben Gerondi, *Eved Avraham*, on Ibn Ezra’s commentary on the Pentateuch and Psalms, *Ma‘aseh Livnat ha-Sappir*, which are reflections, and *Ma‘aseh Hoshen*, on algebra. Maimon's autobiography (Solomon Maimon's *Lebensgeschichte*, von ihm selbst geschrieben), his only book to win wide acclaim, was published in Berlin in 1793 (Eng. trans. by M. Hadas [1947] and S.H. Bergmann [ed.; 1954]; Heb. trans. [1942]). It is an important source for the study of Judaism and Hasidism in Eastern Europe in that period. The 12th chapter describes Mendelssohn and his thought.

Philosophy
To account for the origin of knowledge and its objectivity, the German philosopher Kant had posited the “thing-in-itself” as something existing outside the mind but unknowable in itself. Maimon's main contribution was to give a new direction to Kant's discussion of it. Maimon agreed with Kant that the cognition process must have a cause and that this cause must also guarantee the objectivity of the knowledge. But he differed from Kant by holding that this cause exists in the mind, not outside it. Invoking Kant’s distinction between sensibility and understanding, Maimon affirmed that the concepts of understanding arise from perceptions of sensibility, which he appears to assume are the same for everyone, and which therefore guarantee their objectivity. Maimon maintained further that sensibility is a kind of understanding, but more limited and imperfect than understanding itself.

The “thing-in-itself” had another meaning for Maimon, namely, as the final goal toward which all cognition tends. Our knowledge is always fragmentary, but as it increases it approaches an ideal knowledge. This may be illustrated by a polygon, which approaches a circle as sides are added, but does not reach it.

Infinite Intellect. While Maimon rejected Kant's extra-mental "thing-in-itself" as the cause of knowledge and the guarantor of its objectivity, he still had to answer Kant's ques-

...
struct a rational structure for the world, but it cannot show that this rational structure exists in fact. Hence, one can only philosophize “conditionally.”

Maimon’s philosophy strongly influenced the philosopher Johann Fichte and, through Fichte, German idealist philosophy. During the 19th century, Maimon was neglected; as a result of the efforts of the historian of philosophy J.E. Erdmann (in his History of Philosophy (1892)), however, interest in Maimon has been revived in the 20th century. In recent years several basic books dealing with his system have appeared. A new photostatic edition of his collected works began to appear in 1965.

[Samuel Hugo Bergman]

MAIMON, YA’ACOV (1902–1977), Israel government stenographer. In 1976 Maimon was awarded the Israel Prize for services in immigrant absorption. Born in Russia, Maimon immigrated in 1922. With the influx of immigrants to Israel after the establishment of the state he devoted himself, in a voluntary capacity, to the absorption of immigrants and organized hundreds of volunteers who followed his example. Maimon served as the official stenographer of the government and invented the system of Hebrew stenography.

MAIMON BEN JOSEPH (d. 1165/1170), Spanish rabbi and dayyan; father of “Maimonides. Maimon studied in Lucena under Joseph *Ibn Migash, and transmitted his teachings, both oral and in writing, to his son, who utilized them as the basis for his own halakhic works. Maimon was a dayyan of Cordoba for many years, until he and his family were compelled to leave, in consequence of the edict of forced conversion issued by the *Almohads after their conquest of the city about 1149. For about ten years he wandered through Spain and probably also Provence. About 1160 he immigrated with his family to Fez, Morocco, where it was easier for forced converts to preserve their Judaism. In Fez he forbade the people to follow the false messiah, Moses Dari, who was popular there at the time. In 1165 he proceeded to Ereẓ Israel, where he died, possibly in the following year. According to one tradition, his grave is in Tiberias. Some scholars think, however, that he went to Egypt with his son and died there.

Maimon was one of the most outstanding and influential scholars of his generation and the first of his distinguished family of whom a written work is known. His Iggeret ha-Nehamah, written in his second year in Fez (published in the original Arabic by M. Simons, see bibliography; and in a scholarly Hebrew translation by B. Klar, 1945), was designed to comfort and guide the forced converts of Islam in their effort to preserve their Judaism. “We who are in exile can be compared to a man who is drowning. The water has reached our nostrils but we still grasp hold of something … and as the water threatens to engulf us, behold, a rope consisting of God’s precepts and His Torah dangles from heaven to earth. Whoever seizes hold of it still has hope of living … and surely he who holds on even only with the tips of his fingers has more hope than he who lets go completely.”

Maimon’s fundamental premise – later adopted by his son Maimonides and accepted as law among Jews in Islamic countries – is that Islam, in that it is free from personification of the Deity, is not to be regarded as idolatry. In keeping with this view, he opposed martyrdom to avoid conversion to Islam. Unlike other scholars, who left the people without hope, Maimon asserts that those who perform the precepts in secret will be rewarded, laying particular stress on the value of reciting the *Amidah three times daily, even in its abridged form, and even in Arabic. He also places great emphasis upon the importance of belief in the divinity of the mission of Moses, to whose virtues the work is largely devoted, comparing such belief to belief in God Himself. This principle, later embodied by Maimonides in his 13 principles, was designed to nullify belief in the divine mission of Mohammed, for which reason Maimon also stresses that Daniel was the last of the prophets. Maimon’s work reflects the spirit of despair that had seized the Jews of the countries during the time of the Almohads, and it fortified his readers that the tyrannical rule would not continue for long, as had been promised by the prophets. Maimon also wrote commentaries to the Talmud, from which his son quotes abundantly; a book on the laws of prayer and the festivals, from which only isolated quotations have been preserved (Simon b. Zemah Duran, Tashbez, 1, no. 2); responsa, a number of which have been published by A.H. Freimann (see bibl.); a commentary on the Torah; a work on the laws of ritual purity; and, apparently, an exposition of an Arabic astronomical book. With the exception of the responsa, all his works were written in Arabic.

Israel Moses Ta-Shma

MAIMONIDEAN CONTROVERSY, a vast complex of disputed cultural, religious, and social problems, focusing around several central themes. Some of the elements of this controversy considerably antedate *Maimonides (1135–1204); and of the questions brought into sharp relief by his ideas and writings, some have remained topical in many Jewish circles. Vast fields of human experience and thought are encompassed by it: reason and philosophy in their relation to faith and tradition; what components are permitted and what prohibited in the education of a man following the Torah; the proper understanding of *anthropomorphism as expressed in the Bible.
Maimonidean Controversy

The crisis of Spanish Jewry in the 15th century accentuated the main educational and social themes of the old controversy. In Renaissance Italy and in the diversified and flourishing Jewish center of Poland-Lithuania the old quarrel again became topical, though in a milder form. With the enlightenment ("Haskalah") of the 18th century the "Maimonidean side" of the controversy was given a new, greatly secularized, and radical expression by Moses "Mendelssohn and his followers – an expression that could scarcely have been imagined by the former protagonists. In German "neo-Orthodoxy, the "Maimonidean side" – particularly in its striving for a synthesis of Jewish faith and "general culture," as well as in certain of its social tendencies – found a new, conservative expression. In Yemen in the 19th century and well into the 20th, there was a distinct "Maimonidean camp" and a struggle against it (see Kafah).

In the last two decades of the 20th century and the first years of the 21st century, Maimonides again became the focus of a controversy in ultra-Orthodoxy, as a result of the emphasis placed by Rabbi Menahem Mendel *Schneersohn of Chabad-Lubavitch Hasidism on the study of the Mishneh Torah. The non-hasidic leadership, in particular of the Lithuanian type of yeshivah, vehemently rejected placing Maimonides at the center of the curriculum in place of such classic codes as Joseph Caro's Shulhan Arukh.

The First Clash: During Maimonides' Lifetime

Through the charisma of his personality and the trend of his thought and leadership Maimonides himself initiated this. An exile from Muslim Spain, he met in the Near East the hierarchical traditions of the exilarchate and the "geonim. Maimonides was willing and ready to respect the "exilarch as scion of the royal house of David and as the proper authority, from the halakhic point of view, to appoint and ordain judges.

His mind and heart vehemently opposed the claims of the geonim. He criticized sharply the way they:

fixed for themselves monetary demands from individuals and communities and caused people to think, in utter foolishness, that it is obligatory and proper that they should help sages and scholars and people studying Torah … all this is wrong. There is not a single word, either in the Torah or in the sayings of the [talmudic] sages, to lend credence to it … for as we look into the sayings of the talmudic sages, we do not find that they ask people for money, nor did they collect money for the honorable and cherished academies (commentary to Avot 4:5).

This attempt to undermine the economic and social foundations of the leadership of the Babylonian geonim went hand in hand with Maimonides' opposition to their program of studies and his contempt for their very office. The Gaon at Baghdad at this time was "Samuel b. Ali, a strong and authoritative personality. In an ironic "apology" for Samuel b. Ali's attacks on the Mishneh Torah, Maimonides explains to one of his pupils:

Why, my son, should you take offense that a man whom people accustom from his youth to believe that there is none like him
in his generation; when age, high office, aristocratic descent, the lack of people of discernment in this town, and his relationship with individuals, all have combined to produce this execrable consequence that each and every individual hangs expectantly on each word pronounced from the academy in anticipation of an honorific title from there... – why do you wonder that he has acquired such [evil] traits? How, my son, could you imagine that he should love truth enough to acknowledge his weakness?... This is a thing that a man like him will never do, as it was not done by better men who preceded him (letter to Joseph b. Judah in: D.H. Baneth (ed.), Iggerot ha-Rambam (1946), 54f.).

The gaonate is represented as corrupt, and typical academy study as being of questionable value. Concerning Zechariah, the son-in-law of the Gaon, Maimonides writes:

He is a very foolish man. He studies very hard at this talmudic discussion and its commentaries, and thinks that he is the greatest of his generation, having already attained the peak of perfection. My esteemed son knows that my appreciation of the greatest of the sages of Israel is such that I evaluate their worth according to their own criteria. They themselves have defined 'the arguments' [havayot] of 'Abbaye and 'Rava [as] a small matter. If this is a small matter, why should I pay attention to an old man who is really miserable, an ignoramus in every respect? To my eyes he is like a newborn baby; one has to defend him, according to the measure of his [Zechariah's] foolishness (ibid., 56ff.; the bulk of this passage has been erased in most manuscripts).

This vehement revolt against the authority of the geonim came at a time when Samuel b. Ali was attempting to minimize the authority of the exilarch on the grounds that what the people needed then was no more than the leadership of the geonim and the guidance of their study in the academy. Small wonder that such a revolt aroused reciprocal anger, coming, as it did, in defense of Maimonides' Mishneh Torah which claimed expressly (in the introduction) to supersede the Talmud in popular usage, replacing its deliberations – the very core and substance of the life of academies and geonim – by his systematic code. The claim of the intellectual to replace an aristocratic hierarchy seemed to be combined with an attempt to impose Greek systematic modes of codification in place of the traditional many-voiced flow of talmudic discussion. It is hardly suprising that Samuel b. Ali, Zechariah, and *Daniel b. Sadaiah ha-Bavli all sought and found halakhic flaws in this code. Some of their arguments have philosophical and theological overtones, but these were to come to the forefront only in the second stage of the controversy. In the main, in this phase, it was Maimonides' creativity which was found provocative, as well as his attitude to Talmud study and to the leadership of established institutions, all of which were being defended against him.

The First Stage in Europe

In this first flare-up, the controversy was thus not over philosophy as much, or over Maimonides' philosophy in particular, since his Guide of the Perplexed was translated into Hebrew only at the very end of his life. The criticism was leveled primarily against his Mishneh Torah and his attitude toward resurrection. The criticism of the Mishneh Torah focused on Maimonides' methodology, the fact that he did not cite sources for his decisions, and his claim that the study of his Code would replace the study of Talmud: "A person should study the written Torah first, and then read this [book], and thereby know the entire oral Torah, so that he will not need to read any other book in between them." The criticism also reflected divergent local traditions and custom (minhag).

Maimonides' great Ashkenazi critic, R. *Abraham b. David of Posquières (Ravad), in his critical gloss (hasagah) to the Introduction to the Mishneh Torah, asserted that Maimonides "has abandoned the method of all the authors who preceded him, because they brought proofs for their words, and cited their sources... But this way, I do not know why I should disregard my tradition and my proof for the sake of this author's book." Ravad also attacked Maimonides on theological issues. Maimonides had categorized as a heretic (min) anyone who affirms that there is one God but that God has a body (Yad, Teshuvah 37). In his hasagah to this passage, Ravad protested: "Why did he call such a person a heretic, when some who were greater and better than he followed this opinion, according to what they found in the Bible and even more, according to what they found in aggadot which corrupt opinions?" What is significant here is not that Ravad defended corporealist beliefs – he also rejected the corporealism of "aggadot which corrupt opinions" – but that he attacked the legitimacy of Maimonides' categorization of such corrupt opinions as heresy.

As for the criticism of Maimonides' regarding the traditional belief in bodily resurrection, because of his consistent emphasis on an intellectualist understanding of the world to come (olam ha-ba) in terms of the survival only of the actual intellect in proportion to its attainment of knowledge, Ravad wrote (on Yad, Teshuvah 8:2): "The words of this man seem close to one who says that there is no bodily resurrection of the dead, but only of the soul." Others were equally critical of Maimonides' apparent denial of resurrection.

Ramah (R. Meir b. Todros ha-Levi 'Abulafia), who was active in the first two climaxes of the controversy, was in many respects a sincere admirer of Maimonides. In the first period he was shocked at the implication that Maimonides did not affirm the resurrection of the body as a halakhic principle. In an angry letter sent to the scholars of "Lunel he not only sought to prove by copious quotations the dogmatic truth of bodily resurrection, but also added passionately that if there is no such resurrection, "to what end did the bodies stand watch for their God, did they go in darkness for the sake of their God? If the bodies are not resurrected, where is their hope for their God, did they go in darkness for the sake of their God? If the bodies are not resurrected, where is their God? If the bodies are not resurrected, where is their hope for their God? If the bodies are not resurrected, where is their God?" (Kitāb al-Rasīl (1871), 14). Abulafia also attacked Maimonides on other halakhic points. It was only after he saw Maimonides' Treatise on Resurrection that he became satisfied that Maimonides, in fact, affirmed the traditional belief. While some of his correspondents agreed with his earlier criticism, others tried to convince him that he had misunderstood the purport of Maimonides' teaching on
resurrection, and this latter view was accepted wholeheartedly by the *nasi* Sheshet b. Isaac of Saragossa, who in a very radical sense gave expression to Maimonides’ rationalism and philosophic synthesis. Writing about 1200, he attacked sharply and derivisely what he regarded as the simplistic and materialism of Abulafia’s view (A. Marx, in: *JQR*, 25, (1934/35), 406–28). To speak about bodily resurrection is “to bring down our saintly fathers from the highest level – the status of the angels who enjoy divine glory and live forever – to the status of man, through their returning to the impure body which cannot exist except through food and drink, and must end in dust and worms ... but the life of wisdom is greater than foolishness, as light is greater than darkness. These notions seem to me like the words of one confused” (*ibid.*, 418). The only correct conception of resurrection, he thought, is the one also accepted by the pagan philosophers. Resurrection means the eternal life of the soul of the sage-philosopher. “If the soul – while still in the body – was yearning for its Creator, subordinating its passion to its reason, [then] when it leaves the body, [it] will attain the highest status, for which it yearned while still in the body; and over it God will emanate of His spirit. This, in the view of the sages, is the resurrection of the dead and the reward of the just at the end of days” (*ibid.*, 421 ff.). All pronouncements in the Bible and the Talmud about bodily resurrection are only for the simple men who constitute the majority of mankind and who understand only material rewards, and the same holds true for the Muslim paradise (*ibid.*, 424).

I ask this fool who maintains that the souls will return to the dead corpses and that they are destined to return to the soil of Israel. Into which body will the soul return? If it is to the body from which it has departed, [then this will] already have returned to its elements thousands of years earlier; [it is now] earth, dust, and worms. Where it has been buried, a house has been built, a vineyard planted, or some other plants have taken root and you cannot find the earth or the dust or the worms into which the body has turned. If, however, this soul is to return to another body, which God will create, then it is another man who will be created in his own time, and has not been dead; how, then can you say that he is being resurrected and that God rewards him, as he has not as yet achieved anything? (*ibid.*, 426).

Sheshet records opposition to the *Mishneh Torah* by reporting the opinion of one of the judges who quarreled with him and refused to judge according to Maimonides: “As he does not adduce proofs from the sayings of the talmudic sages for his decisions, who is going to follow his opinion? It is far better to study Talmud. We will have nothing to do with his books and his writings.” In Sheshet’s view this opposition stems from the fact that until the *Mishneh Torah* the whole matter of legal decision was so confused that the vast majority of Jews, being ignorant of the Talmud, had to obey their judges, whereas now people had before them a clear and open code and were not dependent on judges alone (*ibid.*, 427).

Maimonides was aware of the criticism leveled against him, and responded to it by his *Treatise on Resurrection* (*Maqalah fi Teyihat ha-Metim*, 1190–91). Maimonides’ defense of resurrection in that work was accepted at face value by such early critics as Ramah (Rabbi Meir b. Todros ha-Levi Abulafia), who then retracted his criticism. Ravad’s critical glosses were incorporated into standard editions of the *Mishneh Torah*. So the first climax in the Maimonidean controversy subsided with Maimonides death in 1204, but the criticism of the *Mishneh Torah* was preserved for later generations together with the Code itself.

### The Second Climax: 1230–1235 in Europe

What led to periodic controversies over Maimonides and philosophy? In the first period, as we have seen, it was Maimonides’ enormous status which led towards the end of his life to the rapid availability in Hebrew of his works in Europe, including his *Guide of the Perplexed*, outside his own immediate sphere of influence. It was this almost immediate availability of his philosophical views in areas previously unexposed to philosophical culture which in turn aroused resistance. In the second period, external circumstances contributed to the flare-up of the controversy. Furthermore, whereas Maimonides himself was the subject of controversy in the first period, he was merely the catalyst for a much broader and fundamental controversy in the second period, when philosophy itself came under sharp attack. In addition, whereas Maimonides, however much his views were criticized in the earlier period, was personally highly regarded, in the later period the philosophers themselves were attacked and subject to suspicion.

Maimonides’ works reached Christian Europe, chiefly in the southwest – Spain and Provence – entering a cultural and social climate very different from the one in which they had been created in the Arabic-Islamic culture of Egypt. As we have seen, Maimonides’ authority in the *Mishneh Torah* had been criticized halakhically by Ravad and “Moses ha-Kohen, among others. The Christian Reconquest was proceeding apace in the Iberian peninsula. Mystical tendencies and visionary approaches began to find explicit and strong expression in the developing *Kabbalah* of Provence and Spain. Jews everywhere were suffering from the impact of the *Crusades*, with martyrdom (‘*Kiddush ha-Shem*’) in their wake. Maimonides’ grand attempt at a synthesis between the Jewish faith and Greek-Arabic Aristotelian philosophy was received with enthusiasm in some circles, mainly of the upper strata of Jewish society, and with horror and dismay in others, imbued with mysticism and dreading the effects of Greek thought on Jewish beliefs. The old and continuously smoldering issue of “Athens versus Jerusalem” conceived in the Talmud as the problem of “Greek wisdom” – *hokhmah yevanit* (*BK* 82b–83a; Meg. 9a–b), now burst into flames. Essentially the problem is one of the possible synthesis or the absolute antithesis between monotheistic revealed faith and intellectually formulated philosophy. Both faith, based on revelation, and philosophy, based on human reason, were understood to fundamentally contradict each other’s methodology and undermine each other’s authority. The rational method of inquiry, which in classical and medieval times was equated with science (the distinction
between philosophy and the natural sciences being a modern phenomenon), is an open system. It can lead to any conclusion, and the conclusion is justified and necessitated by the integrity of the method of inquiry itself, which can be replicated by others; furthermore, it is universal, transcending national, cultural, or religious differences. Faith, which differs from scientific knowledge precisely in that it involves an affirmation of truth without conclusive and demonstrative proof, basically is a closed system which reverses the process of inquiry: one begins with the conclusion, which is given as a revealed fact, which one can then subject after the fact to rational analysis and explication, but which cannot itself be rejected or denied. Faith, moreover, begins with revelation occurring within a particular national, cultural, linguistic, or religious context, and its authority is thus conventional, even if it claims to be ultimately universal in its significance and application.

This problem is common to Judaism, Christianity, and Islam. In the view of H.A. Wolfson, all of Western religious philosophy, whether in Hebrew, Latin, or Arabic “garb,” is essentially the same regarding the problematical relationship between revelation and reason. In Wolfson’s scheme, “Philo was the first “synthetic” philosopher, and the greatest figure in the history of Western philosophy after Plato and Aristotle, because he attempted to synthesize biblical revelation (which did not know philosophy) and philosophy (which was pagan and did not know revelation), and all subsequent philosophy in the Middle Ages was “Philonic” in structure, until Spinoza destroyed that structure and made possible modern philosophy by freeing philosophy from revelation (Wolfson, Philo: Foundations of Religious Philosophy in Judaism, Christianity and Islam (1947)).

In all three traditions, therefore, tensions exist between rationalistic religious belief, inclining in the main toward synthesis, and mystic belief, which is largely opposed to it. The problem was not new in Judaism. In Islamic countries in the tenth century it was in the main decided in favor of rationalism and synthesis. Maimonides was not the only one in the 12th century who expressly sought a synthesis between Greek philosophy and Judaism; a philosophic approach was attempted by Abraham *Ibn Daud (see, e.g., his Sefer ha-Emunah ha-Ramah (1852), 2, 58), and he was preceded by a rationalist tradition of synthesis going back to *Saadiah Gaon and *Samuel b. Hopni who denied the historical veracity of the incident of Samuel and the Witch of Endor.

Yet in Maimonides’ time radical changes were taking place in Jewish communities in Europe. The influence of the Christian environment became more pervasive. Increasingly, Christianity was involved in similar problems, as the conflict between Peter *Abelard and *Bernard of Clairvaux clearly shows. After the Crusaders captured Constantinople in 1204 (the year of Maimonides’ death), the Greek works of Aristotle became directly accessible to Western Christians, who no longer had to rely on Latin translations of the Greek texts made (often by Jews) from Arabic or from Hebrew versions based on Arabic translations from the Greek. The growing universities increasingly challenged the monasteries as centers of learning. While the traditional doctrines of the Church were being confronted by secular learning, Christian Orthodoxy was also challenged in the 12th and 13th centuries by “heresies,” especially that of Cathari and the related heresy of the rationalist Albighensians, who had begun in the 11th century to interpret Scripture allegorically and who denied the literal interpretation of the miraculous events of Jesus’ life and death that was central to Catholic dogma. Such “heresy” spread especially among the upper classes. The Church moved against both threats in the first decades of the 13th century. Against the threat of secular philosophy, the Church issued repeated bans on the study of Aristotle and commentaries on his works. Pope Innocent III launched the Albighensian Crusade, to eliminate the heresy (which he regarded as instigated by educated Jews). In 1231 the bans on Aristotle were renewed by Pope Gregory IX, who established the permanent Inquisition under the Dominicans, with the aim of completely eradicating Albighensianism. There were, in fact, certain parallels between the Christian Albighensian “heresy” and the Jewish philosophers of the day, at least in the eyes of their respective opponents, who accused them of indiscriminate allegorization of Scripture and of antinomian laxity in moral or ritual behavior. The stormy winds of anti-rationalism in the Christian environment were a contributing factor in the exacerbation of long existing, if usually dormant, tensions within the Jewish community.

Social upheavals in Jewish society during the 12th and 13th centuries also added communal tension to the spiritual strife. When Maimonides was still young, and most of his work as yet unwritten, *Judah Halevi warned: “Turn aside from mines and pitfalls. Let not Greek wisdom tempt you, for it bears flowers only and no fruit.… Listen to the confused words of her sages built on the void.… Why should I search for bypaths, and complicated ones at that, and leave the main road?” (from his poem beginning “Devarekha be-Mor Over Rekuh”).

Maimonides’ prestige and the external pressures thus combined in a volatile mixture for Jews in Europe. Despite common admiration for Maimonides and his all-embracing devotion to Torah and the Jewish faith, there was in reality no common language between the two radical positions. Gradually the opponents of Maimonides began to attack his very conception of a synthesis between Greek philosophy and Jewish faith.

Solomon b. Abraham of Montpellier, together with David b. Saul and *Jonah b. Abraham Gerondi (a relative of *Nahmanides) agitated against philosophy, and in 1322 succeeded in persuading the rabbis of northern France to issue a total ban on the study of philosophy, including Maimonides’ Guide of the Perplexed and Book of Knowledge (the first section, containing philosophical material, of the Mishneh Torah). The traditionalists’ arguments against philosophy were based on three oft-repeated claims (recurring in the later stages of the controversy as well), which were consistently denied by the philosophers: (1) *Theological – The philosophers were depicted
as denying miracles, as regarding prophecy as a purely natural phenomenon, as undermining the authority of the Torah, and as rejecting traditional eschatology; (2) Exegetical – The traditionalists charged the philosophers with engaging in indiscriminate allegorization of Scripture and of denying the historicity of various biblical persons and events; (3) Practical – The philosophers were suspected of laxity in observance of the commandments.

The controversy of the 1230s also involved exchanges of letters, many between the philosopher and biblical exegete Radak (David “Kimhi”) and the physician and courtier, Judah *Ibn Alfakhar. Remarkably, the letters from both sides of the controversy were preserved in a collection Igerot Kenàot, “Letters of Zealotry” (published in Kovez Teshuvot ha-Rambam, Leipzig, 1859). When Kimhi traveled about the communities of Provence to rally the supporters of Maimonides, he was greatly surprised to be answered by Judah ibn Alfakhar with a bitter attack on Maimonides’ very attempt to rationalize and explain away miracles and wondrous tales. Ibn Alfakhar was against half acceptance; logical proofs were not so important, “for each true proof needs great checking, since sometimes it may include misleading elements of that false wisdom called sophistry in Greek, and when a proof is joined to this it misleads even sages.” Maimonides’ “erroneous” intention was to explain matters according to the laws of philosophy and nature “so as to put the Torah and Greek wisdom together, to make out of them one whole.” He imagined that the one would live with the other like two loving twin deer. In reality this has resulted in sorrow and dissension, for they cannot live together on the earth and be like two sisters, for the Hebrew women are not like the Egyptian ones. To this our Torah says: ‘No, my son is the living one, and yours is the dead’ (1 Kings 3:22) and her rival angers her. I want peace; if I start to talk to them, they go to war” (letter to Kimhi, Igerot Kenàot, 2a).

Thus, through radical rationalistic argumentation, this physician and courtier in Spain rejects the synthesis of the physician and courtier in Egypt and the logical compromise it involves. As suggested by S. Harvey (1987), the dispute of the 1230s between Kimhi and Alfakhar may well have served as the model for the book “The Epistle of the Debate” by Shem Tov ibn Falaquera, who was a participant in the next, third climax of the controversy.

The demand for logical consistency was also answered from the Maimonidean camp. Increasingly they inclined toward extreme allegoristic explanations of talmudic and even biblical expressions and tales. Their opponents accused them of even inclining to explain away as no more than symbols certain practical commandments, which need be fulfilled only by simple men, but not by educated people. The rationalists denied this. Social overtones became stronger. The anti-Maimonideans berated their upper-class opponents for their hedonistic, luxurious, and sinful way of life. The Maimonideans countered by accusing their adversaries with anarchy, harshness, ignorance, simplicity of mind, and of being under Christian influence.

The anti-Maimonidean camp turned to the great sages of northern France. Never having been acquainted with Aristotelian philosophy, they never felt the need for synthesis with it; therefore, they unhesitatingly pronounced a herem on Maimonides’ philosophical works. Some report that they excommunicated even parts of his halakhic code. In Provence and Spain the anti-Maimonidean camp was led by Solomon b. Abraham of Montpellier, *Jonah b. Abraham Gerondi, the poet Meshullam “da Piera, and above all Nahmanides. The position of Nahmanides is remarkable for its simultaneous flexibility in expression and rigidity of mental attitude. Seeing that the extreme anti-Maimonidean stance taken by the rabbis of northern France and by Solomon of Montpellier had no chance of finding support among the leading circles of Jewish society in Provence and Spain, he therefore advised the anti-Maimonidean camp to adopt a moderate stand in order to achieve at least what was possible. Writing to the north French rabbis (printed in: MGWJ, 9 (1860), 184–95) he expresses his devotion and admiration, but he humbly submits that they “are nourished in the bosom of [true] faith, planted in the courts of tradition,” and therefore had to understand Maimonides in his peculiar cultural and social circumstances. The situation he describes is actually that of Spanish and Provençal Jewish upper society in the early 13th century:

They have filled their belly with the foolishness of the Greeks … they … make fun … of the trusting souls. . . . They did not enter profoundly into the ways of our Torah; the ways of alien children suffice for them. But for the words of [Maimonides], but for the fact that they live out of the mouth of his works … they would have slipped almost entirely.

It is not only a matter of false spiritual pride and alien culture; it is also a case born of social necessity:

God save and guard us, my teachers, from such a fate. Look about and see: is there a pain like our pain? For the sons have been exiled from their fathers’ tables; they have defiled themselves with the food of gentiles and the wine of their feasts. They have mixed with them and become used to their deeds … courtiers have been permitted to study Greek wisdom, to become acquainted with medicine, to learn mathematics and geometry, other knowledge and tricks, so that they make a living in royal courts and palaces.

This intrinsically hostile description of the life of the upper classes of Jewish society in Provence and Spain is given in order to put Maimonides in the light of a great talmudic sage who – argues Nahmanides – would certainly and gladly have written and lived as the northern French rabbis did. Alas, it was not granted him: “Did he trouble himself for your sake, you geniuses of the Talmud? He saw himself compelled and constrained to structure a work which would offer refuge from the Greek philosophers…. Have you ever listened to their words, have you ever been misled by their proofs?” He goes on to explain that extremism would bring about an irreparable split. It is far better to educate gradually this misled society and bring it back to the right way of northern France, by par-
Maimonidean controversy

The Maimonidean controversy was a long-standing dispute between rationalists and anti-rationalists in the Jewish community. It was named after Moses Maimonides, a prominent rabbi and scholar of the 12th century, whose teachings and writings were both praised and criticized by contemporaries and later generations.

The controversy returned to the Muslim countries in the East. Maimonides' son, Abraham b. Moses b. Maimon, was outraged at what had happened in the West. He attacked "many overseas [scholars who are] mistaken. They cling to the corpuscularist beliefs, rather than philosophy, constituted the true denial of the Torah.

While this blast was going forth from the East, extremists from the West caused the desecration of Maimonides' tomb at Tiberias, which shocked not only the Maimonidean camp but also the majority of the anti-Maimonideans. When in the early 1240s the Disputation of Paris and the burning of the Talmud added shock to shock, public quarrels among Jews were set aside for several decades, and the second climax of the controversy came to an end.

It remains a much disputed point whether the Dominicans set fire to Maimonides' writings on their own initiative, scented heresy wherever they could find it, or whether their action resulted from a denunciation by Jews, as contemporary Maimonideans believed. Neither the social nor the cultural motivating forces of the controversy disappeared with the cessation of polemics. The rise of kabbalistic circles and literature (see "Zohar") on the one hand, and the continuing philosophical activity and way of life of the upper and "professional" circles of Jewish society on the other implied a continuation and an intensification of the struggle between rationalists and anti-rationalists.

The Third Climax: A Renewed Outbreak of the Controversy in 1288–1290

Whereas the controversy of the 1230s took place largely in southern France, within a Christian environment, most of the controversy towards the end of the 13th century took place in the Near East. Solomon Petit, a mystic and anti-rational-
The controversy focused on the content of Jewish education and the question of the possibility or impossibility of synthesis between “Greek wisdom” and the Torah of Moses. Abba Mari Astruc ha-Yarḥi of Lunel turned to Rashba (Rabbi Solomon b. Abraham ‘Adret) in Barcelona for guidance on the rationalists’ allegorical interpretations, which he saw as heretical. Despite Astruc’s strong partisan views, he preserved a collection of the exchange of letters from both sides in his Minhät Kena’ōt, “The Offering of Jealousy” (cf. Num. 5:35) (ed. M. Bisliches, Pressburg, 1838; reprinted Jerusalem, 1968; new and superior ed., H. Dimitrovsky, Teshuvot ha-Rashba, Jerusalem, 1990, 2 vols.). Astruc charged the philosophers with treating historical figures and events in the Bible purely symbolically, at the expense of their historicity; with regarding Plato and Aristotle, rather than the Torah, as the criteria of truth; with rejecting miracles and divine revelation; and with being personally lax in observance of Jewish law.

Although these charges, especially those of interpreting biblical figures purely symbolically and laxity in observance, were consistently denied by the rationalists, such as Menahem b. Solomon Meiri and Jedaiah b. Abraham Bedershi ha-Penini, they were on some level accurate. For example, Jacob b. Abba Mari Anatoli (1194–1296), the son-in-law of Samuel ibn Tibbon, in his book Malmad ha-Talmidim, had interpreted the patriarchs and matriarchs allegorically, rather than historically. Abraham and Sarah symbolized form and matter; Lot and his wife symbolized the intellect and the body; Isaac symbolized the active soul, and his wife Rebecca the intelligent soul; Leah symbolized the perceptive soul, and her sons the five senses; Leah’s daughter Dinah represented sensations induced by imagination; Joseph symbolized practical reason, while Benjamin symbolized theoretical reason. He also interpreted the seven-branched menorah (candelabrum) as representing the seven planets, the twelve tribes as symbolizing the constellations, and the Urim and Thummim of the high priest as representing the astrolabe.

The traditionalists feared that such views could only lead to laxity in observance. If the Torah is true only on a symbolic level, the commandments might also be interpreted purely symbolically, at the expense of their actual observance, which is based on the literal text. Nevertheless, their attacks on individual rationalists like Levi b. Abraham b. Hayyim of Vilefranche (who seems to have been the immediate catalyst of the outburst), were unwarranted, since these rationalists, as they themselves insisted in their own defense, did not in fact go beyond Maimonides’ views or give up strict observance of the law, despite their radical allegorization.

Toward the end of the 13th century, a fierce dispute broke out in Provence between traditionalists and rationalists. While the main bone of contention was ostensibly radical rationalist allegorical exegesis of the Bible, the dispute actually flared up over the rationalist practice of healing with astral magic. Astral magic was included in the curriculum of medical studies in the universities. Paradoxically, it was thus the rational-
Maimonidean Controversy

ist camp which employed astral magic in healing, and it was their use of such magic which the traditionalists, led by Abba Mari of Lunel, rejected as idolatrous avodah zarah and as prohibited by the halakhah.

Abba Mari tried to drag R. Solomon b. Adret (Rashba) into the argument, but failed. Rashba noted that he himself, before the anti-philosophical controversy had arisen, had unhesitatingly permitted the fashioning of effigies for medical purposes, and even while the controversy was still raging refused to issue an absolute prohibition of the medical use of astral magic. As against Maimonides’ approach, denying the reality of sorcery, Rashba pointed out that both the Babylonian and Jerusalem Talmuds contain an abundance of magical material which violates no religious precept. Moreover, Rashba accused the opponents of sorcery of denying the possibility of miracles. To support his acceptance of the possibility that spirituality might descend upon amulets, he wrote:

And I say that it was the kindness of the Supreme Being at the start of Creation to create in his world things that would ensure the health of the created beings, that if the exists happen to fall ill or for any other reason deviate from their natural perfection, these [things] are ready to restore them to their realm or to make them healthy. And He placed these forces in the essence of things found in nature, as may be attained by study, such as medicines and aids known to scholars of medicine, or in nature based on properties but not attainable by study. And it is not impossible that such a power should also be in speech, as in the case of amulets and similar things (Minhat Kena’ot, in Rashba, Responsa, ed. H.Z. Dimitrovsky, p. 302).

The possibility that stellar forces could be used to heal the sick was provided for in advance by God. Whether such practices were permissible or not depended, according to Rashba, on the magician’s innermost intention: it was his awareness that God was the primary cause of recovery that legitimized the astral-magical practice. Thus, Abba Mari was unable to persuade Rashba to join him in condemnation of astral magic.

Through the 14th century, the dispute became increasingly acrimonious; at least four positions can be distinguished with regard to the status of astral magic:

(a) False and forbidden: The moderate rationalists rejected astral magic of any kind and therefore also considered it halakhically prohibited. They thus accepted Maimonides’ firm negation of any reality of astral magic and his prohibition of its practices. These thinkers, then, took up Maimonides’ approach in content, style, and language (Menahem ha-Meiri, David ha-Kokhavi). Some rationalists chose almost to ignore the issue, probably because they attached no reality whatever to astral magic (Joseph ibn Kaspi).

(b) Dubious and forbidden: This was the view of the traditionalists, who consistently battled the radical rationalists and in fact defined the latter group, inter alia, in terms of their employment of astral magic for medical purposes (Abba Mari, Jacob b. Solomon ha-Zarfati). They, too, prohibited the practice absolutely, as did the moderate rationalists, although they did not entirely deny the possible reality of astral magic.

Their most characteristic trait was the connection they perceived between the practice of astral magic and the magician’s affinity for philosophy: in their view, a rationalist philosophy was bound to lead to the practice of astral magic.

(c) False in respect of its reality but psychologically effective, and forbidden: Some circles denied that astral magic could actually bring down stellar forces, but believed that there was some psychological benefit in the practice. Nevertheless, they, too, prohibited its use from the standpoint of Halakhah (Gersonides, Jediah ha-Penini of Béziers). In a sense, this might be considered an intermediate position, though it is closer to that of the moderate rationalists and its proponents were essentially a subgroup of the latter.

(d) Real and permitted: Certain thinkers believed in the absolute reality of astral magic (Nissim of Marseilles, Frat Maimon) and even considered it halakhically legitimate (Levi b. Abraham). For such thinkers, astral magic was a theological principle that could be used in interpreting various bibli-cal passages.

All these issues provided the background for Rashba’s ultimate decision to support a limited ban.

After much hesitation, and spurred on by the influence of Asher b. Jehiel, Rashba and the Barcelona community issued a herem on July 26, 1305, against “any member of the community who, being under the age of 25 years, shall study the works of the Greeks on natural science or metaphysics, whether in the original language or in translation.”

Works by Jewish philosophers were excepted, as was the study of medicine. The ban was intended to prevent young men from being influenced by Greek philosophy to turn away “from the Torah of Israel which is above these sciences. How can any man dare to judge between human wisdom based on analog, proof, and thought, and the wisdom of God, between whom and us there is no relation nor similarity? Will man, who is embodied in a vessel of clay, judge … God his creator to say, God forbid, what is possible and what he cannot do? Truly this, sometimes leads to utter heresy” (Resp. Rashba pt. 1, no. 415). A ban was also pronounced against all who “say about Abraham and Sarah that in reality they symbolize matter and form; that the 12 tribes of Israel are [an allegory] for the 12 planets … [and] that the Urim and Thummim are to be understood as the astrolabe instrument…. Some of them say that everything in the Torah, from Bereshit to the giving of the law, is entirely allegorical” (ibid., no. 416).

The condemnation of extreme allegory did not arouse opposition, but the prohibition on the study of “Greek wisdom” until the age of 25 was sharply opposed on grounds of principle, though to Rashba and his group this formula was certainly in many respects a compromise. Among the many communities and individual sages in Provence and Spain who opposed the ban, the great talmudic scholar Menahem b. Solomon Meiri was one of the most eloquent voices. In his counter-herem (printed in excerpts in Jubelschrift… L. Zunz (1884), Heb. pt. 153–72) he reminded Adret of the failure of the early 13th-century attacks against Maimonides. Rejecting insinua-
tions that the study of philosophy causes heresy, he pointed to many talmudic scholars who were students of philosophy. Meiri stressed that sciences such as mathematics were necessary for the understanding of many passages in the Talmud. He regarded the prohibition against certain types of study as self-defeating: "Each individual [nature] will search for what suits him according to his natural inclination." This trait of human intellect and nature, he maintains, will even cause the second generation of the excommunicating community to seek ways out of this prohibition. Meiri was well aware that there was a more radical wing among the rationalists, which he opposed (see his commentary to Psalms, ed. by J. Cohn (1936), e.g., ch. 36, p. 78f., and many passages in his commentary to Proverbs and to Mishnah Avot).

Finally, Jedaiah b. Abraham Bedersi (ha-Penini) wrote Adret a "letter of apology" (Ketav Hitnazzelut) – actually a sharp attack against the anti-rationalists – basing himself on the spiritual greatness of Provençal Jews and praising rationalism and philosophy. He daringly proclaims:

My rabbis, please look into the mighty pattern of the benefits of philosophy to all of us, even to those who despise it. For it is extremely well-known that in ancient times anthropomorphism was widespread, one may say almost in the entire Diaspora of Israel ... but in every generation there arose geonim and sages – in Spain, in Babylonia and in the cities of Andalusia – who, thanks to their familiarity with the Arabic language, had the great opportunity to smell the perfume of the sciences, some much, some a little, for they are translated into this language. It is thanks to this that they began to elaborate and clarify many of their opinions on the Torah, above all as to the unity of God and the abolition of anthropomorphism, especially by the philosophical proofs taken from scientific works.

He goes on to list this rationalistic literature, from the days of Saadiah Gaon onward (Resp. Rashba pt. 1, no. 418). This long epistle concludes:

Relinquish your herem for the heart of this people will not turn away from philosophy and its books as long as there is breath in their frame and soul in their bodies, especially as together with it [i.e., with devotion to philosophy], they are true to Torah and commandments. Even if they had heard it from the mouth of Joshua bin Nun they would never have accepted it, for they intend to do battle for the honor of the great teacher [i.e., Maimonides] and his works; and for the holiness of his teaching they will sacrifice fortune, family, and soul as long as there is a breath in their bodies. And thus they will teach and command their children in generations to come (ibid.).

On this sharp though inconclusive note, the great controversy of the early 14th century petered out. In any event, the expulsion of the Jews from France by King Philip IV on July 22, 1306, almost exactly one year after the Barcelona ban was issued, overshadowed the internal Jewish controversy. The greater external threat totally eclipsed a potential internal threat from philosophy. Like its predecessors, the Barcelona ban, as limited as it was in comparison to earlier bans, also proved ineffective and unenforceable, and to that extent, the rationalists had the last word in the controversy.

Aftermath of the Controversy

The tension between rationalists and antirATIONALISTS never abated throughout the Middle Ages. Among the beleaguered Jews of 15th-century Christian Spain, Maimonidean rationalism was seen by many as the root cause of the misfortunes and the reason for *apostasy. On the other hand, a man like Abraham *Bibago, throughout his Derekh Emunah, defended rationalism, not only as being justified but as the very essence of Judaism. Proudly calling himself "a pupil of Maimonides," he believed that the Jewish people is the bearer of reason – weak in this world as reason is weak against the unreasonable passions. Generalizing the traditional rationalistic view, he stated:

The reasonable creature having reason has to study the sciences; and being a believer, he will study Torah and acquire faith and its roots and dogmas. The first study will be a kind of carrier and vessel to bear the second study. In the same way that life is an assumption and carrier by which humanity and speech are carried, so through the form of reason – by whose accomplishment one studies and acquires the sciences – Torah study will be assumed and carried. Thus faith will be complete and without doubt, and the one attitude [faith], will not conflict with the other [philosophy]. Therefore did the sage say, ‘Reason and faith are two lights.’ To solve all doubts we must explain that ‘Greek wisdom’ cannot be the above-mentioned wisdom of reason belonging to man insofar as he is a man. Hence it is a human wisdom and not a Greek one. The wisdom called [by talmudic sages] ‘Greek wisdom,’ must be something peculiar to the Greeks and not to another nation (see above, pt. 2, ch. 3, 46a).

That views like this were acceptable also among 16th-century Ashkenazi Jewry is proved by the fact that the Sefer ha-Miknah by *Joseph b. Gershom of Rosheim is in reality a kind of synopsis of Bibago's Derekh Emunah. In Renaissance Italy Jehiel b. Samuel of *Pisa wrote a detailed treatise (Minhat Kenaot) against rationalism, while the life and works of many of his contemporaries and countrymen constituted a clear espousal of it. In Poland-Lithuania in the 16th–17th centuries the tension between Maimonideans and anti-Maimonideans likewise continued, as evidenced, for example, by the dispute between Moses *Isserles and Solomon b. Jehiel *Luria (see Moses Isserles, Resp., nos. 687; and see also his Torat ha-Olah).

The problems of the synthesis between Judaism and other cultures, of the proper content of Jewish education, and of the right way to God – through reason or through mystic union – has remained, though formulations and expressions have changed considerably. The old hierarchical basis of Jewish leadership, wholeheartedly hated by Maimonides, has disappeared, but the leadership of the individual scholar, even after Maimonides, retained many hierarchical and sacral elements (see *Semikhah). The Mishneh Torah did not supersede the Talmud, and Maimonides' aristocratic opposition to monetary support for Torah study failed completely. So strong was his personality, however, that most of his opponents made great efforts to say that they opposed not Maimonides himself but some element of his teaching or, better still, some misguided
interpretation or citation of his work. The Maimonidean controversy is both very specifically at the heart of Jewish culture and, at the same time, part or a set of problems central to Judaism, Islam, and Christianity alike.

[Haim Hillel Ben-Sasson / Raphael Jospe and Dow Schwartz (2nd ed.)]

**MAIMONIDES, MOSES** (Moses ben Maimon; known in rabbinical literature as "Rambam"); from the acronym Rabbi Moses Ben Maimon; 1135–1204), rabbinical authority, codifier, philosopher, and royal physician.

**BIOGRAPHY**

The most illustrious figure in Judaism in the post-talmudic era, and one of the greatest of all time, Maimonides was born in Cordoba, Spain, to his father "Maimon, dayyan of Cordoba and himself a renowned scholar and pupil of Joseph ʻIbn Migash. He continues his genealogy, "The son of the learned Joseph, son of Isaac the dayyan, son of Joseph the dayyan, son of Obadiah the dayyan, son of the rabbi Solomon, son of Obadiah" (end of commentary to Mishnah); traditions extend the genealogy to R. Judah ha-Nasi. Posterity even recorded the day and hour in even minute of his birth, "On the eve of Passover (the 14th of Nisan) which was a Sabbath, an hour and a third after midday, in the year 4895 (1135) of the Creation" (Sefer Yuhasin). Maimonides' grandson David gives the same day and year without the hour (at the beginning of his commentary to tractate Rosh Ha-Shanah).

As a result of the fall of Cordoba to the "Almohads in May or June, 1148, when Moses had just reached his 13th birthday, and the consequent religious persecution, Maimon was obliged to leave Cordoba with his family and all trace of them is lost for the next eight or nine years, which they spent wandering from place to place in Spain (and possibly Provence) until in 1160 they settled in Fez. Yet it was during those years of wandering, which Maimonides himself describes as a period “while my mind was troubled, and amid divinely ordained exiles, on journeys by land and tossed on the tempests of the sea” (end of commentary to Mishnah) that he laid the strong foundations of his vast and varied learning and even began his literary work. Not only did he begin the draft of the Siraj, his important commentary on the Mishnah, in 1158, but in that same year, at the request of a friend, he wrote a short treatise on the Jewish calendar (Māmār ha-Ibbur) and one on logic (Milloth Higgayon) and had completed writing notes for a commentary on a number of tractates of the Babylonian Talmud, and a work whose aim was to extract the halakhah from the Jerusalem Talmud (see below Maimonides as halakhist).

According to Muslim authorities the family became formally converted to Islam somewhere in the period between 1150 and 1160. But Saadiah ibn Danan (Z. Edelmann (ed.), *Hemdah Genuzah* (1856), 164) relates that the Muslims maintain the same about many Jewish scholars, among them Dunash ibn Tamim, Hasdai b. Hasdai, and others. In any case in the year 1160 Maimon and his sons, Moses and David, and a daughter, were in Fez. In his old age 'Abd el-Mu'min, the Almohad ruler, somewhat changed his attitude to the Jews, becoming more moderate toward those who were living in the central, Moroccan, part of his realm. It was probably on account of this that in 1159 or early in 1160 Maimon deemed it worthwhile to emigrate with his family to Morocco and settle in Fez. Living in Fez at that time was R. Judah ha-Kohen ibn Susan, whose fame for learning and piety had spread to Spain, and Maimonides, then 25, studied under him. Many Jews had outwardly adopted Islam and their consciences were troubling them, and this prompted Maimon to write his Iggeret ha-Nehamah ("Letter of Consolation") assuring them that he who says his prayers even in their shortest form and who does good works remains a Jew (*Hemdah Genuzah*, pp. lxxiv–lxxxii). Mean-mate his son worked at his commentary on the Mishnah and also continued his general studies, particularly medicine; in his medical works he frequently refers to the knowledge and experience he gained among the Muslims in North Africa (see Maimonides as physician). Here also he wrote his Iggeret ha-Shemad ("Letter on Forced Conversion") also called Iggeret Kiddush ha-Shem ("Letter of the Sanctification of the Divine Name"). These letters of father and son, as well as Maimonides' utterances after leaving Morocco, do not point to outrages and bloody persecutions. Although Maimonides in the opening lines of the Iggeret ha-Shemad most strongly deprecates the condemnation of the forced converts by "the self-styled sage.
Maimonides, Moses

who has never experienced what so many Jewish communities experienced in the way of persecution,” his conclusion is that a Jew must leave the country where he is forced to transgress the divine law: “He should not remain in the realm of that king; he should sit in his house until he emigrates...” And once more, with greater insistence: “He should on no account remain in a place of forced conversion; whoever remains in such a place desecrates the Divine Name and is nearly as bad as a willful sinner; as for those who beguile themselves, saying that they will remain until the Messiah comes to the Maghreb and leads them to Jerusalem, I do not know how he is to cleanse them of the stigma of conversion” (Iggeret ha-Shemad, in: Z. Edelmann (ed.), Hemdah Genuzah, 11b–12a).

Maimon and his sons acted in accordance with this advice, as certainly did many others. Maimonides’ departure from the country of the Almohads is commonly assumed to have taken place in 1165; according to Saadiah ibn Danan (Seder ha-Dorot, in: Hemdah Genuzah, 30b.), it was promoted by the martyrdom of Judah ibn Susan, who had been called upon to forsake his religion and had preferred death to apostasy. R. Maimon and his family escaped from Fez, and a month later they landed at Acre. The day of his departure as well as that on which the ship was saved from a tempest were instituted as a family fast enjoined on his descendants, and that of his arrival in Erez Israel as a festival (E. Azikri (Azcarri), Sefer Haredim; Maim. Comm. to Rosh Ha-Shanah, ed. Brill, end).

The family remained in Acre for some five months, striking up an intimate friendship there with the dayyan Japheth b. Ali. Together with him they made a tour of the Holy Land, visiting Jerusalem where Maimonides states, “I entered the [site of the] Great and Holy House and prayed there on Thursday the 6th day of Marheshwan.” Three days later they paid a visit to the Cave of Machpelah in Hebron for the same purpose. Maimonides also appointed both these days as family festivals. The family then left Erez Israel and sailed for Egypt. After a short stay at Alexandria they moved to Cairo and took up residence in Fostat, the Old City of Cairo.

Maimon died at this time either in Erez Israel or in Egypt. It has been suggested that the reason for the choice of Alexandria was the existence at that time “outside the town” of “the academy of Aristotle, the teacher of Alexander” to which “people from the whole world came in order to study the wisdom of Aristotle the philosopher” mentioned by Benjamin of Tudela (ed. by M.N. Adler (1907), 75). It is not certain what prompted the move to Cairo. That Maimonides’ influence was decisive in virtually destroying the hitherto dominating influence of the Karaite sects which were more numerous and wealthy than the Rabbanites in Cairo is beyond doubt (see below) and in the 17th century Jacob Faraji, a dayyan in Egypt, states that it was this challenge which impelled Maimonides to move to Cairo (see Azulai, letter M150).

For eight years Maimonides lived a life free from care. Supported by his brother David who dealt in precious stones, he was able to devote himself entirely to preparing his works for publication and to his onerous but honorary work as both religious and lay leader of the community. His Siraj, the commentary to the Mishnah, was completed in 1168. The following year he suffered a crushing blow. His brother David drowned in the Indian Ocean while on a business trip, leaving a wife and two children, and with him were lost not only the family fortune but moneys belonging to others. Maimonides took the blow badly. For a full year he lay almost prostrate, and then he had to seek a means of livelihood. Rejecting the thought of earning a livelihood from Torah (see his commentary on Avot 5:4, and especially his letter to Joseph ibn Sham’un in 1191, “It is better for you to earn a drachma as a weaver, or tailor, or carpenter than to be dependent on the license of the exilarch [to accept a paid position as a rabbi]”; F. Kobler (ed.), Letters of Jews Through the Ages, 1 (1952), 207) and he decided to make the medical profession his livelihood.

Fame in his calling did not come to him at once. It was only after 1185 when he was appointed one of the physicians to al-Fadil, who had been appointed vizier by Saladin and was virtual ruler of Egypt after Saladin’s departure from that country in 1174, that his fame began to spread. It gave rise to a legend that Richard the Lionhearted “the King of the Franks in Ascalon” sought his services as his private physician. About 1177 he was recognized as the official head of the Fostat community. Ibn Danan says of him, “Rabbenu Moshe b. Maimon] became very great in wisdom, learning, and rank.” In the so-called Megillat Zuta he is called “the light of east and west and unique master and marvel of the generation.”

These were the most fruitful and busy years of his life. His first wife had died young and in Egypt he remarried, taking as his wife the sister of Ibn Almali, one of the royal secretaries, who himself married Maimonides’ only sister. To them was born their only son Abraham to whose education he lovingly devoted himself, and an added solace was his enthusiastic disciple Joseph ibn Sham’un (not Ibn Aknin, as often stated), whom he loved as a son, and for whom he wrote, and sent chapter by chapter, his Guide of the Perplexed. It was during those years, busy as he was with the heavy burden of his practice and occupied with the affairs of the community, writing his extensive correspondence to every part of the Jewish world (apart from the Franco-German area), that he wrote the two monumental works upon which his fame chiefly rests, the Mishneh Torah (compiled 1180) and the Guide (1190; according to Z. Diesendruck, in: HUCA, 12–13 (1937–38), 461–97, in 1185), as well as his Iggeret Teiman and his Ma'amor Tehiyat ha-Metim.

The following passage in the letter to the translator of the Guide, Samuel b. Judah ibn *Tibbon, in which he describes his multifarious cares and duties, with the aim of dissuading Ibn Tibbon from coming to visit him, has often been quoted:

I dwell at Misr [Fostat] and the sultan resides at al-Qahirah [Cairo]; these two places are two Sabbath days’ journey distant from each other. My duties to the sultan are very heavy. I am obliged to visit him every day, early in the morning; and when he or any of his children, or any of the inmates of his harem, are indisposed, I dare not quit al-Qahirah, but must stay during
the greater part of the day in the palace. It also frequently happens that one or two royal officers fall sick, and I must attend to their healing. Hence, as a rule, I repair to al-Qāhirah very early in the day, and even if nothing unusual happens, I do not return to Miṣr until the afternoon. Then I am almost dying with hunger … I find the antechambers filled with people, both Jews and gentiles, nobles and common people, judges and bailiffs, friends and foes – a mixed multitude who await the time of my return.

I dismount from my animal, wash my hands, go forth to my patients, and entreat them to bear with me while I partake of some slight refreshment, the only meal I take in the twenty-four hours. Then I go forth to attend to my patients, and write prescriptions and directions for their various ailments. Patients go in and out until nightfall, and sometimes even, I solemnly assure you, until two hours or more in the night. I converse with and prescribe for them while lying down from sheer fatigue; and when night falls, I am so exhausted that I can scarcely speak.

In consequence of this, no Israelite can have any private interview with me, except on the Sabbath. On that day the whole congregation, or at least the majority of the members, come to me after the morning service, when I instruct them as to their proceedings during the whole week; we study together a little until noon, when they depart. Some of them return, and read with me after the afternoon service until evening prayers. In this manner I spend that day.

The two major works will be described below, but something must be said of the two letters. The Arab ruler in Yemen, who, unlike the sultans in Egypt who were Sunnites, belonged to the sectarian Shi’ites, instituted a religious persecution, giving the Jews the choice of conversion to Islam or death. Not only did many succumb, but there arose among those Jews a pseudo-Messiah, or a forerunner of the Messiah who, seeing in these events the darkness before the dawn, preached the imminent advent of the Messianic Age. In despair the Jews of Yemen turned to Maimonides, who probably in 1172 answered their request with the Iggeret Teiman (al-Risāla al-Yamaniyya). It was addressed to R. *Jacob b. Nethanel al-Fayyumi, with a request that copies be sent to every community in Yemen. Deliberately couched in simple terms, “that men, women, and children could read it easily,” he pointed out that the subtle embellishment of Christianity and Islam which preached a new revelation was more dangerous than the sword and then the attractions of Hellenism. As for the pseudo-Messiah, he was unbalanced and he was to be rejected. These trials were sent to prove the Jews.

The effect of the letter was tremendous. In gratitude for the message of hope, combined with the fact that Maimonides also used his influence at court to obtain a lessening of the heavy burden of taxation on the Jews of Yemen, the Jews of Yemen introduced into the “Kaddish a prayer for “the life of our teacher Moses b. Maimon” (Letter of Nahmanides to the rabbis of France, in: Kitvei Ramban, ed. by C.B. Chavel (1963), 341).

This remarkable tribute, usually reserved for the exilarch, has an indirect connection with the third of his public (as distinct from his private) letters, the Mā’amar Teḥiyyat ha-Metim (“On Resurrection”; 191). Maimonides wrote the letter with the greatest reluctance. It was the direct result of his Mishneh Torah and constituted his reply to the accusation leveled against him that in this work he denied, or did not mention, the doctrine of personal resurrection which was a fundamental principle of faith among the Jews of his time. An objective study of his work does lend a certain basis to the allegation. It is true, as he indignantly protests, that he included this doctrine as the last of his famous Thirteen Principles of Judaism, but in his Mishneh Torah the undoubted emphasis is on the immortality of the soul and not on individual bodily resurrection. That the allegation was not based upon mere malice or envy of his work is sufficiently proved by the fact that anxious queries were addressed to him from the countries in which he was most fervently admired, Yemen and Provence, and Maimonides answered them. Abraham b. David of Posquières wrote: “The words of this man seem to me to be very near to him who says there is no resurrection of the body, but only of the soul. By my life, this is not the view of the sages” (Comm. to Yad, Teshuvah 8:2). Some Jews from Yemen however, unsatisfied, wrote to “Samuel b. Ali the powerful and learned Gaon in Baghdad who sent a reply, which although couched in terms of respect to Maimonides, vigorously denounced his views. It would appear that the vehemence of this reply was connected with Samuel’s desire to assert his authority as gaon over Egypt, which he thought was being usurped by Maimonides. On the other hand, Maimonides held the exilarch Samuel (of Josiah b. Zakkaï’s line), the successor of the exilarch Daniel b. Hisdal, in higher esteem than the gaon Samuel b. Ali. Thus the relations between Maimonides and the gaon remained strained, although there was never open hostility. Joseph ibn Sham’un, in Baghdad, who had also queried Maimonides’ views on resurrection, sent a copy of Samuel’s reply to Maimonides and with great reluctance Maimonides felt himself compelled to write his Mā’amar Teḥiyyat ha-Metim in which he asserted and confirmed his belief in the doctrine.

Maimonides was active as head of the community. He took vigorous steps to deal with the Karaites, and as a result brought about the supremacy of the Rabbanites in Cairo. On the one hand he emphatically maintained that they were to be regarded as Jews, with all the attendant privileges. They might be visited, their dead buried, and their children circumcised, their wine permitted; they were however not to be included in a religious quorum (Resp. ed. Blau, 449). Only when they flouted rabbinic Judaism was a barrier to be maintained. One was particularly to avoid visiting them on their festivals which did not coincide with the dates fixed by the rabbinic calendar. One of the inroads which they had caused in orthodox observance was with regard to ritual immersion for the *niddah. Their view that an ordinary bath was sufficient had been widely adopted among the Rabbanites. Maimonides succeeded in restoring rabbinic practice in this matter, but generally his policy toward the Karaites was more lenient in his later years, and was continued by his son Abraham. (For an
exhaustive treatment of this subject see C. Tchernowitz, *Toledot ha-Posekim* (1946), 197–208.)

Maimonides made various changes in liturgical custom, the most radical of which was the abolition of the repetition of the 'Amidah in the interests of decorum. With the completion of the *Guide*, Maimonides’ literary work, apart from his extensive correspondence, came to an end. In failing health he nevertheless continued his work as head of the Jewish community and as court physician. (It is doubtful whether he actually held the appointment of nagid as is usually stated; see M.D. Rabinowitz, *Introduction to Ma'amak Tehiyat ha-Metim* in *Iggerot ha-Rambam*, 220–7.)

It was during this period however that he engaged in his correspondence with the scholars of Provence in general and with Jonathan of Lunel in particular. In some instances the border line between responsum and letter is not clearly defined (e.g., his letter to Obadiah the Proselyte, see below), but, as Kobler comments, the letters of Maimonides mark an epoch in letter writing. He is the first Jewish letter writer whose correspondence has been largely preserved. Vigorous and essentially personal, his letters found their way to the mind and heart of his correspondents, and he varied his style to suit them. But above all they reveal his whole personality, which is different from what might be expected from his *Mishneh Torah* and the *Guide*. The picture of an almost austere and aloof intellect above human passions and emotions derived from there is completely dispelled.

Maimonides died on December 13, 1204. There were almost universal expressions of grief. Public mourning was ordained in all parts of the Jewish world. In Fostat mourning was ordained for three days and in Jerusalem a public fast and the Scriptural readings instituted concluded with the verse “the glory is departed from Israel, for the Ark of the Lord is taken” (1 Sam. 4:22). His remains were taken to Tiberias for burial, and his grave is still an object of pilgrimage.

**Influence**
The influence of Maimonides on the future development of Judaism is incalculable. No spiritual leader of the Jewish people in the post-talmudic period has exercised such an influence both in his own and subsequent generations. Despite the vehement opposition which greeted his philosophical views the breach was healed (see *Maimonidean Controversy*).

It is significant that when Solomon *Luria strongly criticized Moses Isserles for his devotion to Greek philosophy, Isserles answered that his sole source was Maimonides’ *Guide*, thus giving it the cachet of acceptability (Resp. Isserles 7). It was probably due to his unrivaled eminence as talmudist and codifier that many of his views were finally accepted. They were very radical at the time. To give but one example, the now universally accepted doctrine of the incorporeality of God was by no means accepted as fundamental before him and was probably an advanced view held by a small group of thinkers and philosophers. Even Abraham b. David of Posquières protested the statement of Maimonides that anyone who maintains the corporeality of God is a sectarian: “Why does he call him a sectarian? Many greater and better than he accepted this idea [of the incorporeality of God] basing themselves on Scripture” (Yad, Teshuvah 3:7). C. Tchernowitz (*Toledot ha-Posekim*, 1 (1946), 193) goes so far as to maintain that were it not for Maimonides Judaism would have broken up into different sects and beliefs, and that it was his great achievement to unite the various currents, halakhic and philosophic.

Maimonides is regarded as the supreme rationalist, and the title given by Ahad Ha-Am to his essay on him, “Shilton ha-Sekhel” (“The Rule of Reason”; in: *Ha-Shiloah*, 15 (1905), 291–319) included in his collected works, *Al Parashat Derakhim* (1921), has become almost standard in referring to him, and so long as one confines oneself to his three great works, the commentary on the Mishnah, the *Mishneh Torah*, and the *Guide*, a case can be made out for this view.

In the *Mishneh Torah*, Maimonides rigidly confines himself to a codification of Jewish law, refraining almost entirely from allowing his personal views to obtrude. Where he does advance his own view to which he can find no talmudic authority, he is careful, as he explicitly states in a letter to Jonathan of Lunel, to introduce it with the words “it appears to me” (cf. Yad, Sanhedrin 4:11). From his knowledge of medicine he was aware that certain disabilities in animals which in the time of the Talmud were regarded as fatal were susceptible to cure, while some which were not so regarded were in fact fatal, yet he lays it down that the talmudic view must be applied (Shehitah 10:12 and 13). Among the few exceptions the most striking is his outburst against belief in witchcraft and enchantment. After faithfully giving in their minutest details the talmudic description of, and laws concerning, these practices, he adds: “All these and similar matters are lies and falsehood… it is not fitting for Jews, who are intelligent and wise, to be attracted by them or believe that they are effective… whosoever believes in them, and that they are true, only that the Bible has forbidden them, belongs to the category of fools and ignoramuses and is in the class of immature women and children” (*Avodat Kokhavim* 11:16). In his work on the calendar included in the *Mishneh Torah* (*Hilkhot Kiddush ha-Hodesh*) he maintains vigorously that one should have recourse to works written by non-Jewish astronomers (11:1–6). At the end of *Hilkhot Temurah*, he defends the search after reasons for the biblical commandments (4:13).

In the *Guide* he allows himself more freedom, but the main difference between the two works lies in their different purpose and aim. The *Mishneh Torah* was written for the believing Jew untroubled by the apparent contradictions between revealed law and current philosophy, and its aim was to tell him how he should conduct himself in his desire to live according to the law. The *Guide*, as its name conveys, was designed for those whose faith had been weakened by these doctrines and its aim was to tell him why he should adhere to traditional Judaism. This helps to explain the contradictions between the two.
In both works one sees only the unemotional man of intellect. It is in his letters that Maimonides emerges as the warm human being, his heart open to the suffering of his people, and expressing and responding to both affection and hostility. It comes almost as a shock to read in his letter to Japheth b. Ali, when he informs him of the death of his brother David, that he remonstrates with him for not sending a letter of condolence to him on the death of his father which took place 11 years earlier though he had received innumerable such messages from all over the Jewish world, repeating the complaint twice. The letter was written eight years after his brother’s death, yet he writes, “I still mourn, and there is no comfort…. Whenever I come across his handwriting or one of his books, my heart goes faint within me, and my grief reawakens” and in that letter he continues that he will never forget those days which he passed in Erez Israel with his correspondent (Kobler 192–3). The personal human element is equally to the fore in the above-quoted letter to Samuel ibn Tibbon, while his letter-responsum to Obadiah the Proselyte reveals Maimonides’ spirit to the full. It was surely only to his intimate disciple that he could open his heart and declare, “when I see no other way of teaching a well-established truth except by pleasing one intelligent man and displeasing ten thousand fools, I choose to address myself to the one man and take no notice whatsoever of the condemnation of the multitude” (Introduction to the Guide). On the other hand Maimonides is almost virulent in his opposition to songs and music: “song and music are all forbidden, even if unaccompanied by words … there is no difference between listening to songs, or string music, or melodies without words; everything which concedes to the rejoicing of the soul and emotion is forbidden.” It is immaterial whether they are in Arabic or in Hebrew. “A person who listens to foolish songs with musical accompaniment is guilty of three transgressions, listening to folly, listening to song, and listening to instrumental music. If the songs are sung with accompaniment of drinking, there is a fourth transgression, if the singer is a woman there is a fifth.” The references in the geonic sources to singing are only to liturgical hymns (Resp. ed. Blau, 224. cf. 269; Guide 3:8; Yad, Ta’anit, 5:14). Despite this last permission he was opposed to the insertion of piyyutim in the prayers (180, 207, 254, 260, 261). If the ignorant insist on them and their ways prevail, they should be said before the Shema, the beginning of the essential service (207).

No praise can be too high for the outer form of his works, both in language and logical method. The Mishneh Torah was the only work which he wrote in Hebrew, and the language is superb, clear, and succinct. He regretted that he did not prepare Hebrew versions of his other works. In answer to Joseph b. Gabir’s request written in 1191 that he translate the work into Arabic, not only does he state that it would thereby lose its specific character, but that he would have liked to translate his works written in Arabic into Hebrew (Kobler 199); and when the rabbis of Lunel asked him to translate the Guide into Hebrew, he stated that he wished he were young enough to do so (ibid., 216).

The Mishneh Torah is a model of logical sequence and studied method, each chapter and each paragraph coming in natural sequence to its preceding one. More impressive is the fact that in his earliest work one can so clearly discern the seeds of the later, so that it can confidently be stated that his whole subsequent system and ideas were already formulated in his mind when he wrote it. The Shemonah Perakim which form the introduction to his commentary on the Mishneh Torah is almost a draft of the first portion of Sefer Madda, the first book of the Mishneh Torah. When attacked on his views on resurrection he pointed out that he had included it in the Thirteen Principles which he evolved in his commentary to the tenth chapter of Sanhedrin. The radical view found in the very last chapter of the Mishneh Torah that the messianic age is nothing more than the attainment of political independence in Israel is stated in detail in that same excursus, and his original view on the possibility of the reestablishment of the Sanhedrin, which he carefully puts forward as his own (“it appears to me”) and which he qualifies by the statement “but the matter must be weighed up” (Sanhedrin 4:11), is already expressed in his commentary on the Mishnah (Sanh. 1:1).

[Louis Isaac Rabinowitz]

As Halakhist

Maimonides’ halakhic activity began during his youth with his commentary to some tractates of the Talmud (introduction to commentary to the Mishnah). Only fragments on several tractates have survived (see S. Asaf, in: Sina'it, 6 (1940), 103–32, on Shabbat; M. Kamelhar (1956) on Yoma): the commentary to Rosh Ha-Shanah, published in its entirety (by J. Brill, 1865; Y. A. Kamelhar, 1906), is of doubtful authenticity (see M. J. L. Sachs, Hiddushei ha-Ra-MBa-M la-Talmud (1963), introd. 13–23). His Hilkhot ha-Yerushalmi (“Laws of the Palestinian Talmud”), alluded to in his commentary to the Mishnah (Tamid 5:1), is not extant; the authenticity of the fragments published by Saul Lieberman (1947) has been challenged (Benedikt in: KS, 27 (1950–51), 329–49). It is interesting to note, in view of the fact that his famous code, the Mishneh Torah, embraces the whole of Jewish law, both practical and theoretical, that in both these works he confined himself to the practical halakhah, his commentary on the Talmud being confined to the orders “Mévod, ‘Nashim, and ‘Nezikin and the tractate ‘Hullin, which deals with dietary laws.

Commentary to the Mishnah

It is through his commentary to the Mishnah that one can begin to review Maimonides as a halakhist. In his commentary, Maimonides sets out to explain to the general reader the meaning of the Mishnah, without having recourse to the involved and lengthy discussions in the Gemara, the language of which was more difficult than the Mishnah itself (Mishneh Torah, introd.). Out of the mishnaic and other tannaic texts and corresponding passages in the Gemara, often widely scattered throughout the Talmud, Maimonides evolves the underlying principles of the subjects discussed, which a particular
Mishnah, chapter, or entire tractate presupposed. In some cases he interprets the Mishnah differently from the Gemara (cf. in Sanh. 1:1). It has been asserted that even during his early work as a commentator, Maimonides was at the same time a codifier, a role which he later successfully developed in the Sefer ha-Mitzvot and the Mishneh Torah (M. Guttmann, in: J. Guttmann et al. (eds.), Moses ben Maimon, 2 (1914), 306–30; idem, in: HUCA, 2 (1925), 229–68). Following his explanatory glosses to the mishnaic passage, Maimonides gave the halakhic decision in each Mishnah based on his reading of the discussion in the Gemara.

Of special significance are the lengthy introductions he included in his commentary. The general introduction which heads his commentary to the order of Zera'im is in reality an introduction to and history of the Oral Law from Moses until his own days. The introduction to Avot, known as the Shemonah Perakim (“Eight Chapters”) is a philosophical and ethical treatise in which its author harmonized Aristotle's ethics with rabbinical teachings. In the introduction to Mishnah Sanhedrin (101b), which begins with the words “All Israel has a portion in the world to come,” Maimonides dealt at length with the fundamental doctrines of Judaism which are formulated in the Thirteen Articles of Faith. Especially extensive and exhaustive is the introduction to the difficult order Tohorot, in which Maimonides systematizes all that had been said in talmudic literature on the subject of ritual purity and impurity. The standard Hebrew translation, the work of a number of hands, is a poor rendering of the Arabic original. A new and more faithful translation was made by Y. Kafah, Mishnah im Perush ha-Rambam … (1963–68).

The Responsa of Maimonides

The publication of the critical editions of the responsa of Maimonides (ed. by A. Freimann, 1934; J. Blau, 1957–61) affords a better opportunity to appraise his role in the communal life of the Jews of Egypt and neighboring countries. The responsa, which were in the language of the questioner, whether Hebrew or Arabic, number 464; some of them soon found their way into halakhic literature. Although not all responsa bear the date of composition, it has been ascertained that Maimonides' responsa extend from about 1167, a short time after his arrival in Egypt, until a little before his death. The questioners include prominent scholars like R. Anatoli and R. Meshullam, dayyanim in Alexandria; *Jonathan ha-Kohen of Lunel; Joseph b. Gabir; Nissim of Damascus; and Samuel b. Ali, Gaon of Baghdad. From these responsa one learns of the growing tension between the gaon of Baghdad and Maimonides in connection with traveling on the high seas on the Sabbath, prohibited by Samuel b. Ali but permitted by Maimonides (ed. Blau, no. 308–9). Some of the responsa to Jonathan of Lunel, who was a disciple of *Abraham b. David of Posquières, are in essence rejoinders to the latter's criticisms, for his questions coincide with the language and style of these criticisms (ed. Freimann, introd. xlv = ed. Blau, 3 (1961), 43).

The bitter experience of his youth failed to nurture in Maimonides rabid anti-Muslim feelings, and he consistently declined to classify Muslims as idolators. Even the ritual practices connected with the Ka'ba stone in Mecca did not in his opinion deny Islam its purely monotheistic nature (ed. Freimann, no. 369 = ed. Blau, no. 448; see S. Baron, in: PAAJR, 6 (1935), 83f.). In reply to an inquiry by Saadiah b. Berakhot about the authenticity of the gnostic work, Shi'ur Komah, Maimonides writes: “Heaven forfend that such work originated from the sages; it is undoubtedly the work of one of the Greek preachers ... and it would be a divine act to suppress this book and to eradicate its subject matter” (ed. Freimann, no. 373 = ed. Blau, no. 117; see Scholem, Mysticism (1946), 63ff.). Of special interest is his responsum to Obadiah the Proselyte (ed. Freimann, no. 42 = ed. Blau, no. 293), who inquired if he was permitted to say in the blessings and prayers, “Our God and God of our Fathers,” “Thou who has chosen us,” “Thou who has worked miracles to our fathers,” and similar expressions. Maimonides' responsum, apart from its halakhic merit, is a unique human document displaying grave concern for the feelings of this lonely proselyte who was so unsure of himself. Obadiah was advised that he was to recite all those prayers in the same way as one born a Jew, that he must not consider himself inferior to the rest of the Jews. The major part of this responsum has been translated into English by F. Kobler (see also S.B. Freehof, Treasury of Responsa (1962), 28–34). These responsa, although confined to halakhic decisions, nevertheless display Maimonides' views on matters of doctrine and fundamentals of Judaism.

Sefer ha-Mitzvot (“Book of the Commandments”)

Maimonides found all previous attempts at enumerating the traditional 613 commandments unsatisfactory. He therefore composed the Sefer ha-Mitzvot in which he gave his own enumeration of the 248 positive and the 365 negative commandments. As an introduction to this work, he laid down 14 principles which guided him in the identification and enumeration of the commandments. He severely criticized the work of his predecessors, such as the enumeration of the "Halakhot Gedolot and of R. Hefez, as well as those paytanim like Solomon ibn Gabirol, who composed the Azharot, religious hymns based on enumeration of the commandments.

Maimonides' sharp criticism of the Halakhot Gedolot evoked a defense of the latter by Nahmianides, a staunch apologist "for the ancients," who in his Hassagot strongly criticized Maimonides, accusing him of inconsistencies. He was also challenged by Daniel ha-Bavli, a disciple of Samuel b. Ali, the anti-Maimonist. His criticisms took the form of questions which he sent to Abraham, the son of Maimonides, who replied to them. The Sefer ha-Mitzvot, however, was generally accepted, and a whole body of literature was produced in defense of it, apart from the general works on the 613 commandments according to Maimonides' classification and enumeration (see A. Jellinek, Kunteres Taryag, 1878).

The Sefer ha-Mitzvot, originally written in Arabic, was translated several times into Hebrew. The version by Abraham
ibn Hasdai is no longer extant, while the translation by Moses ibn Tibbon, in its critical edition by H. Heller, is accepted as the standard text (1946).

**The Mishneh Torah (“Repetition of the Law”)**

The *Sefer ha-Mitzvot* was not an end in itself but an introduction to the *Mishneh Torah* (Responsa, ed. Freimann, no. 368 = ed. Blau, no. 447), on which Maimonides labored for ten successive years. The purpose of the work is explained by Maimonides:

> In our days, many vicissitudes prevail, and all feel the pressure of hard times. The wisest of our wise men has disappeared; the understanding of our prudent men is hidden. Hence, the commentaries of the *geonim* and their compilations of laws and responsa, which they took care to make clear, have in our times become hard to understand, so that only a few individuals fully comprehend them. Needless to add that such is the case in regard to Talmud itself, both Babylonian and Jerusalem, and the *Sifra*, *Sifre*, and *Tosefta*, all of which require, for their comprehension, a broad mind, a wise soul, and considerable study. Then one might learn from them the correct way to determine what is forbidden and permitted, as well as other rules of the Torah. On these grounds, I, Moses the son of Maimon the Sephardi bestirred myself, and relying on the help of God, blessed be He, intently studied all these works, with the view of putting together the results obtained from them … all in plain language and terse style, so that thus the entire Oral Law might become systematically known to all without citing difficulties and solutions of differences of view … but consisting of statements, clear and convincing, that have appeared from the time of Moses to the present, so that all rules shall be accessible to young and old … (introduction to *Mishneh Torah*).

Maimonides then set for himself the task of classifying by subject matter the entire talmudic and post-talmudic halakhic literature in a systematic manner never before attempted in the history of Judaism. The *Mishneh Torah* was divided into 14 books, each representing a distinct category of the Jewish legal system. (In Hebrew 14 is *yad* and hence the alternative name of the work *Yad ha-Ḥazakah*, i.e., “the strong hand.”)

Even though the *Guide of the Perplexed* was written after the completion of the *Mishneh Torah*, Maimonides succeeded in incorporating many of its philosophic and scientific aspects into this purely halakhic work. Philosophy and science were handmaids to theology. Hence Book 1 contains a complete system of metaphysics, Book 3 the astronomical calculations for reckoning the calendar, and Book 14 a discussion of the doctrine of the Messiah and a refutation of Christianity, Islam, and their founders. These digressions, which technically speaking are not halakhic in essence but rather ethical and philosophic, occur frequently in the halakhic writings of Maimonides.

Unlike the commentary to the Mishnah and *Sefer ha-Mitzvot* which were written in Arabic, the *Mishneh Torah* was written in a beautiful and lucid Hebrew, the like of which had not been known in halakhic literature since Judah ha-Nasi composed the Mishnah. The *Mishneh Torah* influenced the language of later codes, including the Shulḥan Arukh (see J. Dienstag, in: *Sinai*, 59 (1966), 54–75).

**Opposition to the Code.** The entire structure, form, and arrangement of the *Mishneh Torah* was a cultural and historical phenomenon unprecedented in Jewish dogmatic jurisprudence (see *Codification of Law*) which both awed and shocked the scholarly world for centuries (see *Maimonidean Controversy*). The architectural beauty of its structure, its logical arrangement, and ready-reference nature were the main targets for criticism, for it was feared that students would turn away from the study of the Talmud and commentaries, the source and wellspring of dynamic halakhic creativity. The severest criticism came from Abraham b. David of Posquières, an older contemporary of Maimonides, who probably equaled him in talmudic scholarship. The most serious of his charges was that Maimonides neglected to cite the sources and authorities from which his decisions were derived:

> He [Maimonides] intended to improve but did not improve, for he forsook the way of all authors who preceded him. They always adduced proof for their statements, citing the proper authority; this was very useful, for sometimes the judge would be inclined to forbid or permit something and his proof was based on some other authority. Had he known there was a greater authority who interpreted the law differently, he might have retracted… hence I do not know why I should reverse my tradition or corroborative views because of the compendium of this author. If the one who differs from me is greater than I, fine; and if I am greater than he, why should I annul my opinion…? Moreover, there are matters on which the *geonim* disagree and the author has selected the opinion of one…. Why should I rely on his choice…. It can only be one that an overbearing spirit is in him (Abraham b. David’s *Hasagot* to introduction of *Mishneh Torah*).

These charges were not motivated by personal animosity, as claimed by some scholars of the Haskalah period, for on many occasions Abraham b. David traces certain sources of laws in the Code or comments upon it. At other times he is overwhelmed by this compendium (see I. Twersky, in: *Sefer ha-Yovel* … Zevi Wolfson (1965), 169–86). Abraham b. David’s objections were shared by lesser-known scholars (I. Twersky, in: A. Altmann (ed.), *Biblical and other Studies* (1963), 161–82), who added their own criticism. During the 19th century, opposition to the *Mishneh Torah* was still a subject of controversy between S.D. Luzzatto, N. Krochmal, and others (J. Dienstag, in: *Bitzaron*, 55 (1967), 34–37).

In a series of letters Maimonides replied to his criticism that his intention in writing the *Mishneh Torah* was not to discourage talmudic studies, including the *halakhot* of Alfasī. On the contrary, he had lectured to his pupils on these subjects (A. Lichtenberg (ed.), *Koveẓ Teshuvot ha-Rambam* (1859), pt. 1, no. 140 p. 25, b–c). He regretted the omission of his sources and hoped to include them in a supplement (*ibid.*). Maimonides never realized this hope. However, practically every commentary on the *Mishneh Torah* attempted to trace its sources. If his aim in compiling the Code was “so that no other work should...
be needed for ascertaining any of the laws of Israel," the more than 300 commentaries and novellae which have been written on it – and their number is growing – is an ironic phenomenon that could not have been anticipated by Maimonides. The *Mishneh Torah* did not become the definitive code its venerated creator had hoped. Actually, it surpassed his hopes, for it became the major source of halakhic creativity and talmudic research equaled only by the Talmud itself.

**Maimonides the Halakhist in Modern Jewish Scholarship**

Finally, it is interesting to note that no other halakhic authority has been the subject of so much modern Jewish scholarship as Maimonides. The tendentious, albeit subtle, anti-halakhic orientation of many of the exponents of the Wissenschaft school and the scholars of the Haskalah (including the leaders of Reform Judaism) has dampened, if not outright discouraged, intensive research in halakhah per se. Some of those who did engage in this discipline, such as A. Geiger, N. Bruell, J.H. Schorr, and others, were motivated by their anti-traditional bias and sought to undermine its authority and advance the cause of modernism and reform. The preoccupation of modern Jewish scholarship with Maimonides as halakhist is out of proportion to its interest in rabbinic literature and the stream of systematic studies on the subject has continued unabated.

[ Jacob I. Dienstag]

**Philosophy**

Maimonides was, by general agreement, the most significant Jewish philosopher of the Middle Ages, and his *Guide of the Perplexed* is the most important philosophic work produced by a Jew. The Arabic original *Dalalat al-Hā’irîn* was completed about 1200 and shortly thereafter was twice translated into Hebrew as *Moreh Nevukhim*. The first translation, a literal one, was made by Samuel ibn Tibbon with Maimonides’ advice and was completed in 1204. The second, a freer translation, was made by the poet Judah *al-Harizi a little later. In its Hebrew translations, the *Guide* determined the course of Jewish philosophy from the early 13th century on, and almost every philosophic work for the remainder of the Middle Ages cited, commented on, or criticized Maimonides’ views.

While the *Guide* contained the major statement of Maimonides’ position, his philosophic and theological views appeared in a variety of other writings, among which the most important are the three lengthy essays in his commentary to the Mishnah (see above), first book of the *Mishneh Torah*, *Sefer ha-Madda* which is devoted to God and His attributes, angelic beings, the structure of the universe, prophecy, ethics, repentance, free will and providence, and the afterlife, and the last section of the work, *Mishneh Torah*, *Hilkhot Malakhim* which includes a discussion on the Messiah and the messianic age.

**Influences on Maimonides**

In his philosophic views Maimonides was an Aristotelian (see ‘Aristotle’), whose philosophy also contained some neoplatonic elements, and it was he who put medieval Jewish philosophically on a firm Aristotelian basis. But in line with contemporary Aristotelianism his political philosophy was Platonic. In his works he quotes his authorities sparingly (see “Shemonah Perakim,” introduction, end), but in a letter to his translator Samuel ibn Tibbon (A. Marx, in: *JQR*, 25 (1934–35), 374–81) he indicated his philosophic preferences explicitly. In this letter he advises Ibn Tibbon to study the works of Aristotle with the help of the Hellenistic commentators ‘Alexander of Aphrodisias and “Themistius and of Maimonides” contemporary ‘Averroes. It appears, however, that Averroes’ commentaries reached Maimonides too late to have any influence on his *Guide*. He recommends highly the works of the Muslim al-*Fārābī, particularly those on logic, and he speaks of the writings of the Muslim ‘Avempace (Ibn Baja) with approval. The works of ‘Avicenna (Ibn Sinā) in Maimonides’ view are also worthy of study, but they are inferior to those of al-*Fārābī. Of Jewish philosophers he mentions only Isaac *Israel*, of whose views he disapproves, and Joseph ibn *Zaddik, whom he praises for his learning, though he states that he knew only the man, not his work. He also mentions some other philosophers of whose views he disapproves. Al-*Fārābī, Avempace, and Averroes interpreted Aristotle rationalistically, and it appears that Maimonides preferred their interpretations to the more theologically oriented one of *Avicenna*, though he relied on *Avicenna* for some of his views.

(For a full discussion of sources, see S. Pines, *Guide of the Perplexed* (1965), translator’s introduction lvi–cxxxiv.)

Maimonides considered himself in the tradition of the Aristotelians, adapting and developing their teachings in accord with his own views; but he differed from them in the works he produced. While the Muslims had composed commentaries on Aristotle’s works, summaries of his views, and independent philosophic treatises, Maimonides produced no purely philosophic work of his own, the early *Treatise on Logic* excepted. He held that the extant philosophic literature was adequate for all needs (*Guide* 2, introd., proposition 25, and ch. 2), and he devoted himself to specific issues, particularly those bearing on the interrelation of philosophy and religion.

**Distinction between Intellectual Elite and Masses**

Fundamental to Maimonides’ approach is a division of mankind into two groups: an intellectual elite, who, using reason, can understand by means of demonstrative arguments, and the masses (including those scholars who study only religious law), who, using imagination, understand by means of persuasive arguments. In the light of this distinction Maimonides’ works may be divided into two kinds: *Guide of the Perplexed*, addressed primarily to an intellectual elite, and his other writings, addressed to the masses.

This distinction had one further consequence for Maimonides. Maimonides identified ma’aseh bereshit (the account of the creation) and ma’aseh merkavah (the account of the divine chariot of Ezekiel) with physics and metaphysics respectively. According to the Mishnah, however (Hag. 2:1) one may not teach the former to two persons, nor the latter even to one,
unless he is wise and able to understand by himself. Maimonides codifies this as halakah (Yad, Yesodei ha-Torah, 2:12; 4:10–13) and in his commentary to the Mishnah gives as the reason for the prohibition the current philosophical opinion that the teaching of abstract matters to someone who cannot grasp them may lead to unbelief.

This prohibition against the public teaching of maaseh merkavah and maaseh bereshit posed a problem. How could he write the Guide, a book devoted to these esoteric topics, when putting something in writing is equivalent to teaching it in public? Maimonides solved this problem by making use of certain literary devices. First, Maimonides addressed the book to his disciple, Joseph ibn Judah ibn Sham'un, who after studying with him left for Baghdad. Hence, the Guide in its formal aspect is a personal communication to one student. Moreover, Maimonides, in a dedicatory letter at the beginning of the Guide, relates Joseph's intellectual history, showing that he had acquired some philosophic wisdom and that he was able to reason for himself. Hence, Joseph had fulfilled the conditions necessary for studying the esoteric disciplines.

But Maimonides was well aware that persons other than Joseph would read his work. Hence, he had to make use of other devices. Invoking modes of esoteric writing also current among Islamic philosophers, Maimonides wrote his work in an enigmatic style. Discussing the same topic in different passages, he would make contradictory statements about it. He describes this method in the introduction to the Guide, where he speaks of seven types of contradictions which appear in literary works, stating explicitly that he will make use of two of them. It is left to the perceptive reader to discover Maimonides' true views on a given issue.

The enigmatic nature of the Guide imposed great difficulties on medieval and modern commentators, and two schools of interpretation arose. Some, such as Julius Guttmann, while aware of Maimonides' method, consider him a philosopher who attempted to harmonize the teachings of religion with those of philosophy. Others, such as Leo Strauss, considered Maimonides a philosopher, whose views were in agreement with those of the rationalistic Aristotelians, and who expressed religious opinions largely as a concession to the understanding of the masses. For example, Maimonides, according to the first interpretation, believed that the world was created, while according to the second, his true view was that the world is eternal.

With all these distinctions in mind one may proceed to an exposition of Maimonides' philosophy based largely on the Guide.

**Purpose of the Guide**

Maimonides wrote his work for someone who was firm in his religious beliefs and practices, but, having studied philosophy, was perplexed by the literal meaning of biblical anthropomorphic and anthropopathic terms. To this person Maimonides showed that these difficult terms have a spiritual meaning besides their literal one, and that it is the spiritual meaning that applies to God. Maimonides also undertook in the Guide the explanation of obscure biblical parables. Thus, the Guide is devoted to the philosophic interpretation of Scripture, or, to use Maimonides' terms, to the "science of the Law in its true sense" or to the "secrets of the Law" (Guide, introd.).

**God**

Maimonides' first philosophical topic is God. In line with his exegetical program he begins by explaining troublesome biblical terms, devoting the major portion of the first 49 chapters of the first part of the Guide to this task. Representative of his exegesis are his comments on the term "image of God" (zelem Elohim), found in the opening section of Genesis. Some have argued, Maimonides states, that since man was created in the image of God, it follows that God, like man, must have a body. He answers the objection by showing that the term zelem refers always to a spiritual quality, an essence. Hence, the "image of God" in man is man's essence, that is his reason but not physical likeness (Guide 1:1).

**Divine Attributes.** Maimonides then takes up the question of God's attributes (Guide 1:50–60). The Bible describes God by many attributes, but it also states that God is one. If He is one in the sense of being simple, how can a multiplicity of attributes be ascribed to Him? Medieval philosophers held that attributes applied to substances are of two kinds: essential and accidental. Essential attributes are those that are closely connected with the essence, such as existence or life; accidental attributes are those that are independent of the essence and that may be changed without affecting the essence, such as anger or mercifulness. Medieval logicians generally agreed that accidental attributes introduce a multiplicity into that which they describe, while they disagreed concerning essential attributes. Some, such as Maimonides' contemporary Averroes, held that essential attributes are implicitly contained in the essence and, hence, do not introduce multiplicity; others held that they provide new information and, hence, produce multiplicity. Avicenna was an exponent of the latter view, holding that essential attributes, particularly existence, are superadded to the essence. Maimonides accepted Avicenna's position on this point. Maimonides came to the conclusion that accidental attributes applied to God must be interpreted as attributes of action, that is, if it is said that God is merciful, it means that God acts mercifully; and essential attributes must be interpreted as negations (or more precisely, negations of privations), that is, if God is said to be existing, it means that he is not nonexistent.

(See also *God, Attributes of*).

**Existence, Unity, and Incorporeality of God.** Prior to Maimonides, Islamic and Jewish *Kalām* philosophers had offered arguments for the existence, unity, and incorporeality of God and for the creation of the world. Maimonides summarized the teachings of the Kalām philosophers in order to refute them (Guide 1:71–76). In the case of the existence, unity, and incorporeality of God, Maimonides held that these are le-
gitimate philosophic issues, but that the Kalâm philosophers, relying on categories of the imagination rather than reason, had not solved them correctly. In the case of creation he held that to demonstrate the creation or eternity of the world lies outside the competence of the human mind.

Maimonides prefaces his own proofs for the existence, unity, and incorporeality of God with 25 metaphysical and physical propositions, which he considers to have been demonstrated in the philosophic literature of his days. To these he adds a 26th proposition, namely, that the world is eternal. However, it appears that this proposition does not reflect Maimonides' own belief concerning the origin of the world (see below), but serves, rather, a methodological function. It can be seen readily, Maimonides implies, that if it is assumed that the world is eternal, the existence of God can still be demonstrated (Guide 2, introd.).

**Existence.** To demonstrate the existence of God, Maimonides makes use of four proofs current in his day: from motion, from the composition of elements (also a kind of argument from motion), from necessity and contingency, and from potentiality and actuality (causality). The common structure of all of them is that they begin with some observed characteristic of the world, invoke the principle that an infinite regress is impossible, and conclude that a first principle must exist. For example, Maimonides begins his first proof, that from motion, by noting that in the sublunar world things constantly move and change. These sublunar motions, in turn, are caused by celestial motions which come to an end with the motion of the uppermost celestial sphere. The motion of that sphere is caused by a mover that is not moved by another mover. This mover, called the Prime Mover, is the last member in the chain of causes producing motion. Maimonides uses the following example as an illustration. Suppose a draft of air comes through a hole, and a stick is used to push a stone in the hole to close it. Now the stone is pushed into the hole by the stick, the stick is moved by the hand, and the hand is moved by the sinews, muscles, etc., of the human body. But one must also consider the draft of air, which was the reason for the motion of the stone in the first place. The motion of the air is caused by the motion of the lowest celestial sphere, and the motion of that sphere, by the successive motions of other spheres. The chain of things moved and moving comes to an end with the last of the celestial spheres. This sphere is set in motion by a principle which, while it produces motion, is itself not moved. This is the Prime Mover, which for Maimonides is identical with God.

Maimonides then turned to the nature of the Prime Mover. Four possibilities exist: Either the Prime Mover exists apart from the sphere, and then either corporeally or incorporeally; or it exists within the sphere, and then either as distributed throughout it or as indivisible. It can be shown that the Prime Mover does not exist within the sphere, which rules out the last two possibilities, nor apart from it as a body, which rules out the third. Hence, it exists apart from the sphere and must be incorporeal. Maimonides shows, further, that there cannot be two incorporeal movers. Thus, it has been established that the Prime Mover exists, is incorporeal, and is one.

Maimonides' proof from necessity and contingency rests on the observation that things in the world are contingent, and that they are ultimately produced by a being that is necessary through itself. This proof was first formulated by Avicenna and was rejected by Averroes (Guide 2:1; for a more popular discussion of Maimonides' conception of God, and his attributes, see Yad, Yesodei ha-Torah, 1–2).

**Creation**

Maimonides next turned to the incorporeal intelligences of the celestial spheres which he identifies with the angels (Guide 2:2–12), and then to creation of the world (Guide 2:13–26). On the last subject he begins by enumerating three theories of the origin of the world: that of the Torah, that the world was created by God out of nothing; that of Plato and others, according to which God created the world out of preexistent matter; and that of Aristotle, according to which the world is eternal. A major portion of the discussion is devoted to showing that Aristotle's and his followers' proofs of the eternity of the world are not really proofs. From an analysis of Aristotelian texts Maimonides attempted to show that Aristotle himself did not consider his arguments as conclusive demonstrations but only as showing that eternity is more plausible than creation. Maimonides' own position is that one can offer plausible arguments for the creation of the world as well as for its eternity. From this it follows that a conclusive demonstration of the creation or the eternity of the world lies beyond human reason; the human mind can only offer likely, technically known as dialectical, arguments for either alternative. However, an examination of these arguments reveals that those for creation are more likely than those for eternity, and on this basis Maimonides accepts the doctrine of creation ex nihilo as his own. An additional reason is that Scripture also teaches creation. Maimonides' intellectual daring is apparent in his statement (ch. 25) that had the eternity of the world been demonstrated philosophically, he would not have hesitated to interpret the Bible accordingly, just as he did not hesitate to interpret anthropomorphic terms in the Bible allegorically. He also states that the principle of creation is the most important one after that of God's unity, since it explains the possibility of miracles and similar occurrences. It should be noted, however, that some interpreters understand Maimonides' esoteric teaching as propounding the eternity of the world.

If the world was created, will it come to an end at some future time? He answers in the negative and adds that the future indestructibility of the world is also taught in the Bible (Guide 2:27–29). Maimonides concludes this phase of the discussion with an explanation of the creation chapters at the beginning of Genesis and a discussion of the Sabbath, which in part is also a reminder of the creation.
Prophecy
In the introduction to the Guide Maimonides incidentally discussed the nature of the prophetic experience, likening it to intellectual illumination. In the present section (Guide 2:32–48) he is interested in the psychology of prophecy and its political function. He begins by listing three possible theories of how prophecy is acquired: that of the unsophisticated believer, who holds that God arbitrarily selects someone for prophecy; that of the philosophers, according to which prophecy occurs when man’s natural faculties, particularly his intellect, reach a high level of development; and that of Scripture, which specifies the same development of natural faculties but adds dependence on God, Who can prevent someone from prophesying, if He so desires. According to this last view, God’s role in prophecy is negative, rather than positive.

Maimonides defined prophecy as an emanation from God, which, through the intermediary of the Active Intellect, flows first upon man’s intellectual faculty and then upon his imagination. While a well-developed imagination is of little significance for the illuminative experience of the prophet, it is central to his political function. In line with the views of the Islamic Aristotelians, particularly al-Fārābī, Maimonides conceives of the prophet as a statesman who brings law to his people and admonishes them to observe it. This conception of the prophet-statesman is based on Plato’s notion, found in the Republic, of the philosopher-king who establishes and administers the ideal state. For Maimonides the primary function of prophets other than Moses is to admonish people to adhere to the Law of Moses; this requires that the prophets use the kind of imaginative language and parables that appeal to the imagination of the masses. Maimonides characterizes three personality types: philosopher, who uses only his intellect, the ordinary statesman, who uses only his imagination, and the prophet, who uses both.

Though he discusses the phenomenon of prophecy extensively, Maimonides mentions Moses, the chief of the prophets, only in passing in the Guide. However, in his halakhic writings he singles out Moses for special discussion. Moses, he states, differed so much from other prophets that he and they had virtually only the name “prophet” in common. Moses’ prophecy is distinguished from that of the other prophets in four ways: other prophets received their prophecy in a dream or vision, Moses received his while awake; other prophets received their prophecy in allegorical form, Moses received his directly; other prophets were filled with fear when they received prophecy, Moses was not; other prophets received prophecy intermittently, Moses received it when he wished (Hakdamah le-Ferek Helek, Principle 7; Yad, Yesodei ha-Torah, 7:6; cf. Guide 2:35). Moses also differed from other prophets and legislators in that he conveyed a perfect law, that is, one that addressed itself not only to man’s moral perfection but also to his intellectual perfection by requiring the affirmation of certain beliefs.

Nature of Evil
Maimonides begins the third part of the Guide (introd. ch. 1–7) with a philosophic interpretation of the divine chariot (merkavah); this exposition brings to a close that part of the Guide that deals with speculative matters, that is, physical and metaphysical topics (Guide 3:7–end). Next he turns to practical philosophy, discussing evil and providence first.

Maimonides accepts the neoplatonic doctrine that evil is not an independent principle but rather the privation, or absence, of good. Like the Neoplatonists and other monists he had to accept this position, for to posit an independent principle of evil was to deny the uniqueness and omnipotence of God. There are three kinds of evil: natural evils, such as floods and earthquakes, which man cannot control, social evils, such as wars, and personal evils, the various human vices, both of which man can control. Natural evils are infrequent, and, hence, the majority of evil in the world, which is caused by man, can be remedied by proper training. Maimonides also argues against those who hold that the world is essentially evil, stating that if one looks at the world at large, rather than at one’s own pains and misfortunes, one finds that the world as a whole is good, not evil (Guide 3:8–12).

Divine Providence
Maimonides discusses divine omniscience and then turns to the related question of divine providence. He distinguishes between general providence, which refers to general laws regulating nature, and individual providence, which refers to God’s providential concern for individual men. He lists four theories of providence that he rejects: the theory of Epicurus (see Epicureanism), which states that everything that happens in the world is the result of chance; that of Aristotle (really that of the commentator Alexander of Aphrodisias), which states that there is only general, not individual, providence; that of the Islamic Asharites (see *Kalām), which states that the divine will rules everything – this is equivalent to individual providence extended to include all beings, animate and inanimate; and that of the Muʿtazilites (see *Kalām), which states that there is individual providence extending even to animals but not to inanimate objects. Last, Maimonides discusses the attitude toward providence of the adherents of the Torah. They all accept man’s free will and God’s justice. To these principles some more recent scholars (Maimonides had in mind the geonim, most likely Saadiah) have added the principle of yissurin shel ahavah (“afflictions of love”), which explains that God may cause suffering to a righteous person in order to reward him in the hereafter. Maimonides rejected it, however, stating that only an unjust God would act in this manner, and asserted that every pain and affliction is a punishment for a prior sin. Finally, Maimonides gave his own position: there is individual providence, and it is determined by the degree of development of the individual’s intellect. The more developed a man’s intellect, the more subject he is to divine providence (Guide 3:16–21). Maimonides used this theory of providence in his interpretation of the Book of Job, in which the characters of that book represent the various attitudes toward providence discussed above (Guide 3:22–23).
Nature of Man and Moral Virtue

Maimonides’ final undertaking in the Guide is his explanation of the Law of Moses and its precepts. But this account is based on his philosophy of man, which he summarizes only in his “Shemonah Perakim.” From this summary it is clear that Maimonides’ philosophy of man was one current among Muslim Aristotelians. Man is composed of a body and a soul, the soul, particularly the intellect, being the form of the body. The soul, which is unitary, contains five basic faculties: nutritive, sensory, imaginative, appetitive, and rational. Of these faculties, the appetitive and rational are important for the good life and for happiness on earth and in the hereafter. Man attains happiness through the exercise of moral virtues to control his appetites and by developing his intellectual powers. In Maimonides’ discussion of morality he follows Aristotle in holding that virtuous action consists of following the mean, but he holds that all should go to the extreme to avoid pride and anger (Yad, Deot, 2:3). While in his halakhic writings Maimonides embraced a morality of the mean, in the Guide he advocates a more ascetic life, and he particularly recommends curbing the sexual drive. As in Aristotelian thought, the moral virtues serve only a preliminary function, the final goal being the acquisition of intellectual virtues.

(For another discussion of Maimonides’ moral philosophy, see Yad, Deot.)

Law of Moses

In the Guide 3:26–49 Maimonides discusses the reasons of the commandments. Maimonides considers a distinction made by Muʿtazilite philosophers, “Saadiah among them. These philosophers had divided divine law into two categories: rational commandments, such as the prohibitions against murder and theft, which the human mind can discover without revelation; and revealed commandments, such as prayer and the observance of holidays, which are neutral from the point of view of reason and can be known only through revelation. Maimonides understands this position as implying that the revelational commandments come from God’s will rather than His reason. Against this view, Maimonides argues that all divine commandments are the product of God’s wisdom, though he adds that some are easily intelligible (mishpatim), and others intelligible only with difficulty (ḥukkim). However, Maimonides adds that particular commandments have no rational principle behind them and are commandments only because God willed them.

Maimonides postulates two purposes of the Law: the well-being of the soul (intellect) and the well-being of the body, by which he means man’s moral well-being. The former is acquired through true beliefs; the latter, through political and personal morality. The beliefs which a man must accept are graded according to his intellectual ability. There are also true beliefs, such as the existence of God, His unity, and His incorporeality, which everyone must accept regardless of intellectual ability; and there are beliefs, such as that God gets angry at those who disobey Him, which have primarily a political function and are considered necessary beliefs. Ordinary men will accept the Law only if they are promised rewards or threatened with punishment, and it is the function of the necessary beliefs to provide such motivation. They are unnecessary for the philosopher, who obeys the Law because it is the right thing to do regardless of consequences.

Although reasons for general moral laws can readily be found, it is more difficult to explain the numerous ritual laws found in the Bible. Maimonides explains many of them as reactions to pagan practices, and he makes use of his extensive familiarity with such books as the Nabatean Agriculture, which describe such practices (see *Commandments, Reasons for). Thus, for example, he explains the biblical prohibition against wearing garments made of wool and linen combined as a reaction to a pagan practice requiring priests to wear such garments. Maimonides also considers certain commandments as concessions to historical situations, such as those dealing with sacrifice. Worship without animal sacrifices is preferred, but it would have been unrealistic to require the Israelites leaving Egypt to give up sacrifices altogether. Hence the Bible commanded sacrifices, restricting, however, the times and places for them and permitting only priests to offer them. We should not infer from this, however, that Maimonides believed in a progressive development of Jewish law; in fact, he codifies all of rabbinic law in his Mishneh Torah. The Guide concludes with a supplementary section on the perfect worship of God and man’s perfection.

Eschatology

Eschatology is barely mentioned in the Guide, although Maimonides developed it fully in other works. Following traditional Jewish teachings, he deals with the Messiah and messianic times, the resurrection of the dead, and olam ha-ba (“the world to come”). He proceeds characteristically by stripping these occurrences of supernatural qualities as much as possible. The Messiah is an earthly king, descended from the house of David. He will bring the Jews back to their country, but his major accomplishment will be to bring peace and tranquility to the world, thereby facilitating full observance of God’s commandments. The Messiah will die of old age and be succeeded by his son, the latter, by his son, and so on. No cataclysmic events will take place during messianic times, but the world will continue in its established natural order. Maimonides calculated the year of the coming of the Messiah (“Epistle to Yemen”), although he generally opposed speculations of this kind (Hakdamah le-Ferok Helek, principle 12; Yad, Melakhim, 12:2 – uncensored edition).

During messianic times the dead will be resurrected with body and soul reunited though later the human person will die again. (For his affirmation of this doctrine in reply to criticism that he rejected it, see above.) Undoubtedly, the central notion of Maimonides’ eschatology is his account of olam ha-ba. In his view the intellect, but not the body, has an afterlife, and in that afterlife the intellect is engaged in the contemplation of God. Generally, he speaks of incorporeal intelligences
(plural), implying that immortality is individual, but there are passages which suggest that immortality is collective, that is, in the world to come there exists only one intellect for all mankind (Hakdamah le-Ferek HaHelek; Yad, Teshuvah, 8–10, Guide 1:41; *Treatise on Resurrection*).

**Basic Principles of Judaism**

Maimonides' rationalism is reflected in the formulation of 13 principles that in his view every member of the Jewish community is bound to accept (see *Articles of Faith*). Did he intend these principles as a means of developing the intellects of the masses, thus enabling them to share in olam ha-ba, or as a political expedient, that is, to make the masses aware of intellectual issues so that philosophers can live safely in their midst? Proponents of both views are found among Maimonides' interpreters (see A. Hyman, in: A. Altman (ed.), *Jewish Medieval and Renaissance Studies* (1967), 119–44).

**Influence**

Maimonides' *Guide*, as has been noted, profoundly influenced the subsequent course of medieval Jewish philosophy. Among the extensive literature that arose were numerous full and partial commentaries on the *Guide*, most of them still unpublished. However, four of these have been printed and they appear many times with the Hebrew text of the *Guide*. They are those of Profiat *Duran* (Efohdi), Shem Tov ben Joseph *Ibn Shem Tov*, Asher *Crescas*, and Isaac *Abravanel*. In addition, the following commentaries have appeared in print: *Moreh ha-Moreh* by Shem Tov Ibn *Falaquera*, which also contains corrections of Ibn Tibbon's Hebrew translation based on the Arabic original (edited by M.L. Bisseliches, 1837); Yair Shiffman has published a critical edition of Shem Tov Ibn Falaquera's commentary *Moreh ha-Moreh* (Jerusalem, 2001); and a commentary by *Moses Narboni* (all three reprinted in *Sheloshah Kadmoni Meshafeshet ha-Moreh*, 1961). Samuel ibn Tibbon composed a philosophical glossary on the *Guide* entitled *Perush me-ha-Millot ha-Zarot asher be-Ma'amarei ha-Rav*, which has also been printed many times. One aspect of the commentary literature is the attempt to reconcile Maimonides' views with the divergent ones of his contemporary Averroes. Of commentaries and notes that have appeared on the *Guide* in more recent times are those of Solomon Maimon's *Givat ha-Moreh* (edited by Samuel Hugo Bergman and N. Rotenreich, 1966), the notes in S. Munk's French translation of the *Guide*, and the Hebrew commentary in Ibn Shmuel's edition.

In addition to its significance for medieval Jewish philosophy, the *Guide* also had a formative influence on modern Jewish thought. Maimonides provided a first acquaintance with philosophic speculation for a number of philosophers of the Enlightenment period and served as a bridge for the study of more modern philosophy. Moses *Mendelsohn is a case in point. In addition, Maimonides became a symbol for their own philosophic endeavors; he had attempted to introduce the spirit of rationalism into Jewish teachings during medieval times, just as they tried to do in their own time. Among modern thinkers influenced in some way by Maimonides are, in addition to Mendelsohn and Solomon Maimon (c. 1752–1800), Nahman *Krochmal, Samuel David *Luzatto* (who opposed Maimonides' rationalism), S.L. *Steinheim, Hermann *Cohen*, and *Ahad *Ha-Am*.

Maimonides exercised an extensive influence on Christian scholastic thought. Among these scholastics are *Alexander of Hales, William of Auvergne, Albertus Magnus, Thomas Aquinas, Meister Eckhart*, and *Duns Scotus*. These scholastics generally quote Maimonides by name, but sometimes they cite his views anonymously. Giles of Rome composed a treatise entitled *Errores philosophorum* about 1270 (edited by J. Koch, with an English translation by J.O. Riedl, 1944), the 12th chapter of which is devoted to a refutation of Maimonides' views. (For Maimonides' influence on scholastic philosophy, see B. Geyer, *Die patriotische und scholastische Philosophie* (1928), index; E. Gilson, *History of Christian Philosophy in the Middle Ages* (1945), index; Görg Hasselhoff, *Dicit Rabbi Moses, Studien zum Bild Moses von Maimonides im lateinischen Westen vom 13. bis zum 15. Jahrhundert* (Würzburg, 2004); Kaufmann, Schriften, 2 (1910), 152–89; Jacob Guttman, in: Moses *ben Maimon*, J. Braun et al. (editors), 1 (1908), 135–250; and see also other studies by Jacob Guttman, Issachar Joel, and Isaac Husik.)

In early modern times Maimonides influenced the secular philosophers Baruch *Spinoza* (see H.A. Wolfson, *The Philosophy of Spinoza* (1954), index) and Gottfried Wilhelm Leibnitz.

[Arthur Hyman]

**AS PHYSICIAN**

Maimonides was probably first taught medicine by his father, but, as stated above, during the seven years which his family spent in Fez, Maimonides probably had the opportunity to pursue his medical studies and mingle with well-known physicians. In his "Treatise on Asthma" he describes discussions with the Jewish physician Abu Yüṣuf b. Mu'allim and with Muhammad, son of the famous Avenzoar, and others. From his commentary on drugs it may also be concluded that he received his basic medical education in Morocco. He refers to "our physicians in the West" and to Morocco and Spain. Most of the names of drugs are given there not only in Arabic but also in Berber and Spanish. The only authors quoted by name are Spanish–Moroccan physicians (Ibn Julia, Ibn Wādid, Ibn Samajun), who lived one to two centuries before him, and his older contemporary al-Ghāṣqī. Maimonides was certainly very familiar with Arabic translations of the writings of Greek physicians as well as with the writings of the older Arab physicians, for he himself condensed some of them.

That Maimonides was highly regarded as a physician among the Muslims is evident from the statements of the historians Ibn al-Qifti (c. 1248) and Ibn Abi Usaybi'a (c. 1270) as well as of the physician 'Abd-al-Latif of Baghdad, who visited Maimonides when he was in Cairo in 1201. A song of praise...
which was written by a grateful patient, Saʿīd b. Ṣanāʾ al-Mulk, has been preserved by Ibn Abi Uṣaybiʿa:

Galen's art heals only the body
But Abu-Amran's [Maimonides'] the body and the soul.
His knowledge made him the physician of the century. He could heal with his wisdom the sickness of ignorance. If the moon would submit to his art, He would free her of the spots at the time of full moon, Would deliver her of her periodic defects, And at the time of her conjunction save her from waning.
(Translation taken from B.L. Gordon, Medieval and Renaissance Medicine (1959), 235.)

Moreover, from certain statements made by Ibn Abi Uṣaybiʿa, it is clear to us that Maimonides also lectured on medicine and taught disciples such as his own son Abraham, as well as Joseph b. Judah ibn Shamʿun, and Rashīd al-Dīn.

Maimonides classified medicine into three divisions: preventive medicine; healing of the sick; and care of the convalescent, including invalids and the aged. His medical teachings, based on the then prevailing humoral pathology as taught by Hippocrates and Galen, are of a strictly rational character. He disapproved strongly of the use of charms, incantations, and amulets in treating the sick, and was outspoken against any blind belief in authority. He encouraged his disciples to observe and reason critically and insisted on experiment and research. In his “Treatise of Asthma” Maimonides stresses that the physician is important not only during sickness but also when the body is healthy. Unlike any other craftsman, the physician must use art, logic, and intuition. Maimonides also added that the physician must be able to take a comprehensive view of the patient and his circumstances in order to make a diagnosis of both his general condition and of diseases of individual organs.

Except for part of his Galen compendium, all of Maimonides' medical writings, most of which were apparently written in Arabic in Cairo during 1190–1204, have been preserved. The majority of these works were translated into Hebrew and Latin and helped to spread his fame in the West.

(1) Al-Mukhaṭṣarāt is a compendium of the works of Galen for teaching purposes, of which only three, in Arabic, have been preserved.

(2) A commentary by him on the Aphorisms of Hippocrates, which had been translated into Arabic by the ninth-century translator Ḥunayn ibn Ishāq, in general follows Galen's commentary; it has been only partially preserved in two defective Arabic manuscripts.

(3) Fūṣūl Mīṣā ("The Aphorisms of Moses") is possibly the most famous and most widely quoted of all Maimonides' medical writings. It was translated into Hebrew under the title Pirkei Moshe, in the 13th century. In this work Maimonides included a large number of medical aphorisms and sundry information, mostly from Galen's own writings or his commentaries on Hippocrates, but also from Arab authors. On speaking of the relation between the right-hand part of the heart and the lungs (1:55), Maimonides seems to have touched on the lesser circulation, without, however, venturing further afield. The passages in 1:19 as well as 8:57 and 62 strongly indicate that he was speaking of arterioles connecting the arteries and the veins.

(4) Sarḥ ʿasmāʾ al-ʿuqqār is a commentary on drugs, the manuscript of which was found in Istanbul in 1932. It consists of 56 pages of 17 lines each. In the introduction Maimonides deals with the necessity of identifying drugs by their popular names. He then lists, in alphabetical order, about 350 remedies, mainly derived from plants. The Arabic names are often followed by Greek and Persian terms as well as colloquial Spanish, Moroccon, Egyptian, and Berber names. The so-called "Prayer of a Physician" was not written by Maimonides but was added later.

(5) Fi al-Bawāsīr is a work on hemorrhoids and was written for a young aristocrat.

(6) Fi al-jīmāʿa, a treatise on sexual intercourse, was written for the sultan Omar son of Nur al-Dīn.

(7) Maqāla Fi al-Rabw ("Treatise on Asthma") was written in 1190. Maimonides regards bronchial asthma as largely due to nervousness, and believes that some people thus inclined react strongly to certain irritants. Correct diet and spiritual treatment, he says, have a beneficial effect on the asthmatic.

(8) Kilāb al-Sūmūm wa al-Mutahharrīn min al-Adwīya al-Qīṭāla ("On Poisons and Their Antidotes"), a very famous manuscript, includes a classic description of the various symptoms of poisoning and is of value even today. Maimonides is the first to distinguish between the various types of snake venoms and suggests the establishment of collections of antidotes in state pharmacies. For snakebites he advises cautery, local tourniquets, rest, and general treatment against shock.

(9) Fi Tadbīr al-Ṣīḥa ("Guide to Good Health"), a treatise on hygiene, is one of the most popular of Maimonides' works. It was written in 1198 for the Egyptian sultan Afdal Nūr al-Dīn Ali, who suffered from attacks of depression accompanied by physical symptoms. Maimonides teaches that physical convalescence is dependent on psychological well-being and rest. He stresses the necessity of hygienic conditions in the care of the body, physical exercise, and proper breathing, work, family, sexual life, and diet, and suggests that music, poetry, paintings, and walks in pleasant surroundings all have a part to play toward a happy person and the maintenance of good health.

(10) Maqāla Fi Bayān al-Aʿrād ("Explanation of Coincidences") was also written for the sultan Afdal Nūr al-Dīn Ali, who requested an explanation of the causes of his continued depression. It is a short treatise on the subject, in 22 chapters.

In the formation of his opinions on man's spiritual well-being, Maimonides' scientific and psychological experiences are closely interwoven with his religious principles. Physical and biological rules are integrated with moral and ethical principles in his world of values. To integrate oneself consciously into the natural biological laws of the world represented for
Maimonides the fulfillment of the idea of walking in the paths of science and wisdom and achieving true knowledge and perfect bliss.

[Suessmann Muntner]

AS ASTRONOMER

Maimonides did not compose a systematic treatise on astronomy, but his competence in the subject is well illustrated by a number of passages in the Moreh Nevukhim (Guide of the Perplexed) and by his treatise on the calendar, The Sanctification of the New Moon (Kiddush Rosh Hodesh in Mishneh Torah). In the Guide there are references to technical aspects of Ptolemaic astronomy, and it is revealed that Maimonides' disciple Joseph ibn Sham'un had studied Ptolemy's *Almagest* under him. Maimonides states that he was acquainted with the son of Jabir ibn Aflah of Seville (d. c. 1150), the author of a well-known astronomical text which takes exception to some Ptolemaic principles. He also refers to a lost work of Ibn Bāja (d. 1139), concerning the principles of astronomy, that he had obviously read with care. According to Maimonides, the physical difficulties of eccentric and epicyclic spheres need not concern the astronomer, whose task is merely to propose a theory in which the motions of the planets and the stars are uniform and circular, and conform to observation. In the Sanctification, Maimonides describes the calendric rules that were used in the time of the Sanhedrin, the rules of the fixed calendar that apply to this day, and the astronomical determination of the beginning of the month. The third section again shows Maimonides to be competent in the technical aspects of Ptolemaic astronomy, although he made no original contribution to the subject. In 1194 Maimonides wrote a letter addressed to the rabbis of southern France strongly denouncing *astrology* as a pseudoscience opposed to the true science of astronomy, an opinion rarely expressed by Jewish scholars in the Middle Ages. In this letter Maimonides stated that astrology was the first secular subject he studied, and that he had read everything available in Arabic on the discipline.

[Bernard R. Goldstein]

TRANSLATIONS

The Arabic original of the Guide was edited, with a French translation, by S. Munk (Le guide des égarés, 3 vols. (1856–66); ed. by I. Joel, based on Munk's text, 1931). Samuel ibn Tibbon's Hebrew translation was first printed in Rome before 1480, and again in Venice, 1551, Sabionetta, 1553, and frequently thereafter. Yehudah Even-Shemuel (Kauffman) edited part of this text with introductions and a commentary in three volumes (1935–59). Yehudah Even-Shemuel (Kauffman) also published a full edition of the Samuel ibn Tibbon translation, but without commentary, in 2000. Y. Kafah published the Judaic-Arabic original with a modern Hebrew translation in three volumes in 1972. Michael Schwarz published a modern Hebrew translation from the Arabic with a modern Hebrew commentary and bibliography in two volumes in 2002. The translation of Judah al-Harizi was edited, with notes, by L. Schlossberg in three parts (1851–79; 19123). Both versions were translated into Latin: that of Ibn Tibbon by J. Buxtorf (Basel, 1629) and Al-Harizi's edited by A. Justinianus (Paris, 1520). The Guide was translated into English by M. Friedlaender, 3 volumes (1885; 1904; repr. 1956), and by S. Pines (1963), with introductions by L. Strauss, and the translator C. Rabin published an abridged translation with an introduction by I. Guttmann (1952). German translations were undertaken in the 19th century (R. Fuerstenthal, pt. 1, 1839; M. Stern, pt. 2, 1864; S. Scheyter, pt. 3, 1888), all based on the Hebrew version of Ibn Tibbon. There is also a modern Hebrew translation from the Arabic by A. Siman and E. Mani, and versions in Italian, Spanish, and Hungarian.

Maimonides, Moses

MAIMUNA, celebration held by all Maghrebi Jews and many Eastern communities at the end of the last day of Passover which, according to tradition, is the anniversary of the death of 'Maimonides' father 'Maimon b. Joseph who lived for a time in Fez. In every home, tables are set with food and drinks having a symbolic significance, varying according to local custom. These include fresh pitchers of sweet milk, garlands of leaves and flowers, branches of fig trees, and ears of wheat. Usually a live fish (a symbol of fertility) is placed on the table, swimming in a bowl. The menu includes lettuce leaves dipped in honey, buttermilk, and pancakes spread with butter and honey. There is a “lucky dip,” a bowl of flour in which golden objects are placed. In some places a plate of flour is set on the table with five eggs and five beans and dates set in it. In Oman, vessels of silver and gold are included in the table decoration. On this night people eat only dairy foods and wafers made of fried dough resembling pancakes, in the table decoration. On this night people eat only dairy foods and wafers made of fried dough resembling pancakes, buttermilk, and pancakes spread with butter and honey. There is a “lucky dip,” a bowl of flour in which golden objects are placed. In some places a plate of flour is set on the table with five eggs and five beans and dates set in it. In Oman, vessels of silver and gold are included in the table decoration. On this night people eat only dairy foods and wafers made of fried dough resembling pancakes, known as muflita. No meat is to be consumed. The Jews visit each other, taking gifts of food. On the day following the holiday, the actual day of Maimuna, people go out to the fields, cemeteries, or the beaches and organize large social gatherings. In modern Israel Jews of Moroccan extraction celebrate the day after Passover with communal outings and picnics, and a central gathering is held in Jerusalem. The exact meaning of the word Maimuna is unknown. A suggestion that it is connected with the name of Maimun, the king of the jinns, has been questioned by scholars. In an article in Tarbiz (41,2, Jan–March 1972), Y. Einhorn quotes new sources to support his contention that the name Maimuna is, in fact linked with the king of the jinns.

[Reuben Kashani]

MAINE, northernmost New England state, had an estimated Jewish population of 9,300 out of a total of 1,277,000 (0.7%) in 2001. More than 7,000 lived in the southern part of the State (in Portland, the largest city, Biddeford, Saco, Brunswick, and Bath). Other substantial communities were Bangor, approximately 1000; Lewiston-Auburn, approximately 500; Rockland approximately 200; Waterville, approximately 200; Augusta, approximately 200; and 200 in other parts of Maine in such communities as Calais, Gardner, Caribou, Rumford Falls, Old Town, Old Orchard Beach and Bar Harbor. A large Jewish summer population added considerably to this number but was difficult to estimate.

There were five congregations in Portland, including a Chabad center, three in Bangor, two in Augusta, and one each in Old Orchard, Biddeford, Augusta, Rockland and Bath.

The Jewish Community Alliance of Southern Maine, located in Portland, and the Bangor Jewish Community Council are the two representative Jewish organizations in the State. The Cedars Nursing Home, the successor to the Jewish Home for the Aged in Portland, is the only such Jewish facility in Maine. Both Portland and Bangor maintained Jewish funeral chapels and Portland also maintained a Jewish Day School. There were Hillel Foundation groups at the University of Southern Maine, University of Maine in Orono and at the private Bates, Bowdoin and Colby Colleges. In addition, the history of Jewish life in Maine was maintained through the Judaica Collection at the Sampson Center for Diversity on the Portland campus of the University of Southern Maine and through the Documenting Old Portland Jewry project.

A Jewish Film Festival has been an annual event in Portland since 1999. Camp Modin, located in Belgrade and founded in 1922, is among America’s oldest overnight camps and New England’s oldest Jewish camp.

Susman Abrams (1743–1830), a native of Hamburg, Germany, was the first known Jewish resident of Maine. He came to the state in the post-Revolutionary period and lived in Waldoborough, Thomaston, and finally in Union where he operated a tannery. Abrams married a Christian woman but did not himself convert to Christianity.

Maine had relatively few German or Sephardic Jewish residents. The Campanal and Decoster families, with Sephardic roots, have been prominent in Maine for several decades and Joseph M. Papo, who was the executive director of the Portland Jewish Federation in 1947–48, wrote the well-regarded book Sephardim in Twentieth Century America: In Search of Unity (1987).

German Jews were among the earliest Jewish residents of the state and began to settle in Bangor by 1829. Bangor developed numerous Jewish institutions and a Jewish cemetery was created in Waterville in 1830.
These Jews, many of them originating in the Boston area, came to Maine as peddlers, walking the roads of the huge state and going from farm house to farm house to sell their wares. Haiman Philip Spitz was the first modern Jewish settler in the Bangor area and helped found, along with five other Jewish families, Congregation Ahawas Achim, which was officially formed in 1849, although the Rev. Isaac Leeser's Occident and American Jewish Advocate mentions the formation of a Bangor congregation in November 1847. Because of economic difficulties, the synagogue and most of the German Jews who founded it, disappeared by 1856. A second group of German Jews, who came to Bangor in the 1860s and 1870s, intermarried itself out of existence within a few years. Yet, Captain A. Goldman, most likely a member of one of the Bangor Jewish families, was the only known Maine Jew to give his life in the cause of the Union during the Civil War as a member of Maine's 17th regiment.

The first German Jew known to have settled in Portland was William M. Shine, who was born in Kempen, Prussia, in 1852 and arrived in Portland in 1867. By the 1870s, there were several German Jewish families in the Portland area. The first East European Jews began to arrive in Portland in 1866 and were peddlers like the German Jews who came to Maine a few decades before them. In 1875, the Portland Lodge of B'nai Brith purchased a site in Cape Elizabeth. The site became the first Jewish cemetery in Portland, the Smith Street Cemetery, located in what later became a part of South Portland.

But there was little organization in the Jewish community of the time, that is until 1886 when Portland celebrated its centenary on July 4. Although only a handful of Jewish families lived in the community, as Bernard Aaronson designated to speak for the small Jewish community of the time observed, "We number sixty families, and over the majority portion being of the middle or poorer class, yet content with their lot….”

That contentment was reflected in a sense of pious synagogue worship, a piety that earned Portland Jewry the nickname of the "Jerusalem of the North.”

The first synagogue in Portland, Congregation Beth Judah, was founded in 1883, although informal minyanim were held a number of years earlier in private homes. In 1885, Reverend Israel Levine became Portland's first rabbi. A number of other synagogues were founded in the years after 1883. Congregation Shaarey Tphiloh, founded in 1904, is most likely the oldest extant synagogue in Maine, celebrating its centennial in 2004. One of the earliest Chassidic rabbis to settle in America, Rabbi Gershon Ackerman, a Brezner Chasid (from the Russian Polish town of Berezno), came to Portland in 1909 and lived in the city until 1928.

The Jews of Maine were fortunate in not having to endure a large amount of anti-Jewish sentiment. That was reserved for Maine's Catholic population, especially its French Catholic community. Know-Nothing activists in the 1840s burned down Catholic churches and tarred and feathered Catholic priests.

In the 1920s, the Ku Klux Klan of Maine, part of a rejuvenated national KKK movement, marched through the streets of several Maine communities, but aimed most of its animosity again at Maine's Catholics rather than the much smaller and less visible Jewish or African American communities.

But Maine's Jews were not immune from social restrictions. Many resorts, country clubs, and private social organizations still restricted Jews by formal or informal means. Finally, in the late 1960s, a number of non-Jewish politicians, including Maine's governor, Kenneth Curtis, decided to end, once and for all, these discriminatory practices. It was a non-Jew, Charles W. Allen (1912–2003), the father of Maine Congressman Tom Allen, a Portland lawyer and member of the Portland City Council, who led the struggle to force private clubs in Maine to open their memberships to Jews and African Americans.

Among the most important Maine Jewish family names, among others, are those of Stern, Bernstein, Povich, Berliawsky, Lown, Wolman, Lipman, Goldsmith, Marcus, Cohen, Cutler, Escovitz, Glickman, Unobskey and Alfond. They, and many other families, have contributed to the success and continuity of Jewish life in Maine.

Other Maine Jews have established their imprint on the national scene as well. Hiram Abrams (1878–1926) was a co-founder of Paramount Pictures Corporation and founded the United Artists Corporation. Shirley *Povich (1905–1997), born in Bar Harbor, was one of the best-known and beloved sports writers in American journalism who wrote for the Washington Post. Albert Abrahamson, born in Portland in 1905, was a professor of economics at Bowdoin College and held various positions in government including that of assistant director of the War Refugee Board, created in 1944 and the only Ameri—
can governmental institution that sought to rescue European Jews from the Holocaust.

Louise *Nevelson (1899–1988) was born in Russia but came to America in 1904 and settled with her family in Rockland, Maine. She became one of the most famous American sculptors. Dahlov Ipcar (born in 1917) is the daughter of another famous American Jewish sculptor, William *Zorach. She came to Maine in 1936 and settled in Georgetown. She is a renowned painter, illustrator, and soft sculptor. Linda *Lavin (born 1937) is a movie, television, and Broadway actress. William S. *Cohen (born 1940), the son of a Jewish delicatessen owner in Bangor, was elected to the United States Congress from Maine in 1972 and to the United States Senate in 1984. He was appointed the U.S. Secretary of Defense in 1997. Cohen's mother was not Jewish and when the rabbi insisted on conversion before his bar mitzvah, Cohen was angered and left Judaism.

[Abraham J. Peck (2nd ed.)]

MAINTENANCE (Heb. מזונות, mezonot), generally speaking, the supply of all the necessaries of the party entitled thereto, i.e., not only food, but also matters such as medical expenses, raiment, lodging, etc. (Sh. Ar., EH 73:7; see *Husband and Wife*). When, however, the maintenance obligation is based on a personal undertaking (see below) and not on the operation of law, it will not cover raiment and perhaps not even medical expenses, unless the contrary is indicated by the terms of the undertaking (Sh. Ar., EH 114:12; Rema, HM 603; Sifei Cohen thereto n. 14). The liability of maintenance exists generally by virtue of law, but in the absence of any legal duty it may also be based on a voluntary undertaking (e.g., by the husband toward his wife's daughter by a previous marriage). Even though it is normally for an unfixed amount, such an undertaking will be binding and be governed by the general law of obligations (Sh. Ar., HM 60:2, contrary to the opinion of Yad, Mehirah 11:6; see also *Contract; *Obligations, Law of*).

The liability of maintenance by virtue of law is imposed on (1) a husband toward his wife; (2) a father toward his small children; and (3) the heirs of the deceased toward his widow. A divorced wife is not entitled to maintenance from her former husband (Sh. Ar., EH 82:6; see *Divorce*), nor, generally speaking, a betrothed woman from the bridegroom (Sh. Ar., EH 55:4 and Rema thereto). Only maintenance between husband and wife, as a liability by virtue of law, will be discussed below (see also *Widow; *Parent and Child*).

Scope of the Maintenance Obligation

The husband's duty to maintain his wife is one of the duties imposed on him by virtue of his marriage as obligatio ex lege (Yad, Ishut 12:2; Sh. Ar., EH 69:2). He has to provide her with at least the minimal needs for her sustenance in accordance with local custom and social standards (Yad, Ishut 12:10; Sh. Ar., EH 70:3). In addition and subject to the aforesaid, the wife's right to maintenance is governed by the rule that she "goes up with him but does not go down with him" (Ket. 614a; Tur, EH 70), i.e., the wife, regardless of the standard of living she enjoyed prior to the marriage, is entitled to a standard of living which matches that of her husband and to be maintained in accordance with his means and social standing. At the same time, she is not obliged to suffer having her standard of living reduced to one below that which she enjoyed prior to her marriage, at any rate not as compared with the standard of living customary in her paternal home with regard to family members backed by means similar to those available to her husband, even if he should choose a lower standard of living than he can afford (Yad, Ishut 12:11; Sh. Ar., EH 70:1 and 3 and Helkat Mehokes thereto n. 1). In addition to providing for all the domestic needs of the common household and as part of his duty of maintenance in its wider sense, the husband must give his wife a weekly cash amount for her personal expenses, again in accordance with their standard of living and social custom (Sh. Ar., EH 70:3; Helkat Mehokes thereto n. 2). In return for this obligation, the husband is entitled to his wife's "surplus handiwork," i.e., to her earnings from work done beyond the call of her legal duty toward him (Maaseh Yadah). The said obligation being imposed on the husband as part of his duty to maintain his wife, she may, of her own choice, waive her right to the weekly allowance in order to retain for herself such surplus earnings, just as she may waive her maintenance in order to acquire for herself the proceeds of her handiwork (Helkat Mehokes loc. cit.). The unspent balance of the money given the wife for her maintenance belongs to her husband, since he is only required to give her an amount sufficient for her needs (Ket. 65b; Yad, Ishut 12:13; Pithi Teshuvah, EH 70 n. 1). However, if such balance results from the wife's spending less than she requires for her own needs, it belongs to herself; she need not invest the amount of it and if she should do so, the fruits of such investment would belong to her alone (see *Dowry*). Another opinion is that money given by the husband for his wife's maintenance always remains his own, except insofar as she actually expends it on the household or on her own maintenance, and therefore any balance, even if saved, belongs to him (see Rema, EH 70:3; Pithi Teshuvah, EH 70 n. 1; PDR 2:229 and 289).

The wife's right to be maintained in the manner described above is independent of the fact that she may be able to maintain herself out of her own property and the fact that her husband may be in financial difficulties. She will accordingly not be obliged to sell her property or to use fruits thereof, to which her husband has no right, in order to facilitate his fulfillment of his obligation to maintain her, since he has undertaken the obligation on the marriage and it is also expressed in the ketubah deed in the phrase, "I shall work and support you" (see below, Sh. Ar., loc. cit. Pithi Teshuvah, EH 70 n. 2; PDR 1:97, 101f.).
Separated Parties

In general, the husband is only obliged to maintain his wife as long as she lives with him or, at any rate, if he is not responsible for the fact that they are separated (Rema, EH 70:12). Hence in the case of separation of the parties, it is necessary to establish which of them has left the common home.

When the Husband Leaves the Home. In principle the wife's right is not affected: "She was given to live and not to suffer pain" (Ket. 61a) and the husband remains responsible for her maintenance (Mordekhai, Ket. no. 273). To frustrate her claim, the husband must prove a lawful reason for his absence and refusal to maintain her, e.g., her responsibility for a quarrel justifying his departure (Rema, EH 70:12). However, even in circumstances where the husband is responsible for maintaining his wife despite their separation, it will nevertheless be presumed that he has left her with sufficient means to support herself for a reasonable period during his absence and therefore, in general, she will not be awarded maintenance during the first three months following his departure (Ket. 107a; Sh. Ar., EH 70:5). For the wife to succeed in a claim brought within this period, she must prove that her husband has left her without any means at all, or will have to rebut the above assumption in some other manner, e.g., by proving that her husband left the home as a result of a quarrel or with the intention of returning after a short interval but for some reason failed to do so (Rema, EH 70:12; Beit Shemu'el 70 n. 11; Hut ha-Meshullash, v.6, 4).

The husband is not entitled to demand that his wife should work and support herself out of her earnings during his absence unless she has expressly or by implication consented to do this (Yad, Ishut 12:20; Maggid Mishneh thereto; Sh. Ar., EH 70:9; Halkelet Mehokek 70 n. 33). This is so regardless of whether or not she has been accustomed to working prior to his departure and handing over her earnings to her husband, according to law. The court will not of its own initiative investigate the matter of the wife's earnings from her own handiwork, but will take this into account only if it emerges out of the wife's own arguments. However, if after his return the husband can prove that the wife has been working and earning during his absence, he will not be obliged to repay a loan his wife has taken for her maintenance (see below), to the extent that he proves that she was able to support herself from such earnings during his absence. In this event he will similarly be entitled to demand that she refund to him all amounts she has recovered out of his property for the purposes of her maintenance (Yad, Ishut 12:16; Sh. Ar., EH 70:5).

When the wife is entitled to maintenance but her husband leaves her without sufficient means and she does not maintain herself out of her own earnings, she has the right to borrow for her maintenance and to hold her husband liable for the repayment of such a loan (Ket. 107b; Yad, Ishut 12:19; Sh. Ar., EH 70:8). This is not the case if prior to his departure she was supporting herself by her own efforts and remained silent when he publicly disavowed responsibility for debts she might contract, thus seeming to have consented to this (Rema, EH 70:12; Beit Shemu'el 70 n. 32). The husband's duty to repay such a loan is toward his wife only and he is not directly liable to the creditor. If, however, the wife has no property of her own, or if for any other reason the creditor might have difficulty in recovering from the wife, he may claim repayment of the loan from the husband directly, in terms of the "Shibuda de-Rabbi Nathan" (permitting the creditor to recover the debt directly from a third party who owes money to the principal debtor if the creditor has no other means of recovering from the latter (Yad, Ishut 12:19; Rema, EH 70:8)).

If the wife has sold some of her own property to support herself, she will be entitled to recover from her husband the equivalent of the amount realized, provided that the facts do not demonstrate any waiver of this right on her part, such as an express declaration to this effect made by her before witnesses at the time of the sale, or if at that time there was a suit for divorce pending between the parties. If proof to this effect is forthcoming, the wife will not be entitled to recover anything from her husband since it is presumed that as long as the marriage tie is in existence, she will not do anything which might bring about its complete severance and will therefore also be prepared to waive her pecuniary rights against her husband (Rema, EH 70:8; Beit Shemu'el 70 n. 29; PDR 2:289, 291f.). Whenever the wife is not entitled to a refund of the amounts she has expended, during the period of her husband's absence, the earnings from her handiwork will be loans to her (Rema, EH 70:8).

Third parties who of their own accord assist the wife in respect of her maintenance are not entitled to be refunded for their expenditure – neither from the wife since she has not borrowed from them, nor from her husband since he has not instructed them to do so – but they are in the position of one who "has put his money on the horns of a deer" (Rema, EH 70:8; see also "Unjust Enrichment"). If the wife can prove that the assistance was given her in the form of a loan, the question of repayment will be governed by the aforesaid ordinary rules concerning a loan for purposes of the wife's maintenance, even if the assistance was given by her own parents (Mordekhai, Ket. no. 273).

When the Wife Leaves the Home. In principle the husband is not obliged to maintain his wife unless she lives with him (see above). Hence the mere fact of her leaving him, or her refusal to return to him after she has left him lawfully, provides the husband with a prima facie defense against her claim for maintenance, since by living apart from him she precludes herself from carrying out her marital duties, on due fulfillment of which her right to maintenance is dependent. Therefore, to succeed in a claim for maintenance in these circumstances, the wife must discharge the onus of proving facts justifying her absence from the marital home (Rema, EH 70:12; Beit Shemu'el 70 n. 34; PDR 6:33, 52f.). These may arise either from the husband's bad conduct toward her – e.g., his responsibility for a quarrel justifying in law her refusal to continue liv-
ing with him together in the marital home (Beit Yosef, EH 70, end; Sh. Ar., EH 70:12) – or from other circumstances which are independent of the husband’s blameworthy conduct toward her, such as his refusal to comply with her justified demand to move to another dwelling or to live away from her husband’s relatives who cause her distress (see *Husband and Wife). In general it may be said that any reason sufficient to oblige the husband to grant his wife a divorce will entitle her to claim maintenance from him even though she may have left the home, since the fact that the husband is obliged to grant her a divorce means that he must acquiesce in their living apart; therefore her refusal to live with him entails no breach of her duties toward him. Moreover, by unlawfully withholding a divorce from his wife the husband prevents her from marrying someone else who could maintain her, and there is a rule that a husband who, contrary to law, prevents his wife from marrying another man renders himself liable to maintain her until he grants her a divorce (PDR 1:74, 77–80). If the wife leaves the home on account of a quarrel she has unjustifiably caused, and generally when she has no justifiable reason for living apart from her husband, she will not be entitled to maintenance from him.

For other cases in which the wife forfeits her right to maintenance, see *Husband and Wife (s.v. moredet); *Divorce.

Claim for Maintenance Cannot Be Assigned or Set Off
The husband is not entitled to set off against her claim for maintenance any pecuniary claim he may have against his wife, such as one arising from her sale, contrary to law, of her husband’s property for purposes of her maintenance during his absence. His duty to maintain his wife means to provide her with the necessities of life with him, i.e., entails responsibility for her daily needs with regard to food, raiment, lodging, etc. This affords the wife a right against which pecuniary debts cannot be set off, since those two differ in their legal nature and her daily needs cannot be satisfied by a reduction of the debt she owes him (PDR 1:333, 338; 2:97, 99). If, however, the wife’s claim is based on a right whose legal nature is purely pecuniary, e.g., her claim for repayment of a loan she has taken for her maintenance, there will be no bar to the husband setting off against such claim any other pecuniary claim he may have against her, if, for instance, she is indebted to him for a loan she obtained from him for the purpose of supporting her relatives – he may also set off such pecuniary claim against her claim with regard to payment of her ketubbah at the time of their divorce (see PDR 1 loc. cit.). The same reason that entitles the wife to receive actual payment of her maintenance prevents her from assigning this right to others (Beit Shemu’el 93 n. 18).

Arrear Maintenance
If the wife, although entitled to maintenance, does not bring an action for it in the court, she will be unable to claim maintenance for any period preceding the date of bringing her suit, since it will be presumed that she preferred to suffer rather than unfold her troubles before the court and her silence will therefore be interpreted as a waiver of her right for such a period (Yad, Ishut 12:22; Sh. Ar., EH 70:11). This presumption may be rebutted by evidence showing that she insisted on her rights, e.g., that she demanded her maintenance from her husband and refrained from instituting action only because of his promise to comply without recourse to the court (Rema, EH 80:18; Beit Shemu’el 80 n. 27); institution of action has the same effect for any period thereafter even if a considerable amount of time elapses before judgment is given (Rema 70:5; Beit Shemu’el 70 n. 12; see also *Limitation of Actions).

Non-payment of Maintenance: Consequences
On the husband’s failure to maintain his wife in the manner to which she is entitled, the court – at her instance – will order him to do so, whether he refuses payment although he has the means to meet it or whether he lacks the means because he does not work although he is able to work and earn this amount. In other words, the husband will be ordered to pay maintenance in accordance with his potential working and earning abilities, and not necessarily his actual earnings, for he has undertaken in the ketubbah to work and to maintain his wife (Rema, EH 70:3; Heikat Mehokek 70 n. 12). If he has sufficient for his own needs only for a single day, he must still share this with his wife since he is liable to maintain her “with himself” (Rema, EH 70:3). On the other hand, as he has to maintain her “with him” only, i.e., to no greater extent than he is able in respect of himself, he will be exempt from maintaining her if he cannot afford it because he is in a position of utter poverty and unable to work and earn for reasons beyond his control (Pithei Teshuvah, EH 70 n. 2; Perishah, HM 97 n. 41). For the same reason, inability to pay maintenance is excused on grounds of the husband’s need to repay regular debts, these taking preference over the former (ibid.). If the wife should not wish to contend herself with a claim for maintenance, she may possibly be entitled to demand a divorce.

In the State of Israel
Maintenance for the wife is a matter of personal status within the meaning of article 51 of the Palestine Order in Council, 1922, and is therefore governed by Jewish law (sec. 51 thereof) even when claimed in a civil court by virtue of section 4, Rabbinical Courts Jurisdiction (Marriage and Divorce) Law, 5713 – 1953. So far as a Jewish wife is concerned, the above position was left unchanged by the Family Law Amendment Maintenance Law, 5719 – 1959, which expressly provides that the question of her maintenance shall be governed solely by Jewish law (sec. 2; see Supr. PD 15 (1961), 1056, 1058). If the husband refuses to comply with a judgment of the court for the payment of maintenance, he may be imprisoned for a period not exceeding 21 days for every unpaid installment (Executive Law 5727 – 1967, sec. 70ff.); see also Imprisonment for *Debt.

[Ben-Zion (Benno) Schereschewsky]
Maintenance (Mezonot) in the State of Israel

Maintenance payments in Israel are determined in accordance with Jewish law, as stipulated in Section 2 of the Family Law (Maintenance) Amendment Law, 5719 – 1959. In this respect, the position described above remained unchanged. This update will deal with a number of issues in which new arrangements were established in Israeli law, in both the rabbinical courts and the general courts.

Maintenance under the Law of Meukevet Mehamato (A Woman Prevented from Remarrying Owing to Her Husband’s Refusal to Give Her a Get). In Jewish law – and in Israeli law, too, which applies Jewish law – the husband’s obligation to pay maintenance derives from the fact of the marriage and the husband’s undertaking in the ketubbah to provide for his wife – an obligation that terminates upon divorce. Accordingly, where the husband is obligated to grant a divorce – and refuses – the question arises as to how this refusal affects his maintenance obligation. Under Jewish law, even if the couple do not live together, the husband remains liable for maintenance, because his refusal to grant his wife a get prevents her from marrying someone else, thereby denying her maintenance from a potential husband. Furthermore, in such circumstances a different set of rules applies. By law, the husband owns the wife’s handiwork (ma’aseh yadeha) – the fruits of his wife’s labor – and practically, such fruits (e.g., income) are deducted from her maintenance. But when the maintenance obligation is imposed by reason of the husband’s refusal to give a get, the latter is not entitled to deduct her income. The explanation is that the husband’s ownership of his wife’s handiwork against his obligation to support his wife derives from the consideration of ill-feeling (eivah). In other words – it was instituted in the interests of domestic peace (shelom bayit) between the spouses (see *Husband and Wife). However, when the husband refuses to grant a get to the wife, there is no justification for entitling him to her earnings, because there is no longer an interest in fostering domestic harmony, but rather in terminating the marriage with a get. The Israeli Supreme Court thus ruled that a maintenance award based on the wife’s inability to marry because of her husband is only applicable after the rabbinical court has ruled on divorce, in one of the following manners: forcing or obligating the husband to grant a get, as well as the more “moderate” case in which the court orders the parties to divorce. This principle was established by the Rabbinical Court of Appeals (dayyanim A. Goldschmidt, S. Yisraeli, J. Kapah; Appeal 205/5733, PDR 10, 294), and was adopted in a ruling of the Supreme Court (comments of President, M. Shamgar, CA 792/82, Nuni v. Nuni, 40 (3) PD 744, following Justice M. Elon, HC 644/79 Gutman v. the Rabbinical Court, 34 (1) PD 443, and the comments of Judge Y. Cahn in HC 661/77 Haber v. the Rabbinical Court, 32 (3) PD 324).

Procedures. In 1975, a chapter dealing with maintenance was added to the Civil Procedure Regulations – Chapter 23 (3) of the Civil Procedure Regulations, 5723 – 1963. Its central innovation was the requirement that every statement of claim or defense dealing with maintenance be supported by an affidavit. In addition, a detailed specification had to be submitted as an appendix to any claim or defense, detailing the complete assets and income of each party (including documentation, such as wage slips for an entire year), as well as the sums that, in that party’s opinion, would meet the maintenance needs of the (rival) parties. Under these regulations, the District Court (which had jurisdiction over maintenance cases at that time) conducted an initial enquiry based on the material submitted, fixing temporary maintenance accordingly, without having to conduct a separate proceeding. These regulations also established sanctions for failure to comply with the regulations, by not attaching substantiating documentation, concealing particulars, or otherwise contravening the regulations. The sanctions ranged from orders to comply with the regulations, to the possibility of accepting the other party’s claims (see, e.g., the ruling of the Jerusalem District Court, AM 470/03 Anon. v. Anon.; AM 789/05 AD v. AV).

The Civil Procedure Regulations 5744 – 1984 incorporated the same maintenance provisions in Chapter 21 (Regulations 259–266). In 1995 the Family Courts Law (see Family Courts Law, 5755 – 1995) was adopted and the powers of civil instances to adjudicate maintenance cases were transferred to the Family Court. Maintenance suits are now governed by the civil procedure regulations applying to all claims adjudicated in the Family Courts (Part 3.1 of the Civil Procedure Regulations, 5744 – 1984; Regulation 258A–258G).

Apparently, the enactment of procedure related regulations in the general court system, including with respect to the Family Court, led to the enactment of the new regulations governing rabbinical courts procedure (1993). Regulation 33 of these regulations determined that a maintenance claim must be submitted together with the form indicated in Regulation 211, and the defendant is instructed to follow suit when submitting his statement of defense. Pursuant to Regulation 211, special forms were prepared for maintenance claims in the rabbinical courts, in which, as part of the specification of data, the husband is required to declare the sums of maintenance paid prior to submission of the claim together with particulars of his income and property. A number of rulings have determined that failure to attach the specification of data form, or to properly complete it, may be taken into account when assessing the sincerity of the “inclusion” of a maintenance claim in a divorce suit in the rabbinical courts (see FF (Tel Aviv) 16981/96 Daham v. Daham; on the inclusion of maintenance with a divorce case, see *Bet Din Rabbani – Rabbinical Court in Israel).

Enforcement of Maintenance Payment. The State of Israel enforced court maintenance awards by means of the Execution Office, pursuant to the provisions of the Execution Law, 5727 – 1967. This mechanism likewise enforces maintenance awards of rabbinical courts (see under *Rabbinical Court; *Execution, Civil).

Maintenance differs, in principle, from any other mon-
etary ruling. In a regular civil file, the court is only required to consider the question of whether the defendant is liable or not; the defendant's financial capacity to pay the sum of the claim does not affect his liability. On the other hand, liability for maintenance, in principle, is based on the financial capacity and situation of the liable party, and the sum of maintenance is fixed in accordance with a number of parameters, inter alia, the liable parties' financial ability to pay a particular sum of monthly maintenance (after he has borne his own expenses). This distinction affects the discretion exercised by the head of the Execution Office in determining how a debt is paid. Regarding a regular debt, the head of the Execution Office may, and is often compelled to, consider the debtor's financial situation, in view of which he determines whether he should pay the debt in one payment or in installments. Regarding a maintenance ruling, the head of the Execution Office does not have such discretion and must implement the court's ruling literally, inasmuch as the judicial forum that ruled on maintenance (a rabbinical court or the family court) has already considered this data and the sum of the maintenance ruling was determined on the basis of that data.

Another difference between collection of a financial debt as distinct from a maintenance debt relates to the use of imprisonment. The Execution Law and Supreme Court rulings restricted the cases in which imprisonment can be imposed against a person who fails to discharge his civil debt (see the detailed ruling of Deputy President Judge M. Elon in HC 5304/92, Perach v. the Minister of Justice, 47 (4) PD 715; see in detail: “Execution, Civil”). In contrast, Section 74 of the Execution Law determines that regarding a maintenance debt, the head of the Execution Office may, at the request of the person entitled to maintenance, issue an arrest warrant against the debtor, even without investigating his financial ability (one of the minimal terms required for imprisonment with respect to a civil debt). The Supreme Court emphasized the difference between collection of a maintenance debt and collection of a regular civil debt: the maintenance award is fixed by a judicial instance [after having consideration for the liable party's financial situation]; the dependency of the persons entitled to the maintenance on the maintenance payments for their sustenance; the fact that a maintenance ruling is not final and the debtor may apply to a rabbinical court or the family court to alter the amount of the maintenance if there has been a change of circumstances justifying its alteration (p. 731 of the Perach decision).

In addition, a special social welfare law was enacted in Israel enabling receipt of maintenance payments through the National Insurance Institute (The Maintenance (Assurance of Payment) Law, 5732 – 1972). According to this law, a person with a maintenance ruling in his favor (such as a spouse or child) may present a copy of the judgment to the National Insurance Institute and the latter will pay the maintenance sum on a monthly basis (subject to a statutory ceiling; see Section 4 of the law). The National Insurance Institute acts on behalf of the person entitled to maintenance, and concurrently initiates execution proceedings against the maintenance debtor.

In this way, those entitled to maintenance receive the monthly payment with dignity and without tension or pressure in the event of the maintenance debtor's failure to pay. This law is particularly effective when the maintenance debtor changes addresses and cannot be traced or absconds abroad. The difference between the sums awarded as maintenance by the Court (either Rabbinical or Family Court) and the sum actually paid by the National Insurance Institute, may be collected by the entitled party by opening a file in the Execution Office (see Section 10 of the law; AM 789/05 AD V. AY).

[Moshe Drori (2nd ed.)]

MAINZ (Mayence; Heb. מיינץ, מיינץ, מאיינץ), city on the Rhine in Germany.

The Medieval Settlements

Mainz is one of the oldest Jewish communities in Germany. It is presumed that Jews came to the city as merchants in the Roman era and may even have founded a settlement there. The date of the first medieval community is uncertain. A church council in Mainz declared in 906 that a man who killed a Jew out of malice must make amends like any other murderer, and presumably there were some Jews in the city at the time. The *Kalongymus family of Lucca is believed to have moved to Mainz in 917, but the date is not completely reliable. Evidence of the existence of a Jewish community is indisputable only from the middle of the tenth century. Archbishop Frederick (937–54) threatened the Jews with forcible conversion or expulsion. They were in fact expelled by Emperor Henry II in 1012 after a priest had converted to Judaism. Soon after, however (according to Jewish sources only a month), they were allowed to return and continued to play a lively part in the trade of the city, which was a commercial center on the Rhine and Main rivers. An organized community was in existence in the late tenth century (when *Gershom b. Judah was teaching in Mainz; his son apostatized in 1012), although land for a cemetery was not acquired until the time of the expulsion (gravestones dating from the 11th–14th centuries, discovered in 1922 in the fortified inner city, came from this cemetery). Many Jews left the city in 1084 after they had been accused of causing a fire in which their quarter was also damaged; settling in *Speyer, they founded the community there.

At the beginning of the First *Crusade (1096) the Mainz
parnas, Kalonymus b. Meshullam, obtained an order from Emperor Henry *IV protecting the Jews, but nonetheless, and in spite of an armed and spirited resistance, on May 27 more than 1,000 died – some at the hands of the crusaders and many by suicide as an act of *kiddush ha-Shem. Kalonymus escaped with a group to Ruedesheim but committed suicide the next morning during an attack led by Count Emicho. The synagogue (first mentioned in 1093) and Jewish quarter were burned down on May 29. Twelfth-century Jews immortalized the Mainz martyrdom as an example of supreme *akedah. The community slowly recuperated in the following years after Henry IV had permitted those forcibly converted to return to Judaism, decreeing that the Jews were also to enjoy the “king’s peace” (*Landfrieden). During the Second Crusade (1146–47) it suffered several casualties (see also *Bernard of Clairvaux). During the Third Crusade (1189–92) the Jews of Mainz were unharmed because of the resolute protection of Frederick I Barbarossa; large numbers temporarily went into hiding in Munzanberg (near *Friedberg). In 1259 Mainz Jews were ordered to wear the Jewish *badge. In 1281 and 1283 numerous Jews fell victim to the blood *libel; the synagogue was also burnt in these years. As a result of these repeated persecutions some Jews of Mainz, along with those of other German cities, wished, in 1285, to immigrate to Erez Israel under the leadership of *Meir b. Baruch of Rothenburg; others escaped the boundaries of the empire. During the *Black Death (1349) almost the whole community perished; some of them in a battle against the mob, and the majority (6,000 persons) in the flames of their burning synagogue and quarter, set on fire by their own hands in *kiddush ha-Shem.

In the next decade (following the charter of the German Empire known as the Golden Bull of 1356) Jews again began to settle in Mainz. The community did not attain its former standing, even though a considerable number of Jews settled (in 1385 they presented the council with 3,000 gulden “out of gratitude” for its protection during the anti-Jewish disturbances that had broken out in various places). With the gradual transfer, in the later Middle Ages, of *Judenschutz ("guardianship over the Jewry") to the cities, their financial obligations grew heavier. The community was led by a so-called *Judenrat, nominated by the archbishop, and by not less than four elders (Vorsteher) who together constituted the Judenrat ("Jews’ council") from 1286 until the end of the 14th century. The supreme non-Jewish juridical authority was the archbishop (from 1209). A yeshivah was founded in the tenth century by the Kalonymides and became central under R. Gershom b. *Judah and his pupils and contemporaries, Judah ha-Kohen, Jacob b. "Yakar, Isaac ha-Levi, and Isaac b. "Judah. Gershom’s *taḳkanot ("regulations"), which were applicable to the Rhenish cities, were acknowledged by all the other German communities and even by other European ones, thereby achieving the force of law, a fact which enhanced the reputation of Mainz. The chronicle of Solomon b. *Samson recounting the kiddush ha-Shem of 1096 regards Mainz as the main, most ancient, and most famous Jewish community on the Rhine; he praises its learning and pious way of life (see A.M. Habermann (ed.), Sefer Gezerot Ashkenaz ve-Zarefat).

From the early 13th century on, *Speyer, *Worms, and *Mainz (in Jewish sources named ד”ש (shum), an abbreviation made up of the first letter of their names) were recognized as the leading Jewish communities in Germany. Synodal assemblies were held in Mainz (1150, 1223, 1250), in which primarily representatives of the three leading communities took part; their resolutions, the *takkanot, were acknowledged by the rest of the communities of Germany. The Mainz rabbi, Jacob b. Moses *Moellin (1356–1427; known as Maharil), promulgated takkanot (chiefly concerned with ritual matters) aimed at the German and primarily the Rhenish communities. His collection of *minḥagim (compiled by his pupil Zalman of St. Goar), which rely mainly on Mainz traditions, are connected with all German and some non-German communities and were used to a large extent in the Shulḥan Arukh, Orah Hayyim. Outstanding among the many notable scholars and personalities in medieval Mainz are, in addition to those already mentioned, Nathan b. *Machir b. Judah (c. 1100); *Eliyzer b. Nathan (c. 1150); *Meshullam b. Kalonymus (c. 1150); *Judah b. Kalonymus b. Moses (c. 1175); and Baruch b. Samuel (1200).

Resettlement and the Modern Community
In the early modern era only a few Jews lived in Mainz. In
1513 the archbishop designated Weisenau, near Mainz, as the seat of the rabbinate for the diocese of Mainz, presumably because few resided in the city itself. These few were expelled in 1579, but a new community was reconstituted in 1583, reinforced by emigration from *Frankfurt (1614), Worms (1615), and *Hanau. A rabbi was subsequently engaged and a synagogue built (1639; see also *Landesjudenschaft). During the French occupation (1644–48), the Jews suffered and were subsequently subjected to ever-harder restrictions. The permitted number of Jewish families was limited to 20, and later 10 (1671); they were allowed to inhabit one special street only (ghetto).

Influenced by the *Toleranzpatent (1784) of *Joseph II, the archbishop-elector improved the legal position of the Jews and allowed them to open their own schools and attend general ones. After the revolutionary French occupation of Mainz (1792), the *Leibzoll (“body tax”) was abolished and on September 12 the gates of the ghetto were torn down. Until the end of the occupation (1814) the Jews of Mainz were French citizens (they sent delegates to the *Sanhedrin in Paris). The Napoleonic edict of May 17, 1808, remained in force until 1848. After the German war of liberation (1813–15), Mainz passed to *Hesse-Darmstadt. Full civil rights, promised in June 1816, were not granted.

In the mid-19th century, the community split when R. Joseph *Aub introduced ritual reforms in the newly built synagogue (1853). The Orthodox founded the Israelitische Religionsgesellschaft, with its own synagogue, and engaged Marcus *Lehmann as rabbi; he founded a Jewish school (a high school with instruction in foreign languages) in 1859. Until the Prussian law of 1876 regulating secession from religious communities, the Orthodox remained within the community and seceded only later. In modern times, too, a number of scholars originated from Mainz, notably Michael *Creizenach; Isaac *Bernays; Joseph *Derenburg; and Ludwig *Bamberger. Among the former communal institutions were the Israelite Home for the Sick and Disabled, the Jewish Sistership Organization for the Care of Jewish Antiquities, and the *talmud torah. The Israelitische Religionsgesellschaft possessed a school (eight classes and 68 pupils), a library, and supplied religious instruction to 30 children. The communal budget totaled 220,000 marks in 1931. Twelve communities from the surrounding district were administered by the Mainz rabbinate. In the 19th century the Jewish population of Mainz increased, but its percentage of the general population remained steady: 1,620 Jews in 1828 (5.3% of the total population); 2,665 in 1861 (5.8%); 2,998 in 1871 (5.8%). From then on, both numbers and ratio declined, to 3,104 (3.7%) in 1900; 2,738 (2.5%) in 1925; and 2,730 (1.8%) in 1933.

Holocaust and Contemporary Periods
On November 9/10, 1938, the main synagogue (including the museum and library) was looted and burnt down. The Orthodox and Polish synagogues suffered similar treatment. On May 17, 1939, only 1,452 Jews remained, 70% of whom were 40 years or over. A steady flow of emigrants was partly balanced by an influx of refugees from the countryside. In March and September 1942 the majority of the community was deported to Poland and *Theresienstadt. On February 10, 1943, the final liquidation of the community, which had been moved to the hospital, took place. After the war, a new community was organized, which numbered 80 persons in 1948 and 122 in 1970 (with an average age of 53). In 1989 the Jewish community numbered 140, and about 1,000 in 2005. The increase is explained by the immigration of Jews from the former Soviet Union. In 2005 a second (liberal) Jewish congregation was founded with about 70 members. It is a member of the Union of Progressive Jews in Germany. The congregation wished to use the restored synagogue in Mainz-Weisenau, which was inaugurated in 1996, as a cultural and educational center on Jewish history and tradition for the citizens of Mainz. It also planned to build a new synagogue.

MAIORESCU, GEORGE TOMA (1928– ), Romanian poet and author. In Ochii Danielei (“Daniela’s Eyes”, 1963) the poem “Amintiri ins-xîngerate” (“Bloodstained Memories”) is a nightmare evocation of his father’s death in a Nazi labor camp. This versatile writer’s other works include accounts of a journey to South America, a collection of love poems, and Dialog cu secolul şi cu oamenii săi (“A Dialogue with Our Century and Its People”, 1967). He has been translated into more than 20 languages.
MAIROVICH, ZVI (1909–1974), Israeli painter. Born in Poland, he immigrated to Palestine in 1935, settling in Haifa. In 1947–48 he was a founder member of the New Horizons group. Mairovich arrived at abstractionism quite late. In his expressive compositions, there is always a portrait, a landscape, or a still life. He formed a link between abstract–lyrical painters, and Israel expressionists.

MAISEL, ELIJAH HAYYIM (1821–1912), Polish talmudist and rabbinic leader. Maisel studied at Volozhin and at the age of 20 was appointed rabbi of Gorrodok. After serving for two years, he resigned the office, devoting the next ten years to study. After serving as rabbi in a number of small communities, he was appointed to the important rabbinate of Lomza, and then in 1874 to the even more important one of Lodz. He was an erudite scholar, with a great understanding of and sympathy for humanity. Though a Mitnagged, he was loved by the people of Lodz, most of whom were Hasidim. He was a firm and fearless leader, taking an active part in all the community’s philanthropic and religious institutions, to assist which he devoted most of his income. When they lacked money, he would borrow and himself guarantee the repayment. If the wealthy members of the community refused to meet these debts, he changed his post, making it a condition that the new town paid his charitable debts in his old community. On one occasion the community of Bialystok offered to pay his debts in Lodz. However, not wishing to lose him, the community of Lodz immediately paid the debts. He kept open house and none who came for help was turned away empty-handed. Though lenient to others in personal religious matters, he strove with all his energies to prevent the breakdown of public religious life. He once stood on the Sabbath at the entrance of a Jewish shop until its owner promised to keep it closed in future.

[Mordechai Hacohen]

MAISELS, MOSES HAYYIM (Misha: 1901–1984), Hebrew writer. Born in Warsaw, Maisels, as a member of the staff of the Hebrew papers Ha-Yom and Ha-Zefirah in his native city, contributed numerous articles on contemporary and literary problems. In 1930 he emigrated to the United States where, from 1932, he was a member of the staff of Hadar, and, after the death of M. *Ribolow, its editor. In 1959 he emigrated to Israel where he became one of the editors of Mosad Bialik, the scholarly publishing house of the Jewish Agency for Israel. His major work, Mahashuvah ve-Emet (1939), is a two-volume essay: the first deals with philosophy in the past and its implications for the present; the second, with Judaism in the context of general philosophy. An abridged edition appeared under the pseudonym of M.H. Amishai (1961) and an English translation and condensation was published by A. Regelson under the name Thought and Truth, a Critique of Philosophy (1956). Among Maisels’ translations are Upton Sinclair’s Oil, published under the pseudonym of M. Avishai (1929); M. Balaban’s Polish studies on the history of the Jews (1930–33), and on the Frankist movement (1934–35); and Louis M. Epstein’s The Jewish Marriage Contract (1954). Maisels’ passion for anonymity led him to publish under numerous pseudonyms.

[Esig Silberschlag]

MAISEL-SHOHAT, HANNAH (1890–1972), Israeli pioneer and educator, wife of Eliezer *Shohat. Hannah Maisels was born in Grodno, Belorussia, and studied education, agronomy, and science in Russia, Switzerland, and France. Active in the Po’alei Zion movement in Russia, she settled in Erez Israel in 1909, and in 1911 founded the first women’s agricultural farm in Kinneret on the shores of Lake Tiberias, with 14 pupils (among them the poetess *Rahel (Bluwstein)). In 1919, she established the first “Labor Kitchen” in Tel Aviv, and later the WIZO School for Home Economics. In 1920, she was elected to the first executive of WIZO, and in the following year she and her husband were among the founders of the first moshav, “Nahalal. From the very first years of her aliyyah Hannah Maisels-Shohat realized the importance of training the young women who had come on aliyyah in agriculture and home economics, and her initiative, vision, and activity in this sphere constitute an important chapter in the history of the development of agriculture and education in Israel. In 1929 she founded the WIZO Agricultural High School in Nahalal and was its principal from its foundation until 1960. As a leader of the *Mo’ezet ha-Po’alot (Council of Women Workers) she was one of the organizers of the first conference of the Labor Movement in Erez Israel.

[Benjamin Jaffe (2nd ed.)]

MAIUMAS, a popular licentious feast connected with water festivals undertaken in various places (13 according to Lev. R. 5:3, et al.); four localities were named after it (see below). Information about the Maiumas festivals is provided by Melalus
from Antioch in Syria. He relates that the festival in honor of Dionysus and Aphrodite was held every three years, lasted 30 days, and was celebrated with night-time stage performances. An imperial edict issued by the Emperor Commodus, who renewed the Olympic Games, included ceremonies from which income was to be channeled to the Maiumas rituals. According to Livia an attempt to prohibit the festivities – apparently by Julian the Apostate – was not a success.

(1) Maiumas near Gaza served as the port of that city. It is first mentioned in the Zeno Papyri (259 B.C.E.; Cairo Papyrus 59.006). In the fourth century it became a Christian city called Constantia Neapolis, and was consequently freed from dependence upon the pagan city of Gaza. It is identified with al-Minā, 2½ mi. (4 km.) from Gaza, on the Mediterranean coast. A synagogue with a mosaic pavement representing King David as Orpheus and dated to 508/9 C.E. was excavated there in 1967.

(2) A Maiumas located on the coast near Ashkelon is mentioned by Antoninus Placentinus. It is perhaps to be identified with Khirbat al-Asraf at the entrance to the Shikma Valley (Wadi Sikrayr).

(3) Khirbat Miyāmās has been identified with Shuni, east of Caesarea, on the road linking Binyamina and Zikhron Ya’akov, identified as the village of Kfar Shumi (or Shami) from the third century C.E. mentioned in the Jerusalem Talmud (Hallah 58, 73). The site was probably referred to by the Bordeaux Pilgrim in 332 C.E.: “At the third mile from there [Caesarea] there is Mount Sinai and there is a spring in which, should a woman bathe, she will fall pregnant.” Since 1986 excavations have been conducted at the site by E. Shenhav on behalf of the Jewish National Fund. The Roman theater was uncovered and it consists of an orchestra, seating arrangements, vaults, and a pool, all of which together form an oval complex, containing stepped pools with mosaic floors, fountains, and a hostel apparently used by pilgrims. Storeerooms and residential quarters were also exposed, as well as a large public building that may have served as a shrine during the water festivals performed at the site. Some of these festivities would have taken place within the semi-circular pool on the other side of the theater. This pool had a mosaic floor with built-in recesses for flags and was marked with lines and lanes. It is assumed that these denoted the directions of the water games and the positions taken by the players. Two inscriptions were exposed on the floor of the pool, one of which was complete and could be read as follows: “In the time of Flavius Marcianus son of Antipatris the most honorable consul the work of quarrying the mountain from the foundation was completed.” The person mentioned may have been the governor of Caesarea in the fourth century C.E. Clearly the water games at the site continued during the early part of the Byzantine period.

(4) Betomarasea in the vicinity of Charachmoba (al-Karak) is called Maiumas on the Madaba Map and was connected in ancient sources to the Baal-Peor of Numbers 25:3–9.

Smith, Historical Geography of the Holy Land (1896), 190; Avi-Yonah, in: BIES, 30 (1966), 221–3; idem, Madaba Mosaic Map (1954), no. 14; A. Ovadyah, Qadmoniot, 1 (1968), 124–7, pls. 3–4.

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]

MAJD AL-KURŪM. Arab village in northern Israel, 10 mi. (16 km.) E. of Acre. In the Israel War of *Independence, the village capitulated to Israeli forces (Oct. 30, 1948). In 1964 Majd al-Kurūm received municipal council status. It has an area of 3.5 sq. mi. (9 sq. km.) and had a 1969 population of 3,690, most of whom were Sunnite Muslims. The village economy was based on hill farming, with olive groves, deciduous fruit tree orchards, and vegetables and local workshops, stone and marble quarries, and factories, particularly for food processing. By the end of 2002 the population of Majd al-Kurūm had tripled to 11,400 inhabitants, with income less than half the national average. Its site is assumed to be identical with the talmudic Bet Kerem (“House of Vineyards”), known for its fertile soil and rich water resources (Nid. 2:7; Tosef., Nid. 3:11).

[Efraim Orni]

MAJDAL AL-SHAMS. Druze village in the N. Golan, at the foot of Mt. Hermon. Under Israeli military administration after the "Six-Day War (1967), Majdal al-Shams was the largest of all Druze villages in the region. In 1968 it had 3,300 inhabitants whose social and economic services were greatly improved after 1967. Profits from its rich fruit orchards increased and new sources of income were created in tourism, construction of new roads (e.g., the one leading from the village to the top of Mt. Hermon), etc. In 1982 Majdal al-Shams received municipal council status. The village is spread over 4.5 sq. mi. (12 sq. km.) and reached a population of 8,240 in 2002. Income was about a third of the national average. Majdal al-Shams maintained friendly contact with the Israeli administration and close contact with the Druze community in Israel, while maintaining its contacts with the Druze community across the border in Syria.

MAJDANEK (Maidanek), concentration and death camp on the southeastern outskirts of *Lublin, Poland, in the Generalgouvernement, German-occupied Poland. It was also called Lublin-Majdanek and Majdan Tatarki, after the suburb of Lublin in which it was situated. Originally set up on July 21, 1941, for Soviet prisoners of war, it was soon turned into a camp for Jews and Poles with a maximum capacity for 35,000 inmates. Majdanek covered 667 acres; situated on the Lublin-Zamosc-Chelm Highway, it was ringed by two layers of barbed wire and guarded by 19 watchtowers, each 26.5 feet high. It contained 227 buildings, gas chambers, two gallows, and a small crematorium. The camp was divided into six sections which in 1943 contained a women's camp; a field hospital for Russian collaborators attached to the German army; a men's camp for Polish political prisoners as well as Jews from Warsaw and Bialystok; a men's camp for Soviet prisoners of war, civilian hostages, and political
prisoners; a men's hospital camp; and a section for further expansion.

As with Auschwitz, but unlike the other major killing centers of Sobibor, Belzec, Treblinka, and Chelmno, Majdanek was also a slave labor and prisoner camp. Also, unlike the other major killing centers, which were used almost exclusively for the murder of Jews, Majdanek's prisoners were more diverse; many died from its primitive conditions, perhaps more than died in its gas chambers.

The camp commandants were the SS officers Karl Otto Koch (September 1941–July 1942), Max Koegel (August–October 1942), Hermann Florstedt (October 1942–September 1943), Martin Weiss (September 1943–May 1944), and Arthur Liebenschel (May until liberation on July 24, 1944).

The first transport, consisting of 5,000 Soviet prisoners of war, arrived in the autumn of 1941. They died of starvation and exposure. The camp population was mixed: Soviet prisoners of war, Polish farmers, Ukrainians, Byelorussians and, of course, Jews. The first groups of Jews arrived from Slovakia and the Protectorate of Bohemia and Moravia (15,000) and then Poland (36,500). Early in 1943, 6,000 Dutch and Greek Jews arrived, followed by 74,800 Polish Jews, mostly from *Warsaw, *Bialystok, and Lublin. Altogether 130,000 Jews were sent to Majdanek in 1942–43.

Until the spring of 1942 prisoners were usually shot in a nearby forest, but from October 1942 until the end of 1943, Majdanek had three gas chambers located in one building, which used both carbon monoxide and, like Auschwitz, Zyklon B gas to kill prisoners.

Jewish prisoners who were not killed immediately were employed in various work projects in the camp or in the Lublin area. If further workers were needed in 1942, some trains en route to Belzec were stopped and Jews able to work were removed before the train resumed its journey toward the death camp.

In May 1943 some 18,000 Jews from the Warsaw Ghetto were sent to Majdanek following the Ghetto Uprising and some ghetto factories were transferred there. They were not to stay long. In the summer of 1943, 10,000 able-bodied Jews were transferred from Majdanek for work in “Hasag” camp and Auschwitz.

Toward the end of 1943 a strong partisan movement developed in the Lublin district. Uprisings had taken place in Vilna and Bialystok, and even in the death camps of Sobibor (August) and Treblinka, unnerving the Germans. In retaliation, they carried out a massacre (euphemistically named the “Harvest Festival”) of 42,000 Jews, some of whom had been brought from the nearby work camps. This “action” included the machinegunning of 18,000 Jews in a single day (November 3, 1943) in front of the ditches that the victims were made to dig to serve as their own graves.

Between 170,000 and 235,000 persons died or were killed at Majdanek. Most died because of the harsh conditions, starvation and disease, torture, forced labor, and despair. The number of victims of Majdanek’s gas chambers is unknown.

When the camp was liberated by the advancing Soviet armies (July 24, 1944), only a few hundred prisoners of various nationalities were still alive. In their hasty evacuation, the Germans could not destroy the camp entirely and thus a clear remnant of the camps, barracks, gas chamber, and crematoria remained. The liberation of Majdanek was covered widely. Western correspondents had entered the death camp and written stories about it. H.W. Lawrence, a correspondent for the New York Times, wrote: “I have just seen the most terrible place on earth.” These revelations were not given the credence they deserved.

Press coverage was intense. Roman Karman, a well-known Soviet correspondent, filed this report on August 21, 1944:

In the course of my travels into liberated territory I have never seen a more abominable sight than Majdanek near Lublin, Hitler’s notorious Vernichtungslager, where more than half a million European men, women, and children were massacred … This is not a concentration camp; it is a gigantic murder plant.

Save for the 1,000 living corpses the Red Army found alive when it entered, no inmate escaped alive. Yet full trains daily brought thousands from all parts of Europe to be coldly, brutally massacred.

In the center of the camp stands a huge stone building with a factory chimney – the world’s biggest crematorium … The gas chambers contained some 250 people at a time. They were closely packed … so that after they suffocated they remained standing … It is difficult to believe it myself but human eyes cannot deceive me…

In the postwar years the Polish authorities established a museum and research institute at Majdanek. Poland established an impressive memorial at Majdanek and made significant efforts to preserve the remaining buildings, which are used to portray what happened there. More than 500,000 shoes taken from prisoners filled one of the barracks.

In July 1944 the Polish-Soviet Investigation Commission began to look into the crimes of Majdanek; it published a report in September; 6 of the 1,300 people who had served at Majdanek were tried in November 1944, 4 of them were hanged. Between 1946 and 1948, 96 additional men were tried and between 1975 and 1980 16 former staff members, 6 of them women, were tried in West Germany.

[Danuta Dombrowska / Michael Berenbaum (2nd ed.)]

MAJOR, ERVIN (1901–1967), musicologist and composer. Born in Budapest, the son of Julius *Major, he studied composition with Zoltan Kodaly and Leo *Weiner at the Budapest Academy of Music (1917–21) and philosophy at
the Budapest Scientific University (1920–24). In 1930 he received his doctorate for a dissertation on the relationship of popular Hungarian music to folk music. From 1926 to 1928 he was the editor of Zenei Szemle and later became a member of the editorial board of the periodicals Muzsika (1929–30) and Magyar muzsika (1935–36). He was also a librarian and lecturer of composition, music theory, and history at the Budapest Conservatory and at the Budapest Academy of Music. In 1951 he became a member of the musico logical committee of the Hungarian Academy of Sciences. He was one of the founders of Hungarian historical musicology, specializing in the 18th and 19th centuries and in the tracing of Hungarian influence in the works of classical composers. He also contributed a number of central articles to the Zenei lexikon ("Music lexicon"; edited by B. Szabolcsi and A. Tóth, 3 vols. 1930, 1965) and established successful methods of research, using public and private archives, periodicals, and collected editions of music. His compositions include chamber, piano, organ and choral works, and arrangements of old Hungarian melodies.

ADD. BIBLIOGRAPHY: Grove online.

MAJOR, JULIUS (Gyula Jacob; 1858–1925), composer, conductor, pianist, and teacher. Born in Kassa (Kosice), Major studied with Liszt, Volkmann, and Erkel. He wrote symphonies, concertos, lieder, and operas, many of which demonstrate a felicitous synthesis of the Hungarian national idiom and Western European forms. His teaching activities included founding and directing the State Music Teachers’ College and the Hungarian Women’s Choral Association.

MAJORCA (Sp. Mallorca), largest and most important of the Balearic Isles. It is difficult to determine when Jews first arrived in Majorca, but it may be assumed that the settlement was ancient because of the island’s location at the crossroads of the maritime trade routes and its proximity to the coasts of both North Africa and the Iberian Peninsula. The presence of Jews on the nearby island of Minorca during the fifth century implies their presence on Majorca also, and several lead tablets (attributed to the fourth–fifth centuries) bearing the name of Samuel b. Hagi (or Haggai) have recently been found. Practically nothing is known of the history of the island from the sixth to the eighth centuries – and even less of the history of the Jews there during that period. It appears that the Jewish settlement was destroyed when the Byzantine general Belisarius overcame the Vandals and took Majorca (534 C.E.). Similarly, few details are available on the period of Muslim conquest. When the “Almohads attacked southern Spain (12th century), refugees from Andalusia arrived in Majorca and it may be assumed that there were some Jews among them. The earliest evidence for the presence of Jews on the island during the Muslim period is from 1135, when Ramón Berenguer 111, count of Barcelona, took some Jews of Majorca under his protection.

The Beginning of Aragonese Rule
When James I of Aragon conquered Palma de Mallorca (1229–32), there were several Jews in his retinue, noteworthy being Bahye and Solomon Alconstantini, from Saragossa, whose knowledge of Arabic was greatly appreciated and when the distribution of properties took place after the conquest they were among the beneficiaries, notably Samuel b. Benveniste, al-faqiuin of Count Nuño Sánchez of Roussillon. Properties were also granted to Jews who settled in other parts of the island: Inca, Petra, and Montiour. In Palma (then named Majorca, like the island itself), a residential area was set aside for the Jewish settlers in the fortress of Almudaina which was later known as “the fortress of the Jews.” With the consolidation of Christian rule, Jews arrived from Marseilles and other towns of Provence-Languedoc, from North Africa, and even from Alexandria in Egypt. The king, who controlled settlement on the island, undertook to protect the permanent residential area of the Jews in the same way as other places. The Jews, however, rapidly left the fortress of Almudaina, settling in the vicinity, a move which later led to disputes. Besides the communities mentioned above, there were others in Felanitx, Sineu, Alcúdia, Sóller, and Pollensa. James I also gave letters of protection to Jewish settlers from North Africa, among whom was Solomon b. Amar of Sijilmassa (1247).

From the start the Jewish settlers integrated into the economy of the island; they owned Muslim, Turkish, and Tatar slaves, whom they were accustomed to convert to Judaism, although the civil authorities and the church issued series of decrees designed to prevent this. The papal Inquisition was very active against Jewish merchants. Between 1276 and 1343, except for the years 1285–1298, the Kingdom of Majorca that included the Balearic islands and the counties of Roussillon and Ceradagne was independent. The independent kings of Majorca pursued more or less the same policy towards the Jews that was adopted in the Crown of Aragon. Under Sancho I (1311–24) the synagogue in the city of Majorca was converted into the church of Santa Fe. With the conquest of Majorca in 1343 by Pedro IV of Aragon, a period of great achievements began for the Jews of the island. From that year on, they developed ramified commercial activity. They engaged in the international maritime trade and became renowned for their skill in crafts such as gold- and silversmithery and shoemaking. In 1250 James I confirmed the rights of the Jewish settlers, granting them further privileges in conformity with his Jewish policy in the kingdom of Aragon. The problem of interest rates was one of the most severe in the relations between Jews and Christians on the island. Many royal ordinances dealt with the subject: restrictive decrees were issued; rates which had been fixed were cancelled; and occasionally the Jews were obliged to return the interest. In other matters, James I authorized the Jews of Majorca to address their complaints directly to himself and assured them of his protection. In 1254, he assessed their property, along with that of the Jews of Minorca and Ibiza, and constituted them as an independent taxation group. The community of Barcelona
nevertheless continued to influence the island communities in their administrative affairs, as well as in all other aspects of communal life. In 1269 the Jews of Palma were granted an important privilege authorizing them to purchase houses, vineyards, and any other property in and around the town and to live in the houses which they had acquired or rented. Toward the close of the 13th century, the Jews in Palma lived in the area between Temple and Calatrava streets and this quarter became the focus of Jewish life in the town until the destruction of the community.

During the early 13th century, Alfonso III of Aragon, the independent kingdom of Majorca under his second son James II (1276–95) until the Rule of Pedro IV (1343)

James I divided the kingdom of Aragon in his will, setting up the independent kingdom of Majorca under his second son James II (of Majorca). Reigning from 1276, James II confirmed the privileges which had been granted by his father. In 1285 his nephew Alfonso I11 seized the island from him, ruling it until 1295. Alfonso confirmed a series of privileges and decrees issued by James I and further exempted the Jews from various taxes. The Jews of Majorca granted the king a special allowance of 10,000 sólidos for his own use, and Alfonso authorized them to appeal to him against legal decisions taken by his officials, provided that the town’s interests were not prejudiced by these appeals (1286). During that year, he also borrowed 20,000 sólidos from the trustees of the community. A year later, the Jews of Majorca had to assist the king with a special contribution of 30,000 sólidos. At the same time, Alfonso showed concern for the regular payments of the debts owed to them by Christians, although he occasionally granted to the latter a remission of debts for a given period. Continuing to make yearly demands for support from the Jewish community in addition to the annual tax, in 1290 he imposed a payment of 17,000 sólidos in reparation for the offense of taking excessive interest; he also collected 12,000 sólidos for the right of establishing a “Jewish street,” surrounding it with a wall, and installing gates at the points of entry.

James II returned to the island in 1295, reigning there until his death in 1311, when he was followed by his son Sancho I. The situation of the Jews further deteriorated until the island was reconquered by Pedro IV (1343). From the earliest days of the independent kingdom, they were compelled to pay tithes whenever they acquired land and houses from Christians. Anti-Jewish riots broke out in 1305, and in 1309 the first blood libel occurred on the island when several Jews were accused of the murder of a Christian child. Riots ensued; the king ordered the attackers of the Jews to be punished and the activity of Christians within the Jewish quarter to be restricted. During the same year, similar riots broke out in Inca and many Jews were killed. Nevertheless the island admitted several Jewish settlers who had been expelled from France (1306). Among these was R. Aaron ha-Kohen who studied under R. Shem Tov Falcón in Majorca and later wrote his Orhot Hayyim there. The king even sent an emissary to reassure the Jews of their security, and this assurance was reiterated by his son, Sancho I, in 1311. When several Christians from Germany arrived in Majorca in 1314 the community of Palma accepted them as proselytes (even though they had previously been rejected by the communities of *Lérida and *Gerona), thereby arousing considerable ill feeling on the island. Under the influence of Majorca’s bishop, Sancho ordered the confiscation of the synagogue of Palma, which was converted into a church, and imposed a heavy fine on the community. A year later he ordered the confiscation of the property of the Jews of Palma, but left them with enough for subsistence. After the fine was paid, Sancho was again willing to take the Jews under his protection. During the same year, a long series of regulations dealing with Jewish matters was issued. The regulations concerned community administration, taxes on foodstuffs and wine, and commerce. It was prohibited to try Jews on their festivals; any Jew who expressed his desire to convert while imprisoned was to be confronted with two other Jews, before whom he had to declare that his conversion was of his own free will; if he reconsidered his decision, he would be authorized to remain a Jew. It was also stated that the Inquisition’s investigations against Jews would not take place without the consent of the king; the trustees of the community would be authorized to seize those who disregarded communal regulations and imprison them; a Jew from abroad who came to trade in Majorca would be authorized to carry on to Minorca with his goods without having to pay any additional taxes. A year later, Sancho allowed the Jews of Majorca to import goods and property acquired in Moorish countries even though he was at war with them. He also authorized the erection of a new synagogue to serve as a house of prayer and bet midrash but stipulated that it be less splendid than the former building. In 1331 James I11, Sancho’s nephew, ordered the viceroy on the island to assist the Jews in the erection of the synagogue in spite of the opposition of Pope John XXII.

After the death of Sancho in 1325, the regent Philip, who ruled in the name of James I11, confirmed the existing privileges of the Jews on the island and granted them civic rights. Treating them with tolerance, he stopped the legal action against several Jewish merchants accused of smuggling goods to North Africa (after the merchants had promised to pay
him a considerable sum) and in 1327 he prohibited the forced conversion of Jews and their pagan slaves. During the reign of James III (1327–43) a poll tax was imposed on the Jews of Majorca. When the Palma community refrained from paying this in 1332, the king imposed a fine on it; after some time, he reduced the fine for several families. In 1337 he granted the trustees of the Majorca community the right to punish those guilty of religious or moral offenses, but they were forbidden to expel them or to administer corporal punishment. In spite of the restriction in the rights of the Jews of Majorca to try cases of criminal law, the *dayyanim* strictly adhered to Jewish law and the customs of Spanish Jewry.

### The Organization and Administration of the Majorca Communities

Details of the organization of the Palma community have come down from the close of the 13th century. In its communal and religious life Majorcan Jewry was very much influenced by the Catalan Jewish communities. The rabbis of Majorca were in close contact with those of Barcelona. In its administration, too, the community followed in the footsteps of the community in Barcelona. In 1296 the community was authorized to elect three *muqaddimim* or trustees; the right of jurisdiction over the Jews was at first in the hands of the communal leaders, who were even authorized to expel any Jew for disreputable conduct. Throughout the period of the independent kingdom, the community was generally headed by six trustees and an executive council of eight “good men,” though this council does not seem to have functioned regularly. In 1327, when the regent Philip allowed four of the trustees to dismiss a fifth who had been appointed by Sancho I, he recognized the exclusive right of the Jews of Palma to elect their own officers without any outside intervention, even from the king himself. When Pedro IV conquered Majorca in 1343, he confirmed the existing arrangements. When in 1348 the trustees wished to coopt one of the “small taxpayers” on to the committee distributing charity funds, one of the “large” taxpayers complained to Pedro IV who supported him, declaring that it was preferable that charity be distributed by those who had contributed it. In the inter-communal organization for the entire Crown of Aragon that met in 1354 it was felt that Majorca was important enough to be represented on the board. In 1356 Pedro confirmed a communal regulation excluding physicians and brokers from serving as trustees. At that time, the governor of the island appointed a “Council of Thirty” which functioned until 1374, when the king ordered that the former communal leaders were to be responsible for its administration. Members of the council were to be elected by the community itself, and assisted by members appointed on the recommendation of the wealthier taxpayers. Several regulations on the assessment of the communal taxes, which indicate an attempt to create a reasonably objective assessment system, were confirmed by Pedro in 1378. Under the influence of R. Jonah *Desmaestre*, Pedro issued in 1383 a series of instructions on the organization of communal life: the right to judge criminal law was restored to the community; the right of individuals to draw up testaments was not to be infringed upon; Jews were not to be compelled to hold disputations with apostates; no Jew of Majorca would be exempted from communal taxes, nor would any extraordinary tax be imposed upon him; no Jew might claim office in the community nor would he be exempted from public office if such was imposed upon him. Confirming these regulations John I granted the trustees of Palma the additional right of trying criminal law cases with the assistance of five rabbis, either according to Jewish law or Roman law. The community of Majorca benefited from these regulations until its destruction in 1391. When the Jewish settlement on the island was renewed, it appears that these regulations were again applied until it ceased to exist.

### From the Reign of Pedro IV (1343–87) Until the End of the Jewish Settlement

After Pedro IV conquered the Balearic Isles (1343), the situation of the Jews of Majorca improved. The king’s retinue included the physician Maestro Eleazar ibn Ardut of Huesca and Hasdai Crescas, the grandfather of R. Hasdai *Crescas*. Immediately after the conquest, Pedro exempted the Jews of Majorca from the taxes imposed upon them by James III and canceled the bonds for the payment of the poll tax. He reconfirmed the privileges which had been granted by James II, Alfonso III, and the regent Philip, and ordered that those Jews who had left the island and newcomers also be given favorable opportunities to settle there. One of the supporters of James III was an alchemist named Menahem who was brought to trial in 1345; later he entered the service of Pedro as alchemist, physician, and astrologer. In 1346, Pedro decreed that a separate quarter be built for the Jews in Inca, in order to prevent both undue familiarity and quarrels between Jews and Christians. However, it appears that this separation did not apply in practice. The island communities suffered extensively at the time of the “Black Death and during the plagues which also broke out in the 1370s and 1380s. Rioting occurred as an aftermath of the plagues, and in 1374 the Christians called for the expulsion of the Jews from the island, but both the king and the infante John endeavored to restore order.

At the end of the 1340s, the Jewish physician and scholar Judah *Mosconi* (Leo Grech) left Greece to settle in Majorca. From then until the close of the century, a school of Jewish astronomers and cartographers developed on the island. Among them were Abraham *Cresques* (d. 1387), who was made a magister *mapa mundorum et buxolarum*, and his son Judah. Both were also granted by royal decree the privilege of appointing all the ritual slaughterers on the island. In 1359 R. Isaac *Nifoci*, an astronomer, was chosen as the companion of the king of Aragon (in 1390 he joined the rabbis of the island). In the 14th century Majorca became a center of Torah learning. *Aharon ha-Kohen of Lunel* wrote his *Orhot Hayyim* there. At the end of the 1360s, R. *Isaac b. Sheshet* corresponded with R. Solomon Zarfati, the talmudist, who was invited to come to Majorca by Jucef Faquim. R. Vidal Ephraim Gerondi, as-
trometer to the infante John and Solomon Zarfatī’s rabbinical rival, died a martyr’s death in 1391. During the 1380s, R. Joh

nah Desmaestre did much to strengthen religious observance on the island and acted as rosh yeshivah in Palma (Simeon b.

Zemah *Duran was his son-in-law). Together with R. Hasdai Crescas, he undertook the reconstruction of the communities which had been destroyed during the persecutions of 1391. The physician Maestre Aaron Abdal-Hagg was also well-known; in spite of the prohibition of 1356, he was appointed as trustee of the community of Palma. In 1381 Pedro IV appointed Solomon b. Abraham Benallell as mustaçaf (“town market supervisor”) over the Jews of Majorca in appreciation of his services, also leasing him the right to manufacture soap on the island. Granting him a “rabbinical” position in Palma, he authorized him to appoint a ritual slaughterer or to slaughter for the requirements of the community.

During the second half of the 14th century, the island communities developed to the point of gaining the regard of the communities of Aragon, and in 1354 Majorca was invited to send a delegate to the supreme council of the communities of Aragon. In all this period, the Jews of Majorca carried on an intensive local trade and supplied goods from North Africa to the Spanish mainland. Others continued to engage in agriculture and crafts, but small craftsmen and owners of small plots of land were compelled to sell their land in times of difficulty; in an effort to help them Simeon b. Zemah Duran (Resp. 1, no. 51) attempted to modify the Jewish *usury laws so that they would be able to take loans. During the 14th century, the Jews of the island still owned slaves and the problems connected with their possession which had arisen during the 13th century persisted. Essentially the prominence of the leading Jewish merchants was based on their maritime trade in the Mediterranean, with Alexandria, Sicily, Sardinia, and other places. It was these merchants who imported grain to the island in times of famine and scarcity, although they were not shipowners; there was even a series of privileges which declared that Christian shipowners must not refuse cargoes loaded on their ships by Jews. Eminent among these merchants was Don Juef Faquim (Joseph Hakim) whose family had arrived on the island in 1332. In 1365 he argued before the king that he should be exempted from taxes because his property consisted of goods scattered over many countries and these possessions were insecure; the king ordered the trustees to appoint two merchants to assess his payments. In 1370 Juef Faquim supplied grain to the army, which was quartered on Sardinia. When the Jews of Majorca complained to Pedro IV in 1351 about sailors who took some of their number into captivity and removed them elsewhere if they were not redeemed in time, he ordered that the captives be set free against the payment of a ransom of 30 livres of silver. During this period Majorca Jews also engaged in moneylending and frequent governmental measures attempted to reduce the interest rates.

The form of the Jewish *oath in force in Majorca, established by Pedro in 1352, required them to swear on a text containing the Ten Commandments only, without the addition of the reproof sections. In 1359 the king renewed the privilege which stipulated that Majorca Jews could not be tortured without explicit royal approval. In the same year, he authorized the Jews of North Africa to enter and to leave the island, against a payment of one-eighth of the price of goods which they bought or sold on the island. After the inhabitants of the town of Inca had attacked the Jews in 1373, many left the island. After several conversions had taken place, the Jews of Majorca complained to the king, who in 1373 ordered the bishop of Majorca to pay heed to the ancient decree concerning the conversion regulations (see above). In 1376 the Jews of Porreras were set upon by the local population. However, the following year Pedro intervened in favor of the Jews, ordering them to present their claims in person before the mercantile court (consulado del mar). During this period the king continued to impose compulsory loans on the Jewish communities (especially in 1380 and 1383).

The 1391 Persecutions

When news of the anti-Jewish riots sweeping Spain in 1391 reached Majorca, the leaders of the Jews appealed to Francisco Sa Garriga, viceroy of John I, to find a way of preventing the outbreak of similar riots on the island. It was decided to cor-
don off the Jewish quarter and allow no weapons inside. As soon as they heard reports of the riots in Valencia, Jews began to leave the island and those who lived in the villages moved to the towns, into the fortified Jewish quarters. In Palma the riots broke out on July 10; youths bearing crucifixes infiltrated the Jewish quarter. Although the gates were closed the mob broke them down and massacred scores of Jews. The next day the authorities made attempts to mitigate the storm, but on August 2 the riots broke out again. The community of Inca was completely wiped out, as were those of Sóller, Sineu, and Alcudia. Several leaders of the riots were captured, but the mob set them free; villagers traveled to the towns in order to share in the pillage. Many Jews died as martyrs, notably R. Vidal Ephraim Gerondi, and several distinguished personalities accepted baptism; among these were R. Isaac Nifoci, who later atoned for his act by emigrating to Erez Israel, and Judah Cresques, who became a prominent courtier. A list of 111 heads of families who were converted is still extant; they were given the names of their baptismal godfathers (several of the converts were named after the viceroy, Francisco Sa Garriga). In spite of the governor’s prohibition on leaving the island, many Jews fled to North Africa, among them Simeon b. Zemah Duran, who settled in Algiers and held rabbinical office there. Majorcan Jewish settlers in North Africa speak of a Jewish community of more than 1,000 families in Majorca, prior to the massacres. The figure seems exaggerated but indicates the prestige and splendor the community had in Jewish eyes. In September 1391 the peasants demanded that the surviving Jews be baptized or put to death; in rejecting this demand the authorities explained that Christianity sought to achieve conversion through free will and not by force. However, the peasants renewed their demands a month later,
and it appears that there were numerous converts at that time.

At the beginning of 1392, the authorities took steps to normalize the situation. The populace was ordered to hand back plundered property; surviving Jews and forced converts were required to provide within ten days a written list of the debts owing to them; the forced converts were called upon to appear before the viceroy and declare whether they desired to continue to live in the Jewish quarter or rent houses to Jews who had been left homeless; and the inhabitants were ordered to return the doors which they had removed from Jewish houses. The bailiff of Palma, one of the leaders of the riot, was executed in January 1392. Fearing that the island's peasants might rebel, the crown granted an amnesty to the rioters and canceled debts to Jews contracted over the previous ten years. Despite the governor's decree forbidding the forced converts to leave the island, many fled to North Africa and returned to Judaism; among them were members of the Najjār family. In January 1393, the governor prohibited further assaults on Jews; anyone molesting them would be hanged if he was of the lower class and flogged if he belonged to the nobility. Nevertheless, a new amnesty was granted to the rioters. As early as 1393, there are instances of the authorities prosecuting forced converts who had returned to Judaism.

In an attempt to reestablish the Jewish communities of the island, in 1394 the authorities invited 150 families from Portugal to settle there, and they arrived in 1395. At the same time the crown granted a writ of protection and exemption from special taxes to all Jews who had fled to North Africa and other places and wished to return to Majorca. However, their resettlement was doomed to failure. In 1413, Vicente Ferrer visited the island and induced several members of the community to accept baptism. Seeking to undermine the position of the Jews of Majorca, Ferdinand I issued in 1413 a series of restrictions resembling the 1412 decrees of Valladolid with an additional provision prohibiting the emigration of forced converts to North Africa. There was a slight alleviation in the situation during the reign of Alfonso V, who included the Jews of Majorca in his favorable decree of 1419 which ordered that copies of the Talmud be returned to the Jews; that the system of Jewish jurisdiction be set in order; that their synagogue be restored; and that they be exempted from forced attendance at sermons. A blood libel was perpetrated in Majorca in 1432, and in 1435 the community ceased to exist: 200 persons were converted and the remainder fled to join their coreligionists in North Africa.

The Fate of the Conversos of Majorca

The papal Inquisition was already active in Majorca during the 13th century, but it was only from the beginning of the 15th that its activities really made themselves felt. In 1407 a *Converso who had twice returned to Judaism was condemned to be burnt at the stake, and in 1410 Benedict XIV ordered that measures be taken against the Conversos of Majorca. Antonio Murta, the inquisitor of the Balearic Islands from 1420 to 1436, was responsible for the conversion of many Jews in 1435. The Spanish Inquisition began to operate in Majorca in 1488. From the start, many Conversos were brought back to the Church. Until the close of the 15th century, 346 trials were held and 257 persons were handed over to the secular arm for the death penalty. During the 16th century, especially after 1520, the tribunal's activities decreased, but they were resumed with renewed ferocity in 1675 and 1677. In 1675, a large group of Conversos from Majorca, referred to by the Inquisition as "Portuguese," was brought to trial. Martyrs included Alonso López; others were sentenced in absentia and burned in effigy. Among those sentenced in 1677 were Pedro Onofri Cortes and Raphael Valis, who were prominent members of the Con-

verso community. The tribunal's activities reached their peak in 1691, when 86 Conversos (including 46 women) were sen-
tenced and another 39 reconciled with the church. From then on its activities appear to have waned. By 1771 the Inquisition had sent a total of 594 Conversos to the stake and reconciled a further 460 with the church. During the 18th century, tribunal officials occasionally arrested Jewish travelers on the Balearic Isles on the suspicion that they were Conversos. In 1718 Jacob Cardozo Nuñez of Bayonne, and Samuel Nahon and his relative Solomon Nahon of Tetuán were arrested. Cardozo was imprisoned until 1721.

Conversos in Majorca were given the name of *chuetas, a name which persisted into the mid-20th century. They continued to live in separate quarters and all social and public advancement were denied to them. They formed a closed society in which the overwhelming majority secretly observed Jewish rites, for which they were often brought to trial. It was not until the end of the 18th century that the government attempted to alleviate their condition and in 1782 the Conversos were permitted to settle in any part of the town or the island; at the same time it became an offense to molest them by word or deed. After the French conquest of the island, the Inquisition was abolished in 1808 and the Conversos were granted further concessions. However, when Ferdinand IV returned to power (1814) the Inquisition was reintroduced and its final abolition barely improved the lot of the Conversos. In 1856 riots broke out against them once more when several prominent members of the community sought to join the exclusive Circulo Balear club. There was a renewed debate on the place of the chuetas within the island's society toward the close of the 19th century with the publication of the work of the priest José Tarongí in 1877, condemning their social ostracism and explicitly blaming the clergy for this. Also influential was the work of Vicente Blasco Ibáñez, Los muertos mandan (1916). Jews began to take an interest in their condition. During the Republican regime in Spain (1931), a work by Garao, La Fe Triunfante, was republished. Written a century before it sought to stress the Jewishness of the chuetas as grounds for their total rejection.

[Haim Beinart]

The Jewish Quarter

The Jewish quarter of Majorca was famous for its size and prosperity. It was only at the beginning of the 14th century that
the locality known as the call came into being. It was then that
beforehand, many of the Jews had resided in the place called Almu-
daina. The new Jewish quarter was in the district of the Temp-
ple and Calatrava. The medieval Jewish quarter included the
streets known today as C. del Sol, C. Montesión, C. Montser-
rat, C. Calatrava and all the streets connecting between them.
In Majorca there were at least four synagogues, including the
Mayor and the Menor or Nueva. The two famous rimmonim
found in the cathedral are of Sicilian origin and were bought
for the cathedral in 1493. In the Archivo del Reino de Mallorca
there are two beautiful ketubbot.

[Yo2 Tov Assis (2nd ed.)]

Contemporary Period
A small Jewish community – the first since 1435 – was es-
established in 1971 in Palma de Mallorca, the capital of the island.
This was the result mainly of the efforts of Mr. Alec Kessel-
man, then the supervisor of the kasher section of a hotel in
Palma. In reply to his application the Spanish minister of jus-
tice gave approval to the establishment of the Comunidad
Israelita de Palma de Mallorca on July 8, 1971. In addition to
services held at a hotel there were weekly services in the
Palacio de Congresos, Palma. The kasher section of the hot-
el was closed, however, in 1978. The community numbered
around 300 people (although some estimates were higher):
most were silver- and goldsmiths and a few were small mer-
chants. Some were successful businessmen and a few even
left for Spain, where they managed to find a place in Span-
ish society. In the early 2000s the community maintained a
sagency.

MAJORITY RULE, deciding a matter according to the ma-
majority opinion. In the field of the halakhah this rule is applied
in three principal instances:

(a) determination of the binding law according to (the
view of) the majority of halakhic scholars;

(b) adjudication of dispute by the majority decision of
the courts’ judges; and

(c) imposition by majority decision of the community,
or its representatives, of a communal enactment (see “Ta-
kcanot ha-Kahal”), binding on all members of the community.
The basis for the majority rule is to be found in the exegesis
of the scriptural phrase, aharei rabbim le-hattot (to “follow a
multitude . . .” Ex. 23:2).

In Deciding the Halakah
In the Talmud the phrase aharei rabbim le-hattot was con-
verted into a decisory canon: “where there is a controversy
between an individual and the many, the halakah follows
the many” (Ber. 9a). The sages of the Talmud explained the
existence of this rule as a practical necessity, for if the Torah
had been given in the form of an exhaustive codex, “the world
could not have existed” (TJ, Sanh. 4:2, 22a; cf. Mid. Ps. 82:3). The
halakhic opinion that has prevailed is that the law is de-
cided in accordance with the view expressed by a majority
of the scholars, and this is so even if in a particular matter a
heavenly voice (see *Bat-Kol) should declare that the law is
accord to the minority opinion (BM 59a).

The individual may continue to express his opinion that
the majority has erred, but may not instruct in practice
according to the minority opinion; if he actually instructs
others to follow the minority opinion, he becomes (when
there is a Sanhedrin) a “zaken mamre (i.e., a “rebellious
scholar”; Maim., Yad, Mamrim, 35–6). If a majority of scholars
should arrive at the same conclusion but each for a different
reason, some scholars hold this to be a majority opinion
which is binding while other scholars hold the contrary view
(Maggid Mishneh, Ishut 7:12; Maharik, resp. nos. 41, 52, 94, 102).

Some of the geonim and rishonim took the view that a
minority opinion is to be preferred above a majority opinion
of scholars of lesser wisdom. This question first arose in a respon-
sum of Hai Gaon on a court decision on the concrete
matter in issue, and not as concerns deciding of the halakhah
in general (Geonim Kadmoniyim, resp. no. 144; Ramban nov.
Sanh. 23a; Sefer ha-Ḥinnukh, no. 67). Some of the scholars op-
posed this opinion, holding that the law is always as decided by the majority (Haggahot Asheri, Av. Zar. 1:3; Siftei Kohen, supplementary note to YD 242), while other scholars laid down that whenever the minority opinion is qualitatively superior to the majority opinion, the position is as if opinions are divided equally and either may be followed (Ramban nov. Sanh. 23a; Ritba, RH 14b). In the Shulhan Arukh, the most authoritative code of Jewish law, determination of the halakhah is generally made by application of the majority rule, the author (Joseph Caro) having adopted for himself the principle that the binding halakhah was to accord with the opinion held in common by any two of three great halakhists preceding him, namely Alfasi, Maimonides, and Asher b. Jehiel – or with the majority opinion selected on a different basis if a particular matter had not been dealt with by the three above-mentioned scholars. See *Codification of Law.

Decision by the Court

Within its plain meaning and read within its context, the above-mentioned scriptural passage (Ex. 23:2) has reference to a judgment of the court. The sages of the Talmud derived therefrom an additional interpretation relating to the field of criminal law – in which there is need for a specific majority, i.e., of two at least: "Thou shalt not follow after the many to do evil – I conclude that I must be with them to do well. Then why is it written [to follow] after the many to change judgment? [It means that] thy verdict of condemnation shall not be like thy verdict of acquittal, for thy verdict of acquittal is reached by the decision of a majority of one, but thy verdict of condemnation must be reached by the decision of a majority of two" (Sanh. 1:6 and cf. Mekh., Kaspa 20). Some scholars explain the need for a specific majority in matters of the criminal law on the basis that in matters of the civil law no judgment solely condemns or solely absolves, since any suit involves two litigants and what is at issue the one's benefit is to the other's detriment; whereas in criminal law matters the judgment is condemnatory, i.e., to the detriment of the accused (Tos. to Sanh. 3b).

A majority is only required in the event that a judicial decision has to be made in a concrete case before the court, whereas in deciding the halakhah in the criminal law field – outside the context of instant litigation – a simple majority of one suffices as it does in all other cases (Resp. Radbaz, Li-Le-shonot ha-Rambam, no. 1690).

The amoraim question how a judgment in a civil law matter, arrived at by majority decision, should be worded. It was decided, in accordance with the opinion of R. Eleazar, that the judgment must be written in the name of the court without mention being made of the names of the judges favoring one view or the other (Sanh. 30a; Maim., Yad, Sanh. 22:8); similarly, that a judgment given by a majority decision must be signed also by the judge dissenting therefrom (TJ, Sanh. 3:10; Arkat Rokhel, no. 19; Mabit, vol. 2, pt. 1, resp. no. 173; ḤM 19 – Urim, n. 4). Hai Gaon's opinion (see above) that a preponderance of wisdom should be preferred above numerical majority, also with reference to court decisions, and even that the opinion of one individual may prevail against that of the many, remained generally unaccepted in later generations. Even those who favored wisdom above a numerical majority as the basis for deciding the halakhah, agreed that the majority opinion was to be preferred as the basis for a judgment by the court in the concrete matter before it (Sefer ha-Ḥinnukh, no. 67; Ramban nov. Sanh. 23a).

Communal Decisions and Enactments

The view that has prevailed in Jewish law is that communal resolutions and enactments are passed by a decision of the majority and bind the minority (see Elon, in bibl., 11 n. 34).

This general view was dissented from by Rabbenu Jacob *Tam, who held that only after an enactment had been passed by the whole community might the majority lay down fines for transgression thereof, and that the minority could not be compelled by the community to comply with a decision of the majority to which it had been opposed (Mordekhai, ḤK 179 and ḤB 480). The doctrine of aharei rabbim le-hattot has been relied upon by the scholars in support of the right to pass a communal enactment by majority decision (Rosh, resp. no. 65).

According to some of the scholars, the ordinances of a guild or an association – as distinguished from communal enactments – must be passed with the consent of all members in order to be binding (Ramban, nov. BH 94; Nimmukei Yosef, BH 94; Lehem Rav, no. 216).

In the case of a judicial tribunal, it was laid down that a majority decision is not binding unless all the judges have participated in the proceedings and the judgment is that of the majority of the full complement (Sanh. 5:5). Some scholars deduced therefrom that also a communal enactment passed by majority decision is not binding unless the minority has participated in the proceedings (Rashba, vol. 2, resp. no. 104; Maharik, resp. no. 180; Maharit, vol. 1, resp. no. 58). Since this ruling, if followed, might enable the minority to impose its will on the majority by absenting itself from the discussions of the community, it came to be laid down in the course of time that the decision of the majority shall be binding despite the minority's nonparticipation in the discussions leading thereto. The scholars supported the conclusion either on the basis of a presumption that the absentee minority impliedly agrees to accept the decision of the majority which exerts itself to participate (Mishpat Shalom, no. 23a; ibid., Kanteres Tikkun Olam, “vav”), or on the basis that the minority impliedly delegates authority to the majority (Hatam Sofer, ḤM, resp. no. 116); custom too is relied upon by some scholars in support of the majority rule of those participating in the proceedings in communal legislation (Mabit, vol. 1, resp. no. 264). If the community has delegated authority to its representatives, the latter decide by majority decision, but only if the minority too is present (Penei Moshe, vol. 2, resp. no. 110; Birkei Yosef, ḤM 15:7).

[Shmuel Shilo]
Halakhic Decision-Making and the Importance of Minority Opinions

The determination of practical *halakhah* by the majority does not contradict the concept of freedom of expression nor detract from the importance of any view, even if that view is a lone view.

Early Jewish law, as reflected in the sources, is characterized by its anonymity and its uniformity. Prior to the era of "Hillel and "Shammai, halakhic disputes were rare, since any problem which arose was resolved by the Sanhedrin, which enjoyed complete judicial authority (Sanh. 88b; Tosefta, Sanh. 7:1). From the generation after Hillel and Shammai – i.e., the beginning of the first century – and until the end of that century, following the destruction of the Second Temple and a concomitant decline in the status of the Sanhedrin, the halakhic world split into two schools of thought – the School of Hillel and the School of Shammai (see "Bet Hillel and Bet Shammai"). Each school practiced the law in accordance with its own beliefs, while differences even extended to legal questions with fundamental and basic ramifications:

When the disciples of Shammai and Hillel, who had insufficiently studied, increased in number, disputes multiplied in Israel and the Torah became as two Torot (ibid.).

Practically speaking, this period of pluralistic halakhic rulings could not continue for long, as it led to the possibility that families belonging to one school of thought could not marry into the other, thereby dividing the nation into two separate endogamous groups. At the beginning of the second century, when the center of Jewish law moved from Jerusalem to Yavneh, with Rabban Simeon ben Gamaliel 11 as its head, the original uniformity in practical application that had previously existed in the *halakhah* was restored.

In deciding between the opinions of the School of Hillel and the School of Shammai, the Sages ruled that "both are the words of the living God, but the law is in accordance with the School of Hillel" (Tj, Ber. 1d).

It was this trend toward deciding between opposing views that led to the early stages in the process of redaction of various legal collections which later constituted the basis for the redaction of the Mishnah. Nevertheless, during the process of redaction of the Mishnah, the divergent views and disputes among the various *tannaim* were preserved and recorded. One reason for this is stated explicitly in the Mishnah itself (Eduyyot 1:5), namely: that should a later court of law see fit to rule in accordance with the individual opinion, it would be at liberty to do so. In the words of the Tosefta: "Rabbi Judah says: Why is the minority view recorded [in the Mishnah] alongside the majority view…. So that a [later] court that agrees with the minority view can rely on" (Tosefta, Eduyyot 1:4).

Rabbi "Samson of Sens (France, Palestine; 12th and 13th centuries) interprets the aforementioned sources as follows:

Even though the individual opinion was not accepted in the first instance, and the majority disagreed with the individual, a later generation may arise, the majority of whom might agree to the opinion of the individual, and then the matter will be decided in accordance with their opinion. All of the Torah was transmitted to Moses in this fashion: there are considerations to purify and considerations to render impure. (Moses) was told: How long will we have to clarify every situation? He said to them: "The rule is according to the majority; however, both opinions are the words of the living God."

According to this interpretation, there is no such thing as an absolute and unequivocal ruling. In every case there are multiple considerations. While the final ruling in halakhic decision-making is indeed determined by the majority, a different majority at another period in time might arrive at a different conclusion. In the Supreme Court of the State of Israel, this justification for citing minority opinions has been presented – on the basis of the sources cited above – as an explanation for the crucial need to present minority opinions in fundamental court rulings (FH 13/80 Hendeles v. Bank Kuppat Hā'am 35 (2) PD 785, p. 796; IH 669/85 Kahane v. Knesseret Speaker, 40 (4) PD 393, 404–420 per Justice Menachem Elon).

An additional explanation, that is both connected to and founded on the previous one, is the pluralistic nature of the *halakhah* – not in terms of practical actions, but in terms of opinions. The *halakhah* accepts uniformity in halakhic decision-making as an operative necessity. On the theoretical plane, however, it considers each and every opinion as important, and it sees the importance of presenting the full spectrum of halakhic views. A sage who disputes the opinion of his fellows – even after the Sanhedrin has ruled against his opinion – may continue to adhere to his opinion, so long as he does not rule accordingly for others. Such a sage will not be considered to be a “rebellious elder” (Mishnah, Sanhedrin 11:2).

This position, which sees the multiplicity of opinions and the importance of transmitting all of those opinions to the learning community as a value, may be found in the words of halakhic authorities of later eras.

Rabbi Ḥayyim ben Bezalel Ashkenazi states that, if a halakhic authority were to rule in accordance with a particular opinion on one day, and in accordance with a different opinion on the next day – “this would not be evidence of any change or deficiency which would cause us to say that the Torah has become, God forbid, as two Torahs; on the contrary – such is the way of the Torah, and both are the words of the living God” (Vikku‘ah Mayim Ḥayyim (Introduction), par. 7; Poland, 16th century).

Rabbi Solomon Ephraim of Lonschitz (Keli Yakar, on Deut. 17:2) applies the same statement to the legal decision of a judge in a case adjudicated before him. In his opinion, in every case there are considerations in either direction, and there is no absolute ruling of pure or impure, permitted or prohibited. That is why, when a court of law rules, we must always rely on its rulings; the court has ruled in accordance with the intellectual discretion of the majority of its members, a fact that endows their opinion with obligatory validity. This, however, does not detract from the essential truth of the op-
posing opinion, in and of itself. Rabbi Jehiel Michal Epstein (Arukh ha-Shulhan, t.h., Introduction; beginning of 20\(^{th}\) century) sees the diversity of opinions as the glory of the Torah. He compares it to a choir made up of many voices:

> For those who truly understand, all of the disputes of the tan-naim and amoraim, the geonim and the posekim are truly the words of living God, and each of them have validity in the halakhah. In truth, that is the glory of our holy and pure Torah. All of the Torah is called "song," and the glory of a song is when the voices are different from each other. That is the essence of its beauty.

These words regarding the phenomenon of multiple opinions as an integral part of the world of the halakhah, have been cited and discussed at length in the rulings of the Supreme Court of the State of Israel by Justice Menachem Elon, in the Neiman case, in the Shakdikel case, and in the Kestenbaum case. In all of these cases he relied on those sources in order to establish the legitimacy of different and divergent opinions in the realm of halakhah, in the spectrum of political opinions in the State of Israel, and in the field of public administration in the State of Israel (e.g. 2/84 Neiman v. Chairman, Central Elections Committee; 39 (2) PD 225, 292–296; HC 153/87 Shakdikel v. Minister of Religious Affairs; 42 (2) PD 221, 263–264; CA 294/91; CA 294/91 Burial Society v. Kestenbaum; 46 (2) PD 464, 505–506).

[Menachem Elon 2nd ed.]

**MAKAI (Fischer), EMIL** (1870–1901), Hungarian poet and playwright. Born in Mako, Makai was the son of Rabbi Enoch Fischer. In 1884 he entered the Budapest rabbinical seminary, but during his years there he spent much of his time writing. Finally, in 1893, after much heart searching and with the encouragement of the great Jewish poet József *Kiss, he decided to give up his rabbinical studies and devote himself entirely to writing.

Makai began the first, exclusively Jewish phase of his literary career with a collection of lyric verse, Vallásos éneké (“Religious Hymns,” 1888). This was followed by a biblical drama, Absalon (1891), and Zsidó költők (“Jewish Poets,” 1892), translations from the works of leading Hebrew writers in medieval Spain. These had an epoch-making effect on Hungarian literature, and established Makai’s reputation as a poet. In 1893, his paraphrase of the Song of Songs (Énekek éneke) was published. Unlike almost all his contemporaries, Makai was an “urban poet,” a type virtually unknown in Hungarian literature.

In his second, “worldly” phase of creative writing, Makai wrote primarily about love, notably in the collection Margit (1895). His plays include the three-act verse comedy Tudós professzor Hatvani (“The Learned Professor Hatvani,” 1900), depicting the life of a humorous Faustian character. From 1892 Makai translated more than 100 operettas which, by reason of his masterly metrical technique, established the style of the Hungarian operetta. They included Abraham *Golfaden’s Sulamit and Bar Kochba*, the former a major success on the Hungarian stage. A two-volume selection of Makai’s writings was published in 1904.

[Paul Blau]
MAKHSHIRIN ( Heb. מַכְשִׁירִין), eighth tractate in the order Tohorot, in the Mishnah and Tosefta. The word machshirin, the causative hiphil form of kasher (“to be fit”), means “those things which render fit,” but it is here used in a technical sense. In accordance with Leviticus 11:34, 37–8, that food can become liable to ritual impurity only if it has been moistened by water, machshirin is employed to refer to all liquids which have this quality. For the same reason, the tractate is sometimes called Maskhim (“Liquids”). It is laid down on the basis of verse 38 that there must be some intention or desire on the part of the owner of the food so moistened, and the tractate deals primarily with these two points – the liquids which render food liable to ritual impurity and the intention of having the food moistened. Every possible cause of foods becoming moist is detailed – from rain, ordure, damp walls, absorption of water in the food’s vicinity, dripping through a leak in the roof, bilge water, steam caused by rain dripping on hot iron, the juice of grapes, etc. The tractate concludes (6:4–8) with a discussion of liquids other than water which render produce susceptible to impurity. Epstein has pointed to various layers which can be detected in Machshirin. According to him 1:3 belongs to the Mishnah of R. Joshua; 1:4 to that of Akiva; 5:2 and 6:2 to Meir; and 6:3 to Judah b. Ilai, Akiva’s disciple. He maintains that Joshua’s ascription of Mishnah 6:4 (Ter. 11:2) to “the sages” is evidence that it is an early one. Mishnah 6:8 is interesting in that, although mishnayot and beraitot usually contain only the discussions of colleagues, this Mishnah also gives disciples’ questions and Akiva’s reply (cf. Epstein, Tanna’im, 88). The standard text of mishnah 5:1 deals with a drunken man who pushes someone into the water. S. Lieberman has shown that the text is corrupt. The correct reading should be “if he pushed him in order to injure him” (leshovero, לַשְׁמַר לָהוֹ, not leshokhvero, לַשְׁמוּרָה), and is one of several mishnayot references to the prevalent custom of dangerous water sports, of which the rabbis strongly disapproved. In the Tosefta there are some passages of historical interest. One tells of the overtuling by the rabbis of Joshua b. Perahiah’s ruling declaring all Alexandrian wheat (a major source of supply) unclean (3:4) and the alterations made by the farmers of Sepphoris in their methods of harvesting in order to remove the suspicion of defilement from their produce (3:5–6). Genizah fragments of the tractate have been found and their alternate readings throw light on several passages (JTLG, 18 (1927), 28ff.). Neusner (1980) devoted a study to the form-critical analysis of the Mishnah, using Machshirin as his primary focus. The Mishnah of this tractate was translated into English by H. Danby (1933), while a History of the Mishnaic Laws of Purities (1974–77), vol. 17; idem, Form Analysis and Exegesis: A Fresh Approach to the Interpretation of the Mishnah (1980); idem, From Mishnah to Scripture (1984), 89–92; idem, The Philosophical Mishnah, 2 (1989), 251–56; idem, Purity in Rabbinic Judaism (1994), 97–102.

MAKKABI—RE’UT (Heb. מקב nổiוּעַת), urban community in central Israel, midway between Tel Aviv and Jerusalem. It received municipal council status in 1990. In 2002 its population was 10,700, occupying an area of 1.4 sq. mi. (3.5 sq. km.). In 2003 its municipality was united with that of the nearby city of “Modi’in.”

[Malka Gilboa]

MAKKADEAH (Heb. מַכָּד אָה), Canaanite city in the Shephelah which marked the farthest limit of the Israelite pursuit of the five kings who united to punish Gibeon but were defeated at Aijalon (Josh. 10). The kings fled to a cave at Makkedah where they were captured and executed by hanging in the Israelite camp. The city was afterward conquered and destroyed, and, accordingly, the king of Makkedah is mentioned in the list of defeated Canaanite cities (Josh. 12:16). In the topographical description of Judah, it is located, with Lachish, in the southern Shephelah (Josh. 15:41). Eusebius places the city 8 mi. (c. 13 km.) to the east of Eleutheropolis (Bet Guvrin; Onom. 126:22ff.). The identification of the ancient site is uncertain.

[Michael Avi-Yonah]

MAKKOT (Heb. מַכֹּת, “Flagellation”), fifth tractate in the order Nezikin, in the Mishnah, Tosefta, and Babylonian and Jerusalem Talmuds. The tractate deals with three separate topics and is a continuation of the preceding tractate Sanhedrin, as it also deals with judicial punishments administered by the courts. The first chapter discusses the laws of plotting witnesses (”zomemim”); Deut. 19:16–20), the kind of testimony that constitutes such plotting, when such witnesses are punishable by the sentence they intended the court to impose upon the accused, and when their punishment is merely flogging. Chapter 2 contains an exhaustive treatment of circumstances under which the inadvertent murderer is banished to a city of refuge (Num. 35:6ff.; Deut. 19:2ff.), those liable and those exempt from banishment, the character of the cities of refuge and the protection they afford, and the connection between the death of the high priest and the return of the manslayer to his hometown (Num. 35:25). Chapter 3 gives a list of offenses for which the penalty is flogging; discusses whether flogging is incidental to offenses punishable by death, and describes in detail the imposition of the penalty. The tractate ends with an aggadic passage on the value to Israel of the commandments and a summation of the principles which inspire them. An interesting mishnah (11:10) deals with capital punishment: “R. Eliezer b. Azariah says: A Sanhedrin that effects a capital punishment once in 70 years is branded a destructive tribunal. R. Tarfon and R. Akiva say: Were we members of the Sanhedrin, no person would ever be put to death.”

Thereupon] Rabban
Simeon b. Gamaliel remarked: If so, they [these rabbis] would multiply shedders of blood in Israel."

The Tosefta consists of five chapters (ch. 2 is found only in the Erfurt manuscript published by Zuckermandel). Chapter 1 of the Tosefta parallels chapter 1 of the Mishnah; chapter 2, Mishnah 2:1–4; chapter 3, the remainder of chapter 2; while chapters 4 and 5 correspond to chapter 3. De Vries maintains that the Mishnah and Tosefta in this case both derive from an earlier compilation which the Tosefta follows closely, but from which the Mishnah deviated considerably. In his opinion the Mishnah was originally divided into five chapters – as is the Tosefta – and that it was later abridged into three chapters. The Babylonian Talmud has Gemara on all three chapters, but the Jerusalem Talmud only on the first two. In addition, the Babylonian Talmud on Makkot is much richer in aggadic material. It concludes with the moving story of a group of rabbis who were shocked to see a jackal emerging from the recess of the Holy of Holies. All with the exception of Akiva, burst into tears, while he laughed. He explained his joy with the observation that with this calamity the worst prophecy about the Jews had been fulfilled, and one could now anticipate that the comforting prophecy of Zechariah, "There shall yet old men and old women sit in the broad places of Jerusalem" (Zechar. 8:4), would likewise be fulfilled.

Although the printed editions of the Jerusalem Talmud have no Gemara to the third chapter, Lieberman has shown that such a Gemara existed, but since the topics with which it dealt were discussed in the Gemara to Mishnahoyt in other places, the copyists omitted these duplicated discussions from the third chapter of the tractate. In fact, the early authorities quote references from the Jerusalem Talmud to Makkot which do not occur elsewhere in the existing text. A fragment from the Jerusalem Talmud belonging to chapter 2 of Makkot and found in the Cairo Genizah has been published by S. Wieder. Published translations of the Mishnah include one in Latin, with extracts from the Gemara, by J. Coccejus (Amsterdam, 1629), one in German by H.L. Strack (1910), and one in English by Danby (1933). The Babylonian Talmud was also translated into English by H.M. Lazarus in the Soncino edition (1935). Although the imposition of the penalties discussed in Makkot was not practiced directly in the Diaspora, yet because of its importance for the theoretical discussion of criminal law it is much discussed and frequently referred to in rabbinic literature.

**MAKLEFF,** family of Erez, Israel pioneers.

**Aryeh Leib Makleff** (1876–1929) was born in the Grodno district of Russian Poland and settled in Erez, Israel in 1891. At the age of 18 he moved from Jerusalem to Petaḥ Tikvah and worked on his brother’s land. Eventually he settled in Moza and put many years of labor into the vineyard planted by his father-in-law Yehiel Chemerinski, one of the founders of the Mahaneh Yehudah quarter in Jerusalem. As an agricultural expert he was instrumental in choosing the land for Hulda before the Jewish National Fund purchased it. For 25 years his home was the center of the settlement of Moza. During the riots of 1929, the sheikh of the nearby Arab village, Qalunya, promised him that Moza would not be attacked. Nonetheless, the settlement was stormed by its Arab neighbors, and Makleff was killed along with his wife, Ḳayyah Ḥayyah (b. in Jerusalem, 1877); his son, Avraham (b. 1907); and his daughters Minna (b. 1905) and Rivkah (b. 1910).

**Mordechai Makleff** (1920–1978), Aryeh Leib’s youngest son, survived the slaughter of his family by taking shelter in a neighbor’s home and grew up to become chief of staff of the Israel Defense Forces. Born in Jerusalem, he received a religious education and graduated from the Reali school in Haifa in 1938. He joined the Special Night Squads led by Orde Wingate against Arab terrorists. In 1940 he joined the British army and was sent to officers’ school. He saw action in World War II with the *Jewish Brigade* in Italy. In 1948 he was the commanding officer of the Haganah unit that captured Haifa and represented the Haganah in its negotiations with the Arabs of the city. He then took part in the battle for Mishmar ha-Yarden and the lightning operation to capture eastern Galilee. He headed the Israel delegation to the armistice talks with Lebanon and Syria. In 1949 Makleff became assistant chief of staff under Yigael *Yadin,* and in 1952 he received the appointment of chief of staff, a post which he held for a period of one year. In 1958 he became managing director of the Dead Sea Works, and ten years later was appointed director of the Citrus Marketing Board of Israel.

**MAKO** (Hung. *Makó,* or *Mako*), town in S. Hungary. Jews were first authorized to settle in Mako in 1740. In 1748 they founded a hevra kadisha in the town, and the community was probably organized at that time. A Jewish school was also opened. The first synagogue was erected in 1814, and the magnificent great synagogue was built in 1914. After 1868 the community was split into two factions and in 1870 the Orthodox built a synagogue. There were 158 Jews in Mako in 1773, earning their livelihood mainly from trade, especially in onions which grew abundantly in the surroundings. There were also Jewish craftsmen. From 154 in 1824 the Jewish population increased to 1,200 by 1858. The Jews numbered 1,928 in 1918, 2,380 in 1920, and 1,125 in 1941. The first rabbi of the town was Jacob Selig (1773). Others were Solomon *Ullman* (1826–1863), who maintained a yeshivah, and Enoch Fischer (1864–1896), the father of the poet Emil *Makai.* The last rabbis were the historian A. *Kecskeméti* (1898–1944) and M. Vorhand (*Orthodox*). The renowned journalist and publisher Joseph *Pulitzer* was born in this town. After the German invasion (March 19, 1944) a ghetto was set up for the 3,000 Jews of Mako and the surrounding area. All were transferred to Szeged at the end.
of June and deported to *Auschwitz, with some going to Austria; only around 600 returned to reestablish a community in 1949. The synagogue was demolished in the late 1960s. In 1970 there were 98 Jews in Mako.

[Alexander Scheiber]

**MAKOW MAZOWIECKI** (Pol. *Maków Mazowiecki*, Russ. *Makov*), town in Warszawa province (before 1795 Mazovia province), Poland. An organized Jewish community is traceable to the second half of the 16th century. At the end of the 17th century a Jew, Nachman ben Nathan, was executed as a result of a blood libel. King Augustus III (1733–63) confirmed the rights of the Jewish community. According to the 1765 census, 1,258 poll tax payers, of whom 827 lived in neighboring villages, were under the jurisdiction of the Makow kahal. Of the 113 Jewish families (431 persons) living in Makow, 54 owned their houses; 21 families earned their livelihood as craftsmen (tailors, carpenters, tinsmiths). The Jewish population numbered 2,007 (72% of the total population) in 1808; 4,090 (90%) in 1827; 4,100 in 1856; and 4,400 in 1897. Of rabbis in Makow in the 18th century the following are known by name: Moses ben Gershon, Abraham Abish and David ben Zion Jehезkel (d. 1815), *dayyan* and *Maggid*, who was a central figure in the historical controversy between *Hasidim* and *Mitnaggedim*. Of the 19th century rabbis mention should be made of Arye Leib Zunz, Eliezer Hakohen Lipschutz, and Judah Leib Graubard. Nathan Chilinowicz founded a yeshivah at the end of the 19th century which existed until 1939.

**Holocaust Period**

At the outbreak of World War II, there were about 3,500 Jews in Makow Mazowiecki. Shortly after the German invasion of Poland, another 500 Jews settled there. At the end of 1940 several hundred young Jewish men were deported to the nearby forced-labor camp in Gasiernow. In September 1941 the ghetto was established. On Nov. 5, 1942, the Germans concentrated Jews still living in the smaller places of Makow county in the ghetto. A few days later (Nov. 14–18, 1942) the first deportations to the *Treblinka* death camp were known by name: Moses ben Gershon, Abraham Abish and David ben Zion Jehезkel (d. 1815), *dayyan* and *Maggid*, who was a central figure in the historical controversy between *Hasidim* and *Mitnaggedim*. Of the 19th century rabbis mention should be made of Arye Leib Zunz, Eliezer Hakohen Lipschutz, and Judah Leib Graubard. Nathan Chilinowicz founded a yeshivah at the end of the 19th century which existed until 1939.

[Stefan Krakowski]
Tokyo. And in 1975, when the United Nations condemned Zionism as a form of racism and racial discrimination, they sent a petition of protest containing 37,000 signatures to the UN General Secretary. Makuya show great hospitality to visiting Israelis and Jews, and it is possible to find Makuya Hebrew speakers in most important Japanese towns. To some extent their admiration for Jews derives from the Christian part of their ideology. But, in addition, it springs from the national nature of Judaism – the idea that Judaism is the religion of the Jewish people – and from Zionism. The Makuya are intensely nationalistic and, in some ways, are looking towards the redemption of the Japanese nation which will be modeled upon the redemption of Israel.

[Makuya, a Jewish community in Japan, and their relationship with Zionism and Judaism.]

**MALACH, LEIB** (pseudonym of Leib Salzman; 1894–1936), Yiddish poet and dramatist. Born in Zwoleń, Poland, he had a traditional education, lived in Warsaw in 1907–22, and worked at various trades until his literary talent was discovered by the novelist H.D. *Nomberg. From 1922 until his death in Paris, he lived in a number of countries, his longest stay being in Argentina. He began his literary career with songs and ballads, later turning to prose and drama. His travel sketches were widely read, and his drama *Ibergus* (“Overflow,” 1926) about white slave traffic helped in the struggle against this social evil in Buenos Aires. His novel *Don Domingo’s Krautsveg* (“Don Domingo’s Crusade,” 1930) is an epic of adventurous and idealistic Jewish life in Latin America.

**BIBLIOGRAPHY:** Reijen, Leksikon, 2 (1927), 431–4; LNYL, 6 (1965), 4–8; M. Ravitch, *Mayn Leksikon* (1945), 135–7; L. Malach *Bukh* (1949); *Biete tsum Ondenk fun L. Malach* (1936), incl. bibl.

**MALACHI, BOOK OF**, the last (12th) book of the section of the Bible called “Minor Prophets.” In the Qumran fragment 4QXIIA, however, Malachi seems to be followed by Jonah. It contains “The pronouncement of the word of the Lord to Israel by Malachi” (Mal. 1:1). The Hebrew word (Heb. מַלְאָכִי) (malakhi) means “My messenger.” According to A. von Bulmerincq, the word could be a shortened form of מַלְאָכִי יָהִי (malakhiyyah, “messenger of the Lord”). However, since this name is not found elsewhere in the Bible, the Septuagint, in which it appears as malakho (“by the hand of His messenger”), is probably right in not regarding it as a personal name. The Targum follows the masoretic text, but adds a note to the effect that “My messenger” is “Ezra: “by the hand of My messenger whose name is called Ezra the scribe.” The same tradition is mentioned and accepted by Jerome. Had Ezra been the author of the book, however, it is unlikely that his authorship would have been thus concealed. In fact, the occurrence of the word in the title is naturally explained as derived from Malachi 3:1: “Behold, I send My messenger” (cf. Mal. 2:7). It is noteworthy that whereas the activity of Haggai and Zechariah is noted in Ezra 5:1; 6:14, no mention is made of Malachi, a further indication that the book, should be regarded as anonymous, the title having been added by the compiler who had given similar editorial titles to the anonymous oracles beginning with *Zechariah 9:1 and 12:1. The reason behind the separation of the Book of Malachi from the preceding Book of Zechariah is that the “Malachian” chapters constitute a characteristic unit, different from Deutero- and Trito-Zechariah (Zech. 9–11; 12–14). The separation also provides a twelfth prophetic book, corresponding to the traditional twelve tribes of Israel.

The contents of the Book of Malachi fall into six clearly marked sections introduced by a statement of the Lord or of the prophet, which is then challenged by the people or the priests, and defended by the Lord Himself in words of reproach and doom. The Lord’s love for Israel, in contrast with His treatment of Edom, is emphasized at the outset (Mal. 1:2–5). The second speech reproaches the priests for their neglect of the sacrificial cult (1:6–2:9): their attitude should express a proper regard for the ritual of the Lord’s worship, yet any offering, however imperfect, has been thought good enough for His altar. In this, as no doubt in other matters, the priests show themselves unworthy of their forefather Levi, by misleading “the many” into sin with their lax rulings. Let the priests, therefore, take warning, and return to their ancient ideals. This section seems to have been subsequently expanded by the insertion of 1:11–14. The aspect of God as their common father should inspire correct relations between Jew and Jew, and not such conduct as repudiating Jewish wives for the sake of marrying non-Jewish women (2:10–16). In its present form, this speech reproaches the Jews for contracting mixed marriages. The view of Ch.C. Torrey (*JBL, 17* (1898), 1–15) and F.F. Hvidberg (*Weeping and Laughter in the Old Testament* (1962)) that a reproach for the adoration of foreign gods is actually meant has little to commend it. A problem, however, arises from the secondary character of 2:11b–13a, or 11–12. Several modern scholars have challenged the genuineness of this passage for literary reasons and consider it a later addition. Without these verses, 2:10–16 contains no reference to mixed marriages, but rather attacks the abuse of divorce by Jews, exhorting them to remain loyal to the wives of their youth (cf. Prov. 5:15–20). If the sacredness and religious value of marriage are implied, the reproach indicates that men were divorcing wives casually and callously. It is also possible to read the section as an attack on divorcing Jewish women for the purpose of marrying gentile women, who are described as (2:11) “daughter of a foreign god” (see below). Such a union is opposed by “the One” (2:15) who desires “divine seed” (Hebrew זֶרֶא אֵלֹהִים, elsewhere called “holy seed,” Hebrew זֶרֶא הקֹדֶשׁ; Ezra 9:2), i.e., children who are not products of sexual intermingling with gentiles. The connection between loyalty to a Jewish wife and to God was facilitated by the characterization of marriage as berit, “covenant,” a notion first attested in Ezekiel 16:8.
The prevalence of wrongdoing had provoked skepticism about divine justice. The fourth section asserts against these doubts that the Lord is the God of judgment and will restore the rights of the people; His messenger is already at hand to purge indifferentism from worship and immorality from conduct (Mal. 2:17–3:5). A. von Bulmerincq’s assumption that Ezra is the “messenger” of 3:1 is unlikely, because the conception here is rather that of a heavenly being. According to the next section, the people’s neglect in paying tithes and other sacred dues has been punished with drought, locusts, and failure of crops; however, the punctilious payment of the withheld tithes will be rewarded with abundance (3:6–12). This fifth section thus enforces the duty of giving tithes. The last section promises the despondent pious Jews vindication for themselves and punishment for the ungodly ones on the Day of Judgment (3:13–21). Religion may seem useless, warns the author, but the Lord remembers His own, and will soon distinguish them openly from the irreligious. The book closes with an appeal to observe the Law that the Lord gave at Horeb, and with the announcement that the prophet Elijah will come before the threatened judgment (3:22–24). The appeal to the “Law of Moses” is part of the redactional process of Scripture in which Torah is declared superior to the Prophets and Hagiographa. Thus, Joshua 1, which opens the Prophets, emphasizes the book of Torah. Malachi, which ends the Prophets, closes with Torah, and Psalm 1, which opens the Hagiographa opens with Torah. These concluding words are likewise an addition, namely a later interpretation of 3:1, saying that the anonymous “messenger” is Elijah. Nonetheless, the addition shares with the body of the book its deuteronomic orientation: the book evidently regards the entire tribe of Levi as priestly, the closing appeal names Horeb instead of Sinai as the mount of revelation. These facts favor an early rather than a late post-Exilic date. Other features bear this out.

Like Haggai and Zechariah 1–8, the Book of Malachi is an expression of the changed outlook of prophecy in post-Exilic times. The topics noted above clearly relate the book to the post-Exilic period, when the Temple had been rebuilt (1:10; 3:1, 10), the province of Judea was ruled by a representative of the Persian government (1:8), and there had been time enough for the loss of earlier religious enthusiasm. The three main abuses attacked in the text are the degeneracy of the priesthood (1:6–1:9), intermarriage with foreign women (2:11), and the people’s remissness in the payment of tithes (3:8). These abuses, especially the second and the third, are mentioned prominently in the Book of *Ezra and Nehemiah, and are those which both reformers strenuously set themselves to correct (Ezra 9:2; 10:3, 16–44; Neh. 10:31, 33–40; 13:10–14, 23–29). The independent character of Malachi’s attack against divorcing Jewish wives in order to marry foreign women (Mal. 2:10–16) suggests a date of composition prior to that of the work of Ezra (Ezra 9:2; 10:3, 16–44). This earlier date is made still more likely if the reproach against mixed marriages in Malachi 2:11b is a later insertion, one which precisely reflects the preoccupations of the time of Ezra and Nehemiah. The time of Ezra’s activity, unfortunately, is uncertain. Following A. van Hoonacker and S. Mowinckel, above all, many scholars have assumed that Ezra was not active under Artaxerxes I (in 458 B.C.E.), but under Artaxerxes II (in 398 B.C.E.; cf. Ezra 7:8). The problems of mixed marriages and unpaid tithes, however, existed also in the time of Nehemiah (Neh. 10:31, 33–40; 13:10–14, 23–29), i.e., between 445 and about 424, the year Artaxerxes I died (cf. Neh. 2:1; 13:6). The insertion of Malachi 2:11b–13a may thus date from that period, and it may reasonably be inferred, therefore, that the original Book of Malachi dates prior to the age of Nehemiah and Ezra. In fact, most modern scholars agree that the prophet prepares the way for the work of those reformers.

There is no evidence of sufficient strength to substantiate a later date. The assumptions of H. Winckler (Altorientalische Forschungen, 2 (1898), 531ff.) and O. Holtzmann (ARW, 29 (1931), 1–21), who date the book to the first half of the second century B.C.E., are highly speculative and, at the present state of knowledge, inadmissible. The opinion of A. von Bulmerincq, who identifies the “messenger” of Malachi 3:1 as Ezra, becomes still more doubtful if Nehemiah is considered to have preceded Ezra. The period of Nehemiah’s absence at the Persian court in approximately 430 B.C.E. (Neh. 13:6) has been proposed as the time of composition by S.R. Driver (An Introduction to the Literature of the Old Testament (1897), 357) and A. Gelin (Introduction à la Bible, 1 (1957), 572), but an earlier date is the most likely. One of the chief duties of the priest was still the proclamation of the Oral Law (Mal. 2:6–9), and not as yet the solemn reading of the Written Law, as in Nehemiah 8–10. In fact, the prophet seems to be influenced by earlier deuteronomistic theories concerning the priests; at the same time, it is doubtful whether he knew the Priestly Code regulations on tithes found in Numbers 18:20–32, where the tithe is designated in its entirety for the maintenance of the levites (whereas, according to deuteronomistic legislation (Deut. 14:22–29; 26:12–15), the levites only took part of the tithe). It appears that the Priestly Code, in its present form, is not presupposed by the Book of Malachi.

An earlier date for the composition of Malachi is also suggested by the allusion to the destruction of Edom in Malachi 1:3–4. The Arab invasion of this Transjordanian kingdom cannot be dated with precision, but Edom was apparently entirely taken over by Arab tribes toward the end of the sixth century B.C.E. Since the remaining Edomites still expected a restoration of their ruined country (1:4), approximately 500 B.C.E. is a more probable date for the composition of the Book of Malachi than the first half of the fifth century. A.C. Welch even thought that the book dated from the age of the prophet Haggai (520 B.C.E.). The bad harvests and locust plagues alluded to in 3:11 would then reflect the same situation as in Haggai 1:6, 9–11; 2:16–17. However, the existence of the Temple as implied by Malachi indicates a somewhat later date. All things considered, it may reasonably be assumed that the book dates from approximately 500 B.C.E.
The work reflects the various currents of thought and modes of life in the Jerusalem of about 500 B.C.E., affording an interesting and valuable glimpse of the post-Exilic community in the period between the age of Haggai and Zechariah on one hand, and the time of Nehemiah and Ezra on the other. The situation in Judea was one of depression and discontent. The expectations which earlier prophets had aroused had not been fulfilled. The return from Babylon had brought with it none of the ideal glories promised by Deutero-Isaiah. The completion of the Second Temple (515 B.C.E.) had been followed by disillusionment over the anticipated prosperity announced by Haggai in 520 B.C.E., by consequent indifference to worship, skepticism as to divine justice, and moral laxity. In view of these conditions, the message of Malachi is to reassert the true relation of the people to their God, and to recall the nation to religious and moral earnestness, especially in regard to questions of ritual and marriage. Yet the author is no formalist. Ritual observances are of value in his eyes only as expressions of spiritual service; for example, he supposes that God does not accept offerings presented by disloyal husbands (2:13b–14). Moral and social offenses are fiercely condemned by the prophet (3:5), and from the concept of the brotherhood of all Jews under one Father (2:10), he deduces the duties which they have toward each other, and the wrongfulness of the selfish practice of divorce prevalent in his day (2:14–16).

The Book of Malachi is a significant landmark in the religious history of Israel. Despite its emphasis on the observance of ritual, it shows genuine prophetic spirit. Its denunciation of those who divorced their Jewish wives to marry "the daughter of a strange god" reflects the prophetic ideal of a permanent covenant between God and His people, which had been represented as a marital relation since the days of Hosea. The denunciation also involves a protest against the influences of foreign marriages, the prohibition of which was to be made effective, at least in Yehud, by the reforms of Nehemiah and Ezra. The influence of the closing words of the book (3:22–24) on later messianic expectation is apparent in the Jewish post-biblical literature (Eccles. 48:10; Suk. 52b; Mid. Ps. 10 421; Targ., Lam. 4:22; Targ. Yer., Deut. 30:4) and in the New Testament (Matt. 17:3, 4, 10–13; 27:47, 49; Mark 9:4–5, 11–13; 15:35–36; Luke 9:30, 33; John 1:21, 25). In the New Testament the end of Malachi serves as a proof text to identify John the Baptist with Elijah.

In the Aggadah

The author of Malachi was considered the last of the prophets, along with Haggai and Zechariah. Upon their death, the spirit of prophecy departed from Israel (Yoma 9b). Malachi was identified with Ezra by R. Joshua b. Korha and with Mordecai by R. Naḥman. The sages, however, declared that Malachi was his proper name (Meg. 15a). Targum Jonathan to the words "by Malachi" (1:1) added the gloss "who is known by the name of Ezra the scribe." R. Joshua validated this view by explaining the references in Malachi to the "daughter of a strange god" (2:11) as identical with the "foreign women" described by Ezra (10:2; Meg. 15a). Malachi was a member of the Great Synagogue, and traditions were later reported in his name (cf. Rh 19b).

MALACHI, ELIEZER RAPHAEL (1895–1980), U.S. Hebrew scholar and bibliographer. Born in Jerusalem, Malachi emigrated to the United States at the age of 17. A conscientious and diligent scholar, he began his literary career with original and translated stories, but in early life switched to scholarship. Though he wrote prolifically, he published only two books of essays: Massot u-Reshimot (1937), on contemporary and past writers, and Zilelei ha-Dorot (1940), on historical occurrences.

His first publication, as a boy of 15, was an essay on Hebrew newspapers, which appeared in Luncz’s Luah Erez Yisrael (1910). In 1913 he became a contributor to the newly established monthly Hatoren, where he exhibited his expertise as a bibliographer in his pioneering historical survey of the American Hebrew press, which he traced from its beginnings in the 1870s. Subsequently, the monthly published his bibliography of the writings of Mendele Mokher Sforim (Sholem Yankev *Abramovitch), which remains a model to this day. His succeeding work embraced Diaspora Hebrew periodicals, the Yiddish press, Hebrew poetry in America, Hebrew literature, historical essays, and individual bibliographies of Hebrew scholars and writers. His bibliographies of scholars include A.M. Luncz, J.N. Simhoni, S.A. Horodetsky, S. Krauss, N. Slouschz, S. Dubnow, A. Elmaleh, J. Schatzky, and S. Tchernowitz, the last of which also appeared separately as Peri Etz Hayyim (1946). His bibliographies of writers include such Haskalah figures as J.L. Gordon and Mendele Mokher Sforim and such late Hebrew writers as Bialik, Tschernichowsky, Sheuer, Sokolow, Peretz, H. Zeitlin and Kabak, while his bibliographies of Hebrew writers in America — containing much information in a generally neglected field — include S.B. Maximon, N. Touroff, B.N. Silliner, Z. Scharfstein, S. Halkin, M. Ribalow, and H. Bavli. The
latter was reprinted separately (Zekher le-Hillel, 1962). Malachi also published Igerot David Frischmann (1927), a book of David Frischmann’s letters, and Igerot Soferim (1932), miscellaneous letters of other writers, with notes and introductions. In addition, he edited a book on the State of Israel and its history, Yisrael (1950). In 1955, Malachi’s Treasury of Hebrew Lexicography appeared as an appendix to the American edition of Mandellkorn’s Concordance to the Bible, in which Malachi provided detailed descriptions of all the biblical concordances and dictionaries that had been published in Hebrew and other languages. Some of his other work includes his bibliography of “Hebrew Educational Literature in America” (1944) and “History of the Hebrew Movement in America” (1974).

Regarded by many as the greatest Hebrew bibliographer of recent times, he was, in quantity alone, the most productive Hebrew bibliographer, having written thousands of articles. Malachi wrote mainly in Hebrew, but his body of work includes much material in Yiddish as well.

After Malachi’s death, his papers — containing his collection of letters and documents — were transferred to the archive of the Ben-Zvi Institute in Jerusalem.

MALACHI BEN JACOB HA-KOHEN (d. 1785–1790), Italian scholar. Little is known of his life. He was the pupil of Abraham Hayyim Raphael Rodrigues and of the kabbalist R. Joseph *Ergas, whom he succeeded as rabbi of Leghorn after the latter’s death in 1730. He arranged Ergas’ work Divrei Yosef for publication (Leghorn, 1742). He also drew up an order of service Shivhei Todah (“Praises of Thanksgiving”; Leghorn, 1744), for the 22nd day of Shevat, an annual fast day proclaimed to commemorate the rescue of the Leghorn community from the earthquake of 1742. He lived to an old age, dying in Tripoli, where he had apparently served as an emissary for Erez Israel. Malachi is best known through his work Yad Malakhi (ibid., 1767), which deals with the methodology of the Talmud and the codifiers. Part 1 contains principles of the Talmud in alphabetical order; Part 2, principles of the codifiers in chronological order; and Part 3, principles of various laws in alphabetical order. His novellae and responsa are found in the works of contemporary scholars. A manuscript of his responsa, Teshuvot Yad Malakhi, was published by E. *Gruenhut in Ha-Me’assef, 5 (1900). Malachi was also a liturgical poet. He composed Sefer Shirei Zimrah, which includes poems and dirges, part of which was published by S. Bernstein (Mizrah u-Ma’arav, 3 (1929), 245–61). His poem written on the occasion of the inauguration of the synagogue in Leghorn in 1742 was also published in Piperno’s Kol Ḫayyim (Leghorn, 1846).

MÁLAGA, port in Andalusia, S. Spain. A Phoenician-Punic necropolis has been discovered there. In the Muslim period, the Jewish quarter was located in the eastern part of the city: the cemetery was on the slopes of Gibralfaro. In 865, at the time of the heresy of the bishop of Málaga, Hostegesis, he was alleged to have attached Jews from Málaga to the regional clerical councils as specialists in the principles of Christianity. Málaga served as a refuge for *Samuel ha-Nagid and other Jews who reached there in 1013 after the Berbers captured Córdoba. Solomon ibn *Gabriol was born in Málaga (c. 1021). In the mid-11th century the Jews numbered 200 out of a population of approximately 20,000.

When Málaga was captured by Ferdinand and Isabella in 1487 there were 100 Jewish families living there, and another group of 55 Jews were living in nearby Vélez-Málaga. All these were taken captive. The Jews of the kingdom had to pay 10 million maravedis for their ransom. Abraham *Seneor and Meir of Segovia traveled through Andalusia to raise the money, and Solomon *Ibn Verga was also active.

The Catholic Monarchs had already ordered in 1490 that Málaga should be settled by Christians. The Jews and Moors, excepting certain Moors named in the royal edict, were ordered to leave Málaga within 15 days. Sixty-two exiles whose names were stated left Málaga, most of them persons in poor circumstances. Judah b. Jacob *Hayyat in his introduction to Ma’arekhet ha-Eluhot records how on leaving Portugal in 1493 his ship was seized by Basque pirates and brought to Málaga, where local clergy attempted to convert the captives. The community of Málaga was revived in the early 1960s by Jews from North Africa. It has a community center and is affiliated to the organization of Jewish communities in Spain.

MALAKH, HAYYIM BEN SOLOMON (between 1650 and 1660–1716 or 1717), leader of the Shabbatean sect. Malakh was born in Kalish. Nothing is known about his early career, but he became a highly respected rabbinic scholar, kabbalist, and preacher. He was soon attracted by the Shabbatean movement and became closely associated with the Shabbatean prophet Heshel *Zoref in Vilna. In 1690 he went to Italy, probably on a mission on behalf of the movement, staying there several months with Abraham *Rovigo and Benjamin *Cohen, the heads of the Italian Shabbateans. They studied the writings of Isaac *Luria and *Nathan of Gaza, and Hayyim Malakh
received their secret traditions concerning Shabbetai Zevi. From 1692 to 1694 he was back in Poland, active as a Shabbatean missionary among rabbinic circles. One of his students (about 1693) was the famous talmidus Mordecai Suskind Rosenburg, rabbi of Lublin. During this period he attracted the attention of R. Zevi Ashkenazi, the father of Jacob Emden, who became Malakh’s bitter foe. Possibly because of a ban due to his heretical activity or possibly because of his own doubts concerning the Shabbatean theology, he went to Turkey. He stayed for two to three years with Samuel Primo in Adrianople, becoming his fervent follower and receiving the traditions and secrets of the circle of Shabbetai Zevi’s personal pupils. He went to Bursa (Turkey) where some outstanding Shabbateans lived, and toward the end of his stay, had a vision which caused him to return to Poland and join another Shabbatean leader, Judah he-Hasid. He arrived in Zolkiew, late in 1696, and stayed for some time, finding many influential followers. From Zolkiew he sent a letter to his Italian masters informing them that he was leaving their camp since he had found the authentic spring of Shabbatean teaching in Turkey. It is quite possible that he went back to Turkey in 1697 where he seems to have met Abraham Cardozo in Adrianople. Malakh took Primo’s side in the discussions with Cardozo whose speculative dissertations he refused to read. It is not clear whether at this time or later he came into contact with the young leader of the most radical wing of the *Doeleh sect in Salonika, Baruchiah Russo (Osman Baba), several of whose sayings were quoted by Malakh to one of his pupils (in a Shabbatean notebook, probably written in Damascus, now in Columbia University Library).

After his return he became one of the founders of the new “Association of the Hasidim” which advocated an immigration of ascetic scholars to Jerusalem to await the imminent coming of the Messiah. Privately this Messiah was understood to be Shabbetai Zevi whose return in 1706, forty years after his apostasy, had been predicted by Malakh. Apparently during these years, Malakh acquired the surname Malakh, “the angel.” He became generally known by this title from the late 1690s on: whether this was because of his gifts as a preacher or because of his asceticism is unknown. Certainly he was considered the chief kabbalist of the group. In connection with the “hasidic” propaganda which attracted many secret Shabbateans in Poland, Germany, and the Hapsburg Empire, he spent some time in Germany and Moravia, where, at the end of 1698, he attended a council of the Shabbatean leaders of the Hasidim in Nikolsburg (Mikulov), an eyewitness report of which has survived. He also went to Vienna and announced that he would discuss the Shabbatean belief and teachings with any duly initiated kabbalist. Abraham Broda, the rabbi of Prague, sent his pupils, Moses Hasid and Jonah Landsorfer, but the dispute, which lasted two weeks, ended inconclusively. Malakh then went to Erez Israel where, after the sudden death of Judah he-Hasid in October 1700, one faction of the Hasidim chose him as its leader. What exactly happened in the Shabbatean circle in Jerusalem is unknown or blurred by biased and half-legendary reports. At any rate, internal dissensions between moderate and radical Shabbateans contributed to the break-up of the group, but the precise date of Malakh’s expulsion from Erez Israel is unknown. It is probable that he went to Constantinople and again to Salonika, meeting with Baruchiah. Since that meeting Malakh acquired the reputation of being an emissary of the antinomian wing of Shabbateanism. This led to his prolonged persecution by the rabbinical authorities. A circular letter of the Constantinople rabbis, written in 1710, denounced him vehemently. He returned to Poland where he founded the radical sect in Podolia from which the Frankist movement sprang (see Jacob *Frank), but he also served as an emissary for some Ashkenazi groups in Erez Israel. As such he is mentioned in the records of the community of Tiktin (Tykocin) in 1708. In public he denied any Shabbatean connections, preferring to divulge his doctrine in private. Forced to leave Poland, he wandered through Germany and Holland. In 1715 he was in Amsterdam where a letter from Abraham Broda, then rabbi of Frankfurt, urging Malakh’s immediate expulsion arrived soon after his departure. He died shortly after his return to Poland in 1716 or 1717. He was generally considered an expert in Kabbalah and a persuasive spokesman for the Shabbatean movement after it was forced to go underground. None of his writings has survived.

[MALAMAT, ABRAHAM (1922– )]. Israeli Bible scholar. Born in Vienna, Malamat settled in Palestine in 1935 and received his doctorate from the Hebrew University of Jerusalem in 1951 for a thesis on the history of the Arameans written under B. *Mazar*. He then spent two years at the Oriental Institute of the University of Chicago studying under the Sumerologist T. Jacobsen and the Assyriologist B. *Landsberger*. Many of his writings are concerned with the relationship between the history of ancient Mesopotamia to Ancient Egypt and the Bible. He has made a major contribution through his discoveries of the relation of the ancient *Mari documents to the study of the Bible. His record and study of Mari in the third and second pre-Christian millennia contributed to our understanding of the historical background of ancient Israel. Malamat argued that much of biblical historical narrative had "telescoped" events of long periods of time.

In 1954 he was appointed lecturer in Biblical and Ancient Jewish History at the Hebrew University of Jerusalem and professor in 1964. He taught there until his retirement in 1991. Malamat taught widely around the world and trained many students. He has served as editor of the Hebrew bulletin of the Israel Exploration Society and is a member of the board and scientific council of the Israel Society for Military
Malamat has published over 250 papers in Hebrew, English, and German. His Hebrew works include: *Israel in Bible Times – Historical Essays (1983–1984); Jeremiah, Chap. One – The Prophetic Call (1954), and The Arameans in Aram Naharayim (1952). A full bibliography through 1993 is available in his jubilee volume published as *ErSiR, 24 (1993). After his retirement Malamat was a fellow at the Dinur Center for Research in Jewish History at the Hebrew University. His later publications can be found on the website of the center.

MALAMUD, BERNARD (1914–1986), U.S. novelist. Born in New York City, Malamud began to teach in 1939, went west to Oregon State College (an experience used in his third novel, *A New Life*, 1961), and later taught at Harvard. Malamud was elected president of the American Pen Club for 1980. One of the most significant of the younger generation of mid-20th century American writers, Malamud was profoundly influenced by realistic novelists such as Dostoevski. His first novel, *The Natural* (1952), about the rise and fall of a baseball hero, was a brilliant tour de force, displaying a characteristic mixture of realistic detail, vernacular language, and free-ranging symbolism and fantasy. Malamud found his true voice, however, with his second novel, *The Assistant* (1957), and a collection of short stories, *The Magic Barrel* (1958). With magnificent virtuosity and integrity, he (like Saul “Bellow) used a dialect of American English mixed with Yiddish, and succeeded in transferring to the American scene the intense moral concern, the comic yet pathetic irony, and the traditional situations of East European Jewish culture. Within the narrower Jewish world, he wrote with special love about the idealistic shlichim, the obscure and the lonely and the suffering, as in the title story of *Idiots First* (1963); this is also the case with Morris Bober, the grocer protagonist of *The Assistant*. Another recurring theme is the relations between Jews and gentiles: the New York Italian assistant falls in love with Bober’s daughter and finally becomes a Jew; stories set in Italy deal with love between Jewish men and gentile women; and “Angel Levine” and “Black is My Favorite Color” are concerned with Jews and blacks. Malamud was deeply conscious of the role of the Jew as a symbol of the human tragedy. All his concerns were fused, and grew in scope and significance, in *The Fixer* (1966), which won the National Book Award and the Pulitzer Prize in 1967 and was made into a motion picture. Yakov Bok, a Russian-Jewish handyman falsely accused of ritual murder, is based on Mendel “Beils, victim of the notorious Kiev Blood Libel of 1913. An obscure little man in flight from his heritage, Bok is thrust into a situation requiring unusual courage. The stages by which he comes to a full understanding of his responsibility, and develops the strength of will to face his ordeal, are powerfully described. Malamud said of this novel: “The drama is as applicable to the American people as it is to the Russian.” *Pictures of Fidelman* (1969), subtitled “An Exhibition,” uses three previously collected stories, and adds three more, about the picaresque misadventures of an American-Jewish artist in Italy. In Rome, Milan, Florence, and Venice, Arthur Fidelman seeks both “perfection of the life” and “of the work”; in each city, he works at a different art or problem, and lives with a different woman. At the end, “Prometheus Fidelman” has learned his limitations: back in the U.S., “he worked as a craftsman in glass and loved men and women.” In “Pictures of the Artist,” a “Jewish refugee from Israel” named Susskind is imagined preaching a sort of parody of the Sermon on the Mount. *The Tenants* (1971), a novel of clashing aspirations and dislikes dramatized by a Jewish and an African-American writer, also represents the struggle of writers appropriating subjects and histories that exhaust their sense of the human. In *Dubin’s Lives* (1979), arguably one of Malamud’s finest works, Dubin, a biographer whose life is lived largely in books, is forced to confront the disruptive yet life-giving nature of passion. In *God’s Grace* (1982), Malamud dramatizes the Jewish dialogue with a God of awe and the understanding we have of our own finitude. Allegorical, as well as dystopian, it deals with resignation to, as well as acceptance of, freedom within limitation. Its humor is that of the pathos of human existence, driven by power and its vanities. *The People and Uncollected Stories*, composed in the main of an unfinished novel about a Jew living with an Indian tribe, was published in 1989. * Conversations with Bernard Malamud*, edited by Lawrence Lasher appeared in 1991. Malamud’s *The Complete Stories* edited by Robert Giroux was published in 1997.

Malamud’s contribution to American-Jewish literature remains large. (He appears as the novelist E.L. Lonoff in Philip Roth’s *The Ghost Writer*, 1979.) Yet his achievement also seals an epoch in which the Jew was portrayed as helpless, and forced to justify his existence. Suffering, in much of Malamud’s work, marked American-Jewish life. It also was the human condition. Malamud’s Jewish characters are often victimized by their sense of self. They are also often diminished by their environment, by capitalism, and by public and social malevolence. His protagonists escape a constricting life at the cost of a deeper remorse: the abandonment of their authentic selves.

A new American-Jewish literary type, one willfully accepting conditions of success and ease in America, gains its strength against the background and achievement of Malamud’s art.

[Sholom Jacob Kahn / Lewis Fried (2nd ed.)]

MALAVSKY, SAMUEL (1894–1983), *hazzan. Born in Smela, near Kiev, Ukraine, Malavsky sang as a meshorer (see *Music) with various *hazzanim. He went to the U.S. in 1914 and audi-
tioned for Josef *Rosenblatt, thus beginning a lifelong association. Malovsky sang duets with Rosenblatt in concerts and on recordings as well as officiating as *hazzan in many leading congregations. In 1947 he formed the Malovsky family choir, “Singers of Israel,” with his two sons and four daughters. They achieved great international popularity through their appearances in synagogues, concerts, and on recordings. Malovsky created a unique style for his family choir by introducing a strongly marked beat and syncopation into traditional Eastern European *hazzanut.

**MALAYSIA**, federation of states in S.E. Asia formerly under British protection. A few Jews settled in Penang, of whom the first was Ezekiel Menassah from Baghdad, in 1895. Although remaining the only Jew in the whole area for nearly 30 years he continued Jewish observances, kept a *kasher* household and welcomed visiting coreligionists. Other Jews arrived there after World War I, mostly poor peddlers. During World War II the community was evacuated to *Singapore,* subsequently occupied by the Japanese. Of the Jews who settled in Penang after the war, some 20 families remained by 1963. Only three families lived there in 1969.

**MALBEN** (Heb. initials מוסדות לפוסל בוליונים וקשליים – “Institutions for the Care of Handicapped Immigrants”), agency of the *American Jewish Joint Distribution Committee* (JDC) for the care of aged, infirm, and handicapped immigrants in Israel. Its funds are derived mainly from the *United Jewish Appeal.* The mass immigration after Israel declared its independence included thousands of old people – often the last survivors of families destroyed by the Nazis; victims of tuberculosis acquired in the concentration camps or Middle East ghettos; and others physically or emotionally incapacitated by poverty, wartime suffering, or Nazi persecution. In 1949, Malben was founded by the JDC to relieve the Israel government of the burden of caring for these immigrants. It constructed a network of about a hundred institutions, converting army barracks and whatever buildings were available into old-age homes, hospitals, TB sanitariums, sheltered workshops, and rehabilitation centers.

Once emergency needs were under control, Malben began to consolidate its programs of direct care, while cooperating with other agencies to create more municipal and regional facilities for the aged and handicapped, and to develop indirect services which would enable elderly people to live on their own as long as possible. These measures include cash relief, constructive loans to help the aged and handicapped to earn a living, employment assistance, home medical care and housekeeping services, and the establishment of “Golden Age” clubs to provide elderly people with facilities for social and community life. Malben also cooperates with the government, the Jewish Agency, and the municipalities in the fields of mental health, chronic illness, and the care of physically and mentally handicapped children and adults among the settled population. Between 1949 and 1968, Malben-JDC helped some 250,000 immigrants – every fifth newcomer and one in ten of the population – at a total cost of $164 million. It maintained a hospital for chronic invalids, 12 old-age homes and villages with 3,000 beds, and extramural services for some 48,000 persons. By the end of 1975 all the homes, hospitals, and other programs initiated by Malben had been handed over to the government and local authorities.

**MALBIM, MEIR LOEB BEN JEHIEL MICHAEL WEISSER** (1809–1879), rabbi, preacher, and biblical exegete. The name Malbim is an acronym formed from Meir Loeb ben Jehiel Michael. Born in Volochisk (Volhynia), Malbim was a child when his father died. He studied in his native town until the age of 13, with Moses Leib Horowitz, among others. He married at the age of 14, but after a short time divorced his wife. He went to Warsaw, where he became widely known as the “illui from Volhynia.” From there he went to Leczyca, where he married the daughter of the local rabbi Hayyim Auerbach, who maintained him, and he was thus able to devote himself to literary work. In 1834 he traveled to Western Europe to obtain commendations from contemporary rabbis for his *Arzot ha-Hayyim* (1837), visiting, among other places, Pressburg, Amsterdam, and Breslau. In 1839, on the recommendation of Solomon Zalman Tiktin of Breslau, he was appointed head of the rabbinic court of Wreschen (district of Posen). From there he went to Kempen in 1840, where he remained for 18 years, and was therefore sometimes referred to as “The Kempen.” While in Kempen he was invited to the rabbinate of Satoraljaujhely in Hungary but refused the offer. He finally agreed to accept the call of the Bucharest community, and in the summer of 1858 he was officially inducted as chief rabbi of Romania.

In Bucharest, Malbim set new *kashrut* standards, imposed restrictions on the kosher butchers, constructed a new *eruv,* personally supervised the educational institutions in town and began to attract large crowds to his sermons. All of these activities, combined with his insistence that his congregants become more observant, resulted in friction between Malbim and the enlightened intellectuals in the Jewish community, who were actually wealthy, foreign nationals. When Malbim objected to the building of a new modern synagogue, the Choral Temple, because it would include an organ and choir like the Reform synagogues in Western Europe, his opponents complained to the authorities, claiming falsely that Malbim was preaching against Christianity. In 1860, he published the first volume of his commentary on the Pentateuch – on Leviticus. In the introduction he wrote a scathing attack against Reform Judaism. His son, Aaron, passed away in 1862. This personal tragedy had a severe effect on Malbim. At the same time, his rapidly deteriorating relations with the en-
lightened members of his community made his position precarious. Because of Malbim’s uncompromising stand against Reform, disputes broke out between him and the communal leaders of the town, leading to his imprisonment. On Friday, March 18, 1864, Malbim was arrested and jailed. He was freed only on the intervention of Sir Moses “Montefiore and on condition that he leave Romania and not return. Upon release, he was placed in a boat sailing down the Danube River. He was put ashore at the Bulgarian border town of Ruschuk. M. Rosen has published various documents which disclose the false accusations and calumnies Malbim’s Jewish-assimilationist enemies wrote against him to the Romanian government. They accused him of disloyalty and of comprising social assimilation between Jews and non-Jews by insisting on adherence to the dietary laws, and said, “this rabbi by his conduct and prohibitions wishes to impede our progress.” As a result of this the prime minister of Romania issued a proclamation against the “ignorant and insolent” rabbi for his effrontery in “publishing libelous letters against those eating meat from any butcher shop and he has preached against the idea of progress and freedom.” In consequence the minister refused to grant rights to the Jews of Bucharest, on the grounds that the rabbi of the community was “the sworn enemy of progress” (from the official newspaper *Moniturul* March 6, 1864). Determined to refute the false accusations made against him, Malbim went to Constantinople to lodge a complaint against the Romanian government, which was then under Turkish domination. Following the rejection of his appeal and his failure to obtain the help of the Alliance Israélite Universelle (in transmitting a memorandum written in 1864 in Paris in which Malbim, with the help of Adolphe Crémieux, addressed himself to the Romanian ruler, stressing his patriotism), he was compelled to leave Romania (1864). During his wanderings in the following years he suffered persecution and calumny. As served as rabbi intermittently in Leczyca, Kherson (1869–70), Lunshitz (1870–71), and Mogilev (1872–75), and wherever he went he was persecuted by the assimilationists, the *maskilim*, and the Hasidim. The *maskilim* accused him of being an extremist and a rebel against the enlightenment. He was invited to Mainz, and on his way stopped at Koenigsberg, where he remained for about four years (1875–79). In 1879 he received an invitation from Kremenchug, Poltava oblast, to serve as its rabbi, but died in Kiev on his way there.

Malbim’s fame and his immense popularity rest upon his commentary on the Bible, which was widely esteemed. His first published commentary was on the Book of Esther (1845), followed by one on Isaiah (1849). In 1860 his commentary *Ha-Torah ve-ha-Mitzvah* on the Sifra was published in Bucharest. His commentary on the Song of Songs, *Shirei ha-Nefesh*, was published first in Krotoszyn and then in Bucharest in 1860. The remaining commentaries to the books of the Bible were completed and issued during the years 1867–76. His commentary encompasses all of the books of the Bible except Lamentations and Ecclesiastes. Malbim’s commentary on the Bible was motivated by his opposition to the Reform movement, which in his view could potentially undermine the very foundation of Judaism. He began with Leviticus and the Sifra because the Reformers attacked the very idea of sacrifice and the halakhic Midrash on Leviticus as lacking any *peshat*. He wished to combat these Reform ideas in particular and in general to strengthen the position of Orthodox Judaism in the spheres of exegesis, knowledge of Hebrew, and the exposition of the Bible according to its plain meaning, and thereby counteract and weaken the Reformers in precisely those three spheres in which they had made appreciable achievements. In his long introduction to the commentary *Ha-Torah ve-ha-Mitzvah* (1860) on the Book of Leviticus and the Sifra, Malbim refers to the Reform Synod at Brunswick in 1844, calling it a gathering of “rabbis and preachers as well as readers who butcher their communities.” Because of these Reformers’ negative approach, Malbim decided that it was time to act for the Lord, and to fortify the wall around the Law, Written and Oral … so that violators could not assail and desecrate it.” From that time he began to compose commentaries on the Bible with the aim of proving “that the Oral Law is the law given from heaven, and that all its words are necessary and implicit in the plain meaning of the verse and in the profundity of the language, and that the interpretation is only the plain meaning based upon accurate, linguistic rules.”

His commentary to the Bible is based upon three fixed principles: In the text of the Torah and the figurative language of the prophets there are no repetitions of mere synonyms; consequently every word in a sentence is essential to the meaning in accord with the rules of the language despite the fact that they seem to be mere synonymous repetitions. Every statement conveys a sublime thought; all the metaphors are of importance and replete with wisdom for they are the words of the living God (introduction to Isaiah). In Malbim’s opinion the sages had “important principles and fixed rules for the grammatical forms and the foundations of the language and of logic,” according to which they understood all the words of the revelation transmitted at Sinai. He arranged these rules and principles in a special work, *Ayyelet ha-Shahar*, which he prefaced to his commentary on the Sifra. In it he noted 613 paragraphs (248 on linguistic usage and 365 in explanation of the verbs and synonyms) that are the foundations of tradition and the Oral Law. He stresses the superiority of the literal interpretation and complains that the commentators after David Kimhi – except for Isaac Abrabanel – were exponents of homiletical exegesis “and no one exerted himself to breathe life into the verses by the literal method” (end of his introduction to Joshua). In his commentary on the Pentateuch, Malbim treated the narrative portions differently from the legal sections. His *peshat* commentary to the narrative portion is accompanied by questions which are the opening gambit to his exegesis. The commentary on the legal sections focuses more on the halakhic Midrash, explaining its connection to the straightforward meaning of the biblical text. Overall, his Pentateuchal commentary is accompanied by *Torah Or*, essays on the aggadah combined with Kabbalah and philosophy;
Remazim, hints of broader issues on the Tabernacle sections in Exodus; and Ner Mitzvah, which answers questions by other commentators on the Midrash. While his commentary on the Pentateuch is meant more for scholars, the commentary on the rest of the Bible is aimed at a broader audience.

It should be noted that at the end of his commentary to Daniel, Malbim devotes himself to the calculation of the date of the redemption, which was to have been in the period 1913–1928: "We are writing these words in 1868 and according to our calculation the time of the redemption will be removed a further 60 years… for the rise of a scion of the house of David, the building of the Temple, and all the promises of the prophets will be fulfilled at the same time, and their luster will shine forth from the year 1913 to the year 1928, when the Temple will already have been established."

The following of his talmudic works are noteworthy: Arzot ha-Hayyim, contains novellae and expositions on Shulhan Arukh, Orach Hayyim (Part 1, on chapters 1–24, 1837; Part 2, on chapters 25–31, 1861), with the novellae of his son-in-law Elijah Joel Heilprin. The work, in three parts, comprises novellae on the responsa of Moses Isserles with source references and a pilpulistic exposition of the Shulhan Arukh. Malbim provides a synthesis of halakhah and natural science on the one hand, as well as halakhah and Kabbalah on the other hand. Yalkut Shelomo (1938; 1966) was a collection of his novellae on the tractates of the Talmud, published (1966) after editing by Solomon Drillich, who also prepared and arranged a new edition of Ha-Torah ve-ha-Mitzvah, on the Pentateuch, with the title Sefer ha-Torah ve-ha-Mitzvah ve-ha-Himmukh, in three parts (1967). Alim li-Terufah (1904) is a small work consisting of an exposition of the fourth chapter of Hilkhot De'ot in Maimonides' Mishneh Torah. Arzot ha-Shalom (1838) contains nine sermons which reveal the profundity of his homiletic ideas. Characteristic of this work is the fact that the sermons are based upon biblical verses only and do not rely upon rabbinic dicta. Each sermon encompasses a specific subject and is preceded by a poetic introduction. This method was regarded by some as an innovation in sermonic literature. His oral sermons were distinguished by verbal precision and strict logic. His Erez Hemdah (Warsaw 1882) contains sermons on the Pentateuch and expositions of aggadot. His works on language, poetry, and logic include: Ya'ir Or (1892), on synonymous nouns and verbs, containing 662 synonymous nouns; selections from his commentaries on synonyms found in the Likutei Shoshanim (1875), and Ha-Karmel (1900) and arranged by J. Greenbaum; Yesodei Hukhmah ha-Haggayon (1900), a textbook on logic in 20 chapters comprising a survey on the principles of logic; Mashal u-Melizah, first published by Jehiel Brill (1867) – an allegorical play in four acts that was a visionary poem on the vice of hypocrisy. His autobiography was published in serial form in Ha-Levanon (vol. 2, 1865). Throughout his works Malbim quotes ideas from both Jewish and non-Jewish philosophers, including Aristotle and Kant. However, it is very difficult to know if his knowledge of their works was firsthand or secondhand from other sources.

After his death, the Bucharest Jewish community built a Bet Midrash honoring Malbim. It became the center for Orthodox Jewish life in Bucharest until 1980 when it was destroyed by the Communist regime of Nicolai Ceacescu.

MALCA (ben, ibn Malkah), Jewish-Moroccan family name, known from the early 14th century through the kabbalist Nissim ibn Malca, the author of Ženif Melukkah. His son was the philosopher, Judah ben Nissim ibn “Malkah. He was strongly influenced by neoplatonic doctrines and wrote several works of which only one has been published, Uns al-Gharib. This was completed in 1365 probably in Fez. Lengthy extracts from it were translated into French and published by G. Vajda (see bibl.).

JACOB BEN JOSEPH BEN MALCA (d. 1771) was a rabbinical authority in Morocco. At first, he was dayyan in Fez, together with Judah “Benatar and Jacob Abensur. Of a quarrelsome disposition, he was often in conflict with his col-
leagues, who nevertheless respected his profound erudition in the fields of rabbinical law and casuistry. During the famine which struck Fez in 1738 he moved to Tetuan, where he was appointed av bet din. He left a large number of decisions on various religious subjects, some of which have been published in the works of various Moroccan authors.

KHALIFA BEN MALCA (d. c. 1750) was a member of a wealthy family of Safi. He studied in Fez with Judah Benatar and Samuel *Sarfaty and later continued his studies in his native town with Joseph Bueno de *Mesquita, where Abraham ibn Musa and Jacob Abensur were his fellow students. Having lost his fortune, he settled in Agadir, where he represented Moses Guedalla of Amsterdam. He married Deborah, the daughter of the wealthy scholar Isaac *Mendes. In 1728 a plague claimed many victims, among them his wife and one of his daughters. In 1737 he lost large sums of money when the community was plundered and its synagogue set on fire. He then traveled to Holland and London. He wrote a commentary on the siddu r entitled Kav ve-Naki, and also wrote commentaries to the Shulhan Arukh, which he entitled Rakh va-Tov. He was particularly remembered for his piety, and both Jews and Muslims regarded him as a saint. Up to the 1960s regular pilgrimages were still made to his tomb in Agadir.

MALCHI, ESPERANZA (d. 1600), *kiera who served Safiye, favorite consort of Sultan Murad III (1574–95) and mother of Sultan Mehmed III (1595–1603).

Both Esperanza and her contemporary Esther *Handali served in a period known as “The Women Sultanate,” when the strong ladies of the harem were involved in a variety of internal and external intrigues and became very influential in the Ottoman court. Besides being the main supplier of jewels and other luxury items to the harem, Esperanza was Safiye’s most trustworthv contact with the outside world. She influenced important nominations, mediated in diplomatic conflicts, supplied diplomatic intelligence, and communicated with foreign envoys on Safiye’s behalf. In a letter in Italian, dated November 16, 1599, addressed to Queen Elizabeth I of England, Malchi described herself as “a Hebrew by law and nation.” She mentions a previous gift that was presented to her mistress, the Queen Mother, by the English ambassador, and lists the gifts which are being delivered to Queen Elizabeth through the ambassador who is soon to depart to England. In return she requests the Queen of England to send “distilled waters of every description for the face and odoriferous oils for the hands […] clothes of silk or wool, articles of fancy suited for so high a Queen as my Mistress.” The “articles for ladies” should be delivered discreetly through Esperanza’s hands only (Kobler, Letters, 393–94).

As a reward for her longtime services, Esperanza and her sons received various profitable concessions, among them the control of customs in Istanbul. Her great wealth and special privileges, as well as her undisguised influence on the Sultan’s mother and her interference in state matters gained her many enemies. On April 1, 1600, she was publicly stabbed to death by rebellious soldiers and her eldest son was killed the next day. Esperanza’s second son converted to Islam in order to save his life and a third son managed to escape. The family’s enormous fortune and estates were confiscated.

[Martin A. Cohen]
MALESHERBES, CHRETIEN GUILLAUME DE LA-MOIGNON DE (1721–1794), liberal French statesman. As minister of the Maison du Roi in 1787, he was responsible with Turgot for the decree granting civic status to “non-Catholics,” thus opening the way for effective action by the Jews on their own behalf. Malesherbes’ main reason for wanting improved treatment of the Jews was his belief that it would lead to their conversion; he was opposed to the organized Jewish community, considering it as a state within a state. Jewish individuals were not free to convert, said Malesherbes, because they were so closely tied to the whole community. He therefore proposed that Jews be enabled to use public legal registers for their personal status, thus weakening their ties with Jewry. In spring 1788 Malesherbes set up an informal committee to study the question, coopting as advisers men well-disposed toward the Jews, including Pierre Louis *Roederer. Eight Jewish leaders were summoned to the committee, among them *Cerberr for Alsace, Berr Isaac *Berr for Lorraine, Abraham *Furtado and D. Gradis for Bordeaux. The purpose of the committee was to conduct a preliminary inquiry on a new system for regulating the condition of French Jewry, and to prepare a memorandum. However, meetings were few and the differences between the two delegations, the “Portuguese” and the “German,” were so marked that they could not reach agreement. The “Portuguese” memorandum in answer to Malesherbes’ questionnaire on the current state of Judaism was later to influence the one presented by Napoleon’s representatives to the Assembly of Jewish Notables and the French *Sanhedrin. In July 1788 the delegates returned home, without having come to any decision. Malesherbes remained a staunch royalist and was later guillotined. 

MALEV, WILLIAM S. (1898–1973), U.S. Conservative rabbi. Malev was born in Homel, Russia, and immigrated to the United States in 1908. He received his B.A. from the City College of New York in 1919; as a student at the Teachers Institute, and president of the Jewish Teachers Association (1921–22), he was persuaded by Mordecai *Kaplan to enter the rabbinical Seminary in 1925. Over the next 20 years, Malev developed three thriving synagogue centers in the New York metropolitan area: the Concourse Center of Israel (Bronx, 1925–27); Kingsbridge Heights Jewish Center (Bronx, 1927–28); and the Jamaica Jewish Center (Jamaica, 1928–46). In 1946, he moved to Houston, Texas, where he built Congregation Beth Yeshurun into the state’s leading Conservative synagogue and was instrumental in establishing the first day school in the Southwest United States. He was president of the Texas Kallah of Rabbis and a force on behalf of Zionism as the foremost regional orator for the *Zionist Organization of America. As president of the Houston Ministerial Association, and a weekly columnist for the *Houston Post*, Malev was a principal civic leader in interfaith and interracial affairs. He also lectured at the University of Houston. Primarily a shaper of Conservative Judaism in the Southwest, his major role in the framework of the national movement was as chairman of the *Rabbinical Assembly’s Committee on College Youth* (1945–46), established to build bridges between RA members and the next generation of American Jewish leaders. 

MALIK AL-RAMLĪ (of Ramleh in Erez Israel; mid-ninth century), founder of the sect of Ramlites or Malikites. Like some other sectarians, Malik taught that Shavuot must fall only on a Sunday, that the fat tail of the sheep comes under the heading of forbidden fat, and that marriage to a niece is incestuous. Within a century or so the Ramlites vanished, probably having been absorbed into the larger sect of *Karaites.

MALINES (Mechelen), transit camp established by the Nazis in Belgium, between its two largest Jewish communities, Antwerp and Brussels, in October 1941 to concentrate Jews before transporting them to Eastern Europe. An infrastructure was already in place and a railway line led directly to the camp, which became an antechamber to death. The camp was surrounded by local inhabitants. The first group of Belgium Jews was arrested on July 22 and taken to Breendonck and then to Malines. The first transport from Mechelen was on August 4, 1942, and arrived in *Auschwitz on August 6. According to a list in the Mechelen archive, between August 4, 1942 and July 1944 there were 28 transports to the east with more than 25,257 Jews; some gypsies were transported in 1943 and 1944. All the inmates of the camp had to wear identification badges. The badges differed for the Jews in the camp. The various known symbols were: \( \tau = \text{Transport-Juden} \) (Jews who would be sent to the east), \( z = \text{citizens of the Allied countries or neutral countries,} \) \( e = \text{Entscheidungsfalle,} \) borderline cases, whose identity required further investigation, \( g = \text{Gefahrlc} \)
finally liberated by the Allies in September 1944; a few hundred Jews had managed to survive.

See “Belgium, Holocaust.”

[B. Mordechai Anscher / Michael Berenbaum (2nd ed.)]

MALINO, JEROME (1911–2002), U.S. Reform rabbi. Malino was born in New York City, earning his B.A. from City College in 1931. He was ordained at the Jewish Institute of Religion (later merged with Hebrew Union College, (HUC-JIR)) in 1935 and was awarded an honorary D.H.L. from Alfred University in 1958, as well as an honorary D.D. from HUC-JIR in 1960. After ordination, he became rabbi of the United Jewish Center in Danbury, Conn., a position he held for his entire career. In 1981, he was named rabbi emeritus and joined the faculty of HUC-JIR as adjunct lecturer in Homiletics; he had previously taught at Western Connecticut State University and been a member of the Commission for Higher Education for the state of Connecticut. For more than 40 years, he served as a chaplain at the federal correctional institution in Danbury (1940–83).

Malino was a leader of the *Central Conference of American Rabbis on both regional and national levels. He served as president of the New England Region of the CCAR (1961–63) and was the long-time chairman of its admissions committee (1964–73). A consistently outspoken proponent of rabbinc ordination for women, he was elected vice president of the CCAR in 1977 and president in 1979. Following his two-year term of office, he chaired the Committee on Rabbinical Growth. He was also a member of the Alumni Overseers of the HUC-JIR, which honored him by establishing the Jerome Malino Award, bestowed on the best first-year student at JIR.

Malino, a member of the National Executive Committee of the Jewish Peace Fellowship, was a pacifist and supporter of conscientious objectors to military service, even during World War II – a controversial position for a rabbi at the height of the battle against Hitler. Moreover, his advocacy of non-violence extended to the theater of the Israeli-Palestinian conflict. Malino also served as president of the Institute of Religion in an age of science, delivered scholarly papers at its conferences, and contributed numerous articles to professional and religious journals. In 1988 Malino received the Rabbi Israel and Libby Mowshowitz Award from the New York Board of Rabbis.

[Bezalel Gordon (2nd ed.)]

MALINOWSKI, JOSEPH BEN MORDECAI (Troki: d. after 1625), Karaites scholar. Joseph was the pupil of Isaac b. Abraham *Troki, and was the leading Karaites scholar in Poland-Lithuania after his teacher’s demise in 1594. Malinovski completed Isaac’s *Hizzuk Emunah* after Isaac’s death. According to his correspondence (Mann, Texts, 1196–8), in 1624 he was a spiritual leader of Troki. As such he endeavored to organize the communal affairs of the Birzhe Karaites community. He established a number of ritual customs for Polish-Lithuanian communities, which were published in *Karaite Siddur* (Vilna 1890), 456–64. Some of them were close to Rabbinic practice. In 1624 he moved to Lutsk, evidently to become a spiritual leader of the community.

He had extensive knowledge of both Karaites and rabbinic scholarship. He wrote a book *Sefer Minhagim* (IOS A 208, INUL R 52984), concerning prayer, reading the Torah, etc. “Manasseh Ben Israel’s press printed his composition *Ha-Elef Lekha* (Amsterdam, 1643), a long mystical liturgical poem. Simhah Isaak *Luzki wrote his printed commentary *Kevod Elohim* on it and they were published together (Kevod Elohim, Y. Algamal ed., Ramla 2000). His *Kizzur Iyin Shehhtah on the ritual slaughter of animals was printed together with Mordecai b. Nissim’s *Dor Mordekhai* (Vienna, 1830). Joseph died in Lutsk. He composed several liturgical poems, some of which had been included in the Karaite Siddur.

[Leon Nemoy]

MALKAH, JUDAH BEN NISSIM IBN (fl. c. 1260), philosopher, probably living in Morocco. Three of his works written in Judeo-Arabic have been preserved. (1) *Uns al-Gharib* (“Familiarity with the Unfamiliar”), consisting of the author’s own views and of a commentary on the *Sefer Yeẓirah*, preceded by a long introduction. One extract was published by H. Hirschfeld, *An Arabic Chrestomathy in Hebrew Characters* (1892), 19–31; an anonymous Hebrew abridgement was published by G. Vajda (1974); (2) a commentary on the *Pirkei de Rabbi Eliezer*; published by F. Fenton (*Sefunot* 21 (1993), 115–65); (3) *Ṭāfṣīr al-Ṣalawāt*, a commentary on the liturgy (fragment). Besides these, Judah refers to a work which he wrote on astrology, which probably bore the title *Kitāb al-Miftāḥ* (“The Key Book”).

The doctrine of Judah b. Nissim rests on two fundamental theses: the unknowability of God and universal astral determinism. From the first thesis flows a metaphysics of emanation having at its apex the prime intellect, to which the functions of the first cause, and consequently those of God of religion, have been transferred. From the second thesis flows a view of the world according to which even revealed religions are completely determined by astral influences. In the light of this, the superiority of Judaism is that it is best adapted to the demands of astral determination. The only ones who can penetrate this mystery, however, are the philosophers who are adept in the allegorical exegesis of religious texts, whereas the masses are obligated to observe the letter of the law. Judah’s philosophy is
in many ways similar to the Neoplatonic speculations adopted by the Islamic Isma‘iliya in constructing their theology, but no precise historical connection can be established between them. His views on astral determinism are not alien to the Jewish thought of the Middle Ages (particularly that of Abraham *Ibn Ezra and certain Averroists), but they are brought to conclusions which no one else had perhaps dared to formulate with such boldness. On the other hand, the deductions which Judah drew from the unknowability of God are similar to the Kabbalah. In fact, the author was familiar with the Kabbalah and referred to it; although, besides the Sefer Yeẓira, he cites only the Bahir and the Raziel. It has been possible to establish that he availed himself of the kabbalists of *Gerona (*Azriel, Jacob b. Sheshet *Gerondi, and *Naḥmanides), and even of the Zohar. Nevertheless, he did not consider the Kabbalah superior to those of philosophy, but rather identified the Kabbalah with philosophy. More precisely, he regarded the Kabbalah as a particular symbolic expression of God's unknowability and of astral determinism. It appears that Judah had some influence on subsequent Jewish thought, especially on Samuel *Ibn Motot and Joseph b. Abraham *Ibn Waqar.

**MALKHI, MOSES** (b. Ezra?; mid-18th century), emissary of Safed, Malkhi had the distinction of being the first emissary of Ereẓ Israel to visit the New World. He was in New York in the summer of 1759 for four and a half months, and it is assumed that he remained there at the request of the members of the Sephardi community “Shearith Israel” who had no rabbi, in order to arrange their religious affairs. In the account book of that community it states that they gave the emissary 18 pounds sterling for 18 week’s accommodation and for provisions and traveling expenses to Newport, Rhode Island, which was then the wealthiest Jewish community in America. There he met the Christian theologian Ezra *Stiles who was greatly interested in the emissary from Ereẓ Israel. Stiles relates that Malkhi was born and brought up in Safed, and he sent a letter in Latin through him to one of the heads of the Greek Church in Ereẓ Israel requesting exact information on the geography of the country and its inhabitants which he needed for his research on the “Ten Tribes. This Malkhi must be distinguished from his namesake, Moses (b. Raphael Mordecai *Malkhi*). He may have been the son of Ezra *Malkhi.

[Avraham Yaari]

**MALKHI, MOSES BEN RAPHAEL MORDECAI** (d. 1747), head of the Safed community in the first half of the 18th century. Moses was a brother of Ezra *Malkhi. He was head of the Jewish community of Safed for many years, and as such his signature appears first on the letters of appointment of various Safed emissaries. Malkhi was one of the intermediaries between Sheikh Zahir al-Omar and Ḥayyim Abulafia for the renewal of the Jewish community in Tiberias in 1740. He died in Acre and was buried in Kafr-Yasif. In the letter of the community of Safed reestablishing the Jewish community of Kafr-Yasif written in Elul of that year, the tomb of “the distinguished rabbi Moses Malkhi of blessed memory” and that of Ḥayyim Luzzato, who died that year in the plague in Acre and was buried in Kafr-Yasif, are listed together with those of namaim and amoraim. It may be conjectured that Malkhi also died in that plague during a visit to Acre in connection with the affairs of the Safed community.

**BIBLIOGRAPHY:** Yaari, Sheluḥei, 431, 432, 437, 438, 501, 850.

[Avraham Yaari]

**MALKHUYYOT** (Heb. מַלְכֻיּוֹת, verses describing God’s “sovereignty”), name of the first part of the central section of the “Musaf prayer for *Rosh Ha-Shanah. It consists of 10 verses, four from the Pentateuch, three from Psalms, and three from the Prophets; all of them proclaim God as King and anticipate the realization of His kingdom on earth. According to the Talmud (RH 32a), the number ten symbolized the ten praises sung by David (Ps. 150), or the Ten Commandments, or the “ten sayings” by which God created the world (cf. Avot 5:1). The Malkhuyyyot prayer and two similar sections, “Zikhrnot and
Shofarot, form the Teki'ata de-Vei Rav. At the end of each section during the Reader’s repetition (and in some rites during the congregation’s silent reading), the shofar is sounded. The recital of Malkhuyot-Zikhrnot-Shofarot verses dates back to mishnaic times (cf. r.H 45, 6) and was, most probably, part of the prayer service in the Temple. The Talmud, however, does not specify which verses had to be chosen for this purpose (R.H 32a–b). The present selection and order of the verses are ascribed to the Babylonian scholar *Rav (175–247 C.E.), as are the introductory and concluding passages.

**BIBLIOGRAPHY:** Elbogen, Gottesdienst, 141–4; Idelsohn, Liturgy, 213–4.

MALKIEL, THERESA SERBER (1874–1949), U.S. labor and women’s rights activist and socialist. Malkiel was born in Bar, Russia, in what is today western Ukraine. The daughter of a well-to-do Jewish family that immigrated to New York City in 1891, she was well educated and literate in German and Russian. Supporting herself with work in the garment industry, she was a member of the Russian Workingmen’s Club and later a founder of the Infant Cloakmakers Union, serving as its president. She was active in various labor organizations in New York in the 1890s, including the Socialist Labor Party (SLP) and its Socialist Trade and Labor Alliance. In 1901, tired of the factionalism of the SLP, she joined the Socialist Party of America, which became her activist home for the next two decades.

Theresa married fellow socialist (and lawyer) Leon Malkiel in 1900; their daughter was born in 1903. Theresa Malkiel gave up wage work after the family moved to Yonkers, north of New York City, but remained committed to working women and socialist politics. She took a particularly active role as an advocate for women within the Socialist Party and in 1909 was elected to the Women’s National Committee (WNC), the body that oversaw the Women’s Department within the party. On the WNC, she became an advocate for the establishment of International Women’s Day as an annual holiday to commemorate women and promote female suffrage. With her husband, she was a founder of the socialist newspaper the New York Call.

Malkiel also became a member of the Women’s Trade Union League, a strong advocate of female suffrage, and an indefatigable campaigner for women’s rights, within the Socialist Party and in the wider society. She was a strong supporter of the great Shirtwaist Strike in New York City in 1909–10, gave speeches at several major rallies, reported on the strike in the *New York Call*, and wrote a fictional account that appeared shortly after the strike’s conclusion, *The Diary of a Shirtwaist Striker* (1910). In 1914 Malkiel led the Socialist Suffrage Campaign in New York, organizing meetings, writing pamphlets, and publishing a regular column in the *Jewish Daily Forward*. Two years later, Malkiel joined a national suffrage tour sponsored by the Socialist Party. The success of female suffrage with the passage of the Nineteenth Amendment led Malkiel to run an unsuccessful campaign for the New York State Assembly as a Socialist candidate. For the remainder of her life she was active in adult education, founding the Brooklyn Adult Students Association. In 1932 she organized a summer camp for the education and naturalization of immigrant women at which she worked until her death.

[Thomas Dublin (2nd ed.)]

MALKIEL, YAKOV (1914–1998), U.S. philologist. Born in Kiev, Russia, educated in Berlin, Malkiel immigrated to the United States in 1940. From 1942 he was a faculty member at the University of California (Berkeley) and later professor of linguistics and Romance philology. In 1947 he became founder and editor-in-chief of the journal *Romance Philology*. He was president of the Linguistic Society of America in 1965. He was author of numerous articles and monographs dealing with historical linguistics, Hispanic lexicology, and the theory of etymology and lexicography, and he constantly attempted to mediate between general linguistics and Romance philology.

[Jonas C. Greenfield / Ruth Beloff (2nd ed.)]

MALLER, JULIUS BERNARD (1901–1959), U.S. educationist and sociologist. Born in Vobolniki, Lithuania, Maller went to the U.S. in 1921. Having received both a secular and religious higher education, Maller’s professional life was divided between teaching posts at Howard University, Washington, D.C., and Yeshiva University (1949–59). He was also active in Jewish organizations. Maller devised (1929) the "Guess Who" technique, a sociometric test for use with children. His personality tests, known as the "Maller Personality Sketches" (1936) and the "Maller Character Sketches" consisted of cards with descriptions of personality or character traits, to be sorted into groups. He demonstrated that intelligence test scores at the fifth grade level were closely related to socioeconomic levels. A close relationship was shown between delinquency, density of population, and economic level. His chapter on personality tests in *Personality and the Behavior Disorders* (1944) was adopted as a standard treatment. Later he became a consultant to various government agencies in addition to his interests in Jewish education, his work with Jewish service organizations and his teaching activities. His most important publications were: *Cooperation and competition: an experimental study of motivation* (1929); *Studies in the nature of character: volume 2; Studies in service and self-control* (with Hartshorne and May, 1929); and *Testing the Knowledge of Jewish History
MALOVANY, JOSEPH (1941– ). Born in Tel Aviv, Malovany served as cantor at Tel Aviv’s Bilu synagogue, cantor of the Israeli army, and then from 1963 to 1968 hazzan of the Yeoville synagogue, Johannesburg, and from 1968 to 1973 of the Edge-ware Synagogue, London. In 1973 he was appointed chief cantor to the Ateret Zevi Congregation of Fifth Avenue, New York. Malovany held music diplomas from the Tel Aviv Academy of Music and Great Britain’s Royal Academy and Trinity College of Music. He was also honorary president of the Cantorial Council of America and past chairman of the board of the American Society of Jewish Music. He held the academic positions of distinguished professor of liturgical music at Yeshiva University and dean of the IDC Moscow Academy of Jewish Music. Malovany possessed a brilliant spinto tenor voice and was a much sought-after artist with orchestras and choirs worldwide. He was the possessor of an extensive discography of cantorial and contemporary Jewish music. On January 26, 2004, he received the honor of being knighted as Commander of the Legion of Honor by the president of Poland in appreciation of his musical contribution to the international and Polish communities. He was the first Jewish cantor to receive this award from Poland.

MALSIN, LANE BRYANT (1879–1951), U.S. fashion innovator and entrepreneur. A gifted seamstress, Lena Himmelstein immigrated alone to New York from Lithuania at 16. Not quite 20, she married Russian immigrant jeweler David Bryant, who died a few months after their son, Raphael, was born in 1900. Bryant supported herself and her son by sewing lingerie and other apparel from her apartment; in 1904 she applied for a bank loan to open a shop. From then on her name became Lane Bryant, either because a bank officer misspelled her name on a business account application or she signed her name incorrectly on that application and was too embarrassed to correct the mistake. Bryant pioneered a special line of maternity clothing which became increasingly popular. After
her 1909 marriage to Albert Malsin, who became her business partner, the couple started the first mail order catalog for maternity ware. By 1917 mail order revenues netted more than a million dollars and by 1930 their sales made them the sixth largest mail order retailer in the U.S. Lane Bryant’s other major innovation was ready-made clothes for stout-figured women, and this clothing line was also a great success. Bryant opened the first of many branch retail stores in Chicago in 1915. When her husband died in 1923, Lane Bryant, Inc. was grossing $5,000,000 a year.

Lane Bryant was committed to good customer service and employee benefits, offering her workers decent wages, profit sharing, group life insurance plans, and medical expenses. When the company went public she provided one-fourth of the stock for employee investment. An exemplar of corporate philanthropy, Bryant teamed up with the American Red Cross and provided any Lane Bryant customer with a wardrobe to replace clothing destroyed in a disaster; she was also a supporter of the Hebrew Immigrant Aid Society, New York Federation of Jewish Philanthropies, and other charities. She was survived by three sons, who continued to be involved with the business after her death, a daughter, and 12 grandchildren.

[Sara Alpern (2nd ed.)]

MALTA. Mediterranean island. That Jews were present there in Roman times is attested by the discovery of a catacomb with the symbol of the *menorah. There must have been a community under Arab rule (870–1090) and in 1240 there were 25 Jewish families there and eight in the neighboring island of Gozo. During the Middle Ages the two islands were part of the Kingdom of Sicily, and a great deal is known of their history from materials preserved in the Sicilian archives. The communities came to an end with the expulsion of the Jews from Sicily in 1492. From 1530 to 1798 the islands were ruled by the Knights of St. John, who in the course of their forays against the Muslims captured and brought back to Malta large numbers of Jewish prisoners. The Societies for Redeeming the *Captives (Hevrot Pidyon Shevuyim) in Venice and elsewhere were mainly engaged in raising funds for ransoming the Jewish prisoners in Malta, where the Venetian society kept a permanent Christian agent. Under the latter’s auspices, the Jewish slaves were able to maintain a synagogue for worship, and there was also a cemetery. A regular community, mainly deriving from North Africa, began to develop during the last days of the rule of the Knights and under British rule (from 1800).

In 1804 the *blood libel raised against the handful of Jews was firmly suppressed by the English poet S.T. Coleridge, then colonial secretary on the island. The community remained small, numbering 16 families in 1868 and 60 Jews in the mid-1900s. A synagogue was opened in Valetta in 1984.

[Colin Roth]

Relations with Israel

Israel established friendly relations and cooperation with Malta even before the latter achieved independence in 1964.

In the late 1950s the leader of the Maltese Labor Party, Dom Mintoff, tried to mediate between Israel and Egypt, albeit unsuccessfully. In 1966 an Israel embassy was established with a resident chargé d’affaires, while Israel’s ambassador in Rome also serves as nonresident ambassador to Malta. Israel experts assisted in the development of dairy, poultry, and afforestation projects. Trade with Malta has been modest.

MALTER, HENRY (1864–1925), rabbi and scholar of medieval Jewish philosophy. Malter was born in the village of Bonze, Galicia. His father was his teacher and provided him with the fundamentals of a rabbinic education. Hardly past childhood, Malter became interested in secular knowledge, having somehow obtained access to Ha-Maggid, a Hebrew periodical with a Haskalah viewpoint. At the age of 16 in search of broader knowledge he journeyed to Lyck and from there to Berlin. While earning his living by teaching Hebrew, he prepared himself for entering the university and at the same time continued his Jewish education at the Veitel-Heine-Ephraimische Lehranstalt. There he attracted the attention, and became the favorite pupil, of Moritz *Steinschneider, who encouraged his interest in medieval Jewish bibliography and whose book in that field, *Juedische Literatur* (1850), Malter translated into Hebrew as *Sifrut Yisrael* (1897). With his work on the influence of the 11th-century Muslim philosopher Al-Ghazzali on Jewish thought, *Die Abhandlung des Aba Hamid al-Gazzali* (1894), Malter earned a doctorate in philosophy from the University of Heidelberg. In 1898 he received a rabbinical diploma from the Lehranstalt fuer die Wissenschaft des Judentums. The newly founded library of the Berlin Jewish community then invited him to become its librarian. He held this post for a year.

Malter went to the United States in 1900 at the invitation of Hebrew Union College in Cincinnati to teach medieval Jewish philosophy. He also taught Bible and rabbinic law and literature, and at the same time served as rabbi at the Shearith Israel congregation in Cincinnati. However, he disagreed with the theological attitudes of American Reform Judaism and was, therefore, in conflict with Kaufmann *Kohler, then president of Hebrew Union College; consequently, he left the college in 1907. Thereafter, in New York he collaborated with J.D. Eisenstein on the Hebrew encyclopedia *Ozar Yisrael*, contributing articles on Jewish literature, among others. With the opening of Dropse College in 1909, Malter assumed the chair of talmudic literature which he occupied to the end of his life. He was a stimulating teacher in Talmud and particularly in medieval philosophy and ethics. Painstaking in his scholarship, Malter published a number of important essays in the *Jewish Quarterly Review* and elsewhere. His chief published work is *Saadia Gaon, His Life and Works* (1921). The study is based on a meticulous review of every fragment, including *genizah* material, by and about the head of the Sura academy in the tenth...
century. It is a model of a biography of a scholar by a scholar: it deals with *Saadiah's eventful life, analyzes his works, and in a bibliographical section shows his influence by citing the numerous references to him in the course of the centuries. Two other books, both published posthumously, deal with the talmudic treatise *Ta'anit: Treatise Ta'anit of the Babylonian Talmud (1928), critically edited on the basis of manuscripts and old editions, and Massekhet Ta'anit min Talmud Bavli (1930), a critical edition of the text with notes and explanations on the basis of 24 manuscripts. With Alexander *Marx, Malter edited the Gesammelte Schriften of Moritz Steinschneider, of which only the first volume appeared (1925).

[Solomon Grayzel]

[Adam Wills (2nd ed.)]

**MALTZ, ALBERT** (1908–1985), U.S. playwright and novelist. Maltz, who was born in Brooklyn, wrote his first play in 1931 in collaboration with George Sklar. Entitled Merry-Go-Round, it was an expose of corrupt Tammany politics in New York City. Maltz became associated with the left-wing Theater Guild, for which he wrote an antiwar drama, *Peace on Earth* (with George Sklar, 1934), and *Black Pit* (1935). From the late 1930s he began writing novels, notably The *Happiest Man on Earth* (1938); *The Underground Stream* (1940); The Cross and the Arrow (1944), which was made into a motion picture; and The Journey of Simon McKeever (1949). He also published essays and the scenarios for films including This *Gun for Hire* (1942), *Destination, Tokyo* (1943), and *Naked City* (1948). In 1947, during theHUAC investigation of the motion picture industry, Maltz refused to “name names” and was indicted with several other Hollywood writers. He spent nine months in prison. After his release in 1951 he settled in Mexico. A later novel was A *Long Day in a Short Life* (1957). His Afternoon in the Jungle: The Selected Short Stories of Albert Maltz was published in 1970.

[Milton Henry Hindus]

**MALVANO, GIACOMO** (1841–1922), Italian diplomat. Born in Turin, he was secretary general of the foreign ministry from 1876 to 1885. Malvano was minister to Tokyo from 1887 to 1889 when he resumed the post of secretary general of the foreign office, which he held until 1907. Malvano was a senator from 1896 and later was appointed to the Council of State, eventually becoming its president. He was also president of the Italian Geographic Society for many years.

An opponent of Zionism, Malvano refused to assist Theodore Herzl on his visit to Rome (Jan. 26, 1904) on the ground that he was only “a modest civil servant.” Herzl ironically refers to him, “He is a clerk in the wholesale firm of ‘Italy, Inc.’”

[Giorgio Romano]

**MALZBERG, BENJAMIN** (1893–1975), U.S. psychiatric statistician and epidemiologist. Malzberg was born in New York City and from 1923 to 1928 served as statistician to the Department of Welfare of New York State. After serving on the Committee on State Hospital Problems, he moved to the New York State Department of Mental Hygiene in 1940, becoming the director of its statistical bureau in 1944, and its consultant in 1956. Malzberg performed numerous studies of a statistical and epidemiological nature. Among his early researches were “Mortality among Patients with Mental Disease” (1934); “Hereditary and Environmental Factors in Dementia Praeox and Manic-Depressive Psychoses” (with associates, 1938); “Social and Biological Aspects of Mental Disease” (1946). *Migration and Mental Disease* appeared in 1956, as did his important study *Mental Disease among Jews in New York State* (1960). *Mental Disease among Jews in Canada* appeared in 1963 and *Ethnic Variations in Mental Disease in New York State* in 1966. His studies also covered the mental health of African-Americans and alcoholic psychoses. In his studies of mental illness among Jews, Malzberg demonstrated a higher incidence of psychotic depression among Jews than among white non-Jews (as measured by hospital admissions). His research confirmed
the general knowledge that the incidence of alcoholism was very low among Jews.

[Louis Miller]

MAMET, DAVID (1947– ), U.S. playwright. Born in Chicago, Mamet received a B.A. from Goddard College in 1969 and taught playwriting there for a brief period. He started his theatrical career as an actor and director before his own plays were ever produced. He began writing for the stage in 1971 with The Duck Variations. In 1973, Mamet founded, along with three friends, his own theater company in Chicago (St. Nicholas) and remained its artistic director through 1975.

A primary theme running throughout his work is the question of whether moral people can exist in an excessively immoral world. The environment he depicts is often devoid of any emotion and spirituality, and morality, if it exists, is on the decline. The strong male characters for which Mamet is known find it difficult to survive, let alone thrive, in such a world. In fact, the characters that do thrive are typically devoid of morality as well. His dialogue is often stylized, almost poetic, version of the streetwise speech found in noir films and novels.

Mamet received the New York Drama Critics Circle Award for American Buffalo (1977) and Glengarry Glen Ross (1984), for which he was also the recipient of the Pulitzer Prize for drama. The play depicts desperate salesmen and the extreme measures, from ethically questionable to positively illegal, to which they resort to sell undesirable units of real estate. Mamet has also written screenplays, among them The Postman Always Rings Twice (1979), The Verdict (1980), for which he received an Academy Award nomination for Best Screenplay Adaptation, The Untouchables (1987), House of Games (1987, also directed), Things Change (1988, also directed), Glengarry Glen Ross (1992, an adaptation of his play), Hoffa (1992), The Spanish Prisoner (1997, also directed), Wag the Dog (1997, adapted from Larry Beinhart's novel American Hero), State and Main (2000, also directed), and The Heist (2001, also directed).

[Mordkhai Neishtat]

MAMLUKS (lit. slaves), a military class which ruled *Egypt and *Syria (including *Palestine) from 1260 to 1516. Under the Mamluk sultans in Egypt and Syria, local Jews often suffered at the hands of government officials and Muslim zealots, although at times the sultan and his representatives were also a restraining influence on fanatical mobs or leaders. The Mamluks were one of the most important dynasties in the history of medieval *Islam, gaining fame for stopping the *Mongol advance into Syria and for eradicating the Crusader presence in Palestine and elsewhere along the Syrian coast. They were great patrons of culture, and many buildings with the distinctive building style of the period are scattered throughout Israel, especially Jerusalem. Scholars divide the Mamluk era into almost two equal sub-periods: the Bahri period (1250–1382), when the dominant group was mainly composed of Qipchaq Turks; and, the Circassian period (1382–1517) when Mamluks from the northern Caucasus region were predominant, although Turks continued to play an important role. The latter period is often still mistakenly called the Burji period. Most Mamluk sultans were themselves Mamluks of slave origin, although some were the sons of sultans.

Military slavery, primarily of pagan Turks brought as youngsters from the Eurasian Steppe, had existed in the heart of the Muslim world since the ninth century. Later referred to as Mamluks (pl. mamālik), these soldiers of slave origin—particularly those who became officers—played an important role in the military and political life of many Muslim states. Turks were particularly favored since they combined hardiness, horsemanship, and archery which they had begun to learn in their Central Asian milieu. These nascent skills were reinforced by years of training in military schools in which the young Mamluks were enrolled after their conversion to Islam. Generally the sons of Mamluks were excluded from this military formation: Muslim rulers had learned that the sons of Mammuks had neither the hardiness nor loyalty of their fathers and therefore there was a continual import of young Mamluks to the centers of the Muslim world. In other words, the Mamluk system was a one-generational, continually replicating military elite. On the whole, Mamluks fought in organized units of mounted archers, and were generally loyal to their patrons, be they sultans or senior officers, although there were some notable exceptions.

Mamluks were certainly important in the armies of the *Ayyubid sultans and princes, and, since the time of the dy-
nasty’s founder Saladin (d. 1193), played a key role in the war against the Crusaders. In 1250, they overthrew their masters in Egypt; ten years later, in the aftermath of their victory over the Mongols at Ayn Jalut in northern Palestine, they gained control of all of Syria up to the Euphrates River, and embarked on a 60-year war against the Mongols, whom they successfully kept at bay. The Sultan Baybars I (1260–77) was the real architect of Mamluk power, expanding and strengthening the army, reforming the judicial system and generally bringing stability to the subjects of the state, in spite of his many wars against the Mongols and Crusaders. The latter culminated in the conquest of Acre in 1291. The Mamluk Sultanate was a relatively centralized state, governed from *Cairo, although most of the military activities were in Syria. Although the Mamluk regime became increasingly oppressive and rapacious over the decades, it was never seriously threatened by internal opposition. There were, however, many cases of urban disorder and riots, often over food shortages or other economic matters. The position of the “dhimmis” (“protected people,” i.e. Christians and Jews) was also a source of occasional disorder and dissatisfaction, not least because of the many Christians (and some Jews) still employed in various government offices, some of them holding relatively high positions. Without a doubt, the Mamluk period saw an increase in anti-dhimmī feeling and the consequent decline of the position of these peoples. This appears to be a result of several factors: the militant rhetoric of the Mamluks themselves, engaged in holy war (*jihād) for decades; the culmination of almost two centuries of war against the Crusaders; the apparent perception that the local Christians, while Arabic speakers, were secretly sympathetic to the enemies of the state, be they Crusaders or Mongols; the declining economic situation, which began to be felt from the mid-14th century onward, particularly after the outbreak of the Black Plague in the region in 1349; and perhaps the competition over government jobs in which members of the Muslim learned class had a particular interest. It should be noted that the lion’s share of anti-dhimmī feelings were directed at the Christians of Egypt and Syria, a much larger group than the Jews and better represented in the government bureaucracy. The impression gained is that the acts and activities against the Jews were often side effects of steps taken against their Christian “colleagues.” It appears that, during the Mamluk period, there was a long-term islamization process among the Sultanate’s Christian population (certainly among the Copts of Egypt). It is difficult to gauge the exact long-term impact of the Mamluk period on the size of the Jewish community, but there was some demographic decline caused by conversions and perhaps emigration, although apparently not to the same degree as among the Christians.

The paucity of the Cairo *Genizah documents from the Mamluk period indicates the great change in Egyptian Jewry; whereas these archives of Cairo Jewry contain many documents from the 11th and 12th centuries, there are relatively few preserved from the subsequent period. Perhaps rather than indicating only the decline of the Jewish community in Old Cairo, it may reflect the weakening of Egypt’s participation in the Mediterranean trade, which was the economic basis of this particular Jewish community. In any event, the numerous Arab chronicles and other sources for the Mamluk period contain much information on the Jews. From these and various Jewish sources we can reconstruct a picture of the main developments of the Jewish community in the main provinces of the Mamluk Sultanate. The difficulties experienced by the Jews were not only with the Muslim majority and authorities, but were also related to tensions within the community and “the depressed condition of community life” (M.R. Cohen).

On the whole, we can say that during the Bahri period there was a series of acute outbreaks of anti-dhimmī activity and measures, which also affected the Jewish population of the Sultanate. In the Circassian period, the anti-dhimmī (and therefore anti-Jewish) measures were generally less sweeping, but the Jews (and the Christians) suffered from both chronic and temporary harassments. The terms of the so-called Covenant of *Omar are mentioned time and again during the period as the model which the dhimmis were expected to follow, indicating perhaps that, between the anti-dhimmī measures enacted and mentioned in the sources, the non-Muslims lived under easier conditions. On the other hand, the repeated acts took their toll.

When Damascus was reconquered from the Mongols in 1260, there were riots against the local Christians, which spilled over to the Jews; the latter were soon curtailed when it was remembered that the Jews had not cooperated with the Mongols. Five years later the Christians in Cairo were accused of arson. Thereupon Sultan Baybars I (1260–77), who had just returned from Syria and the conquest of Caesarea and Arsuf from the Crusaders, assembled many Christians and Jews and ordered that they be burned alive, but released them on condition that they pay a heavy tribute in annual installments. These were, however, sporadic measures, which show how Jews could be caught up in what was originally a mainly anti-Christian activity. One act directed only against Jews was in *Damascus in 1271. There the Sufi shaykh Khidr, a Raspustin-like figure who was the favorite of the sultan, attacked and expropriated the largest synagogue. However, this figure was known for his attacks on Christians too. It was mainly later that more concerted and widespread actions against the dhimmīs were taken, including the frequent dismissal of non-Muslim officials. One Arab chronicler, al-‘Aynī, notes that, already under Sultan Qalāwūn (1279–90), “the dhimmīs had been in a state of extreme humiliation and degradation.” Arab chroniclers sometimes mention only measures taken against Christians, but they state explicitly that Jews suffered during the dismissal of the officials in 1293 under Sultan al-Malik al-Ashraf Khalil (1290–93), which followed riots that broke out in Cairo in the aftermath of supposed overweening behavior by Christians. In 1301 the hatred of non-Muslims burst into severe persecution; riots occurred in several towns in Egypt and many Christians and Jews were compelled to adopt Islam, including all the Jews of Bilbeis, in Lower Egypt, accord-
to the Jewish-Egyptian chronicler of the Ottoman period, Joseph b. Isaac “Sambari. All churches and synagogues in Cairo were closed; in Alexandria, houses of non-Muslims which were higher than those of their Muslim neighbors were destroyed. These were unprecedented acts. Furthermore, the government decreed that henceforth Christians must wear blue turbans; Samaritans, red; and Jews, yellow. The willingness of the Mamluk authorities in this case to countenance the anti-dhimmī disorders and to enact stringent sumptuary laws may have been strengthened by the embarrassing defeat at the hands of the Mongols in Syria at the end of 1299, so that this became a way of diverting attention and demonstrating to the population the Mamluk commitment to Islam. In 1309, however, under Byzantine pressure, several churches and a synagogue were reopened, so there were occasional rays of light in this difficult period. There were again riots against Christians in Egypt, in which Jews are not mentioned, except in so far as some Christians borrowed their clothes to escape the wrath of the mob. In 1354 there was another general persecution of the non-Muslims in Egypt. There were riots during which Christians and Jews were attacked in the streets, with the rioters “throwing them into bonfires if they refused to pronounce the shahadatayn [the Muslim profession of faith]” (D.P. Little). Jewish and Coptic leaders were forced to listen to a list of the sumptuary measures which theoretically had already been in force. Non-Muslim government officials were dismissed, even those who embraced Islam. This particular set of measures seems to have had some impact on the conversion of Copts to Islam; whether it affected the Jews in the same way is unclear.

The anti-dhimmī atmosphere was not only a result of riots or repeated enactments of sumptuary laws. The early Mamluk period saw the appearance of several anti-dhimmī polemical works, such as that by al-Ghāzi b. al-Wāṣīṭi, as well as the fatwas (responsa) and essays by the famous, but uncompromising, scholar Ibn Taymiyya. In addition, sometime in the first century or so of Mamluk rule, a humiliating oath which Jews had to take when appearing in Muslim courts was reintroduced after a hiatus of some 500 years (the text of the oath, from al-Umarī’s Tarīf, is found in Stillman, Jews of Arab Lands, 267–68).

In the second half of the 14th century restrictive laws and various vexations followed. Non-Muslim officials were dismissed in Damascus in 1356 and in 1363. At that time Jews and Christians were forbidden to ride horses and mules. They were allowed to ride donkeys only, using packsaddles and mounted so that both feet were on one side of the animal. In public baths they had to distinguish themselves by wearing little bells around the neck, and women had to wear one black and one white shoe. In 1365 Muslim zealots in Damascus searched Jewish and Christian homes for wine and poured the wine they found into the streets and rivers. Restrictive laws were again enforced; Jewish and Christian women were forbidden to frequent the public baths. Although the frequency of these ordinances proves that the discriminatory laws were not systematically kept, it is evident that their periodic enactment humiliated Jews and Christians whose communities were sizably weakened and diminished by the end of the rule of the Bahri Mamluks in 1382.

The image of the non-Muslim communities in the chronicles from the reign of the Circassian Mamluks (1381–1517) is somewhat different. With the end of the crusaders’ principalities, the non-Muslims were no longer accused of conspiring with the enemies of the sultan; hence, general persecutions of non-Muslims in Egypt and Syria were to a degree lessened. Nevertheless, the actions of the second Mamluk dynasty were in some ways even worse than its predecessor. The frustration of the population increased and the sultans were thus often inclined to enforce the restrictive laws on the dhimmīs or extort heavy contributions from them. Under Sultan al-Malik al-Muʿayyad Shaykh (1412–19), the authorities harassed the Jews and Christians in Egypt for drinking wine. In 1417 non-Muslims were ordered to dress simply in order that they not resemble Muslim judges. Furthermore, they were forbidden to ride swift asses. Two years later non-Muslim officials were again dismissed from government posts. Al-Malik al-Ashtar Barsbāy (1422–38) readily complied with the suggestions of Muslim zealots. Immediately after his accession he dismissed non-Muslim officials, and in 1426 he again demanded distinctive signs, ordering Jews and Christians to reduce the size of their turbans and put iron rings around their necks when going to public baths. Periodically, he sent officials to search the non-Muslim quarters of Cairo for wine. In 1442, during the reign of Sultan Jaqmaq (1438–53), the dais (referred to as a minbar in Arabic) of a synagogue in Cairo was destroyed when it was thought that it contained anti-Muslim blasphemies, and several other Jewish institutions as well as Christian buildings were also in danger of being damaged or ruined. This same sultan prohibited in 1448 non-Muslim physicians from treating Muslims, and in 1450 reinforced the regulations regarding their dress. In 1463 Sultan Khushqadam (1461–67) solemnly reinforced all the restrictive laws imposed on non-Muslims, with the exception of those which forbade them to be physicians and money changers. The last Mamluk sultans did not introduce new restrictions, but periodically imposed heavy tribute. Arab historians report that Qaṭḥbāy (1468–96) did this in 1488 and 1491 and that similar contributions were extorted from the Jews in 1500 and 1501. Yet, there was another side to late Mamluk attitudes towards the dhimmīs which should not be ignored, namely the occasional protection of the non-Muslims against the actions of intolerant Muslim religious figures or the mob. Thus, in 1473–75, the Mamluk authorities, eventually under the direct orders of the sultan, prevented the Muslim population of Jerusalem from expropriating a synagogue, although an enraged mob had destroyed it; the Jews were permitted to restore it. This episode shows that legalistic niceties were often enforced, and, even at a time of general anti-dhimmī feelings and measures, non-Muslims “could not be abused with impunity” (D.P. Little).
The decline of the Jews’ situation in the Mamluk state in the second half of the 15th century, economically and demographically, is pointed out by the traveler Felix Fabri, as it is likewise vividly depicted in the letters of Obadiah of *Bertinoro and his anonymous pupil, an Italian Jew who settled in Jerusalem at the end of the 15th century. In the capitals of Egypt and Syria there were still large communities, but in the other towns they had dwindled to small groups. Everywhere they were subject to legal discrimination and had to pay special taxes, e.g., on drinking wine. Their letters also stressed the general lawlessness and anarchy from which the Jews suffered (which was, however, not only the fate of the Jews, but also that of the Christians, and often the population at large). The authors of these travelogues, however, were not aware of the great change that Egyptian and Syrian Jewry had undergone under the impact of Mamluk rule. The flourishing Jewish middle class, once the mainstay of the Jewish communities, had greatly declined under the Mamluks (probably part of the general economic decline of the Sultanate, and not a result of an anti-Jewish policy) and most Jews had become poor. Social discrimination and the hostility of the upper classes caused many of the Jewish physicians and other well-situated Jews to adopt Islam. A relatively great number of biographies of these apostates appear in the writings of Arab historians of this period. On the other hand, the Mamluk sultans allowed the Jews to retain their judicial autonomy in cases of civil law, and until the end of their rule recognized the *nāqīd as head of all the Jewish communities in Egypt, Palestine, and Syria. The nāqīdim, who had deputies in Jerusalem and Damascus, represented the Jews, *Karaites, and Samaritans to the government. Until the end of the reign of the Bahri Mamluks, the post was held by the descendants of *Maimonides. The last was David 11. In the 15th century the post was filled by Jewish court physicians. The Mamluk sultans apparently did not interfere with Jewish settlement in Egypt and Syria after the expulsion from Spain in 1492. The economic decline and the overall brutalization of life in the Sultanate in the 15th century (and perhaps before) weakened the community and contributed to a worsening of relations within it, as seen by the *Genizah document from 1442 published by M.R. Cohen in 1984. In general, in spite of the deterioration of the community, one can still state with a great deal of certitude that the legal conditions of the Jews in the Mamluk Sultanate were still superior to those of their fellow Jews in most of contemporary Europe. The economic, social, and demographic condition of the Jewish communities of Syria and Egypt was to improve discernibly under the *Ottomans, who ended Mamluk rule and gained control over these countries in 1516 and 1517, respectively.

[Mamram (or Mamran; ממרן, ממרנים, ממרן, ממרנים, ממרון, ממר”), a form of promissory note distinguished by its brevity. In Hebrew sources it is mentioned for the first time during the 12th century in the *tosafof* of Elhanan

---

**MAMRAM**, city in the Negev. According to Eusebius it was situated between Hebron and Elath, one day’s march from Tamara (Onom. 8:8). The Madaba Map shows it between Beersheba and Tamara and calls it Maps. Ptolemy also refers to it as Maps. It appears in the episcopal lists of Palaestina territorialis. Mampsis is identified with Kurnub where excavations were conducted by A. Negev from 1966. The town, which is surrounded by a wall, consists of three hillocks. On the western side of the town are the remains of a palace including a guard room, audience hall, records room, and stairs leading to an upper story with balconies; nearby is a tower with office rooms. A complex of residential buildings extending over 1,900 sq. yds. (1,600 sq. m.) on the eastern hill included stables with mangers. Some of the rooms were decorated with frescoes; a hoard of 10,400 Roman tetradrachms was discovered there. Mampsis had apparently settled in about 50 C.E. and continued into Byzantine times; its ruins include two churches. A Nabatean and a Roman military cemetery were found nearby. The remains of several dams were found in the vicinity. New excavations conducted at the site in the 1990s revealed additional Nabatean-Roman remains, including buildings, pottery, and middens.

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]
b. Isaac of Dampierre to the tractate Avodah Zarah. There is evidence of its use in Poland from the 14th century at least, but it was only during the 16th century that it became the distinctive promissory note used by Jewish merchants in their internal trade. There are various opinions on the etymological origin of this term, the most important being: a derivation from the Hebrew word יָרָשׁ (hemir, “to change”); a contracted form of the Latin in memoriam; and a derivation from the word membrana, which in medieval Latin signified a scrap of parchment. The signature of the debtor appeared on one side of the document, while, on the other, in the same place as the signature, the sum owed and the date of payment were recorded. According to the regulations of the community councils, the document had equal validity with the ordinary handwritten promissory note even though the lengthy traditional formula was absent. Since the name of the creditor was not mentioned in the mamram, it was payable to the person who presented it to the debtor. As a result, the mamram was purchased by one person from another by simple transfer without any written documentation. The brevity of the mamram and the possibility of its easy transfer gave it a great advantage over the ordinary bill, encouraging its popularity. It was most common in Poland, especially during the 16th century, and the trading of mamramim became a frequent occurrence.

Another kind of mamram frequently employed in Poland during the 16th century was the blank mamram (in Polish membran goły). Its principal feature was that neither the amount of the debt nor the date of payment were mentioned. The signature of the creditor appeared on one side and the other side was blank. It is evident that a document of this kind could only exist in a society where the honesty of the debtor was taken for granted. The blank mamram came to satisfy the demands of the commerce practiced by the Jews of Poland during that period and it was particularly suited for use at the large fairs then held in the country. The merchant did not bring large sums of cash to the fairs because of the many dangers attendant on his journey and many deals were concluded at the fairs on short notice. Thus the merchant was in need of credit during that time and the mamram document satisfied his requirements. Through its use merchants could borrow unlimited sums, which in turn permitted the orderly development of business. The mamramim thus fulfilled the functions later provided by banks. The blank mamram was also different in that it was signed not by the debtor but by the person providing the credit. When in need of funds, the debtor sold it and thus received the amount he required. Because the halachic basis of the blank mamram was highly dubious, some eminent rabbis objected to it and invalidated it and its use. Most authorities sanctioned it, however, because “it has already become the custom in these lands to collect by it according to the regulations of the countries.” It was still in use among Polish Jews in the first half of the 19th century.

MAMRE (Heb. מַמְרֶה), oak grove near *Hebron which was one of the favorite dwelling places of Abraham (Abram; Gen. 13:18); it is also the name of one of the clans of Hebron which was an ally of Abraham (14:13, 24). At Mamre, Abraham learned of the captivity of Lot and received the three angels (14:13; 18:1). It is described in Genesis 23:17 as having Machpelah “before” it; elsewhere, it is identified with Hebron (23:19; 35:27). In the time of Josephus, a tree some distance north of Hebron was assumed to be the “terebinth” of Abraham (Ant., 1:186; Wars, 4:533). In the Mishnah (Ma’as. 5:2), the site appears as Elath, one day’s journey from Jerusalem, and in the Talmud (TJ, Av. Zar. 1:4, 38d) and the Midrash (Gen. R. 47:10) as Butnah (Butnan), the site of a famous trade fair where Hadrian sold the captives of the Bar Kokhba War into slavery. Later Christian sources refer to the site as a place of prayer; Constantine built a church there (which is shown on the Madaba Map). Jews, Christians, and pagans worshiped together there until the Arab conquest. The site is now identified with Ramat al-Khalil, 2 mi. (3.2 km.) north of Hebron. E.A. Mader, excavating there in 1926–28, cleared a Herodian enclosure wall, some blocks of which measure 14 × 4 ft. (4.3 × 1.2 m.). At its southwest corner was a well into which pilgrims threw gifts and money. In the eastern part of the enclosure, Constantine built a basilica measuring 60 × 50 ft. (19 × 16 m.), with a double narthex, a nave, and two aisles. Pottery from the ninth and eighth centuries B.C.E. indicates that the site was inhabited under the kings of Judah.

[Michael Avi-Yonah]

MAMZER (Heb. מַמְזֵר), usually translated as “bastard.”

Definition
“If she cannot contract a legally valid marriage to this man, but can contract a legally valid marriage to others, her offspring [from the former] is a mamzer. Such is the case when a man has sexual relations with any of the ervot ["forbidden”; see “Incest” in the Torah] (Kid. 312; cf. Yev. 4:13). Thus, a mamzer is the issue of a couple whose sexual relationship is forbidden according to the Torah and punishable by “karet or death. Because of this a marriage between them is void (Sh. Ar., EH 4:13), and thus, for example, the issue of a union between brother and sister or between a man and a woman validly married to another at the time is a mamzer (see *Adultery; Yev. 45b; Maim., Yad, Issurei Bi’ah 15:1; Tur and Beit Yosef, EH 4: Sh. Ar., EH 4:13). On the other hand, in Jewish law – unlike in other systems of law – the mere fact that a child is born (or conceived) out of lawful wedlock does not make him a mamzer and he is not an illegitimate child, i.e., one whose status or rights are impaired. The parents of the mamzer are...
indeed unmarried – either in fact or since they are so consi-
dered in law because of an absolute legal bar to a marriage be-
tween them – but unlike a man and a woman who, from the 
legal point of view, can marry each other but do not want to, 
the parents of the mamzer, owing to the said legal bar, cannot 
marry each other even if they want to. If one parent is non-
Jewish this fact alone does not make the child a mamzer (see 
*Marriage; Yev. 45b; Maim., Yad, Issurei B’ah 15:3; Tur, EH 4; 
Sh. Ar., EH 4:19).

Consequences of the State of Mamzerut

These are twofold and relate to marriage and to personal sta-
tus.

(1) Marriage. The Bible lays down: “A mamzer shall not 
enter the congregation of the Lord” (Deut. 23:3), i.e., a mar-
rriage between a mamzer (male or female) and a legitimate Jew 
or Jewess is prohibited. If such a marriage is nevertheless con-
tracted, it is legally valid but must be dissolved by divorce (see 
*Marriage, Prohibited). A marriage between two mamzerim is 
permitted (Yev. 45b; Kid. 69a; 74a; Maim., Yad., Issurei B’ah 
15:33; Sh. Ar., EH 4:24) and so also is a marriage between a 
mamzer and a proselyte (Yev. 79b and Rashi thereto; 
72b–73a; Maim., Yad, Issurei B’ah 15:7; Sh. Ar., EH 4:22).

(2) Personal status. The offspring of a mamzer (whether 
male or female) and a legitimate Jew or Jewess are also 
mamzerim, since “mamzerim… are forbidden and for-
den for all time, whether they are males or females” (Yev. 8:3) 
and the rule is that in the case of a prohibited union the off-
spring follows the status of the “defective” parent (Kid. 3:12; 
see *Yudasin). On the other hand, as the offspring of a union 
between a Jew and a gentile takes the status of the mother, a 
child born of a mamzer and a gentile mother will be gentile 
and not a mamzer; thus after proper conversion to Judaism, 
he will acquire the status of a legitimate proselyte and the fact 
that his father was a mamzer will be wholly irrelevant (Kid. 
67a, Rashi; Maim., Yad, Issurei B’ah 15:3; Tur and Beit Yosef, 
EH 4; Sh. Ar., EH 4:20).

Except with regard to marriage, as stated above, the per-
sonal status of a mamzer does not prejudice him in any way. 
His rights of inheritance are equal to those of any other heir 
(Yev. 22b; Maim., Yad, Nahalot 1:7; Sh. Ar., EH 276:6). His 
birth releases his father’s wife from the obligation of “levi-
rate marriage and halizah. The mamzer is eligible to hold any 
public office, the highest (i.e., that of a king), for he remains 
“thy brother” and “from among thy brethren shalt thou set a 
king over thee” (Deut. 17:15; Tos. to Yev. 45b). Furthermore, 
according to the Mishnah, “a mamzer who is a scholar [talmid 
ḥakham] takes precedence over a high priest who is an igno-
ramus [am ha-areẓ]” (Hor. 3:8).

Asufi (“A Foundling”) 

Sometimes a doubt may arise whether a child is legitimate 
or not and therefore he has the status of “doubtful” mamzer. 
One such case is that of a foundling, i.e., a child found aban-
donated in a public place when the identity of neither parent 
exists; in this case it is unknown whether the parents are 
legitimate or mamzerim (Kid. 4:12; Maim., Issurei B’ah 15:13; 
Tur, EH 4; Sh. Ar., EH 4:31). If such a child is found in or near 
a place inhabited by both Jews and gentiles, so that it is impos-
sible to know even if he is of wholly Jewish parentage or not, 
he is considered both a “doubtful” mamzer and a “doubtful” 
genite, so that if he later marries a Jewess and then afterward 
she wants to marry another man, she will require a divorce 
because of this latter doubt (Ket. 15b; Maim., ibid. 15:25; Tur, 
EH 4; Sh. Ar., EH 4:33). If, however, such a child is found in or 
not an exclusively Jewish place, he is assumed to be of wholly 
Jewish parentage; but as the identity and hence the status of 
such parents (whether mamzer or legitimate) is unknown, he 
is considered a “doubtful” mamzer (Kid. 74a; Maim., Issurei 
B’ah 15:21; Sh. Ar., EH 4:31–36). Thus, he cannot marry either 
a legitimate Jewess (because he may be a mamzer) or a female 
mamzer (because he may in fact be legitimate). However, the 
suspicion of mamzerut only attaches to him if the circum-
stances in which he was found were such as to cast doubt on 
the status of legitimacy of his parents; for instance if it was 
clear that they did not care for his survival. If there is any in-
dication at all that he was abandoned out of necessity, such as 
hunger or in time of war, or if there are some signs of mini-
mal concern for his welfare and future, such as his being cir-
cumcised, clothed, or abandoned in a place (like a synagogue) 
where he is likely to be comparatively safe from danger or any 
other place where people are more likely to find and take care 
of him, then it is assumed that his parents are of unimpeach-
able status and so is he. Therefore no suspicion of mamzerut 
will be attached to him (Kid. 73b; Maim. Yad, Issurei B’ah 
15:31; Tur, EH 4; Sh. Ar., EH 4:31).

Shetuki (lit. “Undisclosed”) 

The other case where the status of “doubtful” mamzer may 
be arises is that of a child known to be born of an unmarried Jew-
ish mother who either refuses to disclose the identity of the 
father or claims not to know it (Kid. 69a; Maim., Yad, Issurei 
B’ah 15:12). Since the father’s status is unknown, the child is 
likely to be considered a “doubtful” mamzer (Kid. 74a; Maim., 
ibid.; Arukh ha-Shulhan, EH 4:47). However, if the majority 
of the inhabitants of the district and of those who habitually visit 
there are Jews of unimpeachable status, it will be presumed 
that the father was also of such unimpeachable status and 
therefore no suspicion of mamzerut will be cast on the child 
(Tur, Beit Yosef, Bah EH 6 (at the end); Sh. Ar., EH 6:17–18; Beit 
Shemuel 6, n. 31; but cf. Maim., Issurei B’ah 18:13–15; Arukh 
ha-Shulhan, EH 4:34). The mother can always avert the sus-
picion of mamzerut being cast on her child by declaring that 
the father was a legitimate Jew or a gentile. In the latter case 
the child takes its status from the mother (i.e., he is a Jew; Kid. 
74a; Maim., Yad, Issurei B’ah 15:12, 14; Sh. Ar., EH 4:26; Arukh 
ha-Shulhan, EH 4:30, 31, 56).

Karaites 

Halakhic problems concerning a “doubtful” mamzer have 
arisen in connection with the *Karaites because, while their 
form of kiddushin (kiddushei-kesef or kiddushei bīḥaḥ) may be
valid according to Jewish law (see *Marriage) their method of divorce does not accord with the halakhah, as their get (bill of divorce) is not in the form prescribed by the sages. Accordingly, a Karaite woman divorced by such a get is not properly divorced and remains a married woman (eshet ish) so that any child she bears to another man whom she marries on the strength of such a get is a mamzer. Since it is impossible to determine who, throughout the generations, remarried on the strength of such invalid divorce, Jewish law casts the suspicion of “doubtful” mamzer on all members of that community (Beit Yosef, EH 4 – end; Darkhei Moshe, EH 4, n. 14; Rema, EH 4:37; Turei Zahav, EH 4, n. 24; Baer Heitev, EH 4, n. 49). Some posekim, however, did permit marriages between Karaites and Rabbanite Jews on varying halakhic grounds and such marriages were particularly prevalent in the 11th and 12th centuries. Especially noteworthy is the permission to contract such a marriage granted by David b. Solomon ibn Abi Zimra who based his decision on the grounds that the kiddushin of the Karaites are also invalid according to halakah, as they are deemed to have taken place without witnesses, the witnesses of the kiddushin being disqualified according to halakah (Resp. Radbaz, nos. 73 and 796). Thus, according to him, no stigma of mamzerut is to be attached to a child of a woman who married, was divorced, and then married another man, all in accordance with Karaites rites only, since – in Jewish law – she is regarded as never having been married at all. On the strength of this argument and for some additional reasons arising out of the specific circumstances of the case, in 1966 a rabbinical court in the State of Israel permitted the marriage of a non-Karaite Jewess to a Karaite man by whom she had become pregnant (see also Ozar ha-Posekim, EH 4, n. 175).

[Ben-Zion (Benno) Schereschewsky]

Rabbinic Efforts to Avoid Declaring Mamzer Status

The mamzer rule is intended to deter adults from violating the severe prohibitions against proscribed sexual relationships. The result, that the offspring of such illicit behavior bear the punishment of their parents’ act, seems to contradict a major principle of Jewish law which punishes only the sinner (see *Punishment). The Midrash expounds on this problem (Lev. R, 32, ed. Margolis, 32:8), in its comments on the verse, “I further observed all the oppression that goes on under the sun: lo, the tears of the oppressed, and there is none to comfort them; their oppressors have power – and there is none to comfort them” (Eccl. 4:1).

The Midrash elucidates the verse as follows: “I further observed all the oppression” – Hanina, the tailor, relates this verse to mamzerim: ‘I further observed all the oppression’ – These are the mamzerim. ‘Lo, the tears of the oppressed’ – [of] their mothers. [Other versions: their fathers.] They transgressed, and we banish these unfortunates? This person’s father engaged in illicit sexual relations, but this person – what has he done? Of what relevance is it to him? ‘There is none to comfort them,’ but ‘their oppressors have power’ – this is the Great Sanhedrin of Israel that comes upon them with the power of the Torah and banishes them in the name of [the verse], ‘no mamzer shall be admitted into the congregation of the Lord’ (Deut. 23:3). ‘There is none to comfort them’ – the Holy One, blessed be He, said: I must comfort them, for in this world there is a defect in them, but in the world to come… they are of pure gold.”

This Divine comfort in the world to come does nothing to alleviate the mamzer’s present condition. Thus, to reduce this injustice, the Sages developed a series of rules and presumptions so that even when there is only a remote possibility that a person is not a mamzer, they could legitimate him and avoid the stigma of mamzerut with its dire implications. Thus, a married woman, even if it is rumored that she has been unfaithful to her husband, and everyone’s tongue is wagging about her – her children are not suspected of being mamzerim.” The explanation is the legal presumption that “most of her [the married woman’s] acts of intercourse are with her husband” (Sot. 27a; Yad, Issurei Bi’ah 15:20; Sh. Ar, EH 4:15).

The Sages established an additional presumption, that a fetus could spend up to 12 months in the uterus, to enable the attribution of a child’s paternity to its mother’s husband. Thus, if a wife has cohabited with her husband at any time within the 12-month period prior to her child’s birth, paternity is ascribed to him (Yev. 80b; Yad, ibid., 15:19; Sh. Ar., EH 4:14).

Even when the mother explicitly declares that she was impregnated by someone other than her husband, her declaration is inadmissible (Sh. Ar., EH 4:29). Admittedly, in relation to a father’s declaration that he is not the father of a child, the rule according to most authorities is that his declaration is valid. This claim is called “yakir” – based on the verb in Deut. 21:17, “He shall acknowledge [yakir] the first-born, the son of the hated, by giving him a double portion,” i.e., the father recognizes that son as his first-born. However, R. Simeon Kayyara of the geonic period in his Halakhot Gedolot limits the father’s authority to grant “recognition” to determination of birthright, so that in any other case, a father’s testimony rendering his son a mamzer is invalid: “Even if his wife is most licentious, most acts of intercourse are ascribed to the husband” (end of section 29, Hilkhot Arayot).

In addition, the Mishnah cites a tradition that “Eliyahu will not come [in the future] to declare the pure, impure – nor to declare the impure, pure; nor to distance those who are near or to draw near those who were distanced, but only to distance those drawn near by force and to draw near those distanced by force” (Eduyot 8:7). R. Obadiah of Bertinoro interprets the citation as meaning that Eliyahu will only distance those who are publicly known to be tainted but were forcibly intermingled among the Jewish People, “but where there is a tainted individual in a particular family, but this is not publicly known, owing to the family having intermingled [into the Jewish community], Eliyahu will let it remain so and let the family retain its presumption of legitimacy.” This was the basis for the Rema’s ruling (Sh. Ar., EH 2:5) that if a per-
son learns that one of the progenitors of a particular family is tainted by mamzerut, he may not reveal this, “but rather he should allow the presumption of their legitimacy to remain intact, for all the families that have become assimilated into Israel are legitimate in the future.”

**Tissue Typing and the Establishment of Paternity.** The Talmud (bb 58a) records a case where a man learns that nine of his children are mamzerim and only one is his real child. Before his death, the man bequeathed his property to his real child, but he did not know who the real child was. When the case was brought before R. Bena’ah, he ordered a test to determine which son, according to his characteristics, was the legitimate heir. Sefer Hasidim (section 232) discusses a method, considered scientific by the standards of the time for determining paternity. Rabbi Samuel Strashun (Haggahot ha-Rashash) comments on the talmudic source that R. Bena’ah refrained from employing the “scientific” test mentioned in Sefer Hasidim because by doing so he would have revealed that the other sons were mamzerim.

With the development of scientific means for identifying family relations by genetic testing of tissues, these principles have become more significant. Rabbinical courts have considered the validity of a scientific test that produces results that contradict juridical presumptions of Jewish law, such as the one mentioned above, that “most acts of intercourse are attributed to the husband.” Rabbi Shlomo Dikhovsky (File 866/41 PDR 13, 51) rules that one must accept tissue typing intended to establish paternity for purposes of ruling on child support payments (see *Maintenance*), but for establishing mamzerut one may disqualify reliance on tissue typing because it is not infallible (p. 60). The Rabbinical Court of Appeals has ruled in a number of cases that even for determining maintenance payments, tissue typing to establish paternity may not be used as an absolute criterion, and there is also a need for supporting evidence.

This question was brought before the Israeli Supreme Court (CA 548/78, Sharon v. Levi, 35 (1) PD 736 per Justice Menahem Elon), that ruled that in Israeli courts tissue typing for establishing paternity should be admitted as evidence. The court emphasized, though, “that tissue-testing would not, in every case, establish paternity.” Moreover, in certain instances the court may decide not to make use of this test, when the test is liable to label a minor as “tainted,” e.g., when a married woman claims that while she was married she became pregnant by someone other than her husband, and that the person by whom she became pregnant is the father of her child. If true, this statement of the married woman would result in the minor being stigmatized as a mamzer. In this or in similar cases involving the establishment of status, “proof provided by tissue typing is insufficient to establish paternity” (p. 748 of decision). Thus, in such cases, paternity shall be established based on the juridical presumption assumption that “most acts of intercourse are ascribed to the husband.” This ruling is based on Jewish law’s sensitivity to a person being stigmatized and branded by mamzer status and the halakhic principles of making various legal presumptions to avoid such stigmatization. Further on its ruling, the court cites some of the Jewish law sources cited above upon which it based its ruling.

In another ruling (CA 1354/92, Attorney General v. Anon., PD 48(1) 711, per Justice Menahem Elon), based on these considerations, the court ruled that even when both parents give their consent to tissue typing for establishing the parenthood of a minor, such a test should not be conducted if there is risk involving the minor’s best interests, inter alia raising doubts about his legitimacy, and these interests supersede the interest in investigating the truth.

The court added (pp. 739–40) that although the rabbinical courts have no reason to suspect that such testing would determine an individual’s status as a mamzer, since only rabbinical courts have the authority to declare someone a mamzer, there are two reasons for discouraging such testing.

First, acceptance of such findings in a civil court might socially brand the minor, sufficient reason for prohibiting the testing. Secondly, there is no certainty that the rabbinical court will not change its stance and decide to recognize such results as sufficient to supersede the juridical presumptions assumptions cited above: “Since no one can assure us that if indeed the test is performed and if it indicates that the mother’s husband is not the father of the minor, a rabbinic court would not consider the results and rule accordingly. As we have seen, the halakhah relies on various presumptions assumptions and fictions to preclude the tainting of a child as a mamzer, by reason of his married mother having been impregnated by someone other than her husband. But as we noted, according to halakhah as well, when it is clear that the child cannot be the offspring of the mother’s husband, such as a case in which it has been proved that for 12 months there were no relations between the husband and wife, even the halakhah, for lack of alternative, declares the offspring a mamzer. Thus, several rabbinical courts have ruled against relying on tissue typing for proving paternity” (p. 740).

[Menahem Elon (2nd ed.)]

MAN, THE NATURE OF.

IN THE BIBLE

Names of Man

The idea of man is expressed in the Bible by a number of words that reflect various aspects of his nature. The following are the most important.

ʾAdam: collective, “men, human beings,” also (in prose, with the article) “mankind,” Homo sapiens, in distinction to other creatures (Gen. 6:7), or to God ( Isa. 2:17). It is occasionally used of individuals ( Neh. 2:10); etymologically it may be compared with Arabic anqm, “creatures,” “mankind.” The plural is beneʾadam.

ʾish: “husband,” “male,” “individual” (Gen. 2:23–24; 13:16; 41:33; Hos. 2:18 [16]); very often used in collective sense ( Josh. 9:6). In certain passages it has the meaning of “servant” or “soldier” (1 Sam. 23:12; cf. the expression ʾish ha-ʾElōhim, “man of God”). The antithesis in Psalms 49:3 [2] between beneʾadam and beneʾish apparently contrasts “men of low degree” with “men of high degree.” Its etymology is uncertain. The plural anashim is evidently from the same root as ʾenosh.

ʾenosh: mostly a collective denoting the human race. Occasionally it is used of individuals ( Isa. 56:2; Jer. 20:10). In antithesis to God it connotes frail, mortal man ( Isa. 51:7, 12; Ps. 90:3; Job 28:4). The word is probably related to the Arabic ansa, Ugaritic ans (“to be friendly, social”), Aramaic enash, and Arabic ʾinsām (pl. ʾanās, coll. nās). Other cognates show that it cannot be related to Arabic anatha, “to be weak.”

Gever: the adult male being in contrast to women and children ( Ex. 10:11; Josh. 7:14). In poetry it often has a more general sense. The stem means “to be strong, mighty.”

METIM: used only in plural, “males,” “men,” “people” (Gen. 34:30; Deut. 23:4; 4:27). In Isaiah 3:25 it may mean “warriors.” The singular occurs in Ugaritic and other cognate languages and is possibly to be seen in names like Methushael and Methuselah.

According to this terminology, man is conceived as both strong and weak, as a member of the human race and of the family unit, and as an individual.

Psychological Terms

Further insight into the nature of man is furnished by certain psychological terms that describe different aspects of the human personality. Nefesh can denote the essence of any living creature (Gen. 2:7); it may even be equated with the blood (Gen. 9:4; cf. Lev. 17:11). It signifies the “individual,” “ego,” “person” (Gen. 46:26; 1 Sam. 1:26; Job 16:4), and hence even “body” (Ex. 21:23). Ruʾah “spirit,” is sometimes synonymous with nefesh (Gen. 6:17), but is also distinguished from the latter. It represents power and energy (Ex. 35:21; Isa. 31:3) that comes to man from without; it provides the impulse to higher life and finds expression in special skill (Ex. 28:3), might, or leadership (Judg. 3:10; Isa. 11:2). Neshamah, “breath,” is not only the vitalizing element breathed into man by God (Gen. 2:7), but the divine spirit and lamp – the soul – within him (Prov. 20:27). In contrast to these spiritual aspects of man, basar signifies his physical nature, the living body (Gen. 2:23, 24), and, as such, it symbolizes human frailty (Isa. 40:6).

The Bible also regards certain organs as the seat of given psychological attributes. Lev, the “heart,” is the center of thought (Ps. 45:2[1]), conscience (1 Sam. 24:6[5]; Job 27:6), and emotion (love: Deut. 6:5; anger: Deut. 19:6; joy: Isa. 30:29; hatred: Lev. 19:17; courage: Jer. 48:41, and the like). By synecdoche, the heart represents the whole inner life of man (Gen. 6:5; Ps. 51:10; Ezek. 36:26; Prov. 4:23). Kelayot, the “kidneys” (in artificial “biblical” English “veins”), are likewise the source of emotion and conscience, and in conjunction with “heart” describe the fundamental character of man (Jer. 12:2; Ps. 7:10; 16:7; 26:2). Melāyim, “bowels,” are the seat of overpowering feelings ( Isa. 16:11; 63:15; Lam. 1:20); modern versions sensibly substitute “heart” for “kidneys” or “bowels” in such contexts. Kaved, “liver,” also means “being” (Lam. 2:11; cf. ʾHeart). Rahātim – from rehem, “womb” – means “compassion” (Deut. 13:18). Yad, “hand,” is often used in a conative sense, indicating “power” (Deut. 2:7, 24; 32:36). Other shades of psychological significance are expressed by other parts of the body, e.g., face, eyes, ears, head, and so forth.

This extensive nomenclature points to the complexity of the human personality, but is not exhaustive. The complete picture of man’s nature as envisaged by the Bible can only be seen in the full context of scriptural evidence.

Man’s Origin

The key is to be found in the story of man’s origin (Gen. 1:27; 2:7). He is not a descendant of the gods (as in certain pagan mythologies); the term child(ren) used with reference to man in relation to God (Deut. 14:2; Ps. 27) has in Scripture a metaphorical connotation. Nor is man the product (as some philosophical systems hold) of the blind forces of nature. He is the artifact of God, fashioned purposefully out of two diverse elements: his body is of the earth, but it is animated by the divine breath of life (Gen. 2:7). Yet man is not a dichotomy of body and soul (a view characteristic of Orphism and Platonism), and certainly not a trichotomy (1 Thes. 5:23). His is a multifaceted unitary being – nefesh ha-yayyah, “a living person” (Gen. 2:7). Of particular significance is the concept that all human beings, irrespective of ethnic and cultural differences, stem from two common ancestors, Adam and Eve. Humanity, despite its diversification, is essentially a single family, and men remain brothers even in the face of hate and murder (Gen. 4:9–10). To this inherent Brother-hood and equality of all, even slaves (unlike the Greek view) were no exception (Job 31:13, 15). Furthermore, the world was divinely planned to be one of creatively peace, harmony, and understanding; man, as well as other living beings, was not to destroy his fellow creatures even for food (Gen. 1:29–30; 2:19). The permission granted to Noah to eat flesh was a sad concession to a world that had lost its original idealism (Gen. 9:3). Monogamy is clearly viewed in the creation story as the proper state of marriage. Women play a pivotal role in numerous bibli-
cal stories, and there are women prophetesses, like Deborah and Huldah.

The Image of God

However, the Bible does not merely stress the creatureliness of man. It depicts him as the peak of creation. He climaxes the ascending course of the six days' work of the Beginning. He is formed by special resolve (Gen. 1:26) and in a unique manner (Gen. 2:7), and attracts to himself three of the six occurrences of the stem baraʾ ("to create") in the creation story. However, his crowning glory is contained in the statement that he was made in the divine "image" and "likeness" (for a suggested distinction between the two words see I. Epstein, in bibl., 224), which endows him with unique worth. Man alone among the creatures is capable of sustained thought, creativity, and awareness of God; the light of God is immanent in his spirit (Prov. 20:27). Hence he is given dominion (the "image" is the symbol of the Deity's presence) over the earth (Gen. 1:26, 28) and is privileged to commune with God and enjoy His fellowship (Gen. 2–3). In the language of later rabbinic literature, he became a "partner" of the Creator (Gen. R. ed. H. Albeck (1940), 73; cf. Shab. 10a). The dualism of man's status and significance within the unified framework of his psychophysical being is given unmatched expression by the Psalmist: "What is man that Thou art mindful of him... Yet Thou hast made him little less than the angels" (literally, "God-like beings"); 8:4–5).

Free Will

There is still another aspect of the divine image reflected in man, which plays a crucial role in the profound parable of the Garden of Eden. In a supreme act of self-limitation the Absolute God gave man freedom of moral choice. He could will to do right or wrong, to obey or disobey his Maker. It was heaven's greatest gift to man: he was not to be an automaton. However, the immediate consequences were calamitous. Man rebelled against the Creator; he introduced disharmony into the universal harmony. Sin was born and in turn begot suffering and death. History had begun. Israel was the first people to evince a sense of the historic.

While the Bible is unequivocal in its assertion of the reality of human responsibility for evil (Eccles. 7:29) and in condemning sin trenchantly as estrangement from and treason against God (this is the meaning of the story of Eden), it is no less emphatic in its affirmation of God's grace (Ps. 103:13–16) and readiness to forgive (Num. 14:20; Jer. 33:8). Sin is never final. It is punished, or rather punishes itself. However, retribution is part of the divine redemptive process. It helps man to seek atonement, which the divine love never fails to vouchsafe (Ezek. 33:11).

The road of redemption, however, is hard and long. Outside the Garden of Eden man's iniquity reaches new depths. Brotherhood as well as "sonship" are destroyed. Cain's example was widely imitated (Gen. 6:11). It almost seemed that the making of man was a divine error (Gen. 5–6), which only the Flood could expunge. At this point, however, a new providential principle manifests itself – the elective factor. The family of Noah is chosen from a doomed generation to be saved and to save the world. Later Abraham is elected to be a source of blessing to all mankind (Gen. 12:3). Israel, the seed of Abraham, were chosen to be "a kingdom of priests and holy nation" (Ex. 19:6). Though themselves far from perfect (Deut. 9:5), they were destined to become a light to the world (Isa. 60:3), illuminating the way of ethical and spiritual truth. To this end God made a covenant with Israel at Sinai (Deut. 5:2), which found detailed expression in the Torah. Religious and secular precepts are inextricably intermingled in the Law, for human life is a unity and must be dedicated to God's will in all its diversified aspects. God is served in the righteousness of human relationships – in love between man and man, which reflects God's image – as well as in divine worship. When the "image" is wronged, religious service becomes an abomination (Isa. 1:13–17). The path toward God is further delineated and interpreted by the Prophets, and even by figures (like Abraham, and Job, and some of Psalmists) who question God's moral government of the world. Revelation – the word of God understood in its broadest sense – is the great antidote to sin, leading man to repentance and regeneration. The relevance of this biblical teaching is not confined to Israel. In a deep sense, the Bible tells the story of Everyman in all generations. Even when Israel is the focal point of the Bible's concern, the universal concept of mankind is never ignored (Amos 9:7; Isa. 19:24–25). Israel's significance derives from its relationship to all humanity, whose significance, in turn, flows from man's relation to God. History is thus seen as the moral and spiritual drama of the human species.

The Afterlife

The beginning of that drama, with its hope and tragedy, was enacted in Eden. Inevitably the question arises: Where will the denouement take place? Has human life a divinely designed goal? Later Jewish theology, elaborated in apocryphal and rabbinic literature, answers these questions (solving at the same time the problem of theodicy) on the individual level, by postulating the belief in the afterlife. There the disembodied soul is judged, the wicked are condemned, and the righteous are rewarded with eternal bliss. This doctrine is unknown to Scripture. There is an unmistakable finality about the biblical conception of death (Ps. 146:4; Job 7:9; Isa. 38:18). The Bible is primarily concerned with the world; it seeks heaven upon earth in the form of the kingdom of God (Zech. 14:1), and continued life in descendants rather than in personal immortality (11 Sam. 7:12). Nevertheless death does not mark the complete extinction of existence. The dead continue to live a shadowy, ghostlike existence in Sheol, a region of darkness and silence deep within the recesses of the earth. Yet the dead are not without consciousness (1 Sam. 28: 15ff.; Isa. 14:19ff.), nor beyond God's judgment (Ps. 139:8). Two holy men escaped death altogether: Enoch (Gen. 5:24) and Elijah (11 Kings 2:11). In Job there is a yearning for continued life af-
ter death (14:13ff.; 19:26); in certain psalms the definite hope is expressed that death will not end the human fellowship with God (49:16; 73:24ff.). Whether resurrection is envisaged in Isa. 26:19ff. is a matter of exegesis, but it is certainly envisaged in Daniel 12:2. The preexistence of the soul is first taught in the Apocrypha (Wisd. 8:19ff.), but Jeremiah was “a thought of God” (B. Duhm) before ever he was formed in the womb (Jer. 1:5). Thus the Bible lacks a definite theology of the afterlife, and belief in resurrection is still vague and inchoate. Yet Scripture contains undoubted intimations of immortality, on which future epochs built their religious doctrines.

The End of Days

The true goal of history, however, is to be sought in “the end of days.” It will be the age of regeneration, when the work of creation will be completed in accordance with God’s original plan. Man and God, and man and man, will be reconciled. The treason man perpetrated in the Garden of Eden will be transmuted into universal voluntary obedience to God’s will, and the crime of Cain will be atoned for in a state of international peace and brotherhood (Isa. 2:2–4; Micah 4:1–5). The immature knowledge man acquired from the forbidden fruit will give way to a higher wisdom. For inherently knowledge is good (Prov. 8); it is man’s unwise use of it that vitiates it (Eccl. 1:18). A new earth and a new heaven will issue from the new heart and spirit of man (Isa. 65:17; Ezek. 36:26), and human communion with God will be restored (Joel 3:1–2). The Garden of Eden will, as it were, become worldwide, and the pristine glory of the reflected image of God in man will be renewed. The end of days is undated. It is an elusive horizon; yet its advent remains a prophetic certitude.

[Israel Abrahams]

IN RABBINIC THOUGHT

The Physical Nature of Man

The process of human gestation, and especially the preservation of the embryo, prompted the sages to the observation that these were evidence of both God’s skill and solicitude in the fashioning of man (Ber. 10a; Nid. 31a; Lev. R. 14:3, 4; 15:2, 3; 34:3). The fact that every hair of man’s head is fed through a separate root is cited as further evidence (BB 16a). Man receives five parts of his body from each of his parents, and ten parts from God. From his father, he receives bones, veins, nails, brain, and the white of the eye; from his mother, skin, flesh, blood, hair, and the pupil of the eye. To his formation, God contributes breath, soul, light of countenance, sight, hearing, speech, touch, sense, insight, and understanding. Hence, the rabbinic saying that there are three partners in man – his father and mother and God (Kid. 30b; Nid. 31a; Tj, Kil. 8:3, 31c; Eccl. R. 5:10, 2). A late Midrash (Mss. Midrash ha-Hefez) describes the human body as possessing ten orifices, including the navel. The marvel is, the Midrash continues, that when the child is in the embryonic state, the navel is open and the other orifices are closed but, when it issues from the womb, the navel is closed and the other orifices are opened.

In the totality of his physical structure, man constitutes a microcosm (see *Microcosm and Macrocosm*). An elaborate parallel, covering 30 items, is drawn between the various components of the human body and similar features in the physical world (ARSN 3:31). A hardly less complex parallel is found to exist between the organs of the human body and the structure and vessels of the Tabernacle (Mid. Tadshe, Beit ha-Midrash, Jellinek, vol. 3, 175f.; cf. the New Testament denomination of the human body as a tabernacle, J Cor. 5:1, 4; 11 Pet. 1:13, 14). A simpler summation of man’s physical being is deciphered in the word *adam* (“man”) as being an acronym (*notarikon*) for “dust” (efer), “blood” (dam) and “gall” (marah; Sot. 5a). They give a remarkably accurate enumeration of the 248 organs of the human body (Oho. 1:8). It may be fairly said that the rabbinic reflection on the complex mechanism of man’s physical structure served as occasion for admiring reverence for the skill and wisdom with which God created him. Indeed, its unknown aspects suggested the argument that if man does not know his own body, he certainly cannot fathom God’s acts (San. 39a). But for all its marvelous mechanism, it is destined, save for the soul, to return to the earth from which it originally came. Only one tiny bone remains indestructible and, in the time of resurrection, will serve as the nucleus out of which the body will be restored (Gen. R. 28:3; Eccl. R. 125; see *Luz of the Spine*).

Nowhere in rabbinic literature is there any denigration of the human body so characteristic of contemporary Platonic, Stoic, and Gnostic thought. On the contrary, since even the body is conceived as having been created in the image of God, man is duty bound to honor it by maintaining it in a state of cleanliness. No less an authority than *Hillel termed such activity a religious duty* (Lev. R. 34:3).

Character

Since Genesis describes Adam as having been both created in God’s image (1:27) and formed out of the dust of the earth (2:7), the sages declare that man possesses both heavenly and earthly qualities. In four respects, he is said to resemble the animals and the angels respectively. Like the angels, he possesses the power of speech, intelligence, upright posture, and glance of the eye. In his physical aspects, he resembles the animals (Gen. R. 128:14:3). Indeed, God created man because he was not completely satisfied with either the angels or the animals. The former failed to satisfy him because they lacked the evil inclination. The animals, on the other hand, lacked the good inclination. God therefore created man, who possesses both a good and evil inclination and is confronted with the need to exercise free will. This is the origin of the ambivalent character of man. If he pursues evil, he is likened to an animal; if he chooses the good, he is likened to an angel (Gen. R. 14:3, 4). The contradictory nature of man is highlighted by the legend describing the sharp difference of opinion evoked by God’s taking counsel with the angels as to whether or not man should be created. The angels that favored his creation contended that man would be affectionate and a doer of jus-
tice. Those who opposed his creation claimed that he would be quarrelsome and riddled with falsehood (Gen. R. 8:3–9; in the qualities of lovingkindness, righteousness, peace, and truth are hypostatized).

Man’s moral ambivalence derives from the two inclinations within him: the good inclination (yezer tov) and the evil inclination (yezer ra) (see Inclination, “Good and Evil”). The fact of human individuality exhibits God’s power, for although all men are cast from the same mold since all are descendants of Adam, no two men are alike (Sanh. 4:5). Their physical differences are to be noted in their voice, taste, and appearance (ARN 4).

In their attitude toward possessions, men fall into four distinct categories, ranging from the average to the wicked and the saint (Avot 5:10). It is assumed, as a legal principle, that all men become excited when their property is at stake (Shab. 117b, 153a). This concept is further reflected in the dictum that every artisan is hostile toward his fellow craftsmen (Gen. R. 19:6). It is assumed further, as a matter of legal principle, that in money matters no man is likely to regard himself as culpable (Ket. 105b). The rabbis look askance at him who has an excess of material things. They conclude that such a situation can only produce deplorable moral consequences (Tosef., Sot. 3:6; Ber. 32a; Sanh. 108a; Gen. R. 26:5; 28:6). Indeed, when a man is poor, he can be relied upon to have trust in God. Riches incline him to trust in his money and thus displace his piety (Tanh. Naso 28). For all the rabbinic recognition of the powerful influence of the economic motive on human conduct, a certain basic honesty is assumed as characteristic of all men. Hence, the assumption is made that a man makes no legal monetary claim unless there is some substance to it (Shevu. 40b), and that a man is not brazen as to deny outright the existence of his debt in the presence of his creditor (BM 3a). A man’s basic character is recognizable by his drinking (how he behaves when under the influence of liquor), by his rectitude in financial transactions (Rashi’s interpretation) and by his anger (to what extent he is able to control his temper). To this generalization, some add, also by his laughter (his good humor; Eruv. 65b).

Man and Woman
The difference in the origin of man and woman described in Genesis served the sages as points d’appui for their observations on the contrast between the character and psychology of man and woman. The latter, having been fashioned from a more durable substance (man’s rib-bone) than man (dust of the earth), can more readily withstand disagreeable circumstances and possesses greater inurement to pain (Tanh. Toledot 8). A woman, moreover, is blessed with greater native intelligence (instinct; Nid. 45b). Whose intelligence matures sooner is a matter of opinion (ibid.). A man is more hospitable towards guests and more generous than a woman (Sif. Num. Shlah 100). An aggrieved man is more readily reconcilable than a woman (Nid. 31b). Particularly characteristic of woman is her proclivity to tears (BM 59a) and an inordinate curiosity (Toh. 79). At the time of her creation, God, anticipating woman’s faults, sought to obviate them. He knew that she would be arrogant, wanton-eyed, an eavesdropper, a tatter, a meddler, and a gadabout. Hence, he fashioned her from a chaste part of man’s body that is free of these faults (Gen. R. 18:2; 45:5).

Destiny
The phenomena experienced in the theophany afforded the prophet Elijah (1 Kings 19:11–12) are interpreted as symbolic of the four worlds through which man must pass. The wind symbolizes the evanescent quality of the life of this world. The earthquake represents the day of death, since on it man quakes and trembles. Fire is the symbol of man’s judgment in Gehenna. The “still small voice” is the Last Judgment (Tanh. Pekudei 3). A more elaborate articulation of the worlds (i.e., stages) through which man passes in this life describes seven distinct phases. Each phase is marked by its own characteristics, few of which are flattering (ibid.). All of life is clouded over by uncertainty, for a man goes on his way and knows not whether good or evil awaits him (Tan. Toledot 12). A trace of a tragic view of human destiny is to be discerned in a few rabbinic statements. Throughout his lifetime, man is caught in the impossible dilemma of either obeying his Creator (yoger) or his evil inclination (yezer). Whatever he chooses, he finds himself perpetually at odds with the other (Ber. 61a–b)

Though man enters and leaves the world surrounded by love, both his entrance and exit are marked by sighing and weeping (Eccl. R. 5). The vanity of human ambition is expressed in the observation that man comes into the world with his fists clenched, as if to say, “I will grasp the whole world”; he leaves with palms outstretched, as if to say, “See what I am carrying away” (ibid.). Wherever man dies, there the earth will accept him, for the first man was created by God from dust gathered from the four corners of the earth (San. 38a–b; Tan. Pekudei 3). Whether it was better for man to have been born or not to have been born is the subject of a prolonged controversy between the schools of Shammai and Hillel. The debate terminates with the decision that it would have been better for man never to have been born. But once having entered the world, “let him scrutinize his deeds” (Er. 13b). The pessimistic conclusion is unique and has no parallel in rabbinic literature. (Talmudic commentators have sought to temper it by interpretation. See Maharsha to Mak. 23b, and Urbach, in bibliography, pp. 224–6.)

Significance
Rabbinic thought considers all creation as having been called into being for the sake of man (Gen. R. 8:3–9); he is the only creature formed directly by the hand of God (Alphabet of R. Akiva 59); he was created last because he was to have dominion over all (Gen. R. 19:6). One man is worth the whole of creation (ARN 31). R. Akiva is moved to exclaim: “Beloved is man who was created in the image (of God); still greater was the love in it that it was made known to him that he was cre-
ated in the image of God” (Avot 3:15). Man’s likeness to God, a doctrine meant to emphasize the singular position of man in the world, is a common doctrine in rabbinic Judaism and occurs in a wide variety of contexts. (However, one meets the occasional notion that man was created in the image of the angels and not in that of God; (Gen. R. 14:3; 21:5). (See Ginzberg, op. cit. in bibliography, vol. 5, p. 65, note 6 for a proposed explanation of this extraordinary view.) Man’s superiority over the angels is to be found in his superior wisdom (Num. R. 193) and in his possession of free will (Gen. R. 21:5).

In poetic fashion, man is termed God’s candle in the world (Tan. B. Gen. 28).

[Theodore Friedman]

---

**MANĀKH AH**, city in *Yemen amid the high mountains of Harāz (2200 m.), 90 km S.W. of *San‘a*, on the way to *Hudaydah*. Manākhah was a prominent commercial center and Jews from the surrounding villages would gather together on the weekly market day there, when the local Jews would also abandon their workshops and engage in trading. The Jewish community of Manākhah, one of the largest in Yemen, actually started to gain importance and size in the 1850s through Jews who had fled from *San‘a* owing to the worsening political situation, which explains the fact that the way of life in Manākhah was the same as in *San‘a*. In the last generation it numbered 600 Jews. It was also the richest Jewish community in Yemen, excluding *Aden*. Many of the Jews were businessmen, in import and export; some of them monopolized the coffee trade and even owned land. Nevertheless, they were careful to maintain an external appearance of abject poverty, and their poor houses had the appearance of prisons. In this way the local Jews could maintain good relations with the Muslims. Others were craftsmen: gold- and silversmiths, iron-smiths, carpenters, and tanners. The Jews lived in their separate walled-off neighborhood and had three synagogues. There was a local three-judge *bet din*, serving as a spiritual center for the Jewish population of nearby and far-off towns and villages, such as Mudmār, Jirwāh, and Hawzān. The authority of the temporal leader (*qāfīl*), appointed and paid by the Muslim government, was usually stronger than that of the chief rabbi. Some of the local Jewish families took part in the smuggling of Jewish orphans from *San‘a* to the Holy Land.

**MANASSEH** (Heb. ְֶּׁהֶּ בֶּשֶׁ הָּ מְנָשֶּׁ הָּ; derived from the Ar. al-Manara; for a time the Hebrew name Ramā‘īn, “heights,” was used), kibbutz near the Israel-Lebanese border on the Naphthali Ridge of Upper Galilee, affiliated with Ha-Kibbutz ha-Me’uhad. Its founding in 1943 by pioneers from Germany and Israel-born youth was a bold enterprise. ‘The settlers had to climb a 5 mi. (8 km.), steep footpath to reach the site – 2,990 ft. (920 m.) above sea level – and withstand isolation in a place where the winter is snowy and stormy, and where no water sources are present in summer. In the Israel *War of Independence* (1948), the settlers held out under enemy siege. In violation of the cease-fire arrangements the surrounding positions were occupied by irregular Arab forces commanded by Fawzi al-Qāuqī (October 1948). The area and all of Galilee were liberated by Israel’s Operation Hiram. In the first years after 1948 the water problem was solved when a pumping installation was built to bring water from the Einan Springs in the Huleh Valley 2600 ft. (800 m.) below. A highway was paved and the kibbutz, in addition to its hill farming (mainly deciduous fruit), received fields and carp ponds in the valley. Manarah also had a metal factory for electricity grids and control panels, an amplifier rental service, guest rooms, and a big, modern chicken run. In 2002 its population was 248. The crusader castle ruins of Hūnin (Chasteau Neuf) are located nearby.

[Yosef Tobi (2nd ed.)]
Joseph. This bracketing of Ephraim and Manasseh as Joseph within the 12-tribe roster points, however, to an older affinity between the two tribes reflected in some texts (e.g., Gen. 41:50–52; 48:8–22; Deut. 33:13–17; Josh. 17: 14–18). Ephraim and Manasseh were geographically contiguous, occupying the fertile mountains and small plains extending northward from Bethel to the plain of Jezreel in the region later to be known as Samaria. Manasseh lay to the north of Ephraim. The relationship between the two tribes is portrayed in the Bible as ethnic; they migrated into the central highlands as one people who later divided under the decentralizing pressure of settlement in rather different geographical-agricultural and cultural-political zones. It is, however, conjectured by some scholars that they were ethnically distinct and had entered the land separately, but were closely linked in a common religious conversion. The decision on this point depends largely on whether Ephraim and Manasseh are seen as Exodus tribes or are regarded as early converts to the religion brought to them by Levi or other tribes. The rivalry and struggle for priority between Manasseh and Ephraim is strongly attested to in the traditions. In most tribal lists Ephraim is named first, which reflects its political predominance as epitomized in the leadership of Ephraimites (e.g., Joshua and Jeroboam I). By contrast, some lists name Manasseh first (Num. 26:28–37), which accords with the genealogical claim that Manasseh was the firstborn of Joseph (Gen. 41:50–52). This discrepancy between Ephraim's genealogical subordination and its historical dominance has been harmonized by inserting an etiology that accounts for the greater blessing which Jacob gave to Ephraim (Gen. 48:17–20). That Manasseh is sometimes represented as having priority probably points to its larger territory and population, to the prominence of the Manassite city of Shechem, and to the tribe's political leadership under Gideon.

Yet another traditional historical peculiarity of Manasseh is its stylization as a “half-tribe” in the central highlands west of Jordan and as a “half-tribe” in the highlands east of Jordan. It appears that colonists from the Manassite holdings in the Samaritan highlands crossed the Jordan eastward and settled on the slopes of the Gilead Mountains from the Jabbok River northward to the Sea of Galilee. Since the biblical account of the conquest tradition pictured all Israel as entering the Land of Canaan from the east as a unit, the presence of Israelites in Transjordan is explained by an initial occupation of Transjordan by two and a half tribes: Reuben, Gad, and the half-tribe of Manasseh (Num. 32). There are scholars, however, who believe that all these Transjordan settlements were the result of movements from the western highlands eastward across the Jordan. Historically, the Transjordan settlement was relatively light and always tenuous prior to the monarchy; even under the monarchy it was precarious except when a strong king secured the frontiers against the Arameans, Ammonites, and Moabites. The colonization of Transjordan by Manassites was matched by Ephraimite colonization in the same region (Judg. 12:4; 11 Sam. 18:6), and it is strongly suspected that Reuben and Gad were either offshoots of more established tribes in the western highlands or transplants of reduced or decimated tribes originally located in cis-Jordan. That Manasseh alone was credited with territory on both sides of the Jordan is probably an index of its greater success in colonization.

Another name for Manasseh was Machir (Judg. 5:14). Machir elsewhere is credited as a major clan within Manasseh, the latter's “firstborn” and “the father of Gilead” (Gen. 50:23; Josh. 17:1). If Machir was the original name of the tribe, Manasseh would have been introduced once colonization had extended the group holdings and the need was felt for a more inclusive term. The adoption of the term Manasseh would probably also have been a function of the desire to relate the tribe more closely to Ephraim, the two being regarded as “sons of Joseph.”

Manasseh's territorial holdings as described in Joshua 17 and in Judges 12:7–28 appear in an account of the tribal allotments at the time of the Conquest, which some exegetes regard as an incomplete and mutilated sketch of the tribal administrative subdistricts of David's kingdom. The boundary of Manasseh with Ephraim to the south is given with some precision. The borders with Issachar and Asher to the north have been obscured as a result of redaction of the sources. Similar uncertainty exists in delimiting the Transjordan holdings of Manasseh in relation to Gad. It is doubtful whether, before the time of David, Manasseh settled the coastal plain on the west, the Carmel highlands on the northwest, the plain of Jezreel to the north, or the plain of Beth-Shean on the northeast. In Transjordan, Manassite colonization, it is supposed, hardly penetrated beyond the crest of the Gilead Mountain Range and perhaps some distance up the Jabbok Valley. The major settlements in west Manasseh, prior to the expansion under David, were Shechem, Dothan, Tirzah, Thebez, Arumah, Ophrah, Bezek, and Arubboth. In east Manasseh the major towns were Jabesh-Gilead and Abel-Meholah. The settlements of Succoth, Penuel, Zarethan, and Zaphon, located

**Territory of the tribe of Manasseh. After Y. Aharoni in Lexicon Biblicum, Dvir Co. Ltd, Tel Aviv, 1965.**
in or around the Jabbok Valley and its juncture with the Jordan, may also have been Manassite, although some of them are attributed to Gad. Among the clans of Manasseh (Josh. 17:2–3) are Canaanite cities, such as Shechem, some of which probably remained non-Israelite down to David's time, even though surrounded by Israelites. The approximate position of several of the clans in the west Jordan highlands can be plotted on the basis of their occurrence as place names in the Samaria Ostraca (Albiezer, [A]riel, Helek, Hoglah, Noah, Shechem, Shemida).

[Norman K. Gottwald]

**In the Aggadah**

Manasseh emerges in the aggadah as his father's right-hand man. He was sent by Joseph to spy on his brothers after they entered Egypt (Tanḥ. B., Gen. 202). He is identified as the interpreter between Joseph and his brothers (Gen. 42:23) when his father feigned ignorance of Hebrew (Gen. R. 91:8), and it was he who overcame Simeon despite his martial prowess and cast him into prison (Tanḥ., Va-Yiggash, 4). As the steward of his father's house, Manasseh also prepared the repast for the king (Tanḥ. B., Gen. 197). On the flag of the tribe of Manasseh was embroidered a wild ox, an allusion to Deuteronomy 33:17, which refers to Gideon (Judg. 6:11), a descendant of Manasseh (Num. R. 2:7).

For the relationship between Ephraim and Manasseh see "Ephraim in the Aggadah."

**MANASSEH** (Heb. מְנַשֶּׁה; perhaps “one who causes [an earlier deceased, child] to be forgotten”), king of Judah (668–643 B.C.E.), son of *Hezekiah. Manasseh ascended the throne at the age of 12 and reigned for 55 years (11 Kings 21:1). In those years Assyrian power reached its pinnacle; Manasseh’s reign coincided with more than half of Sennacherib’s (705–681 B.C.E.), all of Esarhaddon’s (680–669), and most of Ashurbanipal’s (668–627). During most of Manasseh’s reign, Judah was a submissive dependent of Assyria. Manasseh is mentioned, together with 22 kings of Syria, Palestine, and Cyprus, in one of Esarhaddon’s inscriptions relating that he imposed forced labor upon them, making them convey timber and stones for the construction of his palace in Nineveh (Pritchard, Texts, 291). Most of these kings, including Manasseh, are also mentioned in one of Ashurbanipal’s inscriptions which recounts that their armies accompanied him to Egypt in his campaign against *Tirhakah (668; Pritchard, Texts, 294). Several scholars hold that part of Manasseh’s army remained in Egypt as a garrison, and that they were the first inhabitants of the Jewish settlement in *Elephantine. Further evidence of Judah’s submission to Assyria is found in a fragment of an inscription from the period between Sargon and Esarhaddon, which lists the tribute of Judah after that of Ammon and Moab, the amount of the former being smaller than that of the latter. This probably relates to the period after *Sennacherib’s campaign in Judah, when the country was impoverished.

The Book of Kings does not mention any political events during Manasseh’s reign, but in Chronicles it is stated that, because he did what was displeasing to the Lord, the Lord caused the Assyrian officers to oppose him and put him in chains, transporting him to Babylon, where he submitted to God’s will and was returned to Jerusalem and his throne (11 Chron. 33:10–13). To the degree that there is any historical validity to the story, the imprisonment was probably brought about by an attempted revolt against Assyria, and not by foreign religious practices, which would be a sign of submission to Assyria. The tradition that he was transported to Babylon appears strange, unless the Assyrian king happened to be there in response to a Babylonian revolt. It is likely that Manasseh was involved in the revolts which broke out against Assyria at the time of Shamash-shumu-ukin’s revolt in Babylon against his brother Ashurbanipal (668–631). Further evidence of Manasseh’s efforts to overthrow Assyrian domination may be seen in the fortification of Jerusalem and his appointing of officers over all the walled cities in Judah (11 Chron. 33:14), although these events may refer to a later period. The account of Manasseh’s return from imprisonment to the throne is given credence by the policy of Ashurbanipal, who, having exiled rebellious Egyptian princes to Assyria, came to favor Neco (671–663), the father of Psammetichus I, and returned him to Egypt as vassal ruler.

Manasseh abolished the religious reforms of his father Hezekiah and introduced alien rites into the Temple (11 Kings 21:3). It has been argued that this course was forced upon him by the Assyrian overlords. Ashurbanipal imposed religious duties upon several Chaldean states in southern Mesopotamia after crushing their attempted revolt. (However, his actions in defeated territories need not be conclusive evidence concerning his policies in lands ruled by his vassals. For a nuanced discussion, see Cogan 1993). It is significant, though, that none of the negative cultic activities attributed to Manasseh is Assyrian. Instead it appears that whereas Hezekiah had been an adherent of the “Yahweh-alone” party (Smith), Manasseh supported the majority position that ignoring other gods with a long history of worship in Israel was perilous. Indeed, the severe territorial losses suffered by Hezekiah could have been attributed to his excessive zeal for monolatry, just as the fall of Judah in 586 was attributed to Josiah’s reforms by the exiled Judahites in Jeremiah 44 (Cogan). The abolition of Hezekiah’s reforms was therefore part of the internal struggle in Judah between those who had supported a policy of acceptance of the ancient native cults and perhaps some newer Syro-Palestinian ones dating from the time of Ahaz, and the devout circles around the prophets. It was a ruthless struggle, and
Manasseh is described as having shed “very much innocent blood …” (I Kings 21:16). According to I Chronicles 33:12ff., Manasseh fully repented upon his return from Babylon, but this does not agree with I Kings 21:16, which relates that he died without repenting. It appears unlikely that the destruction of Jerusalem would have been so emphatically attributed to the sins of Manasseh had he completely repented as described in Chronicles.

[Jacob Liver / S. David Sperling (2nd ed.)]

**In the Aggadah**

Manasseh’s mother was the daughter of the prophet Isaiah, and married King Hezekiah after his miraculous recovery (Ber. 10a). Manasseh and his brother Rab-Shakeh soon showed their total dissimilarity from their parents. Once, when Hezekiah was carrying his two sons on his shoulders to the schoolhouse, he overheard their conversation. One said, “Our father’s bald head might do well for frying fish.” The other rejoined, “It would be good for offering sacrifices to idols.” Enraged by these words, Hezekiah threw his sons to the ground. Rab-Shakeh was killed by the fall, but Manasseh escaped unhurt (Dik. Sof., Ber. 10a). His name is derived from נוש [nosh] (“he forgot”), in that he forgot his God and indulged in idolatry, murder, and other abominable acts (Sanh. 102b). After his father’s death, Manasseh began to worship idols. He destroyed the altar and set up an idol with four faces, copied from the four figures on the divine throne of Ezekiel, so that from whatever direction a man entered the Temple he saw a face of the idol (Sanh. 103b). Manasseh also made another idolatrous image so heavy that it required 1,000 men to carry it. New bearers were employed daily because the king had each group executed at the end of the day’s work (ibid.). He expelled the name of God from the Scriptures (ibid.) and delivered public lectures whose sole purpose was to ridicule the Torah (Sanh. 99b). He also committed incest by violating his sister (Sanh. 103b).

Manasseh sat in judgment on his own grandfather, Isaiah, and condemned him to death. The indictment against him was that his prophecies contradicted the teachings of Moses. Isaiah refused to defend himself, knowing that his efforts would be of no avail and preferring that his grandson act out of ignorance rather than from wickedness. He fled for safety and when he pronounced the Ineffable Name a cedar tree swallowed him up. Manasseh ordered that the tree be sawn in two, causing the prophet’s death (Yev. 49b). Manasseh was carried off to Babylon in the 22nd year of his reign (Sot. 24a) and there placed in a heated oven. In his torture, he prayed in vain to the idols he had formerly worshiped, and at last besought the God of his fathers. The angels pleaded with the Almighty not to accept his penance. The plea was not accepted, God saying, “If I do not accept him I will be closing the door of repentance in the face of all repentant sinners.” Immediately a wind arose and carried Manasseh back to Jerusalem (TJ, Sanh. 10:2, 28c).

Manasseh is included among those who have no share in the world to come. Despite his restoration to Jerusalem, the rabbis felt that he had forfeited eternal life because of his previous sins. R. Judah, however, held that he was also restored to his portion in paradise (Sanh. 102b). Manasseh possessed a profound knowledge of the Torah and could interpret Leviticus in 55 different ways (Sanh. 103b). He justified his actions by pointing to the corrupt behavior of his times. R. Ashi once announced a lecture about him, saying, “Tomorrow, I shall speak about our colleague, Manasseh.” That night, the king appeared to Ashi in a dream and asked him a ritual question which Ashi could not answer. Manasseh then revealed the solution to him. Amazed by the king’s scholarship, R. Ashi asked why one so erudite had worshiped idols. Manasseh answered, “Had you lived at my time, you would have caught hold of the hem of my garment and sped after me” (Sanh. 102b).

**MANASSEH, PRAYER OF**, brief penitential psalm incorporated among the books of the *Apocrypha. According to 11 Chronicles 33:1ff., Manasseh, king of Judah, repented his sins when he was taken to Babylonia in fetters (cf. also 1 Baruch 64:8). Shortly before the beginning of the Christian Era, an unknown author drew up a prayer appropriate for the occasion. Its style is comparatively simple and clear, concise and expressive, breathing throughout a spirit of deep and genuine religious piety. Its contents may be summarized as follows: O, God whose might and mercy are immeasurable (verses 3–7a), Thou hast promised forgiveness not for the righteous but for sinners (verses 7b–8). I have committed many iniquities and am now weighed down with sin. Therefore I confess my transgressions, and implore forgiveness (verses 11–13). Thou wilt save me in Thy mercy, and I will praise thee continually. For all the host of heaven sings thy praise, and thine is the glory for ever. Amen (verses 14–25). It is disputed whether the prayer was composed in Hebrew, Aramaic, or Greek. The theology and literary style of the prayer appear to be more in accord with the teachings of Palestinian than of Hellenistic Judaism. The two main ideas that permeate the prayer are the infinite mercy of God, and the efficacy of true repentance.

The position of this ancient prayer in bibli cal texts varies considerably. Its first appearance in literary history is in the *Didascalia Apostolorum*. In several Greek manuscripts (including codex B, 5th century C.E.) it is included among the 14 odes appended to the Psalter. In medieval manuscripts of the Vulgate it often follows 11 Chronicles. Several Syriac, Armenian, Ethiopian, and Old Slavonic manuscripts have the prayer, some at the close of the Psalter, some at the end of 11 Chronicles. Among printed Bibles its position varies. In
editions of the Vulgate printed before the Council of Trent, the prayer stands after 11 Chronicles; in official printings of the Vulgate after the Council, it is placed in an appendix after the New Testament. In Luther’s German Bible it stands at the close of the Apocrypha. Among English versions it usually stands among the Apocrypha before I Maccabees, although in the Geneva Bible (1560), widely used by the Puritans, it is included among the canonical books, following 11 Chronicles. The Roman Catholic Douai Bible of 1609–10 places it in an appendix after 11 Maccabees.

[Bruce M. Metzger]

MANASSEH (Menasseh) BEN ISRAEL (1604–1657), Amsterdam scholar, printer and diplomat. Manasseh, who was born a Marrano in Lisbon or La Rochelle, was baptized as Manoel Dias Soeiro. According to an unreliable document of the Portuguese Inquisition, he was born on the island of Madeira. His father, Gaspar Rodrigues Nuñez (a nash-seller), escaped from Lisbon after appearing as a penitent in an *autofáʿe and settled in 1613–14 in Amsterdam, where he took the name Joseph b. Israel and called his two sons Ephraim and Manasseh respectively and his daughter Esther. His mother, Antonia Soeira took the name Rachel. Manasseh made prodigious progress in his education. He became a member of the Hevrah for Talmud Torah at the age of 12, began to frequent the yeshivot when he was 14, made his first public oration in Portuguese when he was 15, and at 17 wrote his first book, Safah Bersarah, a grammatical work (unpublished and known from two manuscripts). He succeeded R. Isaac ʿUzziel as preacher to the Neveh Shalom congregation in 1622. In 1623 he married Rachel Abarbanel. They had three children, Gracia (Hannah), Joseph, and Samuel. His extraordinarily extensive knowledge in the theological rather than the talmudic sphere and his linguistic abilities made him a forerunner of the Jewish scholars of the 19th century who attempted to present Judaism in a sympathetic manner acceptable to the Christian world. He founded the earliest Jewish printing press in Amsterdam (1626), where he continued to publish works in Hebrew, Yiddish, Latin, Spanish, Portuguese (and some in Dutch or English) for the remainder of his life. The first book of his press, a Hebrew Sefer Hizkim prayerbook, appeared on January 1, 1627 (13 Tevet 5387). It was financed by Ephraim Bueno and Abraham Sarphati and corrected by Isaac Aboab da Fonseca. Today it is known in only very few copies. Penei Rabbah, his index to the Midrashim, appeared in 1628. In 1628–29 he published Joseph Solomon Delmedigor’s Sefer Elim and Mayan Gannim on religious, metaphysical and scientific matters with mathematical illustrations. Some chapters were prohibited by the Portuguese parnasim. He issued a number of Hebrew and Spanish biblical texts (from 1627 to 1654), Sephardi and Ashkenazi prayerbooks in Hebrew, Spanish, and Yiddish (from 1630 to 1650) and several Hebrew editions of the Mishnah (1631–32; 1643–44; 1646). The first part of his Concilador (1632, in Spanish; 1633 in a Latin translation by Dionysius Vossius), reconciling apparently discordant biblical passages, gained him a great reputation in Christian circles (the remaining three parts appeared in Spanish only, 1641–51). This was followed by a series of works also largely directed to non-Jews: De Creatione (1635, Latin only); De Termino Vitae (1634, Latin only); De Resurrectione Mortuorum (1636); and De Fragilitate Humana (1642). Beside other minor works, he produced Teshouro dos Dinim, a code of Jewish law for returned Marranos (1645–47); Piedra Gloriosa, with (in a few copies) containing four etchings by Rembrandt (1655); and Nishmat Hayyim (1651) on the nature of the soul. The Manasseh b. Israel press, which was not always in his own hands, published about 80 titles. For these works, as well as his synagogue sermons (at which gentile scholars and notables were often present), he was regarded in the world of scholarship as the leading representative of Hebrew learning. In May 1642 he was honored to deliver an official address of welcome to Queen Henrietta Maria of England, her daughter Mary, and their hosts Stadtholder Frederick Henry and his son William (II) in the Portuguese synagogue at the Houtgracht. Manasseh published his address in the same year in Portuguese (Gratulacão), Latin, and Dutch. He had close personal relationships with luminaries such as Gerardus Joannis Vossius and especially with his son Isaac, Hugo ‘Grotius, Petrus Serrarius, Caspar Barlaeus, Claudius Salmasius, Paul Felgenhauer, Samuel Bochart and many more. He boasted to have written more than 200 letters to all his friends and relations, which he intended to publish separately. This never happened. Very few of these letters have survived as autographs, of which the Amsterdam University Library possesses six. Though continuing to serve the Amsterdam community in various capacities, he was never its official chief rabbi. In 1640, when he intervened in a quarrel between the synagogue authorities and his brother-in-law, Jonas Agrabanel, he was put under the ban. Despite his publishing activities, his income was never adequate, and in 1640 he planned to immigrate to Brazil. When after the Puritan revolution the return of the Jews to England was proposed, Manasseh took a prominent share in the negotiations. In 1650 he dedicated the Latin edition of his work, The Hope of Israel, describing the reported discovery of the ‘Ten Lost Tribes in South America, to the English parliament in an effort to solicit their goodwill. At the same time, he entered into discussions with various Englishmen by correspondence and in person, on the possibility of permitting the return of the Jews; this, in his view, had messianic implications, because it would complete the dispersion of the Jews to Kezeh ha-Areẓ (“the end of the earth”), the medieval Hebrew term for Angle-Terre (cf. Deut. 28:64). Because of political circumstances and his own health, Manasseh did not avail himself of an opportunity to go to England in 1652, though his friend Manuel Martinez (David Dormido ‘Agrabanel) and his son Samuel Soeiro conducted some negotiations on his behalf. Eventually however, he went
there in 1655, and submitted his petition to *Cromwell for the recall of the Jews. Although this was not formally granted, as-sent was given to a subsequent petition which merely asked for permission to establish a synagogue and acquire a cemetery. This arrangement eventually proved providential, since it placed no conditions on the return of the Jews. During his stay in England, Manasseh wrote *Vindiciae Iudaicorum (1656) to defend the Jews against the attacks which were then being made on them. He was bitterly disappointed at the apparent frustration of his hopes, although Cromwell showed his personal sympathy by granting him a pension of £100 a year. He returned to Holland in the autumn of 1657, but died at Middelburg shortly after his arrival. He was buried at the Portuguese cemetery Beth Haim at Ouderkerk on the Amstel, where his tomb (restored by British Jews in 1960) can still be visited. The historical facts about Manasseh b. Israel in R. Menasse's novel Die Vertreibung aus der Hölle (2001) are unreliable. His portrait was engraved by Salom Italia (1642). Whether a portrait etching by Rembrandt of 1636 (Bartsch 269) represents Manasseh is doubtful, and painted portraits of Manasseh by Rembrandt or by Ferdinand Bol are not known.

**MANASSEH BEN (Porat) JOSEPH OF ILYA (1767–1831),** one of the forerunners of the *Haskalah in Lithuania and Russia. He was born in Smorgon, Lithuania, and was renowned as a child for his remarkable memory and intellectual precocity. He received a talmudic education in the home of his father-in-law, a wealthy merchant in Ilya.

Manasseh has been credited with the invention of several agricultural machines which the unsophisticated environment rejected. Raising the problem of the poor in Jewish society, he called for justice for them, as "the overwhelming majority of these people lack their basic needs, are hungry and thirsty, have no garment against the cold, and their spirit is faint within them." Social responsibility and service for society he regarded as a duty, even at the cost of personal advantage. He attacked the custom of kset, by which a newly married couple was supported for several years by the wife's parents, since he was in favor of productivization. Regarding trade as "robbery," he called for "proper leadership" to enable the Jewish masses to earn their livelihood through crafts. From time to time he suggested that the leading rabbis confer to deliberate on the problems of a "general improvement" of Jewish conditions and culture. Manasseh was persecuted. A rabbinical convention deliberated his excommunication and he was prevented from going to Berlin. He therefore completed his studies in the Polish and German languages at home and read antiquated scientific works in those languages, thus gaining a sketchy knowledge in this field. To make a living, he later worked as a private teacher in various places in Russia and Galicia. It was then that he became acquainted with Nachman *Krochmal and other Galician maskilim.*

Manasseh was a prolific writer, but it was not easy for him to publish his writings, because none of them was issued with approbation of the rabbis. His Pesher Davar (Vilna, 1807) was burnt by many rabbis. When he attempted to publish his principal work, Alfei Menasseh, in Volhynia, the printer burned the manuscript and the copies that had already been printed as soon as he became aware of the content of the work; when it was printed in Vilna (1822), the author was required to omit a paragraph which alluded to reforms in halakhah. His Binat Mikra (Grodno, 1818), written in the form of unsystematic novellae, deals with the cantillation marks of the Bible as factors in syntax and meaning. In his pamphlet Sama de-Hayyei (Yid. trans. Lebn-Mittel), he sought to present his views to the people at large and to outline "proper and useful behavior for life in this world." Though he had intended to publish additional pamphlets, no more appeared, possibly because of the opposition of the rabbis and community leaders. After Sama de-Hayyei, Manasseh published anonymously the pamphlet Shekel ha-Kodesh, in which he apologized to those who considered him "a nonconformist in several matters," and suggested that his opponents "choose several men who would be willing to clarify their opinions with me."
Manasseh visited ḥadarim and encouraged young men to study mathematics and sciences. In 1827 the Jews of his native town elected him as their rabbi, but he resigned after a year, refusing to be involved in the cruelty of the *Cantonist mobilization. He died in a cholera epidemic. Most of his literary remains were destroyed in the fire which broke out in Ilya in 1884, but some extracts appeared in the second volume of Alfei Menasheh (1904), published by his grandson Isaac Spalter, head of a yeshivah in Smorgon. Circles of pupils and admirers cherished his memory, and using this tradition, M. *Plungian, one of the first Lithuanian maskilim, wrote his biography of Manasseh, Ben-Porat (Vilna, 1858). *Maskilim of the 19th century (M. *Lilienblum, R.A. *Braudes, and others) used Manasseh's opinions against rabbis of the old school.

[Yehuda Slutsky]

MANCHESTER, city in northern England. Its Jewish community, the second largest in Britain, dates from about 1780, the first synagogue being founded by two brothers, Lemon and Jacob Nathan, formerly of Liverpool. A cemetery was acquired in 1794 and the first local charity was the Manchester Jewish Philanthropic Society (1804) which provided winter relief for poor resident Jews. After a temporary schism in the congregation in 1840, a more serious split followed during the rabbinate of S. *Schiller-Szinessy and led to the establishment of a Reform synagogue in 1856. Two years later, the original community moved to its new synagogue ("the Great") on Cheetham Hill still in use in the 1970s. The early settlers and community leaders came mainly from Liverpool and included a tailor, a pencounter, and an optician. Nathan Meyer *Rothschild's first residence in England was in Manchester, from where he exported cotton goods from 1798 to 1805. The second half of the 19th century brought to the city substantial merchants from Central Europe, some political refugees from the 1848 liberal risings in Europe, Romanian Jews fleeing from the 1869 persecutions, and in the 1870s young men escaping service in the Russian army. In 1871, small groups arrived from North Africa and the Levant, areas connected with the Manchester cotton industry, forming the nucleus of the flourishing 20th-century Sephardi congregations of south Manchester. The most significant influx, however, resulted from the great Russo-Polish immigration of 1881–1914. The Jews of Manchester spread northward, settling in the adjacent city of Salford and in the suburban districts of Prestwich and Whitefield. In the 20th century, the south Manchester Jews spread into the suburban areas of Cheshire.

Some of the earlier immigrants became waterproof-garment manufacturers, an industry developed by Jews which flourished until it was superseded by the technologically superior "rainproof," in the manufacture of which Jews were not prominent. The Russo-Polish immigrants followed the usual immigrant trades of tailoring and capmaking. There were also large numbers of jewelry travelers, hawkers, and street-traders. Communal institutions proliferated. The first Jewish school was founded in 1842, and by 1904, 2,300 pupils were being educated in Jewish schools. A Board of Guardians on the London pattern was founded in 1867. Many small hevrot were opened by immigrants. A weekly journal, the Jewish Telegraph, is published there. In the 20th century, Manchester had its own bet din and shehitah board and a Jewish hospital. The representative body, the Council of Manchester and Salford Jews, had 68 synagogues and organizations affiliated to it. At its peak around 1910, Manchester's Jewish population was estimated at 35,000. It probably remained at just under this figure until about the 1970s, when a decline was obvious.

As Manchester was the home of Chaim *Weizmann from 1904 to 1916, the city became the training ground of some of the outstanding British Zionists, personalities prominent also in British life: Lord Simon *Marks, Harry *Sacher, Leon *Simon, *Rebecca and Israel *Sieff. In civic life, too, Jews played an increasingly important role. Nathan and Sarah *Laski were followed by a large number of Jewish lord mayors of both Manchester and Salford. Several Jews were Labor members of parliament for Manchester constituencies, especially after 1945, including Leslie and Harold *Lever and Frank Allau. The novelist Louis *Golding lived in Manchester and set several of his novels in the city. Even in the very recent past Manchester produced a number of communal leaders with a power base separate from London Jewry, such as Sir Sidney *Hamburger.

In the mid-1990s, the Jewish population numbered approximately 27,000. According to the 2001 British census, the first to include an optional religious question, Manchester's Jewish population totaled 21,733. It still contained more communal institutions than any British city apart from London. The community was headed by a Jewish Representative Council of Greater Manchester and Region. There were about 32 synagogues, all but three of which were Orthodox. The Orthodox community, which included a highly visible Strictly Orthodox community, maintained a local Council of Synagogues, a Beth Din, and a range of institutions. Remarkably, Manchester also had no fewer than 16 Jewish day schools, ranging from Strictly Orthodox to Liberal. There was also a well-presented Manchester Jewish Museum on Cheetham Hill Road. The history of the community down to recent times has been fairly well chronicled by historians such as Bill *Williams.

MANDATE FOR PALESTINE

The mandate system was established after World War I by the Treaty of Versailles for the administration of the former overseas possessions of Germany and parts of the Turkish Empire. Its purpose was to implement the principles of Article 22 of the Covenant of the League of Nations, which said in paragraph 4:

Certain communities formerly belonging to the Turkish Empire have reached a stage of development where their existence as independent nations can be provisionally recognized, subject to the rendering of administrative advice and assistance by a Mandatory until such time as they are able to stand alone. The wishes of these communities must be a principal consideration in the selection of the Mandatory.

Class A of the mandates included former Turkish provinces constituted as Palestine, Iraq, and Syria. The first two were assigned to the administration of Great Britain and the third to France. The mandates for Iraq and Syria ended in 1932 and 1936, respectively, their main purpose having been to prepare the countries to be able “to stand alone.” The mandate for Palestine differed from the other “A” mandates in that its primary purpose was the establishment of a national home for the Jewish people, as stated in its preamble, paragraph 3, “putting into effect the declaration originally made on November 2, 1917 [the “Balfour Declaration] by the Government of His Britannic Majesty, and adopted by the other Allied Powers …” Moreover, the reason for the establishment of a national home for the Jewish people in Palestine is related to the recognition of “the historical connection of the Jewish people with Palestine and to the grounds for reconstituting their national home in that country” (para. 3). Great importance was attached to the wording of this paragraph, as it made it clear that Palestine was not just a country in which a national home should be built, but was taken as the historic land of the Jews. Therefore the national home is to be reconstituted, and not just constituted, there (see “White Papers”.

The second article of the mandate makes it the responsibility of the mandatory power, i.e., Great Britain, to place “the country under such political, administrative, and economic conditions as will secure the establishment of the Jewish national home, as laid down in the preamble.” To this is added the aim of “the development of self-governing institutions,” an intentionally vague phrase that implied the gradual preparation of Palestine for self-rule as a process parallel to the establishment of the Jewish national home (particularly when compared with the Mandate for Iraq (Mesopotamia)).

The fulfillment of the main purpose of the Palestine mandate was to be assured by establishing “an appropriate Jewish Agency for the purpose of advising and cooperating with the Administration of Palestine,” by facilitating Jewish immigration into Palestine, encouraging close settlement by Jews on the land (art. 6), and “facilitating the acquisition of Palesti-
ian citizenship by Jews" (art. 7). The Zionist Organization was recognized as such an agency until the establishment of the "Jewish Agency in 1929 (art. 4).

The Hebrew language was recognized as one of the three official languages of the country (art. 22). The Mandate was also to safeguard the "civil and religious rights of all the inhabitants of Palestine, irrespective of race and religion" (introd. and art. 2) and to set up the judicial system so that it assured the rights of all and respected the "personal status of various peoples and communities" and that religious interests (in particular waqfs) be "fully guaranteed" (art. 9). Also many other articles dealt with religious autonomy for the various religions strongly emphasizing this as one of the important functions of the mandate (see arts. 13, 14, 15, 23). Each community was allowed to maintain its own schools in its own language (art. 15); and no modification of the mandate was possible without the consent of the League of Nations (art. 27). According to Article 25 of the mandate, "In the territories lying between the Jordan and the eastern boundary of Palestine as ultimately determined, the Mandatory shall be entitled, with the consent of the Council of the League of Nations, to postpone or withhold application of this mandate as he may consider inapplicable," and by virtue of this saving clause, Transjordan was severed from the territory destined to include the Jewish national home (see *White Papers*).

The mandate for Palestine was given to Great Britain at "San Remo on April 25, 1920, and a civil administration (which superseded the British Military Administration), headed by Sir Herbert *Samuel, was effected on July 1, 1920. The mandate itself was ratified by the Council of the League of Nations on June 24, 1922. A special American-British Palestine Mandate Convention was ratified in March 1925, as the United States was not a member of the League of Nations. In this convention the United States agreed to the terms of the mandate and Great Britain agreed that no modification in these terms would be possible without the assent of the United States (art. 7); thus any modification in the mandate needed the assent of both the League of Nations and the United States. The mandate terminated with the establishment of the State of Israel on May 14, 1948.

**MANDEL, ARNOLD** (1913–1987), French author and journalist. Of Polish immigrant parentage, Mandel was born in Strasbourg. A libertarian radical until World War II, Mandel rediscovered his Jewish identity as a soldier in North Africa in 1940, and then in occupied France. He fled to Switzerland, where he was interned until 1944, after which he fought in the Maquis. From 1945, Mandel was one of the chief spokesmen for French Jewry. Under the influence of Samson Raphael *Hirsch and of hasidic mysticism, he returned to neo-Orthodoxy. His knowledge of Yiddish and of Jewish lore made him one of the few able interpreters of Yiddish literature in France. A prolific writer, Mandel defined the originality and distinctiveness of Jews – particularly French Jews – in the modern world. His works deal mainly with his search for identity in a gentle world, and with his intellectual and spiritual quest for a Judaism both modern and Orthodox. They include *L’Homme-Enfant* (1946); *Chair à Destin* (1948); *Les Temps incertains* (1950); *Les Vaisseaux brûlés* (1957); *Le petit livre de la sagesse populaire juive* (1963); *La Voie du Hassidisme* (1963); and *Les Cent Portes* (1968). Mandel contributed to most Franco-Jewish periodicals, particularly *La Terre retrouvée*, *Evidences*, and *L’Arche*.

[Daniel Efron]

**MANDEL, ELI** (1922–1990), Canadian author. Mandel is among the most challenging writer-critics to gain prominence as part of the explosion of Canadian literary activity in the 1960s. Born in Estevan, Saskatchewan, he served in the Canadian armed forces during World War II. His first book, *Trio*, appeared in 1954, just after he completed his Ph.D. in literature at the University of Toronto. This division of labor, between working poet and active scholar and teacher, was a pattern he maintained throughout his career. In the middle 1950s Mandel taught at the College militaire royal de Saint-Jean; from 1957 until 1967 he was at the University of Alberta. He spent the remainder of his career at York University.

Mandel’s published work, which reflects his varied interests and talents, includes poetry collections, volumes of personal and critical essays, as well as a number of important poetry and critical anthologies that both reflected their times and influenced the course of Canadian literary studies. The bulk of Mandel’s anthologizing work took place in the early 1970s, when the Canadian literary scene was undergoing impressive growth and change, alongside the rise of a new cultural nationalism. In his published criticism, Mandel addressed a wide area of Canadian intellectual trends, from the influence of Northrop Frye to the linguistic and political implications of postmodernism. He also contributed to discussions related to regionalism and the role of ethnic writing.

Jewish themes appear intermittently in Mandel’s work, but they are not central as they are in the writings of Leonard *Cohen, Irving *Layton, and A.M. *Klein. Most interesting are a 1984 essay entitled "Auschwitz and Poetry," in which Mandel explores his own efforts to address the Holocaust in his art, as well as a remarkable text called *Out of Place* (1977), which explores Mandel’s family history in the Jewish prairie farming colony of Hirsch in southern Saskatchewan. In *Out of Place* Mandel juxtaposes the particularity of Jewish prairie life with questions of Canadian history, memory, and landscape, making use of a poetic method that is spare and lightly ironic. The outcome, like much of Mandel’s work, is a surprisingly original view of Canadian cultural life.

MANDEL, ARNOLD

(1913–1987), French author and journalist. Of Polish immigrant parentage, Mandel was born in Strasbourg. A libertarian radical until World War II, Mandel rediscovered his Jewish identity as a soldier in North Africa in 1940, and then in occupied France. He fled to Switzerland, where he was interned until 1944, after which he fought in the Maquis. From 1945, Mandel was one of the chief spokesmen for French Jewry. Under the influence of Samson Raphael Hirsch and of hasidic mysticism, he returned to neo-Orthodoxy. His knowledge of Yiddish and of Jewish lore made him one of the few able interpreters of Yiddish literature in France. A prolific writer, Mandel defined the originality and distinctiveness of Jews – particularly French Jews – in the modern world. His works deal mainly with his search for identity in a gentle world, and with his intellectual and spiritual quest for a Judaism both modern and Orthodox. Mandel contributed to most Franco-Jewish periodicals, particularly La Terre retrouvée, Evidences, and L’Arche.

[Daniel Efron]
Mandel’s awards include the Governor General’s Award in 1967 for his collection An Idiot Joy.

[Norman Ravvin (2nd ed.)]

**MANDEL, GEORGES (Louis)** (not Jeroboam as represented by antisemites) Rothschild, 1885–1944), French statesman, born in Chatou, near Paris. Mandel became a close associate of Georges Clemenceau in 1903, after joining Clemenceau’s staff at L’Aurore, a radical daily newspaper which campaigned for the rehabilitation of Alfred Dreyfus. When Clemenceau became prime minister in 1906, he appointed Mandel head of his office (chef de cabinet), a position Mandel held until 1909, and again from 1917 to 1919 in Clemenceau’s war cabinet. At the peak of World War I Mandel was put in charge of the trials dealing with treason and defeatism. In 1920 he was elected a deputy and after 1935 he was appointed minister a number of times. As cabinet minister he urged France’s speedy rearmament to meet the threat of German National Socialism and in 1936 he opposed Germany’s remilitarization of the Rhineland. As minister of the interior in Paul Reynaud’s government (from May 1940 to the fall of France), Mandel ordered the arrest of numerous suspected Nazi sympathizers and also interned Jewish refugees from Germany and Austria. After the retreat of French troops, he opposed Pétain’s and Laval’s policy of capitulation and collaboration. Pétain had Mandel arrested in Bordeaux, but upon his release he went to Morocco to organize the renewal of combat. Arrested a second time, Mandel was taken to prison in France and assassinated by the Vichy militia in 1944. Mandel did not participate in Jewish community life.

[Lucien Lazare]

**MANDEL, MARVIN** (1920– ), U.S. politician. Mandel, born in Baltimore, Maryland, the son of East European immigrants, was raised in an Orthodox, Yiddish-speaking home. After graduation from Johns Hopkins and the University of Maryland (1942) and service in the army during World War II, Mandel practiced law in Baltimore until his election to the lower house of the Maryland legislature in 1951. In 1963 he was chosen speaker of the Maryland House of Delegates, and also served as chairman of the Maryland State Democratic Committee. As speaker, he was credited with helping push through the legislature tax reform, a fair housing law, and the repeal of the state anti-miscegenation law. When Spiro T. Agnew, Maryland’s Republican governor, was elected vice president of the United States in 1968, Mandel was elected governor (Democrat) by legislature vote. Reelected twice (in 1970 and 1974), he served as governor until 1979. He also served as chair of the Comprehensive Health Planning Agency (1969); the Governor’s Executive Council (1969–79); the Board of Public Works (1969–79); and the Maryland Council on the Environment (1970–79). In addition, Mandel was a member of such entities as the State House Trust (1969); the Hall of Records Commission (1969–70); the Maryland Highway Safety Coordinating Committee (1969–79); the Maryland Education Council (1969–79); and the Southern Regional Education Board (1969–79).

In 1977 Mandel was found guilty of mail fraud, racketeering, and bribery, for which he served 19 months in prison. He was pardoned by President Ronald Reagan; in 1989 the Supreme Court overturned his conviction.

Among his honors and awards, Mandel received the House of Delegates Thomas Kennedy Award in 2002. From 2003 he served as chair of the Governor’s Commission on the Structure and Efficiency of State Government and a member of the Board of Regents for the University System of Maryland. A former state commander of the Jewish War Veterans, Mandel was active in Jewish communal affairs.

[Bernard Postal / Ruth Beloff (2nd ed.)]

**MANDEL, SHELOMOH** (1909–1981), *hazzan. Mandel was born in Nowy Zanz, Galicia. He studied hazzan, the specific melodies and musical style of the solo cantorial singer, under Moshe Steinberg and Moshe Koussevitzky in Vilna and music at the Warsaw Conservatory. After serving as *hazzan in Warsaw and Cracow he was appointed to the Bera synagogue in Johannesburg in 1934, remaining there until he immigrated to Israel in 1974. Of a hasidic background, he incorporated hasidic melody into the traditional melodies. Among his records is one of the whole Passover Haggadah. He taught hazzan.

[Akiva Zimmerman (2nd ed.)]

**MANDELBAM, BERNARD** (1922–2001), U.S. rabbi, educator, community leader, administrator. Mandelbaum spent the better part of his professional life as one of the most important figures in the Conservative movement in the 20th century. He was born in Brooklyn, New York, received a B.A. degree from Columbia University in 1942, and was ordained at the Jewish Theological Seminary (1946), obtaining there a Doctor of Hebrew Letters degree in 1953.

Following his ordination, Mandelbaum spent 27 years at the seminary serving, inter alia, as professor of homiletics, instructor of Midrash, registrar and dean of students at its Rubbinical School, director of the seminary’s department of religion and psychiatry, World Brotherhood, American Student Center in Jerusalem and Schocken Institute for Jewish Research, and program editor of The Eternal Light, an NBC television show. Mandelbaum, ultimately, became provost and, in
MANDELBROT, BENOIT

1966, in anticipation of the retirement of Louis *Finkelstein as chancellor, was elected to serve as president of the seminary, seemingly anointed as Finkelstein’s successor.

While already in the mid-1950s there were stirrings within the Conservative movement to reform the prayer book and introduce a full measure of egalitarianism at worship services, 1966 became a fateful year for the seminary as it searched for a replacement of Finkelstein as chancellor. Two factions among the conservative leadership arose, one which supported Mandelbaum for the chancellorship, not only because of his intellectual credentials, proven leadership and dedicated service to the seminary, but because he was fully committed to preserving the traditional roots of Conservative Judaism. The stronger faction aspired to bring to the seminary a worthy leader who would be more amenable to the changes they sought, such as the ordination of women, through a more liberal interpretation of the halakah. When Dr. Gerson D. *Cohen was selected over Mandelbaum as chancellor, the stage was set for an accelerated ideological shift in Conservatism.

Mandelbaum became president emeritus of the seminary in 1973, and accepted leadership roles, thereafter, in the American-Israel Cultural Foundation, serving as its president (1973–77) and then as executive vice president of the Synagogue Council of America and director of its Institute for Jewish Policy Planning and Research.

Among his published works are Assignment in Israel (1960); Pesikta De Rav Kahana: A Critical Edition (1962); The Maturing of the Conservative Movement (1968); To Live With Meaning (1973); Add Life To Your Years (1974); Art and Judaism: Conversation Between Yaakov Agam and Bernard Mandelbaum (1981); and From the Sermons of Milton Steinberg, 2 volumes (1954–63).

found to be applicable to a very wide variety of phenomena, from turbulence to the dispersion of blood vessels through the body. Increasingly, it came to be recognized that fractality reveals an important and hitherto unrecognized characteristic of nature and natural development as a whole. The theory exerts a profound influence upon modern scientific theory, helping to provide descriptions of anything from the behavior of the human heart under stress to the shapes of mountains and clouds or the pattern of water seepage into the soil, in addition to forming a key tool in modern chaos theories.

Mandelbrot synthesized these views in his book *The Fractal Geometry of Nature* (1982). The Mandelbrot set that Mandelbrot discovered and that is named in his honor is called the most complex orderly object in mathematics. Many of its properties are understandable even to young students but have not yet been proven rigorously. Early on, Mandelbrot’s eclectic and wide-ranging approach meant that he was often regarded with suspicion by a scientific establishment that valued compartmentalization and specialization in a single field, but the undoubted value of his discoveries have led to wide recognition of his importance. He has been an IBM Fellow and Sterling Professor of Mathematical Sciences at Yale, has held many visiting positions, and received many awards.

[Rohan Saxena / Gali Rotstein (2nd ed.)]

**MANDELKERN, SOLOMON** (1846–1902), Russian lexicographer, Hebrew poet, and translator. Mandelkern was born in Mlynow and in his youth was among the Hasidim of Menahem Mendel of Kotzk. However, he soon came under the influence of Haskalah. At the age of 19 he divorced his very pious wife and went to study at the newly founded rabbinical seminaries of Vilna and Zhitomir. He also studied Semitic languages at the University of St. Petersburg. From 1873 to 1880 Mandelkern served as assistant to the government-appointed rabbi at Odessa, being one of the first to preach in Russian. During this period he studied law at the university and compiled a history of Russia, *Divrei Yemei Rusyah* (3 vols., 1875), on behalf of the “Society for the Promotion of Culture among the Jews of Russia.” Because of his personal animosity toward the editor of the periodical *Ha-Meliz*, Alexander *Zederbaum, Mandelkern submitted a false report of a *blood libel in Bessarabia for publication in it. When this was discovered, the periodical was forced to suspend publication, and Mandelkern, to leave Russia. He studied at Jena and afterward settled in Leipzig, where he devoted himself to research. An early supporter of Hibbat Zion and Herzl’s Zionism, he attended the first Zionist Congress in Basle in 1897. Mandelkern’s great contribution to Jewish scholarship is his monumental Bible concordance *Heikhal ha-Kodesh* (1896, 1959; abridged edition, *Tavnit Heikhal*, 1897), the fruit of 20 years of scholarly labor. This concordance was a great improvement on its predecessors and was the first to follow the Jewish arrangement of the Hebrew Bible. In later editions of the work by F. Margolin and M. Goshen-Gottstein (19677) and H.M. Brecher and A. Avrunin (1955, with an English introduction by A.M. Freedman and Hebrew bibliographical essay on concordances by A.R. Malachi) many of its imperfections were corrected. Mandelkern had also begun to work on a Talmud and Midrash concordance, which, however, remained fragmentary and has not been published. Mandelkern’s output as a writer, poet, and translator of poetry was equally considerable. They include an early ode to Czar Alexander 11, *Teshu’at Meleckh Rav* (1866), on his escape from an attempted assassination; a love poem *Bat Sheva* (1866), which earned him praise from Adam ha-Kohen (1896); aphorisms, *Hizzim Shenunim* (1864); and an anthology *Shirei Sofet Ever* (3 vols., 1882–1901), which contained apart from his own poetry translations of great poets from various languages. He also translated Byron’s *Hebrew Melodies* into Hebrew as *Shirei Yeshuran* (1890); Mapu’s *Ahabat Ziyyon* into German, *Thamar* (1885; 1897**, without mentioning the author), and *Ashmat Shomeron as Suende Samarias* (1890); and into Russian *Bogdan Chmielnickii* (1878) and *Lessing’s Fables* (1888). Mandelkern expended great mental and physical efforts producing his works and soliciting buyers for his concordance, even traveling to the U.S. in 1899, and late in his life suffered mental illness. He also became increasingly interested in the theory and practice of spiritualism.

**MANDELSHTAM, LEONID ISAAKOVICH** (1879–1944), Soviet physicist. Mandelstam was born in Odessa and entered the New Russian (Noworossiyskiy) University in Odessa in 1897. He was expelled one year later for taking part in student protests and completed his education at the University of Strasbourg. He returned to Russia in 1914; in 1918 he was appointed professor at the Odessa Technical Institute. In 1925 he became professor of physics at Moscow University. Mandelshtam’s main scientific works were in the fields of optics, theory of oscillations, and radiophysics. In his work *Ob opitcheskii odnorodynykh i mutnykh sredakh* (“On optically isotropic and cloudy media,” 1907) he disproved J.W. Rayleigh’s theory about molecular dispersion of light and showed that the medium must be anisotropic to be able to disperse light. He made several important contributions to the nonlinear theory of oscillations, and together with N.D. Papaleksi invented a new method of creating electrical oscillations. In radiophysics Mandelstam solved several problems of propagation of radio waves over the surface of the earth. He also proposed the idea of exact distance measurements with the help of radio waves and together with Papaleksi built radiointerferometric distance measuring devices. He also wrote papers about statistical and quantum physics and relativity theory, the philosophical basis of which has been criticized latey by the scientific community. From 1931 to 1936 Mandelstam served as coeditor with Abram Fyodorovitch *Jofle of Khimicheskii Zhurnal*, the journal of the Russian Physico-Chemical Society, Leningrad.
Mandelshtam was awarded the Stalin Prize in 1942 for his work on nonlinear oscillations and propagation of radio waves. In 1945 the Academy of Sciences established two prizes in his name for the best work in physics and radio-physics.

[ Gerald E. Tauber ]

**MANDELSHTAM, NADEZHDÀ YAKOVLEVNA** (1899–1980), Russian writer and philologist. Mandelshtam was born in Saratov, to a lawyer father who was the son of a “cantonist and turned to Russian Orthodoxy, and a Jewish mother who was a physician. She herself was baptized as a child. She was educated in Kiev, where she studied art in the studio of the painter A. Ekster and worked as an assistant stage designer. In 1919, she met the poet O.E. Mandelshtam, whom she married in 1921. She assisted her husband in his translation work, herself translating from English. After his exile and death, she preserved his manuscripts and helped to prepare them for publication. In 1956, she was awarded the degree of Candidate of Philological Sciences for her dissertation *Function of the Accusative in Anglo-Saxon Poetic Monuments*. Mandelshtam achieved considerable literary fame in the West following publication of her remarkable memoirs, *Hope against Hope* (1970). Her second book of memoirs, *Vtoraya Kniga* (1972), was translated into English as *Hope Abandoned* (1974). After her death her friends collected her poems, commentaries, and other materials into a third book of memoirs, published in Paris in 1987. Mrs. Mandelshtam lived in Moscow. She was buried at services conducted by the Russian Orthodox Church, with which she identified all her life.

**MANDELSHTAM, OSIP EMILYEVICH** (1891–1938?), Russian poet. Mandelshtam was born in Warsaw but as a child moved with his parents to St. Petersburg, where his father, a scion of an obscure Kurland branch of the well-known Mandelshtam rabbinic family, was a leather merchant and taught himself German and Russian, becoming a student of Schiller, Goethe, and Koerner. His mother, Flora Osipovna née Verblovsky, was born and educated in Vilna, belonging to an enlightened and assimilated Jewish family related to the Wengroffs. A piano teacher and of discriminating literary taste, she passed on to her son her love for music and Russian literature.

Mandelshtam grew up in St. Petersburg. In 1907 he finished the Tenishev School, one of the best and most modern and liberal private institutions in Russia. His teacher for Russian literature was Vladimir Gippius, a pioneer of the Russian Symbolist movement. Between 1907 and 1910 he traveled in France, Germany, Italy, and Switzerland, spending one term at the Sorbonne and two at Heidelberg, where he studied Old French. Forced to interrupt his education abroad owing to financial difficulties, he converted to Lutheranism in order to be able to enter the University of St. Petersburg.

During these years Mandelshtam attended the poetic circle (*Proacademia*) of the learned Symbolist poet Vyacheslav Ivanov. His earliest poems, enclosed with his letters to Ivanov, were recently found in the latter’s archives in Russia and published in the West. In these poems, as well as in the pieces selected for his literary debut in 1910 (in the pages of *Appolon*, a trend-setting journal of art and letters), young Mandelshtam emerges as a thoughtful preserver of the European Symbolist heritage and a courageous seeker of new means of poetic expression, combining Verlaine’s musique with a conscious and creative stock-taking of the 19th-century Russian poetic vocabulary (especially that of Pushkin and Tyutchev), which receives a new and unexpected meaning in the framework of his complex symbolism.

In 1911 Mandelshtam joined the Guild of Poets (*Tsekh poezii*). Its founder N.S. Gumilev, whom Mandelshtam had earlier met in Paris, became his closest friend and literary associate, as did another member of the Guild, Anna Akhmatova. By 1912 Mandelshtam’s Symbolist apprenticeship was over. Gumilev proclaimed a new poetic trend, Acmeism, demanding a “more stable balance of forces” in poetic texts and a “more accurate definition of the subject-object relationship” than the mystically inclined Russian Symbolists could provide. To these demands Mandelshtam added, in his programmatic essay “Utro akmeizma” (“The Morning of Acmeism”; written c. 1913 but published only in 1919), the requirement that “the conscious meaning of the word, Logos, be redefined in formal aesthetic terms and granted “equal rights” with such constructive elements of poetry as rhythm, sound texture, etc. Employing the already existing cultural codes to effect shifts of meaning, Acmeism, after some initial crises, developed into a major trend in modern Russian poetry and a powerful rival of Futurism, which sought to emancipate the poetic language from everyday meanings by purely linguistic means. In Mandelshtam’s own poetry the semantic potentialities with which the poetic word is endowed through the history of its use in other poetic contexts are activated by means of elliptic riddle-like quotations that force the reader to turn to their sources in order to find a frame of reference (the so called “subtext”) in terms of which an Acmeist text has to be decoded.

The essential features of this method are already evident in the compact and erudite poems of Mandelshtam’s first collection, *Kamen* (“The Stone,” 1913; 2nd and 3rd eds., greatly enlarged, 1916 and 1923); the title of the book represents an etymologically justified anagram of the Greek work akme (“sharp point,” “summit,”) from which Acmeism derived its name. During World War I, Mandelshtam published, in addition to *Kamen*, several remarkable literary and historical essays (“Chaadayev,” “François Villon,” “On the Interlocutor, ” etc.). The revolution of 1917 found Mandelshtam in St. Petersburg. His attitude toward the Bolshevik takeover, as reflected in his poetry, gradually changed from initial revulsion (“When the October favorite of fate prepared for us/A yoke of violence and malice . . .”) to mainly acceptance of whatever “the vast, clumsy, squeaking turn of the rudder” might bring. In the spring of
1919 Mandelshtam moved to Kiev, where he met his future wife, Nadezhda Yakovlevna Khazina (see previous entry). After the arrival of the White Army, which brought in its wake a terrible pogrom, Mandelshtam moved to the Crimea, where he was jailed by General Wrangel’s counterintelligence, but was freed shortly after through the intervention of a friendly White colonel. He left the Crimea for Tiflis, and was promptly jailed again as a Red spy, this time by the Menshevik secessionist government of Georgia. In the fall of 1920 Mandelshtam returned to Soviet Russia in the company of I. *Ehrenburg. Later, despite the execution of Gumilev on conspiracy charges, followed by a political drive against Acmeism, Mandelshtam and Akhmatova staunchly refused to emigrate. In 1922–23 Mandelshtam’s second collection of poetry appeared first in Berlin (under the title *Tristia*, given in Mandelshtam’s absence by M. Kuzmin), then in Moscow (*Vtoraya kniga, “The Second Book*). Three longer poems composed by him in 1923, “The Horseshoe Finder,” “The Slate Ode,” and “1 January 1924,” marked a turning point in Mandelshtam’s art. Their artistic and intellectual complexity and tragic power remain unsurpassed in modern poetry.

After 1923 Mandelshtam’s name disappeared from the lists of contributors to literary periodicals, and during the rest of the decade he was effectively silenced as a poet and confined himself almost entirely to prose (the publication of his collected poetry in 1928 was brought about by the personal intervention of N.I. Bukharin). A collection of autobiographical essays, *Shym vremeni* (“The Noise of Time,” 1925), described by Prince Syvatopolk-Mirsky (D.S. Mirsky) as “one of the most significant books of our time,” was followed by the long story “Egipetskaya marka” (“The Egyptian Stamp,” 1928), and, in 1930, by “Chetvertaya proza” (“Fourth Prose”), which could not be printed in the U.S.S.R. During these years Mandelshtam was forced to make a living as a translator and in 1928 became the victim of a vicious campaign, in the course of which he was accused of “plagiarism” by A. Gornfeld, a minor literary writer working in European literature could ever escape. His autobiographical essays, *Shum vremeni*, contain a painfully frank description of an assimilated Jewish childhood in a great center of European culture, with its vulgar official brand of Judaism, ostensible pride in Jewish history, and deep day-to-day shame. He never learned Hebrew but appreciated “the admirable equilibrium of its vowels and consonants in the clearly enunciated words, which imparted an invincible power to the chants.” Of the Yiddish language, he wrote with tenderness: “…that melodious, always surprised and disappointed, interrogative speech with sharp pitches on half-stressed syllables.”

In his earliest poems Mandelshtam spoke of himself as “a rustling reed growing out of an evil and muddy pool to breathe forbidden life” and then sinking back into “the cold and boggy abode,” “the beloved ooze” (1910). In 1915, the same image appeared in his poem about Christ (never included in his collections): “He reigned and drooped, as a lily, into the native pool, and the depth, in which stems sink, celebrated its law.” In the poem about his mother’s funeral (1916), Mandelshtam contrasted the “terrible yellow sun” illuminating the Jewish temple with the black sun of Apocalyptic Christianity rising at the gates of Jerusalem (the black and yellow colors of the *tallit* are associated in his poetic vocabulary with Judaism). Religious critics made much of Mandelshtam’s so-called *Christianity* as reflected in a number of his poems and essays. In point of fact, however, Mandelshtam turned with equal enthusiasm to Chaadayev’s Catholic universalism, Kautsky’s Marxism, Florensky’s Orthodoxy, Greek mythology, neoplatonic mysticism, medieval nominalism, the heresy of the Russian “Name-Praising” sect, and the evolutionary theories of Goethe and Darwin in his search for an “integral world view.”

A major part of Mandelshtam’s unpublished work was saved by the heroic efforts of his widow. Some of the Voronezh poems appeared after his “rehabilitation” in Soviet literary journals, and his *Razgovor o Dante* (“Talking about Dante”), edited by L. Pinsky and A. Morozov, was published in Moscow in 1967. However, the edition of his collected poetry, announced on three occasions by the series “Biblioteka poeta,” never materialized.

In the U.S., the collected works of Mandelshtam were published by G. Struve (*Sobraniye sochineniy, 1955; Sobr. soch., 1–3, 1965–71, 2 editions*).

During the 1960s intensive studies of Mandelshtam’s work gained momentum in various scholarly centers, e.g., Cambridge, Mass. (R. Jakobson and K. Taranovskiy, and their students), Moscow (V.V. Ivanov and his colleagues), Tartu (members of the Summer School on Secondary Modeling Systems), Uppsala (N.A. Nilsson), etc.

**Jewish Themes in His Art**

Unlike another modern Russian poet of Jewish origin, B. Pasternak, Mandelshtam never renounced his spiritual Jewish identity. However, his attitude toward the world of Judaism was marked by the tragic ambivalence that no great Jewish writer working in European literature could ever escape. His autobiographical essays, *Shum vremeni*, contain a painfully frank description of an assimilated Jewish childhood in a great center of European culture, with its vulgar official brand of Judaism, ostensible pride in Jewish history, and deep day-to-day shame. He never learned Hebrew but appreciated “the admirable equilibrium of its vowels and consonants in the clearly enunciated words, which imparted an invincible power to the chants.” Of the Yiddish language, he wrote with tenderness: “…that melodious, always surprised and disappointed, interrogative speech with sharp pitches on half-stressed syllables.”

In his earliest poems Mandelshtam spoke of himself as “a rustling reed growing out of an evil and muddy pool to breathe forbidden life” and then sinking back into “the cold and boggy abode,” “the beloved ooze” (1910). In 1915, the same image appeared in his poem about Christ (never included in his collections): “He reigned and drooped, as a lily, into the native pool, and the depth, in which stems sink, celebrated its law.” In the poem about his mother’s funeral (1916), Mandelshtam contrasted the “terrible yellow sun” illuminating the Jewish temple with the black sun of Apocalyptic Christianity rising at the gates of Jerusalem (the black and yellow colors of the *tallit* are associated in his poetic vocabulary with Judaism). Religious critics made much of Mandelshtam’s so-called Christianity as reflected in a number of his poems and essays. In point of fact, however, Mandelshtam turned with equal enthusiasm to Chaadayev’s Catholic universalism, Kautsky’s Marxism, Florensky’s Orthodoxy, Greek mythology, neoplatonic mysticism, medieval nominalism, the heresy of the Russian “Name-Praising” sect, and the evolutionary theories of Goethe and Darwin in his search for an “integral world view.”
Mandelstamm was the son of a Jewish father; his best-known and most controversial of recent British politicians.

The motif of the prodigal son’s return to the faith and the land of his fathers found its final culmination in the “Canzona” (1931): “I shall leave the land of the Hyperboareans to fill with vision the outcome of my fate. I shall say ‘selah’ to the head of the Jews for his raspberry-colored caress.”

Ten years later, in “Fourth Prose,” Mandelshtam wrote with a conviction born out of hard-earned experience: “I insist that writerdom, as it has developed in Europe, and above all in Russia, is incompatible with the honorable title of Jew, of which I am proud. My blood, burdened with the inheritance of sheep breeders, patriarchs, and kings, rebels against the thiefish gypsyishness of the writing tribe.”

The motif of the prodigal son’s return to the faith and the land of his fathers found its final culmination in the “Canzona” (1931): “I shall leave the land of the Hyperboareans to fill with vision the outcome of my fate. I shall say ‘selah’ to the head of the Jews for his raspberry-colored caress.”

**Mandelson, Peter** (1953— ), British politician. One of the best-known and most controversial of recent British politicians, Peter Mandelson was the son of a Jewish father; his mother was the daughter of Herbert Morrison (Baron Morison of Lambeth), Britain’s deputy prime minister and then foreign secretary under Clement Attlee from 1945 to 1951. Mandelson was educated at Oxford and worked as a television producer; he was elected to Parliament in 1992, holding his seat until he resigned in 2004. “Mandy,” as he is widely known, became campaign manager (and chief “spin doctor”) of Tony Blair, the center-left politician who became leader of the Labour Party in 1994 and was elected prime minister with a huge majority in 1997. Some within the Labour Party rejected Mandelson’s enormous influence. From 1997 he served as Blair’s minister without portfolio, responsible for building London’s Millenium Dome for 2000, and then entered the cabinet in 1998 as secretary of state for trade and industry. Later in the same year, he was forced to resign over an allegedly improper loan he had received. He returned to the cabinet in 1999 as secretary of state for Northern Ireland, but in 2001 was again forced to resign over an alleged impropriety regarding a businessman seeking British citizenship. In 2004 Blair appointed Mandelson Britain’s European commissioner responsible for trade.

[William D. Rubinstein (2nd ed.)]
MANDELSTAMM, LEON (Aryeh Loeb; 1819–1889), writer and adherent of the "Haskalah in Russia. Born in Zagare (Lithuania), Mandelstamm had a thorough religious and general education. In 1840 he became the first Jew to enroll at a Russian university (Moscow) and in 1844 graduated in Oriental languages from the University of St. Petersburg. His research concerned the history of political regimes in ancient Israel. During his student years, he produced a book of poetry in Russian (1840). In 1846, after further studies at German universities, Mandelstamm was appointed in charge of Jewish affairs in the Ministry of Education in succession to M. *Lilienthal. He was mainly concerned with establishing a network of government schools for Jews, and supervising the Jewish *ḥeder and *talmud torah schools. For this purpose he traveled extensively throughout the *Pale of Settlement and prepared textbooks; these were published by means of funds raised through the *candle tax, and even private Jewish teachers were required to buy them. The books, which contained texts accompanied by German translations, included selections from the Mishnah, an anthology of Maimonides' writings, the Bible along with the *Biur of Moses *Mendelssohn and his pupils, and the *Kevod Melekh of R. Jehiel *Heller, which stressed the Jew's religious duty to respect secular kings and rulers. Mandelstamm was dismissed in 1857 as a result of attacks by his opponents among the *maskilim and wealthier Jews of St. Petersburg who accused him of wasting funds and engaging in activities for his own profit. During his period in office, Mandelstamm corresponded with and met Haskalah leaders and prominent Hebrew writers, often arranging for them to be given posts. After losing his job, he lived for many years in Germany where he engaged in trade and in contracting. He wrote for both the Jewish and general press, and published, in German, several collections of studies in Bible and Talmud. The translation of the Pentateuch into Russian which Mandelstamm had produced in Germany was forbidden in Russia because of the general prohibition on scriptural works which were not approved by the Church. In 1872, however, permission was given to import and reprint his work there, provided that the translation was accompanied by the original Hebrew version. Toward the end of his life Mandelstamm returned to St. Petersburg where he died forgotten and in poverty.

[Yehuda Slutsky]

MANDELSTAMM, MAX EMMANUEL (1839–1912), ophthalmologist and leading member of the Zionist and Territorialist movements in Russia. Mandelstamm was born in Zagare, Lithuania. His father Ezekiel Mandelstamm, the brother of Leon *Mandelstamm and Benjamin *Mandelstamm, was an educated merchant who wrote a biblical lexicon entitled *The Book of Names* (1862). Mandelstamm was among the first Russian Jews to study in a Russian high school, but he received his main education at the German University of Dorpat (Estonia). After he completed his medical studies at Kharkov University, he continued his studies in ophthalmology in Berlin. Upon his return to Russia he opened a clinic in Kiev and became well known as an expert ophthalmologist throughout southern Russia. Mandelstamm also served as a lecturer in ophthalmology at Kiev University, but he left the university when his candidacy as an associate professor was not approved.

The pogroms in southern Russia at the beginning of the 1880s moved Mandelstamm into the field of Jewish public activities. He was the head of the Committee to Support Victims of Pogroms. At the conference of representatives of Jewish communities in St. Petersburg in 1881, he was the only one to support emigration from Russia as a radical solution to the problems the Jews faced there. From that time, emigration from Russia became the basis for his outlook on public affairs. In 1883 he participated along with L. *Pinssker, M.L. *Lilienblum, and H. Shapiro in a meeting in Odessa at which the foundations of the *Hibbat Zion movement in Russia were laid. His wide-ranged organizational work then began and came to an end only after sharp opposition from the authorities.

Mandelstamm joined the Zionist Organization at the First Zionist Congress and from then on was one of *Herzl's most devoted associates and one of the most faithful political Zionists among the Russians. Herzl depicted him in *Altneuland as the first president of the Jewish state – “an ophthalmologist from Russia, Dr. Eichenstam.” He was elected to the Zionist Actions Committee and at the Second Zionist Congress was appointed deputy of the Kiev district. At the Sixth Zionist Congress, Mandelstamm was among the enthusiastic supporters of the *Uganda Scheme and fought for its acceptance even at the *Kharkov Conference. He organized the supporters of the plan to meet the challenge of the Russian Zionists. After the Seventh Zionist Congress he joined I. *Zangwill and participated in the founding conference of the Jewish Territorial Organization (JTA). The pogroms that accompanied the first Russian Revolution (1905–06) strengthened his conviction that it was imperative to organize the flight of the Jews from Russia through Territorialism. He headed the emigration office established by the Territorialists in Kiev that concerned itself basically with organizing the emigration of Jews destined for *Galveston, Texas (under the Galveston Plan) with the aim of creating a Jewish Territorialist center in the southern United States.

[Yehuda Slutsky]

MANDL, SAADIA (1931– ), architect. Born in Novi Sad, Yugoslavia, he arrived in Palestine in 1938. He studied at Ecole des Beaux Arts, Paris, and at the Archeology School,
MANDRAKE (Heb. ודָאִים (dūdāʿīm)), Mandragora officinarum, a plant of the nightshade family native to the Mediterranean region and related to the deadly Atropa belladonna. The mandrake is best known for its large, brown roots that can extend several feet into the ground and branch off into thick, bizarre shapes, even crudely resembling the human form. Since antiquity, the mandrake has been credited with aphrodisiac and fertility-producing powers as well as the ability to induce sleep, relieve pain, or serve as a purgative; it is one of the most frequently mentioned plants in folklore, preserved in literature from the Mediterranean basin from antiquity to the modern era.

The earliest reference may be in Ugaritic literature of the 14th century B.C.E., where the term is found in relation to the goddess of love and war, Anat, whose brother Baal sends her a message concerning peace, love, and “passion” (ddym). Mandrakes appear twice in the Bible, in contexts suggesting that the plant had properties conducive to sex and conception. Perhaps in a word-play with ḏ(ו)ḏ, “love,” it is mentioned in the Song of Songs (7:14) as having an odor that would arouse the lovers’ passion. The well-known story of Rachel and the mandrakes in Genesis 30:14–17 indicates that this plant was believed to aid conception, for the barren Rachel gives her sister and co-wife Leah a night with their husband Jacob in exchange for mandrakes procured by Leah’s son Reuben. The text reports that Rachel subsequently became pregnant when God heeded her. Her use of mandrakes provides an example of the magico-medical means for dealing with problems inherent in the reproductive process, part of women’s religious culture in ancient Israel as in most traditional societies. That Rachel resorts to the ancient equivalent of a fertility drug is not at all contradictory to the overarching notion that divine providence is involved in overcoming barrenness; prayer along with actions we would consider magic were understood as complementary ways for women to become pregnant.

Post-biblical lore and legends refer less to mandrake’s aphrodisiac qualities and more to its other medicinal properties. Digging for mandrake roots was thought to be dangerous, with the animal pulling out the roots meeting a vicarious death for its master (Jos. Wars, 7:183ff.), a risk also found in other ancient writers, such as Theophrastus and Pliny. The Talmud’s prohibition against reciting biblical verses while uprooting mandrakes (TJ Shab. 6:2, 8b), may allude to their supposedly lethal quality. Maimonides (Guide, 2:29) mentions that superstitious people are “deluded” about them.

[Jehuda Feliks / Carol Meyers (2nd ed.)]

**MANÉ-KATZ** (originally Emanuel Katz; 1894–1962), French painter. Mané-Katz was born in Kremenchug, Ukraine. In 1913 he went to study in Paris. He returned to Russia during World War I, working and exhibiting in Petrograd. After the October Revolution of 1917 he returned to Kremenchug, where he taught art. As the city was the scene of continued fighting during the Civil War, there was little chance for him to work and in 1921 he migrated to Paris. He painted assiduously, and a decade later won a Gold Medal at the Paris World’s Fair for his painting “The Wailing Wall.” In 1939, Mané-Katz was mobilized and on the fall of France was imprisoned briefly by the Germans. He managed to get to the United States, but returned to Paris after the war. Mané-Katz was an eminent Jewish representative of the School of *Paris. His output was prodigious. He painted so fervently and with so little concern for detail that he seems to be carried away by his own exuberance. His color is sometimes blatant, but rarely coarse. His smaller works, particularly those of the 1920s, show an intensity of expression and a baroque ecstasy. The subject matter of his early works is exclusively Jewish – hasidic rabbis, talmudic students, fiddlers and beggars of the Pale of Settlement with meager bony faces and deep-set eyes, the same haggard figures placed against an almost barren background. He later painted the sights of Paris, orchestras, bullfights, the scenery of the Riviera, portraits, and numerous flower pieces, usually with a childlike delight in raw colors. He made several sculptures. He died in Israel and left his collection, including many fine specimens of Jewish ritual art, to the city of Haifa.

Jews to France and then acted as the financial intermediary between the Jews of northern France and the monarchy — to his own personal profit as well. In 1374 he secured a further ten-year extension of the Jewish right of residence in France. When the Jews were once more obliged to wear a distinctive "badge, he and all his family were exempted. It is not certain whether it was this Manessier or a namesake who was involved in a lawsuit in 1365. After his death (between June 28 and October 1375), his children, his eldest son in particular, succeeded to his functions and privileges (which included complete exemption from the payment of taxes). When his son Joseph was converted to Christianity in 1382, he recovered the family properties, which had previously been seized. Nothing is known of the family after this.

**BIBLIOGRAPHY:** L. Lazard, in: *Annuaire des Archives Israélites de France, 7* (1890/91), 52–56; R. Anchel, *Juifs de France* (1946), 115f. [Bernhard Blumenkranz]

"MANETHO (third century B.C.E.), Greco-Egyptian historian. Manetho, native of Sebennytos, "Egypt, served as priest in Heliopolis. Thoroughly versed in Egyptian lore, he was also associated with the religious policy of the Ptolemaic dynasty, in particular with the introduction of the cult of Serapis. Manetho was the first Egyptian to give an account of the history of his country in Greek. A number of fragments from this work are preserved in *Contra Apionem* of *Josephus, who apparently did not draw from Manetho's work at first hand, but from extracts in Hellenistic Jewish historians. The fragments fall into two categories, the first of which describes the origin of the rule of the "Hyksos in Egypt (Jos., Apion 1-73f.). Manetho (in accordance with later Egyptian accounts) writes that the Hyksos were a nation of alien conquerors who set fire to Egyptian towns, razed the temples of the gods, and treated the natives with cruelty. After their expulsion from Egypt, the Hyksos crossed the desert on their way to Syria, and in "the country called Judea" built a town, which they named Jerusalem. Although Manetho does not mention the Jews by name, he is clearly referring to them. Josephus himself distinguishes between the first group of fragments of Manetho's writings and the second (ibid., 1:228ff.), "where he had recourse to falsies and current reports." In this second group of fragments it is stated that the Egyptian king Amenophis wished to be granted a vision of the gods and on the advice of his namesake, Amenophis son of Paapis, decided to purge the country of lepers and other polluted persons. He collected 80,000 people and sent them to work in the quarries east of the Nile. Afterward, according to their request, he assigned them Avaris, the ancient capital of the Hyksos, for settlement. Here they appointed as their leader one Osarsiph, a former priest of Heliopolis. Osarsiph decreed that his people should neither worship the gods nor abstain from the flesh of animals reverenced by the Egyptians, and cultivate close connections only with members of their own confederacy. Similarly, he sent representatives to the inhabitants of Jerusalem, who had been expelled from Egypt. Osarsiph's people defeated the Egyptians in a concerted effort, their behavior to the inhabitants being far worse than that of the Hyksos in their day. Here Manetho identifies Osarsiph with Moses.

Some historians completely deny the authenticity of Manetho's entire Osarsiph story, while some object only to his identification of Moses with Osarsiph. However, there are no convincing reasons for doubting the intended identification. The Osarsiph story throughout has much in common with such Egyptian tales as the "Prophecy of the Lamb" or the "Potter's Oracle," which could easily be fused with anti-Jewish elements. The biblical account of the Exodus challenged the Egyptians to provide a suitable answer, and anti-Jewish feelings were common in Egypt even before its conquest by the Greeks. It is therefore unnecessary to postulate Manetho's account to the later Ptolemaic period. The descriptions of the historian *Hecataeus show how easily the story of the Exodus was assimilated into the tale of the expulsion of the strangers because of calamities visited on the Egyptians. Nor was Manetho necessarily the first to combine the story of the lepers with Moses and the Jews. A synthesis, similar though not completely identical, is encountered in subsequent writers. Nevertheless, Manetho may undoubtedly be considered a central figure in the emergence of the anti-Jewish polemical writings of Alexandrian-Greek literature.

[Menahem Stern]

"MANETTI, GIANNOZZO (1396–1459), Hebraist and humanist. Manetti acquired a wide knowledge of Hebrew language and literature and was even taught to speak Hebrew by a Jewish teacher (later baptized) who lived with him. Manetti took lessons also from a Florentine Jew named Immanuel (probably the loan-banker Manuelo of San Miniato), giving him instruction in philosophy in exchange. Many of the Hebrew manuscripts in the Vatican library were originally in Manetti's possession. He made a Latin translation of the Psalms, which he defended against its critics in a five-volume work. In 1447 Sigismondo Malatesta of Rimini organized a religious "disputation at his court between Manetti and Jewish scholars.

[Umberto (Moses David) Cassuto]

**MANEVICH, LEV YEFIMOVICH** (Izrailovich; pseud. Eten (Etienne), 1898–1945), Soviet intelligence agent. Be-
MANGER, ITZIK (1901–1969), Yiddish poet, dramatist, novelist. Born in Czernowitz, his first poem was published in 1921 in the Romanian Yiddish journal Kultur, and his first book of poems was Shnern Oyfn Dakh (“Stars on the Roof,” 1929), where he combined folksong and bardoic simplicity with sophisticated stanzic structures and technical skill. The poems express delight in the entire universe and find beauty and value even in suffering and sorrow. In 1929 Manger moved to Warsaw, where he published more mature poems in Lantern in Vint (“Lantern in the Wind,” 1933). In his Khumesh Lider (“Bible Poems,” 1935), patriarchal figures are portrayed as Eastern Europe shtetl Jews. Thus when Abraham welcomes the three angels, he is the pious Reb Avrom, in a silk skullcap and smoking a pipe; in speaking to Sarah, colloquial Yiddish expressions naturally spice his conversation. Manger’s Megile-Lider (“Scroll Songs,” 1936) recast the traditional Purim play as dramatic lyrics. He added new incidents and characters to the biblical narrative, such as the rivalry between the tailor’s apprentice Fastrigoshe and King Ahasuerus for the love of Esther. These ironic and sentimental lyrics were enthusiastically received when staged as a musical in Israel in 1967 and again in the United States (in English, 1968; music by Dov Seltzer). Manger also adapted A. Goldfaden’s plays for a post-Goldfaden generation; most successfully Di Kishefnakhen (“The Witch”) and Dray Hotsmakhs (“Three Hotsmakhs,” 1936, 1937). He paid tribute to Goldfaden, Eliakum Zunser, Berl Broder, and other predecessors with imaginative essays in Noente Geshtaltn (“Intimate Portraits,” 1938, 1961; also in Shriftn in Proze “Writings in Prose,” 1980). His most piquant tale is the imaginative novel, Dos Bukh fun Gan-Eyun (1919; English tr. by L. Wolf, The Book of Paradise, 1965), in which Shmuel-Abba, formerly an angel and now a newborn, relates his prenatal adventures in Paradise. The story is a satire on the imagined Eden and the harsh realities of Jewish life and human foibles.

MANHEIM, BILHAH (1929– ), Israeli sociologist specializing in the sociology of work and considered one of the leading scholars in the field. At the Industrial Engineering Faculty of the Technion she taught many executives how to manage human resources. Manheim was born in Germany and immigrated to Israel with her family in 1936. She received her B.Sc. from the University of Kansas in 1951. In 1953 she completed her M.A. and in 1957 her Ph.D. from the University of Illinois. From 1957 she taught sociology at the Technion and from 1959 to 1969 she lectured at Haifa University. In 1980 she became a professor at the Technion. From 1981 until her retirement in 1997 she directed the Yigal Allon Chair for Human Sciences in Work. During these years she was visiting professor at universities in the U.S. and Australia. She was also a member of several academic societies and associations as well as public bodies. She published many articles and a number of books, such as The Influence of Reference Groups and Membership Groups on the Self-Image (1957) and The Human Fac-
tor in Work (co-author, 1965). In 2003 she was awarded the Israel Prize in sociology.

[Shaked Gilboa (2nd ed.)]

MANI (Mana II; fourth century c.e.), Palestinian amora. His teachers were firstly his father *Jonah, R. Yose (Tj, Ter. 8:9, 46a; Sanh. 3:6, 21a), and then R. Judah III (Tj, Pes. 6:3, 33a; Bezah 1:3, 60a); he also referred to Hezekiah as his teacher (Tj, Ber. 3:5, 6d, et al.). He visited Caesarea where he attended lectures by R. Isaac b. Eliashib (Taan. 23b) and other scholars of that town (e.g., Oshaya b. Shemi, Zerikah, et c). In his early years he lived in Tiberias, but later R. Hanina (or Hananiah), the head of the academy in Sepphoris, retired in his favor (Tj, Pes. 6:1, 33a) and he remained there until his death (Eccr. R. 11:3). He held halakhic discussions with Zeira II (Mak. 22a). Z. Frankel dates his death in 399 c.e. (the view of I. Halevy that it was before 355 is untenable). It is not known whether he outrived R. Judah II (the statement in Weiss, Dor, vol. 3, p. 102 is due to a mistranslation of a passage in Tj, Ber. 3:1, 6a: "When R. Judah's sister died, Mani did not attend her funeral"). He appears to have been strict and uncompromising in his halakhic rulings, and he expressed his strong doubts as to the correctness of the permission granted by his father and R. Yose for bread to be baked on the Sabbath for the army of Ursicinicus (c. 353 c.e.; Tj, Sanh. 3:5, 21b), despite that fact, in a case of extreme emergency he permitted the bakers of Sepphoris to sell their bread in the market on the Sabbath for the army of Proclus (ibid.; see Lieberman, in: IQB, 36 (1946), 352–3). He also refused to agree that agricultural activity take place during the sabbatical year in a place called Yabluna on the grounds that it was not in Ereẓ Israel proper. On one occasion he strongly disapproved of his teacher, Judah, making appointments for money (Tj, Bik. 3:3, 65d). Most of his teachings are in halakhah, but the few in aggadah are of great interest. He explained Saul's reluctance to exterminate the Amalekites, including their children and cattle, on the grounds that they were innocent according to the Torah (Yoma 22b). He also taught that reciting the Shema at its proper time was greater than studying the Torah (Ber. 10b). Mani was apparently not altogether easy to get on with. Not only was he not on good terms with the patriarch and his household, who distressed him so much that he had to pray for relief, but in his domestic life he was also unhappy (Taan. 23b).

In addition to R. Mani, there was an earlier amora called Mana and it is not always certain which is meant. In Ecclesiastes Rabbah 5:4–5 both are found.

[Harry Freedman]

MANI, family in Iraq and Ereẓ Israel. According to family tradition, the family is of Davidic origin and its name is an acrostic of Mi-Geza Nezer Yishai.

Eliyahu ben Suleiman (1818–1899), one of the best-known Iraqi rabbis, was born in Baghdad, where he studied at the Beit Zilka rabbinical academy and was one of the outstanding pupils of R. Abdallah *Somekh. In 1856 he settled in Ereẓ Israel, first in Jerusalem, but two years later he moved to Hebron. He played a prominent role in the development of the Jewish community there. In 1865 he was appointed chief rabbi of Hebron and retained this post until his death. By nature an unassuming and generous man, he was outspoken and adamant in matters of religious observance. He made several journeys on behalf of the Hebron community: to India in 1873; Egypt, 1872 and 1878; and Baghdad 1880. In 1879–80 a fierce argument broke out between R. Elijah and two prominent members of the community, Mercado Romano and R. Rahamim Joseph Franco, which split the community into two factions. In the end R. Elijah's views prevailed. R. Elijah wrote several books dealing with traditional and mystical Jewish studies. Of these, the following were published: Zikhronot Eliyahu, a collection of religious precepts, arranged in alphabetical order, of which two parts appeared (Jerusalem, 1936, 1938); and Karnot Zaddik (Baghdad, 1867). Many of his responsa were published in the Jerusalem Mēassef and in the writings of contemporary rabbinc scholars.

[Abraham Ben-Yaacob]

Suleiman Menahem (1850–1924), Elijah's eldest son, was appointed rosh av bet din in Hebron when his father died. After the death of Hayyim Hezekiah *Medini, he was elected chief rabbi of Hebron. Israel (1887–1966), the son of Shalom Ezekiel, Elijah's second son, studied law in Paris. During the British Mandate he was appointed magistrate (1927) and district judge in Jaffa (1932). In 1936 he became the first Jewish judge in the newly established Tel Aviv district court. Isaac Malchiel (1860–1933), Elijah's fourth son, became a district judge in Hebron. He was an enthusiastic supporter of *Herzl. In 1901 he moved to Jerusalem to practice law. From 1926 to 1929 he was district judge in Jaffa. His sons-in-law were Daniel *Auster and Giulio *Racah. Eliezer Moses (1907– ), great-grandson of Elijah, during the Mandatory regime served as a lecturer in the Jerusalem law school. In 1948 he was appointed judge in the district court of Jerusalem, and from 1962 he served as a justice of the Supreme Court of Israel. His brother Abraham (1922– ) was professor of physics at the Hebrew University of Jerusalem.

Mazal (Mathilda) *Moser was the daughter of Isaac Malchiel.

MANI, EZRA (1913–2005), Israeli lexicographer. Born in Bagdad, Iraq, where he received his elementary education in Jewish schools and in the Ahiever youth movement, whose goal was to spread the Hebrew book, he immigrated to Israel in 1934, taught Arabic, enlisted in the IDF in 1948, and served in the Intelligence Department of the IDF, in which he was a colonel. Though he did not receive any academic training, he is the author of The Mani Dictionary on Arabic military terms and of their Hebrew equivalents, including 10,000
entries based on Arabic documents, military reviews, TV, films, and colloquial Arabic from several Arab countries. This dictionary aids Intelligence operations and to date only exists in a computerized on-line internal IDF edition. His work is considered highly original by international standards. Mani received the Israel Prize in 1976 for services to Arabic linguistics and was the first military officer to have won this prize.

MANICHAISM, a system of religious beliefs and doctrines named after Mani or Manes (c. 215–275), who lived and taught in Persia. In his youth he seems to have associated with Jewish-Christian (Elchasaite) sectarians. Manes was put to death for his heretical doctrines, but his teachings spread from the Middle East to Rome and to North Africa where they had numerous adherents in the fourth century. Manichean documents have also been found in Chinese Turkestan. A curious mixture of diverse gnostic, Persian-Zoroastrian, and other dualistic doctrines (see *Dualism), Manichaeism preached a severe asceticism, including vegetarianism, and survived in small and often clandestine sects into the Middle Ages.

Several heretical movements in medieval Christianity are thought to have been influenced, directly or indirectly, by Manichaean sects. Manichaean doctrines seem to have been very influential also during the first centuries of Islam, as witnessed by the anti-dualistic polemics of orthodox apologists and theologians. Dualistic attacks on traditional teachings appear in the ninth and tenth centuries and had to be countered by a polemic reminiscent in some ways of the early rabbinic polemic against gnostic dualism (shetei rashuyot). Saadiah argues against dualism both in his Book of Beliefs and Opinions and in his polemical tract against Hiwi al-Balkhi. The dualism, however, which he attacked was not just of the Zoroastrian type but seems to have been indebted to contemporary Manichaeism.

[R.J. Zwi Werblowsky]

MANI LEIB (pseudonym of Mani Leib Brahinsky; 1883–1953), Yiddish poet. Born in Nizhyn (Chernigov district, Ukraine), Mani Leib arrived in the U.S. in 1905 after having participated in the Russian revolutionary movement. He immediately began publishing poems in New York’s leading Yiddish periodicals and in the anthologies of the American Yiddish literary movement Di Yunge, which had impressionistic, art-for-art’s-sake poetic principles that Leib helped to establish and followed faithfully. Largely eschewing social concerns, he crafted formally unified poems that affirmed a belief in the ability of art to compensate for human suffering. His “sound poems” drew renewed attention to the Yiddish language through their skillful use of alliteration and repetition. His most prolific year was 1918 when 11 of his collections appeared. His ballads and tales were incorporated into the Yiddish school curriculum and formed the basis of his widespread popularity. In 1925 he was coeditor, with Zishe *Landau and Reuben “Iceland, of Inzel ("Island"), one of the principal anthologies of Di Yunge. His reputation continued to grow after his death, when several volumes were published: *Lider un Baladn* ("Songs and Ballads," 2 vols. 1955); *Sonetn* ("Sonnets,") 1961; the former volume was reprinted in 1963 with parallel Hebrew translations by Shimshon Meltzer, and an introduction by Itzik *Manger, who was in many respects a kindred spirit. The second volume of *Lider un Baladn* contains a short autobiographical sketch as well as an extensive bibliography. Mani Leib’s lifelong relationship with the poet Rochelle Weprinsky is documented in *Briv: 1918–1953* ("Letters: 1918–53," 1980).

[Sol Liptzin / Alisa Braun (2nd ed.)]

MANILOW, BARRY (Barry Alan Pincus; 1943– ), U.S. singer, producer, and songwriter. Born in New York, Manilow graduated from Eastern District High School in Brooklyn, after which he attended the Juilliard School of Music. Manilow entered the music business writing commercial jingles, such as “I’m stuck on Band-Aids.” He became rich singing the popular “You Deserve a Break Today” (1973) commercial for the McDonald’s hamburger empire. Soon after, Manilow became Bette Midler’s record producer and then turned performer himself. His first record, *Mandy* (1974), went straight to number one on the charts and sold four million singles. Manilow then adapted a Chopin sonata and turned it into the hit song “Magic” (1975). Subsequently he recorded a long succession of top-selling singles (not all of which he wrote), such as “It’s a Miracle” (1975), “I Write the Songs” (1976), “This One’s for You” (1976), “Weekend in New England” (1976), “Looks Like We Made It” (1977), “Copacabana” (1978), “Can’t Smile without You” (1978), “Even Now” (1978), “Ready to Take a Chance Again” (1978), “What a Friend You Turned Out to Be” (1983), and “Sometimes When We Touch” (1997). Rated the number one adult contemporary artist of all time, Manilow had an unprecedented run of 25 consecutive Top 40 hits in the 1970s and 1980s. In 1978, five of his albums were on the charts at the same time, a record that has been equaled only by Frank Sinatra and Johnny Mathis.

Among his innumerable honors and awards, Manilow won a Grammy (“Copacabana,” 1978); an Emmy (The Barry Manilow Special, 1977); and a Tony (Barry Manilow on Broadway, 1977); and he was nominated for an Academy Award (Best Song: “Ready to Take a Chance Again” in Foul Play, 1978). In 2002 he was inducted into the Songwriters Hall of Fame in New York.

In 1994 his two-act musical *Barry Manilow’s Copacabana: The Musical* premiered in the U.K. His next theatrical project, *Harmony*, was a musical based on the true story of
the Comedian Harmonists, a talented group of male singers (three of whom were Jewish) who performed in Nazi Germany until 1934.

With more than 30 albums to his credit and reportedly having made his last grand tour, Manilow signed a long-term contract with the Las Vegas Hilton theater, performing *Barry Manilow: Music and Passion.*

Manilow wrote the autobiographical *Sweet Life: Adventures on the Way to Paradise* in 1987.

[Jonathan Licht / Ruth Beloff (2nd ed.)]

**MANIN, DANIELE** (1804–1857), Italian patriot. Manin's father belonged to the Jewish Medina family who had been converted to Christianity. In 1848 he became president of the revived Venetian Republic and was ultimately appointed "dictator." The revolutionary government which he headed distinguished itself by its moderation and financial profits. His cabinet included two Jews: Leon Pincherle as minister of agriculture and Isaac Pesaro Maurognoto as minister of commerce. After leading fruitlessly the heroic resistance of the city in the long siege by the Austrians, he went into exile in Paris, where he died.

[Giorgio Romano]

**MANISCHEWITZ, HIRSCH** (1891–1943), U.S. Orthodox rabbi, business executive, and philanthropist. Manischewitz, who was born in Cincinnati, Ohio, was educated in Palestine at several yeshivot during 1901–14. While there he helped organize charitable organizations, and, upon his return to Cincinnati in 1914, he continued his philanthropic activities, serving as president of the Orthodox Jewish Orphan's Home. With his brothers he helped maintain the Rabbi Ber Manischewitz Yeshivah of Jerusalem from 1914 until 1943. Moving to New York in 1931, Manischewitz served from that time until his death as an officer of the family B. Manischewitz Baking Co. and helped to build it up into one of the largest manufacturers of Jewish food products in the United States. He was the U.S. representative of over 30 Palestinian and European institutions and organizations of Jewish higher learning. He also served as vice president of the Mizrahi Organization of America, and executive board member of Yeshiva College and of the Orthodox Jewish Congregations of America and Canada.

**MANISSA**, identical with the ancient Magnesia, today the chief town of the Turkish province bearing the same name, N.E. of *Izmir. A Jewish community probably existed in Manissa from the first century C.E., but there is no extant information on it. During the Byzantine period, there was a congregation in the town and a synagogue, Ez ha-Hayyim. After the Ottoman conquest of Istanbul, according to the Surgun system, the Sultan Mehmet II transferred the Jews of Manissa to Istanbul and the Jewish community of Manissa ceased to exist. After 1492, however, groups of Jews expelled from Spain arrived in Manissa; they founded two congregations and two synagogues, Lorca and Toledo. Later, as a result of a dispute which broke out in the town, a third congregation, Shalom, was established. At the end of the 15th century, there were more than 100 Jewish families in the town. Rabbi Eliahu Mizrahi writes in a responsa dated after 1504: "But in our case, while in the town of Magnesia people from these places stay there only occasionally, the Sephardim came and settled by themselves without any strangers among them." In the 16th century there was a yeshivah in Manissa, and in the second half of that century the physician and scholar Rabbi Shem Tov Melamed lived and wrote there and in Usküb. A document from the year 1530/31 notes 88 Jewish families and 33 Jewish bachelors in the city. In 1543 a regulation was passed by the Toledo and Lorca congregations in which they forbade the establishment of a new congregation for a period of 20 years. In the 16th century there existed in the community a society for the ransoming of captives and a hevra kaddisha society, a cemetery, and other charity institutions. In 1575, according to a Turkish document, there were 117 Jewish households and 10 bachelors in the city.

In the 17th century there were three synagogue groups in Manissa before the large-scale emigration from the city. The Jews of Manissa suffered from the attacks of the Cellali gangs at the beginning of the century. These bands attacked Manissa in 1652 and plundered the Jewish community, and most of the Jews lost their property. With the rising importance of Izmir, and as a result of a plague which broke out in the town in 1617, many families left for Izmir. During this period the local rabbi was R. Aaron "Lapapa. Many Jews followed "Shabbetai Zevi's movement in 1665–66. During the 17th–19th centuries there existed in Manissa an Ashkenazi congregation and a Sephardi one. Three Jewish cemeteries and some tombstones from the 17th century have survived, the oldest of which is dated 1646. In 1671 the community was very poor and could not pay taxes to the government, because most of the Jews had left the city. In 1702 the traveler Tourenfort found in Manissa three synagogues, and another traveler, Pococke, wrote in 1733 that most of the merchandise in the city was concentrated in the hands of the Jews. The old charity institutions existed throughout the "Ottoman period and for halakhic questions the Jews of Manissa turned frequently to the rabbis of Izmir. In 1692 the Hebron emissary Rabbi Nissim Rozilio visited the community. In the responsa literature of the 16th and 17th centuries many regulations and minhagim of the community are recorded. Many old minhagim and traditions are mentioned in the 19th century by Rabbi Hayyim Falaji of Izmir. A known rabbi in
the community in the 18th century was Raphael Abraham Mazliah (d. 1784).

At the beginning of the 19th century, the synagogues were renovated and a plot of land was consecrated for a new cemetery. In 1837, 200 Jews died of the plague. In 1838 the Jewish community numbered about 1,200, and in 1873 about 3,000. The main families of the community in the 19th century were Alazraki, Algraniati, Gomel, Danon, Mazliah, Franco, Cohen, Levy, Ben-Djoya, Polity, Ninio, Nahom, Shikar, Shochet, Gargir, Lere’ah, Pessoah, Ashkenazi, Azar, Shalom, Buenavida, Israel, Dayan, Saban, Sinsolou, Cherkerdji, Conforte, Misriel, Tobi, Beja, Mendes, Janon, Gagin, Sereno, Armaltas, Gayero, Faradji, Cheres, Mizrahi, Gourdij, and Uziel. There were blood libels against the Jews in the town in 1883 and 1893. In 1892 the first school for boys was founded, and in 1896 this was followed by a school for girls. Both were administered by the *Alliance Israélite Universelle. Rabbi Baruch Kalomity (d. 1825) was active in Manissa and Izmir. The rabbis of the community in the second half of the 19th century and at the beginning of the 20th were Abraham Mazliah (d. 1861); Moshe Mazliah, the author of the halakhic book *Em ha-Banim* (died in Jerusalem); David Gomel (d. 1904); and Hayyim Mazliah (d. 1906). The last *hakham bashi*, Rabbi Hayyim Nahum, was born in Manissa. At the end of the 19th century many Jewish families immigrated to America, Egypt, South Africa, and other places. At the beginning of the 20th century the Jewish community numbered about 2,000, out of a total population of some 40,000. During this period two additional synagogues were built. The president of the community in 1908–18 was Bechor Abraham Gomel. After the conquest of the region by the Greeks in 1919, the Jews continued to support the Turks. They did not fly the Greek flag on their institutions and did not attend the Congress (August 1922) which demanded autonomy for Izmir and its surroundings. When the Greeks retreated in 1922, a great fire broke out in the town, as a result of which a number of Jewish institutions, including the yeshivah, were destroyed. In the late 1930s the community numbered only 30 families. The principal occupations of the Jews were commerce – the export of agricultural products (fruit, tobacco, and raisins) and the import of manufactured goods – and crafts – tailoring, shoe-making, money changing; there were also some farm owners. A few Jews served as physicians in the government hospitals, as judges, and as translators in the foreign consulates of the town. In the mid-20th century many families immigrated to the U.S., South Africa, Egypt, and Israel. By 1970 no Jews were living in Manissa. In a work by the Turkish writer Nazim Hikmet, written in 1936, there appears a historical character, a Jew who had converted to a heretical sect for which he gave his life. This Jew was Samuel, who was known by the name of Torlak Kemal of Manissa.

[Abraham Haim / Leah Bornstein-Makovetsky (2nd ed.)]

MANITOBA, midcontinent province of Canada, bordering on North Dakota and Minnesota to the south, Ontario to the east, and Saskatchewan to the west. In 1877 the first known Jewish residents of Manitoba were Reuben Goldstein, a peddler, and Edmond Coblentz, a clerk, one of three brothers from Alsace-Lorraine. The 1881 Canadian census listed 33 Jews in Manitoba, 21 of them in Winnipeg. Among those outside Winnipeg were Dr. Hiram Vineberg, originally from Montreal and medical health officer in Portage la Prairie, and Harry Wexelbaum, a hotel operator in West Lynne.

In the spring of 1882, Manitoba’s Jewish population expanded more than tenfold with the arrival of 350 refugees fleeing czarist pogroms and promised “free” homesteads. Land had previously been assigned for Mennonites, Icelanders, Scottish, and French settlers but no land was allotted for the Jews in spite of a request by Alexander Galt, Canadian high commissioner in London. Most of the new arrivals were housed in Winnipeg immigration sheds while earlier Jewish residents started an immigrant aid committee and raised $360 for immediate needs. But the newcomers did not wait for charity; men soon found work hauling lumber, women took domestic jobs, and by mid-June, 150 Jewish men were employed laying track across the prairies for the Canadian Pacific Railway. Others took to peddling and trading. The arrival of these Russian Jews was not favorably received in the Winnipeg media. The *Manitoba Free Press* commented: “…they are not likely to be of any great value to the country.”

It took two years until land was found for the Jews, 300 miles west, at Moosomin, beyond the Manitoba border. By this time just 27 families were still willing to go on the land. This settlement, dubbed “New Jerusalem,” was declared a failure after several years, but some of the failed farmers returned to Winnipeg to launch successful business enterprises and to help found synagogues and schools.

In 1887, land was first assigned to Jewish farm settlers within Manitoba, at Niverville, 30 miles southeast of Winnipeg, and after the turn of the century in Bender Hamlet and Camper, 70 miles north of Winnipeg. Closer to Winnipeg several Jewish farmers set up dairy farms. At one time there were reported to be Jewish merchant and farm families living in 118 Manitoba towns and villages outside Winnipeg. However, in 1961 Jews were reported living in just three – Portage la Prair-
rie, 111; Brandon, 101; and Flin Flon, 60. In 2004, descendants of Jews who live in one farming town, Winkler, organized a memorial event and dedicated a plaque to the memory of 15 Winkler Jewish pioneer families who lived there between 1890 and 1914. Among Winkler-born Jews was Israel Nitikman, a judge of the Manitoba Court of Queen's Bench, and Ernest Sirluck, president of the University of Manitoba in 1970–76. As in Winkler, most Jews in smaller communities eventually moved on, especially to Winnipeg.

The total number of Jews in Manitoba, including Winnipeg, grew from 31 in 1881, to 791 in 1891 and to 1,514 in 1901. By 1911 the number ballooned more than sevenfold to 10,741, then by more than half again to 16,669 in 1921. The population of Jews in Manitoba eventually reached 19,341 in 1931 and remained steady until 1971 when population numbers began a decline to 15,215 in 2001. The vast majority of these Jews lived in Winnipeg, the center of Manitoba Jewish life.

Jewish religious services in Manitoba were first held on Yom Kippur in 1879, in a private Winnipeg home. Regular Sabbath services began after the arrival of the Russian Jews in 1882. Some Jewish laborers celebrated Rosh Ha-Shanah that year in a tent at a railway station 40 miles from Winnipeg; they raised $100 among themselves to order a Sefer Torah and a shofar from New York. Synagogues also were established in Brandon in 1906, Portage la Prairie in 1908 and, meeting the needs of summer vacationers, in Winnipeg Beach in 1915. The first two synagogues have long been closed; the latter opens every summer. In the past, several smaller Jewish communities, including Winkler, also had synagogues or at least organized High Holiday services.

With the vast majority of Manitoba Jews congregated in Winnipeg, arguably the greatest area of Jewish impact in Manitoba was in politics – federal, provincial, and municipal. As early as 1882, Harry Wexelbaum served as a municipal councilor in West Lynne, before that community merged with the neighboring town of Emerson. Later Samuel Rosner served as mayor of Plum Coulee. In Flin Flon in Northern Manitoba, with only 60 Jews in a population of 10,200 residents during the 1960s and 1970s, Jack Freedman served as mayor for more than 10 years. Harry Trager was mayor of the neighboring town of The Pas, which could not muster a minyan among its 5,031 population.

Serious political activity took place in Winnipeg, where Jews often sparred politically with one another. In 1904, Moses Finkelstein of the Conservative Party was the first Winnipeg Jew elected to the city council, where Jews served continuously for most of the 20th century. In 1910, S. Hart Green (Liberal) was elected to the Manitoba Legislature, the first Jew to sit in a Canadian provincial assembly. In 1912, Alter Skaler (Conservative) was elected to the city council, serving for five years, and was succeeded by Labour candidate Abraham A. Heaps. Heaps was a leader in Winnipeg's 1919 General Strike, and was arrested with other strike leaders. In 1926 he was elected Labour Member of Parliament from the heavily Jewish Winnipeg North riding and served until 1941. Max Steinkopf, a lawyer and leader in the YMHA and B'nai B'rith, was elected to the School Board in 1916. He supported the anti-strike Committee of 1000, which was formed in response to the 1919 General Strike. In 1920, Steinkopf was defeated by Labour candidate Rosa Alcin. In 1927 and again in 1932, William Tobias (Conservative) was elected to the Manitoba legislature. Marcus Hyman (Labour) was elected and, of special note, sponsored the first group libel law adopted in Canada. In 1959 Maitland Steinkopf became the first Jewish cabinet minister in Manitoba under Conservative Premier Duff Roblin; he declined to run again in 1966 but continued to serve the province in his capacity as chair of the Manitoba Centennial Corporation until his death in 1970.

Three prominent left-leaning politicians, Morris A. Gray, David Orlikow, and Saul M. Cherniack, began political careers as Winnipeg School Board representatives before moving to the city council and then to the legislature. In 1962 Orlikow was elected to the House of Commons, and in 1969 Cherniack became one of three Jewish cabinet ministers in Manitoba's first New Democratic Party government, along with Saul A. Miller, who had been mayor of suburban West Kildonan, and Sidney Green. In the early 1970s, Sidney J. Spivak served as leader of the opposition Progressive Conservative Party, and Israel H. Asper sat in the legislature briefly as leader of the Liberal Party before going on to become a media mogul and philanthropist. In 1986 Mira Spivak was appointed a Progressive Conservative senator from Manitoba; from 2004 she sat as an independent. In 2000 Anita Neville (née Schwartz), former School Board member, was elected to Parliament as a Liberal and re-elected in 2004. Also in 2004 Israeli-born Sam Katz, an entrepreneur and entertainment and sports promoter, was elected as the first Jewish mayor of Winnipeg.

[Abraham Arnold (2nd ed.)]

MANKIEWICZ, HERMAN JACOB (1897–1953), U.S. journalist, playwright, and screenwriter. Mankiewicz was born in New York City. In 1905, the family moved to Wilkes-Barre, Pennsylvania, where his father was an editor for a German-language newspaper and his mother worked as a dressmaker. In 1917, Mankiewicz graduated from Columbia with honors, having written a humor column for the Spectator. He worked as managing editor for the American Jewish Chronicle until 1918, when he enlisted as an Army flying cadet, but joined the Marines and served as a private first class. After the war he spent several years in Europe, collecting stories about the Red Cross for the organization's press office and as a correspondent for a variety of publications. Upon Mankiewicz's return to New York, he worked for the New York World, and in 1923 he joined the drama department of the New York Times. Along with Dorothy Parker and Ben Hecht he became a member of the Algonquin Round Table. In 1925, he was hired as the first drama critic for the New Yorker, a position he held for one year. Soon after, Paramount Publix Studios extended an invitation to him to join the first wave of screenwriters heading west. By 1933, he was working for Metro-Goldwyn-Mayer,
having written or collaborated on a variety of films, including *Dinner at Eight* (1933) and the Marx Brothers’ *Monkey Business* (1931) and *Horse Feathers* (1932). By 1939, his penchant for gambling led to his dismissal from the studio. Orson Welles hired Mankiewicz to adapt Mercury Theater dramatizations. It was during this time that Mankiewicz developed and wrote *Citizen Kane* (1941). Although the film earned him an Oscar for best original screenplay and restored his reputation in Hollywood, it was seen as a betrayal by his friends William Randolph Hearst and Marion Davies. By the end of the 1940s his health was declining and he became a recluse by the 1950s. Mankiewicz died of uremic poisoning in Los Angeles.

MANKIEWICZ, JOSEPH LEO (1909–1993), U.S. film writer, producer, and director. Born in Wilkes-Barre, Pennsylvania, Mankiewicz worked on scripts for Paramount, MGM, and Fox. He received Academy Awards for *A Letter to Three Wives* (Best Director and Best Screenplay, 1949) and *All About Eve* (Best Director and Best Screenplay, 1950).

His early screenwriting credits include *Skippy* (Oscar nomination for Best Adaptation, 1931), *Million Dollar Legs* (1932), *Manhattan Melodrama* (1934), *Our Daily Bread* (1934), *Forsaking All Others* (1934), and *I Live My Life* (1935).

Mankiewicz’s films are characterized by their intelligence, sophistication, and witty dialogue, and a number of them demonstrate his masterful use of the flashback.

His brother HERMAN (1897–1953) was a screenwriter and producer. His son Tom is a writer and director and his son Christopher is a producer.

[Jonathan Licht / Ruth Beloff (2nd ed.)]

MANKOWITZ, WOLF (1924–1998), English novelist and playwright. Mankowitz was born and raised in London’s East End. He studied English at Cambridge, then, like his father, became an antique dealer, revealing his expertise in Wedgwood (1953), *The Portland Vase* (1952), and *A Concise Encyclopedia of English Pottery and Porcelain* (1957) with R.G. Hagger. He turned increasingly to literature and wrote a number of books inspired by his childhood recollections of the East End. These include *A Kid for Two Farthings* (1953), the title of which was suggested by the Passover allegorical ditty "*Had Gadya*; Make Me An Offer* (1952); *The Boychick* (1954); and *The Mendelman Fire* (1957). In his early writing, Mankowitz’s Jewishness was somewhat muted, revealing itself merely in a preference for Jewish characters. His typical mingling of humor and pathos comes out strongly in the play, *The Bespoke Overcoat* (1955), a Jewish reworking of a Russian tale by Gogol. Like several of his other stories, this was made into a motion picture. Mankowitz was primarily a humorist with a talent for elaborating anecdotes, but he gradually developed a more astringent tone in his writing, e.g., *Expresso Bongo* (1960), a satire on the world of “pop” music, and in his satirical novel about film-makers, *Cockatrice* (1963). He later devoted himself to screen-writing and to publicity work in support of the Hasidic sect of Lubavitch. Mankowitz was the author or co-author of a number of well-known screenplays, including *The Day the Earth Caught Fire* (1961), *Casino Royale* (1967), and *The Hirlung* (1973).

MANN, ABBY (1927– ), U.S. screenwriter. Born Abraham Goodman in Philadelphia, Pennsylvania, the son of a Russian Jewish immigrant jeweler, Mann grew up in a working-class area of East Pittsburgh, a largely Catholic area, and attended Temple University and New York University. Mann wrote dramas for such 1950s television programs as *Playhouse 90* and *Studio One*, and is considered a leader in the genre of the made-for-television movie; social justice issues are Mann’s main inspiration. He received an Academy Award for his screenplay for *Judgment at Nuremberg* (1961), based on the postwar trial of Nazi judges. Reuniting with *Nuremberg*’s director, Stanley Kramer, Mann wrote *A Child Is Waiting* (1963), about special-needs children, and then adapted the Katherine Anne Porter novel *Ship of Fools* (1965). Mann took Emmys for the series *The Marcus-Nelson Murders* (1973), the pilot for the series *Kojak*, as well as for *Murderers Among Us: The Simon Wiesenthal Story* (1989) and *Indictment: The McMartin Case* (cowritten with his wife, Myra Mann, in 1995). In 1975, Mann developed *Medical Story*, a short-lived series that cast a light on the medical world. Ten years after the assassination of Martin Luther King, Jr., Mann explored whether there was a conspiracy to kill the civil-rights leader in the miniseries *King* (1978). In 1985, he wrote *The Atlanta Child Murders*, a case that focused on Wayne Williams, a black man accused of killing young boys after procuring them for his gay father.

[Adam Wills (2nd ed.)]
state of *devekut and the love of God. Instructions are also given regarding correct social behavior, in accordance with Jewish ethics, based directly on talmudic and midrashic ideas. The work is divided into short paragraphs (each beginning with a differently arranged in a notarikon system forming the author’s name several times. The work likewise includes a short ethical poem, also arranged in a notarikon system, and, at the end, several brief sermons.

**BIBLIOGRAPHY:** Steinschneider, Cat Bod, 4274; Benjacob, Ozar, 30, no. 596.

[Joseph Dan]

**MANN, DANIEL (Daniel Chugerman; 1912–1991), U.S. director.** Mann was born in New York and began his career in entertainment as a musician in resorts. He served in the army in World War II, was trained at Neighborhood Playhouse in New York, began directing television productions, and was later a director for theater and for movie adaptations of the same plays, including *Come Back, Little Sheba* (1950; 1952), and *The Rose Tattoo* (1951; 1955). On Broadway, he also directed *Paint Your Wagon* (1952), *The Immoralist* (1954), and *A Loss of Roses* (1959).

On the small screen, Mann’s directorial credits include the miniseries *How the West Was Won* (1977) and the TV movies *Another Part of the Forest* (1972), *Playing for Time* (1980), *The Day the Loving Stopped* (1981), and *The Man Who Broke 1,000 Chains* (1981).

[Jonathan Licht / Ruth Beloff (2nd ed.)]

In 1968 he began working outside the United States, directing movies premiered on television and then shown in movie theaters, including *Heidi* (1969), *David Copperfield* (1970), *Jane Eyre* (1971), and *All Quiet on the Western Front* (1979), for which he was nominated for an Emmy.

Mann served as president of the Directors Guild of America (1967–71). In 2002 the DGA awarded him an Honorary Life Member Award.

[Ruth Beloff (2nd ed.)]

**MANN, FREDERIC RAND (Maniyelevich; 1903–1987), U.S. public figure.** Mann, who was born in Gomel, Russia, was taken to the U.S. at the age of two. A successful businessman, he had a varied public career. He was appointed a member of the U.S. Mint Assay Commission in 1943, served as director of commerce and city representative of Philadelphia, and as a Pennsylvania commissioner of the Delaware River Port Authority. President Johnson appointed Mann the first U.S. ambassador to Barbados (1967) and U.S. special representative to the Caribbean islands of Antigua, Dominica, Grenada, St. Lucia, and St. Kitts-Nevis (1968). Active in Jewish affairs, Mann was vice president of the American Committee for the Weizmann Institute of Science, a founder of the Israel Philharmonic Orchestra, which is housed in the Mann Auditorium in Tel Aviv bearing his name, and treasurer of Dropsie College in Philadelphia.

The Mann Center for the Performing Arts in Philadelphia, built in 1976, also bears his benefactor’s name. One of the largest outdoor amphitheaters in the United States, it seats 4,000 under cover and an additional 10,000 in the open air.

**MANN, HERBIE (Herbert Solomon; 1930–2003), U.S. jazz flautist.** When Mann began his career as a flute player in the early 1950s, he was essentially the only flautist playing jazz. A product of the Manhattan School of Music, he sought models in the world of Latin music, where the flute was a much more common sound. As Mann said in interviews, “When [accordionist] Mat Matthews gave me an opportunity to record jazz on flute [in 1952], there was no tradition of straightahead jazz on the flute…. When Symphony Sid [Torin], the DJ in New York suggested I add conga drums, … the audience understood where the flute was. It was jazz, but it was Latin jazz.” The Latin-jazz fusion would prove to be merely the first of many hyphenated jazz styles Mann would explore. He would register bestselling records playing jazz-funk, jazz-rock, disco-inflected jazz, Brazilian jazz, and jazz-reggae. After he was diagnosed with inoperable cancer in 1998, he even went back to his own musical roots, playing East European Jewish-influenced material. Mann’s enormous commercial success was a mixed blessing; jazz purists frequently dismissed his records and playing for their ease, bordering on glibness. Regardless of the merits of his own playing, he established the flute as a jazz instrument.
MANN, JACOB (1888–1940), scholar of the *Genizah period and of the Jews under the *Fatimids, and particularly of the Genizah fragments. The son of a shohet from Przemyśl, Galicia, where he received a traditional Orthodox education, Mann went to London in 1908 where he pursued his secular studies. At the same time he pursued rabbincic studies at Jews’ College and qualified for the ministry in 1914. Soon after, he began publishing learned papers, including his excellent series, “The Responsa of the Babylonian Geonim as a Source of Jewish History” (in IQR, 7 (1916/17); 11 (1920/21)). The field in which he was later to distinguish himself as a great scholar was Genizah research. Mann for the first time undertook to collect and explain all the documents from the period preceding the Crusades to the fall of the Fatimids. His book, *The Jews in Egypt and in Palestine under the Fatimid Caliphs* (2 vols., 1920–22; reprinted with intro. by S.D. Goitein, 1970), was a masterpiece *sui generis*. By establishing the dates of a great number of the largely undated Genizah documents, Mann provided the chronological framework for the history of the Jews in the Near East. He revealed the great role played by the *Jerusalem gaonate in the period before the Crusades and shed new light on the various forces within the Jewish communities then living in the lands ruled by the Fatimids. Although Mann neglected the Arabic documents, abstained avowedly from drawing general conclusions, and was mainly interested in the communal history of the Jews, his work is of lasting value as a great collection of hitherto unknown sources, which he ably deciphered and annotated. After the first volume of the above-mentioned book appeared, Mann went to the United States, first as lecturer at Hebrew College in Baltimore and a year later as professor at Hebrew Union College in Cincinnati. There he taught Jewish history and Talmud and continued his research. His second major work, *Texts and Studies in Jewish History and Literature* (2 vols., 1931–35, repr. 1970), contains various documents concerning European Jewry and Geonica and texts elucidating the history of the “Karaites in the Near East and in Eastern Europe. In the last years of his life Mann embarked on the study of one of the most difficult branches of Hebrew literature, the Midrashim. In his work, *The Bible as read and preached in the Old Synagogue; a study in the cycles of the reading from Torah and Prophets, as well as from Psalms and in the structure of the Midrashic homilies*, he tried to establish the dependence of the Midrashim from the chapters of the Torah and from the haf-tarot which were read on the Sabbath on cycles of three and one-half years respectively. The first volume of the book was published in 1940. Material left by Mann for the second volume was prepared for publication by Isaiah Sonne; after the latter’s death the work was continued by Victor Reichert; it appeared in 1966.

[George Robinson (2nd ed.)]

MANN, MENDEL (Mendl Man; 1916–1975), Yiddish novelist and painter. Mann was born in Plonsk, Poland. When his art education in Warsaw was interrupted by the Nazi invasion, he fled eastwards and enlisted in the Red Army, in which he witnessed the siege of Moscow and the occupation of Berlin. After the war he settled in Lodz and published a volume of verse, *Di Shitikayt Mont* (“Silence Calls,” 1945). Following the Kielce pogrom, he moved to Regensburg in 1946, where he edited a Yiddish DP newspaper. He immigrated to Israel in 1948, where he published *Oyfgevakhte Erd* (“Awakened Earth,” 1953), a collection of stories reflecting the lives of Jewish refugees living in a former Palestinian village. From 1949 he was a co-editor of *Di Goldene Keyt*. The novel, *In a Farvor-loztn Dorf* (“In an Abandoned Village,” 1954), is based on the life of Zionist emigrants to Palestine from Jewish villages in the vicinity of Plonsk. His most outstanding work is a trilogy of novels reflecting his wartime experiences. The constituent volumes are *Bay di Toyern fun Moskve* (1956; *At the Gates of Moscow*, 1963), *Bay der Vaysl* (“At the Vistula,” 1958), and *Dos Fain fun Berlin* (“The Fall of Berlin,” 1960). The action deals with fighting on the Eastern Front seen through the eyes of Jews serving in the Red Army (whose contribution is minimized to indulge Stalin’s prejudice), the reactions of the Russian and Ukrainian population as the Nazis approach Moscow, the instinctive patriotism of ordinary Soviet soldiers and their aspirations for greater freedom after the war. The Nazi leaders are portrayed as histrionic charlatans. Further important prose works are *Nakht der Geshishno* (“Night over Glushino,” 1957), *Di Gas fun Bliendike Mandlien* (“The Street of Almond Blossoms,” 1958), a collection of stories set in Palestine, *Al Naharoyts Poyln* (“By the Rivers of Poland,” 1962), and a further volume of stories, *Der Shvartser Demb* (“The Black Oak,” 1969). In 1961 Mann moved to Paris and became the editor of *Undzer Vort*. He built up a significant art collection and became a friend of Marc Chagall. In 1963 he edited the Yiddish section of *Sefer Plonsk ve-ha-Sevivah*, the Plonsk memorial volume. There were exhibitions of his paintings in the 1930s in Warsaw and in 1967 in Paris. His works have been extensively translated into French and German.

[Josef Schawinski / Hugh Denman (2nd ed.)]

MANN, THEODORE R. (1928– ), U.S. attorney and communal leader. Mann was born in Czechoslovakia, and came
to the U.S. with his parents in 1929. After studying at various yeshivot in New York, he graduated from Pennsylvania State University and Temple University's School of Law. He was the editor of Temple University's Temple Law Quarterly. He clerked in the U.S. 3rd Circuit Court of Appeals and then taught at the University of Pennsylvania Law School.

For 31 years he was a senior partner at the law firm of Mann, Ungar, Spector & Labovitz, concentrating on securities fraud litigation, anti-trust litigation, and other complex commercial issues. Mann played a leading role in several major civil rights and church-state separation cases. He successfully argued cases involving the admissions policy of Girard College and challenges to Bible reading in the public schools. He also argued before the U.S. Supreme Court in Lemon v. Sloan, a case challenging public aid to parochial schools, and in several Sunday “blue law” cases. Mann joined the WolfBlock law firm, serving as Of Counsel in the Business Litigation Practice Group in the company’s Philadelphia office.

Long active in Jewish communal affairs, he served as president of the Jewish Community Relations Council of Greater Philadelphia and of the Greater Philadelphia Council of the American Jewish Congress and as national vice president of the Congress. He was also chairman of the Jewish Council for Public Affairs and the Israel Task Force of the National Jewish Community Relations Advisory Council. Mann succeeded Rabbi Alexander M. Schindler as president of the Conference of Presidents of Major American Jewish Organizations, holding office until 1980. He also held official positions with the National Conference on Soviet Jewry, the American Jewish Congress, and the Executive Committee of the Israel Policy Forum. He was the founding chairman of Project Nishma and of Mazon: A Jewish Response to Hunger. In 2000, the Jewish Council for Public Affairs presented Mann with the Albert Chernin Award for his “exemplary voluntary service to the field of Jewish community relations and the leading role he has taken in defending the First Amendment and religious freedoms for all Americans.”

[Ruth Beloff (2nd ed.)]

“MANN, THOMAS (1875–1955), German novelist and the leader of Germany’s anti-Nazi intellectuals. Mann married Katia Pringsheim (1883–1980), whose parents were both of Jewish background: Alfred Pringsheim (1850–1941), professor of mathematics at Munich University, and Hedwig Dohm (1853–1942), the daughter of the famous feminist and author Hedwig Dohm (born Hedwig Schlesinger, 1831–1919), who had married in Berlin in 1853 the political and satirical publicist Ernst Dohm (formerly Elias Levy, 1819–1883), editor-in-chief of the satirical periodical Kladderadatsch.

It was the Berlin Jewish publisher, Samuel *Fischer, who launched Thomas Mann on his literary career. He introduced Jewish characters in many of his masterpieces, such as Kö nigliche Hoheit (1909, Royal Highness, 1916), Der Zauberberg (1924; The Magic Mountain, 1927), and Doktor Faustus (1947; Eng., 1949). He withdrew his short story “Blood of the Wal-
sungs” (Waelsungenblut, 1905), the original conclusion of which could be considered antisemitic, from publication after protests of his father-in-law and published it only as a private printing and with a different ending in 1921. Before the rise of Hitler he rarely wrote on Jewish matters, but his 1907 essay “Solving the Jewish Question” stood in the tradition of emancipation ideology by advocating mixed marriage and conversion. When Jacob *Wassermann, in 1921, voiced his despair at the prevalence of antisemitism in Germany, Mann answered his fellow-novelist that Germany was the country least suited for the growth of this evil. But from 1922 Mann warned of the Nazi danger. He called Munich as early as 1923 “the town of Hitler” and fought actively against the danger (“Kampf um Muenchen als Kulturzentrum,” 1926; “Deutsche Anspreche. Ein Appell an die Vernunft,” Berlin, 1930). When Hitler came to power, Mann, unlike his brother Heinrich (1871–1950) and his children, at first remained silent about the Nazi regime, hoping that it would not last too long. To wait things out he chose voluntary exile in southern France and Switzerland. In January 1936 he broke his silence on the persecution of German Jews in a leading article in the Neue Zuercher Zeitung. While disclaiming the appellation “philo-Semite,” Mann expressed his repugnance for German antisemitism as the product of a racial myth designed for the rabble, and urged Jews not to despair: having survived many storms in the past, they would outlive this new oppression too. As a Czechoslovak citizen from November 1936, the Nazis deprived him of German citizenship in December, because of his “solidarity with Jewish associates.” In response to the stripping of his title of Dr. h.c. of the University of Bonn, Mann warned in his published reply already in January 1937 of the coming war. During the early Nazi years he was at work on his prose epic Joseph und seine Brueder (4 vols., 1933–42, Joseph and his Brothers, 1934–45), the most profound treatment of this biblical theme in literature. He went to the United States in September 1938, teaching as an honorary professor at Princeton University, and moved to California in 1941. From the beginning of World War II he broadcast from America through BBC London 55 speeches to German listeners (“Deutsche Hoerer!”). In 1942, when news of the extermination of the Jews reached him, Mann broadcast the information, hoping it would reach German listeners. In 1943 he called attention to the “maniacal resolution” of the Nazis to exterminate the Jews totally. He begged the United States not to cling bureaucratically to its immigration laws while millions of Jews were being massacred, but to prove by a modification of those laws that the war was indeed being waged for humanity and human dignity. He lived in California until 1952, when he moved to Switzerland. His public views on the Jewish question from the years 1936–48 were published in 1966 (Sieben Manifeste zur juedischen Frage, ed. by W.A. Berendsohn).

His eldest child, ERIKA MANN (1905–1969), trained as an actress, directed Die Pfefermuehle, an anti-Nazi cabaret, from January 1933. She went into exile in February 1933 and was in the U.S. from 1936, became a war correspondent, and
eventually settled in Switzerland. Her works include *Zehn Millionen Kinder. Die Erziehung deutscher Jugend im Dritten Reich* (1938) and *Das letzte Jahr* (1936), a biography of her father. She was an outspoken critic of post-World War II German democracy. Her brother, Klaus Mann (1906–1949), an anti-Nazi writer and journalist, published two journals (*Die Sammlung*, 1933–35; *Decision*, 1941–42) and resumed his career in the U.S. Army as a propagandist. He wrote various novels and an autobiography, *The Turning Point* (1944; German ed., 1952). He and his sister also published *Escape to Life* (1939), about the talented victims of Hitlerism. Klaus Mann committed suicide in Cannes.

[Sol Liptzin / Dirk Heisserer (2nd ed.)]

**MANNA** (Heb. מָן), referred to as "bread from heaven" (Ex. 16:4; cf. Ps. 105:40). Manna is described in Exodus as coming down in the wilderness of Sinai within the area of the Israelites’ encampment every morning except on Sabbaths in the form of “a fine, scale-like thing, fine as the hoarfrost on the ground.” The Israelites collected “an Omer a head,” which they ate within 24 hours, for if left until the next morning it bred worms and rotted. When the sun shone on the ground the manna melted. The double portion collected on the sixth day, however, did not rot and sufficed also for the Sabbath when no manna fell. In form “it was like coriander seed, but white; and the taste of it was like wafers made with honey.” For 40 consecutive years the Israelites ate the manna, “until they came to the land of Canaan” (Ex. 16:26–36).

Some, drawing an analogy between the manna and the quails, which also miraculously descended to the children of Israel, contend that, like the latter, the manna was a phenomenon of nature which sometimes occurs in the wilderness of Sinai. Something similar is stated by Josephus (Ant. 3:266f.): “And to this very day all that region is watered by a rain like to that which then the Deity sent down for men’s sustenance.” As early as from the time of St. Anthony (c. 250–355 C.E.), Christian pilgrims tell of a tradition, current among the monks of the monastery of St. Catherine in Sinai, that the biblical manna comes from the secretion of insects on the branches of tamarisk trees, which to this day grow in the wadis of the southern Sinai mountains. Bodenheimer has suggested a similar explanation of the origin of the manna. Two genera of coccidae parasitize on tamarisk trees of the species *Tamarix mannifera*. On those growing in the Arabah Valley, in the lowlands of the southern Negev, and in Sinai, there are large numbers of the coccus *Najacoccus serpentinus minon*, which is covered with a pocket in the form of an elongated tube in which it lays its eggs. Another coccus, the *Tradutina mannipara*, lays its eggs in a cone-like pocket. These two coccidae extract the sap, rich in carbohydrates, of the branches of the tamarisk, the excess carbohydrates which their bodies cannot absorb being secreted in the form of drops of transparent liquid that congeal into white globules, composed chemically of glucose, fructose, and a very small quantity of pectin. The globules melt in the heat of the sun. A large proportion of these globules of “manna” is eaten by ants, which collect them in their nests. In years of plentiful rain, the Sinai Bedouin, who also call the globules *man*, gather as much as 600 kilograms (about 1,300 lbs.) of them, which they use as a substitute for honey.

Although there is some resemblance between this “manna” and that described in the Pentateuch, and despite the importance of the early tradition supporting that identification, it is very doubtful whether this is the manna of the Bible, lacking as it does several features of the biblical food. There is the additional fact that the nutritional value of the “manna” produced by the coccid of the tamarisk is very slight, since it contains no proteins at all, whereas the Pentateuch speaks of the manna as “bread” and as a basic food. And finally, the quantity of this “manna” is not enough to feed a tribe or even a family, let alone a nation wandering in the wilderness. Some identify the biblical manna with the *Lecanora esculenta*, a species of lichen, large quantities of which are sometimes borne by winds to the central Asian steppes and to the heights of the Atlas Mountains. This species, however, has thus far not been found in the Arabian Peninsula or in the neighborhood of Israel.

[Shuda Feliks]

**In the Aggadah**

Manna was one of the ten objects created in the twilight on the eve of the Sabbath of Creation (Avot 5:6). It was ground by the angels in heaven (Tanh. B., Ex. 67), where manna is constantly being prepared for the future use of the pious (Hag. 12b). Manna deserved its name, “bread of the angels” (lit. “bread of the mighty” *זית זנים*, Ps. 78:25) because those who ate it became equal to the angels in strength. Furthermore, like angels, they had no need of relieving themselves since the manna was entirely dissolved in their bodies (Tanh. B., Ex. 67), and it was not until they sinned by complaining about the taste of the manna that they once again had to relieve themselves like ordinary mortals (Yoma 75b). Each day sufficient manna to sustain the Jewish people for 2,000 years fell (Tanh. B., Ex. 66), and this spared the Israelites the need of carrying it during their wanderings, and thus also enabled them to enjoy it while it was still hot. Receiving a new supply every day constantly made them turn their hearts to God for their daily bread (Yoma 76a).

Before the manna fell, a north wind swept the surface of the desert, which the rain then washed clean; dew next descended and was congealed into a solid substance by the wind so that it would serve as a table for the manna which next fell from heaven; it was then covered by another layer of dew.
which protected it from vermin and insects (Mekh., Va-Yassa, 4). The manna fell directly in front of the homes of the righteous, but the average person had to go out and gather it, and the wicked had to go far from the camp to attain their share (Yoma 75a). At the fourth hour of the day when the manna melted, it formed a river from which the righteous will drink in the hereafter. The heathens also attempted to drink out of these streams, but the manna that tasted so delicious to the Israelites had a bitter taste in their mouths. They could enjoy it only indirectly, by catching and eating animals that drank the melted manna; even in this form it was so delicious that the heathens cried, "Happy is the people that is thus favored" (Tanḥ. B., Ex. 67). There was no need to cook or bake the manna. It contained the flavor of every conceivable dish. One had only to desire a specific food, and the manna assumed its taste (Yoma 75a). To the child it tasted like milk, to the adolescent like bread, to the old like honey, and to the sick like barley steeped in oil and honey (ibid.). The manna exhaled a fragrant odor, and served the women as perfume and cosmetics. Together with manna, precious stones and pearls also fell down from heaven to the Israelites (Yoma 75a).

The amount of manna gathered by each family was found to correspond to the number of its members. This rendered the manna useful in solving many difficult problems. For instance, when two people came before Moses, one accusing the other of having stolen his slave and the other claiming to have bought the slave, Moses deferred his decision to the following morning, when the quantity of manna in their respective houses revealed to whom the slave truly belonged (Yoma 75a). When, many centuries later, the prophet Jeremiah exhorted his contemporaries to study the Torah, they responded by saying, "How shall we maintain ourselves?" The prophet then brought forth the vessel with manna which had been placed in the Temple, and exclaimed: "O generation, see ye the word of the Lord; see what it was that served your fathers as food when they applied themselves to the study of the Torah. You, too, will be supported by God in the same way if you will devote yourselves to the study of the Torah" (Mekh., Va-Yassa, 6). When the destruction of the Temple was imminent, the vessel with manna was concealed along with the Ark and the sacred oil. In the messianic period, the prophet Elijah will restore all those hidden objects (ibid.).

MANNE, MORDECAI ZEVI (1859–1886), Hebrew lyric poet and artist. Born near Vilna, he was sent at the age of 13 to study at yeshivot in Minsk. After his talent for painting was discovered he went to Vilna and enrolled at its school of art. He taught himself Russian and general studies, and wrote his first poems, lyrical studies of nature. In 1880 he was accepted as a student at the Academy of Arts in St. Petersburg. On the recommendation of A. *Zederbaum, Manne's studies were subsidized by A. Kaufman, a wealthy communal leader, and he served as his Hebrew secretary. He contributed poems and articles to Ha-Melîz and Ha-Zefrah under the pen name Ha-Mezayer ("the painter"); also Heb. acronym of – Mordecai Zeviyel Radoshkewitz. In 1884 he went to Warsaw and contributed to Nahum *Sokolow's Ha-Asif and S.P. *Rabinowitz' *Keneset Yisrael, designing the covers of both anthologies. A victim of tuberculosis, his health deteriorated after 1884. At the end of his life he wrote a popular poem, Masat Nafshi, wherein he expressed his longing for Palestine. Only some of his poems and articles were published during his lifetime; his collected works appeared after his death, edited by his friend A.L. Schoenhaus (1897).

Manne's poetry displays an individual lyricism, and he is at his best in descriptions of nature, in which his talents as writer and painter fuse. His poems are clearly influenced by the classical Russian and German poetry which he translated extensively. In his critical articles he wrote that "the poem and the poetic phrase have no purpose outside themselves, they are in themselves a purpose." Manne dreamed of "artists who loved their people and their religion," and who would devote themselves to depicting the beauty, the sacred values, and the history of Israel. A list of his works translated into English appears in Goell, Bibliography, p. 34.

[Yehuda Slutsky]

MANNE, SHELLY (Sheldon; 1920–1984), U.S. jazz drummer, club owner. Manne's father and two uncles were drummers so he had percussion in his blood. Although New York-born, he is most strongly associated with the "West Coast" school of post-WWII jazz and spent most of his career in Los Angeles and its environs. He got his first professional experience on transatlantic cruise ships, then played for Raymond Scott and Les Brown. But the big breakthrough for Manne came when he was hired as Stan Kenton's drummer in 1946. He enjoyed two successful stints with Kenton, proving that a swift, sure drummer could make even the Kenton behemoth swing. In between he played with Woody Herman and small groups headed by Charlie Ventura and Herman alumnus Bill Harris. After leaving Kenton for good in 1952, he relocated to the West Coast, where he was much in demand for studio work. But he continued playing live jazz whenever possible, fronting his own band, Shelly Manne and His Men. From 1960 to 1974 he was owner of and frequent performer at his own Los Angeles club, Shelly's Manne-Hole. After the club folded, he co-founded the 1.A 4 combo, which would last until his death 10 years later. Manne was a highly intelligent player, modest
but self-assured. He stated his own rules for drummers in a 1955 piece in *Down Beat*: "I'm not in favor of the bombastic approach to drumming. A display of technique leaves me cold if a good line, good sound, and sensitivity are ignored."

[George Robinson (2nd ed.)]

**MANNES, LEOPOLD** (1899–1964), U.S. pianist and co-inventor with Leopold *Godowsky* of the Kodachrome color process. He was born in New York, the son of David Mannes, the violinist and conductor of the New York Symphony Orchestra. He studied musical composition in Rome and together they found a successful method of producing color film. They experimented in the Eastman Kodak Laboratories in Rochester, New York. In 1939 Mannes left Rochester and joined his father as codirector of the Mannes School of Music. In 1953 he reorganized it as Mannes College of Music of which he was president.

**MANNHEIM,** city in Baden, Germany. Jews first settled in Mannheim (which was founded in 1606) around 1652, and the first rabbi, Naphtali Herz, served from 1657 to 1671. The community was granted a highly favorable charter in 1660. A cemetery was acquired a year later (in use until 1839), and a synagogue and *mikveh* were built in 1664. In 1663 there were 15 Jewish families in the town, two of them Portuguese, founders of a Portuguese community that later maintained its own schoolteacher and enjoyed particular privileges. In 1674 the *hebra kaddisha* (Kippe) was established. By 1680 there were 78 Jewish families in Mannheim; in 1689 they aided theburgers in the defense of the city against the French; on its destruction, they took refuge in the communities of *Heidelberg* and *Frankfurt*. Eighty-four families had returned to the city by 1691 when a new charter was issued. Modeled on the first one, it included the Portuguese, fixed the number of tolerated families at 86 (increased to 150 in 1698), established an interest rate of 5%, and abolished the yellow *badge*. The charter of 1719 (also including the Portuguese) raised the number of tolerated families to 200 and permitted an interest rate of 10%. The favorable position of the Jews there is expressed in a contemporary reference to Mannheim as "New Jerusalem." There were many local followers of *Shabbetai Zevi* in the community, vigorously opposed by its rabbi, Samuel Helmann (1726–51). In 1708 the synagogue and *heider* (*Klaus*), donated by Lemlie Moses Rheinganum, was consecrated and later endowed with 100,000 gulden (it remained in use until 1940). Soon after, it was enlarged considerably. An unsuccessful attempt was made when the Jewish charter was renewed in 1765 to establish a separate Jewish quarter. Political emancipation came in 1807, followed by full civil rights in 1862. The main synagogue was consecrated in 1855. A public elementary school was in existence between 1821 and 1870. The number of families increased from 225 in 1761 to 247 in 1771, and the number of Jews in Mannheim rose from 940 in 1801, to 4,249 in 1885; 6,402 in 1913; and 6,400 (2.3% of the total population) in 1933. The community issued a monthly bulletin (1922–38) and maintained a *Lehrhaus* (school for adults) between 1922 and 1938, as well as numerous charitable, cultural, and social organizations. Jews were active in the social, cultural, and political life of the city.

The interior of the synagogue was demolished on April 1, 1933. By 1938 only 3,000 Jews remained. On November 10, 1938, the main synagogue was burnt, and the community was forced to transfer the remains of 3,586 bodies interred in the old cemetery to the public one. On October 22, 1940, some 2,000 Jews were deported to the concentration camp of *Gurs*, and the remainder to Auschwitz a year later. After World War II, Jews returned to Mannheim; they numbered 68 in 1945; 386 in 1970; and 338 in 1977. A new synagogue was opened in 1957. In 1987 a new community center with a synagogue was consecrated. The Jewish community numbered 400 in 1989 and more than 500 in 2005.

[Louis Lewin / Larissa Daemmig (2nd ed.)]

**MANNHEIM, HERMANN** (1889–1974), lawyer and criminologist, pioneer of the teaching of criminology in Britain. Born in Russia of German parents, Mannheim was educated in Germany. He combined his work as a judge in the Berlin
criminal and appeals court with that of a professor of criminal law at Berlin University. When in 1933 his career in Germany came to an end, he had already achieved a position of both judicial and academic eminence. In 1934 Mannheim settled in England where he continued his studies in the sociological and psychological problems connected with crime and punishment and introduced the systematic teaching of criminology into British universities. His courses at the London School of Economics, where the post of reader in criminology was created for him in 1946, were attended by social scientists, lawyers, psychologists, and psychiatrists from all over the world. In those years Mannheim already wrote some of his influential books, among them: *The Dilemma of Penal Reform* (1939), *War and Crime* (1941), and *Criminal Justice and Social Reconstruction* (1946, 2nd ed. 1949, 3rd ed. 1967). He took a leading part in the establishment and the development of almost every important scientific and public activity aiming at the study of crime, the understanding of the offender, and the peno-correctional treatment of delinquents and criminals. For several years he served as president of the scientific committee of the International Criminological Society. He was co-founder and coeditor of the *British Journal of Criminology* (1950–66) and of the International Library of Criminology. The London Institute for the Study and Treatment of Delinquency and the Howard League for Penal Reform were among the causes to which he dedicated his life. In 1955 he published (together with L.T. Wilkins) his *Prediction Methods in Relation to Borstal Training*, the first examination in Britain of the efficacy of penal methods. The Home Office adopted its findings in the administration of the Borstal and prison services. His textbook, *Comparative Criminology* (2 vols., 1965), is the definitive statement on the study of crime in the United States, Britain, and Continental Europe, dealing with the causes of crime, the sociological, psychological, and physical factors involved, and also critically analyzing the various methods used in criminological research. He edited *Pioneers in Criminology*, which has become one of the basic readings for the student of criminology in the Anglo-Saxon world.

**BIBLIOGRAPHY:** T. Grygier et al. (eds.), *Essays in Honour of Hermann Mannheim* (1965), includes a full bibliography. ADD. BIBLIOGRAPHY: ODNB online.

**MANNHEIM, KARL** (1893–1947), sociologist. Born in Budapest, Mannheim was a student of Max Weber in Heidelberg. He was professor of sociology in Frankfurt in 1930, emigrating in 1933 to London, where he taught at the London School of Economics until his death.

Combining influences coming from Marx, Dilthey, and Max Weber, Mannheim became – together with the philosopher Max Scholer – the initiator of the sociology of knowledge. This branch of sociology is based on the conviction that cognition is not a purely intellectual act but formed by vital relations that are non-theoretical in character and largely defined by the position of the actor in the social structure. Cognition is based on volition and volition, in turn, on the antecedents and concrete circumstances of a person’s life. Mannheim denied that this view was leading to sociological relativism or to a disparagement of the spirit; rather, in his opinion, the mind was to be set free by the recognition of the nonrational roots of a consciousness.

After his emigration, Mannheim’s interest turned largely toward the problem which was posed by the rise of Nazism, namely, how democracy in a period of mass movements could be prevented from sliding into totalitarian dictatorship. Mannheim’s thesis was that *laissé-faire* liberalism, through loosening all societal bonds, would carry with it the danger of totalitarianism and that a fighting democracy would have to “plan for freedom”; the intention ought to be to guarantee the values of personality by means of social regulation. He even went so far as to suggest the cooperation of sociology and theology to that end. Mannheim’s early work, *Ideologie und Utopie* (1929; Eng. trans., 1936), opposes “utopian” thinking, carried by the disinterested and emphasizing change, to “ideological” thinking which is essentially conservative in nature. Still earlier appeared *Die Strukturanalyse der Erkenntnistheorie* (“The Structural Analysis of Knowledge”; 1922), “Das Problem einer Soziologie des Wissens” (in: *Archiv fuer Sozialwissenschaft und Sozialpolitik*, 53 (1925), 577–652). and “Das Konservative Denken” (in: *Archiv fuer Sozialwissenschaft und Sozialpolitik*, 57 (1927), 68–142; 470–95). The major works of Mannheim’s second period are *Man and Society in an Age of Reconstruction* (1940) and *Diagnosis of Our Time* (1943). Three posthumous publications were: *Freedom, Power and Democratic Planning* (1950), *Essays on Sociology and Social Psychology* (1955), and *Systematic Sociology* (1958). Mannheim was the founder of the International Library of Sociology and Social Reconstruction, which published many well-known monographs. He had an important unofficial influence on some aspects of British government policy such as the 1944 Education Act. Mannheim contracted pneumonia and died at the age of only 53.

**MANNHEIM, LUCIE** (1899–1976), actress. Born near Berlin, she became a leading actress at the Volksbuehne, Berlin and from 1924 to 1930 appeared at the Staatstheater, Berlin where one of her roles was Nora in Ibsen’s *A Doll’s House*. After the Nazis came to power, she settled in England where she appeared on the London stage, repeating her success as Nora. After World War II she frequently appeared in Germany. She
also appeared in a number of British films, including Alfred Hitchcock’s *The 39 Steps* (1935).

**MANNHEIMER, ISAAC NOAH** (1793–1865), Vienna preacher and creator of a moderate, compromise Reform ritual. Born in Copenhagen, he was the son of a Hungarian *hazzan*. He received his general education at the local secular school and studied Hebrew literature and Talmud with R. Gedaliah Moses, the liberal pedagogue of Copenhagen. While attending the university of Copenhagen he continued with his talmudic studies. When in 1816 the Danish government issued regulations for Jewish religious instruction, he was appointed head teacher of religion (Hauptkatechet) and entrusted with the task of examining his students and preparing them for confirmation. The first confirmation took place with considerable fervor on May 9, 1817, with the accompaniment of organ music and in the presence of high state and university officials. He held services every Wednesday evening for adherents of Reform Judaism that were characterized by the total elimination of the Hebrew language and the use of music by Christian composers. Mannheimer preached in the Danish language, much to the dismay of the traditional majority of the community who lodged an official protest with the government. In 1821 he went to Berlin to conduct services in the Reform synagogue, then to Vienna, and back to Copenhagen. He finally left Copenhagen to preach in 1823 in Hamburg and then went to Leipzig. At the suggestion of Lazar Biedermann, he was asked in 1824 to officiate at the new Seitenstetten Synagogue in Vienna. Since Jews in Vienna were not permitted to constitute a community at that time, he was officially known as headmaster of the religious school. Mannheimer became one of the leading preachers of the 19th century, attracting all segments of the Jewish population; he adhered to an inspirational rather than didactic concept of preaching. His sermons, in which the aggadah was translated into modern terms, remained classical in form and content, yet they were the least rule bound and formalistic of contemporary sermons. Moreover, he was not reluctant to acknowledge his debt to Christian masters of the art of preaching. In his mature years in Vienna he rejected radical Reform and adopted a middle course in his service, eliminating some traditions without destroying their essence. He insisted on Hebrew as the language of worship, retained the prayers of Zion and Jerusalem, did not incorporate organ music into the service, and vigorously defended circumcision as a ritual of fundamental importance. In creating a form of worship known as “worship according to Mannheimer” (or “the Viennese rite”) he prevented a split in the community, and became a pioneer in this type of service in the communities of Austria, Hungary, and Bohemia. His service was also imitated in some German communities.

Despite his moderate Reform tendencies, Mannheimer was strongly attacked by the *Orthodox* community. He helped to foster reforms in religious education, retaining Hebrew as an important element and introduced birth, marriage, and death registers into the community. He also helped to found a number of charitable and cultural organizations and fought for the rights of the Jews in general society; with great persistence he sought to gain legal recognition of the Viennese community. Together with 24 Austrian rabbis he achieved the abolishment of the oath more *judaico, although his own modified form was not fully accepted. In 1842 he successfully defeated the proposal of Professor Rosas to limit the number of Jewish medical students.

During the revolution in 1848 Mannheimer delivered an eloquent eulogy on two of its Jewish victims who were buried together with Christian victims in a Christian cemetery (March 17). On March 31, 1848 he published a “Declaration on the Jewish Problem” and submitted an effective draft law to the political commission. In the same year the city of Brody elected him to the Reichstag, where, in cooperation with A. Fischhof and the rabbi D.B. Meisels, he succeeded in obtaining the removal of the “Jews’ tax.” Nevertheless, he warned the Jewish community against pleading on its own behalf. Jewish emancipation, he said, might be discussed, but only after it had been broached by the non-Jews. In the Reichstag he made a striking plea for abolishing the death penalty. The Vienna community, whose subservient attitude to the government he criticized, tried to restrict his liberal activity, in part out of concern that his outspokenness might embroil them with the increasingly reactionary forces in the government. They even sought to censor his utterances in the Reichstag. Reluctantly Mannheimer eventually withdrew from political life.

Mannheimer’s most important literary work is the exemplary German translation of the prayer book and the festival prayers (Vienna, 1840, later in a number of editions). Of his sermons there have been published P r o d i k e n d e r h o l d n e v e d d e t m o s a i s k e T r o e s s a m f u n d s A n d a g t s ö v e l s e r i M o d e r s m a a d e l i t S o m m e r h a l b a a r e t 1819 (Copenhagen, 1819), and Gottesdienstliche Vorträge ge halten im Monat Tishri 5594 (1834). A posthumous edition of additional sermons was published by B. Hammerschlag (1876). Some of his sermons on Genesis and Exodus were translated in Hebrew by E. Kuttner and published under the title Mei Noåh (1865). Of importance, too, are his Gutachten für das Gebetbuch des Hamburger Tempels (1841), and Gutachten gegen die Reformpartei in Frankfurt a. M. in Angelegenheit der Beschneidungsfrage (1843).

[Bernard Sulzer]

**MANNHEIMER, THEODOR** (1833–1900), Swedish banker. Mannheimer is regarded, together with A.O. Wallenberg, a
non-Jew, as the founder of modern Swedish banking. Born in Copenhagen, he settled in Göteborg, Sweden in 1855 and began his business career in the grain trade. He turned to banking later and by 1864 had become managing director of the newly founded Skandinaviska Kreditaktiebolaget (Scandinavian Joint Stock Credit Company, now known as the Skandinaviska Enskilda Banken, or SEB), the first of its kind in Sweden. Under Mannheimer’s leadership Skandinaviska Banken soon became Sweden’s most important financial institution, chiefly concerned with placing securities for industry and transport. Mannheimer was also deeply involved in railway and mining enterprises. From 1870 to 1876 and from 1881 to 1894 he was a member of the Göteborg municipal council.

**BIBLIOGRAPHY:** Svenska män och kvinnor, 6 (1949).

[Hugo Mauritz Valentin]

**MANOAH OF NARBONNE** (end of 13th and first half of 14th century), Provençal scholar. No biographical details are known of him. Even the name of his father is uncertain (see Hurvitz in bibl.). Some (Geiger, according to Isaac b. Sheshet, resp. no. 85, and Samuel b. Meshullam Gerondi, *Ohel Moed* pt. 1, Jerusalem 1886 ed., 88b) are of the opinion that his father’s name was Simeon; others (Zanz, Gross, and the New-York-Schulisinger publishers of Maimonides’ Yad) without giving reasons state that it was Jacob. A third view is that there were two scholars named Manoah – one, the subject of this article, whose patronymic is unknown, and a second, the son of Simeon, mentioned in the above responsa, who was the author of *Hilkhot Terefot*. Manoah’s teachers were Meir b. Simeon ha-Me’ili and Reuben b. Hayyim. Internal evidence suggests that he was active in Narbonne (ch. 12 of *Hilkhot Tefillah*: “the custom of this town, Narbonne” quoted in the *Shem ha-Gedolim* of Azulai).

Of his works in the sphere of rabbinical literature, that on Maimonides’ *Mishneh Torah* on the laws of leavened and unleavened bread, *shofar*, the Day of Atonement, *sukkah*, and * lulav* has been published (Constantinople, 1718; with the commentary of Simeon Sidon, 1879). An additional portion on the laws of the reading of the *Shema*, prayer, and the priestly and other blessings is extant in manuscript (Moscow-Guenzburg no. 123). This may be the manuscript seen by H.J.D. Azulai (*Shem ha-Gedolim*, 1 (1852), 126 no. 46). An excerpt from this section was published by Hurvitz in *Talpioth*, 9 (1965). This work is much quoted by Joseph Caro in his *Beit Yosef* and *Kesef Mishneh*.

[Shlomoh Zalman Havlin]

**MANOR, EHUD** (1941–2005), Israeli songwriter. Manor was born in Binyaminah. He began writing songs in the late 1960s, and immediately became very popular and productive, often collaborating with song composer Nurit “Hirsh as in “Ba- Shanah ha-Ba’ah” (1970). In the 1970s and 1980s Manor wrote songs for many musicians with a personal style, including Matti Caspi (“Brit Olam,” 1976); Hanan Yovel (“Dor,” 1984), and Boaz Sharabi (“Halevay,” 1986). He made many contributions to song festivals such as ‘Abanibi’ (1978), winner of the Eurovision song contest. He also produced Hebrew versions of various foreign songs, such as the Brazilian “Eretz Tropit Yafaḥ” (1978). In later years, Manor continued to work with artists of the older generation, but also with younger ones and even adopted the Mediterranean style, as in “Hayiti be-Gan Eden” (1999). He also translated many musicals, including *Hair* (1971) and *Chicago* (2004) as well as the plays *L’Ecole des femmes* (1987); and *Twelfth Night* (1989). Over the years, Manor edited and presented numerous productions as well as radio and television programs, especially those featuring popular songs (Israeli and foreign). Although a large part of Manor’s output consists of light songs, his most famous ones achieve deep resonance on a national level, like “Eim li Eretz Aheret” (1984), and several are highly personal, like “Ahi ha- Tzed’ir Yehudah” (1969) and “Yemey Binyaminah” (1974). In 1998, Manor was awarded the Israeli Prize for lifetime achievement in the field of Hebrew song. His song collections and writings include 50 Hits by Ehud Manor and Nurit Hirsh (1969), *Mi Ralath Beni – Children’s Songs* (1989), *Eim li Eretz Aheret – Shirim ke-Biografiah* (2003), and with Zippora Shapiro *Children’s Rhymed Dictionary* (2001).

**BIBLIOGRAPHY:** Y. Rotem, “Ehud Manor” (www.mooma.com).

[Yossi Goldenberg (2nd ed.)]

**MANOSQUE**, town in the department of Basses-Alpes, S.E. France. Jews are mentioned in Manosque from 1240. In 1261 the community was already sufficiently numerous to maintain two butcher’s stores. Before the “Black Death in 1348, there were about 30 Jewish families in Manosque. The Jews owned at least one synagogue and cemetery. They lived in their own street, the Carriera Judaica, on the site of the present Rue Bon Repos. When an epidemic broke out in 1364, the services of a Jewish physician were still called for. However, from 1370 on there were frequent anti-Jewish disturbances, the most violent in 1455 and 1495. In 1498 the town expelled its Jews.

[Bernhard Blumenkranz]

**MANS, LE** (Heb. ים), capital of the department of Sarthe, in western France. A Jew, Vasinus, is mentioned as a moneylender there between 1104 and 1115. In 1138, the Jews of Le Mans were attacked by local inhabitants. They lived in the quarter formed by Rues Marchande, Saint-Jacques, Falotières or de Merdencré, Barillerie, Ponts-Neufs and de la Juiverie, and owned a synagogue and a cemetery (in the parish of Sainte-Croix), which was also used by other Jews in the vicinity. They probably also had their own market and a hospital. Another attack upon Jews may have occurred around 1200, since several Jewish converts are found in Le Mans in 1207, and in 1216,
Berengaria, the widow of Richard the Lion-Hearted, Lady of Le Mans, disposed of the so-called “school of the Juiverie,” i.e., the synagogue. Records show the existence of a Jewish quarter during the second half of the 13th century, the Jews of Le Mans then being under the jurisdiction of the bishop. Reference to Jewish scholars of Le Mans is found in rabbinical literature from the end of the ninth century, the most celebrated being ‘Avun the Great (tenth century) and Elijah b. Menahem ha-Zaken (11th century). The Jews were expelled from Le Mans in 1289 at the same time as the Jews of Maine and Anjou. During World War II many of the Jews in Le Mans were deported. A new community was formed after the war, many of its members coming from North Africa. It numbered 400 in 1969. A stained-glass window dating from the 12th century depicting the allegorical defeated Synagogue can be seen in the Cathedral of Le Mans.

[Bernhard Blumenkranz / David Weinberg (2nd ed.)]

### MANSFELD, ALFRED (1912–2004)

**architect.** Born in Russia, he went to Paris in 1933 and in 1935 to Erez Israel and worked from 1936 as an independent architect, mainly in Haifa. He designed and built several housing schemes in Haifa (including Ramat Hadar), and also various public buildings, including the Institute for Jewish Studies of the Hebrew University in Jerusalem (Mount Scopus) and the Hydraulic Institute of the Technion (with M. Weinraub). In 1963, his design for the international airport at Lydda was awarded first prize. He designed and built (in partnership with Dora Gad, interior decorator), the Israel Museum in Jerusalem (1959–65). From 1949, he lectured at the Faculty of Architecture of the Technion, and from 1954 to 1956 he was dean of the faculty. In 1966 he received the Israel Prize.

**BIBLIOGRAPHY:** R. Pedio, *Profilo dell’architetto Alfred Mansfeld* (It., 1965), with Eng. preface.

[Abraham Erlik]

### MANSO, LEO (1914–1993)

**U.S. painter and educator.** Manso trained at the National Academy of Design, New York City, from 1930 to 1934, the Educational Alliance, and the New School for Social Research. He taught at Cooper Union, Columbia University from 1950 to 1955, and New York University. Working as a book illustrator early in his career, Manso took the position of art director at World Publishing in New York, and in 1943, worked for Simon & Schuster illustrating book covers. He made his summer studio and home in Provincetown, Mass., in 1947 and assisted in the organization of Gallery 256, the period’s first regional artists’ cooperative. Manso’s early work reflects the influence of Abstract Expressionism: he exhibited with the American Abstract Artists, whose members included Josef Albers and Ben Nicholson. Describing himself as an “Abstract Impressionist,” Manso’s light-suffused art of this period testifies to his study of the Impressionists, especially Claude Monet, as well as such painters as J.M.W. Turner and Sung artists. Manso stated that his work possessed two themes: a concern with landscape and an endeavor to find a visual equivalence for certain philosophical ideals. His work developed from landscapes with rapid, thick, expressive brushwork in an Abstract Expressionist vein, such as *Bay/Dusk* (1954) and *Grey Sun* (1957) to more serene images composed of related planes of tone. Manso’s collages, such as *Tanka III* (1968) are small and intimate, owing a debt to the artist’s study of quattrocento Italian artists and to the collages of his friend and contemporary Robert Motherwell. To study the expressive qualities of color, Manso studied Persian miniatures, Romanesque and Etruscan art, and such modern artists as Paul Klee and Pierre Bonnard. Manso traveled widely: to Mexico in 1945, where he met the artists Jose Clemente Orozco and Rufino Tamayo, to Maine the following year, to Haiti in 1958, to India, Nepal, and Africa in the early 1970s, to Italy in 1975, and again to Rome in 1980 and 1981. In 1979–80, he was artist-in-residence at the Accademia Americao, Prix-de-Rome. Manso experimented with the use of simple geometric forms, making circular supports, as in his *Vista 1 (Valley of Katmandua)* (1974), or contained large triangles within the rectangular format of the canvas or paper. The title of a 1984 collage, *Firenze*, refers explicitly to the artist’s beloved Italy. The composition features tones of russet, ochre, and lavender in overlapping planes of delicate texture further enunciated by the inclusion of a handwritten letter and envelope dated 1846. Manso counted among his friends the artists Milton Avery, Jacques Lipschitz, and Kurt Seligmann. Manso participated in many group and solo shows since 1946: in New York City; Rome; Provincetown, Massachusetts; Washington, D.C.; the San Francisco Museum; and the Museum of Modern Art, among other venues. His work is owned by private collectors and by many museums, including the Museum of Modern Art, New York, the Museum of Fine Arts, Boston, the Whitney Museum, the Hirschhorn Museum, and the Glicenstein Museum, Safed, Israel.

[Nancy Buchwald (2nd ed.)]

*ΜΑΝΣŪR (Al.; full name: al-Mansur Ibn Abi ‘Amir; in Christian sources, Almanzor; d. 1002), chamberlain (Ar. ḥājib) of Caliph Hishām II (976–1013) of Spain. Al-Mansūr in effect ruled *Umayyad Spain as virtual dictator and in 996 assumed royal titles. His reign marked the climax of the Umayyad political, economic, cultural, and military supremacy in Spain. A religious fanatic, al-Mansūr embarked on a lengthy and successful campaign against the Christians in northern Spain (against Catalonia in 985), in which he ruthlessly destroyed Christian holy places. He, however, did not harm the Christian and Jewish communities in his domain. The responsa of R. Hanokh of Cordoba attest to the conver-
sions of Jews to Islam under al-Mansūr, who intensified and increased Muslim preaching and other religious activities. Spain was extremely prosperous during his reign and Jewish immigration therefore increased. The Jews came mainly from North Africa (present Morocco and Algeria), together with many *Berbers, whom al-Mansūr employed in his military campaigns. The military security and economic stability contributed to an efflorescence of Jewish culture, halakhah, poetry, etc. (see *Spain). The 12th-century historian Abra-

ham *Ibn Daud recalls "King" al-Mansūr's appointment of Jacob *Ibn Jau, a wealthy and opportunistic silk merchant, to the position of nasi in charge of all Jewish communities in his domain. Al-Mansūr empowered Ibn Jau to collect taxes from whomever he desired. He had Ibn Jau imprisoned one year later for not collecting enough money from the Jews. Al-Mansūr's son 'Abd al-Malik al-Muẓaffir succeeded him, thus founding the Amirid dynasty.

**MANSURA (El Mansura; al-Mansura; Al-Mansurah),** town in Lower Egypt, on the right bank of the eastern arm of the Nile. Founded during the 13th century, Mansura has become an important center for the cotton commerce in modern times. There was a Jewish community from the 16th century. In 1583 and 1597 there were Jewish written deeds in Mansura. Around 1560 the physician Eleazar Scandari received the position of *sarraf* (banker) of *Mahalla al-Kubra and Mansura. The Jewish population grew under *Ottoman rule and by the 17th century there was an organized community led by the rabbis Elijah Shushi (Shoshi) and Shabbetai ha-Kohen. During the middle of the 19th century, Jacob *Saphir found 40 families in the town, most of whom had come from *Cairo and *Damietta. During the second half of the 19th century, when blood libels were brought against Jews in various Egyptian towns, the Jews of Mansura were also accused. In 1877 during Passover, the Jews were accused of having slaughtered a Muslim child in order to use his blood for the baking of *mazzot*. In the mid-19th century 40 Jewish families lived there. At the end of the century, the number of Jews was about 500 and continued to increase at the beginning of the 20th century. In 1901 the *Cairo rabbis declared the new *kiddushin regulation in Mansura and other cities. A well-organized community was set up in 1918 and educational and charitable institutions were established. An *Alliance Israélite Universelle school was inaugurated in 1903. In 1917 the Jewish community reached 586 people, its number continuing to increase. A Zionist association was also founded in the town. After World War 1 there was a decrease in the population. In 1927 there were still 563 Jews there, but a few years later there were only 150 to 200 Jews left, and by 1971 the community no longer existed.

**MANSURAH, SAADIAH BEN JUĐAH** (19th century), Yemenite scholar living in *San‘a*. He was author of Sefer ha-Mahashavah, which appeared under the title Sefer ha-Galut ve-ha-Ge’ullah (1955), which consists of seven sections written in rhymed prose. Like the Sefer ha-Musar of R. Zechariah al-Dāhri, it describes the hardships endured by the community of San‘a in his time. The principal hero is Eitan ha-Ezraḥi (i.e., Abraham the Patriarch) and the narrator Ḥazmak (i.e., Saadiah, after the “ʿAtbash” method of interchanging Hebrew letters) is the poet himself. The narrator tells the founder of the nation of the misfortunes of Yemenite Jewry, and the latter in turn relates the servitude of Israel in the Egyptian exile. He deals with the exiles into which Israel was sent, with the return to Zion and the redemption of the people. The last section consists of eulogies of the rabbis of *Yemen and the author himself. Mansurah also wrote poems and prayers, the subject of which is exile and redemption, as well as an introduction to Yemenite poetry. In the field of halakhah, he wrote Shaṭar ha-Moda’it on the laws of ṣeḥiṭah and *terefot.

**MANSURAH, SHALOM BEN JUĐAH** (d. c. 1885), Yemenite scholar. A member of one of the distinguished families of *San‘a,* Mansurah was the brother of the poet Saadiah *Mansurah. In addition to his knowledge of the Torah, he also engaged in popular and natural medicine and was renowned as a practical kabbalist. In 1854 he was appointed leader of the Jews of San‘a. Three of his works on Torah and halakhah (in manuscript) are known. In addition to his own writings, he corrected many works of others. His notes in the margins of books, both published and in manuscript (especially those of R. Yihya ʿSalah), are numerous.

**MANTINO, JACOB BEN SAMUEL** (d. 1549), physician and translator. Mantino was apparently of Spanish origin but he spent most of his life in Italy. After graduating in medicine at Padua in 1521, he developed a flourishing practice in Bologna, Verona, and Venice, especially among the upper classes. At the same time he became known for his translations from Hebrew into Latin of philosophical works, mainly those of Averroës and Avicenna. In the stormy debate on the annulment of the marriage between Henry VIII of England and Catherine of Aragon he opposed Henry's supporters, thus earning the gratitude of Pope Clement VII, and at his request Mantino was appointed lecturer in medicine in Bologna in
1529. In 1533 the pope invited him to Rome where, unlike his protector, Mantineo took a strong stand against the messianic claims of Solomon "Molcho. In 1534 Pope Paul III appointed him his personal physician and in 1539–41 professor of practical medicine at the Sapienza in Rome. In 1544 he returned to Venice. Five years later he left for Damascus as personal physician of the Venetian ambassador. He died soon after his arrival there.

**MANTUA**, city and province in N. Italy, an important Jewish center in late medieval and modern times.

**History**

The first record of a Jewish settlement in Mantua dates from 1145, when Abraham *Ibn Ezra lived there for a while. A small Jewish community existed during the heyday of the republic. Sometime after the Gonzaga had become lords of Mantua, Jewish bankers were invited to start operations in the capital and province. Subsequently the Jewish population increased, reaching 3,000 by 1600. The merchant and artisan population soon outnumbered the bankers. Some 50 Jewish settlements of varying size flourished in the province, the major ones being *Bozzolo*, *Sabbioneta*, *Luzzara*, *Guastalla*, *Viadana*, *Revere*, *Sermide*, and *Ostiano*. The Jews were protected by a series of privileges granted them by popes, emperors, and the Gonzaga rulers. A Christian loan bank (*monte di pietà*) was established in Mantua in 1486 to compete with Jewish banking, but initially at least had little success. Anti-Jewish riots took place at Mantua in the 15th century, fostered by the Church and aided and abetted by the business competitors of the Jews. There was also an isolated case of "blood libel in 1478. At the end of the 15th century the regulation imposing the Jewish "badge was introduced in Mantua. Rioting in 1495, after Duke Francesco Gonzaga’s indecisive encounter with the French forces at Fornovo, resulted in the confiscation of the house of the leading Jewish banker in the city, Daniel *Norsa*, and the erection of the Church of the Madonna della Vittoria on the site. David *Reuveni visited Mantua in 1530, but failed to obtain the support of either the ruler or the Jews. Two years later Solomon "Molcho was burned at the stake there.

The Counter-Reformation began to affect the Jews of Mantua adversely in the last quarter of the 16th century. Restrictive measures and anti-Jewish propaganda culminated in riots and murder. The worst outrage occurred in 1602, when seven Jews were hanged on a charge of blasphemy at the instigation of a Franciscan rabble-rouser. Some ten years later the Jews of Mantua were confined to a ghetto. The worst disaster in their history befell Mantuan Jewry in 1629–30, when they were despoiled of their possessions during the sack of the city by the German troops and then banished. A moving account of the disaster and of the return of the survivors is the contemporary *Ha-Galut ve-ha-Pedut* ("Exile and Deliverance") by Abraham Massarani (Venice, 1634). The events of 1630 decimated the Jewish community which never quite recovered its former importance. In 1708 the duchy of Mantua came under Austrian rule. In the last quarter of the 18th century Mantua became the chief center in the struggle for Jewish civil rights in Austrian Lombardy. On the Jewish side were ranged R. Jacob *Saraval of Mantua and Benedetto *Frizzi of Ostiano who had to contend with the lawyer G.B. Benedetti of Ferrara and G.B.G. d’Arco, a political economist. During the 18th century the Jewish population increased: In 1707, 1,723 Jews lived in Mantua and in 1764, 2,114. In 1754 the guild of silversmiths threatened the Jewish ghetto and the Jews were maltreated for a month in spite of the defense of ducal troops. When in 1797 the French revolutionary army captured Mantua the ghetto was abolished, its gates were torn down, and the ghetto square was renamed Piazza della Concordia. After its recapture by the Austrians in 1799, however, several Jewish "revolutionaries" were banished from Mantua, among them Issachar Hayyim Carpi of Revere, who described the events in his *Toledot Yizhak* (1892). The French again ruled Mantua from 1801 to 1814 and R. Abraham Vita *Cologna of Mantua was among the foremost personalities in the Napoleonic *Sanhedrin. During the last period of Austrian rule in Mantua (1814–66) there occurred yet another blood libel (1824), and in 1842 anti-Jewish riots took place. A number of Jews from Mantua began to immigrate to Milan from the end of the 18th century mainly because of greater professional and socio-cultural activities.

The Jews of Mantua, like their coreligionists elsewhere in Italy, took an active part in the Italian Risorgimento. Among them were Giuseppe *Finzi of Rivarolo, one of the “martyrs of Belfiore,” and the writer Tullo "Massarani. When Mantua was incorporated in the Kingdom of Italy (1866) the last restrictions affecting the Jews were removed. At that time the Jewish population reached 2,795, its highest figure since 1603. Subsequently migration and assimilation reduced the community. In 1931 the community numbered only 669 Jews, mainly because of immigration to Milan and other Italian cities and also because of assimilation. The anti-Jewish measures of the Fascist regime (see "Italy) seriously affected the Jews of Mantua, coming to a climax under the German domination in 1943–45. A concentration camp was set up in Mantua. From the province of Mantua 44 Jews were deported to the death camps, and over 50 Mantuan Jews perished. Only some of the survivors returned to Mantua after the war. By 2000 fewer than 100 Jews lived in Mantua, but in spite of the number they maintained one of the former synagogues with services. Thanks to the active and economic support of the Mantua municipality and funds from the Italian State Ministry of Culture the Jews carried out cultural activities and were able to maintain their rich archive and library, inventoried and in part deposited at the City Hall Library of Mantua.
Cultural Life

During its heyday in the 16th and 17th centuries the community of Mantua made important contributions to the development of Jewish communal institutions in Italy. The assembly of all taxpayers elected a “large” council, which in turn elected a “small” or executive council of seven to ten members. Alongside these, several smaller executive committees functioned. The chief officers were two massari (מָסָארִי). Communal regulations, especially those pertaining to taxation, were published in Hebrew at regular intervals, as were also sumptuary laws for the restriction of ostentation in clothing and festivities. The synagogues of Mantua included the Great Synagogue of the Italian rite, and several smaller synagogues of the Ashkenazi and Italian rites. The community maintained a public school system and welfare institutions, including medical services for the poor. The rabbinical court had extensive powers until the grant of Jewish emancipation. Its procedure was laid down in the Shuda de-Dayyanei (“Judges’ Verdict”) of 1677–78.

Mantua was an important Jewish cultural center during the Renaissance in Italy. Prominent scholars in the 15th century included Judah Messer *Leon, rabbi, physician, and philosopher; R. Joseph *Colon, the greatest rabbinical authority in Italy; Mordecai *Finzi, mathematician, astronomer, doctor, and banker; and Baruch de Peschiera, scholar and merchant. Abraham *Conat, a physician and talmudist, founded at Mantua about 1475 one of the first Hebrew printing presses; the first dated work issued was the *Tev Orat Hayyim (1476). His wife, Estellina, assisted him as a printer. Other Hebrew printers active at Mantua included Samuel Latif (1513–15), Joseph b. Jacob Shalit and Meir Sofer, both of Padua, Jacob ha-Kohen of Gazzuolo (1556–76), Samuel Norsa and his sons Isaac and Solomon (16th century); the Perugia and d’Italia families (17th and 18th centuries). The Hebrew press in Mantua was the second largest in Italy after Venice. Sixteenth-century scholars included Azariah de *Rossi, author of Me’or Einayim; the versatile Abraham Yagel *Gallico; R. Azriel *Dina of Sabbioneta; the preacher Judah *Moscati; several members of the *Norsa (Norzi) family including Jedidiah Solomon Norsa, author of Minhat Shai; the Provencal brothers *Moses, *David, and Judah, rabbis and scholars; Abraham Colorni, engineer and inventor; members of the *Finzi, *Cases, *Fano, *Rieti, and Sullam families; the *Portaleone family, physicians for three centuries; and Judah Leone b. Isaac *Sommo, playwright, poet, and author of the famous “Dialogues on the Theater.” Mantua was the most important center of Jewish participation in the Renaissance theater. The community provided its own theater company, which put on comedies and other plays for court performances throughout the 16th and early 17th centuries. The Jews of Mantua were also active in music and the dance. The greatest Jewish composer in Mantua and the first composer of modern Jewish music was Salamone de’ *Rossi, whose sister “Madama Europa” acted on the Mantuan stage. Other Jewish musicians, dancers, and actors at Mantua included Abramo Dall’ *Arpa and his nephew Abramino; Isaac Massarani; Angelo de’ Rossi; and Simone Basilea. In the 17th and 18th centuries there lived at Mantua the Basilea family of rabbis and scholars, including Solomon Aviad Sar-Shalom *Basilea; Judah Briel, rabbi and polemicist; Moses *Zacuto, mystic and poet; Samson Cohen Modon, rabbi and poet; Jacob Saraval, rabbi, polemicist, traveler, and preacher; the brothers Jacob and Emmanuel *Frances, poets; the Cases family, rabbis, physicians, and scholars; and Samuel *Romanelli, poet and playwright.

Outstanding modern Jewish personalities include Marco *Mortara, rabbi and bibliophile; Tullo Massarani, writer; and Vittore *Colorni, jurist and historian.

[Shlomo Simonsohn / Federica Francesconoi (2nd ed.)]

"MANUEL I (1469–1521), king of Portugal 1495–1521. He was termed Manuel the Great because of the achievements of his reign: Vasco da Gama’s discovery of the sea passage to India via the Cape of Good Hope (1498) and the acquisition of Brazil (1500). For the Jewish citizens, however, Manuel’s reign brought an end to their life in Portugal. Initially Manuel was well disposed to Jews. He retained the esteemed Abraham b. Samuel *Zacuto as his astronomer, and removed the Jewish disabilities imposed by his predecessor John II. But in 1496 the king entered a politically motivated marriage with Princess Isabella of Spain, daughter of *Ferdinand and Isabella, who made their consent conditional to Manuel’s ridding Portugal of the Jews. On Dec. 4, 1496, an edict was passed ordering every Jew to leave Portugal before November 1497, on penalty of death. Manuel assured the Jews of every assistance in travel and free departure with their belongings. As the mass emigration got under way, Manuel realized that the loss of his Jewish citizens, however, Manuel’s reign would have dire economic results for Portugal. To stem the departures, he ordered all Jews desiring to emigrate to come to Lisbon, supposedly for embarkation. When some 20,000 had convened in Lisbon, Manuel herded them together for forced conversion. On May 30, 1497, he decreed that the Conversos would be free from the Church’s discipline for 20 years. When the king learned soon after that the Conversos were emigrating in large numbers, he quickly withdrew their liberty to dispose of property and emigrate. When some 4,000 of the *New Christians were massacred by a Lisbon mob in 1506, Manuel responded by executing the Dominican friars who had incited the riot, and restored all previous rights and immunities to the New Christians, only to reverse his decision in the year of his death.

MANUEL, FRANK EDWARD (1910–2003), U.S. historian. Manuel was born in Boston. He was professor of history at Brandeis from 1949 to 1965 and at New York University, and then again at Brandeis from 1977 to 1986. Upon his retirement from Brandeis, he was named professor emeritus. Manuel’s chief field of specialization was the history of ideas. Regarded as one of the most respected scholars of European intellectual history of the last century, Manuel was well known for his study of utopias of the 18th and 19th centuries. He also wrote about modern history, Christian-Jewish intellectual relations, psychohistory, and eminent thinkers such as Isaac Newton and Karl Marx. His book Realities of American-Palestine Relations (1949) was an important contribution to the understanding of American policies in Palestine from 1832. His Utopian Thought in the Western World (1979), which he co-authored with his wife, Fritzie P. Manuel, won the American Book Award in History, the Melcher Award, and the Phi Beta Kappa’s Ralph Waldo Emerson Award.

"MANUEL I COMNENUS, Byzantine emperor (1143–1180). He added humiliating procedures to the standard *oath more judaico requiring that the Jew spit on his circumcision. But he also continued to permit the Jews to use the older and less offensive formula of the oath. Manuel confirmed Jewish access to ordinary courts, giving them recourse to the protection of imperial law, thus abolishing the practice of having Jews summarily tried by a minor local official. Manuel had a Jewish physician who may have influenced him to moderate his position toward the Jews. The economic and cultural life of Byzantine Jewry during Manuel’s reign is described by Benjamin of Tudela.

MANUSCRIPTS, HEBREW, term which includes religious and secular books, as well as letters and documents written on papyrus, parchment, hides, and paper in Hebrew characters, sometimes using them for the writing of languages other than Hebrew, e.g., Aramaic, Yiddish, Ladino, etc. Hebrew manuscripts have been preserved in archives and public and private libraries. It has been estimated that there are about 60,000 manuscripts (codices) and about 200,000 fragments, most of which have come from the Cairo *Genizah (and a certain number from the Judean Desert).

500 B.C.E.–500 C.E. Documents and letters, some with accurate dates, have been preserved from the period of 500 B.C.E. to 500 C.E. The most important of them are a collection of *papyri from Yeb (*El-ephante) and Assuan in Egypt (494–407 B.C.E.); papyri from Edfu, also in Egypt, are thought to belong to the third century B.C.E., as are parts of the Book of Jeremiah and fragments of II Samuel among the *Dead Sea Scrolls. The other scrolls from the Judean Desert are regarded as dating from the second century B.C.E. to the Bar–Kokhba War (132–135), including some written or dictated by him (see bibl. nos. 1–5).

500–1500 No material is available which can be proven with any certainty as belonging to the first centuries of this period. The oldest manuscripts of the period date from the end of the ninth century. Information has been published on a biblical manuscript in St. Petersburg dated to 846. On the other hand, some of the fragments found in the Cairo Genizah belong, without doubt, to the beginning of this period and possibly even to the end of the previous one. The development of Hebrew paleography should make it possible to determine with greater accuracy the dates of these most valuable fragments.

BIBLE AND BIBLE EXEGESIS. The oldest dated biblical manuscripts are: Prophets as vocalized by Moses b. Asher, which was found in the Karaite synagogue of Cairo and written in Tiberias in 895; Latter Prophets, with Babylonian punctuation, in the Saltykov-Shchedrin Library in Leningrad (No. 3), now the Russian National Library, was copied in 916; and a Pentateuch which was copied by Solomon b. Buya’a (who also prepared, according to a note at its end, the so-called Keter Aram Zova, later vocalized by Aaron b. Asher) in 929 and vocalized by his brother Ephraim b. Buya’a (it appears that both were active in Tiberias). This particular Keter Aram Zova (keter, “crown” being an appellation for a Bible codex; Aram Zova, “Aleppo”) is at the Ben-Zvi Institute, Jerusalem (see bibl. nos. 5–7). There are biblical manuscripts in the Saltykov-Shchedrin Library and others, which, according to their *colophons, were written during the tenth century, but doubts have been raised as to the reliability of these colophons. Finally, there is the Bible manuscript (St. Petersburg B 19A) which was written in 1009 in Egypt. The text is complete and the date appears to be authentic.

MISHNAH, TOSEFTA, TALMUD, AND HALAKHIC MIDRASHIM. The oldest dated manuscripts of the Mishnah are: Paris Manuscripts 328/9, the complete text with Maimonides’ commentary and written and vocalized by Joab b. Jehiel, the “Physician of Beth-El,” from the province of Cesena (Italy), between 1399 and 1401. Individual orders (sedorim), written and vocalized (in part) from 1168 (Zera'im, Nezikin, Kodashim), are in Oxford (nos. 393, 404), and Mo'ed of the same set is in the Sas-
soon Library (no. 72). Not dated but definitely early works are:
Kaufmann Number 50 (facsimile edited by G. Baer, 1929) and Parma Number 138. The oldest Tosefta manuscripts are Erfurt Number 159, which was thought to have been written in 1150, and Vienna Number 46. The oldest dated halakhic Midrashim are Sifra of 1073 (Vatican Library, no. 31) and Sifra of 1291 (Oxford, no. 151), which also includes the Mekhilta. The only manuscript of the Jerusalem Talmud, which was written in 1299 by Jehiel b. Jeukthiel b. Benjamin, the Physician, is at Leyden. There is also only one complete extant manuscript of the Babylonian Talmud (Munich, Bayerische Staatsbibliothek, Cod. Heb. 95). It was written “on the twelfth of the month of Kislev, in the year 103 of the sixth millennium” (1342) by Solomon b. Samson, probably in France (facsimile edited by H. Strack, 1912). At the end of this manuscript several minor tractates are added. Individual tractates from 1176 and after have been preserved in the Library of Florence, as well as a manuscript from 1184 in the Hamburg Library and in the Jewish Theological Seminary Library (Av. Zar., 1290).

AGGADIC MIDRASHIM. Among the extant manuscripts of aggadic Midrashim are Genesis Rabbah and Leviticus Rabbah from 1291 (Bibliothèque Nationale of Paris, no. 149). There is a manuscript from the same year of the Pesikta de-Rav Kahana in the Bodleian. The Parma Library possesses a manuscript from 1270 (no. 1240) which contains Song of Songs Rabbah, Lamentations Rabbah, Tanhumah, Pesikta Rabbati, Midrash Proverbs, and others.

MISCELLANEA. Thousands of medieval manuscripts in the fields of philosophy and Kabbalah are extant; these are as numerous as those in medicine, astronomy, astrology, geography, and other natural sciences. A considerable number of these manuscripts are translations from Greek, Arabic, and other languages spoken and written in the countries of the Diaspora. Polemics, poetry, philology (grammar, dictionaries, masorah), history, sectarian literature, halakhah (responsa, novellae, codes, ritual compendiums), ethics, and homiletics are well represented, as is liturgy (siddurim and mahzorim). Due to their constant use many tens of thousands of them were stored away in genizot after being worn and damaged. Occasionally autographs were also preserved, i.e., either manuscripts from the hand of the author, such as Maimonides’ Mishnah commentary and miscellaneous writings (ed. S.D. Sassoon, 1966), or confirmations of the correctness of the copy as the one added by Maimonides to a copy of his code; “Corrected from my [original] copy, 1, Moses, son of Maimon of blessed memory” (Oxford Ms. 577).

1500–1970
Manuscripts of this last period are also extant; some of them were published, some not. A considerable number of the manuscripts of this period were written in countries where there were no Hebrew presses (e.g., the Yemen). They were either contemporary works or those of earlier periods, but some were copied from printed works which had reached them from Western countries and are therefore of no original value. Manuscripts written by the authors themselves are of special importance because of their corrections. They make it possible to reconstruct the original text and compare it with other copies, either handwritten or printed editions. Early authorities, who wrote in the early years after the appearance of printing, made use of manuscripts of classic books and commentaries. In later centuries this practice naturally waned.

Owners and Other Lists
At the beginning and the end of manuscripts it was customary to note the name of the owner, with a formula such as “a man should always sign his name in his book lest a man from the street come and say it is mine.” Owners, who usually were scholars, often added notes of their own to the text. At times, the names of several generations of a single family appear in these lists, and well-known names in Jewish literature and history are found among the owners, e.g., a manuscript of Maimonides’ Guide (1472, Parma 660) belonged successively to David, Abraham, and Moses Provencal (father, son, and grandson).

Modern manuscript catalogs generally register these notes and lists in detail. The same pages were also used to commemorate family and general events, and documents which are sometimes of great historical value were also copied on them, although they may have no connection with the contents of the manuscript. Among this material are lists of books describing whole or parts of private collections. Such lists shed light on the cultural standards of various periods and environments. The prices of the manuscripts which are mentioned in them are of particular interest (see “Book trade”).

Collection of the Material
The Institute for the Photography of Hebrew Manuscripts was founded in 1950 by the Israel Government (Ministry of Education and Culture) in order to enable a comparative processing and registration of all possible material. In 1962 the institute was placed under the authority of the Hebrew University and became affiliated with the National and University Library. During its 20 years of activity the Institute has photographed – mainly in the form of microfilms – approximately half of the collections of manuscripts and fragments scattered throughout the libraries of the world. The most important works which had not been previously published in the form of facsimiles were enlarged by the Institute, as were all the fragments which reached it. Some of the material has been listed in the publications of the Institute (bibl. nos. 24–27). The Jewish Theological Seminary of America houses the Louis Ginzberg Microfilm Collection, which aims at the microfilming of important Hebrew manuscripts from all over the world. The list below cites all libraries containing over 100 Hebrew or Samaritan manuscripts. The numbers of the manuscripts and fragments are given in parenthesis, and the names of the authors of the catalogs and the year of their publication are given after the colon. The numbers of the manuscripts given here are not always identical with those which are classified in the catalogs, as additions were acquired after their publication.
AUSTRIA. VIENNA: Nationalbibliothek (216; 308 fragments): A.Z. Schwarz (1925); Bibliothek der Isr. Kultusgemeinde (215); A.Z. Schwarz-Oesterreich (1932; 40 Mss. transferred to the Jewish Historical Institute, Warsaw).

ENGLAND. CAMBRIDGE: Trinity College Library (160); H. Loewe (1926); University Library (1,000; 100,000 fragments): S. Schiller-Szinessy (1876); Westminster College Library (4,000 fragments). LEEDS: University Library (371); C. Roth (Alexander Marx Jubilee Volume; 1950). LETCHWORTH: D.S. Sassoon Collection (1,220): D.S. Sassoon (1932). LONDON: Bet Din and Bet Ha-Midrash (161): A. Neubauer (1886); British Museum (includes the first part of the Gaster Collection, 2,467; 10,000 fragments): G. Margoliouth (1899–1933); Jews College Library (Montefiore Collection: 580); H. Hirschfeld (in: JQR 1902–03). MANCHESTER: John Rylands Library (second part of the Gaster Collection: 750; 10,000 fragments): E. Robertson (also the Samaritan Mss.; 1938–62). STRASBOURG: Bibliothèque Nationale et Université (176; 292 fragments): S. Landauer (1881).

FRANKFURT: Stadt-und Universitätsbibliothek (400; 10,000 fragments): R.N.N. Rabbinowitz (1888); N. Allony-D. Loewinger (1957; including the Merzbacher Collection; 10,000 Genizah fragments lost during World War II). HAMBURG: Stadtbibliothek (476); M. Steinschneider (1878; including the Levy Collection). MUNICH: Bayerische Staatsbibliothek (476): M. Steinschneider (1895); E. Roth (1966).

HUNGARY. BUDAPEST: Hungarian Academy of Sciences (Kaufmann Collection: 595; 600 fragments): M. Weiss (1906); D.S. Loewinger-A. Scheiber (1947); Library of the Jewish Theological Seminary (355; 400 fragments): D. Loewinger (1940).

ISRAEL. JERUSALEM: National and University Library (6,000); G. Scholem (1930); B. Joel (1934). N. Ben-Menahem (120); Hechal Shlomo (150); J.L. Bialer (1966–69); Mosad ha-Rav Kook (1,000): N. Ben-Menahem in: Aresheth, 1 (1959), 396–413; Ben-Zvi Institute (1,100); Schocken Library (400). RAMAT GAN: Bar Ilan University Library (Margulies Collection: 750). TEL AVIV: Bialik House (200).

U.S.A. CINCINNATI: Hebrew Union College Library (1,500). LOS ANGELES: University Library (Rosenberg Collection from Ancona; the third part of the Gaster Collection, etc., 400).

NEW HAVEN: Yale University Library (300): L. Nemoy (Journal of Jewish Bibliography; 1938–39). NEW YORK: Columbia University (1,000); Jewish Theological Seminary of America (10,000; 25,000 fragments): E.N. Adler (1921); YIVO Institute for Jewish Research Library (120); R.H. Lehm- ann Collection (400); The New York University, Jewish Culture Foundation Library (114); Yeshiva University (1,000); YIVO In- stitute for Jewish Research Library (1,200). PHILADELPHIA: Dropsie College for Hebrew and Cognate Learning (256; 500 fragments): B. Halpern (1924). SAN FRANCISCO: California State Library (Sutro Collection, 167): W.M. Brinner (1966).

RUSSIA. ST. PETERSBURG: M.S. Saltykov-Shchedrin State Library (now Russian National Library) (1,962; 15,000 fragments; including the Firkovich Collections): A. Harkavy-H.L. Strack (1875); A.I. Katsch (1957/58; 1970). ASIATIC MUSEUM (2,347). MOSCOW: Lenin State Library (now Russian State Library) (Ginzburg Collection, 2,000).

Judaica and Hebraica Manuscripts in Russia

BACKGROUND. Dr. A.I. Katsh first visited the Soviet Union, Poland, and Hungary in 1956, when he arranged for the microfilming of several thousand manuscripts and rare documents of Judaica and Hebraica in various collections in those countries. It was the first, and so far the only, such undertaking by a Western scholar. In subsequent journeys behind the Iron Curtain in 1958, 1959, 1960, 1969, and 1976, he augmented this collection, which was then housed at the *Dropsie College, Philadelphia.*

In this article Prof. Katsh gives an account of the five major collections of Judaica that are to be found in Lenin-
grad and Moscow as the situation was prior to the dissolution of the Soviet Union. Today the Russian collections are accessible to scholars.

INTRODUCTION. Shortly after the Russian Revolution, the majority of the private collections of rare manuscripts on Judaica and Hebraica, which had been gathered over the centuries by Jewish scholars, disappeared. The only collections which remained were those in the possession of the Czarist government.

These collections constitute a bibliographer’s paradise. They consist of a number of individual archives which include those of Israel Zinberg, Daniel Chwolson, Abraham Baer Gottlober, David Maggid and Shalom Aleichem.

There is also valuable Hebraica material in the Academy of Tbilisi, the capital of Georgia; in the government library of Yerevan, the capital of Armenia; in Kiev, Vilna and the synagogues of Moscow and St. Petersburg.

Apart from those, however, the Russian collections consist of five major collections: the Baron David Guenzburg Collection, the Friedland Collection, the Two Firkovitch Collections, and the Antonin Genizah Collection.

THE GUENZBURG LIBRARY. The *Guenzburg Library was founded by Joseph Yozel Guenzburg (1812–78) and added to by his son Horace (1833–1909) and his grandsons David (1857–1910) and Alfred (1865–1930).

David Guenzburg was a brilliant scholar and an outstanding Orientalist who was reputed to have a knowledge of 34 languages. He founded the famous Guenzburg Academy in St. Petersburg. He was, however, also actively involved in all matters affecting the Jewish community.

In collaboration with Vladimir Stassoff, David published L’Ornement Hebraïque, a collection of artistic reproductions from the ancient Hebrew manuscripts in the St. Petersburg collection. In assembling their library the Guenzburgs had the help and advice of such experts as Adolf Neubauer, who was the custodian of the Oriental Department of the Bodleian Library, and the scholar Raphael Nathan Nata Rabbinovicz, the author of Dikduke Soferim.

In 1865, while the collection was in France, the renowned bibliographer Senior Sachs was appointed its custodian. Ten years later he began work on a catalog to be called Reshimat Sefarim Kitve-Yad be-Ozar ha-Sefarim Shel Guenzburg (list of manuscripts in the Guenzburg Library). The planned catalog was designed in such elaborate detail that it took 48 pages to describe the first two manuscripts. Realizing that this approach was impractical, Sachs then prepared a brief handwritten list of 831 items for the use of the family. This was apparently completed in 1887, when the Guenzburgs moved the collection from Paris to St. Petersburg, and it is now housed in the Russian State Library in Moscow. (Sachs himself, pensioned by the family, remained in Paris until his death on Nov. 18, 1892.)

A second handlist of items 832 to 1,908 was later prepared and catalogued, probably by a later scholar, by book size rather than by subject matter. Copies of these two handlist volumes are extremely rare. A Russian translation of the first 831 titles is now available in the Russian State Library. The actual number of titles may be as high as 5,000, because most of the codices list several items. However, not all the manuscripts listed in the handwritten catalogs are extant, since some were lost during the moving of the volumes from one place to another.

The manuscripts in the Guenzburg collection deal with a great variety of subjects, including Bible, Mishnah, Talmud, Responsa, Midrash, Kabbalah, philosophy, medicine, astronomy and mathematics. The biblical literature consists of 40 texts, 30 translations and 180 commentaries. Among the latter are Rashi, Ibn Ezra, Kimhi, Naḥmanides, Levi b. Gershom and Jacob ben Asher.

The section dealing with Mishnah, Talmud and Halakhah is rich in quality and quantity (350 items) and also contains a number of works of the Gaonic period. The Responsa material includes the names of Rabbenu Gershom, Alfasi, Rashi, the Tosafists, Maimonides, David ha-Nagid, Abraham B. David, Naḥmanides, Solomon ben Adret (Rashba), Meier of Rothenberg, and Asher b. Yehiel. Hebrew poetry, secular and religious, is represented by Judah Halevi, Solomon ibn Gabirol, Abraham ibn Ezra, Judah Al-Harizi and Immanuel of Rome. Some of the prayerbook manuscripts are illuminated in beautiful colors.

The collection includes a vast literature on the Shabbatai Zevi movement, works by Aristotle, as well as philosophical treatises in Hebrew (or Judeo-Arabic) by Averroes, Maimonides, Al-Ghazālī, IsaacIsraeli, Jacob Anatoli, Crescas and others. Some of these works are no longer extant in the languages in which they were originally written. The Guenzburg collection includes important works on astronomy and mathematics and about 40 volumes on medicine. In addition, there are works by 19th-century Hebrew authors and scholars which are now of great value, since most of the unpublished manuscripts of the leading Jewish scholars of the 19th century were destroyed in the Holocaust. Of special interest are works by the biblical scholar Wolf Heidenheim (d. 1832), by his disciple S. Baer (d. 1897), and by the first Hebrew novelist, Abraham Mapu.

FRIEDLAND COLLECTION. The Friedland collection, housed in the Oriental Institute of the Academy of Science in St. Petersburg, contains unique manuscripts on the Bible: biblical commentaries in Judeo-Arabic, Persian, Turkish and other Middle Eastern languages; lexicography; ethics; astronomy; theology; philosophy; music; and historical material such as travel narratives, documents, archives and records of Jewish communities in Middle Eastern countries. There is a great deal of Karaic literature. One of the rare Bibles, consisting only of the Later Prophets, bears the date 847 C.E.

A manuscript catalog begun by the late Yonah Y. Ginzburg was completed several years ago by A.M. Gasov-Ginzberg. The Oriental Institute in St. Petersburg, formerly under the direction of K.B. Starkova, has prepared an eight-volume catalog describing in detail the entire manuscript collection.
This catalog lists the following: 339 items dealing with Bible, commentaries and lexicography; 291 items dealing with philosophy, ethics, mysticism and theology; 332 items dealing with mathematics, physics, astronomy, medicine and music; 215 items dealing with Karaitic and liturgical works; 149 items of material on the Golden Age of Spain and literature of the Middle Ages, such as responsa, letters, records and documents.

The circumstances under which the Friedland collection was assembled, and its subsequent presentation to the Imperial Institute of St. Petersburg, is of more than passing interest and merits that it be given in some detail, especially in view of the fact that it explains the contents of this invaluable library.

Moses Aryeh Leib Friedland (1826–99) was a prominent Jewish leader in Czarist Russia and corresponded with all the leading rabbis of Russia in his endeavors to ease the economic and political plight of the Jews of the country during the era of the “Cantonists,” when Jews were confined to the “Pale of Settlement and professions and trades were closed to them. Moreover, following the Congress of Vienna (1814–15) some two million Jews were added from the Duchy of Warsaw or the Kingdom of Poland and draconic steps were taken by the authorities to uproot them from their settlements and change their way of life.

Into this oppressive and tyrannical atmosphere was tossed the complicated and stormy question of the Haskalah, the “enlightenment” movement which, according to its proponents, was to secure new standing for the Jews as a people, by means of an orderly and suitable process of integration into the life of the state. Against this background one can appreciate Friedland’s leap into the battle occupying his people, which was one of the factors contributing towards the acquisition of his huge library.

Friedland did not belong to the same upper social class as the Guenzburgs. Starting from humble beginnings he traveled through the vast Russian steppes under the most trying conditions and in face of real danger, and he learned at first hand the joy of succeeding by dint of one’s own labor. He felt the need to broaden the curriculum of education among Jews in Russia, by introducing into the yeshivah curriculum secular subjects and the Russian language. Convinced that this was the only way to salvation for the Jewish masses in Russia, Friedland ardently espoused the cause of the Haskalah and engaged in a voluminous correspondence with the great rabbis of the time in an attempt to persuade them to modernize their curriculum. Friedland’s brother, Meir, was connected by marriage to Dr. Azriel *Hildesheimer. Friedland saw in his brother the ideal combination of religious and secular learning he strived for. Wherever he traveled in Russia he recorded accurate statistics concerning the size of the Jewish population, its communal institutions and his reason for demanding enlightenment and accepting the government’s regulations, for under the circumstances that prevailed it was no longer possible to conceal from the authorities what was happening in Jewish communal life. All this had a direct bearing on the content of his library. Among his manuscripts is the Kol Ne-gidim in four volumes, which is a veritable treasure house of information on the Jewish community of Russia during the 19th century. It consists of hundreds of letters, correspondence with the leading rabbis of his time dealing with their history and the many problems facing them. Included are the following references:

(1) The leaders of Russian Jewry at the time of Poliakoff, Guenzburg and others.
(2) Friedland’s suggestion to include the teaching of the Russian language in Yeshivat Mir similar to the program in Yeshivat Volozhin.
(3) The rabbinical authorities – their attitudes to the introduction of secular education into the yeshivot.
(4) The Petersburg Congress of leading rabbis.
(5) The condition of Russian Jewry in Siberia, the Ukraine and elsewhere.
(6) The government requirement that every rabbi study the Russian language for six years.
(7) The controversy over deleting liturgical poems (piyutim) and kinot in the prayers.
(8) The plan of Rabbi Isaac Jacob *Reines to establish a special yeshivah at Lida.
(9) The controversy between Rabbi Jacob Lifshitz and the leaders of the enlightenment movement.

In addition to these Friedland set himself the task of gleaning the treasures of Jewish learning in order to disseminate through them a knowledge of this heritage. He amassed a large collection of books, some of them extremely rare, at his own expense. These books were not limited to any one field or subject. His library was quantitatively large and qualitatively valuable, which was considered unique in the sphere of private libraries. Included also was a complete collection of the books of the Talmud, both early and late; books of rabbinical decisions (poskim); books of research and responsa in halakhah; books of meditation and thought; and numerous volumes of “enlightenment” books. Among the manuscripts in this collection are copies of Maimonides’ Guide to the Perplexed, with numerous variants, two translations of the Koran in Hebrew by Jacob b. Israel Halevi, works by Tanhum b. Joseph ha-Ye-rushalmi, Isaac b. Judah ibn Ghayyat, Judah Halevi, Solomon ibn Gabirol and Judah Al-Harizi.

In the foreword to Kehillat Moshe, St. Petersburg 1896, S. Wiener wrote: “Moshe [Aryeh Leib Friedland], in addition to his good deeds for the general welfare of his people, and for the welfare of the individual in his support of several thousand families who bless his name, as the best known and most famous throughout the dispersion, this man also managed to build an everlasting sanctuary for the works of Jewish scholars. In this he has been eminently successful for he has collected in his home more than 14,000 of the finest works and has placed them as eternal witness for permanent safekeeping forever for all generations to come, in a building of the Asiatic Museum of the Imperial Academy of Science in St. Petersburg where, together with the museum’s collection, the
number of volumes listed will exceed 24,000.” In my archives there is a personal letter written by S. Wiener to a friend of his, a learned scholar in Warsaw, on 12 Tevet 1891, in St. Petersburg, in which he says: “The number of books being published in the holy tongue [Hebrew] is about 10,000, and there are about 400 handwritten manuscripts. There is no treasure that compares with this except in Oxford and in London; this one is third in quantity and value.” Friedland’s library included “the collection which the learned grammarian Ber Bammé of Minsk gathered throughout his life (he died on 28 Adar 1888). He spent a vast fortune on locating and building up a library of new and old and even rare volumes in all the subjects of Jewish learning and literature, the like of which has never before been seen in our city” (Naphtali Maskileison, Alon Bachtut, Ha-Melitz, 1888, No. 53).

Friedland’s library also contained the collection of books of Eliezer Lipman Rabinowich who died in Heshvan 1887 (see Ha-Melitz, No. 147). It contained also the choicest volumes collected by the prominent man of wealth, Shmaryahu Zucker- man of Mogilev (died in 1879), among which is the Mekhilla with the commentary on Zeh Yenahameinu, which the Gaon of Vilna studied and revised with his own hand (Wiener’s foreword to Kehillat Moshe). Likewise included in Friedland’s library were “about 2,000 volumes from the superb and valuable collection assembled throughout his life by the excellent bibliographer Joseph Mazal of Wiazin” (ibid.) as well as priceless volumes from various collections acquired for Friedland in Europe and other places. Friedland prized his library and was fully cognizant of its importance and value. In the initial stage he attended to his collection himself, but in the course of time – as it expanded and became more ramified – he engaged people specifically to catalog and classify the works according to subjects and to supervise and direct the progressive completion of the collection by acquiring every rare and priceless volume available in order to render his library complete.

In 1880 there appeared in Ha-Melitz an announcement which aroused consternation throughout the Jewish community. It declared that Friedland had decided to transfer his invaluable library to the Imperial Institute in St. Petersburg. It created a storm of controversy; it was considered by some as a betrayal of the Jewish people, especially since access to the institute was forbidden to Jews. Only one rabbi in Russia, Rabbi David ben Samuel *Friedmann of Karlin, at that time an active member of the *Hibbat Zion movement, while expressing his concern and sorrow at this step, tried to reason him out of it and proposed to Friedland that he transfer his library to Jerusalem. In a deeply moving letter he praised him for the labor and expense invested in this collection. The fact, however, that it would be housed in an institution closed to the Jews would result in “these volumes and the wisdom of their authors remaining locked up in darkness... Therefore, my advice to you is to establish a Jewish library in Jerusalem, the holy city, under the supervision of its rabbis, both Sephardi and Ashkenazi.” He went into meticulous detail relevant to the implementation of his proposal: the binding of books, cataloging, means of keeping it up to date, budget requirements, librarians.

Rabbi Friedman’s letter aroused a responsive chord in Friedland’s heart. He regretted, however, that the suggestion had come too late; had it come earlier he would have accepted it.

In point of fact, Friedland was aware of the probable fate of his library, insofar as its use for Jews was concerned, if he gave it to St. Petersburg, since the authorities had closed the Jewish library in Warsaw and the Strashun Library in Vilna, and he sent 1,500 volumes of his library to the Great Bet HaMidrash of Dinaburg. To his consternation and dismay, however, he discovered that they had not even been taken out of their containers and he went to the expense of putting up shelves and appointing a librarian. But when the authorities refused to pay the wages of the librarian, he finally decided to give it to the St. Petersburg Institute. It was open daily and its “personnel consisted of people who regard Jewish learning very highly.” Moreover, the authorities added to it some 3,000 duplicate copies of works already in their possession and undertook to appoint a special official in charge. The famous Russian Orientalist, Paul K. Kokovtsov, undertook the responsibility for its care and maintenance. Friedland consoled himself with the hope that circumstances would change. He believed that, housed within the Asiatic Museum, his library was destined to be used extensively. Many would study the volumes and contemplate their contents and would, through them, develop a familiarity with and esteem for the people which had produced men of such spirit and wisdom. The transfer of the library to the governmental institute was therefore, in Friedland’s eyes – under the circumstances which then ruled the life of the Jews of Russia – a form of the most superior kind of “intercession” because as he saw it: “We shall find favor in the eyes of the government, for the benefit of our people, just as our Father Jacob placed the entire camp before him, when he went to face Esau, to ensure his safe journey.”

Thus did the Friedland Library find its home in St. Petersburg.

THE FIRKOVITCH AND ANTONIN COLLECTIONS. The Firkovitch and Antonin collections are housed in the Russian State Library in St. Petersburg and contain principally genizah material.

The Firkovitch Collections. A native of the Crimea, Abraham Firkovitch (1786–1874) was imbued with the notion that the Karaites of Babylonia were descended from the Ten Lost Tribes who had settled in the Crimea in the 6th century B.C.E. In his quest for documentary proof, he traveled throughout the Caucasus and the Middle East, exploring the genizot of ancient Jewish communities, and eventually assembled the most extensive collection of Hebrew, Samaritan and Karaitic manuscripts in the world, which was acquired in 1859 by the Imperial Library of St. Petersburg.

Some noted authorities, who checked the collection, accused him of tampering with dates on the manuscripts in or-
der to prove his “theory” about the Karaites. Yet even his most severe critics admit that the manuscripts are extremely rare. Thus A. Harkavy and H.L. Strack wrote in 1875: “Though we, in the interest of science, deplore the numerous falsifications mentioned in our catalog, we gladly admit that A. Firkovitch, by the successful results of his tireless zeal for collecting manuscripts, assured himself everlasting recognition in the fields of Bible studies, Karaite, and rabbinic literature.” A considerable portion of the Firkovitch I collection consists of copies and molds of inscriptions found on old Jewish tombstones, mostly assembled by him while in the Crimea. These inscriptions are, in some cases, the only evidence we possess of the existence of Jewish settlements in early Crimean history. In the main, this collection consists of extremely valuable Hebrew, Karaite and Judeo-Arabic manuscripts originating in Palestine, Egypt, Syria, and the Crimean Peninsula. When Firkovitch visited these places, the manuscripts there were still plentiful and he was able to make a choice selection. He kept the material in his possession for a good many years, studying and classifying it. He gradually compiled a handwritten catalog, which he attached to the memo when he offered to sell the collection to the Russian government in 1856. Firkovitch’s catalog contains 850 items, in addition to several hundred letters and documents.

The biblical manuscripts of this first Firkovitch collection, catalogued by Harkavy and Strack, consist of five Torah scrolls written on leather, 41 scrolls written on parchment, 76 manuscripts in codex form, and 23 manuscripts containing text and translation in Aramaic, Arabic, Persian, and Tatar.

Of particular importance in the Firkovitch collection is the section dealing with disputations between the Karaites and Rabbinites.

Included are a manuscript of the Hizzuk Emunah by the Karaite scholar Yizhak b. Abrahám, and by Moses b. Ezra, dealing with the history of Hebrew poets of the Middle Ages, containing material not found elsewhere, and the archives of Judah al-Harizi.

A large number of the manuscripts deal with poets who lived in Palestine, Egypt, and Syria.

In addition to the first Firkovitch collection, another small collection of important Hebrew manuscripts came into the possession of the Imperial Library in St. Petersburg around the year 1863. This was the collection of the Society for History and Antiquity in Odessa. Since it contained manuscripts originally belonging to Firkovitch, the authorities of the library demanded that it be added to the Firkovitch collection. Harkavy-Strack included in their catalog of the Odessa collection 35 Torah scrolls and 20 in codex form.

This important acquisition of unique manuscripts immediately placed Russia in a favorable position for Hebrew manuscript study, especially in biblical research. The announcement of this collection and the first reports of its contents aroused great excitement among biblical scholars and manuscript collectors. According to Firkovitch’s description, and supported by Prof. Daniel Chwolson, there were in this collection 13 Bibles belonging to the period from the 5th to the 9th centuries and 15 Bibles of the 10th century. In his memorandum to the Russian government, Chwolson stated: “In the future, no edition of biblical text should be considered without consulting these important early manuscripts.”

The Firkovitch Collection II was acquired by the Russian Imperial Library in 1876. For a long time little was known of its contents, nor was the exact origin of its material certain. Although Firkovitch himself did not provide this kind of information, there is no doubt that the greater part of it came from the genizot of the old synagogues in the Crimea. A substantial number of the fragments appears to have come from the Cairo genizah in Egypt. A detailed description of the contents of the Firkovitch II collection was given by the late Prof. P. Kahle, who examined the material while on a visit to Leningrad. According to Kahle it includes: 1,582 items of biblical fragments with masorah written on parchment; 725 items of biblical material written on paper; 159 items of scrolls of the Bible on leather or parchment; over 6,000 Hebrew and Judeo-Arabic fragments; and 344 non-biblical manuscripts. The material in the Firkovitch collections and the other Hebraica collections in Russia undoubtedly comprise the largest biblical manuscript collection in the world.

The Antonin Collection. The Antonin genizah collection was acquired by the Russian Archimandrite, Antonin Kapustin, who lived in Jerusalem from 1865 until his death in 1894. When he learned about the discovery of the Cairo genizah he was among the first to be on the scene and was able to acquire a choice selection of material. Upon his death, this material went to the Government Library at St. Petersburg. The Antonin collection occupies an outstanding place, not so much for its quantity as for its quality. The fragments deal with the Bible, biblical translations in Aramaic and Judeo-Arabic, Karaite polemics, historical documents, Kabbalah, liturgy, medicine, theology, philosophy and Ketubot. They are written in Hebrew, Arabic, Judeo-Arabic, and Samaritan. The late Prof. S. Assaf in his book Gaonic Responsa (1929) lamented the fact that the Antonin material in Russia was not accessible to scholars, nor was a catalog available. As a result of many visits to the U.S.S.R. this author was able in 1963 to prepare and publish the only catalog of the entire Antonin material.

According to my classification, the Antonin genizah collection of 1,859 items represents 36 subjects ranging from biblical texts to Zohar, including such rare items as the Bible in Samaritan, Ibn Ezra’s commentary on the Bible, and medical notes in Arabic. The proportions of these various subjects is interesting. Half the collection consists of biblical literature; liturgical material comes next with one-sixth; Talmud, Midrash, Halakhah, with one-seventh. This uneven proportion is due to the fact that the sacred books were in wide use among the people. Each household possessed a Bible and one or more prayerbooks. Each scholar had a Talmud and some midrashic and halakhic books, whereas the other non-sacred books were confined to special individuals only. The reason that so much...
non-religious material was found in the Cairo genizah at all is that the synagogue at Fostat-Cairo was also used for the offices of the rabbinical courts, where they kept the community archives. Later all this became part of the general genizah. Furthermore, the placing of discarded material in the genizah was not officially controlled; individuals merely sent their unwanted old books and papers to the genizah. No one examined the contents before they were stored away. Thus among the genizah contents are private papers, business letters and accounts, and a great number of documents in Arabic script. Prof. Harkavy, in evaluating the Antonin genizah, noted: “…the Hebrew and Arabic fragments … have the same origin as the material of the second Firkovitch collection, namely, from the genizot of Egypt. They complement each other to a great degree. Together they add great honor and glory to the Royal Public Library.”

[Abraham I. Katsh]

MA’ON (Heb. מאון, biblical Maon).

(1) City in Judah, the dwelling place of Nabal (1 Sam. 25:2, 3); there was also a desert of the same name (1 Sam. 23:25). Maon belonged to the seventh district of Judah (Josh. 15:55). In talmudic sources it is called Maon of Judah to distinguish it from Bet Maon near Tiberias (Mekh. Yitro 1). The place is identified with Tell Ma’in, about 4 mi. (7 km.) S.E. of Yatta.

(2) The Moanites, a tribe, oppressed Israel along with the Zidonians and the Amalekites (Judg. 10:12). This tribe may be identical with the Meunim whose tents were destroyed by the Simeonites (1 Chron. 4:41) and were later defeated by Uzziah, king of Judah (11 Chron. 26:7). The area in which this tribe was located is in dispute.

(3) Site southwest of Gaza, called Menois in Roman times. It was the westernmost point of the Palestinian limes (Codex Theodosius 7:4, 30; Notitia Dignitatum in partibus Orientis 34:19, 2). The place is shown on the Madaba Map (mid-sixth century). Eusebius mistakenly identified it with the Madmanna of Joshua 15:31 (Onom. 130:7). It is now identified with Horvat Maón (Khirbat al-Ma’in) near Nirim, southeast of Gaza. A kibbutz called Maón was established near the site in 1949. Remains of mosaic pavements and other debris show that the area contained an extensive settlement from the fourth century C.E. onward. The most interesting building is a syna- gogue which was excavated in 1957–58. It is oriented toward the northeast and consists of a hall, 14.8 x 11.8 m., with two rows of columns forming the nave and two aisles. In the vicinity was a ritual bath (mikveh). The stone-paved aisles and narthex form a sort of ambulatory around the mosaic-paved nave. The design of the mosaic shows a vine trellis issuing from an amphora flanked by peacocks; the trellis forms medallions within which pairs of various animals are represented. The section of the pavement nearest to the apse has symbolic designs: two palm trees with doves at their bases and above them a me- norah with two etrogim, a shofar, and a lulav, flanked by two lions. The Aramaic inscription mentions the congregation as a whole and three individual donors of a gold dinar each. The pavement, which dates to the early sixth century, has an interesting parallel in a church pavement found at nearby Shellal. They were both, according to Avi-Yonah, made in the same workshop in Gaza (see recently Ovadiah on this matter).

MAOR, GALIA (1943– ), president and CEO of Bank Leumi. Maor received an M.B.A. from the Hebrew University of Jerusalem and began her banking career at the Bank of Israel in 1963. She filled a long series of positions from assistant to the manager of open markets to adviser to the director general. From 1982 to 1987 she served as the supervisor of banks. During her time in that position, the banks’ manipulation of their own share prices was revealed in a major scandal. She retired from the Bank of Israel in 1989 and worked for two years as a consultant for the Somech-Haikin accounting firm. In 1991 she joined Bank Leumi, first as deputy CEO and from 1995 as CEO. Maor is considered a top-flight manager who led Bank Leumi to numerous successes, positioning it second after Bank Hapoalim in the hierarchy of Israeli banks. In 2004 she was ranked 36th in Forbes’ list of the world’s most successful women.

[Shaked Gilboa (2nd ed.)]

MAOR KATAN (Lucerna, Lutzerner, Luzerner), family of physicians in Vienna and Prague in the 17th century, who intermarried with the *Fraenkel-Teomim family. The family is well known mainly because of their internal correspondence from 1619, preserved in the Viennese imperial archives. The first of the family, MOSES BEN LOEB (d. 1605), was elected in 1570 and 1573 as physician of the Frankfurt community. He presented a certificate by the *bet din of Mantua that he belonged to the Freistaedtl family there. His son, JUDAH LEIB (Leva, Leo Lucerna Hebraeus Aulicus; d. 1635), was physician and at the same time rabbi in Vienna. He built himself a synagogue in his house, and left unpublished books. His grandson, Menahem Mendel *Auerbach, describes him in his *Atteret Ze-kenim (1702), para. 572. Another son, AARON, was employed by the Prague Jewish community in 1619 as physician, attending Christians as well. Through his mother and his wife he was related to Yom Tov Lipmann *Heller, who in his *Maaladenei Melekh on Hulil 66b acknowledges information supplied by Aaron. Besides attaining the degree of doctor of medicine he was also a doctor of physics and philosophy from the university at Padua, and was the only Jewish physician fully recognized by the Vienna medical faculty.

[Meir Lamed]
synagogues the English version is sung in addition to or in stead of Ma'oz Zur.

**Musical Rendition**
The most commonly sung melody of Ma'oz Zur is of West European Ashkenazi origin and may be dated from around the early 15th century. E. *Birnbaum and A.Z.* *Idelsohn, on the basis of the similarity of isolated motives, related it to a group of early Protestant chorales and a German soldiers' song. There is a much closer correspondence in the entire melodic line to the church melody Patrem omnipotentem which appears in several Bohemian-Silesian manuscripts, the earliest of which is dated 1474. The earliest notation attesting to the use of the melody for Ma'oz Zur so far located is found in the manuscript of Judah Elias of Hanover (1744) as a "melodic reminder" in settings of Hodu for Hanukkah. The first printed version appears in Isaac "Nathan's Hebrew Melodies (1815) set to Byron's "On Jordan's Banks." None of the standard sources of the 19th and early 20th centuries has the repetition of the last sentence of the stanza, which is a recent and inept "improvement." In Ashkenazi usage, from the beginning of the month of Kislev onward and during the week of Hanukkah, various prayers are also sung to the Ma'oz Zur melody or feature its motives. Other melodies also exist, but their distribution is limited. The melody of the Tesesco (German-Italian) Jews was first noted by the gentle composer Benedetto Marcello in his Estro po etico-armonico (Venice, 1724, 1803). It is still sung in Italy, and sometimes also in Israel and the United States. However, the standard West European Ashkenazi melody has become the dominant and representative one, in spite of objections to its "non-Jewish" character.

**Sources**
**STANDARD MELODY:** Idelsohn, Melodien, 6 (1932), pt. 110, 53; pt. 2 no. 43, both "Hodu for Hanukkah," from cantors' manuals of the end of the 18th century; Idelsohn, Melodien, 8 (1933), no. 311; Judah Elias of Hanover, Ms. dated 1744, two Hodu for Hanukkah published by A. Nadel: one, no foliation indicated, in Der Orden Bne Briss (Sept.-Oct. 1935), 95; another Hodu no. 215, in Musica Hebraica, 1-2 (1938), 28, 69. The Ms. is lost; John Braham and Isaac Nathan, A Selection of Hebrew Melodies... by Lord Byron (London, 1815), 31-36 ("On Jordan's Banks"); Ms. formerly in the possession of the Lieben family of Prague, dated 1820 or 1826, lost, 2 copies made in 1920, one in Jewish Museum, Prague (no no. given), one in Jnul, Jacob Michael Collection of Jewish Music, Ms. no. JMA 4705, fol. 16a. Published by H. Avenary in Tazil, 7 (1967), 127; A. Baer, Baal T'fillah (1883), no. 188; E. Birnbaum, Chanuka Melodie "Maos Zur" fuer Pianoforte bearbeitet (1889), textless; M. Wodak, Hamnazeach (1898), no. 94. **GERMAN-ITALIAN:** Benedetto Marcello, Estro poetico-armonico (Venice, 1724-26, 1803), toms. 111, xii-xiv, setting for 1 voice and 2 instruments, prefaced on p. xii by notation of the synagogal tune. Published in Idelsohn, Melodien, 6 (1932), appendix, no. 2 (p. 231), and elsewhere. **GERMAN:** Elhanan Kirchhan (Kirchhain), Simhat ha-Nefesh (Fuerth, 1726/27), fol. 6b, textless, but with super-
Commonwealth in Palestine after the War – a position that was approved by the *Biltmore Conference in 1942. Mapai called for participation by Jewish military units in the British army to fight the Nazis in World War II, combined with opposition to the restrictions of the 1939 White Paper on Jewish immigration and land settlement. It advocated self-defense through the *Haganah under the authority of the Jewish national institutions (Jewish Agency and Va’ad Le’ummi), and the use of physical resistance and even armed force to combat British measures against clandestine immigration, while opposing terrorist reprisals against individual Arabs and all-out rebellion against the Mandatory government.

A leftist group in Mapai, Si’ah Bet ("Faction B"), criticized the reformist tendencies of the majority, who held all the key positions. The struggle came to a head in 1942, when the Mapai convention prohibited factions within the party. As a result, Si’ah Bet broke away in 1944, supported by over half of the Kibbutz ha-Me’uhad, and formed the Tenu’ah le-Ahdut ha-Avodah. Despite the split, Mapai retained its absolute majority in the Histadrut, though reduced from 69.3% in 1942 to 53.8% in 1944. It remained the strongest party in Asetat ha-Nivharim (63 delegates out of 171 in 1944), and retained a dominant position in the Jewish Agency Executive.

During the preparations for the establishment of the State, Mapai was allotted ten seats out of 37 in the National Council and four out of 13 in the National Administration, which became the Provisional State Council (legislature), and the Provisional Government respectively when the State of Israel was proclaimed. It won 46 out of 120 seats at the elections to the First Knesset in 1949, 45 in the elections to the Second Knesset in 1951, 40 in the elections to the Third Knesset in 1955, 47 in the elections to the Fourth Knesset in 1959, and 42 in the elections to the Fifth Knesset in 1961. It ran together with Ahdut ha-Avodah–Po’alei Zion in the elections to the Sixth Knesset in 1965 in the Alignment list, which won 45 seats. Mapai, and later the Alignment, had the support of two to five members of associated Arab minority lists.

It was the dominant force in all the Israeli governments until 1968, holding, among others, the portfolios of Prime Minister, Defense, Foreign Affairs, Finance, Education, Agriculture, and Police. In the Jewish Agency, it held the chairmanship of the Executive and headed most of the central departments. In the Histadrut it maintained its absolute majority until 1965 and its representatives held leading positions in all its organs. Mapai nominees headed most of the local authorities. There was a Mapai mayor in Jerusalem in 1955–65, in Tel Aviv from 1959 to 1968, and in Haifa from 1951 to 1968.

Mapai was badly shaken by the *Lavon Affair that began as the *Esek Bish in 1954. The affair finally led to a split in the party in 1965 when Ben-Gurion and a group of followers that included Moshe Dayan and Shimon Peres, broke away from Mapai and established a new party by the name of *Rafi. A year after the Six-Day War Mapai, Ahdut ha-Avodah–Po’alei Zion, and Rafi became a single party called the *Israel Labor Party. In the institutions of the new party Mapai received 57% of the seats, while the other two received 21.5% each.

[Chaim Louvis / Susan Hattis Rolef (2nd ed.)]

**MAPAM** (Hebrew acronym for Milfelet ha-Po’alei ha-Me’uchedet – The United Workers’ Party), an Israeli Zionist-Socialist party, founded in 1948, when Ha-Shomer ha-Za’ir merged with *Ahdut ha-Avodah–Po’alei Zion.

In its early days Mapam advocated radical socialist positions, based on class struggle and links with international socialism, but at the same time it also called for the concentration of the majority of the Jewish people in Erez Israel. Its declared aims were the achievement of socialism in Israel through the democratic hegemony of the labor movement; the establishment of publicly owned enterprises; communal land settlement in the form of kibbutzim; state ownership of the land; cooperation with private capital while condemning all forms of profiteering and “parasitism”; a planned economy to ensure full employment, and the attainment of an egalitarian society.

In 1951 it was the main force behind the violent seamen’s strike in the *Zim shipping company, which was viewed by many as an attempted revolt against the *Mapai establishment.

In the early period Mapam also advocated a pro-Soviet policy. Nevertheless, during the 1952 *Slansky Trial in Prague, at which the Zionists were accused of espionage and subversion in the Communist countries, a prominent Mapam member, Mordechai Oren, was arrested and received a 15-year prison sentence. Despite the antisemitic flavor of the trial in Prague, and the Jewish doctors’ trial in Moscow, the pro-Soviet group within Mapam advocated that the party support the position of the Soviet Union. In 1954, a small pro-Soviet group within Mapam, led by Moshe Sneh, broke away from the party, and joined the Israel Communist Party (Maki). In the same year Ahdut ha-Avodah–Po’alei Zion decided to break away from Mapam as well and reestablish an independent party. The background to this decision was criticism of the pro-Soviet line and Mapam’s decision to accept Arab members into its ranks. Mapam advocated cooperation with the Arab working class and the belief that Israel could achieve peace with its neighbors by integrating into the Middle East. Mapam continued to run as an independent list until 1969, and then in the elections to the Seventh to the Eleventh Knessets ran within the framework of the Alignment together with the *Israel Labor Party.

Mapam was not a member of the government until after the elections to the Third Knesset in 1955; but then was a member of all the Mapai and Labor Party-led governments.
until 1977. Both of Mapam’s historic leaders, Me’ir *Ya’ari and Yaakov *Ḥazan, supported its entering the Alignment with the Labor Party, which greatly dampened what remained of the party’s radical zeal. This trend strengthened after the elderly leaders retired from membership in the Knesset in 1974, after the elections to the Eighth Knesset. In 1974 Mapam Minister of Health Victor *Shem-Tov proposed, together with Aharon *Yariv of the Labor Party, a formula for the holding of negotiations with Palestinians, who would recognize Israel’s right to exist, be willing to live in peace with Israel, and refrain from performing acts of terror. However, the Yariv–Shem-Tov formula was not accepted at the time by the Government, though almost 20 years later it constituted the basis for Israel’s willingness to sign the Declaration of Principles with the PLO.

Following the elections to the Eleventh Knesset in 1984, when the Labor Party decided to enter a National Unity Government with the Likud, based on parity and a rotation in the premiership, Mapam decided to leave the Alignment, but only after the coalition agreement had been signed. Mapam ran independently in the elections to the Twelfth Knesset, and then joined with the Civil Rights Movement, and *Shinui in establishing *Meretz, in which it constituted the socialist component. In February 1997 the three components of Meretz joined into a single party, and Mapam ceased to exist as a separate party. Meretz was a member of the government formed by Yitzhak *Rabin in 1992, in which Mapam’s Ya’ir *Tsaban served as minister of immigration absorption. Though Tsaban exerted little influence on the Government’s policies in the sphere of economics and the peace process, he was active in the spheres of religion and state and social issues. In the years 1994–97 Hayyim Oron of Mapam was treasurer of the Histadrut, after running in the 1994 Histadrut elections on Haim *Ramon’s Hayyim Ḥadashim ba-Histadrut list.

Traditionally the party’s power came from the Kibbutz ha-Arzi kibbutz movement, on the one hand, and organized urban groups, on the other. Until the 1980s it was the first group that was dominant. Later on the latter gained the upper hand. Mapam’s gradual loss of strength was a function of the general deterioration of the Left in Israel.

Mapam’s secretary generals since its foundation were Me’ir Ya’ari, 1948–71; Me’ir Talmi, 1973–79; Victor Shem-Tov, 1979–85; Eleazar Granot, 1985–97.

Its Knesset representation was as follows: First Knesset – 19; Second Knesset – 15; Third Knesset to Fifth Knesset – 9; Sixth Knesset – 10; Seventh Knesset – 9; Eighth to Eleventh Knesset within the Alignment: Eighth Knesset – 8, Ninth Knesset – 4; Tenth Knesset – 7; Eleventh Knesset – 6; Twelfth Knesset – 3; Thirteenth to Fourteenth Knesset within Meretz: Thirteenth Knesset – 4; Fourteenth Knesset – 3.

Until 2005 Mapam published a daily newspaper, *Al ha-Mishmar, which closed down for financial reasons, as well as a weekly in Arabic, Al Marsad.

MAP MAKERS. The first reference to a map is found in Ezekiel 4:1. The prophet is bidden to outline on an unburned brick, a plan of a city under siege, such as is found on Babylonian monuments. Nearer to real map making is a rudimentary map of the borders of Erez Israel which Maimonides attached to one of his responsa (ed. Freimann, no. 346, 311).

The earliest examples of real maps known to have been designed by Jews belong to the so-called portolano maps, which are charts of the coastlines of the oceans, mostly of the Mediterranean, designed for the use of navigators. Portolanos are first mentioned in connection with reports on the second Crusade of Louis IX, king of France, in Tunisia in 1270. They were drawn with surprising precision and distances are also remarkably accurate. These maps, whose origin is still somewhat of a mystery, may preserve an ancient Greek and Byzantine tradition of sea charts, with Jews serving, as in other branches of science, as intermediaries between antiquity and the Middle Ages. Jews on the Spanish island of Majorca, as well as from Alexandria and Safed, have signed their names as makers of portolanos.

The 14th and 15th Centuries

Abraham Cresques, cartographer and maker of portolanos, worked at Palma in Majorca, then part of the kingdom of Aragon. As the “master of maps and compasses” to the king of Aragon, he is said to have produced in 1376–77, together with his son, the six large leaves of the “Catalan Atlas,” which were presented by his sovereign to Charles VI of France. His son Judah, also a geographer and cartographer, was forcibly baptized in 1391 and christened Jaime (or Jacome) Ribés de Majorca; he became director of the nautical observatory at Sárges. Another Jewish cartographer of Majorca – who is conjectured to have belonged to Abraham Crescas’ family – was Hayyim ibn Rich. He, too, was converted at the time of the persecutions in 1391, adopting the name Juan de Vallseca. He was probably the father of the Gabriel de Vallseca who made another famous mapa mundi in 1439 – now one of the treasures of the Institute of Catalan Studies in Barcelona; it belonged to Amerigo Vespucci – in which the meridian of the Azores is used for the first time in the history of cartography. Another Majorcan cartographer of Jewish birth was Mecia de Viladestes, a map of whose (dated 1413) is preserved in the Bibliothèque Nationale in Paris.

Other Jewish Map Makers

Judah Abenzerara (or ibn Zara) is known as the maker of three portolano maps (Alexandria, 1497, in the Vatican College Library, Cincinnati; and the third with his signature followed by the words “Safed in Galilee, October 1505”). Gerard de Jode (de Judeis; 1509–1591), a maker of maps and publisher in Antwerp, was apparently of Jewish origin. A not very successful competitor of Abraham Ortelius, he published single maps and at-
lases. His work was based on sound geographical knowledge and was executed with elegance and technical perfection. His son Cornelius de Judeis (1558–1600) was his partner and successor. Abraham b. Jacob was an engraver at the end of the 18th century in Amsterdam. He engraved the map of Palestine in the Passover Haggadah which was printed by Moses Wessel in Amsterdam in 1696. It was the first map with Hebrew lettering. Aaron b. Hayyim of Grodno’s map of Palestine appeared in his Moreh Derekh (Grodno, 1839)3, which was printed by Meir Isaac Bajarski. Hayyim Solomon Pinia of Safed made a pictorial map of the Holy Land, which was edited by Joshua Alter b. Moses b. Phinehas Feinkind of Turek and lithographed by S. Litmanowitz in Turek (near Kalisz, Poland) in 1875; the text is in Hebrew. Another edition with a supplementary German text is lithographed on fabric.

[Herrmann M.Z. Meyer]

**MAPS OF EREZ ISRAEL.** Graphic descriptions of Erez Israel relating to its topography and history and based on factual data, are not only extremely valuable sources for the reconstruction of the physiographic and anthropogenic conditions prevailing there at the time they were drawn, but are also nearly always far more important as documents which give evidence on contemporary developments of cartography in general. In this respect the cartographic representation of Erez Israel differs fundamentally from that of any other country. The main reason for that was for its unique status and its special significance for believers in the three monotheistic religions which had such a decisive influence upon the culture and history of the Occident. Consequently Erez Israel became a main – at times almost a sole – object of cartography for several countries. There are innumerable maps depicting the “Holy Land,” and they date back to the very dawn of cartography. Another important aspect is that there is no major break in the cartographic representation of Erez Israel over more than a millennium and a half; thus the subsequent depictions of the country reflect the general developments of cartography and at times are even the principal reason for it. This resulted from the fact that the “Holy Land” was treated as a very special, even unique, geographical-historical and even cosmological object, involving specific problems as to adequate cartographic expression and therefore necessitating techniques and means that were not applied at all, or applied only partially and usually much later in maps dealing with other countries.

**Erez Israel in Ancient Cartography**

Only four map-like documents dating back to classical times are known at present. Of these only one has been preserved in the original (Madaba Map mosaic), while the three others exist in medieval copies only.

**MADABA MOSAIC.** This mosaic, partly destroyed when a church floor in Madaba was unearthed, is a typical pictorial map whose subject is the biblical countries, i.e., besides the land of Israel – to which it is mainly devoted – it depicts parts of Lower Egypt, Sinai, and southern Syria. For further details see *Madaba Map. It became one of the most important and reliable sources for the reconstruction in particular of the anthropogenic landscape of Erez Israel in the Byzantine period.

**THE PTOLEMAEUS MAPS.** In the maps which are ascribed to Claudius Ptolemaeus, a second-century Alexandrian cartographer, and which are drawn presumably to illustrate his treatise Περὶ γεωγραφικῆς ὑφήγησις (preserved only in medieval copies), Erez Israel is represented in the map entitled “The fourth part of Asia.” Its scale is very small; nevertheless, it is of great value since it contains much information pertinent to Erez Israel in the period of the Antonine dynasty. From the cartographic point of view its greatest importance lies in the fact that (as will be detailed below) it changed thoroughly all the fundamental long-held clichés concerning the representation of the Holy Land, and introduced northern orientation and an exact scale by the use of the longitude and latitude grid.

**THE PEUTINGER TABLE (TABULA PEUTINGERIANA).** The Peutinger Table seems to have been one of the very common road maps in use in the Roman Empire. The original table seems to have been drawn in the third century, and the extant copy probably dates from the 13th century. It is exceedingly long in proportion to its width (682 × 33 cm.), and its main subject, to which all other details are subordinated, is a communications network of the contemporary Roman Empire, specifically emphasizing its stations and the distances between them. Originally drawn in one piece, it was apparently cut into a series of sections of equal size later on. Erez Israel is depicted on it in the lower portions of the sections IX and X. It is assumed that the copy does not differ appreciably from the original; the most pronounced variances are, significantly, several “Christian” additions localizing, illustrating, and explaining sights and events of Christian-biblical interest and thus mainly found in the portion depicting Erez Israel and the adjacent regions. It has been assumed, therefore, that this preserved map was copied in order to serve as a guide to pilgrims traveling to Erez Israel and Rome. The map is not drawn to any scale, and the location of the provinces represented on it is dictated merely by the space provided by the elongated shape of the map which led to extreme distortions in their outlines and situation.

**THE “SAINT JEROME MAPS.”** There are two maps known as the Saint Jerome Maps, both of these copies drawn in the third century. They are included in a manuscript in St. Jerome’s De hebraicis quaestionibus et interpretationibus nominum Veteris et Novi Testamenti, and their contents provide evidence that the originals were produced at the time of the Church Fathers, but not necessarily by Jerome himself. Both are rather crude
black-ink sketches very generalized in style and content, and were thus important as precursors of a great number of maps drawn by monks in the medieval period. One of the drawings depicts the Roman Empire according to its division into provinces, emphasizing the places of special interest to Christians. As a portion of this map is missing, only the northern part of Erez Israel appears on it: the Mt. Hermon area and the sources of the Jordan (designated here as “Jor” and “Dan” – a toponymic deduction from the name of the river that prevailed throughout the Middle Ages). The second sketch contains both the whole of Erez Israel and the adjacent countries, Egypt, Syria, and Mesopotamia. Some of the most characteristic features of almost all the “scholastic” medieval maps are also present here: Erez Israel occupies the central part of the drawing and is represented out of all proportion to the surrounding countries, which appear as small unimportant appendages. Similarly, only places and topographical features of biblical interest appear on this map sketch.

In the Middle Ages

Although in general, cartography in the Middle Ages was of a low standard, cartography of Erez Israel reached a peak in this period, both in quantity and quality. For several centuries, Erez Israel was the sole, or at least the most important and prominent, subject of map making. Two kinds of maps existed in the Middle Ages:

a) World maps (mappae mundi), almost all of which were of an abstract nature, and were largely the work of monks. Their purpose was to explain and illustrate contemporary ecclesiastical views of cosmography and geography, which, rather than being based on a knowledge of reality, were based on the Scriptures, as interpreted by the Church Fathers and the scholastics, as well as by the writings of ancient polyhistors such as Pliny, Pomponius Hella, and Solinus. Not only was the content of these world maps decisively influenced by the Bible, even their shape (a circle or rectangle) was a result of dogmatic interpretations of certain biblical passages. The world maps are “oriented,” i.e., their top denoted the East, the presumed site of Paradise (which is shown on many of these maps as a geographical actuality). In all the maps, Erez Israel occupies a prominent place, in many instances as much as a sixth of the entire space (as for example in the famous “Anglo-Saxon” map). In some of the maps, which are so abstract in conception and drawing as to represent mere cartograms, Erez Israel takes up so much space that the other countries tend to appear as insignificant background only. The description of Erez Israel on these maps consists entirely of biblical topography, with an addition of explanations and traditional identifications of places. Furthermore, from the beginning of the Crusades up to the 16th century, Jerusalem, believed to be the “navel of the world,” was placed at the very center of all world maps. This of course, dictated the whole framework, structure, and composition of the map, fulfilling the role played in present maps by the reference location of the poles and the equator. The proportionally great detail of the historio-geographical and physiogeographic facts in which traditional particulars of Erez Israel were depicted or verbally denoted on the maps (such as Mt. Gilboa, Mt. Tabor, various springs, caves, trees, holy places, etc.), however, made it necessary to invent new forms for expressing such details, and this seems to have had a lasting effect upon the development of symbols and signs used in maps in the following centuries. Among medieval maps there were many sketchlike maps of Jerusalem that were generalized and geometrical and served as guides to pilgrims and Crusaders.

b) The portolano maps, which appeared in the late Middle Ages, were used mostly for purposes of navigation and were probably derived from charts developed as early as the Byzantine period. Many Jewish cartographers were involved in the production of this kind of map, in particular those of the Catalan school, centered in Majorca. The most renowned representatives of this school were Abraham and Judah (Jaime) Cresques; the latter drew the Catalan Atlas, the most beautiful and advanced project of the portolano cartography. Although on these maps Erez Israel no longer occupies a disproportionate amount of space, it continues to exhibit many specific aspects, both as to content and cartographic execution. Since these maps were sea charts aimed at serving navigation, they concentrated primarily on the delineation of coastlines and the location of ports, and show hardly any details of the interior, except perhaps for a flag (banner?) signifying the political control of the country. An exception is made in the case of Erez Israel, for which the relevant portion of the map shows great inland detail, such as the Jordan and its lakes, holy places, and important churches and monasteries. The Red Sea is shown in red or crimson (whereas other bodies of water are shown in blue or light green); a white strip marks the site where the Israelites are presumed to have crossed the Red Sea. It has become increasingly certain that the portolano maps served as the basis of the few regional maps made in the Middle Ages (at least the few that have been preserved). All of these maps (with one exception, which also contains Britain; see the Matthew Paris map, below) have Erez Israel as their subject. Considering the period in which they were made, these are exceptional maps: (1) They are the outcome of either direct observation or factual and critically adapted information. (2) Their contents are of a topical nature, describing Erez Israel during and after the time of the Crusader Kingdom of Jerusalem, though they also contain many details based on biblical tradition – so important for every Christian pilgrim in the Middle Ages but not corresponding to the reality of the country and in contrast to the factual content of the map. (3) They generally serve a practical purpose, i.e., as guides for armies or pilgrims. (4) Some of the maps and techniques exhibit specific features that denote marked progress in cartography and were used in the maps of other countries only much later.

The outstanding medieval maps of Erez Israel that have been preserved are the following: (1) A large map (2,080 sq. cm.), preserved at Florence, that is extraordinary not only with regard to its delineation of the coast, which corresponds
closely to reality as is the rule with portolano maps, but also as to its wealth of detail. The details, however, are of a much lower standard; for example, the markings of locations—which is a major subject of all medieval maps—are out of proportion to the areal extension of the map. The map is oriented to the East, in contrast to the portolano, thus reflecting the prevailing influence of the *mappae mundi* and their affinities. (2) A sketch map of Erez Israel at Oxford, whose portolano origin is evidenced by its orientation to the North. It contains a great number of topical details, including some based on observation, such as a unique description of the road leading from the coast to Jerusalem. (3) Another map kept at Florence, outstanding in the quality of its illustrations and colors, but inferior in content to the two maps mentioned above. Because of its highly heraldic and ornamental designs and its wonderful coloring, it represents one of the most pronounced examples of the artistry employed in the late Middle Ages. (4) A map drawn by Matthew Paris of England (1250 C.E.), outstanding for its unique description of the road system and its allusions to caravan traffic between Erez Israel and Syria. Some places, especially Acre, the most important Crusader fortress, are depicted in great detail in a separate small vignette. Paris was also the author of an illustrated road guide (England to the Holy Land) which is unique in cartography. The map has the form of a long strip and signifies with miniature designs the stops along the route between the two countries; the stops were usually churches or monasteries that pilgrims customarily visited, and even the roads leading from one stop to the next are indicated by two parallel lines. (5) Medieval cartographic presentation of the Holy Land reached its climax in a series of maps and sketches attached to a memoir by the Venetian Marino Sanuto, appealing for a renewal of crusading (*liber secretorum fidelium crucis*). The map appendage consists of a map of Erez Israel, a rather stereotyped *mappa mundi*, a map of the Near Eastern countries, and a detailed, extremely accurate sketch of Acre, and a far more conventional one of Jerusalem. It is now established that at least the maps of Israel and of the Near East were drawn by Pietro Vesconte, a noted portolano cartographer. The map of Erez Israel is an astounding piece of work, anticipating various future cartographical developments by several centuries. It is not only relatively exact in scale—a characteristic common to most portolanos as far as the coasts are concerned— but also exhibits a grid of longitudinal and latitudinal lines equally spaced throughout at the distance of 1 “leuca” (approx. 2,500 meters). The location of the towns and villages, at least those existing at the time, is rather exact, as are the sites of most topographical features represented in the map. Another extraordinary feature is the wealth of information (besides the usual indication of biblical sites, the areas assumedly occupied by the tribes of Israel, and pertinent remarks and explanations derived from the Bible) on the contemporary situation, based, as were the above-mentioned features of the map, on the author’s personal observation and/or intensive study of the memoir. Because of its relative accuracy and abundance of detail, the map served as a pattern for other maps during the Renaissance period; however, its grid was generally replaced by the Ptolemaic latitude and longitude grid. (6) A map drawn by William Wey in the 15th century. It is a typical medieval depiction of Erez Israel, in which all the elements of medieval presentation of this country are incorporated and superbly executed, in particular the pictorial embellishments and the coloring (illumination).

**Erez Israel in Arab Cartography of the Middle Ages**

In general, medieval Arab maps were more exact, more detailed, and more comprehensive than European maps, but in technique they were far more uniform and stereotyped, employing outlines and symbols of a strictly geometric nature. In Arab maps, Erez Israel did not occupy the most prominent place. The best and most comprehensive Arab map of Erez Israel was made by Idrissi, whose cartographic works represent a mixture of Moslem and Western European style and content.

**In Modern Times**

The cartographical representation of Erez Israel underwent some fundamental changes in modern times: 1. As a result of constantly growing geographical knowledge (gained from the works and maps of Ptolemaeus) and the extensive discoveries of whole continents, accompanied by the development of the sciences, in particular those dealing with the earth—its astronomical position, movements, and surface nature, Jerusalem could no longer be regarded as the “navel of the world” and ceased to be used as the center of world maps. 2. The mathematical and astronomical fixing of locations—by means of lines of longitude and latitude—based upon the method used by Ptolemaeus and arrived at by exact measurements, made it possible to establish the proper outlines of the countries and their relative size. Each map was now based on a distance scale and it was no longer possible to exaggerate the size of Erez Israel in comparison with the other countries of the world. 3. However, whereas the maps of other countries usually contained only details of a contemporary nature, maps of Erez Israel retained their historical character. The main purpose of these maps was to describe the topographical and geographical background of the events described in the Bible and the Gospels, and they ignored the actual landscape of the country, and in particular, the anthropogenic features (villages, roads, etc.). For this reason, a contemporary map of Erez Israel (*tabula moderna*) was usually attached to the Ptolemaeus maps, made to a much larger scale, orientated to the East, and containing many traditional topographical designations. Most of these maps were based on that of Sanuto. Nevertheless, for a variety of reasons, maps of Erez Israel retained their special importance in the early modern period: (1) For various historical and religious reasons (the Reformation, Bible translations), the invention of printing made maps of Erez Israel the most popular and most widely distributed maps; they were also the first to be produced in print. (2) The competition resulting from the wide demand for maps of Erez Israel that provided the location of sites mentioned in the
Bible, caused these maps to become generally the most splendid and beautiful ones produced in this period; this applies particularly to the signs and symbols used on the maps, the decoration of the margins, and the cartouche, i.e., the part of the map separated by an ornamental enclosure containing the title of the map, its author, the scales, sources, and so on. The historical content, that seemed to illustrate the background of the Bible and Gospels with the little contemporary geographical detailing that was available during the Renaissance period, made it possible to experiment with the maps and even led to innovations as regards scales, symbols, shading, coloring (illumination), etc. Thus the first indication of magnetic variation was made on a map of Erez Israel.

Erez Israel in the Era of Atlases. The magnificent atlases produced during and after the Renaissance, in Western and Central Europe, usually contained at least two maps of Erez Israel, which were the works of different cartographers and were scarcely compatible with each other. One of the maps forms an integral part of each atlas and is usually based on Ptolemaeus; it is oriented to the North, contains some slight changes in the delineation of the coast and some additional relief features and hydrographic details, and a wealth of place-names mentioned in the Scriptures, in the works of Josephus and so on. Thus, in essence, the map depicts Erez Israel as it is shown in “The fourth part of Asia” by Ptolemaeus. There are numerous instances, however, in which the Erez Israel map in the atlas is oriented to the East and is much closer in content and nature to the Sanuto map, with the important addition of the use of the astronomic longitude and latitude grid derived from Ptolemaeus. The second map of Erez Israel (and sometimes even a third, produced by yet another cartographer) is found among the numerous addenda (additamentum) that were attached to the atlases in this period. Important Erez Israel maps in this period were produced by Ortelius, Mercator, Tilemanus Sigenensis, Laicstein, Blaeu, Janszon, Homann, Sanson, Seutter, de Lille, Bonne, and d'Anville. The maps made by the last three cartographers mentioned (who represent the French school) were superior to others in the precision of their content and may be regarded as the most advanced maps prior to those of the 19th century. There were also maps of Erez Israel that were attached to the numerous cosmographies published in this period (of which that by Sebastian Muenster was the most widely distributed). Even more important, as a source for the maps appearing in the atlases, were the various works on Erez Israel, which contained maps made to a large scale. Among these, mention should be made of the works of Jacob Ziegler, Adrian Adrichomius (1590), and last and most important, Hadrianus R Ballardus’ *Palaeestina ex monumentis veteribus illustrata*, which contains a number of detailed and relatively precise maps, especially one showing the relief and the consequent physiographic division of the country in the coastal plain, the mountains, the Valley of the Jordan, and the Transjordan plateaus. Only a single map of Israel, made in 1483 by Bernard Breitenbach, is based entirely on the author’s personal observation and describes the country as he saw it. Combining both the medieval and modern cartographic style, the map enjoyed great popularity.

In the 18th and 19th Centuries

The first mapping of Erez Israel based partly on topographical survey was made in connection with Napoleon’s campaign in Egypt and Erez Israel. The main result of this was a series of 47 maps of Egypt, Sinai, and Erez Israel, named the Jaconin maps after their author (1810). Six of the maps depict parts of Erez Israel, especially those parts through which the army passed on its invasion of the country. The scale is 1:100,000, and the maps show precise details of the areas where measurements were taken by means of the trigonometric methods that had developed in Europe by this time (based on the theodolite and the principle of triangulation). Thus, even the representation of relief on these maps was relatively exact and adequate. Relative differences in height and the diverse gradients of the slopes are shown by hachuring (i.e., expressing the gradient of the slope by discontinuous, proportionally dimensioned lines extending down from the summit to the base of the slope; the steeper the slope the shorter but thicker the hachure line and vice versa), and in general, the rest of the details shown on the maps, i.e., symbols and so on, are of a high standard. Some of the place-names are given in Arabic script, in addition to Latinized transcription. For a period of about 50 years these were the maps used in the exploration of the country.

Toward the end of the 18th century and in the first half of the 19th century, Erez Israel became the subject of numerous exploratory voyages and expeditions, as though it was still “unknown territory.” Although the emphasis was on the archaeological and historical aspects of the country, much attention was also paid to its natural conditions including its physiography. In particular, interest was centered on the Jordan Valley and the Dead Sea, because they formed the lowest depression on earth. The works produced by such itinerant scholars and explorers as Seetzen, Burckhardt, Buckingham, and Robinson generally included sketch maps of some areas and sites, and an overall map of the country. Outstanding among these maps is the one attached to Robinson’s work, drawn by Kiepert, the well-known German cartographer. An American naval expedition, led by Lynch, executed a map survey of the Jordan River and the Dead Sea. All these works were summarized in *Erdkunde von Asien* (“Geography of Asia”), the famous work by Ritter, which also contains a comprehensive list of all known maps of Erez Israel, from ancient times up to the 19th century. A companion to Ritter’s work, the atlas by Zimmermann, contains detailed maps of Erez Israel, to the scale of 1:333,333. All the maps listed above were used as an important source for the study of the landscape of Erez Israel in the first half of the 18th century. The final work of this period of individual research and mapping was the map of Van de Velde (scale 1:315,000), one of the most beautiful maps of Erez Israel of this time.
In the second half of the 19th century, the existing maps were felt to be insufficient to meet the requirements of the growing interest in the country, especially for archaeological purposes. The Palestine Exploration Fund (PEF) was established in Britain to carry out a systematic survey of Erez Israel “from Dan to Beer Sheba.” The work of the fund was preceded by a survey of the coastline and the adjoining hinterland, ordered by the British Admiralty (1858–62). They established not only the exact outline of the coastline but also a fixed number of points that were of great help in the survey that followed. An early project undertaken by the Fund was a survey of the Sinai Peninsula, aimed at establishing the route of the Exodus and the location of Mt. Sinai. The maps of Jebel Katerina (the presumed location of Mount Sinai) and Jebel Serbal, whose relief is expressed by form lines, are among the finest maps of the entire area. The first undertaking of the Fund in Erez Israel proper was a survey of Jerusalem and its surroundings (1864), carried out with a precision hitherto not applied in the Near East. In the resulting maps the relief was presented by the hachuring method. In 1871 an expedition of the Fund, led by Conder and later on by Kitchener, embarked upon the main mapping project. The survey encompassed the entire country, from the Qasimiye River up to south of the Dead Sea, and resulted in a set of 26 sheets, made to the scale of 1:63,360 (inch to mile), as on the British topographical maps, and based on a precise triangulation (two base-lines), leveling (Acre–Sea of Galilee, Jaffa–Dead Sea), and altimetric measurements. The relief is represented by means of shading and tinting. In many instances the height is also given in figures; rivers and springs are shown in blue; the various kinds of vegetational cover are indicated by accordant symbols, as are also anthropogenic features. The maps are particularly accurate in the location of the many existing ruins of ancient places of settlement; much effort was also devoted to establishing the names of places and their proper transliteration. The Fund published its Memoirs, and they serve to this day as an important geographical and historical source.

“The Survey of Western Palestine” was followed by efforts to carry out a similar survey of Transjordan, which, however, failed for a variety of reasons. Only the Deutscher Palaestina Verein eventually carried out a survey of Gilead, executed to the same scale as the maps of PEF. The maps of the PEF and, to some extent, the German maps too, served as a basis for Erez Israel maps that were produced up to the conquest of Palestine by the British. Among later maps based on those of the PEF, the most important was the Bartholemew map, in which the relief is expressed by contour lines and the subsequent altitude zones are also indicated by varying coloring. In World War I the existing maps were adapted to military requirements, with the help of aerial photography. The maps employed by the British army were made to a scale of 1:140,000, those of the German army to 1:50,000. Shortly before World War I a survey of the Sinai Peninsula was carried out by Newcombe, to a scale of 1:125,000; this included the Negev and the relief was represented by contour and form lines. Shortly after its establishment, the Mandatory government embarked upon a new survey of the country, using up-to-date methods. Two series of maps were printed, one a topo-cadastral set, made to a scale of 1:20,000, and the other a topographical set made to a scale of 1:100,000. This survey was also restricted to the area of Erez Israel extending from the northern political boundary to somewhat south of Beersheba, and consisted of 16 sheets. In these maps the relief was presented by contour lines with a vertical interval of 25 meters. Agricultural areas appear in green and the hydrographic network in blue. The mapping was executed with comprehensive triangulation and fieldwork. Other maps produced by the Mandatory government were maps of the major cities and villages (scale 1:10,000) and a geographical map of the country (1:250,000). During the Mandatory period, efforts were also made to produce a Hebrew map of the country (Press, Brawer, Lief). These were necessarily adaptations of 19th-century maps and those issued by the government Survey Department but they made important contributions to the proper identification of localities, and the use of historical place-names and Hebrew transliteration. With the establishment of the state, “Survey of Israel” became one of its basic governmental institutions in view of the country’s ever-expanding exigencies, in particular those connected with economic-demographic planning. These were met by extensive triangulation, leveling which also resulted in a dense altimetric network, new additions (Hebrew) of totally revised and updated map series 1:20,000 and 1:100,000, largely improved not only by the above-mentioned measurements but also by the thorough use of photogrammetric techniques. The 100,000 series is continuously supplemented by a far more comprehensive one at a scale of 1:50,000. The Israel Atlas (Heb. 1956–64) and its English edition (1970) – the latest additions to the series of “National Atlases” – summarize both the history and the development of the cartographic representation of the country and its present state in all the fields given to cartographic expression. In the early 21st century, the Survey of Israel was responsible for producing new maps in various fields, such as historical maps, topographical maps, regional maps, general maps, satellite maps, etc. The recent maps were produced with new techniques such as GIS (Geographical Information Systems) and satellites. The Survey of Israel was also in charge of the updating of the Israel Atlas.

MAPU, ABRAHAM (1808–1867), creator of the modern Hebrew novel. One of the principal exponents of the Haskalah movement in Eastern Europe, he is best known for his first and most successful novel Ahavat Ziyyon (“The Love of Zion,” Vilna, 1853), which represents a turning point in the development of modern Hebrew literature. The son of an indigent and scholarly teacher, Mapu was born in Slobodka, a poverty-stricken suburb of Kovno, where he early acquired a reputation as a brilliant student, and, having mastered much of the talmudic learning of the day, was considered fit for independent study at the age of 12. Following his marriage at 17, Mapu continued his studies in the home of his wealthy father-in-law in Kovno. After a brief flirtation with Hasidism, he resumed an interest in Kabbalah and mysticism, previously fostered by his father. This occasioned a period of close contact with Eliezer *Ragoler. The chance finding of a copy of the Psalms with a Latin translation in Ragoler’s home aroused his interest and he taught himself Latin, virtually an unknown study among pious Jews in Eastern Europe. Eventually he acquired a fair proficiency in French, German, and Russian, in spite of the prevailing hostility in Orthadox Jewish circles to the learning of languages. These studies plus an interest in such equally neglected subjects as Bible, Hebrew grammar, and modern literature laid the foundations of his subsequent achievements.

Throughout his life Mapu struggled to maintain his family. He became a teacher of young children and was invited in 1832 to tutor the children of a wealthy merchant in the nearby town of Georgenberg. While separated from his family for two or three years, he was drawn to the Haskalah movement, and, on his return to Kovno, he began to disseminate its doctrines among the local youth. In 1837 Mapu moved his family to Rossii, where he taught for about seven years. In spite of his economic hardship, Mapu found the cultural atmosphere of Rossii attractive. There his friendship with Senior *Sachs engendered a profound interest in the history of ancient Israel. In an attempt to improve his finances Mapu returned to Kovno in 1844. His wife died in 1846, and the following year he moved to Vilna to tutor the son of the wealthy but unlettered Judah Opatov. Despite Vilna’s reputation as a great center of Haskalah, Mapu found the city no more congenial than the house of his harsh employer. On learning of Mapu’s appointment to teach at a government school in Kovno in 1848, Opatov assaulted him physically. Mapu, deeply humiliated, fled the house. He avenged the insult by modeling the character of the boorish upstart, Ga‘al, in his novel Ayit Zavu‘a (“The Hypocrite”) on his former employer. From the Hebrew writers of Vilna, however, Mapu acquired the taste for Romanticism which permeates his novels.

As the new post proved permanent, Mapu settled in Kovno and remarried in 1851. For about ten years domestic happiness and improved financial circumstances coincided with his most fruitful literary period. His growing reputation was enhanced in 1857 by the personal congratulations of the Russian minister of public institutions, Norov, a singular honor which induced Mapu to include a poem in Norov’s honor in the introduction to his lost novel Hozei Hezyonot (“The Visionaries”). But from 1860 his health began to fail beneath the burdens of overwork and persecution by the pious opponents of Haskalah who managed to influence the censors to delay or even forbid his publications. His meager resources were further undermined by his second wife’s long illness, from which she died in 1863. His later years were relieved only by a short visit to St. Petersburg in 1861, where his first acquaintance with opera appealed to his romantic imagination. The loneliness of his last years was aggravated by a disease of his fingers, which made every line he wrote an agony.

Although Mapu was 45 when Ahavat Ziyyon was published he seems to have labored on the novel, despite its modest length, for more than 20 years. While the plot may well have been originally modeled on the allegorical dramas of M. *Luzzatto, the influence of Senior Sachs directed Mapu’s attention toward the Bible, so that the first Hebrew novel also became the world’s first novel in a biblical setting. Ahavat Ziyyon won immediate acclaim, and its continued popularity is attested by at least 16 editions, as well as translations into many languages including English, French, German, Russian, Arabic, Judeo-Arabic, Judeo-Persian, Ladino, and Yiddish. The more liberal spirit prevailing in Russia during the early reign of Alexander II prompted Mapu to choose a contemporary setting for his second novel Ayit Zavu‘a. Of the five parts comprising this long and rambling novel, the first was published in Vilna in 1858, the second in 1861, and the third in 1864. A second edition containing all five parts appeared posthumously in Warsaw in 1869. About ten editions show its popularity. Mapu had been simultaneously composing a third novel, Hozei Hezyonot, depicting the period of the pseudo-Messiah, *Shabbetai Zevi. Reputed to have been in ten complete parts, the work was sent to the censor in 1858, together with the first two parts of Ayit Zavu‘a. Whereas the publication of the latter was subject only to irritating delays, the campaign of the fanatical opponents of Haskalah persuaded the censor to forbid publication of Hozei Hezyonot altogether. The manuscript disappeared, and only a seven-chapter fragment remains. Mapu never completely recovered from this loss. To avoid the persecution of his opponents, he reverted to a biblical background for his fourth and last novel, Ashmat Shomron (“The Guilt of Samaria,” Vilna, first part, 1865; second part, 1866). Again, this achieved some ten editions.

Apart from his novels, Mapu published several books designed to improve the clumsy educational methods of his day. Two of his textbooks, Hanokh la-Na‘ar and Der Hausfranzose, appeared in Vilna in 1859. The former outlines the author’s method for teaching elementary Hebrew, while the latter
comprises a primary textbook for the study of French. Written in German but with Hebrew characters, it constitutes an interesting example of the attempts made by the exponents of Haskalah to broaden the cultural interests of the Jewish community. A third textbook, *Amon Pedagog* (Koenigsberg, 1867), again deals with the teaching of Hebrew. But even within the framework of a textbook, his creative talent emerges in the form of a story, later published separately by J. Klausner under the title *Beit-Hanan* (Jerusalem, 1920), which is unfolded section by section to illustrate the rules to be explained. *Amon Pedagog* served as a standard textbook until the end of the century, and went through five editions.

Mapu's creativity contains both strongly imitative and highly original features. The influence of the Bible is naturally most conspicuous in the setting, style, and language of the two historical novels, *Ahavat Ziyyon* and *Ashmot Shomron*, which depict life in ancient Israel in the days of Isaiah. In lesser measure it also extends to *Ayit Zavnu* which portrays contemporary Jewish life, mainly in his native Lithuania. Aspects of his novels were derived from other sources, principally Hebrew and French writers. His limited inventiveness is demonstrated by his frequent borrowing of dramatic devices and by the many repetitions and similarities which occur in his stories.

Of the Hebrew writers who influenced Mapu, M. H. Luzatto's example may be discerned in the plots, dramatic devices and symbolic names, as well as in the didactic and ethical ideas, and the interest in nature. From N. H. Wessely, whom he held in almost equal esteem, Mapu derived less specific but no less important elements, such as the linguistic narrative possibilities inherent in the Bible. Moreover, the social and educational reforms advocated in Wessely's series of open letters *Divrei Shalom ve-Emet* found an enthusiastic echo in Mapu's novels, especially *Ayit Zavnu*. Among Hebrew prose writers, the Galician exponents of Haskalah, J. Perl and I. Erter exerted considerable influence on Mapu. From their satires on the shortcomings of society, he learned how to use melodrama and farfetched incidents. The letters and dreams which Perl and Erter frequently introduce as convenient media for their satirical purposes are a characteristic feature of Mapu's novels. Many of his characters embody their demands for radical changes in outlook and occupation in Jewish society.

Mapu's novels also owe a considerable debt to the French romantic novelists, the elder Dumas and Eugène Suë. Like Dumas, Mapu turned his attention to the national past, infusing an historical situation with heroism and romantic love, and introducing historical personages side by side with his own creations. From Dumas, Mapu learned the art of creating atmosphere and of clothing his plots in a romantic historical mantle while the influence of Eugène Suë is particularly noticeable in Mapu's novel of contemporary life. But whereas the violence and intrigue encountered in Suë's *Mystères de Paris* are perfectly in keeping with its background of the Paris underworld, the attempt in *Ayit Zavnu* to superimpose such elements on a backcloth of Jewish society in Eastern Europe, which was characterized by sobriety, timidity, and a rigid control of the passionate emotions, is primarily responsible for the incongruity of the setting and the plot.

The original and creative element in Mapu's writings does not lie in the external forms of his novels. The structure, dramatic techniques, and characterizations and stereotypes personifying vice and virtue, all lean heavily on previous writers, and all display grave weaknesses and limitations. For Mapu's own generation, however, the plots, particularly of the historical novels, were the most attractive and fascinating aspect of his work, both because this literary medium was unknown in Hebrew literature and because the adventure and excitement provided so striking a contrast to the colorless lives of most of his readers. The vivid descriptions of heroism and action, the free expression of emotion, and above all the colorful scenes of a people living unrestricted in its own land inflamed the imagination of a life-starved generation. His success in arousing imagination and emotion and his ability to transfuse a somewhat dry and intellectual literature with the feelings of heroism and romantic love constitute the most striking elements of his achievement. By fostering pride in the national past and focusing attention on the land of Israel, Mapu provided an emotional stimulus for generations of young readers. Indeed, the contribution of his novels to the rise of the Jewish national movement from which Zionism later emerged must be regarded as an important factor in modern Jewish history.

Mapu's use of language was equally remarkable. The restricted vocabulary of biblical Hebrew and its limited dialogue seriously curtail its suitability for the modern novel. The narrative power of the biblical story stems, moreover, from its tantalizing brevity and its ruthless pruning of extraneous detail. The Bible story relates a series of events in sequence of time, with little analysis or speculation. It presents a skeleton narrative, leaving the reader to supply the flesh and blood. But the novel demands techniques of a different kind. It is expansive and has to supply those very elements and details which the Bible is so careful to omit. Yet Mapu adopted a medium for expansion whose main strength lies in strict omission, knowingly risking the constant comparison of his own creation with the lofty grandeur of the original. Mapu attempted to solve the problem of language by using his material to the full. The entire Bible became a source for his invention. His style constitutes a fusion of elements of the prose and the poetry of the Bible. Appropriating and refashioning at will, he molded the material to suit his purpose, while retaining much of its original spirit. In spite of the frequent introduction of entire phrases and complete images, he avoided the danger of producing a jumbled patchwork of biblical snippets. So smoothly do they merge with the texture of his own style that the result is neither an imitation nor a parody of the Hebrew Bible. This sensitivity to language is one of the most attractive features of his novels. But Mapu was well aware that he had stretched his material to the limit. In *Ayit Zavnu* he deliberately introduced post-biblical elements, and himself protested that bibli-
cal Hebrew was not an adequate vehicle of expression for the modern novel. His writing may be regarded as the consummation of the neobiblical style advocated by the exponents of Haskalah. No major Hebrew novelist attempted to emulate his achievements.

Although aesthetically the least satisfying, it was *Ayit Zavu’a* with its emphasis on social and educational reform that exerted the most influence on subsequent Hebrew writers. The realistic elements of Mapu’s social novel may be traced in the words of many writers, including P. *Smolenskin, J.L. Gordon, R.A. *Braudes, M.D. *Brandstaedter, and S.J. *Abramovitch (Mendele Mokher Sforim), all of whom furthered the positivist and social aspects of his work. Indeed, the realistic novel depicting the problems of contemporary society has continued to occupy a dominant position in Hebrew literature.

For the Hebrew reader, Mapu’s first novel, *Ahavat Ziyyon*, was uniquely influential. It opened the prospect of a free and independent life to a people hopelessly fettered by political, social, and economic restrictions. Its significance lies in the fresh possibilities of art and life which it revealed, and in the new awareness it promoted. As the first Hebrew novel, it represents the first expression of a people’s longing for a fuller and better life. The English translations of *Ahavat Ziyyon* were published under various titles: *Ammon, Prince and Peasant*, tr. by F. Jaffe (1887); *In the Days of Isaiah*, tr. by A.M. Schapiro (1902; the same translation was published later under the title *The Shepherd Prince* in 1922 and 1930); *The Sorrows of Noma*, tr. by J. Marymont (1919). His letters were published by B. Dinur under the title *Mikhiteve Avraham Mapu* (1971). Following the 1928 edition of Mapu’s works in five volumes, further editions were published in 1945 and 1953.

**MAQĀM**

MAQĀM, and its regional equivalents – *maqom, mugham, dastgah* and *ṭāl –* designate characteristic modal scales that are identified by a multitude of individual names like *rast, buzurk, segah, dil bayāt*, etc. In a broader sense the *maqām* concept is also associated with a series of compositional principles, including the use of melodic types that are characterized by tonal material and motifs as well as a series of conventions prevalent in major centers of the world of Islam, from India to North Africa. In its most sophisticated form the concept of *maqām* and its principles are applied to many compound and cyclic vocal and instrumental compositions with contrasting parts that include various levels of improvisation. This is for instance the case of the *shashmaqām* in Uzbekistan and Tajikistan, the *Azarbadajani maqām*, the Persian *radij*, the Turkish *fasil*, the Egyptian *wasla*, the *Iraqi maqām* and the North African *nuba* and *ṭāl*. The modal scale includes a complex of rules. It is conceived as combination of several small groups of notes, whether of the same intervallic structure or not, called genera (ajnās, s. jins). As a result of this characteristic, many combinations can be created theoretically, but only a limited number have been admitted or commonly accepted and are known by their individual names. Part of the modal scale is linked to a definite pitch, and a group of notes transposed is considered to be a different entity and consequently may receive a new name. In brief, the tonal material and the structural rules are put at the disposal of the musician who in playing and singing invents new variants, improvises, and adds musical ornamentations. In addition to this, ethical and cosmological speculations are linked to the concrete application of the *maqāmāt* in diverse circumstances. Aleppan Jews are very fond of this linkage.

It has been proposed, with weighty arguments, that the puzzling designations found in the headings of many *Psalms* ("upon the sheminīt," “upon yonat-elem-rehokim,” etc.) may not be names of instruments, scales, or prototype melodies, but of *maqām*-like melodic schemes; and such are probably also the superscripts and subscripts of the song texts found in Assyro- and Babylonian cuneiform documents.

The Near Eastern Jewish communities use the local *maqāmāt* for the creation and classification of many of their liturgical and paraliturgical melodies. Even the cantillation of the masoretic accents is submitted to a “maqām” correlation, and is obviously affected by it in its melodic content. The following selection of “maqāmic correlations” is based mainly on the research of A.Z. *Idelsohn; maqām Sīghah can be correlated with the Pentateuch, Ruth, Ecclesiastes, Esther, and the *Amidah* for the High Holy days; *maqām Bayāt* with the prophetic books and Lamentations; *maqām Ṭāj* (Persian name: *Naʿūrīz*, “The New Year’s Day”), associated with exaltation, magnificence, and actual or symbolic wedding functions and ceremonies, with Simhat Torah, Shavuot, the seventh day of Passover, and *Shabbat Shirah; maqām Nawa* with Sabbath Eve (cf. *Lekhah Dodi*) and Sabbath morning; and *maqām Sābā* with circumcisions and prayers on Sabbaths on which the weekly portion of the Bible mentions circumcision.

In several Near Eastern communities the prayer of each Sabbath and festival has its own appropriate governing *maqām*. The Aleppan *bakkashot* singing is entirely governed by a sophisticated maqamic organization, and between the single or grouped *bakkashot* there is a *petihah* (opening – a
vocal improvisation), a verse or a psalm serving as a melodic vehicle for modulation from one maqām to the other. This attains its zenith in the performance of the sabbatical psalm (Ps. 92) wherein each verse is sung on a different maqām. Such modulations are also made in the solemn recitation of the Ten Commandments, the hazzan displaying his virtuosity by skillfully passing through the maximum number of maqāmāt. The Moroccan bakkashot are organized into a series of piyyutim corresponding to the number of Sabbaths between Succot and Passover, each having its appropriate tbol'.

All the above are unwritten conventions. The written indication of the maqām is found in all manuscript and printed collections of piyyutim produced in the Near East since the time of Israel *Najara, who was apparently the first to compose and organize his piyyutim according to this system. In his Zemirat Yisrael the poems are divided by maqāmāt, in the following order: Husseini, Rast, Dīghah, Sīgah, Nawā, Busilik (a Turkish maqām), Husseini, Naʿāt-ʿĀjām, Uzāl, and Iraq. The practice has continued to this day, and even recent songs have been fitted into the system, so that in the collection Shirei Yisrael be-ʿErez ha-Kedem of the Adrianople community (Constantinople, 1922) the anthem "Ha-Tikvah can be found in maqām Nīḥawand.

[Busiyya Bayer / Amnon Shiloah (2nd ed.)]

MAQĀMA (pl. maqāmāt), a narrative in rhymed prose, a collection of short independent stories interlaced with short metrical poems. The maqāma originated in about the tenth century C.E. with the Arab poet Ibn al-Fāṭīmā ibn Ḥusayn (Al-Hamdānī) and reached its peak with al-Ḥarīrī of Bosra (c. 1054–1112). It was imitated in different languages (Persian, Hebrew, Syriac) and times. Derived from the Arabic word maqām ("place"); cf. Hebrew makom), maqāma refers to the public place where people gathered to listen to rhetoric; it has been translated also as "assemblies" or "sessions," alluding to the meetings themselves. In Hebrew the accepted name for this genre is mahberot (pl. mahbarot). In all the languages in which it was written it meant a relatively later variation in respect to the conventions of poetry that usually preceded this genre in prose. In later times it was considered no less valuable, and even more difficult, than poetry, involving its own style, content, and peculiarities. The maqāma was a very imaginative art of writing, full of extravagant, mannered rhetoric with a large amount of humor, and its stories included realistic or caricatured characters that could never have been introduced in a poem. It was also less formal and conventional than poetry, more realistic, like many other cultural manifestations of medieval society. However, the literary study of these compositions, and of Hebrew rhymed prose in general, has been, in the words of D. Pagis, "sorely neglected."

The classical maqāma was created when a narrator described the particular behavior of a talented and quick-witted hero, skillful at mockery and jest, who appeared at the "place," in the middle of the "assembly," flaunting his erudition, particularly in language and literature, and delighting listeners (and ultimately readers) with humorous remarks and stories. At the "place" he frequently encountered an acquaintance of similar abilities or the narrator himself. The two, pretending not to know each other, would engage in an amusing conversation which culminated in the mutual recognition of their friendship.

Hebrew classical maqāma has a rather fixed structure, with different episodes or adventures of the protagonist told by the literary narrator. A narrative frame, creating a background and describing the scene, and a more or less conventional conclusion, encloses the details of the different episodes. The language used is pure biblical Hebrew, constituted many times by a mosaic of biblical quotations (shibbus) that receive a completely new meaning.

Shortly after they were introduced as spoken expressions, maqāmāt were put into writing. In the course of time other humorous stories and pieces in rhymed prose began to be called maqāmāt even though they did not contain the typical gay talk of the classical maqāma. Scholars today, however, have very different attitudes in respect to the use of the name "maqāma" for all kinds of narrative texts in rhymed prose. It is true that even the Arabic maqāma changed notably with different times and places: for instance, in al-Andalus artistic storytelling created new forms, including long narratives with single plots. In Hebrew literature from the 12th to 15th centuries there are narratives that do not have all the characteristics of the classic Arabic maqāma, and it is disputed among researchers whether we should use the same name for this kind of composition, or if they have to be classified as maqāma-like narratives, as many literary historians prefer today.

The author of the first known Hebrew maqāma is Solomon ibn Zakbel (*Ibn Sahl) who lived in Muslim Spain during the first half of the 12th century. Later authors of Hebrew works in this genre are Joseph *Ibn Zabara, who wrote Sefer ha-Shaʿāshuʿim and *Judah ibn Shabbetai, who wrote Minhāt Yehudah Sone ha-Nashim. However, the greatest writer of the Hebrew maqāma is Judah *Al-Harizi. After translating into Hebrew, under the title Mahbarot Ittiʿel, the maqāmāt of Al-Ḥarīrī (adapting their content and language to his audience), he wrote in Hebrew the Tahkemoni, which contains 50 maqāmāt. Al-Harizi said that he composed this book to prove that it was possible to use Arabic literary forms in Hebrew. Al-Harizi greatly influenced such later Hebrew poets as Abraham ibn Hasdai, Jacob b. Eleazar, and Immanuel of Rome. Particularly worthy of mention is Isaac ibn *Saḥula whose Meshal ha-Kadmoni (compiled in 1281), based on Jewish themes, was written in conscious contrast to the Arabic maqāmāt. Following some Arabic models, from the 13th century a special type of maqāmāt also appears in Hebrew: the symbolic or allegoric one, represented, for instance, by the "Scroll of the Fawns"
by Eliyahu ha-Kohen (ed. by Z. Malachi, 1986), continued in some narratives of Mattathias (15th century) or Tanhum Yerushalmi (Orient, 16th century).

The Hebrew style of the maqāma, especially of those written in later periods, has occasionally appealed to contemporary authors, the best example being Bialik’s Alufa Bavat ve-Aluf Shum (“Lord Onion and Lord Garlic”).

[Abraham Meir Habermann / Angel Sáenz-Badillos (2nd ed.)]

**MAQUEDA,** small town in Castile, central Spain, on the territory of the Order of “Calatrava. Because of the resemblance to the biblical name of Makkedah (Josh. 10: 10, 28, etc.), some Jewish commentators (cf. Isaac *Abarbanel’s commentary to Kings) asserted that the Spanish city had been founded by Jews from Makkedah who had been exiled by Nebuchadnezzar. Conversely, Moses *Arragel tried to demonstrate to the head of the Order of Calatrava that Makkedah in Erez Israel had been founded by the king of Maqueda in Spain. The beginning of Jewish settlement in Maqueda probably coincided with the transfer of the region to the ownership of the Order of Calatrava in 1177.

In 1238, Ferdinand III ordered the community to make the Church an annual payment of 30 denarii symbolizing the amount of money received by Judas Iscariot. In 1290 the amount of money received by Judas Iscariot. In 1290 the amount of tax for services collected from the Jews there remained unchanged. The Jews earned their livelihood from the same occupations as the other inhabitants of the region, including agriculture.

During the persecutions of 1391 its two synagogues were sacked. In 1415, the antipope *Benedict generated an appeal sent by the apostate rabbi of the community, who had been maintained from the vineyards and fields which it owned and was left without means of subsistence. Benedict authorized him to take possession of the synagogue appurtenances and property.

By the beginning of the 15th century, the community had been reestablished, and in 1430 Moses *Arragel completed there the translation of the Bible into Spanish commissioned by Don Luis de Guzman, head of the Order of Calatrava. The role played in 1464–65 by R. Maymaran, rabbi of Maqueda, in persuading Conversos to return to Judaism, emerges from the trial of Hayyim *Fichler by the Inquisition held at “Huesca in 1489. The community still paid 50,000 maravedis in taxes in 1491. The status of the community may be gauged from the fact that a meeting of representatives of the communities of Castile was convened there in the fall of 1484, when important decisions concerning the practice of usury by the Jews in the kingdom were passed. After the decree of expulsion of 1492 was issued, Ferdinand ordered that inquiries should be made among the Jews of Maqueda to discover whether they were ready to adopt Christianity. The king ordered that watch should be kept over the synagogue until its future was decided and that a register should be made of Jewish property, of the debts owed to Jews, and those they owed to others. In the folklore of the Sephardim, stories were preserved about simple-minded Jews of Maqueda of the same type as those recounted about the Jews of “Chelm.

[Haim Beinart]
as well as Mar *Zutra. When a passage already quoted in the Talmud is quoted again for the purpose of further elucidation, it is introduced with the words “Mar said,” which in the context merely means “It has been stated above” (e.g., Bet. 2a).

In modern Hebrew Mar is used as a term of address like the English “Mister.”

**BIBLIOGRAPHY:** Hyman, Toledot, 897ff.; J. Schechter, Oẓar ha-Talmud (1963), 244.

**MAR BAR RAV ASHI** (d.c. 468), Babylonian amora. Mar was the son of ‘Ashi. According to one passage he signed his name in a letter “Tavyomi” (BB 12b), Mar apparently being a title of honor. He is extensively quoted in the Babylonian Talmud. He possessed great authority, and according to a tradition found in Rashi (to Hull. 76b) the halakhah follows him except in two cases. He studied under his father, who headed the famous academy of Mata Meḥaṣya, near Sura. On the death of Ashi, Mar stayed on under his successor Maremar (Ber. 45b). His companions were Ravina (the younger, Ber. 36a), Judah b. Maremar, and Aha of Difti (Ber. 45b). In 455 he became head of the academy after competing for the post with Aha. The aggadah describes his appointment as an example of prophecy having been given to fools. Mar was standing in the manor of Mahoza when he heard a lunatic exclaim: “The man to be elected head of the academy of Mata Meḥaṣya signs himself Tavyomi.” He quickly went to Mata Meḥaṣya andime in time to sway the voting in his favor (BB 12b). The aggadah also relates that Mar had great knowledge of the ways of demons and great power over them (Hull. 103b). Sherira Gaon in his letter reports that in the time of Mar, King Yezeḏegerd 111, who was hostile to the Jews, was swallowed by a dragon while he was in bed (ed. by B.M. Lewin (1921), 95). Mar had a brother Sama and a sister, and a dispute between them over the bequest of their father was arbitrated by Ravina (Ket. 69a). He was a wealthy man (Git. 7a). He was succeeded by Rabbah Tofṣa’a.

**BIBLIOGRAPHY:** Bacher, Trad, index; Hyman, Toledot, 897–9; H. Albeck, Mavo la-Talmudim (1969), 445f. **ADD. BIBLIOGRAPHY:** A. Cohen, “Mar Bar Rav Ashi and his Literary Contribution” (Hebrew) (Ph.D. Dissertation, Yeshiva University (1980)).

[David Joseph Bornstein]

**MAR BAR RAVINA** (מָר בָּרָא רַב אַשִּׁי), a fourth-century Babylonian amora, famous for his saintly character. In his youth, he was carefully tended by his mother, who provided him with clean garments every day, so that he could study in comfort (Er. 65a). Although well-to-do, he lived austerely, fasting by day except on Pentecost, Purim, and the eve of the Day of Atonement (Pes. 68b). At his wedding, a note of seriousness was struck by Rav Ḥammunna Zuta who, when asked to sing for the guests, chanted to them, “Alas for us that we are to die” (Ber. 31a). An even sadder note was injected at his son’s wedding when Mar, seeing that the company was in a merry mood, deliberately broke a precious cup to dampen their spirit (Ber. 30b–31a). This is probably the origin of the custom of breaking a cup at a Jewish wedding ceremony. He held that even gentiles who observed the seven Noachide laws did not thereby earn any heavenly reward (Av. Zar. 26–3a). He also had an extremely low opinion of Balaam – the arch-prophet of the gentile world – whom he charged with bestiality (Sanh. 105a) and singled out as the only major sinner against whom biblical passages could be expounded so as to discredit him (Sanh. 106b). Mar bar Ravina had a reputation as a pious, God-fearing man (Ber. 39b; Shab. 61a), who regarded the profanation of God’s name as the most heinous sin (Kid. 40a). He was also credited with miraculous escapes from grave perils (Ber. 54a). Characteristic of his piety was his prayer which is still recited at the conclusion of the Eighteen Benedictions: “O my God, keep my tongue from evil and my lips from speaking guile. And to them that curse me may my soul be silent; yea, let my soul be as the dust to all. Open my heart in thy law, and let my soul pursue thy commandments…” (Ber. 174).

[Moses Aberbach]

**MARBURG**, city in Hesse, Germany. A document dated May 13, 1347 – the first to mention Jews in Marburg – indicates that they then had an organized community and a synagogue, and lived in a special quarter. The community was annihilated during the *Black Death persecutions (1348/49), but Jews were living in the town once more by 1364. In the middle of the 15th century they were apparently expelled from Marburg; the synagogue was demolished and the temple passed into non-Jewish hands. The Jewish population eventually returned, only to be driven out again by a decree of 1523. However, in 1532 Duke Philip abolished the decree and permitted the Jews to reside there for a six-year period. In subsequent years the number of Marburg Jews remained low: six families in 1744 and eight in 1776. Jews from outside the town were permitted to remain there only during the annual fairs. The number of Jews increased during the course of the 19th century, reaching 512 (2.5% of the total population) in 1905. From 1823 Marburg was the seat of the district community organization and later of the district rabbinate. The community maintained a synagogue (built in 1897), a school, a convalescent home, and a number of other institutions. Herrmann *Cohen, professor at the local university, founded the Marburg school of Neo-Kantianism. In 1933 there were about 325 Jews in Marburg. On November 10, 1938, the synagogue was burned down. By May 17, 1939, only 143 Jews remained; ten survived the war, while the rest left or were deported in 1941–42. About 300 Jews lived in Marburg between 1945 and 1948; but by 1959 only 50 remained, and by 1961 the number had shrunk to 15. In 1989 a new community center was inaugurated. The building was provided by the municipality of Marburg. The Jewish community numbered 30 in 1989 and about 350 in 2005. Most of the members are immigrants from the former Soviet Union. Since the community center was too small to accommodate the increased membership, a new one
was opened in 2004. This building, too, was provided by the municipality of Marburg.

MARCEAU, MARCEL (1923– ), French mime. Marcel was born in Strasbourg, the son of a butcher who was executed by the Nazis during World War II. Marcel worked for the French underground, helping Jewish children to cross the border into Switzerland. In 1944, he charles Dullin’s School of Dramatic Art and studied with Etienne Decroux (1898–1991). He made his début as Harlequin in Jean-Louis Barrault’s production of Baptiste in 1947. That same year he formed his own company and created his famous character “Bip,” a flour-faced clown always in conflict with the physical world. He wrote The Story of Bip, which was published in 1976, and celebrated Bip’s 50th anniversary in 1997. Marcel, who is the best-known exponent of modern mime, toured either as a solo artist or with a small company in many parts of the world. In his U.S. tours in 1955–56 and 2000 he also made many television appearances. His silent eloquence and unique synthesis of corporeal mime with 19th century pantomime captured the public’s imagination wherever he appeared. Most of Marcel’s programs consisted of small sketches featuring “Bip,” but in 1951 he created an extended drama, The Overcoat, based on the novel by Gogol. He also made a number of films. In 1971 he collaborated with the Hamburg Ballet on a version of Candide. Marcel described mime as “the art of expressing feelings by attitudes and not a means of expressing words through gestures.” In 1998, French President Jacques Chirac named Marcel a Grand Officer of the Order of Merit. He was elected a member of the Academies of Fine Arts in Berlin and Munich, the Academie de Beaux Arts in France, and the Institut de France.

MARCEAU, MARCEL

MARCKWALD, WILLY (1884–1950), German organic chemist. Marxkwald was born in Jakobskirch, Silesia, and was professor at Berlin University from 1899. He was also director of the chemistry department of the university’s physico-chemical institute. In 1910 he was appointed a privy councillor and was president of the German Chemical Society from 1928 to 1931. When the Nazis rose to power, he escaped to Brazil. Marxkwald’s scientific papers dealt with the physical properties of organic compounds, stereochemistry, and radioactivity. He was the first to isolate the element polonium in pitchblende, which helped toward the discovery of radium. He observed changes caused by light in the color of certain compounds, and called this phenomenon “phototropy.” Marxkwald wrote Ueber die Beziehungen zwischen dem Siedepunkte und der Zusammensetzung chemischer Verbindungen (1888), Die Benzoltheorie (1898), and Radium in Biologie und Heilkunde (1911–12).

MARCOSSON, ISAAC (1876–1961), U.S. journalist and author. Born in Louisville, Kentucky, Marcosson worked on World’s Work, Saturday Evening Post, and Munsey’s Magazine. Specializing in finance, he wrote several books on business and commerce. He was in St. Petersburg during the Russian Revolution and recorded his observations in Rebirth of Russia (1917). He also wrote Adventures in Interviewing (1920), The Turbulent Years (1938), and an autobiographical work, Before I Forget: A Pilgrimage to the Past (1959).

MARCOUSSIS, LOUIS (1883–1941), French painter. Marcouiss was born in Warsaw. As a student at the Academy of Fine Arts in Cracow he was one of the avant-garde Young Poland group which was strongly inclined to French culture. In 1903 he moved to Paris to study. When his father was no longer able to support him, he lived by contributing frivolous drawings to La Vie Parisienne and L’Assiette au Beurre. Marcouiss visited the United States in 1934 and his engravings were shown in New York and Chicago. When the Germans occupied Paris in 1940 Marcouiss and his wife happened to be staying in a village in central France where he was able to live in safety until his death the following
Marcoussis is listed generally among the cubists. Yet in his early still lifes, the element of fantasy is stronger than the purely analytical one. He was an excellent print-maker, who made illustrations for books by Gérard de Nerval, Guillaume Apollinaire, and Tristan Tzara. In his portraits, he abandoned cubism for a tight classical style.

**BIBLIOGRAPHY:** J. Lafranchis (ed.), *Marcoussis* (Fr., 1961).

[Alfred Werner]

**MARCULEȘTI,** Jewish agricultural colony in Bessarabia. It was founded in 1837 on an area of 549 hectares leased from a private owner by 239 settlers from Podolia. In 1888 the land was acquired by the settlers, but because of the *May Laws of 1882* it was registered under the name of a Christian property owner. According to the census of 1897 there were 1,336 Jewish inhabitants. However, the survey conducted by the *Jewish Colonization Association* in 1899 records 292 families (1,534 individuals), of whom 123 were landowners (with an average of 4.5 hectares to a family). After the railway to Odessa was laid, and a station was built close to Marculești, an impetus was given to trading mainly in farm products. The settlement gradually lost its agricultural character, and turned into a typical Jewish town. Under the agrarian reform in Romania in 1922, 105 Jews in Marculești received plots of land. In 1901 a school was opened which was directed by the writer Shalom *Hillels*. Of the 541 members registered in the local loan fund in 1925, 195 were farmers. In 1930 the Jewish population numbered 2,319 (87.4% of the total). *Tarbut* elementary and high schools functioned there during the 1930s. The colony was destroyed when the Germans and Romanians invaded Bessarabia in July 1941, after its incorporation within the Soviet Union. On the 8th of that month, about 1,000 Jews living there were murdered. In September–November 1941 a transit camp was established in Marculești for Bessarabian Jews who were deported to *Transnistria*. Ada *Maimon and Rabbi Y.L.* *Maimon (Fishman), who served as the rabbi of the colony from 1900 to 1905, were born in Marculești.

[Eliyahu Feldman]

**MARCUS, AARON** (1843–1916), scholar, writer on Kabbalah and Hasidism. Marcus was born and educated in Hamburg, studied at the yeshivah of Boskovic (Moravia) but also acquired a wider philosophical education. In 1861 he left for Cracow where he joined the Ḥasidim. Between 1862 and 1866 he made several long visits to the ḥasidic rabbi of Radomsk, Solomon Rabinowicz. He later maintained close relations with many ḥasidic leaders in Poland and Galicia. A major part of his literary work (mainly in German but with a small amount in Hebrew) was devoted to the defense of Hasidism and an explanation of ḥasidic doctrines and Kabbalah. His work testifies to great erudition, but has proved unacceptable by the current standards of modern critical scholarship. In his work he defended traditional Judaism against modern Bible criticism and scientific materialism. At the same time, he tried to find confirmation for new insights in philosophy and science in Jewish religious literature, particularly in the writings of Ḥayyim b. Moses *Attar, M.H.* *Luzzatto, and Ḥabad Ḥasidism. Marcus was one of the few Orthodox Jews in Germany who totally adopted Hasidism in theory and practice. He published: *Hartmanns inductive Philosophie des Unbewussten im Chassidismus* (2 pts., 1889–90); *Der Chassidismus* (under the pseudonym Verus, 1901, 1927); *Barsilai, Sprache als Schrift der Psyche* (1905); an edition of Jacob of Marvège’s responsa *Sheḥelot u-Teshuvot min ha-Shamayim* with a commentary *Keset ha-Sofer*, 1895, 1957; *Keset ha-Sofer* (Bible annotations, largely in Ms., 1912); and *Juedische Chronologie* (vol. 1, posthumously, 1935). From 1898 to 1899 Marcus edited *Krakauer Juedische Zeitung*, a paper he published as a vehicle for his ideas. He became an enthusiastic supporter of Theodor Herzl and his *Judenstaat* (see his Theodor Herzls Judenstaat…, 1897; second ed. 1919 with a eulogy of Marcus), thus becoming one of the pioneers of religious Zionism, though later he turned toward the anti-Zionist Agudat Israel.

*Encyclopaedia Judaica* (Germany)]

**MARCUS, BERNARD** (1929– ), U.S. entrepreneur, philanthropist. Born to Russian immigrant parents, Marcus grew up in a tenement in Newark, N.J., wanting to be a doctor. After high school, he could not afford medical training. Instead, he worked his way through Rutgers University and earned a degree in pharmacy. After college he worked at a drugstore and a cosmetics company. By the late 1970s he had worked his way up to chairman of Handy Dan, a home-improvement chain in California. He and one of his colleagues there, Arthur M. *Blank, were fired in 1978 over disagreements about the chain’s future. Marcus and Blank decided to go into the home-improvement business themselves. After surveying four cities, they settled on Atlanta, Ga., as their home base, believing that it had the right market and real estate conditions to test their theory that consumers would flock to big stores offering a broad selection of home-improvement products, low prices, and friendly, knowledgeable service. In 1979 they opened three Home Depot stores. In their first year, on $7 million in sales, they lost $1 million. But they persevered and in 1981 they went public. By the early years of the 21st century, Home Depot had more than 1,500 stores in the United States, Canada, Puerto Rico, and Mexico, becoming the world’s largest home-improvement retailer. With a familial structure, embracing all employees with stock options and other incentives, plus a harsh sense of competition, Home Depot helped drive Handy Dan, the Blank-Marcus nemesis, out of business. Becoming the do-it-yourself giant, providing everything from screws to electrical wiring to appliances and lawn supplies, Home Depot had more than 150,000 employees and more than $30 bil-
lion in sales. Although Marcus, the older of the founders, was chairman for more than 20 years, he and Blank saw eye to eye on almost everything. Marcus was a hands-on visionary, but he also was known for sparring with investment bankers and for telling jokes at company dinners.

Marcus and Blank became philanthropic leaders in Atlanta. While Blank gave to the Atlanta Symphony Orchestra, youth projects, and many Jewish organizations, Marcus devoted more than 20 years to the City of Hope, a cancer research center. He is also a major supporter of the nation’s largest rehabilitation hospital for spinal care patients, the Shepherd Spinal Center, and a new wing of that hospital was named in honor of his wife, Billi. The Marcus Developmental Resource Center provides services and information to disabled individuals and their families. Marcus spent several years in the early years of the 21st century designing and building a $200 million aquarium, known as the Georgia Aquarium. It will have 100,000 fish, including giant groupers, octopuses, and two white beluga whales. The star attraction will be two whale sharks, the world's biggest fish, which can exceed 40 feet in length.

Marcus has given significant sums to Jewish causes. A Jewish community center in Atlanta is named for him and he was one of the founders of the U.S. Holocaust Museum. In 2000, Marcus and the governor of Georgia led a delegation to major Israeli cities to try to persuade Israeli technology companies to make Georgia their home. Marcus was international chairman of the Israel Democracy Institute, an independent political research organization in Jerusalem, and often visited Israel for both business and pleasure. He attends a philanthropic roundtable of the major American Jewish philanthropists that includes Edgar and Charles Bronfman, Michael Steinhardt, and Leslie Wexner among others.

At the request of the *Jewish Agency and the *Haganah, he went to Palestine at the end of January 1948, serving as David *Ben-Gurion’s military adviser under the *nom de guerre of Mickey Stone. He immediately perceived the special spirit and conditions of the new Israel army which was emerging from the underground. After a brief visit to the United States, he returned to Israel in May 1948 and on May 28, 1948, was appointed commander of the Jerusalem front. Marcus was the first officer to receive the new rank of *alluf (Major General). Before dawn on June 11, he went outside the perimeter fence of his headquarters in Abu Ghosh and was accidentally killed by a sentry. His body was transferred with military honors to the United States and buried at West Point. A village in Judea, Mishmar David, is named after him.

[Jehuda Wallach]

MARCUS, ERNST (1856–1928), German jurist and philosopher. Marcus studied law and was a judge. As a philosopher, he was a Kantian who opposed the new interpretations offered by H. *Cohen and L. *Nelson. For Marcus the “thing-in-itself” remained central, deducible from reason. He developed a theory of the *a priori “organism” which the “I” constructs. He wrote many works on Kant including *Kants Revolutionsprinzip* (1902); *Das Erkenntnisproblem* (1905), *Die Beweisfuehrung in der Kritik der reinen Vernunft* (1914), and *Kants Weltgebabeude* (1917). He also wrote *Theorie einer naturlichen Magie* (1924). Using Kant’s theory, Marcus criticized Einstein in his *Kritik des Aufbaus der speziellen Relativitaetstheorie* (1926) and in *Die Zeit-und Raumlehre Kants* (1927).

BIBLIOGRAPHY: S. Friedlaender, *Der Philosoph Ernst Marcus als Nachfolger Kants* (1930); idem, *Kant gegen Einstein* (1932).

[Richard H. Popkin]

MARCUS, FRANK (1928–1996), German-born playwright. Marcus emigrated to Britain in 1939. Originally an actor, Marcus had his own first play produced in 1950. His later works include *The Formation Dancers* (1964), *Cleo* (1965), and *The Killing of Sister George* (1965), a drama about lesbianism that was made into a successful motion picture.

MARCUS, JACOB RADER (1896–1995), U.S. rabbi and historian. Marcus was the first trained historian of the Jewish people born in America and the first to devote himself to the scholarly study of America’s Jews. Through the American Jewish Archives, which he founded in 1947, and through the many books that he published during his long life, he defined, propagated, and professionalized the field of American Jewish history, achieving renown as its founding father and dean. At the time of his death, he was also the oldest and most beloved member of the Reform rabbinate and the senior faculty member at Hebrew Union College-Jewish Institute of Religion (Cincinnati), where he had taught for some three-quarters of a century.
Born in New Haven, Penn., at the age of 15 Marcus came to Cincinnati's Hebrew Union College where he pursued rabbinical studies and simultaneously attended high school and then the University of Cincinnati where he specialized in Jewish history. Following service in World War I, he was ordained in 1920. He went on to obtain his Ph.D. in 1925 at the University of Berlin in general history. In Berlin, he was profoundly influenced by the historian Simon Dubnow and by the techniques of Fritz Baer.

During his time abroad, Marcus also visited Palestine. He then returned to Hebrew Union College, where he taught successfully for the next 70 years. Legions of students credited him for helping to sustain them through rabbinical school, and many of these same students turned to him again later, as rabbis, for help with their congregations or their personal problems. His students reciprocated, electing him president of the Central Conference of American Rabbis in 1949 and lifetime honorary president of the Conference in 1978.

Marcus's most important early publications consisted of a monograph on Israel *Jacobson (1928), and a popular, derivative history of German Jewry (1934). In 1938, he published a volume of carefully edited documents titled The Jew in the Medieval World. In 1947, he published his last significant scholarly study of German Jewry, Communal Sick-Care in the German Ghetto.

In the 1940s, Marcus shifted his attention to American Jewish history. During the next half-century, he worked systematically to establish American Jewish history as a scholarly discipline. He founded both the American Jewish Archives (1947) and the American Jewish Periodical Center (1956) on the campus of Hebrew Union College (Cincinnati). He served as president and later honorary president of the American Jewish Historical Society. He collected and published thousands of pages of edited primary sources. He created reference tools and a semi-annual scholarly journal, American Jewish Archives (1948– ). He also authored Early American Jewry (2 vols, 1951–53), Memoirs of American Jews (3 vols., 1955), The Colonial American Jew 1492–1776 (3 vols, 1970), United States Jewry 1776–1985 (4 vols., 1989–1993), and The Jew in the American World: A Source Book (1996). To ensure that his work continued, he left his entire fortune in trust for the American Jewish Archives, renamed the Jacob Rader Marcus Center of the American Jewish Archives in his memory.

**BIBLIOGRAPHY:** S.F. Chyet, ’Jacob Rader Marcus—A Biographical Sketch,’ in: Essays in American Jewish History to Commemorate the Tenth Anniversary of the Founding of the American Jewish Archives under the Direction of Jacob Rader Marcus (1958), 1–22; R.M. Falk, Bright Eminence: The Life and Thought of Jacob Rader Marcus (1994); G.P. Zola (ed.), The Dynamics of American Jewish History: Jacob Rader Marcus’s Essays on American Jewry (2004), which includes a full bibliography of his writings.

[Jonathan D. Sarna (2nd ed.)]

**MARCUS, JOSEPH** (1897–1977), Hebrew scholar. Born in Derevno, Russia (Vilna province), Marcus was taken to the United States in 1910. He was ordained by the Jewish Theological Seminary in 1924. After briefly holding several rabbinical positions, he assisted Israel *Davidson in the preparation of the latter’s Ozar (“Thesaurus of Medieval Hebrew Poetry”); later he assisted *Bialik and *Rainitzki in preparing their editions of the poems of Ibn *Gabriol and Moses *Ibn Ezra, copying for them poems from the Seminary’s *genizah collection. In the course of this work (1929), Marcus discovered a leaf from a hitherto unknown Hebrew manuscript of *Ben Sira (Ecclesiasticus). After holding positions in various Jewish libraries, followed by a brief return to the rabbinate, Marcus became librarian and instructor in medieval Hebrew literature at the Hebrew Teachers College of Boston in 1946. In 1963 he settled in Israel, where he became librarian at the Mosad ha-Rav Kook in Jerusalem.

Marcus’ works include A Fifth Manuscript of Ben Sira (1931); Ginzei Shirah u-Firyut (”Liturgical and Secular Poetry of the Foremost Medieval Poets,” 1933); Studies in the Chronicle of Ahimaaz (1934); Igerot Bialik (1935); Tozerot le-Arba Parashiyyot (1965); and studies on the poetry of Isaac *Ibn Ghayyat.

[Raymond P. Scheindlin]

**MARCUS, RALPH** (1900–1956), U.S. scholar of Hellenistic Judaism. Born in San Francisco the son of the talmudic scholar Moses Marcus, Marcus was educated at Columbia, where he wrote his doctoral dissertation on Law in the Apocrypha (1927), and at Harvard where he studied with Harry A. Wolfson (1925–27). He taught at the Jewish Institute of Religion, at Columbia (1927–43), and at the University of Chicago (1947–56).

Marcus is best known for editing, translating, and annotating four volumes of Josephus and two of Philo in the Loeb Classical Library series. His notes show an unusual wealth of lexical and historical knowledge, and his translations are accurate and lucid. His invaluable appendices on select points in Josephus are careful, critical monographs. His bibliographies in these volumes and in separate works (PAAR, 16 (1946/47), 97–181; Jewish Studies in Memory of G.A. Kohut (1955), 463–91) show his mastery of the literature and his critical acumen. He successfully undertook the extraordinarily difficult task of translating Philo’s Quaestiones et Solutiones from the Armenian and restored the Greek in numerous places.

Marcus’ lexicon to Josephus, continuing the work of Thackeray, reached the letter epsilon. His 62 articles excel in etymologies, grammatical and lexical points, and in utilizing his vast knowledge of the various languages of the classical and Jewish worlds. Marcus intended to write a history of the Jews during the Second Temple period, and many of his most fertile ideas for future work in the field are found in his “The Future of Intertestamental Studies” (in: H.R. Willoughby’s The Study of the Bible (1947), 190–208). Marcus also wrote semi-popular articles on Hellenistic Judaism for L. Finkelstein’s The Jews and L.W. Schwarz’s Great Ages and Ideas of the Jewish People as well as for the Encyclopaedia Britannica. In the
controversy between H.A. Wolfson and E.R. Goodenough on Philo, Marcus strongly supported Wolfson’s contention that Philo closely parallels Pharisaic Judaism (Review of Religion, 13 (1949), 368–81). Toward the end of his life Marcus became much involved in the controversies surrounding the Dead Sea Scrolls. He connected the Qumran Covenanters with the Essenes and discerned in them a strong gnosticism flavor.

**Bibliography:** G.E. von Grunebaum, in: JNES, 16 (1957), 143–4; BRE, 3 (1958), 44–46, a list of his works.

[Louis Harry Feldman]

**Marcus, Rudolph Arthur** (1923– ), chemist and Nobel Prize winner. Marcus was born in Montreal, Canada, and educated there at McGill University. He taught at the Polytechnical Institute of Brooklyn, N.Y., 1951–64, at the University of Illinois, 1964–78, and at the California Institute of Technology, where he became the Arthur Amos Noyes Professor of Chemistry in 1978.

Marcus was awarded the Nobel Prize in chemistry in 1992 for his mathematical analysis of the cause and effect of electrons jumping from one molecule to another, ideas which he developed from 1956 to 1965. When electrons in molecules in a solution jump from one molecule to another, the structure of both molecules changes. The occurrence of this change temporarily increases the energy of the molecular system, resulting in a “driving force” for electron transfer. It was only in the 1980s that Marcus’ theories were finally confirmed by experiments. His work has been useful in understanding many complicated chemical reactions, among them photosynthesis. Marcus is also well known for his theory of unimolecular reactions in chemistry, the RRKM theory, which more than 50 years after its development is still the standard theory in the field. It treats the fragmentation of high-energy molecules, as in the atmosphere and in combustion. His research also ranges from the strange fluorescent behavior of nanoparticles to the anomalous isotopic composition of the ozone in the stratosphere and of the earliest solids in the solar system.

**Marcus, Ruth Barcan** (1921– ), U.S. logician and philosopher who played a key role in many of the philosophical debates of the second half of the 20th century. Born and educated in New York City, Ruth Barcan received her B.A. in mathematics and philosophy from New York University in 1941. After her marriage to Jules Alexander Marcus, she earned her Ph.D. in philosophy from Yale in 1946. While raising her four children, she held various postdoctoral fellowships and visiting positions, including a Guggenheim Fellowship (1953–54). In 1957, she became an assistant professor at Roosevelt University in Chicago; two years later she was promoted to associate professor. From 1964 to 1970, she served as professor of philosophy and department chair at the newly established University of Illinois at Chicago, building up her department to attain national recognition. After three years as professor at Northwestern University (1970–73), she returned to Yale in 1973 and remained there as Reuben Post Halleck Professor until her retirement in 1992. Thereafter, she continued as a senior research scholar at Yale and as distinguished visiting professor at the University of California at Irvine.

Widely recognized as a leading figure in the field of philosophical logic, Barkan was well known for her contributions to modal logic, especially the Barkan formula, as well as her work on the philosophy of logic and language, epistemology, and ethics. She published numerous articles and essays over a period of 50 years, many of which appeared in the highly regarded collection of her works, entitled Modalities (1993). She received many prestigious awards and fellowships, including fellow of National Science Foundation (1963–64); the Center for Advanced Study, University of Illinois (1968–68); the Center for Advanced Study in the Behavioral Sciences at Stanford (1979); Wolfson College, Oxford (1985–86); Clare Hall, Cambridge (1988); and the National Humanities Center (1992–93), as well as the Medal of the College de France (1986). The University of Illinois awarded her an honorary doctorate of humane letters in 1995. Marcus was actively involved in many professional organizations, serving as president of the Association for Symbolic Logic (1983–86) and vice president of the Institut International de Philosophie (1989–92), as well as chair of the National Board of Officers of the American Philosophical Association (1977–83).

[Harriet Pass Freidenreich (2nd ed.)]

**Marcus, Siegfried** (1831–1898), German inventor, born in Malchin. Marcus joined the Berlin engineering firm of Siemens and Halske in 1848 and worked on the establishment of telegraphic communication between Berlin and Magdeburg. In 1854 he settled in Vienna, where from 1860 he had his own laboratory. In 1864 he patented a petrol-driven automobile. A car he built in 1875 was preserved in the Vienna Industrial Museum. His patents included an electric lamp (1877), telegraphic relays, a microphone, a loudspeaker, electric fuses for submarine mines, and other devices which were developed by others in later years.

[Samuel Aaron Miller]

**Marcus, Stanley** (1905–2002), U.S. retailer. Marcus was two years old when his family founded Neiman Marcus, but it was his merchandising talent that made the store an internationally known symbol of quality, service, luxury, and exclusivity. Born in Dallas, Texas, he was the eldest of four sons. A high school graduate at 16, Marcus entered Amherst College in Massachusetts. When a fraternity refused to admit him after learning he was a Jew, he transferred to Harvard College and joined a Jewish fraternity. He earned a B.A. from Har-
Marcus Aurelius Antoninus

Marcus Aurelius Antoninus (121–180 C.E.), Roman emperor, 161–180 C.E., adopted son and successor of Antoninus Pius; the ideal philosopher-king as envisaged by political thought of the period. Ironically enough, the years of his reign were spent in war defending the borders of the Roman Empire. In 164–5 C.E., Aurelius’ general Avidius Cassius captured Seleucia and the Parthian capital Ctesiphon, bringing the Mesopotamian Jews temporarily under Roman rule. When Cassius later proclaimed himself emperor in Syria, the Jews are supposed to have supported him, as a result of which Aurelius “crushed them by means of his preses and legates” (Marcellinus, 23:3). Aurelius held a highly unfavorable opinion of the Jews of Palestine. After passing through the country on his way to Egypt, where he was harassed by their importunities and turbulence, he exclaimed “I find these people [the Jews] to be worse than the Marcomanni, the Quadi, and the Sarmatae!” (ibid., 22:5). There may be an allusion to Marcus Aurelius in the “Sybiline Oracles (5:51). Possibly some characteristics of this philosopher-emporer find expression in the portrayal of the *Antoninus found in the Talmud.

MARCUSE, HERBERT (1898–1979), philosopher and social theorist. Born in Berlin, Marcuse studied in Berlin and Freiburg, where he was influenced by Heidegger. In World War I he served in the German army and, as a delegate from his unit, participated in the abortive German revolution of 1918–19. In his works, elements of Schillerian aesthetics, existentialist ontology, and utopian political thought are combined with a modified Marxist outlook and a modified Hegelian (dialectical) method to produce what Marcuse calls “Critical Theory”: a critical, “negating” analysis of prevailing social, political, and cultural institutions and theories.

A member of the Frankfurt Institut fuer Sozialforschung, Marcuse left Germany in 1933, moving with the Institute to Geneva, then (1934) to New York. His first important work, “Neue Quellen zur Grundlegung des historischen Materialismus” (in *Die Gesellschaft*, vol. 9, 1932), an interpretation of the then newly discovered “Economic and Philosophical Manuscripts” of Karl Marx, established him as a pioneer in the exploration of “Marxist Humanism.” He contributed to the Institute’s *Studien ueber Autoritaet und Familie* (1936) and wrote a number of critical essays for its journal, notably “Der Kampf gegen den Liberalismus in der totalitaeren Staatsausfassung” (in *Zeitschrift fuer Sozialforschung*, vol. 3, 1934), in which Fascist-Nazi ideology is shown to be the ideology of capitalism in its monopolistic phase, and thus not so much antagonistic to, as an outgrowth of, liberalism – the ideology of capitalism in its (earlier) competitive phase.

After serving in the OSS and the State Department (1941–50), Marcuse was a fellow, successively, of the Russian research centers at Columbia and at Harvard. His first full-fledged academic appointment was in 1954, as professor of...
politics and philosophy at Brandeis University. He left there in 1965 to become professor of philosophy at the University of California, San Diego.

In Reason and Revolution; Hegel and the Rise of Social Theory (1941, 1954), Marcuse contrasted the negative (critical) social theory stemming from Hegel with the positive (positivist) social theory founded by Comte. Marcuse next undertook a number of critical studies: of Freud's pessimistic theory that civilized society is necessarily repressive (Eros and Civilization, 1955); of Russia's Stalinized Marxism (Soviet Marxism, 1958); and of the repressive nature of a successful capitalist society (One-Dimensional Man, 1964). Such a society, Marcuse argues, can satisfy material wants and employ industrial skills while it suppresses genuinely human needs and faculties and reduces man to a single, conformist dimension in order to maintain the established order and to secure the production of a surplus for the benefit of the ruling elements.

In later years Marcuse became something of a hero and an authority to many members of the “New Left. His essay on "Repressive Tolerance" (in H. Marcuse et al., Critique of Pure Tolerance, 1965), in which he argues that only progressive (i.e., radical) values and movements ought to be tolerated, while toleration should be denied to repressive (i.e., rightist) values and movements, was influential among young radicals.

Marcuse's critique of a capitalist system which satisfies—and tolerates—only those needs that it itself generates (precisely because it can satisfy them to its profit) while it perpetuates domination and exploitation is resumed in An Essay on Liberation (1969). He also wrote Studies in Critical Philosophy (1973) and The Aesthetic Dimension (1978).

[Heinz Lubacz]

MARCUSE, LUDWIG (1894–1971), German essayist. Born in Berlin, Marcuse began his career as a drama critic and as the biographer of Buechner (1922) and Strindberg (1924). During his last years in Germany, he also published perceptive biographies of *Boerne (1929) and *Heine (1932). The implicit parallels between Heine’s age and his own are prominent in the latter. In 1933 he emigrated to France, visited the Soviet Union, and escaped to the U.S. in 1939. In 1945 he became professor of German literature and philosophy at the University of Southern California. After 1949 he visited Germany several times and resettled there in 1962. He was increasingly drawn to the history of ideas: significant works in this field are his Pessimismus, ein Stadium der Reife (1953) and Amerikanisches Philosophieren (1959). These are stylized, luminous histories of ideas, written for the literate layman. In his autobiographical Mein zwanzigstes Jahrhundert (1960) he records a vast array of intellectual experiences, and presents a kaleidoscope of personalities in Germany, France, the U.S., and Israel.

[Harold von Hofe]

MARCUSE, MOSES (late 18th century), physician and Yiddish writer who grew up in Germany. In his book Sefer Refu'ot (“Book of Medicines,” 1790) he claims to have studied medicine at the University of Königsberg, but his name does not appear in the University's matriculation lists. In 1774 he went to Poland and practiced medicine in several communities. The declared aim of Sefer Refu'ot was to transmit elementary knowledge of hygiene in Yiddish to those to whom no doctor was available. The book appears to have gone into a second edition, but only three copies have survived, and it has become a bibliographical rarity. Large extracts from it were published by Noah Prylicki (Zamlbikher, 2 (1917), 1–53). Marcuse goes beyond purely medical information; as an early pioneer of enlightenment among Eastern European Jews, he calls for a change of occupations among Jews and for a different type of education. The book is important for Jewish cultural history since it records customs, living habits, and economic conditions among the Jewish masses, familiar to him as a practic- ing physician.

MARCZALI, HENRIK (1856–1940), Hungarian historian. Marczali was born in Marcali, where his father, Mihály Morgenstern, was rabbi. At the University of Budapest he gained distinction as a lecturer and historical scholar, but because he refused to renounce Judaism, he was denied a full professorship until 1895. Marczali was the first Jew to obtain a chair at Budapest University. He was elected to the Hungarian Academy of Sciences in 1893, but was dismissed from his post in 1924. A historian of the positivist school and a pioneer of source criticism in Hungary, Marczali wrote many works, notably the three-volume Magyarország története 11, József korában (1885–88; Hungary in the Eighteenth Century, 1910); A magyar történet külföinek kézikönyve ("Handbook of the Sources of Hungarian History,” 1901); and Az 1790/1-diki országgyűlés ("The Sessions of the Diet During the Years 1790–91," 1907). Internationally recognized as one of Hungary’s outstanding historians, Marczali also edited volumes 2–4 of the Monumenta Hungariae Judaica (1937–38).

[Alexander Scheiber]
MARDIN, town in Southeast Turkey; population (2004), 71,100. A Jewish community existed in Mardin from the Middle Ages to the 20th century. In 1291 Abinadab b. Saadiyah Halevi of Mardin copied “Maimonides Moreh Nevukhim (Guide of the Perplexed) in Arabic. During the middle of the 14th century, a Jew of Mardin named Najib al-Dawla Abraham b. Yeshu’ah held a government position (Neubauer, Cat. nos. 180, 1249). At the beginning of the 19th century the number of Jews was small, but an ancient synagogue and holy places, such as the so-called Cave of the Prophet Elijah, were preserved. In 1827 the traveler “David D’Beth Hillel found in the town “about six locally born, poor Jewish families with a small synagogue.” Benjamin 11 relates that in 1848 there were 50 Jewish families, most of whom worked on the land. They spoke Hebrew and their leader was the nasi Mu’llim Moses. The number of families remained unchanged during the second half of the century, but the community was dispersed during the 20th century.

BIBLIOGRAPHY: A. Ben-Jacob, Kehillot Yehudei Kurdistan (1961), 139. ADD. BIBLIOGRAPHY: EIS2, 6 (1991), 539–42. [Abraham Ben-Yaacob]

MARDUK (Heb. מְרֹדָך, Jer. 50:2), patron deity of the city of Babylon. Although known as a minor god as early as the third millennium, Marduk became an important local deity at the time of the advent of the First Babylonian Dynasty as can be seen mainly from the literary introduction of the *Hammurapi Stele and other documents. However, he was elevated to the rank of the chief deity and national god of Babylon only during the Middle Babylonian period and especially during the reign of Nebuchadrezzar I (c. 1100 B.C.E.; post-Kassite period) and not, as is commonly assumed, during the reign of Hammurapi (1848–1806 B.C.E.). This can be ascertained from the diffusion during the Old and Middle Babylonian periods of the name Marduk as a component of personal names or as a titular deity in legal and other procedures. Apart from its appearance in Jeremiah 50:2, the name Marduk is found in the Bible in personal names such as *Evil-Merodach and *Merodach-Baladan. In Jeremiah 50:2, the name of Marduk is paralleled by the word bel (Heb. בֵּל), a transliteration of the Akkadian attribute of Marduk, bèlum, “lord” (Sumerian EN), which he inherited in the second millennium from Enil, the “former” most powerful god of the Mesopotamian pantheon. (According to the Old Babylonian conception expressed in the introduction to the Hammurapi Code, he received at this time only the illilitu, the governorship of the people, which had formerly rested on Enil.) The origin of Marduk’s name is unknown but there are some suggested etymologies, the most accepted being from Sumerian (A) MĀR. UTTU (k), “the young bull [or calf] of Samaš [Utū] the Sungod.” This explanation was well known in the Babylonian tradition. (For “the 50 names of Marduk” see below.) Another etymology, put forward by Th. Jacobsen, is “the son of the storm” (or “maker of storm”?), Marud(j)uk, which brings the form of his name closer to the Aramaic-Hebrew transliteration. Abusch understands the name to reflect original Sumerian amar.uda.ak, meaning “Calf of the Storm,” because Marduk was never a solar deity.

Marduk’s rise to the status of national god was slow but exceptionally comprehensive. It is very possible that, apart from being an historical process, his elevation was deeply influenced by his connection – not entirely proven – with Enki (Ea), the benevolent god of wisdom, incantations, and the sweet waters of the deep (Sum. abzu, Akk. āpsû), from Eridu, the most ancient holy city of Sumer.

This connection with Enki was maintained in the theology and practice of the cult of Marduk, e.g., in his identification with Asalluhi, the son of Enki, active in healing or exorcistic incantations, and in the naming of his temple in Babylon Esagila (“the house of the [high] raised head”) after that of Enki in Eridu. Thus Marduk emerges as a national and popular god of the “second [younger] generation,” who exercises influence in every walk of life as the healer and saviour of the Babylonians. In this capacity he appears in incantations, prayers, hymns, philosophical poems (e.g., *Ludlul bēl nēmeqi, “Let me praise the God of wisdom,” a variant of which was known also in Ugarit, see *Job), and epics such as the Erra Epic, where the “disappearance” of Marduk because of displeasure wreaks havoc in the world and brings about the temporary rule of Erra, the god of destruction.

Marduk is the hero of Ėnāmā eliš (“When above . . .”), the Babylonian creation myth. In this myth the Son of the Storm is appointed by the gods to lead the fight against Tiāmat (Heb. סְתָמָא, “Ocean”) who has planned to destroy them. In the struggle between these two personified natural elements, Marduk gains the upper hand. At the end of the didactic-cultic epic the assembly of gods praises Marduk with 50 name-exegeses and builds the Esagila in his honor.

Ēnāmā eliš was read aloud in front of Marduk’s statue during the akītu (New Year; see Klein), Babylonia’s most important festival. In these ceremonies the statues of Marduk and his son Nab – (Heb. נב) were carried from Marduk’s temple in Babylon to the house of the akītu festival outside the city walls. The elaborate ritual of this festival, known chiefly from a late (Seleucid) edition, greatly influenced many theories about supposed parallel developments in the Israelite cult (see *Psalms, *Kingship).

The cult and theology of Marduk began its expansion during the renewed expansion of Babylonian culture beyond Babylon in the Middle Babylonian-Assyrian period. Marduk was accepted into the Assyrian royal pantheon after Aṣšur and other important gods. The Babylonian elaboration of the theology of Marduk, which expressed itself also in speculative identification and the absorption of the functions of other gods into that of Marduk (this was not exclusive to Marduk), as well as the identification of Marduk with the Babylonian national entity, had momentous consequences in that in the course of time Marduk became identified as a symbol of Babylonian resistance to Assyria. The conception of Marduk decisively influenced the cult of Aṣšur who was also elevated to a parallel or even higher position. Thus, for example, in
the Assyrian version of *Enūma elīš, Aššur takes the place of Marduk. The tension between the two nations resulted in a most decisive dislike of Marduk in the middle of the first millennium. After the “experiments” of *Tiglath-Pileser III and *Sargon, who were kings of Babylon in every respect, came *Sennacherib who during most of his reign was uniformly anti-Babylonian and “anti-Marduk,” and who expressed this by destroying Babylon and *Esagila. The emblems and statues of Marduk went into “captivity” many times. The return of the statue of Marduk, which was always connected with Babylonian resurrection, was interpreted as a theological change of destiny and as a punishment inflicted by Marduk on Babylon's enemies, as in the case of Sennacherib. Thus, this antagonism became a major issue in the entire destiny of the Ancient Near East in the middle of the first millennium. A very striking example of this antagonism is found in an Assyrian satirical, quasi-theological composition (correctly interpreted by W. von Soden) which, far from being an “apotheosis” of the “dead and resurrected Marduk” (as was suggested earlier), is a “mock trial” of Marduk ending probably with his “execution,” as a god who – from the point of view of the Assyrians and other peoples – caused much enmity and treachery (see below). This trial is a “logical” continuation of that of the god Kingu and of his execution in *Enūma elīš, where Marduk was the judge.

In the time of the final Assyrian period (Esarhaddon, Ashurbanipal) and the Neo-Babylonian Dynasty, from Napopolosar on, and again in the Early Persian period (Cyrus), Marduk was the chief god of Babylon. Because they opposed the oppressive measures of Nabonidus, the last Neo-Babylonian king, the priests of Marduk were those who made possible the peaceful occupation of Babylon by Cyrus (539; see also "Babylon; *Mesopotamia").

**Marduk in the West and in the Bible**

Marduk is first mentioned in the West (Syria-Palestine) in Akkadian documents from Ugarit (Middle Babylonian period around 1350; see: *Ugaritica*, 5 (1968), 792) where, as mentioned, one version of the philosophical treatise *Ludul bêl némeqi* was known. Also there is an incantation letter against nambul (“The Wrong”; “The Bad”) directing him to appear before Marduk. The first appearance of Marduk in Palestine occurs in the same period and takes the form of the personal name of Šulum-Marduk in the "el-Amarna letters (E.A). According to E A 256:20, as interpreted by Albright (in *BASOR*, 89 (1943), 12 ff.), the royal house at Aššur (the contemporary king being A-ia-ab (= Job)) was called "The House of Šulum-Marduk." (Another reading for “house” is advocated by Moran, 309, but the name Šulum-Marduk remains.) Marduk was known also among the Hitittes, and Middle Babylonian cylinder seals dedicated to him have been found at Thebes, Greece. In the first millennium Marduk's name appears in Assyrian and Aramean treaties from Sefire that were concluded with King Matṭilu of Arpad (COS II, 213). In the Bible, apart from Marduk (see above), Bel (his appellative attribute) together with his son Nab – (see above) is mentioned in Isaiah 46:1 and Jeremiah 51:44. In both these prophecies divine judgment (not the judgment of a “rival” as in the case of Aššur) is pronounced against a symbolic polytheistic entity within the framework of a particular stage in history. The historical placement of these verses is difficult. Nevertheless, the announcement of biblical-prophetic judgment is consistent with the attitude of the other antagonists to Marduk and Babylon, described above.

[Pinhas Artzi and Raphael Kutscher]

**MAREK, PESACH** (Piotr; 1862–1920), historian of Russian Jews and Yiddish folklorist. After completing his law studies at the University of Moscow, Marek was among the founders of the Benei Zion society of the Moscow Zionists in 1884. Among his studies published in the journal *Voskhod* were articles on Jewish printing in Russia (1888), on the history of Moscow's Jews (1893, 1895, 1896), and on the Jewish Community Council of Belorussia (1903). His most important contribution was *Di Yidishe Folkslider in Rusland* (“Yiddish Folk Songs in Russia,” 1901), which he compiled with Saul “Ginsburg. This volume laid the foundation for later studies in the field. Marek's sketches for a history of Jewish education in Russia, published in 1909, embraced the period from 1844 to 1873 and dealt with both traditional and secular systems of education. Marek also wrote for Russian-Jewish historical periodicals and was a contributor to the Russian Jewish encyclopedia. Due to the famine he moved to Volsk, Saratov district, and there he finalized his two works “The History of Religious Struggle” in two volumes, and “The History of the Jewish Intelligentsia in Russia.”

[Yehuda Slutsky]

**MARESHAH** (Heb. מַרֶשָׁה, Marissa), city in Judah connected with the families of Shelah and Caleb (1 Chron. 2:42; 4:21). It was in the fourth district of the territory of the tribe of Judah (Josh. 15:44). Mareshah was one of the cities fortified with King Matti'lu of Arpad (COS II, 213). In the Bible, apart from Marduk (see above), Bel (his appellative attribute) together with his son Nab – (see above) is mentioned in Isaiah 46:1 and Jeremiah 51:44. In both these prophecies divine judgment (not the judgment of a “rival” as in the case of Aššur) is pronounced against a symbolic polytheistic entity within the framework of a particular stage in history. The historical placement of these verses is difficult. Nevertheless, the announcement of biblical-prophetic judgment is consistent with the attitude of the other antagonists to Marduk and Babylon, described above.

[Pinhas Artzi and Raphael Kutscher]

Later Excavations
Excavations undertaken in the 1980s and 1990s by the Israel Antiquities Authority under A. Kloner’s direction uncovered many underground installations quarried in the limestone bedrock (oil presses, columbaria, tombs, and a sanctuary) connected to villas of the Lower City surrounding the tel (acropolis). The exploration of the largest (northwestern) tower of the Hellenistic fortification of the acropolis showed that it was inserted inside the glacis of the Persian period fortification, which, itself, modified the Iron Age II wall (of the eighth century B.C.E.). Its construction is dated to the turn of the third–second century, at the time of the Seleucid conquest of the area over the Ptolemies. An outer wall (proteichisma) surrounded the bottom of the tel, and an insula of the Lower City, attached to its face, consisted of a network of shops, with some craft installations, and dwellings above them. The Lower City was probably built under Antiochus IV (according to the so-called Hippodamic plan), but limited activities took place there already in the Iron Age, Persian, and Early Hellenistic periods. The rich finds comprised local and imported wares, among which the amphoras are evidence for the relation of the Levant with the main production centers of wine, oil, and probably fish products of all the Mediterranean, especially in the second half of the second century B.C.E. (Asia Minor, the Aegean, the Black Sea, Italy, and North Africa). Many ostraca were also found, including the copy of a wedding contract between Idumean families, written in Aramaic. The chronological distribution of the coins and the Rhodian amphora stamps provides a refinement of the historical events. The consequences of the destruction by Judah Maccabee lasted until the second half of the second century B.C.E., when a significant revival of the activities is evidenced by the discovery of an inscribed standard of measures, in situ inside a shop, made under the responsibility of two agoranomes in 143/2 B.C.E. The war of the Seleucid brothers Antiochus VIII and Antiochus IX initiated the decline of the city, the wealth of which was based on trade and agricultural production (oil and cereals), and in connection with the nearby port of Ascalon. The entrances of some of the houses were sealed, evidence for abandonment at the time of the conquest by John Hyrcanus, who did not destroy the city. The conquest took place probably in two stages: the first right after 113/2 B.C.E. – as evidenced by a funerary inscription and a hidden hoard of silver coins from Ascalon, both dating to that same year – and then around 108/7 B.C.E. – as evidenced by the last series of many inscribed lead weights, endorsed by the agoranome of that same year. This latter stage was most likely followed by the conversion of the inhabitants who remained in Idumea. The reduced occupation under the Hasmoneans seems evidenced by the two mikva’ot uncovered on the acropolis by Bliss and Macalister. The re-foundation by Gabinius in 57–55 B.C.E. was marked by the mint of coins under his name in Mareshah. However, no material evidence dates to the period of the Parthian destruction, in 40 B.C.E. Maresha appears to have been an Idumean city administered according to the Greek tradition.
(polis). This is strengthened by the recent discovery of a fragment of a civic inscription on stone, the first of its kind in the whole Southern Levant.

MARGALIOT (Margulies), MORDECAI (1909–1968), scholar of midrashic and geonic literature. Margaliot was born in Warsaw and immigrated to Palestine as a child; he studied at the Mizrachi Teachers’ Seminary in Jerusalem and he was one of the first graduates of the Hebrew University. He taught rabbinical literature at the Hebrew University 1950–57, and from 1958 midrashic and geonic literature at the Jewish Theological Seminary in New York.

In 1938 he published a scholarly edition of Ha-Hilkakim shel-Bein Anshei Mizrah u-Venei Erez Yisrael (“Differences in Religious Customs Between Babylonian and Palestinian Jewries”), a small compilation, which in his view was written in Palestine about the year 700 C.E. This was followed in 1942 by an edition of Halakhot Kesuvot ascribed to *Yehudai Gaon, which, according to Margaliot, was composed in southern Italy in the middle of the ninth century.

He also edited Midrash ha-Gadol on Genesis (1947) and Exodus (1956); Hilkhot ha-Nagid (1962), on Samuel ha-Nagid as halakhist, and Sefer ha-’Razim (1966), a treatise on magic from the talmudic period, which he reconstructed from fragments found in various libraries. This work provided new, important insights into Jewish magic and mysticism. His major work was a critical edition of Midrash Va-Yikra Rabbah, 5 vols. (1953–60), which is considered to be a model of critical editing of a midrashic text. Margaliot also contributed to scholarly publications and was the editor of two popular biographical dictionaries, one on the sages of the Talmud and the geonim, Enziklopedyah le-Hakhmei ha-Talmud ve-ha-Geborim, 2 vols. (1946), and the other of later rabbinical scholars, Enziklopediah le-Toledot Gedolei Yisrael, 4 vols. (1946–50).

Margaliot’s wife Rachel wrote Ehad Hayah Yeshayahu (1954, 1956), a defense of the unity of the Book of Isaiah.

MARGALIOT, REUBEN (1889–1971), rabbinic scholar and author. Born in Lemberg (Lvov), Margaliot qualified as a rabbi, but remained in business, eventually as a bookseller. Having been active in the Mizrachi movement in Lvov, he settled in Israel in 1935, becoming librarian of the Rambam Library in Tel Aviv. He devoted several studies to hasidic lore such as Or ha-Me’ir and Marganita de-R. Meir (1926, 1964); and Hilula de-Zaddikaya (1929, 1961). At a later stage he turned to Kabbalah, producing a monumental annotated edition of the Zohar (1964*), of the Tikkunei Zohar (1948), of M. H. Luzzatto’s Zohar Hadash (1953), and of the early kabalistic work Sefer ha-Bahir (1951). He also wrote Shaterei Zohar (1956), a comparative study of the Zohar’s system. Margaliot also wrote on the *Emden-*Eybeschuetz controversy and received a reply from G. Scholem (1941).

Earlier he had also published sermons and homiletical material and annotations to Hayyim b. Moses *Attar’s penta- teuchal commentary Ner la-Ma’or (1932, 1939). He wrote biographies of S. Edels (1912); of Hayyim b. Moses Attar (1925); of Maimonides’ son Abraham (1930), whose Milhamot Adonai he published in 1953; as well as Le-Toledot Anshei Shem b. Lvov (1950), on the scholars of his native city. On Talmud and halakhah Margaliot wrote among others Margaliyyot ha-Yam (novellae on tractate Sanhedrin, 1958) and Nehesh Hayyah on the Shulhan Arukh Orah Hayyiym (1954)*. Of special interest is a study of the halakhic aspects of a political resettlement of Erez Israel (Kavevi Or, 1921) written under the impact of the Balfour Declaration. Among halakhic studies in a more modern vein and idiom are his Yosid ha-Mishnah va-Arikha- tahu (“Foundations of the Mishnah and Its Redaction,” 1956); and Me’kharmim be-Darkhei ha-Talmud (“Studies in Talmudic Methodology,” 1967). Also of importance are his editions of medieval texts, particularly his annotated Sefer Hasidim, attributed to Judah b. Samuel (12th century), first published in 1924 and republished many times since. Margaliot also prepared an edition of the responsa of the tosafist *Jacob of Mar- vège (Sheclo t u-Teshuvot min ha-’Shamayim, 1957)*; of the dis- putations of Nahmanides with Pablo Christiani in Barcelona in 1263 (with a biography of Nahmanides, 1929); and of Jehiel of Paris of 1240 (1928, 1944). He received the Israel Prize in 1957 for his research on Kabbalah and Hasidism.

MARGALIT, DAN (1938– ). Israeli journalist. Margalit graduated from the Hebrew University of Jerusalem and entered journalism in 1960 working at Ha-Olam ha-Zeh, a satirical political news magazine put out by Uri *Avneri, and then at La-Ishah, the women’s magazine. In 1964 he joined Haaretz covering political and parliamentary affairs, first as a Knesset reporter covering parliamentary committees and later as a political columnist. In 1977, as the paper’s Washington correspondent, he disclosed that Leah Rabin had an illegal foreign bank account, the disclosure of which resulted in the fall of the Rabin government and elections which brought the Likud to power for the first time. Well connected to the country’s political leaders, in the 1980s Margalit began a parallel career as host of Education Television’s New Evening daily interview program on current affairs, and in the 1990s as host of Po- Politika (later Politika on Israel’s Channel 2), a round-table talk show in front of a live audience on topical issues. The program, while earning high ratings, often got out of hand.
as participants tried to outshout one another. An endearing but probing style made Margalit a popular and controversial interviewer. In 2004, following differences with the Channel 2 management, he moved to Channel 10 to present a similar program, Politika-Plus. In 2001 he left Haaretz for Ma'ariv as op-ed editor and political columnist, after having served briefly in 1992 as Ma'ariv's editor following its purchase by Ofer *Nimrodi.

[Yoel Cohen (2nd ed.)]

MARGALIT, MEIR (1906–1974), actor. Born in Ostroleka, Poland, Margalit immigrated to Erez Israel in 1921 and worked as a laborer in the “Gedud ha-Avodah. He began to appear on the stage as an amateur in his school days and was a member of the drama circle of the Gedud formed by Manya Arnon. He joined the Ohel studio established by the Cultural Committee and became one of its first members when it became the “Ohel theater. In his long acting career he played leading roles. He received the Israel Prize for arts in 1964.

MARGARETEN, REGINA (1862–1959), pioneer in the American kosher food industry. Born in Miskolc, Hungary, Margareten came to the United States with her husband, father, mother, and four brothers in 1884. Out of the small bakery the family opened on the Lower East Side of Manhattan came Horowitz Brothers & Margareten, which continues to manufacture matzot, noodles, and other kosher products. Regina Margareten took over management of the business after her father’s death in 1885 and achieved further authority after her husband’s death in 1924. As of her 95th birthday she continued her daily work as treasurer and a director of the company located in Long Island City, Queens. Her 1957 birthday celebration included some 400 family members from all over the world, including children, grandchildren, great-grandchildren, and great-great-grandchildren. A philanthropist, Margareten was active in over 100 institutions. She was president of Daughters of Zion for over 50 years. Upon her death in 1959 the faculty, the Board of Directors, and students of Ye-siva Torah Vodaath and Mesivta called her “a noble woman whose long lifetime of good deeds provided a model for all Jewry” (New York Times, Jan. 19, 1959).

[Sara Alpern (2nd ed.)]

MARGARITA (Margalita), ANTON (b. c. 1490), apostate and anti-Jewish writer. Although the son of a rabbi, Samuel son of Jacob *Margolioth of Regensburg, while he was still a Jew, denounced the Regensburg community to the authorities. He converted to Catholicism in 1522, and later became a Protestant. He was a lecturer in Hebrew at Augsburg, Meissen Zell, Leipzig, and from 1537 until his death, at Vienna University. In his first anti-Jewish book, Der Gantz Juedisch Glaub... (first published in Augsburg, 1530), Margarita modeled himself on similar writings by the apostates Johannes *Pfeifferkorn and Victor von *Carben. In an attempt to ridicule the religious precepts of the Jews, their customs, and their habits, he accused them of lacking charity, of reviling Christianity (in the “Aleinu prayer), and finally of treason. The large number of Jewish prayers in his own translation included in the book reveal his ignorance of Jewish writings (as noted by Johann *Wagenseil in his Latin translation of tractate *Sotah (Altdorf, 1674), 1105) and his scanty knowledge of Hebrew. The book formed the basis of a religious dispute between *Joseph (Joselmann) b. Gershom of Rosheim and Margarita held at the Diet of Augsburg of 1530 at the instance of Emperor Charles V. When Joseph of Rosheim succeeded in proving that the apostate’s allegations were unfounded, Margarita was imprisoned and later banished from Augsburg. However, his book was reprinted many times (Frankfurt, 1544, 1561, 1689; Leipzig, 1705, 1713) and was widely read. It particularly influenced Martin *Luther, who quoted it many times in his Von den Juden und ihren Lugen. Margarita was also the author of Dar waschiach Schon Khenom (1534).

[Bernard Suler]

MARGET, ARTHUR W. (1899–1962), U.S. economist. Born in Chelsea, Massachusetts, after serving with the U.S. army during World War I he taught at Harvard and at the University of Minnesota. In World War II he again joined the armed forces and rose to the rank of lieutenant colonel. After the war he was chief of the finance and economic division of the United States element of the Allied Commission for Austria and during 1947–48 was chief of the United States finance division in Paris. In 1950 he joined the Board of Governors of the Federal Reserve System in Washington and became the director of its international finance division. In 1961 he resigned and went to Guatemala as regional adviser to the State Department’s Agency for International Development. His major publication is The Theory of Prices, 2 vols. (1938–42).

[Joachim O. Ronall]
tion numbered 9,444 (18% of the total population) in 1900 and 1,623 (26.7%) in 1930.

From its inception the community was an Orthodox one. The influence of Hasidism was felt, particularly between the two world wars. The rabbis of the community included R. Joshua Aaron Zevi Weinberger, author of the Maharriaiz responsa (first half of the 19th century); his descendants succeeded him in the rabbinical office until the liquidation of the community. For a short period, from 1850, R. Hillel *Lichtenstein was rabbi of the town. The students of the community’s yeshivah included some who came from far away, and their numbers occasionally rose to 350. The last rabbi, who perished in the Holocaust, was R. Mordecai Azriel Weinberger; he was also the last head of the yeshivah. A Jewish press functioned in Marghita between the two world wars.

After 1940, when the city was returned to Horthyite Hungary, the Hungarian-speaking local Jews discovered that the official and public attitude towards them had changed, and that Hungarian antisemitism was no better than its Romanian variant, which they had experienced during the interwar period.

At the time of the Holocaust, in the summer of 1944, the local Jews were taken to the district capital of Oradea-Mare and deported from there to Auschwitz. After the war some Jews returned to the town, numbering about 500 in 1947. Their numbers gradually decreased through emigration to Israel and other countries, so that they were finally reduced to 10 families in 1970 (out of a total population of 12,000), and their number continued to drop, mostly through immigration to Israel and old age.

[Nancy Buchwald (2nd ed.)]
which he uses his outstanding talmudic knowledge to defend the Talmud against its critics. He is also the author of Sippurei Yeshurun (1877), an anthology of aggadic and talmudic literature written in a pleasant and easily readable Hebrew. Margolies contributed to the Hebrew periodicals Ha-Maggid, Ha-Shahar, Ha-Melitz, and Ha-Zefrah.

MARGOLIES, MOSES ZEVULUN (1851–1936), U.S. Orthodox Rabbi. Rabbi Margolies was born in the small Lithuanian city of Meretz, not far from Kovna and Slobodka. On his father’s side, he was the grandson of Rabbi Abraham Margolies, chief of the bet din of Telshem, and of Rabbi Wolf Altschul, chief of the bet din of Lutzan who traced his lineage to Rashi. On his mother’s side, he was the grandson of Reb Eliyahu Kroszter, the brother-in-law of the Vilna Gaon. Ordained by his uncle and by Rabbi Yom Tov Lippman Halpern, the rabbi of Bialystok in the year 1876. He served as rabbi of Sloboda for 12 years. In 1889 he was invited to assume the chief rabbinate of Boston. In 1906 he was called to the rabbinate of Congregation Kehilath Jeshurun in New York, a post which he held until his death. His primary occupation was study. The Talmud was always open on the dining room table. He began study at five in the morning and he would make a siyum on the completion of the whole Talmud every year on the yahrzeit of his mother. It meant that he covered seven pages of the Talmud every day. Rabbi Margolies introduced the system which supervised the distribution of kosher meat in New York City. He served as president of the Union of Orthodox Rabbis of the United States and Canada. He founded the New York Kehillah and the Central Relief Committee (later absorbed by the American Jewish Joint Distribution Committee). An early Zionist, Rabbi Margolies was a member of the Mizrahi Organization of America. He also served as president of the Rabbi Isaac Elchanan Yeshiva (which ultimately became Yeshiva University) for several years, presiding over the ordination of a generation of Orthodox rabbis.

Gifted with a sharp and crisp wit, he used it not to entertain people but to drive home a point and to help solve a problem. He was consulted by people of all religious persuasions on both personal matters and communal issues. On one occasion, he was consulted by the impresario Meyer Weisgal who had scheduled a performance of “The Romance of a People” at the Polo Grounds in New York on a Saturday night in late August which coincided with the first selihot (penitential service). The performance was to start 8:00 in the evening which, at that season of year, would involve violating the Sabbath. Weisgal wanted the rabbi to grant absolution for the Sabbath violation. “Mr. Weisgal,” the rabbi responded, “You came to the wrong Moses; I would have to refer you to the original Moses. He was the one who gave us the Sabbath.” A wise and witty observation ended the inquiry.

Rabbi Margolies’ natural inclination in deciding questions of Jewish law was toward leniency and tolerance. He had the scholarly erudition which enabled him to back up his decisions with abundant halakhic sources. His openness to all brought him into contact with many of the lay and rabbinic leaders of the wider Jewish community. He once shared a platform at a Zionist meeting with Rabbi Stephen S. Wise who was delivering an address. Wise turned to the rabbi and then to the audience and said “Look what Zionism can do. It can bring to the same platform a guy like me and a sage like Rabbi Margolies.”

His last public appearance just months before his death was at a Madison Square Garden rally against Hitler’s Nuremberg laws. He had to be carried on to the stage. His hands trembled, but his voice never wavered, as he read his message. When he finished, 20,000 people rose to their feet in reverence and appreciation. He was known to many as the Ramaz (an acronym for Rabbi Moses Zevulun). The Ramaz School in New York was established one year after his passing in 1937 by his grandson, Rabbi Joseph H. *Lookstein and Congregation Kehilath Jeshurun. It was named for him as an everlasting memorial to a giant of scholarship and leadership in the Jewish community.

[Haskel Lookstein (2nd ed.)]

MARGOLIN, ANNA (pseudonym of Rosa Lebensboym; 1887–1952), Yiddish poet and journalist. Born into a maskilic family in Brest-Litovsk, Belorussia, Margolin studied in the Odessa Jewish gymnasium. She came to the United States for the first time in 1906 and, working as a secretary for the philosopher Dr. Chaim *Zhitlowsky, began to publish in the Yiddish press. Subsequently, as secretary for the Yiddish anarchist newspaper Di Fraye Arbeter Shhtime, she published short stories under the pseudonym Khava Gros. She lived in London, Paris, and Warsaw (1910–11). After she married the writer Moyshe Stavnske, the couple immigrated to Palestine, but the marriage was short-lived, and, after she bore a son, she left her husband, returning first to Warsaw, and then, in 1914, to New York. As a writer and editor for the Yiddish newspaper Der Tog, Margolin wrote a weekly column, “In der Freyony-Velt” (“In the World of Women”) under her own name, as well as articles under the pseudonym Clara Levin. In 1919 she married the Yiddish poet Reuben “Iceland. She began to write poems under the pseudonym Anna Margolin in 1921, which she published in the prominent Yiddish papers and literary journals of the day in New York, Warsaw, and other Yiddish centers. She published a single volume of her own poems, Lider (“Poems,” 1929) and edited an anthology, Dos Yidishe Lid in Amerike (“The Yiddish Poem in America,” 1923). Her poems received the warmest acclaim from her contemporary Yiddish critics. Both then and now, Margolin has been perceived as the quintessential modernist woman poet. Poems in English translation appeared in: Leftwich, The Golden Peacock; I. Howe and E. Greenberg (eds.), A Treasury of Yiddish Poetry (1969); I. Howe et al. (eds.), Penguin Book of Modern Yiddish Verse.
MARGOLIN, JULIJ (1874–1944), one of the commanders of the *Jewish Legion during World War 1. Born in Belgorod, Russia, Margolin settled in Ereẓ Israel with his family in 1892 and lived in Rehovot. He was outstanding in agricultural labor and in affairs of self-defense. With the death of his parents and the difficult economic situation in the country, he went to Australia in 1900 and worked in agriculture and trade there. During World War 1 he joined the Australian army. He was noted for his heroism on the Gallipoli front (1915–16) and became acquainted with Vladimir *Jabotinsky and the volunteers of the Zion Mule Corps from Ereẓ Israel. He was transferred to the French front under the command of General *Monash and achieved the rank of lieutenant colonel. Jabotinsky met with him in London and offered him the command of the Second Battalion of the Jewish Regiment, which consisted mostly of Jewish volunteers that had arrived from the U.S. and Canada, the 49th Royal Fusiliers (among its members were Izhak *Ben-Zvi and David *Ben-Gurion). Margolin accepted the offer and, with the agreement of the military authorities, arrived in Palestine in the summer of 1918 as commander of the battalion. He also cultivated friendly relations with the Ereẓ Israel volunteers of the third battalion of the Jewish Legion, disregarding the norms of military hierarchy. His battalion broke through the Turkish front on the Jordan River and captured the Transjordanian town of Salt, of which he was made military governor.

In December 1919, when the Legion was officially given its Jewish name, First Judeans, with the seven-branched menorah as its symbol, Margolin became its commander. Margolin constantly struggled against the hostile attitude toward the Legion of the British military command and military authorities in Palestine. But his sense of order could not be gainsaid; he never revealed his deep relationship to the yishuv and the first nucleus of its self-defense network to the outside world. With the riots that broke out in Palestine in the spring of 1920, the armed legionnaires were dispersed, with Margolin’s knowledge, throughout the Arab villages, an act that prevented further bloodshed. Margolin argued with his superior officers for his right to command the Legion in this manner, an attitude that was not usually accepted in military circles.

With the gradual dismantling of the Legion, the British Military High Command decided to establish the Palestine Defense Force, composed of a Jewish and an Arab unit. Margolin was destined to be the commander of the Jewish unit (March 1921). Riots again broke out in Jerusalem and Tel Aviv-Jaffa (spring of 1921), and on May 1 Joseph *Brenner and his friends were killed. Jewish legionnaires, including discharged ones, took arms out from the military camp in Sarefand without Margolin’s knowledge and used them to stop the riots. Margolin arrived in Tel Aviv on May 2, mobilized both in-service and discharged soldiers, and provided them with arms from the military stores. This act served as a pretext to abandon the plan of the Palestine Defense Force and finally disband the Legion. Margolin resigned from the army, rather than face a court martial, returned to Australia, and went into business. Throughout his life he longed to return to Ereẓ Israel. In 1950 his remains were transferred to Israel and reinterred in Rehovot. A childhood friend from Rehovot, the Hebrew author Moshe *Smilansky, described Eliezer Margolin in one of his stories, named after the Arab and Bedouin nickname for him, “Haywaj Nazar.”

[Getzel Kressel]

MARGOLIN, JULIJ (1900–1971), Israeli publicist, writing in Hebrew and Russian. Born in Pinsk (Belorussia), the son of a physician, Margolin spent his youth there and in the Ukraine. After World War 1, he studied philosophy in Berlin. In 1936...
he settled in Tel Aviv with his family and worked as a writer and journalist. However, when on a private visit to Poland in the summer of 1939, he was arrested by the advancing Russians after the outbreak of World War II and sentenced to five years in labor camps for alleged infringement of passport regulations. Margolin wrote three works in the labor camps: The Theory of the Lie, The Doctrine of Hate, and On Liberty, but they were discovered during a search of his effects before his release and were destroyed.

After his return to Erez Israel in 1947, Margolin wrote a factual account of his horrifying experiences; this was one of the most detailed reports published until then on conditions in Soviet labor camps. The book first appeared in a French translation under the title La Condition Inhumaine, and later in New York in the Russian original, and in 1968 in a German edition.

In Israel, Margolin worked for various periodicals. He founded an Israel Association of Former Prisoners of Soviet Labor Camps and during his last years he was involved in various activities in support of Jewish emigration from Soviet Russia. He also wrote A Tale of Millenia: A Condensed History of the Jewish People, which appeared posthumously with a foreword by Michael Zand.

**BIBLIOGRAPHY:** E. Gottgetreu, in: *Allgemeine Juedische Wochenzeitung* (Feb. 12, 1972); H. Reichmann, *To the Memory of a Friend* (Russian, 1971).

[MARGOLIN, MOSES] (1862–?), Zionist writer. After completing his studies at the University of St. Petersburg, Margolin was appointed secretary of the editorial board of the Russian *Entsiklopedicheskiy Slovar* ("Encyclopedic Dictionary") of Brockhaus-Efron and of several other Russian encyclopedias. He was active in Jewish public life, in the *Society for the Promotion of Culture among the Jews of Russia, the Jewish Colonization Association, and other organizations. In 1904 he was one of the editors of the Russian-language Zionist newspaper, Yevreyskaya Zhizn. In his studies in Jewish history Margolin attempted to demonstrate the legitimacy of the historic development of the Jewish people. He deals with this in *Osnovye techeniya v istorii yevreyskago naroda* ("Basic Trends in the History of the Jewish People," 1900, 1917) and in *Yevreyskaya zemlya* ("A Jewish Land," 1918). Under the Soviet regime Margolin belonged to the small group of Jewish intellectuals who attempted to continue their research work in Jewish history; he contributed until 1930 to the publications which these circles published. No information about his subsequent fate is known.

[Yehuda Slutsky]

**MARGOLIOTH** (Margoliouth, Margulies, Margolies, and various other spellings), family that traditionally traces its de-
scent from ‘Rashi. The name derives from margalit (מַרְגָּלִית), Hebrew for “pearl.” The earliest identifiable member of the family was Jacob of Regensburg (see Jacob “Margolioth). Jacob’s son Samuel may be identical with Samuel Margolioth, nominated elder of Great Poland and Masovian Jewry in 1527 by Sigismund I. Samuel’s son was Anton “Margaria, the apostate anti-Jewish writer. Another son, Moses (1540–1616), was rabbi at Cracow and head of the yeshivah there. Naphtali Margolioth (b. 1562) embraced Christianity in 1603, as Julius Conrad Otto. He became professor of Hebrew at Altdorf and later returned to Judaism. Samuel’s grandson Mendel (d. 1652), rabbi at “Przemysl, had eight sons, all distinguished talmudists. The most outstanding member of this line, which was widely dispersed throughout Eastern Europe, was Ephraim Zalman “Margolioth. There was a Moses Margulies among the first inhabitants of the Vienna ghetto, founded in 1620. His son, Mordecai (Marx Schlesinger), was leader of the Vienna community at the time of the 1670 expulsion. Some members of the family settled permanently in Eisenstadt. Those who later returned to Vienna called themselves Margulies-Jaffe and registered themselves as “Schlesinger.”

BIBLIOGRAPHY: J. Mises, Die aelterste gedruckte deutsche Untersetzte des judischen Gebetbuchs aus dem Jahre 1530... (1916); B. Wachstein, Die Grabsschriften des alten Judenhofes in Eisenstadt (1922); L. Loewenstein, Geschichte der Juden in der Kurpfalz (1895), 93.

MARGOLIOTH, EPHRAIM ZALMAN BEN MENAHEM MANNES (1760–1828), rabbi and author. Ephraim studied under his uncle, Alexander Margolioth, rabbi of Satanov, Isaac of Ostrow, author of Berit Kehunnat Olam, and Ezekiel “Landau. In his youth he was rabbi of Ohanov, but later left the rabbinate, according to some reports declining an offer of the rabbinate of Frankfurt. Ephraim settled in Brody and went into business, in which he was highly successful. He owned commercial establishments in Vienna and it was said of him: “From the time of the minister Saul “Wahl there has not been Torah and wealth such as belong to Margolioth.” He spent most of his time in study, leaving the conduct of his business to his partner Simeon Dishze. He also studied esoteric works with a group of kabbalists at Brody, and had a sound knowledge of history. Margolioth wrote many books and exchanged responsa with the greatest rabbis of his time, with some of whom he maintained close relations. He was involved in the controversy caused by Joshua Heshel “Zoref’s book Ha-Zoref and established the fact that it had strong leanings toward Shabbateanism. He also contended with the communal leaders of Brody over the leniency extended to the wealthy parnasim under the prevailing system of communal taxation and demanded their full participation in community expenditure.

Margolioth gave his approbation to a great number of books, including many by hasidic rabbis. His own works, which appeared in many editions, and many of his halakhic decisions have been accepted.

His works include Beit Efrayim, part 1 entitled Peri Tevu’ah, with commentary Rosh Efrayim (Lemberg, 1809); part 2 Shulhan Arukh, Torch Deih (ibid., 1810); responsa Beit Efrayim (ibid., 1818); and another collection of responsa Beit Efrayim (Brody, 1866). The majority of his work was printed at the end of his Arukh. A privilege of Frederick III dated 1487 mentions the name of Jacob “Margolioth, nominated elder of Great Poland and Masovian Jewry in 1527 by Sigismund I. Samuel’s son was Anton “Margaria, the apostate anti-Jewish writer. Another son, Moses (1540–1616), was rabbi at Cracow and head of the yeshivah there. Naphtali Margolioth (b. 1562) embraced Christianity in 1603, as Julius Conrad Otto. He became professor of Hebrew at Altdorf and later returned to Judaism. Samuel’s grandson Mendel (d. 1652), rabbi at “Przemysl, had eight sons, all distinguished talmudists. The most outstanding member of this line, which was widely dispersed throughout Eastern Europe, was Ephraim Zalman “Margolioth. There was a Moses Margulies among the first inhabitants of the Vienna ghetto, founded in 1620. His son, Mordecai (Marx Schlesinger), was leader of the Vienna community at the time of the 1670 expulsion. Some members of the family settled permanently in Eisenstadt. Those who later returned to Vienna called themselves Margulies-Jaffe and registered themselves as “Schlesinger.”

MARGOLIOTH, JACOB (d. between 1499 and 1512), rabbi of Regensburg (Ratisbon), originally from “Worms. In 1497 he corresponded with Johannes “Reuchlin on kabbalistic literature. Margolioth was considered a halakhic authority by his contemporaries and praised by them. His son Samuel, father of the apostate Anton “Margaria, succeeded him as rabbi of Regensburg until the expulsion in 1519; he subsequently moved to Posen (Poznan), where he served as av bet din of Great Poland until after 1537. Another of Jacob’s sons, Isaac Ezik (d. 1525), was a member of the bet din of R. Jacob “Pollak of Prague. Jacob’s Seder Gittin ve-Halizah has been preserved in several copies, one made by his son Isaac (Bodl. Ms. 2010/3) and the other by his son Shalom Shakhna under the title Yam she-Asah Shelomo (Bodl. Ms. 803). Part of his work was printed at the end of Tur Even ha-Ezer (Berlin, 1702). A privilege of Frederick III dated 1487 mentions a second Jacob Margolioth (d. before 1492), of Nuremberg. A halakhic declaration by him is noted in the responsa of R. Judah “Minz (no. 13), on the legality of a declaration of refusal (me‘un) to marry. R. Elijah “Capsali named Jacob Margolioth as one of the supporters of R. Moses “Capsali in his bitter controversy (1475–80) with R. Joseph “Colon (Likkutim Shonim, 1869, p. 16), but it is unclear to which of the two he was referring.

MARGOLIOTH, JUDAH LOEB (1747–1811), rabbi and preacher, one of the precursors of the Haskalah in Eastern Europe. Margolioth, who was born in Zborov, Galicia, served as rabbi in various East European communities and from 1805 in Frankfurt on the Oder. He was familiar with medieval and
MARGOLIOUTH, DAVID SAMUEL

(1858–1940), classical scholar and Orientalist. Born in London the eldest son of the convert missionary Ezekiel Margoliouth, Margoliouth was educated at Winchester and at New College, Oxford, where he gained two first class degrees and won the probably unprecedented total of 11 university prizes; later he was a fellow of New College (1881–89). In 1889 he was appointed professor of Arabic at Oxford University (apparently without knowing Arabic, although he quickly mastered the language), holding the position until his retirement in 1937. In 1899 he was ordained and in 1913 he became moderator in Oriental languages at London University, where he also delivered the Hibbert lectures. Margoliouth was honored by many learned societies; in 1915 he was elected as a member of the British Academy, and from 1934 to 1937 he was president of the Royal Asiatic Society. Margoliouth was an outstanding scholar in the fields of Islamic history and literature and was an important editor of medieval Arabic texts. Among his extensive writings the following are of particular Jewish interest: A Commentary on the Book of Daniel by Jephet ibn Ali... (edited and translated, 1889); The Place of Ecclesiastics in Semitic Literature (1890); The Origin of the “Hebrew Original” of Ecclesiastics (1899); and Relations Between Arabs and Israelites Prior to the Rise of Islam (Schweich lectures 1921, published 1924). He also edited Whiston’s English translation of Josephus (1906).

[Adin Steinsaltz]

MARGOLIOUTH, MEIR OF OSTRAHA (Ostrog; d. 1790), hasidic rabbi in Poland; a disciple of *Israel b. Eliezer the Ba’al Shem Tov. He was descended from a celebrated rabbinical family. From a very early age he and his elder brother became devoted and loved disciples of the Ba’al Shem Tov. R. Meir, who gained a reputation as one of the greatest scholars of his age, served as rabbi in Jaslo and later in Horodenka (Gorodenka); in 1755 he was appointed rabbi in the Lvov region and in 1777 was appointed rabbi Ostroha, a title officially confirmed by the King of Poland, Stanislas ii Augustus, which established his authority over all the rabbis of the district. He wrote works on halakhah and Kabbalah, and also long didactic poems. His great prestige helped to promote Hasidism, which at that time gave it important support. He had five sons, all of whom became noted rabbis and scholars. His works are Meir Netivim (Polonnyoe, 1791–92); Sod Yakhin u-Vo’az (Ostrog, 1794); Derekh ha-Tov ve-ha-Yashar (Polonnyoe, 1795); and Kotnot Or (Berdichev, 1816).

MARGOLIOUTH (Margalita), MOSES (1818–1881), English priest. Margoliouth, who was Jewish by birth, was born in Suwalki, Poland. In his youth he studied in yeshivot, and in 1837 he left Poland for Liverpool, where, under the influence of Jewish converts to Christianity, he himself became a Christian in 1838. After his studies at Trinity College, Dublin (1840–44), he served as curate in Liverpool (1844). From 1877 until his death he served as vicar in Little Linford in Buckinghamshire. Among his works are The Fundamental Principles of Modern Judaism Investigated (1843 with Margoliouth’s autobiography); The History of the Jews of Great Britain (1857); and A Pilgrimage to the Land of My Fathers (1858), a travelogue of Palestine. He was probably, but not certainly, a relative of the father of David Samuel *Margoliouth, whose close friend he was.

His nephew, GEORGE MARGOLIOUTH (1853–1952), like his uncle Moses Margoliouth, converted to Christianity and became an ordained priest of the Church (1881). Margoliouth excelled in biblical and Oriental studies and was in charge of the Hebrew, Syriac, and Ethiopic manuscripts of the British Museum from 1891 to 1914. His works included The Liturgy of the Nile (Palestine Syriac Text, Translation and Vocabulary; 1896); The Palestine Syriac Version of the Holy Scriptures (London, 1897); and the Catalogue of the Hebrew and Samaritan Manuscripts in the British Museum (3 vols.; 1909–15), which has served scholars as a key bibliographical guide to this most important collection.

[Adin Steinsaltz]
in Vilna, he studied with Rabbi Joshua of Vilna, the uncle of the Ḥafeẓ Ḥayyim. He continued with Rabbi Jacob Beirit before entering the yeshivah of Volozhin. He was ordained in 1869 and then worked with Rav Eizele Charif to publish a commentary on the Jerusalem Talmud, titled Noam Yerushalmi. He went on to become head of the Rabbinical Court in Dobrova and after two years moved to Yahnowka. He then returned to Grodno where he was the leading halakhistic authority, succeeding his father-in-law Rabbi Nahum Kaplan. He combined the life of a scholar and communal leader. He was one of the rare rabbis to embrace Hovevei Zion and was a delegate to the Second Zionist Congress in Basel. When secular leadership dominated the Zionist movement, Rabbi Margolis became alienated.

After the pogroms of 1903 he fiercely opposed the Jews who had embraced the revolutionary movement and received death threats. He wanted to declare them no longer members of the Jewish community; a harsh but more moderate proposal passed the gathering of rabbis in Cracow. Political conditions were such that he welcomed and accepted an offer from Boston and arrived in the United States in 1907. Four years later, he moved to New York as rabbi of Adath Israel, a Lower East Side congregation, a position he held for almost a quarter of a century. He arrived in the United States after having served for almost 40 years as a European rabbi and was not about to accommodate himself to the American situation too easily.

He opposed Orthodox participation in the Kehillah and would not cooperate with the Agudat Harabbonim regarding kashrut; he thus established a separate movement Knesset Harabbonim and attracted some significant colleagues to the fledgling organization.

He initially supported RIETS and welcomed its creation. He was one of the speakers at its opening in 1915, but as it embraced secular learning and sought to become a college and not only a yeshivah, his support turned to opposition. Moshe Sherman said: “The major thrust of his efforts to transplant the European world of Jewish piety and observance to the United States proved to be difficult” – at least in his generation when Americanization was the primary interest of immigrants and especially of their children.

He published Shem Olam (1905); Torat Gavriel, 5 volumes (1910, 1925, 1926); Agudat Ezov (1924); Ginzei Margoliot Shir ha-Shirim ve-Rut (1921); and Ginzei Margoliot Kohelet ve-Eikhah (1925).

[Michael Berenbaum (2nd ed.)]

MARGOLIS, MAX LEOPOLD (1886–1932), U.S. biblical and Semitic scholar. Born in Russia, Margolis received a thorough training in Bible and Talmud as well as in modern sciences and languages in his native country and in Berlin. In 1889 he went to the United States. His first field of specialization was the text-criticism of the Talmud to which his dissertation was devoted. His earliest work reveals meticulous attention to detail, thorough mastery of the subject, rigorous application of the inductive method, and brilliance and solidity in the conclusions. At the end of his fellowship year at Columbia University, Margolis was invited by Hebrew Union College in Cincinnati to serve as assistant professor of Hebrew and biblical exegesis. During his incumbency he published his Elementary Textbook of Hebrew Accidence (1893), a succinct and original contribution to Hebrew grammar and phonetics, as well as several works dealing with Reform Jewish theology. In 1897 he went to the University of California at Berkeley to teach Semitic languages and in 1905 returned to Hebrew Union College as professor of biblical exegesis. He resigned from Hebrew Union College in 1910, after he and other faculty members differed with the College president regarding educational philosophy and Zionism – Margolis was a strong Zionist. He went to Europe to complete his work on his pioneering and still classic Manual of the Aramaic Language of the Babylonian Talmud, which appeared both in English and in German (1910). The Jewish Publication Society chose Margolis to be secretary of the Board of Editors and editor-in-chief of their new translation of the Bible into English. To this major task he devoted himself until 1917. After the translation appeared, his mimeographed Notes on the New Translation of the Holy Scriptures (1921), which served as the basis of the work, appeared in a tome of 646 pages for private circulation. When Dropsie College was opened in Philadelphia, Margolis became professor of biblical philology, a position he occupied from 1909 until his death. Two brief popular works The Story of Bible Translations (1917) and The Hebrew Scriptures in the Making (1922) were never expanded into full-length scholarly treatments because his energies were increasingly absorbed by his vision of a truly critical edition of the Septuagint. Choosing the Book of Joshua, he collated all the existing Greek manuscripts and by dint of minute and brilliant analysis established the principal recensions of the Septuagint, which he called Palestinian, Egyptian, Syrian, Constantinopolitan, and Mixed. On the basis of these he then recreated what he regarded as the original septuagintal text. While some scholars have differed with his underlying theory as to the nature of the Greek translation, The Book of Joshua in Greek (1931) is considered a work of brilliant scholarship. In the area of septuagintal studies, he also published scores of technical papers. In the field of biblical exegesis he published a brief but valuable English commentary on Micah, Holy Scriptures with Commentary: Micah (1908), and Hebrew commentaries on Zephaniah and Malachi in the Kahana Bible Commentary Series (1930). The book by which he is perhaps most widely known is a one-volume A History of the Jewish People (1927, 1962) written in collaboration with Alexander Marx. Within the confines of a single volume the multitude of details of nearly 40 centuries of Jewish history were compressed with conciseness, clarity, and completeness. Moreover, the entire work is informed by a broad philosophic grasp of the subject, a rare balance and objectivity of treatment, and a warm love for the Jewish people and its heritage.
**BIBLIOGRAPHY:** R. Gordis (ed.), Max Leopold Margolis: Scholar and Teacher (1952), includes an annotated bibliography of Margolis’ writings.

[Robert Gordis]

**MARGOLIS-KALVARYSKI, HAIM** (1868–1947), pioneer and administrator of Jewish settlement in Erez Israel. Born in the province of Suwalki (then Russian Poland) where his parents were landowners, Margolis-Kalvaryski was active from his youth in the *Hibaklit Zion movement. After studying agriculture in Montpellier, France, he went in 1895 to Erez Israel and became the secretary of *Benei Moshe in Jaffa. He taught at the *Mikveh Israel Agricultural School and later worked at *Mishmar ha-Yarden on behalf of Baron Edmond de *Rothschild’s administration. In 1900 he became administrator of the settlements that the *Jewish Colonization Association (ICA) founded in Lower Galilee. Margolis-Kalvaryski established a training farm for the settlers at Sejera and brought over Russian peasant families who had converted to Judaism. Between 1901 and 1905, Margolis-Kalvaryski founded the settlements Sejera (*Ilaniyah), *Yavne’el, *Kefar Tavor, Beit Gan, and *Menahemiyah. In 1906 he was appointed manager of the settlements in Upper Galilee.

In 1913 he and Nahum *Sokolow met Arab leaders in Damascus to try to reach an understanding between them and the Zionist Movement. During World War I he defended the settlers imprisoned and persecuted by the Turks and helped establish collective settlements including *Ayyelet ha-Shahar, *Tel Hai, *Mahanaim, and *Kefar Giladi. In 1920 Margolis-Kalvaryski negotiated with the short-lived Arab government in Damascus and attempted to save the settlements in Upper Galilee from attacks through negotiations with local Arab leaders. He became manager of the ICA settlements in northern Palestine, a member of the Palestine Government Advisory Council, and a member of the Ya’ad Le’ummi (until 1929). Between 1923 and 1927 he was head of the Arab Bureau of the Zionist Executive and between 1929 and 1931 headed the joint bureau for Arab affairs of the Jewish Agency Executive and the Ya’ad Le’ummi.

Margolis-Kalvaryski saw Erez Israel as a common homeland for Jews and Arabs belonging to a Middle East federation. He was a founder of *Berit Shalom and similar groups which sought to reach agreement with the Arabs. In his later years he opposed official Zionist policy, which, in his opinion, was not sufficiently active in this direction. He wrote on Arab-Jewish relations in *She’ifoteinu, 2, 3 (1931–33) and in *Be’ayot ha-Zeman (1948). The moshef Margaliyyot in Upper Galilee is named after him.

**BIBLIOGRAPHY:** Be’ayot ha-Zeman, no. 27 (1947): A. Ever-Hadani, Ha-Hityashevut ha-Galil ha-Ta’amon (1955), 18–162; M. Smilansky, Mishpahat ha-Adamah, 3 (1954), 176–84.

**MARGOULIES, BERTA** (O’Hare; 1907–1996), U.S. sculptor. Margoulies was born in Lubitz, Poland. The artist’s early life was marked by frequent emigration: to Belgium shortly before its invasion by Germany in World War I, to Holland, and then to England. She went to the U.S. in 1921, graduating from Hunter College in 1927. In 1928, she received a fellowship from the Gardner Foundation in Boston, which enabled her to travel to Paris for two years of study at the Académie Julien and Académie Calorossi; she also studied at the École des Beaux-Arts for a brief period. In 1931, she returned to New York City; she supported herself as a social worker while opening an art studio and taking classes at the Art Students League. The New Deal offered Margoulies many opportunities to further her career: she completed a head of Andrew Jackson for the Works Progress Administration and received a commission from the Treasury Section of Fine Arts for Postman, 1691–1775 (1936), an historically accurate aluminum statue for the Washington, D.C., Post Office Building. Margoulies’ and sculptor Concetta Scaravaglione’s *Railway Mail* form part of ten aluminum figures positioned in the entrance lobby to the building. In addition, Margoulies sculpted *Woman and Deer* for the 1939 New York World’s Fair garden court. With funds provided by the U.S. Treasury Department, Margoulies completed a painted plaster relief entitled *Stillman Foote Acquires Homestead of John Harrington* for the Canton, Ohio, Post Office in 1939. The following year, the artist fashioned *Tomato Sculpture*, a wall-mounted terracotta sculpture commissioned for the Monticello, Arkansas, Post Office. In the composition, male and female figures work side by side to cultivate and harvest tomatoes, a crop associated with Monticello. Margoulies’ sculptures, some fashioned of beaten lead and bronze, often

**MARGOULIES, BERTA** (O’Hare; 1907–1996), U.S. sculptor. Margoulies was born in Lubitz, Poland. She went to the U.S. in 1921, graduating from Hunter College in 1927. In 1928, she received a fellowship from the Gardner Foundation in Boston, which enabled her to travel to Paris for two years of study at the Académie Julien and Académie Calorossi; she also studied at the École des Beaux-Arts for a brief period. In 1931, she returned to New York City; she supported herself as a social worker while opening an art studio and taking classes at the Art Students League. The New Deal offered Margoulies many opportunities to further her career: she completed a head of Andrew Jackson for the Works Progress Administration and received a commission from the Treasury Section of Fine Arts for *Postman, 1691–1775* (1936), an historically accurate aluminum statue for the Washington, D.C., Post Office Building. Margoulies’ and sculptor Concetta Scaravaglione’s *Railway Mail* form part of ten aluminum figures positioned in the entrance lobby to the building. In addition, Margoulies sculpted *Woman and Deer* for the 1939 New York World’s Fair garden court. With funds provided by the U.S. Treasury Department, Margoulies completed a painted plaster relief entitled *Stillman Foote Acquires Homestead of John Harrington* for the Canton, Ohio, Post Office in 1939. The following year, the artist fashioned *Tomato Sculpture*, a wall-mounted terracotta sculpture commissioned for the Monticello, Arkansas, Post Office. In the composition, male and female figures work side by side to cultivate and harvest tomatoes, a crop associated with Monticello. Margoulies’ sculptures, some fashioned of beaten lead and bronze, often
depicted human figures. Her simplification, stylization, and exaggeration of sculpted anatomy indicates her work’s affinity with expressionism, especially that of Ernst Barlach, Kathe Kollwitz, Paula Modersohn-Becker, and Jacques Lipshitz, among other artists. The gently smiling face of the sculpture "Walnut Boy" (1947) suggests early Greek sculpture, while the features of "Young Girl" (1936), especially her long nose and mask-like eyes, calls to mind Modigliani paintings of seated figures or Karl Schmidt-Rottluff’s "Male Head" (1917). Many of her pieces possess overtly social and political themes, such as the bronze sculpture "Mine Disaster" (1942), a loosely pyramidal shaped grouping of figures awaiting news about the fate of fathers, husbands, and brothers. She also completed many pieces with Jewish themes and motifs: "Blessing Candles, Waiting Wall, and Promised Land," the latter depicting a figure reminiscent of Moses with arms upraised. Margoulies won an Avery Award from the Architectural League in 1937, another award from the Society of Arts and Letters in 1944, and a fellowship from the Guggenheim Foundation in 1946. She lived in New Jersey and Massachusetts.

Margoulies’ work has been collected by the Des Moines Art Center, Whitney Museum of American Art, the Neuberger Museum, State University of New York, and Salisbury University, Maryland, among other places.

[Nancy Buchwald (2nd ed.)]

MARGULES, MAX (1856–1920), Austrian meteorologist. Born in Brody, Margules lectured in Vienna on mathematics and physics from 1880 to 1882. His refusal to convert to Christianity blocked his academic advancement and he left the university to become secretary of the Central Institute of Meteorology in Vienna. He held this post for 24 years. In 1906, still refusing to convert and disappointed with his lack of academic success under the Austro-Hungarian academic system, he retired on early pension. He left the field of meteorological research, set up a chemical laboratory in his home, and concentrated on independent research. The post-World War I inflation rendered his small pension insufficient to live on, and he died from malnutrition.

Margules’ first group of writings dealt with the changes of barometric pressure and their diurnal double fluctuations due to inner oscillations and waves in the free atmosphere of the earth. The second group of writings dealt with the effect of hot and cold air masses on climate. In the 1890s, he organized a network of closely spaced stations in a 60-kilometer circumference around Vienna, fitted with thermo-barographs. He showed the progress of the cold and hot waves of pressure and storms, and was able to arrive at an understanding of the phenomenon. In 1901 he showed that the kinetic energy in storms would have to be much greater in order to be produced by the pressure gradient. His conclusion later replaced the accepted theory on the generation of winds. Margules published his most important work on the energy of storms in 1903 (in *Jahrbuch der Zentralanstalt fuer Meteorologie und Geodynamik*). Here he replaced "the energy of the storm" with the "potential energy of distribution of masses on the vertical plane" known as the Margules equation. This introduced a three-dimensional distribution of energy in place of the previously accepted two-dimensional distribution. He stressed that the study of air masses in their space expansion led to an understanding of their movements and proved the impossibility of understanding the problem according to methods of surface barometers only.

[Dov Ashbel]

MARGULIES, EMIL (1877–1943), lawyer and Zionist leader. Born in Sosnowiec, Poland, Margulies became an ardent Zionist as a young man and, after his settlement in Bohemia, had a great share in the development of Zionism there and in the west Austrian district. At the Tenth Zionist Congress (1911), he submitted a new statute for the Zionist Movement. Throughout his life he was a "political" Zionist, and in 1923 he was co-founder of the Radical Zionist Fraction (Democratic Zionists), fighting against the enlargement of the "Jewish Agency by non-Zionists. Parallel to his Zionist activities, Margulies was one of the principal founders of the Czechoslovak "Jewish Party," of which he became president for a time. He also actively participated in the work on international minority problems and was a Jewish representative to the Congress of National Minorities. Margulies attained world renown through his action in the "Bernheim Petition. In 1939 he settled in Palestine, where, together with some colleagues, he opened an office for legal advice.

[Oskar K. Rabinowicz]

MARGULIES, SAMUEL HIRSCH (1858–1922), rabbi and scholar. Margulies was born at Brzezan in Galicia; he was a descendant of Rabbi Ephraim Zalman Margolioth. *Margulies laid the foundations of his talmudic-rabbinical knowledge at home. In 1878 he entered the university and the Jewish Theological Seminary at Breslau. In 1883 he took a degree in Semitic Languages at the University of Leipzig. He served from 1885 to 1887 as rabbi of the Congregation Newe Shalom in Hamburg; from 1887 until 1890 he was the rabbi of the congregation at Weilburg, in Hesse-Nassau.*

When in 1889 the Jewish community of Florence advertised in Jewish newspapers in Italy, France, and Germany that the position of chief rabbi was vacant, Margulies answered the call and he was appointed chief rabbi of Florence. Margulies’ dealings with the Jewish community of Florence were not too easy at the beginning. The community looked with a suspicious eye at the foreign rabbi with distinctive Zionist ideas. Nevertheless, his personal charm as well as his teaching abili-
ties soon established him as the undisputed spiritual leader of Florence’s Jewish community. When in 1899 the *Collegio Rabbinico Italiano was transferred to Florence, Margulies became its head, and thus trained several generations of Italian Jewish spiritual leaders. Altogether he did much to revive Jewish life and consciousness in Italy and to foster contacts between Italian and other European Jews. He founded *Rivista Israelitica in 1904, the learned journal of his seminary (1904–15), and was one of the initiators of the weekly *Settimane Israelitica (later named *Israel). Margulies also established several charitable institutions in Florence.

Margulies published several essays in Berliner’s *Magazin and in the *Monatsschrift; he wrote *Saadja Alfajûmi’s *Arabische Psalmen-Uebersetzung, published at Breslau in 1884, an edition of Saadia’s Arabic translation of the Psalms from a Munich manuscript with German translation and commentary; From his German period there are also *Zwei Pesach-Predigten, published at Frankfurt-on-the-Main in 1888, and *Dichter und Patriot, on the life and work of D. Levi, published at Treves in 1896. His later writings include “Schwertlied Ezechielis” (also in Hebrew, in *Scripta Universitatis... Hierosolymitanarum..., 1 (1923)); articles in his own (*Rivista Israelitica) and other periodicals; and volumes of sermons, among them *Discorsi Sacri (1891, repr. 1956). An autobiographical note appeared in his *Discorsi e Scritti vari (1923).

Margulies was a leading advocate of the 1920 “Jewish Commune” experiment in Florence, which caused disagreements between Zionists and non-Zionist Jews. Margulies died on Purim day, 1922, while he was talking to the children of the Jewish School.

[MARGUL–SPERBER, ALFRED (2nd ed.)]

MARHAB AL–YAHUDI IBN AL–HARITH (d. 629), warrior of Arabia, renowned for his courage. His family is said to have been of Himyarite origin and several other members gained fame as warriors. They were mentioned by many Muslim historians, and were noted for their outstanding courage. Marhab’s two brothers, al–Harith and Yāsir, distinguished themselves in the *Khaybar war against *Muhammad. Zaynab, a woman famous in Islam, who attempted to poison Muhammad to avenge the death of her husband, father and uncle in that war, was also a member of the family. Arab sources refer to him as Marhab al–Yahūdī (Marhab the Jew), omitting mention of his father’s name. The references to the woman Zaynab are somewhat confused. One source states that al–Hārith was “Zaynāb’s father and Marhāb’s brother” (al–Maqrīzī, 1:314). The same source, however, refers to Zaynab as “Zaynab the Jewess, al–Hārith’s daughter, and Marhāb’s sister.” Marhāb and his brother, Yāsir, both composed poetry in the rajāz meter. Arab historians and biographers of Muhammad state that Marhab died in a duel during one of the battles at Khaybar. The story, as preserved by the ninth-century historians al–Waqīdī and Ibn Ḥishām, states that, during the siege by Muslim forces of one of the Khaybar fortresses, Marhab threw a heavy millstone over the walls of the fort, killing Maḥmūd ibn Maslama. His cousin Ali ibn Abū Tālib promptly challenged Marhab’s brother to a duel and killed him. Marhāb, singing an urjūza (poem in rajāz meter), then came to avenge his brother’s blood and met Māḥmūd ibn Maṣlama’s brother, Muhammad ibn Maslama. In the duel Marhab’s sword stuck in his adversary’s shield and Māḥmūd then struck Marhab a mortal blow. Marhab’s second brother, Yāsir, was also killed in a duel, while Zaynab’s husband fell in battle. The distraught Zaynab, having lost her husband and her brothers, attempted to poison Muhammad in revenge, but he was saved by his foresight. There are conflicting traditions as to whether Muhammad had Zaynab killed, or released her after her conversion to Islam.

[Andreas Kilcher (2nd ed.)]
MARSHESVAN (Heb. מָרְשֶׁשֶׁב, *Maršēšēb), the post-Exilic name of the eighth month of the Jewish year, frequently shortened to Ḥeshvan (Heb. חֶשֶׁב). Its pre-Exilic name is Bul (1 Kings 6:38). The name occurs in the Antiquities of Josephus, *Megillat Ta'anit, and later branches of rabbinic literature, but nowhere in the Bible. It is believed to be etymologically connected with Arahassamnu, the Assyrian for “eighth month.” The zodiacal sign of this month is Scorpio. Like *Kislev, it consists of 29 or 30 days in either common or leap years (see *Calendar). The 1st of Marshesvan never falls on Sunday, Tuesday, or Friday. In the 20th century, Marshesvan, in its earliest occurrence, extended from October 6th to November 4th (3rd), and, in its latest, from November 4th to December 3rd (2nd). Historic days in Marshesvan comprise: (1) 6th of Marshesvan, the marking of the blinding of King Zedekiah at the command of Nebuchadnezzar (1 Kings 25:7), once observed as a fast (Meg. Ta'an. 13); (2) 7th of Marshesvan, the commencement in Erez Israel of the Prayer for *Rain, inserted in the ninth benediction of the *Amidah prayer (Ta'an. 13); (3) 17th of Marshesvan, the commencement of the Flood (Gen. 7:11), and of a series of fasts by pious individuals in their intercession for rain in years of drought (Ta'an. 1:4); (4, 5, 6) 23rd, 25th, and 27th of Marshesvan, formerly commemorative of the respective victories of the Hasmonaeans and Pharisees over the Greeks, Samaritans, and Sadducees (Meg. Ta'an. 8).

[Ephraim Jehudah Wiesenbarg]

MARI, one of the principal centers of Mesopotamia during the third and early second millennia B.C.E. The archaeological and epigraphical discoveries there are of prime significance for the history of Mesopotamia and Upper Syria. The Akkadian-language documents from Mari date from the Old Babylonian period and are thus centuries earlier than those of the Hebrew Bible. However, the residents of Mari were western Semites, ultimately related to the Israelites and Arameans who first surface in the late second millennium but who are best known from the first. In consequence, although there is no demonstrable direct connection with the history of ancient Israel as was once thought (see *Genesis and *Patriarchs), there are numerous linguistic, cultural, and social data from Mari that aid us in the study of ancient Israel and the Bible. Mari (sometimes Ma’erī in the cuneiform sources) was located at Tell Harirī, at present some 1.5 mi. (2.5 km.) west of the Euphrates, near Abu Kemal, around 15 mi. (25 km.) north of the modern Syrian-Iraqi border. It was in an optimal position for contacts with the West and its location on the river artery, yet immediately adjacent to the desert, was decisive in the shaping of its fortune and character.

A. Excavations and Discoveries

The French excavations at Mari were instituted in 1913 under the direction of A. Parrot and exploration continued as regularly as the international situation allowed. The archaeological evidence indicates that Mari was founded in the fourth millennium B.C.E. at the very beginning of the Early Dynastic period (ED 1), reaching a cultural-artistic peak during the first half of the third millennium B.C.E. Dating to this period (known as “Early Dynastic 11–13,” or “pre-Sargonic”) are a ziggurat and several sanctuaries: including a temple where the earliest list of the Mari pantheon was discovered, temples to Shamash, Ninursag, and Ishtar, and the pair of temples of Istarat and Ninni-Zaza. In the latter three, there came to light many inscribed statues of local kings (such as Lamgi-Mari, Iku-Shamagan, and Iblul-II), lesser royalty, and courtiers. Although Sumerian culture was predominant, the character of the cultic installations, the appearance of bearded figures in art, and especially the occurrence of particular divine and private names are all clearly indicative of a basic Semitic element from earliest times, with Semitic rule there centuries before the rise of Akkad.

Since 1964, the excavations have revealed two superimposed palaces from pre-Sargonic times, most impressive in themselves, including a royal chapel with an earthen altar (cf. Ex. 20:24), the sacred tradition of which was preserved even in the Old Babylonian palace built there some 700 years later (see below). Within the palace complex, a jar came to light containing a “treasure” including a lapis lazuli bead with a votive inscription mentioning Mesannepada, founder of the First Dynasty at Ur. This indicates a close contact between Mari and Ur at an early date, as do other finds from Mari, such as shell inlays essentially identical with those of the “Ur Standard” (war panel). The pre-Sargonic palace was destroyed either by Eannatum of Lagash (mid-25th century B.C.E.) or, rather, by Lugal-zaggisi of Uruk (mid-24th century B.C.E.).

After Sargon’s conquest, in the second half of the 24th century B.C.E., Mari became a vassal city within the empire of Akkad; among the epigraphic evidence from this period are the names of two daughters of Naram-Sin, king of Akkad. In the final two centuries of the third millennium B.C.E., Mari was a sort of loose dependency of Third-Dynasty Ur, flourishing anew under (local) governors who bore the title šakkanakku (eight of whom are known by name). Indeed, a ruler of Mari is known to have given his daughter in marriage to a son of Ur-Namma, king of Ur.

The pre-eminence of Mari throughout the third millennium B.C.E. is well reflected in epigraphic sources: in the Sumerian King List it appears as the seat of the tenth postdiluvian dynasty; in the inscriptions of Eannatum mention is made of the penetration and repulse of forces from Mari as far south as Lagash; and it also appears in the inscriptions of Sargon and Naram-Sin of Akkad. At the close of the third mil-
lennium B.C.E., Ishbi-Irra, “a man of Mari,” founded the Isin Dynasty and facilitated the collapse of the empire of Third-Dynasty Ur. After an obscure period of two centuries (from which several economic texts and 32 inscribed liver models are known), Mari reached its final period of glory in the 18th century under West Semitic rule. This latter was quashed by Hammurapi, king of Babylon, and Mari never regained its former position.

In the 13th century, Tukulti-Ninurta I conquered the meager settlement there and stationed a garrison in the city for a short time. The uppermost layer on the site dates to the Seleucid-Roman period.

In the second half of the second millennium B.C.E., Mari was still sufficiently important to be mentioned in the *Nuzi documents (horses and chariots were sent there), in recently found texts at “Ugarit (“Ishtar of Mari” in an alphabetic text, and in an epithet of another deity in a Hurrian text), and in the Egyptian geographical lists of Thutmose III and probably also of Ramses III. The land of Mari appears in the neo-Assyrian geographical treatise describing Sargon’s Akkadian empire (on the basis of which W.F. Albright identified Mari with Tell Ḥarirī, long before the start of excavations there).

Finally, Mari is mentioned in a Greek itinerary, in the (Aramaic) form *Merrhan.

THE OLD BABYLONIAN PALACE AND ROYAL ARCHIVES. The main discoveries at Mari are from the period of its domination by the West Semitic dynasties, in the last quarter of the 19th century and the first half of the 18th century B.C.E. (according to the middle chronology; or 64 years later according to the low chronology). Several temples of this period were built over corresponding sanctuaries of pre-Sargonic times – the temples of Ishtar, Ninhursag, and Shamash; a temple of Dagan, also known as the “lions’ temple” (from bronze lions found flanking its entrance), was founded by the late third millennium B.C.E. This latter deity, the biblical “Dagon, held a prime position in the West Semitic pantheon, and at Mari bore the titles “King of the Land” and “Lord of all the Great Gods.”

The outstanding architectural discovery from this period, however, is the royal palace – a structure of unparalleled magnificence and widespread fame in its time. This residence, enlarged successively by each of the West Semitic rulers at Mari, reached its zenith under Zimri-Lim, with an area of about eight acres and including over 300 chambers, corridors, and
The discovery of greatest impact on historical and biblical research comprises the more than 20,000 cuneiform tablets from the several archives in the palace (there was no library), written in the Babylonian language (see below). The original discovery has been supplemented since 1979 by fragments of a few thousand documents discovered by Margueron’s excavations. The earliest publication of the documents was begun by the Assyriologists G. Dossin (dean of the Mari epigraphers), M. Birot, J. Bottéro, Mme. M.L. Burke, A. Finet, J.R. Kupper, and the late G. Boyer and Ch.F. Jean, mostly in the series Archives royales de Mari (ARM). In the early years, the texts appeared in two parallel series, not necessarily at the same time: one containing cuneiform copies, and the other with transliterations, French translations, brief notes, and some form of commentary or glossary. Thanks to computer printing technology, the more recent publications often include hand copies and high-quality photographs alongside texts. The texts published so far (through ARM 29 (2005)) have shed much light on the administrative, economic, cultural, and political facets mainly of Upper Mesopotamia and Upper Syria in the 18th century B.C.E. – regions previously known only vaguely.

The archives were found to be distinguished according to subject. The political-diplomatic archives include correspondence between the king of Mari and his agents, both at the palace and abroad, as well as with foreign potentates. They provide the earliest insight into the complexities of “suzerain-vassal” relationships, diplomatic protocol, and the fluctuating alliances and plots rampant in the Ancient Near East. A noteworthy class of letters is the unusually extensive women’s correspondence published, in ARM, 10, revealing the prominent role of women in activities of the realm. The outstanding case is that of Shibtu, Zimri-Lim’s queen (chief wife), who enjoyed the king’s utter confidence, representing his interests during his absence from the city and exercising considerable influence in her own right.

The majority of documents are economic or administrative in nature, dealing with the maintenance of the palace, official trade abroad, lists of goods, and rosters of persons in royal employ (such as a list of nearly 1,000 captives [?] from the Harran-Nahor region engaged in the manufacture of clothing for the palace). Of a unique category are the some 1,300 tablets containing lists of daily provisions for the palace, often summarized by month. Though dealing only with “vegetarian” foodstuffs and beverages, they shed light on Solomon’s “provisions for one day” and possibly also his monthly quantities (cf. 1 Kings 4:22–23, 27 [5:2–3, 7]; cf. also Neh. 5:17–18). The royal table at Mari, known to have entertained hundreds of guests on occasion, was served by spacious kitchens – in one of which were found numerous molds for preparing fancy cakes some bearing animal and goddess motifs (cf. Jer. 44:19).

Dozens of legal tablets were also found, mostly contracts concerning transactions and loans of silver or grain (ARM, 8), revealing that the palace served as a sort of exchange. Of exceptional interest is an adoption contract which ensured the “primogeniture” of the “eldest” (i.e., first adopted) son, stipulating that he receive a double portion of the inheritance; this is in full accord with biblical law (cf. Deut. 21:15–17).

The very few literary and religious compositions found at Mari include a lengthy Ishtar ritual in Babylonian, as well as six texts in Hurrian. That Hurrian was used occasionally in diplomatic correspondence is known from the only other tablet at Mari in that language, a letter written to Zimri-Lim.

B. Mari under West Semitic Rule

The origins of the West Semitic, or “Amorite,” dynasties are shrouded in darkness, though there are clues pointing to North Syria for the local line at Mari. Thus, the theophoric name element-Lim (perhaps derived from the word for “folk,” “people”; cf. Ugaritic ‘lim and Heb. Leʾom) is found at both Aleppo, in the dynastic name Yārim-Lim, and Mari, in the royal names Yaqid-Lim, Yahdun-Lim, and Zimri-Lim. It is also present in the name of Yashi-Lim, ruler of Tuttul (probably the one at the mouth of the Balikh River), and Ibbit-Lim, ruler of Ebla (probably Tell Mardikh), both several generations earlier than the above. Furthermore, the title “king of Mari, Tuttul, and the land of Hana” was borne by both Yahdun-Lim (Disc Inscription) and Zimri-Lim (cf. a fragmentary inscription from Terqa, between Tuttul and Mari). And, indeed, the site of ancestor worship for both the local and the “Assyrian” dynasties at Mari lay at Terqa, around 44 mi. (70 km.) to the northwest, at the mouth of the Khabur River. Hence, the immediate origin of the West Semitic rulers at Mari would appear to be in the Terqa region.

THE REIGN OF YAHDUN-LIM. The historical figure of Yaggid-Lim, founder of the local dynasty at Mari, is vague, and none of his records have been found, though there is a seal of one Qisti-Iliba who calls himself servant of Yaggid-Lim (RIME 4: E.4.6.7). Nor have many tablets from the reign of his son, Yahdun-Lim, been published, though in 1965 an archive of some 300 of his economic texts came to light. It is known, however, that Yahdun-Lim was able to stabilize his kingdom, establishing his dominance over the entire Middle Euphrates region, as is evident from the dozen known year-formulas and especially the two extant royal inscriptions from his reign (RIME E4.6.8; E4.6.8.1).

The shorter inscription (the “Disc Inscription”) relates that Yahdun-Lim fortified Mari and Terqa, founded a fortress
on the desert fringe (naming it after himself – Dur-Yahdun-Lim), and laid out an extensive irrigation system (boasting that “I did away with the water bucket in my land”). The other text, the Foundation Inscription of the Shamash temple, is a splendid literary composition relating his campaign to the Mediterranean coast and the “Cedar and Boxwood Mountain,” where he obtained several types of choice wood, “and made known his might.” However, this was probably only a passing episode and not a lasting conquest. Thirty-five economic texts published in 1970 are dated by two year-formulas for one Sumu-Yamam, an obscure character who ruled at Mari either before or after Yahdun-Lim. Also elusive is his kinship – whether to the local dynasty or otherwise – for the few other references to him, such as in a “letter to a god” (ARM, 1, 3), are inconclusive. This same letter also reveals the assassination of Yahdun-Lim (or Sumu-Yamam) in a court conspiracy, much to the benefit of Shamshi-Adad, scion of a rival West Semitic dynasty, who established himself in Assyria, swiftly gaining control over large portions of Mesopotamia.

The Assyrian Interregnum. Yahdun-Lim’s removal facilitated a take-over by Shamshi-Adad, who installed his son, Yasmah-Adad, as viceroy at Mari. Under his father’s tutelage, Yasmah-Adad reorganized the local administration, cultivated ties with neighboring lands, and secured his flank against marauding nomads. Though his brother Ishme-Dagan, upon succeeding to the throne of Assyria, promised to maintain the protective policy of their father, Yasmah-Adad was left adrift only three or four years later, when he was defeated by Eshnunna, a West Semitic kingdom beyond the Tigris. Altogether, Assyrian control of Mari lasted some 20 years.

The Kingdom of Zimri-Lim. Thus, the stage was set for the advent of Zimri-Lim, the son of Yahdun-Lim, who in the interim had lived in exile under the wing of Yarim-Lim, king of Yamhad (capital, Aleppo). Yarim-Lim, who had become Zimri-Lim’s father-in-law, was most instrumental in restoring him to the throne of Mari. Thirty-two year-formulas are known for Zimri-Lim’s reign – though many of them may have been alternate designations for the same year, for (chronologically) he cannot have ruled for so long a period. Zimri-Lim’s reign, during the tumultuous interval between Assyria’s decline and the rise of the empire of Hammurapi, marks Mari at its apogee. It is this period which is best represented by the archives found at Mari which provide a thorough insight into the organization of the kingdom. Interestingly, several of Zimri-Lim’s letters have been found in the royal archives at Tell el-Rimah (between the Upper Khabur and the Tigris), probably to be identified with the city of Karana, mentioned in the Mari correspondence. Mari had become a principal political force in Mesopotamia, alongside Babylon, Larsa, Eshnunna, Qatna, and Yamhad (as is known from a contemporary political report). Relying heavily on his diplomatic cunning, Zimri-Lim developed an elaborate intelligence system – within his sphere of influence and beyond it. Frequent alliances, as with Yamhad and Babylon, were designed to meet the danger of the moment – e.g., now against Eshnunna, then against Elam. His military endeavors were directed mainly against the hostile tribal federation of the Yaminites (the previously subdued Hanean tribes were already in his service; for both, see below). This political situation crystallized hand in hand with the development of economic ties branching out as far as the island of Dilmun (in the Persian Gulf), Elam (in the east), Arrapha and Shusharra (in southern Kurdistan), Capadocia (in the north), Phoenicia and Palestine (in the west), and even Kaptara (Crete, in the Mediterranean). Indeed, tolls from caravan and riverine trade were one of Zimri-Lim’s principal sources of income. This golden age at Mari came to an abrupt end, however, when Hammurapi turned on his former ally and conquered the city in his 32nd year, during the consolidation of his empire (in 1759 B.C.E. – middle chronology; or 1695 B.C.E. – low chronology). Two years later he ordered the razing of the city to the ground.

Mari and the West. Mari was bound closely with the lands to the west – Syria, and even northern Palestine – in economy, politics, culture, religion, and ethnic background. Already noted were the ties between the local dynasty at Mari and that of the kingdom of Yamhad; Zimri-Lim’s queen, Shibtu, was from Aleppo and he appears to have held land there, which was either a patrimony or received as a dowry. Similarly, the rival Assyrian dynasty at Mari secured political ties in the west through the marriage of Yasmah-Adad to a princess from Qatna, Yamhad’s southern adversary. Another form of contact with the west is the already-mentioned campaign by Yahdun-
Lim and the later expedition by Shamshi-Adad to the Levant. Zimri-Lim is also known to have visited various places in the west: Yamhad, where he had presented a statue to “Adad the great god of Aleppos,” and Ugarit, where he was accompanied by a select bodyguard (ṣabum behru; see below).

The region farther southwest is only sparingly mentioned in the Mari archives, but references are found to Byblos on the Phoenician coast and the land of Amurrur in southern Syria (the Apum of the Mari texts is most probably only that in the Khabur region, and not the one around Damascus, known from the contemporary Egyptian Excavation Texts and various later sources). In northern Palestine, Hazor is noted several times in the Mari archives as the destination of diplomatic and economic emissaries. In one instance, emissaries passing through Mari are on their way to Yamḥad, Qatna, and Hazor, and a fourth place whose name is broken (the traces in ARM, 6, 23:23 may perhaps be restored to read “Megiddo,” rather than “Egypt” as is sometimes proposed, which surprisingly does not appear in the Mari archives). In an economic document, Aleppo, Qatna, and Ugarit are listed, alongside Hazor (“Thnī-Adad, king of Hazor”) and Laish (“Waritālūd at Laish,” the later Dan north of Hazor), as destinations of large consignments of tin, a commodity of major importance among the exports to the west (it being alloyed with copper to produce bronze). On the other side of the ledger, Mari imported from the west horses and fine woods (from the Qatna region), various precious vessels of Syrian and “Cretan” style, Cypriot copper, fabrics, and garments (especially from Aleppo and Byblos), and large quantities of foodstuffs, such as honey, wine, and olive oil.

C. Mari and the Bible

The Mari documents bear indirectly upon Israelite history geographically; the “patriarchal homeland” (Aram-Naharaim, so called at a later date) lay within Mari’s horizons; ethnolinguistically, the Hebrews were of the same West Semitic (or Amorite) stock as that strongly manifest at Mari (see above); and sociologically, for the descriptions of tribalism comprise the most extensive insight into the nomadic and settled phases of the Israelite tribes.

1. PATRIARCHAL HOMELAND. The cities of Harran and Nahor (cuneiform Nahūr), in the Upper Balikh Valley – which figure in the Bible as ancestral habitats of the Patriarchs – are well documented as important dependencies controlled by governors from Mari (one of whom, Itur-asdu at Nahor, is the subject of ARM, 14). Both cities were foci of tribal foment: at the temple of Sin in Harran, a treaty between the “kings” of Zalmaqum and the Yaminites was sworn against Mari; while at Nahor reinforcements had often to be called in to quell local uprisings inflamed by the “Habiru. Alongside the West Semitic peoples in this region was a considerable Hurrian element (note the typically Hurrian name of King Adalshenni, who at one time gained control over Nahor), which may well have left an imprint upon the initial ethnic and cultural composition of the Hebrews. The picture revealed in the Mari archives, of far-reaching tribal migrations (such as those of Yaminite groups) and caravan conditions between the Euphrates region and Syria-Northern Palestine, provides an analogy for the biblical narratives of the patriarchal wanderings between Aram-Naharaim and Canaan.

2. ETHNOLINGUISTIC AFFINITIES – THE WEST SEMITIC IDIOM. Evidence for the West Semitic (or “Amorite) origin of the majority of the people figuring in the Mari documents is revealed in the onomasticon (name-stock) and specific linguistic features of the Mari dialect. Many of the hundreds of proper names known from the Mari texts are paralleled in the Bible, especially in the patriarchal narratives and the Exodus-Conquest cycle, which demonstrate a strong archaizing tendency. At Mari, where Yahweh was unknown, these names occur often with (other) theophoric (god-bearing) components; e.g., Jacob and Ishmael – i.e., haqtba-hammāt-ahim/ etc. and Yasmah-El/-Adad/-Ba’al/ etc. The names of the Israelite tribes of “Levi” and “Benjamin also seem to have their parallels. Thus, the tribal designation at Mari, DUMU.MES-ya-min(a), “Yaminites,” bears the same connotation as Benjamin – “son(s) of the South,” i.e., southerners, and it is preferable to render the logogram for “sons” as West Semitic bini-ya-mina a form conveniently homophonic with the Hebrew Binyamin. The West Semitic imprint on the standard Old Babylonian (OB) dialect of the Akkadian language in use at Mari is evident to a certain extent in phonology, morphology, syntax, and, especially, vocabulary. The lack of terms in OB for certain specific features in the society and way of life of the population of the Mari region necessitated the frequent adoption of West Semitic expressions in the shape of either Akkadian words employed in new, West Semitic connotations or out-and-out loanwords from the West Semitic – words well represented in biblical Hebrew (often in exalted language, as also at Mari). Besides the linguistic yield, a comparative study of the West Semitic loanwords at Mari and their Hebrew cognates may broadly illuminate the nature of the societies involved. Thus, a list of such lexical items would include the following:

A series of West Semitic terms is also found for tribal organization and institutions (see below, Nos. 3 and 4), which were quite foreign to contemporary Mesopotamia and therefore found no adequate means of expression in the pure Babylonian lexicon; cf., e.g., the set of terms for various tribal units: ġāẏūm = Hebrew goy; ħibrum = Hebrew haver; and perhaps ummatum = Hebrew ammah. West Semitic verbs unknown in standard Babylonian Akkadian but with cognates in biblical Hebrew include the following: ħakām, “to wait”; ħalūm, “to be ill”; ħarāšum, “to be silent”; naḥalūm, “to inherit, apportion”; naqāmum, “to avenge” (only in personal names); qaṭālum, “to kill”; sapātum, “to judge, govern” (and see below).

3. PATRIARCHAL TRIBAL SOCIETY. The Mari archives provide the most abundant and fruitful source material concerning West Semitic tribes of any Ancient Near Eastern source – shedding invaluable light on Israelite tribal society, its structure and organization, as well as its institutions. The wide range of the tribes mentioned at Mari – from fully nomadic to fully sedentary – and their confrontation with the indigenous population, bear directly upon an understanding of the gradual process of the Israelite settlement in Canaan and their ensuing relationship with its inhabitants. The most revealing material at Mari concerns the broad tribal federations of the Haneans and Yaminites. The former were concentrated principally along the Middle Euphrates and comprised an appreciable segment of the general population (and of the army) of Mari. Indeed, the Middle Euphrates region became known as the “land of Ḥana,” and “Ḥana” was applied also to a type of soldier and a kind of wool. The name, which was basically gentilic, also came to denote in general the generic concept of a (semi-) nomad; it seems to be in this sense that Zimri-Lim was called “king of the Haneans,” in parallel to “king of the Akkadians” – which together reflect the two main population strata, seminomadic and indigenous sedentary (see below). The Yaminites were in general less settled and posed the greater threat in this period, both to the rest of the population and to the authorities. In their subtribes (Ubrabu, Ammanu, Yaḥruru, Yarihu, and the affiliated Rabbeans), they were dispersed over a wide arc from the city of Sippar (and even as far south as Ur) and the eastern banks of the Tigris around to the Khabur and the Balikh valleys up to the Euphrates bend, where their main concentration lay. In the west, they had crossed the Euphrates toward Mount Bistir (Jabal Bishri) and encroached upon the land of Amurru in southern Syria. Little mention is made in the Mari archives of the DUMU.MEŠ-simāl, the “sons of the north,” who roamed the “upper country” in the Harran region, or of the Sutu, the fully nomadic tribe which appears more often in subsequent history. This latter ranged in the Syrian steppe and the Bishri mountains, raiding the adjacent oasis of “Tadmor” (spelled Tadmēr at Mari) on at least one occasion. The Mari archives are surprisingly silent on the “Amorites” as a definite tribal entity (though one reference is made to a ġāẏūm Amurum as a sub-clan of the Haneans); in general, the designation (both spelled phonetically and in the logogram MAR.TU) is restricted to the land of Amurru, far to the west, or to the military titles “great-of-Amurru” and “scribe-of-Amurru” (the latter only at Mari).

Patterns of Settlement. The tribal society depicted in the Mari archives is essentially dimorphic, i.e., it encompasses both nomadic and urban modes, with their inherent distinctions and interactions, social as well as economic. Tribal groups would sometimes undergo a gradual process of sedentation, splitting into partly settled and partly nomadic factions (cf. ARM 8, 11), or leading a life of transhumance – in the steppe or desert in the grazing season and in urban bases during the “off” months.

Depending on the stage of sedentation, the Haneans and Yaminites dwelt in towns and hamlets (both designated at Mari as alāmī, literally, “cities”; the term kaprum, “village,” is rare in this context) and engaged in urban-agricultural pursuits (as well as herding), or in temporary encampments (nawām) and engaged in purely pastoral pursuits. At Mari, the standard Babylonian word nawām, “desert, uncultivated field;” or even “a savage,” took on the West Semitic connotation of a pastoral abode, precisely the connotation of the Hebrew naweh (primarily in poetic usage in the Bible). An illustration of this dual mode of life, is found in the distinctions Ḥana ša nawām, loosely, “steppe Haneans,” and ħibrum ša nawām, the nomadic faction of a partly settled clan (in this case, of Yaminites).

Another type of settlement originating among nomadic and seminomadic populations was the ḥašārām (pl. hašîratūm), which, rather than an enclosure for sheep or cattle (as usually assumed), denotes a dwelling place, as does the cognate Hebrew term haṣerim, referring to settlements of the Ishmaelites, the Avites, and the “sons of Kedar” (Gen. 25:16; Deut. 2:23; and Isa. 42:11 (cf. Jer. 49:33), respectively).

Tribal Leadership. The Mari archives indicate that tribal leadership was in the hands of family heads (cf. the biblical bet-āv; “family,” the basic unit of the patriarchal tribal organization), called abū bitim, “father of the household” (pl. at Mari abū bitim, a West Semitic form, equivalent to Heb. āvot). The actual tribal rulers were elevated from among these family heads, leading to the use of the term abū bitim for certain officials, and occasionally abū served as a synonym for “tribal chiefs,” e.g., abū Ḥana and abū idamaras. As in pre-monarchical Israel, the council of the “elders” (sībāti) appears in the Mari documents as a central institution, deciding on matters of war and peace, functioning in treaty making, and representing the tribe before the authorities.

A capital role in the tribal organization, unknown outside the Mari texts, is that of sugāqum/suqāqum (meaning unknown), whose function is somewhat vague. He may have been a sort of mukhtar, chief of a tribal unit or village appointed (or at least approved) by the Mari authorities from among the local leadership; this office (suqāqum) was sometimes purchased with money or sheep.
At the head of the tribal hierarchy stood the “kings” (Akk. šarru, p. šarrānī), who usually appear in the Mari texts as wartime leaders – again suggesting a special West Semitic connotation (in this case, military), much like the Hebrew sar. Thus, Yahdun-Lim’s royal inscriptions record that he defeated “seven kings, fathers (abū) of Hana” and, on another occasion, “three Yaminite kings.” This plurality of “kings” must be understood as referring to subtribal rulers that collectively comprised the tribal leadership; such a structure is also found among the Midianites (Num. 31:8; Judg. 8:12), the early Arameans (1 Sam. 14:47), and perhaps the Edomites (Gen. 36:31ff.).

4. Tribal Traditions – Functional and Religious. The convergence of the West Semitic tribes at Mari with urban Mesopotamia involved a dual process of friction and strife alongside symbiosis and mutual adaptation; this interaction between a tribal heritage and an established civilization was characteristic also of the settlement of Israelite tribes in Canaan. In Mari, this was especially evident at the court, where despite the process of assimilation of Sumero-Akkadian civilization, much of tribal tradition was still preserved. The advice of the palace prefect to Zimari-Lim on a point of protocol may thus be interpreted: “[If] you are the king of the Haneans, you are, moreover, a king of the Akkadians: [My lord] should not ride horses [i.e., in tribal fashion]. May my lord drive in a wagon and mules [i.e., in a “civilized” manner], and may he [thus] honor his royalty” (ARM, 6, 76:20–25). This same distinction is found, too, at the early Israelite court, though there the mule was ridden (1 Sam. 13:29; 18:9; 1 Kings 1:13) and the horse yoked to the chariot (1 Sam. 8:11; 11 Sam. 15:1; 1 Kings 1:5).

Tribal heritage from the nomadic phase did persist in spite of the curbs of sedentation and acquiescence to royal administration of Mari. Tribal customs and institutions, legal, military, and political procedures, and ritual or religious practices all find expression in the Mari texts. These traditions, largely unknown outside Mari, serve to illuminate early Israelite practices. Here are some of the major points.

Making a Covenant. In the largely illiterate society of the tribe, treaties were concluded not by means of documents but solely by symbolic acts – in the cases recorded in the Mari texts, by the ritual of “killing an ass-foal” (note the purely West Semitic expression applied here – ha(ya)rum qatālum). (Another symbolic expression in this context is napīṭām lapātum, “to touch the throat.”) In one case, a possible ploy was made to introduce other animals into the ritual: in a report on a peace treaty made between the Haneans and the land of Idamaras, a Mari official in the Harran region tells his king that “they brought to me a whelp and a goat, but I obeyed my lord and did not give (permission for the use of) a whelp and a goat. I caused ‘the foal, the young of a she-ass’ (cf. Gen. 49:11; Zech. 9:9) to be slaughtered” (ARM, 2, 37:6–12). The Bible mentions a parallel ceremony, involving the cutting in two of young animals (cf. the covenant between God and Abraham – Gen. 15:9–10; and one with the leaders of Judah during the Babylonian siege of Jerusalem – Jer. 34:18–19). In all these ceremonies, the common denominator is the ritual sacrifice of young and tender animals.

Census. The Mari authorities used to take periodic censuses of the tribes, both nomadic and settled. This activity was denoted by the terms ubbuubum (D-stem of ēbēbum), “to cleanse,” and its derivative tēbītum (literally, “cleansing,” “purification”), and is most likely West Semitic in origin. The purpose of the census seems to have been military conscription, taxation, and land distribution, although at least originally it was accompanied by a ritual of purification, similar to that associated with the census of the Israelites in the wilderness (which involved a tax, the payment of which was regarded as a ritual expiation, Heb. kippurim; cf. Ex. 30:11–16). Some scholars, however, view the tēbītum as a purely administrative procedure to clear persons or property of legal or financial claims (as would be indicated by the fact that it is carried out by secular, not religious, officials).

Patrimony. The Mari legal documents employ, inter alia, the West Semitic term nahālām, “to inherit or apportion,” in referring to land transfers effected within a quasi-familial inheritance framework and not in the normal sales procedures. This type of transaction was inherently a part of the patriarchal tribal system, in which land ownership was not on an individual basis but was a patrimony (nihlātum at Mari = Heb. nahalah). The patrimony could not, theoretically, be transferred other than by inheritance, and, therefore, various means were contrived to circumvent this rule. The Israelites upheld a similar custom, where the patrimony was considered an inalienable possession, “the Israelites must remain bound each to the ancestral portion of his tribe” (Num. 36:7; cf. Lev. 25:13, 25–28; 1 Kings 21:1ff.; Ezek. 46:16–18).

The “Judge.” The Mari documents employ several derivatives of the West Semitic root špt (verb: šāpitum; participle: šāpītum; abstract nouns: šiptum and šāpītum), which may serve to elucidate the biblical cognates shafot, sho[fet, and mishpat, usually translated as “judge” (verb and noun) and “norm or law,” respectively. However, neither in the Mari documents nor in the Bible is the primary connotation of these terms judicial (for which the Akkadian employs dayānu); rather, they connote the much broader concept of governorship and rule. Thus, the šāpītum and his counterpart in the Book of Judges, the sho[fet, were actually prominent tribesmen who had acquired an authority far exceeding that of a mere “justice” (and cf. the later Punic suffetes). The expression šiptum nadānum/sakānum, met with in the Mari documents, corresponds to the biblical sim mishpat, “lay down a ruling” (by a duly authorized person) employed in connection with the authoritative acts of a Moses, a Joshua, and a David (cf. Ex. 15:25; Josh. 24:25; 1 Sam. 30:25).
The Ban. A peculiar expression at Mari, asakkam akālum (lit. “to eat the asakkku”), refers to the infringement of a taboo or the profaning of something revered, and may be a loan translation of some West Semitic concept paralleling that of the biblical ban (‘herem). The asakkku of a particular deity, and/or king, is frequently invoked in penalty clauses of contracts, in oaths, and in royal decrees as the sacrosanct and inviolable element. The closest parallel between Mari and the biblical practice is in the imposition of the ban on spoils of war (cf., e.g., the Achan incident, Josh. 7). However, whereas the biblical ban functioned on a purely religious plane (whatever was banned was exclusively God’s), the taboo at Mari was applicable also on a human level, and its infringement there, though theoretically still considered a capital offense, was expiated by payment of a simple fine.

God of the Father. Among the central religious concepts of the Hebrew Patriarchs is the “God of the/my/your/his father,” i.e., a personal, innominate deity, revered by subsequent offspring (cf. Gen. 28:13; 31:5; 42, 44; 53; 32:10; 49:25; Ex. 3:6, 15; 15:2, etc.). A direct parallel occurs in one Mari text, where the king of Qatna swears “by the name of the god of my father” (ARM, 5, 20:16; and cf. Gen. 31:53), and in another where Hammurapi (undoubtedly Yarim-Lim’s successor as king of Aleppo) is appealed to “by the name of (the god) Adad, Lord of Aleppo” and the god of [your] father” (ARM, 10, 159:10–11). It is significant for the biblical comparison that both instances are in the west, as are all other references to such a deity outside Mari – in the slightly older Assyrian tablets from Cappadocia, the later texts from Ugarit (in Akkadian, Ugaritic, and Hurrian), and, again at Qatna, in temple inventories and in an Amarna letter sent from there.

[Abraham Malamat]

Prophetic Revelation. One phenomenon at Mari that has drawn the attention of biblicalists is that of apostolic prophecy, in which individuals, male and female, deliver messages, often unsolicited, in the name of a god. Before the discovery of Mari the Hebrew phenomenon of apostolic prophecy had tended to be viewed in isolation, and often treated as a unique phenomenon.

At Mari we can distinguish between the intuitive mysticism of the apostolic prophet, and the mechanical mysticism of the diviner who examines the entrails of animals, primarily sheep livers, for divine messages and decisions. His learned arts are considered authoritative, as shown by the fact that he is regularly called upon to authenticate the message of the prophet, often an ecstatic. The Mari prophets are often professionals, but sometimes ordinary people. The professionals are (1) āpilu (masculine) āpiltu (feminine), “answerer,” attested once as āplā, “the one answered”; (2) muhhu ( masc./fem.), “ecstatic”; (3) assimnu, a cultic functionary of a god, possibly a eunuch; (4) qammatum, etymology uncertain, perhaps referring to a distinctive hair style; (5) na/ābā (see “Emar), the least attested but closest etymologically to nabi, the most common biblical word for “prophet.” Derived from the verb nabû, “call,” this is either a passive participle, “the one called,” or an active participle, “the caller.” It is noteworthy that in our extant texts the muhhu prophesies in the name of two gods in whose name the āpilu does not prophesy: Itur-Mer, the chief god of Mari, and the goddess Anunitum.

All the male and female divinities in whose name prophecies are delivered are high gods. Some of the goddesses, Bel-Ekallim; Anunitum, and Diritum, are manifestations of Ishhtar, worshipped in Mari and its surroundings. Dagan is the god to whom the most prophecies (16) are attributed, followed by Hadad (7). Among the goddesses the most frequent is Anunitum.

In most instances the prophets spoke their words in those temples to which they were connected. This suggests that these prophets routinely prophesied in their temples, and that only a small number of their prophecies have reached us. In addition, it is likely that most of the prophecies directed to the king were uttered publicly in the royal palace and did not require reduction to writing, in contrast to those prophecies communicated from afar by royal officials, and accordingly, preserved for posterity. Only the activity of the muhhu is attested outside Mari; at Andarig, Babylon, and Yamhad (Aleppo). Sometimes the prophets specify that they are god’s messenger by use of the verb šaparu, “send,” the semantic parallel of šalah, regularly said of the Hebrew prophets and by them. In one case a prophet describes his mission by the verb šāhuzu, “instruct,” indicating that he was instructed to deliver his message.

The Mari letters provide important descriptions of the circumstances in which prophecies were delivered. The writers describe the prophet’s arrival, his standing up in order to deliver the prophecy and the like, as well as the verb used by the prophet to describe the message. What follows are some specific examples describing the delivery of the message arranged by prophetic category.

āpilum: He is described variously as speaking, as coming and speaking, standing up and speaking, and standing and shouting at length at the gate. Sometimes he comes to the palace gate and writes his message to the king; or he dictates his prophecy to a reliable scribe. Finally, he may come and claim that the god has sent a message to the king through him.

muhhu: The method of delivery agrees in some respects with that of the āpilum but differs in others. Of the muhhu it is said simply that he delivers his message, or, he comes and delivers his message, or, he comes and speaks emotionally and forcefully. He calls out repeatedly. It must be noted that his activity is never described by the verb nemhhu, “to act crazed,” “to become ecstatic,” which demonstrates that the verb is never used of a professional ecstatic, but only of an assimnu or any ordinary man or woman overcome by ecstasy (see below). Prophecy described as being “given” (tēr-tam nadānum) is uttered by the muhhu and the assimnu, but never by the āpilu.

Ordinary people: A woman speaks her message; a married woman comes and says that Dagan sent her. Someone's
daughter or serving girl becomes ecstatic (namhû) and speaks. An unidentified man becomes ecstatic and speaks.

Virtual all the prophecies that have reached us were either uttered either in Mari when Zimri-Lim was away, or were uttered elsewhere in the kingdom when Zimri-Lim was at Mari. We may assume that ordinarily when the prophet spoke directly to the king his words were not committed to writing, and accordingly, are not preserved. At the same time it should be noted that all of the royal officers, commanders, and priests were obligated to provide the king with all information relevant to the welfare of the kingdom that reached him. Some of these functionaries were bound by oath to convey that information orally or in writing. Apparently, this is why they felt the need to convey the prophetic messages to the king. Some examples follow of the writers of the prophetic letters and the prophets involved:

1) āpilum: The writers of the letters hear a prophecy and relate it to the king, or send it in writing to the king. At times the āpilum himself sends his words in writing to the king either directly or through an intermediary. He may also write to the queen, who delivers the message in writing to the king.

2) muhhûm: In contrast to the āpilum, the muhhûm never writes the king, but he may speak to the king directly. In most cases someone who has heard his words writes them down and sends them to the king. The queen writes to the king about a prophecy that she has heard personally, or she relates that someone who heard the prophecy of the muhhû has written her about it. There are instances in which a priest or a governor hears a prophecy in a temple and writes it down and sends it to Bahdi-Lim, governor of Mari who rewrites it and sends it to Zimri-Lim.

3) qammatu: The qammatu comes to the (female) letter-writer who writes the king.

4) assinnu: Someone who heard his words writes the king, or, he comes to the queen and she writes the king.

The category of prophecy has not survived: Someone hears a prophecy and writes the king, as required by his position. Sometimes the prophet speaks to Queen Shibtum and she writes to Zimri-Lim. Finally, a female prophet turns to Itur-Asdu, a prefect of Zimri-Lim at Nahur who sends her words to Zimri-Lim.

There are instances in which a god speaks from the throat of the prophet in the first person:

1) āpilum: One formula describes how the āpilum quotes the words of the god: Thus (says) the āpilum of Shamash: Thus (says) Shamash; or: Abiya the āpilum of Addad, Lord of Halab (Aleppo), came to me and thus he said to me: Thus (says) Addad. In contrast, sometimes the āpilum speaks through the throat of the prophet: The plâl / āpilu of Dagan of Tutul stood up and said thus: “I shall gather you ... I shall hand you over.” This is true as well of the prophecies of Adad, Lord of Kalassu, and Adad, Lord of Halab. In both cases they speak from the throat of the āpilu.

Thus far, the Mari texts have not yet produced an Amos or a Hosea. Nonetheless, one finds the same kind of prophetic call for social justice known from the Bible. Letter A.1968 (Roberts, 166–69) reports that Abiya the āpilum of Halab sent to Zimri-Lim reminding him the king that it was the god who restored him to his ancestral throne and had given the king the weapons with which the god had fought the sea(!) It was the god who appointed Zimri-Lim so that none might stand in his way. The god then commands the king, “When someone who has a lawsuit calls to you saying, ‘I have been wronged,’ stand up and judge his lawsuit” (Akkadian: dînûtu din). Similarly, in A.1121+ A.2731 (Roberts, 172–77), an āpilu sends to the king: “When an oppressed man or woman calls out to you, ‘render their judgment’ ” (Akkadian: dînânu din).

The very manifestation at Mari of intuitive divination – revealing a consciousness of prophetic mission among West Semitic tribes in a period predating Israelite prophecy by centuries – places the history and investigation of Near Eastern prophecy in general, and both earlier and later biblical prophecy in particular, in an entirely new perspective (see also *Prophets and Prophecy).

MARIAMNE (Mariamme).

MARIAMNE 1 (60?–29 B.C.E.) was the daughter of *Alexander the son of Antustobulus, the granddaughter of John Hyrcanus, and the second wife of *Herod. Herod's aim in contracting this marriage was to establish his standing with the royal house. Herod was only betrothed to her, but not yet married, when in 40 B.C.E. he was forced to flee to Idumea from Antigonus, who was supported by the Parthians, and he had placed Mariamne together with the other women of the royal household in the fortress of Masada for safety. When Herod's sovereignty over Judea was ratified by the Roman senate on the recommendation of Mark Antony, he went in 37 B.C.E. to Samaria to marry Mariamme while his army was still besieging Jerusalem. Herod's love for Mariamme was unbounded, but it was met by hatred of him on her part, because Herod had put to death practically all the members of her family. Aware of Herod's feelings for her, she was bold enough to speak harshly to him, which others feared to do. In addition to this, her anger was directed against the rise of the new dynasty which had replaced her own – the *Hasmonean – and this caused her to act disdainfully toward the members of the royal Idumean family, particularly to Herod's mother and his sister Salome. As a result these two harbored a grudge against her and were malvolently provocative toward her, fabricating such libels about her as that she had sent her portrait to Antony in Egypt.

When Herod went to visit Antony he entrusted his wife to Joseph, the husband of Salome, ordering him to put Mariamne to death because Antony sentenced him to death. Joseph informed Mariamne of this with the intention of showing her how great was the love Herod bore her. When Herod returned from his journey he discovered from Mariamne that Joseph had revealed this secret order to her. According to one account in Josephus, it was then that in his rage Herod ordered both Joseph and Mariamne to be put to death. A parallel account,
however, is given by Josephus in the section dealing with Herod’s journey to Octavius at Rhodes after the battle near Actium. The first story belongs to the period before 31 B.C.E., while the second is later. It seems that both stories were true, but that the execution of Mariamne took place in 29 B.C.E., and that on the previous occasion Herod did not go so far as to murder his wife. Mariamne bore Herod three sons and two daughters. One of the sons died in his youth. The other two, Alexander and Aristobulus, were executed on the order of their father in 7 B.C.E.

MARIAMNE II (d. circa 20 B.C.E.), the daughter of Simeon b. Boethus the high priest, was the third wife of Herod. She belonged to a priestly family from Alexandria. Her son, also named Herod, was designated to succeed to the throne after Antipater. It was because of this that although Mariamne ii knew of Antipater’s intentions to kill his father, she held her peace. As a result, when the plot of Antipater was discovered, Herod erased from his will the name of his son Herod ii as his heir and sent Mariamne away.

[Abraham Lebanon]

MARIANOS (sixth century), artist who – together with his son Ḥanina – designed the pictorial mosaic floor of the Bet Alfa (Ḥefzi-Bah) synagogue near Beth-Shean. Their names also appear in an ornamental mosaic floor adjoining a synagogue at Beth-Shean. They are known only through these two mosaics. The inscription in Greek at Bet Alfa reads: “May the craftsmen who carried out this work, Marianos and his son Ḥanina, be held in remembrance.” Below this inscription, a partially destroyed Aramaic legend dates the mosaic to the reign of the Byzantine emperor Justin (1), viz., 518–527 C.E. It is clear that, as local Galilean artists, they worked in the standard Greco-Oriental manner of the time, combining Eastern frontality, patterning, and lack of modeling with perspective, with Western costumes, composition, and mosaic technique. The similarity of their work to mosaics in other sixth-century synagogues of the Palestinian littoral indicates that they followed standard patterns. The style of their work appears to reflect rug designs. In the Bet Alfa mosaic the motifs of the border designs and of two of the three panels, that of the zodiac and of the holy symbols, are paralleled elsewhere (e.g., the sixth-century synagogue of Tiberias). The third panel located just inside the entrance to the prayer room depicts the sacrifice of Isaac, combining an artistic and symbolic complexity that belies the direct, seemingly naive manner in which the mosaic is worked. (See Bet Alfa.)

[Bernard Goldman]

“MARI A THERESA (1717–1780), empress of Austria from 1740, the first female heir to the Hapsburg throne as a result of the “Pragmatic Sanction” (1713). She continued the hostile policy of “Charles VI, her father, against the Jews. Her passionate hatred, nurtured from childhood, culminated in the expulsion of “Prague Jewry” (1744), which she revoked in 1748 after international intervention on behalf of the Jews. She declared in 1777 that she knew “no worse plague for the state than this nation, because of its deceitfulness, its usury,” and noted that the Jews “bring the state more harm than good.” She granted audiences to Jews from behind a partition. In spite of this, she profited from the services of such individuals as Diego d’Aguilar, Israel von Hoenigsberg, and Wolf Wertheimer. Pursuing a mercantilist policy on the advice of Joseph von Sonnenfels she granted special privileges to Jews, allowing them to establish factories with the condition that gentle labor be employed. She forbade the baptism of Jewish children against the will of their parents, and in 1754 issued the General Polizey Ordnung (“statute”) for Moravian Jewry based on the long-standing Shai Tikkunot. In 1742 she confirmed the judicial autonomy of Lombardian Jewry (reconfirmed in 1752 and 1764), and in 1744 refrained from carrying out her intention of expelling the Jews from “Naples. In 1753 she permitted the reestablishment of a prayer room at “Usov (Maehrisch-Aussee) and in 1762 reconfirmed the privileges of Mwant banks. The unified toleration tax introduced in 1749 in Hungary was called “malka-geld” (“queen money”); it was fear for the loss of the revenue from this tax that induced the empress to prohibit the spread of blood libels in 1764. Despite her concern for ensuring the revenues of the kingdom, her hatred of the Jews found frequent expression. In 1746 she ordered the expulsion of Jews from Buda (Ofen; see *Budapest) and “Timisoara, and in 1774 she expelled the Jewish community from “Hodonin (Goed- ing), her private domain. In 1752 she had a census taken of the Jews living in Vienna, checked personally on them every three months lest their number multiply illegally, and in 1764 issued a new statute for Lower Austria. Her reign was characterized by the attempt to modernize and centralize the country. As a result of the annexation of the former Polish territories Galicia (1772) and Bukovina (1775), the Hapsburg monarchy became the country with the largest population of Jews.

MARI BEN ISSUR (first half of the fourth century), Babylonian amorah. Mari's father was a non-Jew who became converted to Judaism after his son was conceived and was henceforth known as Issur the Proselyte (BB 149a). According to Rashi (B. Meir, 15a, BM 73b) his mother was Rachel, the daughter of Samuel (Mar or Samuel Yarhinaḥ) who had been taken captive (Ket. 23a); Mari is therefore identical with the Mari b. Rachel and the "Mari, the son of Samuel's daughter" who are often mentioned in the Babylonian Talmud, and he was called after his mother because of his non-Jewish paternity. This view is upheld by Samuel b. Meir (Rashbam to BB 149a) but is contested by the Tosafot (ad loc.) since according to the Talmud the daughters of Samuel were ransomed from captivity in Erez Israel and married Simeon b. Abba, one after the other, all dying shortly after the marriage (Ket. 23a; TJ, Ket. 2:6, 26c). Moreover there is a chronological difficulty in identifying the daughter of Samuel, who died in 256, with the mother of Mari, who died in the second half of the fourth century. Issur, after his conversion to Judaism, became friendly with R. Saphra (BM 31b) and particularly with Rava and under their influence Mari attended the bet midrash and devoted himself to study. Issur left Mari 12,000 zuz which he deposited with Rava (BB 149a). Mari had two sons: Mar Zutra and Adda Saba, contemporaries of Ashi (Kid. 65b).

[David Joseph Bornstein]

MARIBOR (Ger. Marburg), town in Štajersko (Steiermark) province of Slovenia. Jews lived there from the Middle Ages, arriving from the north, mostly from the Rhineland area. They were moneylenders and artisans, known only by their first names, such as Meyer, Isaac, or Mosch (Moses). Among the moneylenders was an Abraham ben Jacob, and Rabbi ben Petahya Isserlein as well as his grandchildren are on record in the 14th century.

Jews lived in a ghetto from 1277; they had to wear a yellow badge. Rabbi Isserlein, locally mentioned as Israel Marburg, worked in Maribor some time in the 1430s. The Jewish physicians, Hayyim and Michael, are noted in documents. To arbitrate disputes between Jews and Christians, a special court was established, consisting of eight judges, four of them Jewish, presided over by a Christian. Later, however, a one-man office, called Judenrichter (Judge of the Jews), came into existence.

In 1465 the Jewish quarter was surrounded by a wall, parts of which still exist, called "Židovsko stolp" (Jew's tower). It formed part of the city's fortifications. By the edict of Emperor Maximilian I of March 1496 all Jews were expelled. They migrated to Burgenland in the north or westward to Trieste and Istria, some even wandering to Poland. In 1501 the synagogue was converted into the Church of All Saints. Only in the second half of the 19th century were Jews re-admitted to Maribor. They were linked at first to the Graz community (Austria), later to that of Varazdin (Croatia). In the early 1930s about a hundred Jews were noted.

No Jews now live in Maribor. The synagogue was preserved and renovated and is used as a cultural center.

[Mari Ben Issur

MARIENBAD (Czech. Mariánské Lázně), town in W. Bohemia, Czech Republic. The first Jew settled in Marienbad in 1820; prior to this time Jews only went to Marienbad during the health cure season. The Jewish community grew, as did the town, during the 19th century, drawing its settlers mainly from the Drnouly (Duerrmaul; see *Chodová Planá) and *Lázné Kynžvart (Koenigswart) communities. Many foreigners also settled there. Instrumental in the development of Marienbad was the professor and balneologist Samuel Basch, whose statue was removed by the Nazis, and reerected in 1970. On the initiative of Prague notables a Jewish hospice with a prayer room was built in 1861, with the help of gifts from Jewish visitors. Another balneologist, Heinrich Enoch *Kisch, also lived in Marienbad, contributing greatly to its development. He was the head of the Jewish hospice and a street was named for him. In 1875 a congregation was constituted and in 1884 a synagogue was dedicated. Marienbad was very popular among Russian Jewry at the end of the 19th century. According to the municipal election statute (in force until 1918), no Jew could be elected to the municipal council. The community numbered 405 in 1930 (3.3% of the total population). In 1937 the great assembly (Keneset ha-Gedolah) of *Agudat Israel was held in Marienbad. The World Council of Agudat Israel was held there in 1947. At the time of the Sudeten crisis (1938) most of the community left the town; those who remained were arrested by the Nazis. The synagogue was burned down and its site is now a park. In 1945 a community was re-founded. It was made up mostly of Jews from Carpatho-Russia who had opted to live in Czechoslovakia rather than in their country of birth. Some were demobilized soldiers of the Czechoslovak army in the Soviet Union. It numbered 196 in 1949. For a period of time there was a yeshivah for survivors of the Nazi persecutions in the town. In 1970 Marienbad was a center of Jewish life in Czechoslovakia as its Jewish old-age home (with a prayer room and a kosher restaurant) had about 100 residents from all over the country. The old age home and prayer room were closed in 1972.

[Meir Lamed]
MARIJAMPOLE (Rus. Mariampol), city in S. Lithuania. In 1856 there were 2,853 Jews in Marijampole; in 1897 there were 3,268 (c. 49% of the total population); and on the eve of World War I, 5,000. Many of them were admitted to Russian boys’ and girls’ secondary schools. In addition to the traditional ḥadarim, a “reformed heder,” where Hebrew was the language of instruction, was established. During World War I the Jews were expelled and a number were imprisoned for allegedly collaborating with the enemy. In 1923 there were 2,545 Jews (21% of the total). The majority of them earned their livelihood from trading in agricultural produce and small industry. There were also some landowners and smallholders. The Jews of Marijampole engaged in extensive nationalist political and cultural activities. They established welfare and cultural institutions of a high standard, including the first Hebrew secondary school in Lithuania (1919). There was also a farm which provided training for halutzim in the vicinity of the city. When the Germans occupied the city in 1941, the Jews were concentrated in a local ghetto together with other Jews from the surrounding area. Over 7,000 of them were massacred at the beginning of September 1941.

[Do Levin]

MARIL, HERMAN (1908–1986), U.S. painter. Born in Baltimore, Maryland, Maril painted seascapes and landscapes, often of the Cape Cod area. He studied at the Maryland Institute of Fine Arts, participated in federal works projects during the Depression, and painted during his World War II military service. He taught painting, drawing, and watercolor at the University of Maryland until his death, while exhibiting in galleries in New York, Washington, D.C., and Baltimore. He created lyrical works in oils, watercolor, and ink which referenced landscape, seascape, and sports subjects with various levels of modernist abstraction. Maril’s careful, balanced compositions are characterized by rich, even sensuous color, large, simplified shapes and forms, and a flattened picture plane. The artist worked in the American Scene style in the 1930s but soon developed a personal idiom which incorporated the tenets of modernism: spare, broad swathes of color, emphasis on facture, flattened forms, and a purging of details. While working in the 1950s Maril never adopted an Abstract Expressionist style, but continued to develop his robust, individualized vision, indebted to the socially attuned work of such artists as Raphael Soyer, Ben Shahn, and Lyonel Feininger. His subjects range from Matisse-inspired goldfish in a bowl, to farmyards and skyscrapers. While working in New York in the 1930s, he met a number of other artists, including Soyer, Marsden Hartley, Mark Rothko, and Chaim Gross. In 1933, the art critic Olin Dows characterized Maril’s abstract art as possessed of a personal style, despite his indebtedness to Picasso, Braque, and Mondrian, among other artists of the first quarter of the 20th century. While living in Cape Cod and Baltimore, Maril traveled to California, Mexico, Italy, and Spain. His acquaintance with Duncan Phillips, founder of the Phillips Collection in Washington, D.C., boosted the artist’s success and visibility, garnering him exhibitions, WPA projects, including a post office mural in Scranton, Penn., and notice by Eleanor Roosevelt, who hung one of his paintings in the White House. With another nod to Matisse, Maril’s work between the 1950s and his death prominently feature open windows and doors, which interweave exterior and interior on the surface of the work. The Phillips Collection owns 13 of Maril’s works. Maryland University College in Adelphi, Md., has exhibited a permanent retrospective of Maril’s work since 1986. Over 60 museums in the United States and Europe own examples of Maril’s work, including the Baltimore Museum, the Cleveland Museum, the Corcoran Gallery, the National Museum of American Art, the San Francisco Museum, the Whitney Museum, and the Walters Art Museum.

[Nancy Buchwald (2nd ed.)]

MARINI, SHABBETHAI HAYYIM (Vita; c. 1690–1748), rabbi, poet, and physician. Born in Padua, Marini studied there under Isaac Hayyim Cohen de *Cantarini, whom he succeeded in the rabbinate of the town. Marini was renowned for his sermons which fascinated not only members of the Jewish community but many educated Christians as well. He was also held in high esteem as a physician.

Marini’s main work is a Hebrew translation of the first three books of Ovid’s *Metamorphoses, based on the Italian paraphrase by Giovanni Andrea dell’Anguillara. Originally Marini planned a joint translation with Isaiah *Bassano. Marini, however, completed the translation alone, and it is not certain whether Bassano’s 100 octaves are included in Marini’s 850. The translation, entitled “Shirei ha-Halifot le-Oved,” was to have been published in Mantua, but Marini died when only one sheet had been printed. The original manuscript of the translation is in the municipal library in Mantua (Ms. 77 Comunità Israelitica). Others are: Parma, de Rossi, Ms. 1110 Budapest, Kaufmann Ms. 547; British Museum, Ms. Add. 26916, Vienna, Ms. 91. A longer excerpt of the translation was published in S.D. Luzzatto’s letters.

Marini also wrote numerous poems for special occasions, including an elegy on the death of his teacher Cantarini and a wedding poem which could be read either as Italian or as Hebrew. The Mantua and the Vienna manuscripts of the Ovid translation contain 34 of Marini’s poems (mostly sonnets), and a fragment of his poetic paraphrase of *Pirkei Avot. Isaiah Romanin wrote an elegy on Marini’s death (Oxford, Bodleian Library, Ms. Mich. 439, fol. 376).

MARINOFF, JACOB (1869–1964), Yiddish poet, editor, and publisher. Born in Russia, he received a traditional kheyder education. He immigrated to England, then the U.S. and lived briefly in Denver, where he worked with *Yehoash and Dr. Chaim Spivak to found the Jewish Tuberculosis Sanatorium. From 1895 he contributed poems to Yiddish periodicals. In 1909 he and Joseph *Tunkel cofounded Der Groyser Kundes, a journal of political and social satire, internationally important also as a watchdog of the Yiddish press and of Jewish institutions. Among the contributors to the weekly were *Sholem Aleichem, Yehoash, A. *Reisen, M.L. *Halpern, and M. *Nadir, as well as cartoonists Z. Maud, S. Raskin, and L. Israel (Lola). Marinoff wrote three volumes of verse: Shpil un Kamf (*“Play and Struggle,” 1938), Mir Veln Zayn (*“We Want to Be,” 1944) and Shtark un munter (*“Strong and Hearty,” 1947) and coedited a collection, Humor un Satire (*“Humor and Satire,” 1912, from Der Groyser Kundes).

[Sol Liptzin / Edward Portnoy (2nd ed.)]

“MARITAIN, JACQUES (1882–1973) and RAÏSSA (1883–1960), French writers who took a positive stand on the Jewish issue during the Nazi era. Raïssa Oumansoff, a Russian Jew, was taken to Paris as a child, and there in 1904 she married Jacques Maritain, a Protestant by birth and a former disciple of Henri *Bergson, who became one of the foremost protagonists of neo-Thomism. Having lost touch with their respective religions, the Maritains became Catholics in 1905. These experiences were sensitively narrated by Raïssa Maritain in Les grandes amitiés (1941; *We Have Been Friends Together, 1942). The conversion, which pained and scandalized their families, paradoxically induced the young couple to meditate on the Jewish destiny. Raïssa’s poems, essays, and diary reveal a very pure, mystical approach, the source of which she described: “My maternal grandfather was a Hasid, and my father’s father was a great ascetic sage. This is my inheritance.” Through Raïssa, Jacques Maritain learned that “inspiration and spiritual sources of life come from the people chosen by God.” When the times demanded that he speak up for the Jews, the philosopher became the man of action. From the moment the Nazi persecutions began, Maritain spoke out and he continued to champion the Jews while an exile in the U.S. during World War II, as French ambassador to the Vatican after 1945, and following the establishment of the State of Israel. Jacques Maritain’s many articles and statements on the subject (1926–61) were collected by the author in a single volume, Le Mystère d’Israël (1965).

[Brother Marcel-Jacques Dubois O.P.]

MARITIME LAW. The Talmud discusses many laws concerning shipping, and sea and river journeys - such as the sale of ships, instances of shipwreck salvage and rescue, rules of passage at sea, lading and charter agreements, and also various details of the laws of the Sabbath and ritual purity applicable to ships. Such laws do not, however, serve to create a distinct branch of maritime law proper, since they are interwoven into the wider principles of the laws of *contract and *damages (contrary to the view expressed by J. Dauvillier, in Revue Internationale des Droits de l’Antiquité, 6 (1959), 33–63). Although in this field special shipping customs, if any, are followed, this is no more than an application of the general principle of contract law relating to local or trade customs (Rasha, Resp., vol. 2, no. 268).

With regard to the sale of ships, as with other sales, reference is made to accessories which are customarily sold with the ship and others which are considered as being independent and must therefore be purchased separately (bb 3:51). It is also stated that it was the practice of shipowners to receive not only the hire for the ship but also payment for its loss if shipwrecked (bm 70a). On arrangements for sea traffic it is stated: “Where two boats sailing on a river meet; if both attempt to pass simultaneously, they will sink; whereas if one makes way for the other, both can pass [without mishap]. Likewise if two camels meet each other while on the ascent of Beth-Horon [which is a narrow pass; see Josh. 10:10 and 11]… if one is laden and the other unladen, the latter should give way to the former; if one is nearer [to its destination] than the other, the former should give way to the latter. If both are equally near or far, make a compromise between them, and the one [to go through] must compensate the other” (Tosef. BK 2:10; Sanh. 32b). If a person hires a ship for carriage of cargo and it sinks in mid-journey, he must pay for half the journey; if, however, he hires a specific ship for shipping a specific cargo, he loses the hire if he has already paid for it but is not obliged to pay if he has not already done so (bm 79b and Tos.). In a case where a man hired boatmen to deliver goods, stipulating that they guarantee against any accident (see *Ones) occurring on the way, and the river dried up during the journey, it was held that the boatmen had not guaranteed against this possibility since such an accident was not foreseeable (Git. 73a).

Various halakhot were decided with regard to shipwrecks. Thus when a boat is in danger of sinking and part of the cargo is thrown overboard to lighten the vessel, the resulting loss is not apportioned equally amongst the cargo owners, nor is it calculated according to the value of the goods of each owner, but the loss is apportioned according to the weight of the cargo of each owner – provided that this does not conflict with local maritime customs (bk 116b). In one instance a donkey being transported threatened to sink the boat and was thrown...
overboard, whereupon it was decided that no compensation was payable to its owner, since the deed was justified on the grounds of self-defense, the donkey being considered as pursuing with intent to kill (bk 117b). An interesting halakhah concerning maritime insurance is related: “The sailors can stipulate that whoever loses a ship shall get another one, but if the boat was lost due to his own negligence or if he sailed to a place to which boats would not normally sail, he would not be provided with another boat.” The same rule applies also to carriers on land (Tosef. BM 11:26; bk 116b).

In the post-talmudic period many responsa dealt with trade customs (see e.g., Rashba, Resp., vol. 2, no. 268), some of them marine customs. Solomon b. Abraham *Adret (Rashba), who lived in Barcelona, where the well-known collection of marine customs Consulat de Mar was compiled, records the custom of depositing goods with a merchant traveling by sea for the latter to trade therein at the risk of the depositor — leaving the sailor exempt from liability for accident (his resp. vol. 2, no. 325; vol. 1, no. 930 and cf. no. 924). Also mentioned is the custom of paying the full wages, even if the journey for which the employee was hired was not completed due to accident overtaking the employer (Rashba, Resp., vol. 6, no. 224).

In the State of Israel maritime law is based on Israeli legislation, conforming with the law of the maritime nations in those matters and also with Ottoman-French laws and English law.

[Shalom Albeck]

**MARIX, ADOLPH** (1848–1919), U.S. naval officer. Born in Germany he was taken to the United States by his father, Henry Marix, who was an official translator to the U.S. Treasury. Adolph Marix was appointed to the U.S. Naval Academy at Annapolis and in 1872 joined the judge advocate-general’s department. He commanded a number of ships between 1894 and 1898 including the U.S.S. Maine until shortly before its mysterious sinking in the Bay of Havana. Marix was appointed judge advocate in the court of enquiry into the sinking, and his findings led to the U.S. declaration of war on Spain. Subsequently, he was president of the navy board which experimented in the use of submarines and in 1908 was promoted to rear admiral, the first Jew to attain that rank.

**MARK, BERNARD** (Berl; 1908–1966), scholar and historian. Born in Lomza, Mark studied law at Warsaw University. Prior to World War II, he published articles in Polish and Yiddish on literary history and edited left-wing periodicals. Between 1932 and 1939, he published a two-volume work in Yiddish entitled *Geshikhte fun di Sotsiale Bayevungen in Poyln* (“The History of Social Movements in Poland,” 1938–39). During World War II, he lived in the Soviet Union, where he was active on the Jewish *Anti-Fascist Committee, and in the Związek Patriotów Polskich (“Polish Patriots’ Union”). In Moscow he published his first work on Jewish anti-Nazi uprisings in Poland. Upon returning to Poland (1946), he published a series of essays and collections of documents on Holocaust subjects. In 1949, Mark was appointed director of the *Jewish Historical Institute in Warsaw, and editor of its Bulletin and Biuletyn Geshikhtes.* In 1954 he was appointed an associate professor. Mark visited Israel in 1957 and lectured at the Second World Congress of Jewish Studies. He strengthened the ties between the Jewish Historical Institute and research institutions in Israel, e.g., *Yad Vashem and the Central Archives for the History of the Jewish People (Jerusalem). His main works are The Extermination and the Resistance of the Polish Jews During the Period 1939–1944 (1955); Dokumenten un Materia- len vegen Oyfshtand inVarshev Geto (1953); Der Oyfshtand in Varshaver Geto (1963), translated into Polish, German, and Dutch; *Di Yidishe Tragedye in der Poylisher Literatur* (1950); *Di Umgekumene Shrayber fun Di Getos un Lagern un Zeyere Verk* (1954); *Der Oyfshtand in Byyalistoker Geto* (1953); and *Di Geshikhte fun Yidn in Poyln* (1957). **ADD. BIBLIOGRAPHY:** A. Grabski, *Dzialalnosc komunistow wrold Zydow w Polsce, 1944–1949* (2004), index.

[Nathan Eck]

**MARK, JULIUS** (1898–2002), U.S. Reform rabbi. Mark was born in Cincinnati, where he earned his B.A. from the University of Cincinnati in 1921 and was ordained at Hebrew Union College in 1922. He served as rabbi of Temple Beth El in South Bend, Ind. (1922–26), and the Vine Street Temple in Nashville, Tenn. (1926–48) before becoming rabbi of New York City’s Temple Emanu-El. Under Mark’s leadership, Emanu-El more than doubled in size (to 3,200 families) and grew to become the largest Jewish congregation in the world. During World War II, he joined the U.S. Navy and served for several years as Jewish chaplain to the Pacific Fleet, rising to the rank of lieutenant commander on the staff of Fleet Admiral Chester W. Nimitz. Returning to civilian life, he served on the executive committee of the United States Commission for UNESCO; as a life trustee of the Federation of Jewish Philanthropies; on the boards of the National Conference of Christian and Jews and the Anti-Defamation League; as honorary vice chairman of the Lighthouse for the Blind; and as honorary president of the American Jewish Encyclopedia Society. He also joined with the clergy of neighboring churches to work for social justice in New York City.

In the service of Reform Judaism, Mark was a member of the governing board of the World Union for Progressive Judaism, a member of the Executive Board of the *Central Conference of American Rabbis, and chairman of the CCAR-UAHC Commission on Justice and Peace.* He also served two terms as president of the *Synagogue Council of America. For his many contributions, he received the Human Relations Award of the Methodist Church (1963); the Gold Medallion for Courageous Leadership of the National Conference of Christian and Jews (1966); Clergyman of the Year Award from Religious Heritage
of America (1969); and repeated recognition from the State of Israel Bonds Organization (1967, 1968, 1970). Five colleges and universities awarded him honorary doctorates in law, divinity, humanities, sacred theology, and humane letters. Among the books Mark wrote was Reaching For the Moon (1959). Rabbi Ronald B. Sobel and Sidney Wallach edited a collection of papers entitled Justice, Justice Shalt Thou Pursue on the occasion of Mark’s 75th birthday, as an expression of gratitude of the Jewish Conciliation Board with whose services and leadership Mark has long been identified.

[Bezalel Gordon (2nd ed.)]

MARK, MARY ELLEN (1940- ), U.S. photographer. After growing up in suburban Philadelphia, Mark earned a bachelor’s degree in painting and art history but decided she was not good enough to be a painter. She then earned a master’s in photojournalism at the University of Pennsylvania, having chosen photography almost at random, she said, and falling in love with the camera the moment she held one in her hand. “From the very first night, that was it,” she said. “I became obsessed by it. I knew immediately it would be my life’s work. I knew I had a chance of being good at it.” The camera proved her ticket to independence.

After traveling around Europe, Mark sought work in the late 1960s shooting film stills for Hollywood productions. It led to her first large-scale project. While shooting at the Oregon State Mental Hospital in 1973 for One Flew Over the Cuckoo’s Nest, she befriended the hospital’s director and was permitted to spend time living with and photographing the women of the institute’s maximum security Ward 81 in 1976. This series of photographs is sentimental and disturbing at the same time, and fulfilled Mark’s goal to portray the lives of “people who haven’t had the best breaks in society.” The book Ward 81 was published in 1979. “For years I’d planned to go live in a mental hospital,” she said. “I wanted to see if I could feel something of what it was like to be set aside from society.” At her own expense, she lived in the state’s only locked ward for women. “I think I was interested because my father had several nervous breakdowns and was hospitalized several times,” she said.

With a special affinity for working with women, she turned her attention to the brothels of Bombay, India, in 1978. She encountered violent resistance from some of her would-be subjects, but she befriended a few, leading to a series of color photographs published as Falkland Road: Prostitutes of Bombay in 1981. She said the book “was meant almost as a metaphor for entrapment, for how difficult it is to be a woman.” She did a series on Mother Teresa of Calcutta for Life magazine, published as Photographs of Mother Teresa’s Missions of Charity in Calcutta in 1985 as well as a series depicting street children in Seattle who turn to prostitution and drugs as a means of getting by. That work led to the film Streetwise, directed and photographed by her husband, Martin Bell; it was nominated for an Academy Award. It was in Seattle, in 1983, that she befriended a 12-year-old, Erin Blackwell (“Tiny”), a child prostitute whom she photographed over the years as Tiny had five children with five different fathers. She first photographed the Damm family of Los Angeles, a husband, wife, and two children, in 1987, after they had been thrown out of a shelter and were living in their car. In one picture, the mother and father sprawl in the front seat of the car as the children peer anxiously out the back window. In 1994, with two more children and the parents seriously into drugs, the family was again Mark’s subject, squatting in squalor but still a family, at a rundown ranch in Llano, California. In October 2003 she published Twins, featuring 20 × 24 Polaroid prints of twins.

Mark published 14 books and won many awards, including the second Cornell Capa Award of the International Center of Photography, and her images have been shown worldwide.

[Stewart Kampel (2nd ed.)]

MARK, YUDEL (1897–1975), Yiddish educator, philologist, and author. Born in Palanga, Lithuania, Mark became active in Jewish politics while studying at Petrograd University (1915–18). In Libava (Liepaja), Latvia, he organized the local branch of the Yidishe *Folkspartei, later becoming the secretary-general of the Jewish National Council in Lithuania (1923), and secretary and vice president of the Folkspartei in the same country. From 1930 to 1934 he was the editor of the daily Folksblat. Mark was the founder (1920) and principal of the Yiddish Real-Gimnazye of Vilkomir (Ukmerge), the first of its kind in Lithuania, and between 1927 and 1930, taught Yiddish at various schools and seminars. After settling in the U.S. in 1936, Mark continued his activity in the field of Yiddish education. He settled in Israel (Jerusalem) in 1970.

Mark’s first literary publication appeared in the Kovno (Kaunas) daily Nayes (1921), and he subsequently contributed extensively to a wide range of Yiddish political, literary, and educational publications, such as Eynheytlekhe Folkshul (1922). In addition he edited various Yiddish periodicals, His books include a Yiddish school grammar, Shul-Gramatik (1922), various textbooks on Yiddish language teaching, Yiddish literature, Jewish history (Der Yidishe Poyps, c. 1947; Dovid ha-Reuweni un Shloyme Molkho, 1941), biography, as well as children’s books in Yiddish. Among his translations into Yiddish are works of Thomas Mann and Erich Maria Remarque. He also edited various books, notably the Glyser Verterbukh fun der Yidishe Shprakh (2 vols., 1961) jointly with Judah A. Joffe; further volumes were in preparation (1971).

Among Mark’s attainments as a linguist are his numerous studies on Yiddish grammar and style, on the Hebrew-Aramaic component in the Yiddish language, and his stylistic analyses of the Yiddish authors. He was also the editor of the *Yivo’s Yidishe Shprakh (1941–68).

MARKAH (Heb. מַרְכָּה; fl. second half of fourth century C.E.), well known and venerated Samaritan poet who wrote in Aramaic. The great esteem in which he is held by Samaritan tradi-
tion is shown by his epithet "Founder of Wisdom" in the Samaritan chronicle Tolidah or "Fountain of Wisdom" (Yanbu‘ al-Hikma) in that of Abu al-Fat and by the legend that the name Markah (מרקה) was bestowed upon him because it has the same numerical value as the name Moses (משה), which no other human being is allowed to bear. Actually, Markah is an Aramaized form of the Latin name Marcus. According to the Samaritan chronicles, he was the son of the liturgical poet Amram Darah whose byname, Tūta, is explained as a development of the Latin name Titus.

Like his father, Markah wrote liturgical poems, part of which belong to the earliest portions of the Samaritan common prayer book, the Deftir (see "Samaritan Language and Literature"). His style is more elaborate than that of his father, and none of his poems is composed in the style of "Verses of Durran" (see Amram Darah). The verses of his poems are arranged in an alphabetic acrostic and the number of lines in each verse is nearly always equal. Once his name is contained in the acrostic of the first four verses of a poem. Through his terse and polished style, he succeeds in conveying the fiery religious feelings of his soul. That is why many of his expressions became fixed figures of speech used by later Samaritan poets.

The work that established Markah's fame and gained him the epithet "Founder of Wisdom" is his great midrashic composition Meimar or Tevat Markah, a compendium of exegetical and theological teachings. It is divided into six books, the main subjects of which are the wonders revealed to Israel from Moses' call to Israel's victory at the Red Sea; a commentary on Exodus 15; a commentary on Deuteronomy 27:9–26; the commission of Joshua and instructions to various classes of the people, whereby priests are witnesses to Israel and to themselves; a commentary on Deuteronomy 32; Moses' death; speculations about the 22 letters of the alphabet. There are many thoughts and figures of speech shared by this work with Markah's poems. All extant manuscripts, the earliest dating from the 14th century, contain recognizable later additions.

[Ayala Loewenstem]

MARKEL, LESTER (1894–1977), U.S. journalist who was responsible for changing the nature of the Sunday newspaper. Born in New York City and trained at Columbia University’s School of Journalism, Markel was from 1923 to 1964 Sunday editor of the New York Times. It was he who conceived the idea of separate Sunday sections, which would bring the reader the news in greater depth than was possible in daily papers. He was personally responsible for the Times Magazine, the "Book Review," and the "Arts and Leisure" section. In 1935 he instituted the "News of the Week in Review," a report in perspective of the week's events, which won Markel and the New York Times a Pulitzer Prize. Markel wrote and lectured widely. In 1951, he founded the International Press Institute to foster the free flow of information and freedom of the press in general. In 1964, he became associate editor of the New York Times and head of its department of public affairs. He also started a television series in which he and others discussed the news in depth.

MARKEL-MOSESSOHN, MIRIAM (1839–1920), Hebraist, translator, and journalist, who exercised a profound influence on the maskilim of her day, particularly Judah Leib Gordon (1831–1892) who dedicated to her “Kožo shel Yod” (The Tip of the Yod), his 1876 poem satirizing the treatment of women in traditional Jewish society. Born in Volkovyshki (Vilkaviskis), Lithuania, to Hayaiah and Shimon Wierzbolokow, an affluent merchant, Markel-Mosessohn underwent rigorous training in Hebrew language and literature from an early age with the assistance of private tutors and also received a thorough grounding in secular subjects, including German and French.

Miriam married Anshel Markel-Mosessohn (1844–1903) when she was 24 and the groom 19. The couple, whose 40-year marriage was childless, shared a love for Hebrew and was committed to its revival. Anshel supported his wife’s literary efforts, granting her freedom and financial backing to travel to pursue the publication of her work. Markel-Mosessohn corresponded briefly with Abraham Mapu and maintained a 20-year professional and personal correspondence with Gordon, although the two never met. With Gordon’s support, the first volume of Markel-Mosessohn’s Hebrew rendition of the German history book Die Juden und die Kreuzzüge unter Richard Löwenherz by Eugen Rispart appeared in 1869 as Ha-Yehudim be-Engiyah. The second volume of the translation was not published until 1895, apparently because of Markel-Mosessohn’s poor health and financial problems. In 1887 she briefly became the Viennese correspondent for Ha-Melitz, the newspaper Gordon edited; however, after publishing only four articles, she abruptly renounced authorship, claiming “my desire and my ability are not one and the same.”

Markel-Mosessohn succeeded in entering the rarefied, male world of Hebrew letters during the very period in which the language was being revived, but the strict pronouncement and observance of gender differentiations by the leaders of the *Haskalah, distinctions which Markel-Mosessohn herself accepted, precluded her from obtaining the status of maskil. Copies of Markel-Mosessohn’s letters to Judah Leib Gordon and other literary papers are housed at the Jewish National and University Library Archive, Hebrew University of Jerusalem.

[Carole B. Balin (2nd ed.)]
MARKET DAYS AND FAIRS. The nomadic nature of early medieval trade and the wide-ranging contacts of Jewish merchants throughout the period made Jewish traders early and eager participants in market days and fairs, in spite of the religious and social problems attendant on such participation, especially in Christian countries. As merchants were prominent in European Jewish leadership and *autonomy, fairs were suitable meeting places for deliberating Jewish affairs. Around 825 Archbishop *Agobard complained that the day on which the *Lyons weekly market was held had been changed from Saturday to suit Jewish traders. In the following three centuries there are many references in both Hebrew and Christian sources to Jews attending fairs, particularly in cities of the Rhineland such as Cologne and *Treves. *Gershom b. Judah mentions a fair at a sea or river port during which the assembled merchants from various communities enacted an ordinance. *Champagne and *Provence, believed to be where the fairs began, had many Jewish communities, whose members in all probability participated in them. Jewish attendance at markets and fairs decreased after the era of the *Crusades when moneylending and pawnbroking became the major source of Jewish livelihood in northwestern and central Europe. In other areas, where the trade in goods formed an important Jewish occupation, their attendance continued.

The 16th century, in Eastern and subsequently in central Europe, witnessed the creation of economic and social patterns adapted to the attendance of large numbers of Jews of various fairs and markets. In *Poland-Lithuania, it was expressly forbidden to fix the dates of fairs and markets on the Sabbath or Jewish holidays. The Jews’ commercial rights at fairs and markets were the only ones not challenged by competing Christian merchants. When persecutions in 1539–40 resulted in Lithuanian Jews ceasing to travel to fairs, the nobility appealed to the king to suppress the persecutions at once. One of the most important fairs was the “Gromnice” (February 2), when many Jewish merchants and heads of communities convened at *Lublin; much trade was done and debts and taxes were gathered. Others fairs took place in *Brody, *Gniezno, *Gdansk (Danzig), *Torun, *Lvov, and *Cracow, and there were innumerable lesser ones as well. As the fairs bore the names of their patron Christian saints, these became common usage and were inscribed on official and business documents. The distinctive creation of Polish Jewry, the *Councils of the Lands, was an outgrowth of a *bet din which officiated at the Lublin fairs. Meetings of the councils took place there regularly, twice a year, during the 16-day spring and summer fairs; sometimes they were held during the *Jaroslaw fairs in the fall. The Lithuanian Council also convened during fairs, and common sessions took place at *Lecznia. One of the tasks of the Councils was regulating the nomination of a *parnas and *dayyan for the duration of the fair. As both positions carried wide powers, they had to be judiciously distributed among the contending lands. In Poland-Lithuania the social aspects of the fair were as significant as the economic and communal leadership ones. N.N. *Hannover described a mid-17th-century fair: “the head of the yeshivah journeyed with all his pupils to the fair on market day … and at each fair there were hundreds of heads of yeshivot, thousands of pupils, and tens of thousands of youths and Jewish merchants…. And whoever had an eligible son or daughter went to the fair and arranged a match, for everyone could find one to his liking. And at every fair hundreds of matches were made, and sometimes thousands; and the children of Israel, men and women, wore kingly vestments at the fair” (*Yeven Mezulah, 1558, 46f.). Meir b. Gedaliah (Maharam) of *Lublin (1558–1616) described another aspect of Jewish life at the fairs: “It is a regular custom that at every fair a place is determined as a synagogue for daily prayer, and every Sabbath scholars and yeshivah students and leaders of the land and people congregate there and read the Torah” (*Responsa, 84).

Jews had been expelled from Breslau in 1455, but they were never absent from the fairs. In 1537 the municipal council opposed an attempt by Ferdinand I to levy a special poll tax on Jewish visitors to the fairs. A century later, at the request of the textile guilds and the imperial authorities and despite the opposition of the local merchants, Jews were permitted to be in the town a few days before and after the fairs. In 1697 the authorities divided the Jews into five categories whose duration of stay depended on the scope of their economic transactions.

Jews attended the fairs as a corporation of merchants based on their communities or countries of origin. These corporations were also responsible for nominating their officials: a *parnas ha-yarid, in charge of keeping order and representing the fair corporations; a *dayyan ha-yarid, who held regular judicial authority and was empowered by the chief rabbi of the land (first mentioned in 1698); supervisor of ritual law; and *shames (shammash), the distinctive Breslau functionary, who was permitted to remain between the fairs and guarantee the continuity of business transactions. First mentioned in 1673, he was elected by his *Judenschaft, authorized by the Councils of the Lands, recognized by the Breslau municipal council, sworn in, and allowed to wear a sword. In 1696 there were ten *shamosim at the fair, one each for the four Polish lands and one for Bohemia, *Moravia, *Glogau, *Posen, *Lecznio, and *Zuelz. The number of Jewish visitors at a fair in 1685 was 332, and they practically monopolized Polish trade, particularly in textiles, silks, spices, tobacco, and above all in furs.

Jewish attendance at fairs within the Austrian Empire was encouraged by Emperor *Maximilian I, who in 1494 permitted Jews to attend markets in the imperial cities from which they had been expelled on payment of three florins *Mautgeld (“body tax”); see *Leibzoll). This right, confirmed by his successors in return for extraordinary taxation, became the legal cornerstone of Jewish economic activity. *Joseph II eventually abolished the *Leibzoll and declared all markets open to Jews (1782/83). In practice, however, many restrictions remained in force until 1848. At *Brno, for example, the Jews were allowed to enter through only one gate (*Judentor) at fixed hours, were restricted to one market, and forced to lodge in one inn, the
Neue Welt in the Krona suburb. They struggled for many years for the right to erect stalls. Complaints by Christian merchants against underselling and inferior wares were continuously raised, and peddlers (called pinkerljoden) were particularly harassed at the Brno fairs. The Council of Moravia regulated the supervision of dietary laws at the fairs, distributed stalls before the fairs commenced, and prohibited the Jews from being at the fair on the day before it opened. There was a tendency to establish Jewish communities near locations of major and minor markets and fairs.

There were a great many fairs in central Europe. Many Jewish calendars recorded dates of fairs, which Jews attended as peddlers who both bought and sold wares, as merchants buying goods wholesale for retailing, and sometimes as popular performers like jugglers. Registers of the special scales for weighing feathers at the *Linz markets of 1594 and 1603 show that there were 131 Jewish traders in feathers and only 12 Christian dealers. Other important commodities were leather, skins, old clothes, and new clothes and textiles imported from Bohemia. In 1714 Bohemian *Federjuden had to have special permission to attend because of the plague. About 300 Jews dealing in similar articles attended the *Krems fairs annually; in 1701 the Moravian Jews boycotted it because a Jew had been arrested as a thief.

The records of Zurzach fairs in Switzerland mention the Judengeleit (Leibzoll), a tax of between 7 and 19 batzen according to age and wealth which was a considerable source of income. The number of Jews attending grew from about 150 in the mid-18th century to about 200 at its close; most foreign Jews were from Gailingen, *Hohenems, and communities in *Baden, *Alsace, and Swabia, which were composed primarily of peddlers and merchants. More than three-quarters of the households of the nearby communities of Endingen and *Lengnau attended these fairs. Although Jews were not tolerated throughout most of Switzerland, they were allowed and encouraged to attend the fairs, particularly the *livestock merchants. In France in 1741, the controller-general of finances wrote a circular letter to all provincial governors asking them about the commercial activities of the Jews. Unanimously they replied that Jews should not be excluded from the fairs and markets because they helped keep down prices. The monopolistic guilds were forcing up prices, while the outside merchants, who came for the duration of the fair, forced them down. An endemic source of strife and litigation between Jews and local merchants and the authorities was the constant attempt to sell outside the market, or not on market days, or on the way to or back from markets, or to remain in the area after the fair was over. In Italy Jews were to be found at the major fairs and often participated in the festive processions which inaugurated them. The community of *Mantua bought and erected stalls at the fairgrounds for its members; there was an unsuccessful attempt to prohibit their use in 1740. A Jewish community had the right to tax Jewish merchants attending the fairs for the use of communal amenities. In 1720 the Jewish communities of the duchy of Parma tried, without success, to tax Jewish merchants attending the Parma city fairs (where there was no community). A long dispute (1748–51) between the community of *Verona, which had attempted to exact a business tax from foreign visitors at the fairs, and the communities of Mantua, *Ferrara, and *Modena ended with rabbinical authorities in Italy and Germany deciding against Verona's action.

European rulers were aware of the economic benefits resulting from Jewish participation in fairs. Joachim 11, elector of *Brandenburg, expelled the Jews in 1510 but subsequently allowed them to attend fairs. After the 1573 expulsion from Brandenburg, Posen Jews regularly received permission to attend the *Frankfurt on the Oder fairs. Elector Frederick William (1640–88) encouraged Polish Jews to attend fairs in his realm long before he admitted 50 Jewish families from Austria to settle and trade freely throughout his lands (1671). Though Jews were rigorously excluded from *Saxony, the internationally important *Leipzig fairs needed Jews to participate in large numbers. Between 1675 and 1764, 82,000 Jews attended the biannual *Leipzig markets; their number fluctuated according to political and economic factors, but grew steadily from about 400 a year in the mid-17th century to twice that amount by the end of the century and continued to grow; they generally constituted about one-fifth of the total attendance. Their number increased from an average of 1,073 in the 1780s to 3,370 in the 1800s and 6,444 in the 1830s, when they formed around one-quarter of the participants. Between 1675 and 1764 the majority of Jewish participants came from Central Europe, though the number of East European Jews was increasing slowly, eventually amounting to one-third of the total Jewish attendance in the early 19th century. The attendance lists of the fairs offer a true mirror of 18th-century Jewish society. Members of the leading families attended (see *Bacharach, *Fraenkel, *Gomperz, *Ephraim, Itzig families, and Samuel *Oppenheimer, David *Oppenheim, and Samson *Wertheimer). *Glueckel of Hameln recorded her husband’s transactions at fairs with Jost *Liebmann, the Court Jew. The leading *Court Jews of the day, Alexander David, Behrend *Lehmann, and Leffmann *Behrends, were also present. Jewish visitors to Leipzig congregated in the Bruehl, which became in effect a Jewish quarter for the duration of the fairs. The Landrabbiner of *Anhalt had rabbinical jurisdiction there and those who died at the fair were buried in Dessau. At Leipzig Jews bought wares worth about half a million thalers annually between 1773 and 1775, primarily textiles. Officially they sold wares worth one-fifth of that amount, but the sales figure was not the true one, for the “sales tax” (Wagegold) was 1% of all sales; it was not until 1813 that it was reduced to 0.5%, the same as the Christian tax. In addition the city exacted a high entrance fee. “Volljuden,” who did not enjoy special privileges and protection and were the majority, paid six thalers each and three for a wife or servant. Jewelers paid eight thalers and cooks (judenkoch) ten thalers and 12 groschen.

In the *Pale of Settlement and Austrian Galicia the market square and the regular market days became the center of
the shtetl and the heart of its economy. To a large extent the economic and social life in these towns was regulated by buying from peasants and selling to them on the fixed market day in the appointed place; taverns were therefore erected around the market square. Jewish emigrants carried over this type of market (with some changes) into large cities in Western Europe; an example is the Petticoat Lane Market in London.

[Henry Wasserman]

**MARKISH, PERETZ** (1895–1952), Soviet Yiddish poet, novelist, and playwright. Born in Volhynia, Markish received a traditional Jewish education and prepared for entrance to a university. He began writing Russian poetry at age 15 and Yiddish poetry in 1918–19, when he published in the Kiev journals *Egyns* and *Baginen*, whose contributing writers and editors broke with past models of artistic representation to craft a new revolutionary Jewish culture. Markish stood out among other Yiddish poets, like David *Hofstein and Leib Eytgns* ("Thresholds," 1919), made his reputation as the poet of the new generation. He moved briefly to Moscow before leaving for Warsaw in late 1921, where he helped found the Yiddish modernist movement through his participation in the literary group, *Khalyastre* ("The Gang"), and by co-founding *Literarishe Bleter*. His poem "Hunger" appeared in the second edition of the Moscow *Shtrm*, and in 1922 he published *Di Kupe* ("The Heap"), an epic poem that commemorated the 1921 pogroms that swept the Ukraine. In 1926, he returned to Moscow, where he became one of the most prolific writers of Soviet Jewish letters, publishing in the Kiev journal *Royn Velt* and the Minsk journal *Shtern*. Markish's career reflected a general shift away from modernism and poetry to socialist realism and prose, as demonstrated in his first novel, *Dor oys, dor ayn* ("Generations," 1929), which describes the tension between modernity and tradition in a Jewish family during the Revolution. Markish quickly rose to a position of power in the Union of Soviet Writers (established 1932), and during the Great Purges of 1936–38 he denounced defendants at one of the trials in a poem whose publication showed Markish to be firmly established within the Soviet system. During World War II, he wrote the play *Kol Nidre*, and in 1942 joined the leadership of the Jewish *Anti-Fascist Committee* (JAFIC), which served as the center of Jewish cultural life during and after the war. Markish's last major work, the 1948 epic poem *Milkhome* ("War"), chronicles a wide spectrum of wartime experiences, focusing particularly on the plight of the Jews. In January 1949, during the antisemitic anti-cosmopolitan campaign, several major cultural figures who worked in Yiddish, Markish included, were arrested. In 1952, he and several others were convicted of anti-Soviet activities, spying, and bourgeois nationalism and were shot. Rehabilitated after Stalin's death, Markish's poems were again published in 1957 (in Russian translation only). His novel of Polish-Jewish heroism during World War II, *Trit fun Doyres* ("The Footsteps of Generations," 1966), was published posthumously in Soviet Russia; ironically, the novel is replete with praise for the regime and political system.

[David Shneer (2nd ed.)]

**MARKON, ISAAC DOV BER** (1875–1949), Russian scholar and librarian. Markon was born in Rybinsk on the Volga and studied at the St. Petersburg University under D. *Chwolson* and at the *Hildesheimer Rabbinical Seminary* and the University of Berlin. He was librarian at the Imperial Public Library in St. Petersburg (1901–17), instructor at the Higher Courses of Oriental Studies (1908–11), instructor and later professor of Jewish studies at the university in St. Petersburg (1917–20), and professor at the Belorussian University at Minsk (1922–24). He also served for a time on the scholars' advisory committee for the Czarist Ministry of Education. For four years he was an editor of the Russian Jewish encyclopedia *Yevreyskaya Entsiklopediya* and planned the publication of a new encyclopedia, *Ozar ha-Yahadut*, of which a prospectus appeared in 1914. He founded and edited the quarterly *Ha-Kedem* (with A. Sarowski) which appeared from 1907 to 1909 in Hebrew and German. Markon left Russia for Berlin in 1926 where he joined the editorial staff of the *Encyclopaedia Judaica* and the *Eshkol Enziklopedyah Yisre'elit*, in charge of the departments of *Karaism and bibliography*. For a time he also lectured at the Rabbinical Seminary. In 1928 Markon was appointed librarian of the Hamburg Jewish community. As he
was a Jewish Soviet citizen, he was expelled from Germany in 1938. He went first to Holland and in 1940 escaped to England, where he joined Montefiore College at Ramsgate.

Markon’s first step in Jewish scholarship was his prize-winning comparison of Christian canonical with talmudic and Karaita marriage law (Russ., 1901). In the same field are his Me-korot le-Korot Dinei Nashim (about laws relating to women) 1, pt. 1 (1908) and various editions of Karaita works. Markon also published a study of the Slavonic glosses in the Or Zarua by Isaac b. Moses of Vienna (1906). With D. Guenzburg he edited the Festschrift... A. Harkavy (1908). Autobiographical reminiscences by Markon appeared in Mezudah (2 (1944), 187ff.; 3 (1945), 341ff.; 4–6 (1948), 474ff.) as well as in some of his letters in G. Kressel (ed.) Genazim (1 (1961), 244ff.).

MARKOVA, ALICIA (1910–2004), British-born prima ballerina who joined Diaghilev’s Les Ballets Russes de Monte Carlo in 1925 when she was just 15 years old. She was one of the famous “Baby Ballerinas” of the company. Her real name was Alice Lillian Marks, a name which, for Diaghilev, was not Russian or at least not French enough to appear in his company’s programs. So without being asked, she was named Markova. Many years and famous roles later, she became – by order of Queen Elizabeth – Dame Alicia.

Markova created many of the central roles in the ballets of Balanchine, Ashton, and other contemporary choreographers. In 1931 she was back in her native London and joined the first professional ballet company in the U.K., the Ballet Rambert, founded and directed by another daughter of a Jewish family, one more dancer whose name was changed by Diaghilev because Miriam Rambam-Ramberg sounded too Jewish and not Russian enough and thus became Marie *Rambert. With this company Markova danced for many years as well as with the Vic–Wells Ballet, which later became The Royal Ballet.

Markova danced the leading roles in the classics as well as in new, contemporary works, such as Ashton’s Façade, Tudor’s Lysistrata, and De Valois’ The Rake’s Progress. She was the prima ballerina of the London Festival Ballet in the 1950s. She stopped dancing in 1962 and in the years 1963–69 Markova was the ballet director for the New York Metropolitan Opera Ballet.

BIBLIOGRAPHY: IED, vol. 4, 267–71. [Giora Manor (2nd ed.)]

MARKOVITS, RODION (Jakabs, 1888–1948), author and journalist. Following capture by the Russians during World War I, Markovits later became a political commissar in the International Brigade fighting with the Red Army after the October Revolution. His Szibériai garnizon (1927; Siberian Garrison, 1929) enjoyed worldwide success in translation. Two later works were Aranyvonat (“The Golden Train,” 1929) and Reb Ancsli és más avasi zsidókról szóló széphistóriák (“Reb Anschel and Other Jewish Stories,” 1940).

MARKOWITZ, HARRY M. (1927– ), economist and Nobel Prize winner. Born in Chicago, Markowitz received his higher education, B.A. through Ph.D. (1954), at the University of Chicago. He was on the research staff of the Rand Corporation and technical director of Consolidated Analysis Centers, both in Santa Monica, California. After serving as a professor at UCLA (1968–69), he moved to New York where he was president of the Arbitrage Management Company (1969–72), worked as a private consultant (1972–74), and was a member of the research staff of T.J. Watson Research Center of IBM (1974–83). From 1982 he was been the Speiser Professor of Finance at Baruch College of City University of New York. From 1990 he was research director at Diawa Securities Trust.

In 1990 he shared the Nobel Prize in economics with William Sharpe of Stanford University and Merton Miller of the University of Chicago “for their pioneering work in the theory of financial economics.” For Markowitz, the Nobel award was in honor of his theory, first defined in the 1950s, of “portfolio choices,” which showed that investors would do best if they built up a diversified investment portfolio. His theory sought to prove that a portfolio that mixes assets in order to minimize risk and maximize return could be practical. His techniques for measuring risk associated with various assets, and his techniques for mixing assets, became standard investment methods. His work on portfolio theory paved the way for financial microanalysis to become an accepted area of research in economic analysis.

Markowitz also developed Simscript, a computer language that is used to write economic-analysis programs.

MARKS, HARRY HANANEL (1855–1916), British journalist and politician. Born in London, Marks was a son of David Woolf Marks (1811–1909), a prominent Reform rabbi. He took up journalism in the U.S. and worked five years on the New York World and Daily Mining News. Returning to England in 1883, he established and edited Financial News and wrote a book, Small Change, or Lights and Shades of New York (1882). In 1889–98 he was a member of London County Council and was elected a Conservative member of Parliament in 1895–1900 and 1904–09. Marks was a bitter anti-Zionist. In 1879, however, he wrote a satirical work denouncing antisemitism, Down With the Jews! A Meeting of the Society for Suppressing the Jewish Race.

MARKS, HAYMAN (1772–1825), early U.S. merchant and Mason. Marks, whose place of birth is unknown, was among
the early Jewish settlers of Richmond, Virginia. Mention of him is found in several documents involving litigation. A well-known citizen of Richmond, he was one of the signers of a petition to the Virginia legislature asking for the incorporation of a bank there. Marks later moved to Philadelphia, where he became active in Congregation Mikveh Israel, ultimately becoming its president (1815–18). Marks was known to be a member of the Masonic fraternities of both Richmond and Philadelphia. His wife was Grace Judah, of the New York "Judah family.

MARKS, MARCUS M. (1858–1934), U.S. clothing manufacturer, civic official, and philanthropist. Marks was born in Schenectady, N.Y., and joined his father’s clothing manufacturing firm, M. Marks and Son, which he later headed (1890–1913). From 1913 to 1917 Marks served as Manhattan borough president under the reforming mayor John P. Mitchell, establishing open public markets, welfare work, and joint trial boards for civil service employees. He was active in a variety of public causes. He was president of the National Daylight Association in 1917. As president of the National Association of Clothiers, he promoted the idea of cooperation among merchants, particularly in labor relations. As a member of Theodore Roosevelt’s Nobel Prize Committee on Industrial Peace, Marks mediated many labor disputes. He was a founder and leader of several peace groups, of the Educational Alliance, of the Hospital Saturday and Sunday Association, and of the Tuberculosis Preventorium for children. An advocate of university exchange study between the U.S. and Europe, he served as chairman of the selection committee of the Institute of International Education.

MARKS, SAMUEL (1845–1920), South African industrialist and financier. Marks, who was born in Neustadt-Suargind, Lithuania, emigrated to the Cape in 1868. With the Lewis brothers, he founded the firm of Lewis and Marks, which eventually controlled large industrial and mining undertakings in the Transvaal. The partners began as traveling traders ("tochers"). When diamonds were discovered they moved to Kimberley, where they opened the first general store in a prefabricated wooden building brought from the Cape by wagon. Lewis and Marks established themselves in the Transvaal in the 1880s, first on the Barberton gold workings and later on the Rand and in Pretoria. Marks, who was popularly known as Sammy, was noted for his salty humor and his fondness for biblical quotations. He understood the Boer outlook, particularly that of his friend President Kruger. He assisted the Transvaal government financially, obtained industrial concessions, and acquired land on the Vaal River on which he founded the town of Vereeniging. He developed rich coal deposits in the area, established fruit farms, and planted extensive forests. He also started the manufacture of bricks, glass, and leather goods and pioneered the steel industry. In 1897 Marks accompanied a deputation to Kruger asking, with indifferent results, for the repeal of laws which placed disabilities upon Jews in common with other non-Protestants and uitlanders ("foreigners"). In the conflict between the Boers and the British he commanded the respect of leaders on both sides and was a mediator in the negotiations which ended the South African War in 1902. He served as a senator in the first Union Parliament in 1910. Marks donated £10,000 for the statue of President Kruger which now stands in the center of Pretoria. In 1896 he helped endow the first chair in Hebrew studies at the South African College, later the University of Cape Town, and in 1905 founded a Hebrew school in Pretoria.

MARKS, SIMON, BARON (1888–1964), British businessman, philanthropist, and Zionist. Born in Leeds, Simon Marks was the son of Michael Marks, who emigrated in 1882 from Russia to the U.K. where he began as a peddler. In 1884 he opened a market stall in Leeds and later a number of Penny Bazaars in the Midlands. They grew into the great multiple-store chain of Marks & Spencer Ltd. Simon Marks was elected chairman of the board in 1917 and from then on, until he died at his office desk, steered the firm to phenomenal commercial and financial success. His close business associate was Israel Moses (later Lord) *Sieff; they had married each other’s sisters. The high quality of their goods and business probity set a tradition in British retail merchandising. Indeed it was said that they were largely responsible for a quiet revolution in British life by raising living standards through making high quality goods available at popular prices. "Marks and Sparks" remains probably the best-known and most famous of all British high street retail chains, although its founding families largely severed their direct connection with the firm in the 1980s.

From their mid-20s Marks and Sieff were loyal and devoted supporters of Chaim *Weizmann in his Zionist activities originally in Manchester and later in London, and were joined by other members of their families. In 1919 Marks went as secretary of the Zionist delegation to the Versailles Peace Conference. Later he became chairman of the Keren Hayesod Committee, vice president of the Zionist Federation and in 1950 was elected a member of the Zionist Executive. He was president of the Joint Palestine Appeal at his death. Marks participated with Weizmann and the Zionist leadership in political negotiations with successive British governments and in other Zionist efforts until the State of Israel was established. He and Lord Sieff were leading contributors to the Daniel Sieff Research Institute (1934) and later in the Weizmann Institute of Science (1949) both at Rehovot, Israel. Their personal and family trust benefactions to public causes in Britain and Israel totaled tens of millions of pounds over six decades. The Marks and Sieff families were reputed to have been the greatest donors to Zionist causes in the Diaspora.

Marks rendered distinguished public service in the period between and during both world wars. He helped to found...
the Air Defense Cadet Corps in Britain in 1938 and headed wartime production coordination in the London and southeast England area. He was also an adviser to the Ministry of Petroleum Warfare and one of the first directors of British Overseas Airways. In 1944 he received a knighthood and 1961 was created a baron.

[Julian Louis Meltzer (2nd ed.)]

**MARKSON, AARON DAVID** (1882–1932), Hebrew author and educator. Born in Lithuania, Markson went to the United States in 1904, and taught Hebrew in New York and other cities. He contributed essays and stories to Hebrew periodicals, edited a miscellany Mi-Keren Zavit (1921), and translated Mark Twain's *The Prince and the Pauper* (1923). His writings were posthumously collected in Kitvei A.D. Markson (1938), which also contains autobiographical material, a brief memoir by his daughter, and evaluations of his work by several authors.

**MARKUS, LUDWIG** (1798–1843), historian. Born and educated in Dessau, Germany, he studied medicine at the University of Berlin, but abandoned it to take up philosophy and astronomy. In 1825 he moved to Paris, and from 1830 until 1838 he taught German at the Royal College at Dijon.

Markus was an active member of the Society for Jewish Culture and Science in Berlin, and one of his lifelong passions was the study of the Falashas (*Beta Israel*) of Abyssinia. This earned him Heinrich "Heine's sobriquet, "King of Abyssinia." He wrote *Histoire des Wandales* (1836) in which he traced the rise and collapse of the Vandal empire in Africa, and in 1842, published *Géographie ancienne des états Barbaresques.* Suffering from recurrent fits of depression, especially after the death of his mother, he moved back to Paris 1838 and died there penniless in an insane asylum. Baroness de Rothschild paid for the funeral, and Heine wrote an obituary.

**MARLÉ, ARNOLD** (1889–1970), German actor. Born in Prague, Marlé trained in Munich and was active as an actor and director in Munich and Hamburg. In 1933 he left Germany for Czechoslovakia, working at the German Theater in Prague from 1934 to 1937. In the 1930s, he accompanied Leopold Jessner's group to Holland and London. In 1939 he immigrated to London. He began appearing in English-language films in 1942 and later also played in television series and on the British and American stages. His wife, Lilli Freud-Marlé, whom he married in 1917, was a niece of Sigmund *Freud, and became known as a reciter of poetry in various European cities.

[David Rees (2nd ed.)]

**MARLI, SAMUEL (Raphael) BEN MAZLI’AH** (d. 1617), Italian rabbi and author. One of the outstanding scholars of Italy, Samuel, like his father, served in a variety of offices in the Mantua community and was in charge until his death of collecting funds for Ereẓ Israel. In 1587 he was appointed rabbi of the community and was apparently also the head of a yeshiva. According to S.D. Luzzatto, his name means “of Arles.” During the time Marli was rabbi, the Jews of Mantua were confined to a ghetto prepared for them at their own cost, and Marli was one of the members of the committee which dealt with matters affecting the ghetto. His signature is found on many of the community's documents and regulations. He was highly praised by the scholars of his time, and although he published no works, a few of his responsa and letters have been published in the works of his contemporaries and preserved in manuscript. Some of his *piyyutim* were published in the *Ayelet ha-Shahar* and in the *Siddur mi-Berakah* of Italian rite (Mantua, 1653), as well as later in Schirman's *Mivhar ha-Shirah ha-Ivrit be-Italyah.* Marli prepared and may have published a special essay which is still in manuscript, “to demonstrate to the nations and princes that a Jew is not permitted to curse or to act wrongly toward any man.” He is also mentioned among those who supplied Azariah dei Rossi with material for his *Me’or Einayim,* and was among the rabbis who forbade the use of the *mikveh* of Rovigo (Moses Porto in: *Palgei Mayim,* p. 55). Hananiah Eliakim Rieti composed a eulogy on his death.

**BIBLIOGRAPHY:** Ghirondi-Neppi, 337; S. Simonsohn, *Toldot ha-Yehudim be-Dukkasaḥ Mantovah,* 1 (1964), 649.

[Itzhak Alfassi]

"**MARLOWE, CHRISTOPHER** (1564–1593), English playwright. *The Jew of Malta* (c. 1590) portrays the monstrous Jew, Barabas; T.S. Eliot described the play as a savage farce. Indeed it has elements of melodrama and exaggeration which suggest that Marlowe was not completely serious in his portrayal of the Jew. Barabas is a rich merchant whose wealth is expropriated and whose house is turned into a nunnery by order of the governor of Malta. In revenge, Barabas indulges in an orgy of slaughter, poisoning his daughter Abigail, her lover, and many others. Malta being besieged by the Turks, Barabas enters upon a career of political intrigue, first betraying the island to the enemy and then plotting the destruction of the Turkish commander. But Barabas is himself betrayed and perishes in a boiling cauldron. The story represents a mingling of traditional antisemitism (in the Middle Ages the Jews were often charged with poisoning the wells) with the late 16th-century taste for the "political thriller." Barabas, a disciple of Machiavelli, practices political stratagems with a view to gaining power in the state. From this point of view his Jewishness is no more than incidental, the main interest being focused on
MARMOR, KALMAN

Zevi; 1879–1956), Yiddish scholar and activist. Born in Mishagola, near Vilna, he immigrated to Switzerland in 1899, where he studied at the universities of Freiburg and Berne, before settling in the U.S. in 1906. He joined the Po'alei Zion, co-founded the World Union of Po'alei Zion, and became the editor of its weekly, Der Yidisher Kemfer. In 1914 he joined the American Socialist Party and in 1919 the American Labor Alliance, which became the Workers Party and later the Communist Party. Marmor began his literary career in 1901 in Der Yidisher Arbeter, published by the Bund, and contributed to Yiddish periodicals in Europe and the U.S. In 1922 he joined the New York Yiddish Communist daily Morgn Frayhayt and remained a contributor until his death.

From 1933 to 1936, he lived in Kiev, working in the Institute for Jewish Studies of the Ukrainian Academy of Sciences, where he prepared editions of the works of Aaron *Lieberman, Joseph *Bovshover, and David *Edelstadt. His monograph on Lieberman, as well as the collection of Lieberman’s works which he annotated and translated into Yiddish, were lost when the Institute was liquidated by the Soviet government in 1936. As a U.S. citizen, Marmor was freed, having rescued Lieberman’s letters, which were later published in New York. The first two volumes of his edition of the works of David Edelstadt, written from an extreme party perspective, were published in Moscow in 1935. The manuscript of the third volume found its way to the YIVO Institute in New York.

In his long career Marmor was a committed Zionist, Po'alei Zion, Socialist, and Communist, an expert on the history of Yiddish and Hebrew literature, on Jewish, Arabic, and Greek philosophy, and on the history of socialist and revolutionary movements; he was a productive writer, an able researcher and collector of historical material. His publications include Der Onhoyb fun der Yidisher Literatur in Amerike (1944), Dovid Edelshtat (1950), Yosef Bovshover (1952), Yankev Gordin (1953), his autobiography, Mayn Lebins-Geshikhte (2 vols., 1959), and his 10-volume edition of the complete works of Morris Winchevsky (1927).

[Harold Harel Fisch]

MARMOREK, ALEXANDER (1865–1923), bacteriologist and Zionist leader. He was born in Mielnice, Galicia, and studied in Vienna and at the Pasteur Institute in Paris, where he became assistant and subsequently chef de travaux. Early in his studies, he discovered an antidote (antistreptococcus) against pyrexial fever. In 1903 he addressed the Paris Académie de Médecine and claimed the discovery of the toxin of the tubercle bacillus and of the antituberculosis vaccine. This discovery was hotly debated in expert circles and was finally accepted as an invariably successful cure if prescribed up to a certain stage of the disease. With this discovery, Marmorek also initiated the serum study that led to the modern treatment of typhus and diabetes. Marmorek was also an ardent Zionist. In Vienna he belonged to *Kadimah, the first students’ society to join *Herzl after the publication of Der Judenstaat. With his brothers Oscar and Isidor, he belonged to the circle of Herzl’s closest friends and was repeatedly consulted on political steps contemplated by the Zionist leader. He was elected member of the Zionist General Council at the first 11 Zionist congresses (1897–1913). After Herzl’s death Marmorek remained an adherent of Herzl’s political Zionism and, next to Max *Nordau, became the foremost spokesman of the opposition, when “practical” Zionists assumed the movement’s leadership in 1911. After World War I he strongly opposed *Weizmann’s policies and refused to participate at the 12th Zionist Congress (1921). In his articles and speeches he emphasized that the Palestine Mandate was not the fulfillment of Herzl’s idea of a Jewish state. Marmorek was chairman of the French Zionist Federation and one of the co-founders of L’Echo Sioniste, the Zionist monthly published in Paris. He founded the Jewish Popular University in Paris, chiefly for the benefit of foreign Jews who settled there. As a foreign national he was unable to remain in Paris during World War I and served as a doctor with the Allied armies in Eastern Europe.

His brother Oscar (1865–1909) was an architect and Zionist leader. Born in Skala, Galicia, he studied in Vienna and Paris. He built a great number of important buildings in Vienna and Austria and also some synagogues, in which he attempted a style based on his studies of old Jewish architecture. He attained fame through his pavilion “Venice in Vienna” at the world exhibition of 1900 in Vienna.

Oscar Marmorek joined Herzl after the publication of Der Judenstaat and was elected to the Zionist Executive at the first six Zionist congresses. He was a co-founder of Die Welt.
Herzl depicted him in *Altneuland* as Architect Steineck. He died by his own hand.

[Oskar K. Rabinowicz]

**MARMORI, HANOKH** (1948– ), Israeli graphic artist and editor. Marmori studied history and theater at the Hebrew University of Jerusalem and graphic design at the Bezalel Academy of Arts. A satirist, he began his writing career on the university newspaper, contributed to the popular television satirical program *Niku'i Rosh* (“Clearing the Head”), and co-wrote a satirical column in the political weekly *Ha-Olam ha-Zeh*. In 1980 he joined the Schocken newspaper chain, first as the founding editor of the Tel Aviv local newspaper *Ha-Ir*. In 1984 he moved to *Hadasht*, the failed Schocken attempt to launch a popular newspaper, where he was occupied in writing mostly for the newspaper’s magazine and supplements. In 1988 he was appointed deputy editor of the *Haaretz* daily newspaper, and following the death of its veteran editor Ger-shon *Schocken* in 1991 was appointed to succeed him. Deploying his graphics background, Marmori succeeded in turning a dullish newspaper into one with an attractive layout, but without losing its character as a thoughtful and stimulating maker of opinion. A daily culture and entertainment supplement and a weekly book supplement were added, together with expanded news coverage, notably in the fields of economics and sport. Notwithstanding his close ties with Amos Schocken, who succeeded his father Gershon Schocken as publisher, differences eventually arose between the two men. Disagreements within the editorial board over the Intifada beginning in 2000 found Schocken taking a more left-wing position together with some other board members while Marmori took a more centrist view. In 2004 Schocken’s plans to further enlarge the economics section of the paper into a separate entity called “The Market,” outside the editor’s direct responsibility, led Marmori to resign. He left active journalism to head the Department of Visual Communications at the Bezalel Academy of Arts. In 2004 he was awarded the Sokolow Prize for journalism.

[Yoel Cohen (2nd ed.)]

**MARMORSTEIN, ARTHUR** (1882–1946), rabbi, scholar, and teacher. Born in Miskolc, Hungary, Marmorstein was descended from a long line of Hungarian rabbis known not only for their talmudic learning but also for their familiarity with secular literature. He studied at the yeshivah of Pressburg and the rabbinic seminaries of Budapest and Berlin. After visiting libraries for some time in England, Italy, and France, transcribing manuscripts, Marmorstein served for six years as rabbi at Jannitz (Jemnice), Czechoslovakia. From 1912 until his death he taught at Jews’ College, London. Marmorstein’s scholarship embraced many subjects. His initial training at the universities was in Semitics, with special emphasis on Assyriology. He was particularly fascinated by the aggadic sections of the Talmud and by liturgy. Though Marmorstein contributed to many areas of Jewish scholarship, he is noteworthy for his studies in rabbinic theology; the subject of his two important volumes *Doctrine of Merits in Old Rabbinic Literature* (1920) and *Old Rabbinic Doctrine of God* (2 pts., 1927); both were reprinted in one volume with an introduction by R.J. Zwi Werblowski (1968). Other important essays on rabbinic theology by Marmorstein were collected and published under the title *Studies in Jewish Theology* (1950). Marmorstein’s work is characterized by painstaking detail in the collection of sources, which are important for the study of rabbinic religion.

[Alexander Tobias]

**MARMUR, DOW** (1935– ), rabbi, teacher, author. Marmur was born in Sosnowiec, Poland, an only child in a Pö'alei Zion (left) family. In 1939, the family moved to the Lwow region, escaping the German invasion. They were deported to Siberia in 1940 by Soviet authorities but, following Operation Barbarossa, released and found refuge in Uzbekistan, where they remained until their repatriation to Poland in 1946. Although largely unschooled, the young Marmur had already learned four languages.

The family moved to Gothenburg, Sweden in 1948, where Marmur not only learned Swedish but English, German, and Hebrew as well. Attracted to Liberal Judaism, he entered the Faculty of Religion at the University of Stockholm in 1956, the same year he married Fredzia Zonabend, a survivor of the Lodz ghetto. Not feeling fulfilled at university, Marmur and his wife moved to London, where he entered the Leo Baeck College. Under the tutelage of several luminaries, including Ignaz *Maybaum*, he graduated in 1962 and was already serving as rabbi of South-West Essex Reform Synagogue in Ilford. In 1969, he became rabbi of North-Western Reform Synagogue in Alyn Gardens and in 1981 moved to Toronto to become rabbi of Holy Blossom Synagogue, the largest Reform congregation in Canada. He remained at Holy Blossom until his retirement in 2000.

Marmur wrote six books, notably *Beyond Survival* (1982); *The Star of Return* (1991); and an autobiography, *Six Lives* (2004). He has wrote extensively in newspapers and journals, taught at St. Michael’s College, University of Toronto, and was a fellow of Massey College, University of Toronto. An ardent Zionist, he also served as the first chair of *ARZENU*, the international movement of Reform Zionists; president of *ARZA* Canada, the Association of Reform Zionists of America; vice president of the Canadian Zionist Federation, and as a member of the executive of the World Zionist Organization. After retirement, he became Interim executive director of the World Union for Progressive Judaism in Jerusalem.

Marmur was a champion of progressive social causes in Canada and Israel, where he remained sympathetic to the
MAROR

(Heb. מָרוֹר), the traditional “bitter herb” which the children of Israel were commanded to eat with unleavened bread and the paschal offering both in Egypt (Ex. 12:8) and “throughout their generations” (Num. 9:11). The plural, merorim, occurs in the Bible in the verse: “He hath filled me with merorim; he hath sated me with wormwood” (Lam. 3:15), referring to a bitter vegetable, parallel to wormwood (cf. Deut. 32:32). The rabbis included under merorim plants whose common features are “bitterness, possessing sap, with a grayish appearance” (Pes. 39a), meaning wild or cultivated vegetables, with leaves of a silvery-grayish-green color, that have a milk-like sap and leaves with a bitter taste. This definition can apply to a number of plants, particularly some of those belonging to the family of Compositae. Thus the Tosefta and the Talmud (ibid.) enumerate a number of such vegetables with which the duty of eating maror on the night of the seder can be fulfilled. The Mishnah enumerates five: hazeret (“lettuce”); olishin (“chicory,” see *vegetables*); tambah (according to Maimonides, “wild chicory” but impossible to identify with certainty); harhavina, a plant of the family of Umbelliferae, of which the most common is Eryngium ceticum; and maror. Some of the Compositae are called murar or marara in Arabic. In the Jerusalem Talmud maror is described as a “bitter vegetable with a silvery appearance, and possessing sap” (Pes. 25b, 29c; the same description as the Babylonian Talmud gives for all the varieties of merorim). These characteristics agree most with the plant Sonchus oleraceus, called in Arabic murar. This is a weed, widespread in gardens, fallow fields, and on the roadsides throughout Israel. Its soft leaves are at times eaten as salad by the poor, some also eating the juicy root. The plant is filled with a milk-like sap, the underside of the leaves is a bluish-grayish color, and the green plant has a bitter taste and is hardly edible. According to Pliny, “this is a healthy food, recommended as a remedy for various ailments” (Historia Naturalis 22:88–90; 26:163). The Samaritans use only the leaves of the wild lettuce Lactuca scariola for maror.

MARRAKESH, one of the former capitals of *Morocco, situated at the foot of the High Atlas Mountains. They city was founded in the latter half of the 11th century by the *Almoravid dynasty. A Jewish community was established there soon thereafter, coming from different parts of southern Morocco. Many were subsequently barred from inhabiting the city while others were persecuted by the *Almohads in the 12th century and had to disperse. A Jewish community was revived there during the course of the 13th century but Jews faced further persecution, death, and expulsion. Only under the Merinid dynasty in the latter half of the 13th and 14th centuries were Jews permitted to resettle in Marrakesh and their numbers grew in the late 15th century through the arrival of Sephardi refugees expelled from the Iberian Peninsula. Nevertheless, the main group of Marrakshi Jews originated from the Atlas Mountains. Iberian Jews (Spanish and Portuguese), however, took control of communal affairs. From 1557 onward, the Sādi dynasty concentrated all the Jews in a Jewish quarter of their own, known as the mellah. While the Jewish com-

peace movement. He was founder of the Polish-Jewish Heritage Foundation of Canada, which seeks to build bridges between Poles and Jews.

[Frank Bialystok (2nd ed.)]
munity numbered approximately 25,000 in mid-16th century; thousands perished throughout that century in epidemics. The Saliid sultans, who were descendants of the Prophet *Muhammad and originated from the Arabian Peninsula, enlisted the Jews of Marrakesh as their trade agents and entrusted to them the management of local industries. With the ascendance of the Alawite dynasty in the latter half of the 17th century, its sultans, also descendants of the Prophet, did not always display tolerance toward the Jews of Morocco. This was evidently the case with Sultan Mulay Isma'il, who in the 1670s exposed the Jews of Marrakesh to horrible atrocities.

In the 18th century Marrakesh lost its status as the central capital of Morocco in favor of *Fez. Notwithstanding, commercially and economically, the city preserved its position as a vital center for southern Morocco. There were flourishing yeshivot in Marrakesh and bustling activity by talmudic scholars belonging to the prominent Corsos and Pinto families, as well as kabbalists. The Jews under the Alawite sultans in the late 18th and throughout much of the 19th centuries played a preponderant role in the local economy and their social and political situation improved markedly. There were efforts by fanatical Muslim leaders to forcibly convert Jews to Islam, but the intervention of international Jewish organizations such as the Paris-based *Alliance Israélite Universelle (which also opened schools in Marrakesh at the beginning of the 20th century) and European consuls stationed in Morocco, foiled their efforts.

Under the leadership of Si Madani al-Glawi, the governor of Marrakesh and its environs, who belonged to the "great families" connected with the Alawite dynasty and the makhzan (Moroccan government), the Jews of southern Morocco enjoyed much influence. In 1908–09, while entrusted by the makhzan to bolster Alawite influence in the south and Marrakesh, Glawi, who then served as the sultan’s chief minister (grand vazir), bestowed on the Marrakeshi Jewish elite considerable economic and social privileges. He also lifted exorbitant taxes imposed on the Jews of Marrakesh and Taroudant in the period immediately preceding his rise to power. Glawi maintained intimate social and economic ties with the leader of the Jewish community in Marrakesh – the illustrious Joshua Corsos of the influential *Corsos family. The latter community president was perhaps the most important Moroccan Jewish leader in many centuries.

Under French colonial domination (1912–1956), in which the French protectorate collaborated with the Alawite dynasty in managing Moroccan affairs, the position of the Jews improved immeasurably. They were now exposed to modern ideas through French education, employment in private and public administration, and the liberal professions. Zionist influences penetrated the community in the interwar years like other political currents prevalent in the modern Jewish world.

Until 1920 the Jewish quarter of Marrakesh was the largest in Morocco. The 1920s and 1930s changed this. Although the Jewish population of Marrakesh was greater than in Fez or *Tangier, *Casablanca on the Atlantic coast emerged steadily as the largest and most important Jewish community through internal migrations from all parts of the country. Thus, if in 1912, 15,700 Jews dwelt in Marrakesh (compared to 7,000 in Casablanca), and 25,646 in 1936 (compared to 38,806 in Casablanca), in 1951, five years before the end of French colonial presence, the Jews of Marrakesh numbered 18,500 whereas Casablanca Jewry was 75,000 strong. The reason for the decline in the Marrakeshi Jewish population was attributed to internal migration to Casablanca and other coastal cities and to aliya under the auspices of the Jewish Agency. As in other major Moroccan cities, Jewish bodies such as the American Jewish Joint Distribution Committee, the ort vocational network, the Alliance Israélite Universelle, educational departments of Ozar ha-Torah, and the Jewish Agency extended their activities and offered vital services. These efforts either helped those Jews who stayed behind to improve their lot, or facilitated their integration into French, Canadian, and Israeli societies. In 2005, there were several dozen Jews left in Marrakesh.

[Michael M. Laskier (2nd ed.)]

MARRANO, term of opprobium used to denigrate the New Christians of Spain and Portugal. Various origins for the term have been suggested. These include the Hebrew marit ayin ("the appearance of the eye"), referring to the fact that the Marranos were ostensibly Christian but actually Judaizers; mohoram attah ("you are excommunicated"); the Aramaic-Hebrew Mar Anus ("Mr. forced convert"); the Hebrew mumar ("apostate") with the Spanish ending ano; the Arabic mura’in ("hypocrite"); and the second word of the ecclesiastical imprecation anathema maranatha. However, all such derivations are unlikely. The most probable, as clearly shown by Farinelli’s study, is from the Spanish word meaning swine, a word already in use in the early Middle Ages, though Y. Malkiel argues plausibly for a derivation from the late Arabic barrān, barrâni, meaning an outsider or stranger, and a coalescence of this word with the term marrano “pig, pork” derived from Latin verres “wild boar.” The term probably did not originally refer to the Judaizers’ reluctance to eat pork, as some scholars hold. From its earliest use, it was intended to impart the sense of loathing conveyed by the word in other languages. Although romanticized and regarded by later Jewry as a badge of honor, the term was not as widely used, especially in official circles, as it is often believed. In Latin America as a rule it is not found in official documents and there is little evidence of its unofficial use in most places.

MARRANO DIASPORA. New *Christians began to leave *Spain in the wake of the mass conversions of 1391 and *Portugal after the forced conversions in 1497. The tide of emigration ebbed and flowed, but was always stimulated by the advent of new disasters, such as the introduction of the *Inquisition into Spain in 1481 and Portugal in 1536, and the recrudescence of intense persecution of the Marranos, as in Portugal after 1630. To stem this continuing exodus, as early as the last decade of the 15th century the authorities in both countries issued decrees prohibiting the emigration of New Christians, and these were frequently renewed. Even the so-called irrevocable permission to emigrate which the New Christians purchased from Philip III in 1601, during the union of Spain and Portugal, was short-lived, being rescinded in 1610. However, these decrees were frequently evaded: Marranos regularly left the Peninsula clandestinely, or secured permission to take business trips abroad from which they never returned. There are even cases of their leaving for the ostensible purpose of making a pilgrimage to Rome. Once the authorities became aware of such stratagems they tried to intercept Marranos as they moved through Europe to places where they could practice Judaism openly, and men like Jean de la Foix in Lombardy acquired notoriety for his inhuman treatment of those who fell into his hands. There were even instances where the highest authorities in the Peninsula closed their eyes to New Christian emigration, particularly when it involved their settling in Latin *America, where their skills and enterprise were desperately needed. Furtively and openly, in trickles and in torrents, thousands of New Christians left the Iberian Peninsula during the nearly three and a half centuries of the Inquisition's power.

Not all the New Christians leaving the Peninsula were secret Jews. Many were devout Catholics and had no intention of changing their faith; others were religiously ambivalent or even apathetic. Some of these may have shared the general insecurity of all New Christians in the Peninsula; some may have feared implication in inquisitional proceedings because of the activities of their relatives or friends; some may have wished to hide their Jewish origins in foreign lands; and others may simply have been affected by new challenges and opportunities. It was people like these who evoked apologies for Judaism such as Samuel *Ussque's classic Consolaçam às tribulações de Israel (1555; Consolation for the Tribulations of Israel, 1965), intended to persuade them to return to their ancestral religion. At the same time, considerable numbers of the New Christians were Marranos, or secret Jews, and were passionately dedicated to Judaism. This was particularly true of the Portuguese New Christians. By the 16th century the term “Portuguese” was already synonymous with the word “Jew” in much of Europe, Asia, and Latin America. During the Inquisition's extended sway over the Peninsula, the emigrating Marranos could plan to travel to four different kinds of countries: Muslim lands, Protestant territories as they came into being, Catholic countries outside the jurisdiction of Spain and Portugal, and Catholic countries within the peninsular orbit.

Muslim Countries
These were the most natural places of refuge for Marranos seeking to live openly as Jews, for they were the archenemies of the Christians and Spain and Portugal were particularly hated. *Morocco had already become a haven of refuge for both Jews and Conversos at the end of the 14th century, but many more Jews and Marranos were attracted to the Ottoman *Empire at the end of the 15th century and during the 16th. Sultan Bayazid *II (Bajazet II; 1481–1512) mocked King Ferdinand for impoverishing Spain and enriching the Ottoman Empire through his expulsion of the Jews. In the 16th century numerous cities in the Ottoman Empire had Jewish settlements, among them *Cairo, *Jerusalem, *Safed, *Damascus, *Constantinople with some 50,000 Jews, and *Salonika where the population of the Marranos exceeded that of the other Jews and the non-Jews as well.

Protestant Countries
Next to the Muslim countries the Protestant lands offered the best prospects, for here too the Catholics were detested, and the Inquisition was a hated institution because it was no more tolerant of Protestant heretics than Judaizers. In places like *England and *Hamburg and other German cities, Marranos began their existence as titular Catholics and secret Jews before the Reformation. They continued in this double life long after those areas had broken with Rome, for the Protestant authorities were not eager to grant official acknowledgment to the presence of Jews in their midst. In Hamburg, destined to become one of the wealthiest and most productive Marrano centers, the settlement of Jews was not officially authorized until 1612 and Jewish public worship not until 1650. In England, where Jews had been expelled in 1290, the Marranos who settled originally in *London and *Bristol were never officially acknowledged as Jews. Spokesmen for the Marranos, both Christians and Jews, including Manasseh Ben *Israel, failed in their efforts to secure the formal recognition of Jewish resettlement. Rather than being officially granted, the resettlement was "connived at"; the question was simply ignored and Marranos were allowed to live undisturbed as Jews. Actually this connivance, or de facto resettlement through official silence, proved salutary for the Jews, since the failure to grant official permission for their presence made it impossible to impose particular disabilities on them. From the middle of the 17th century at least, the Marranos were treated like all other nonconformist citizens. In 1664 the crown granted Jews an official charter of protection, thus further facilitating the development of the Marrano community. The ex-Marranos and their descendants continued to be the dominant element in British Jewry until the 19th century.

In *Amsterdam the Marranos did not arrive until around 1590, some 11 years after the Union of Utrecht (1579) and the birth of the United Provinces of the Netherlands as a Protestant state. Here too they had to wait until 1615 before Jewish settlement was officially authorized, but the Marranos in Amsterdam differed from those in other Protestant countries in
that they openly practiced Judaism almost from the moment of their arrival. Thanks to the Marranos, Amsterdam became one of the greatest Jewish centers in the world in the 17th century; it had some of the finest academies and produced some of the greatest Jewish thinkers. Amsterdam was also a haven for oppressed Jews from other places, including France in 1615 and Eastern Europe after the Chmielnicki massacres (from 1648). Erstwhile Marranos from Holland were among the first settlers in Surinam and Curaçao, where a substantial Sephardi community came into being after 1650. Other former Marranos were also found in Barbados and in other parts of the West Indies, including Martinique and the Leeward Islands.

Other Catholic Countries
The Catholic lands outside the control of Spain and Portugal did not offer so secure a haven as the Ottoman Empire or the Protestant countries, but they had the advantage of being outside the orbit of the peninsular Inquisitions. At the same time these areas were not without their inherent dangers, in the form of envy or rooted prejudice on the part of the local population, pressures from the Spanish and Portuguese Inquisitions upon the local authorities, and even the possibility of persecution galvanized by local initiative, and, in the case of the Papal States, an indigenous Inquisition. As a result, the existence of many of these Marrano communities, even if unclouded and prosperous for a time, was seldom free from molestation.

In the Papal States the Marranos’ presence was noticeable in places like Rome and even more so the seaport of Ancona, where they thrived under benevolent popes like Clement VII (1523–34), Paul III (1534–49), and Julius III (1550–55). They even received a guarantee that if accused of apostasy they would be subject only to papal authority. But Paul IV (1555–59), the voice of the Counter-Reformation, dealt them an irreparable blow when he withdrew all protection previously given the Marranos and initiated a fierce persecution against them. As a result of the anti-Marrano campaign, 25 Judaizers were burned alive in the spring of 1556; 26 others were condemned to the galleys, and 30 more who had been arrested were liberated only after they had paid a substantial bribe. Thanks to the intervention of the Marrano patroness, Gracia Mendes Nasi, the sultan at Constantinople secured the release of all Marranos who were his subjects. Plans were laid to boycott Ancona and transfer all the Marranos’ former business to neighboring Pesaro, in the friendlier territory of the duke of Urbino, but the project failed, and the duke even expelled the Marranos from his territory. A document of 1550 indicates that there were some Marranos among the Spanish and Portuguese merchants in Florence who traded on a large scale with Spain and her colonies. In Ferrara, under the house of Este, the Marranos formed a large and thriving community by the middle of the 16th century, one of the most notable in their entire Diaspora. The dukes protected them until 1581, when Duke Alfonso I, bowing to ecclesiastical pressure, allowed many of them to be arrested. Three were eventually sent to Rome to be burned at the stake in February 1583. Marranos settled in Venice in the 15th and early 16th centuries but were subjected to decrees of expulsion in 1497 and again in 1530. Thereafter the city policy began to change. Venice not only welcomed Marranos but kept the Inquisition at bay. Theologians like Paolo Sarpi even claimed that the Judaizers were outside the jurisdiction of the Inquisition because they had been baptized by force. Equally fortunate was the situation in the grand duchy of Tuscany. In an attempt to woo the Marranos to Pisa and Leghorn, Ferdinand II issued a charter in 1593 granting them protection against harassment in matters of faith. As it was in decline at the time, Pisa did not attract many Marranos, but Leghorn did: the community there thrived and by the end of the 18th century its population approached 5,000. Emmanuel Philbert granted a special privilege to induce Jews to settle in the duchy of Savoy, intending mainly to settle Marranos from Spain and Portugal in Nice in order to develop the city into a central trading port with the East. The privilege enraged Philip II of Spain, who considered the whole plan as seriously damaging Spain’s interests in the Mediterranean as well as an incitement to Marranos to return to Judaism. The joint pressure of Spain and the Holy See led to the rescinding of the privilege and on Nov. 22, 1573 the duke ordered a group of Marranos who had returned to Judaism to leave his territory within six months. This decree was probably not put into effect until 1581 when Charles Emmanuel I ordered the expulsion of all Portuguese Jews from the duchy.

In France the Marranos had to maintain some semblance of Catholicism for more than two centuries, but they were seldom molested in their secret practice of Judaism. Though they were called “New Christians” or “Portuguese merchants,” their Jewishness was an open secret. In the large settlements they lived in their own quarters, had their own burial grounds, developed their own schools and communal institutions, and even trained their own rabbis after first importing them from abroad. In the course of time they gradually reduced their Catholic practices and eventually abandoned Church marriage and even baptism. In 1730 they were officially recognized as Jews. Their more formal communities were situated at Bordeaux and Bayonne and there were numerous lesser settlements in such places as Toulouse, Lyons, Montpellier, La Rochelle, Nantes, and Rouen. Bayonne was the center of a cluster of communities, including Biarritz, Bidache, Peyrehorade, and Saint-Jean-de-Luz. In this last town the Marranos had the misfortune of being expelled in 1619, and then, after a partial return, seeing the town captured by the Spaniards in 1636.

Other Territories
But in the far-flung Spanish and Portuguese possessions, in the Aragonese territories of Sicily, Sardinia and Naples, in Hapsburg territories like Flanders, or the colonial territories in the Far East or in the Americas, the situation of the Marranos was always precarious. There they lived continually under the shadow of the Inquisition; even where a tribunal of the
Holy Office was not in operation, there were episcopal Inquisitions and occasional inquisitional “visitors” sent from the home countries to galvanize the search for heretics. Sicily and Sardinia, with Inquisitions introduced in 1487 and 1493 respectively, were practically free of Jews by the middle of the 16th century. There was opposition to introducing the Spanish Inquisition into Naples, but the papal Inquisition took over and managed to destroy most of the Marrano community by the middle of the 17th century. The situation of the Marranos was no less precarious in ‘Antwerp, where they began to arrive early in the 16th century, frequently to begin a trek across Europe to the Ottoman Empire. In 1526 New Christians’ stay in the city was restricted to a 30-day period and though settlement was fully authorized 11 years later, Judaizing was strictly prohibited. With the decline of Antwerp, the center of Marrano life in the Low Countries shifted to Amsterdam.

In their colonies the Portuguese set up an Inquisition at *Goa and the Spaniards established one in the *Philippines. Episcopal Inquisitions were always present in Latin America: *Brazil never had a formal tribunal, but tribunals were established in the Spanish colonies at Lima (*Peru, 1570), Mexico City (1571), and Cartagena (1610). Latin America in particular attracted considerable numbers of New Christians. The advantage of these territories was that they offered the New Christians a familiar culture and the possibility of direct contact with the mother countries. For New Christians wishing to live fully as Catholics, the distances from the Peninsula and the sparseness of the population of most of the territories aided in the obliteration of the record of their Jewish origins. On the other hand, these factors also facilitated the Marranos’ practice of Judaism.

**Activities of the Marranos**

Religious considerations were important in determining the direction of the flight of many of the Marranos, but they were not the only ones. Of great and sometimes decisive importance were the economic and social opportunities available in the various lands open to them at the time of their escape. These opportunities often made it more desirable for Marranos to continue living as secret Jews in Catholic lands (even under Spanish and Portuguese domination) than to seek a refuge where they could practice Judaism openly. Conversely, in each of the territories where the Marranos – or for that matter all New Christians – appeared, they were allowed to enter and remain because they served definite economic, social, and political ends. In almost every one of their new homes they quickly rose to prominence in international and domestic trade, and banking and finance. They helped to establish great national banks and were prominent on the stock exchanges. They played an important role in large trading companies, such as the Dutch East Indies and West Indies Companies, and even in the rival company established at Portugal to helpoust the Dutch from Brazil. As well as insurance companies, they established manufacturing plants for soap, drugs, and other items, and made signal contributions in minting, handicrafts, armaments, and shipbuilding. In the area of international trade they assumed virtual dominance and controlled, frequently to the point of monopoly, the traffic in such commodities as coral, sugar, tobacco, and precious stones. The Marranos’ common background and culture, their presence in the leading commercial centers, and often their ties of kinship, enabled them to establish an efficient and closely knit international trading organization. Great banking and trading families, like that founded by Francisco Mendes at Lisbon, had branches throughout Europe. The Marranos’ international connections served to stimulate communications between nations and their separate competitive development. In this way the activities of the New Christians fostered the stability of their countries of settlement and facilitated their transition from a medieval to a modern economy. The Marranos also attained prominence in the professional life of the lands of their dispersion. From their midst came great diplomats like João Miguel, the duke of Naxos (Joseph *Nasi), and his mother-in-law, Gracia Mendes Nasi (Beatriz de Luna), who also distinguished herself as a great philanthropist and patron of the Jewish arts, as well as the equally colorful Diego Texeira de Sampao (Abraham Senior *Texeira). The Marranos produced scientists like Immanuel Bocarro Frances, distinguished physicians like Amatus *Lusitanus (Juan Rodrigo), Elijah Montalto (Felipo Rodrigues), and Antonio Ribeiro Sanchez, and a host of other distinguished names in secular literature, theater, and music.

Reciprocally, many of the states and nations in their Diaspora gave the Marranos an opportunity to develop their own institutions and culture. The printing press became a foremost instrument in the development of this culture. Ferrara’s press, which published the famous translation of the Bible into Spanish and Samuel Usque’s *Consolaçam as tribulaçoens de Israel in Portuguese in addition to liturgical and other works, was the center of Marrano culture in the middle of the 16th century. By the end of the 16th century, Venice had the leading press and in the next century it was situated in Amsterdam. Other cities, too, like Leghorn, Hamburg, and London, had important presses, and printing in numerous smaller places helped to spread further Jewish culture. Especially noteworthy is the extensive literature published by these presses. Including prayerbooks and sermons, books of precepts and customs, translations into Spanish and Portuguese of classics in Jewish philosophy and thought, apologetical works and polemics, and also novels, poetry, and plays, it was particularly directed toward the Marranos who had left the Iberian peninsula and sought to find themselves in Judaism, although still assailed by doubts.

Marrano writers of note are far too numerous to mention them all. Among the more important ones were such men as the apologists Immanuel *Aboab, Saul Levi *Morteira, Lorenzo *Escudero (Abraham Ger or Abraham Israel Peregrino), Isaac *Cardozo, Isaac Orobio de *Castro, and David *Nieto; poets like David Abenatar *Melo, Daniel Lopez *Laguna, Solomon Usque, João (Moses) Pinto *Delgado, and Daniel Levi (Miguel) de *Barrios; playwrights like Antonio Enriquez *Go-
mez and Antonio Jose da *Silva; and versatile writers like the prolific Joseph Penso de la *Vega, writer of plays, short stories, and one of the earliest and most comprehensive treatises on the stock exchange. Many Marranos also attained fame outside the Jewish fold. The aristocracy of many societies in Europe and the Americas was enriched by these people and their descendants. Frequently, like Benjamin *Disraeli, they attained the highest diplomatic, military, and administrative positions. Like their Jewish counterparts, they also made a name for themselves in the business and cultural world.

An authentic Marrano community was discovered by Samuel *Schwartz in Portugal in 1917; and from time to time there emerge individuals or even groups whose faith is not Jewish who have retained some of the practices and customs of the Marranos, at times even without awareness of their Jewish ancestry.

**MARRE, SIR ALAN** (1914–1990), British civil servant. Alan Marre, the son of Joseph Moshinsky, a tobacconist in London’s East End, won a scholarship to Cambridge and entered the British civil service in 1936. Marre rose in the administrative civil service to become second permanent under-secretary in the Home Office Department when, in 1971, he was appointed Britain’s second ombudsman (officially, the parliamentary commissioner for administration), holding the post until 1976. As ombudsman, Marre investigated complaints of maladministration by government departments, an unusually sensitive post. In addition, in 1973–76 he was also the first health service commissioner, performing a similar role for the British health service. Marre also headed a number of other well-known investigations, especially the government inquiry into the welfare of children affected by thalidomide who had not benefited from previous financial settlements. He was knighted in 1970.

**THE CONCEPT**

In Jewish teaching, marriage is the ideal human state and is considered a basic social institution established by God at the time of creation.

**In the Bible**

The purposes of marriage in the Bible are companionship and procreation: “It is not good that the man should be alone; I will make him a help-mate for him … Therefore shall a man leave his father and his mother, and shall cleave unto his wife, and they shall be one flesh” (Gen. 2:18, 24); and “Be fruitful, and multiply, and replenish the earth …” (Gen. 1:28). The biblical conception of marriage is essentially monogamous (Gen. 2:24), and although in biblical times polygamy was common among the upper classes (Judg. 8:30; 11 Sam. 5:13; 1 Kings 11:1–8), the many references to marriage in the *Wisdom literature seem to take it for granted that a man had only one wife (Ps. 128; Prov. 12:4; 18:22; 19:14; 31:10–31; Ecclus. 25:1; 26). The prophets using marriage as a metaphor for God’s attachment to Israel (Isa. 61:10; 62:5; Ezek. 16; Hos. 2:21–22; also Song of Songs, if interpreted metaphorically) clearly have monogamous marriage in mind, since God did not enter into such a special relationship with any other people.

Marriages were usually arranged by parents (Gen. 21:21; 24:8; 28:2), but the bride’s consent was asked on occasion (Gen. 24:5, 58), and romantic unions were not uncommon (Gen. 29:20; Judg. 14; 1 Sam. 18:20; 11 Sam. 11:2–4; 1 Kings 217; 11 Chron. 11:21). It was usual to marry within the clan (Gen. 24:4; 28:2; 29:19), and in a leviratic situation (*levirate marriage) this was obligatory (Gen. 38:9; Deut. 25:5; Ruth 3:12–13). Certain marriages, involving close relatives (Lev. 18; 20; Deut.
priests, widows, and divorced women (Lev. 21:7; Deut. 24:4), are forbidden. While marriages outside the clan occurred, they were strongly opposed both as a measure against idolatry (Ex. 34:15–16; Deut. 7:3–4; 28:4), and to preserve Jewish distinctiveness (Ezra 9:12; 10:17; Neh. 10:31; 13:23–28). Fruitfulness in marriage is a great blessing and childlessness a tragedy and disgrace (Gen. 8:17; 9:1, 7; 13:16; 17–18; 22:17; 30:1–23; Ps. 127:3–5; 128). Marriage is the means to true companionship: “Whoso findeth a wife findeth a great good” (Prov. 18:22; cf. 12:4; 14:1; 19:14; 31:10–31). “live joyfully with thy wife whom thou lovest” (Eccles. 9:9). But where marital harmony no longer prevails (particularly in the case of the wife’s *adultery*), the marriage can be dissolved by divorce (Deut. 24:1–4), though Malachi (2:14–16) warns that God deplores the resort to divorce.

### In Sectarian Teaching

The Essenes in general rejected worldly pleasures, including marriage, and practiced continence (Jos., Wars, 2:120). The Covenanters of Qumran did not appear to have been strictly celibate as once was thought. It is clear that some members married and had children (Zadokite Document, 20:7–8; 13:20; Damascus Document, 47). The Order of the Community ruled that a young man should not have intercourse before 20 years of age (1:4–11). Archaeologists have found the remains of a few women and children at Qumran but it is not clear to what extent this indicates marriage. The New Testament has a negative attitude to the sexual impulse and regards celibacy as a higher ideal than marriage (Matt. 19:10; 1 Cor. 7). Marriage is a concession to human weakness (1 Cor. 7), but once entered into, it is a sacrament dissolved only by death (Matt. 19:16; Mark 10:9); though some hold that Jesus allowed divorce in cases of adultery (Matt. 5:31–32; 19:9; Mark 10:12; Luke 16:18).

### In Rabbinic Literature

In contrast, rabbinic teaching sees celibacy as unnatural. It is not he who marries who sins; the sinner is the unmarried man who “spends all his days in sinful thoughts” (Kid. 29b). Marriage is not only for companionship and procreation; it also fulfills one as a person: “He who has no wife is not a proper man” (Yev. 63a); he lives “without joy, blessing, goodness … Torah, protection … and peace” (Yev. 62b); he may not officiate as high priest on the Day of Atonement (Yoma 1:1), and probably not as *sheli‘ah zibbur* on the High Holy Days (Isserles to Sh. Ar., OH 58:1, based on Yoma 1:1 and Yev. 37b). Sexual desire is not evil or shameful. When regulated and controlled in marriage, it serves beneficial ends: “Were it not for the yezer ha-ra (“evil inclination” here sexual urge), no man would build a house, marry a wife, or beget children” (Gen. R. 9:7). He who, by denying his legitimate instincts, fails to produce children “is as if he shed blood, diminished the Image of God, and made the Shekhinah depart from Israel” (Sh. Ar., EH 1:1, based on Yev. 63b–64a), and he will have to account for his actions in the world to come (Shab. 31a). Marriage is so important that a man may sell a Torah scroll in order to marry (Meg. 27a) and a woman will tolerate an unhappy marriage rather than remain alone (Yev. 113a; Kid 7a). One should never approach marriage lightly. To make a successful match is as hard as the parting of the Red Sea (Sot. 2a, et al.), and it requires the infinite wisdom of God himself (Gen. R. 68:3). Hence, although in one view a person’s marriage is predestined (Sot. 2a), the individual must choose wisely: “Hasten to buy land; deliberate before taking a wife” (Yev. 63a). Marriage should not be for money (Kid. 70a), but a man should seek a wife who is mild-tempered, tactful, modest, and industrious (Sot. 3b), and who meets other criteria: respectability of family (Ta’an. 4:8; BB 109b), similarity of social background (Kid. 49a) and of age (Yev. 44a; Sanh. 76a–b), beauty (Ber. 57b; Yoma 74b), and a scholarly father (Pes. 49b). A man should not betroth a woman until he has seen her (Kid. 41a). Early marriage is preferred: “18 for marriage” (Avot 5:21). If one is not married by 20, God curses him (Kid. 29b–30a). Only a person intensively occupied in Torah study, e.g., “Ben Azzai, may postpone marriage (Yev. 63b; cf. Ket. 63a; Sot. 4b); though in Babylon it was suggested that one should first marry and then study (Kid. 29b). A practical order of procedure, derived from Deuteronomy (20:5–7), states; “First build a house, then plant a vineyard, and after that marry” (Sot. 44a). As far as a girl is concerned, if her father does not find her a husband while she is young (from the age of 12), she may become unchaste and he will have transgressed the commandment in Leviticus 19:29: “Profane not thy daughter to make her a harlot” (Sanh. 76a).

Polygamy, while theoretically still possible, was discouraged, and was almost unknown among talmudic rabbis. Marriage is not a sacrament in the Christian sense, since its dissolution through divorce, though regrettable, was possible. It is *kiddushin*, a sacred relationship (analogous to *hekdesh*), whereby the wife is consecrated to her husband and forbidden to all others during the duration of the marriage (Kid. 2a–b). At the same time, it is not a mere legal contract devoid of spiritual content. Thus, while the husband acquires rights over his wife’s ishut (“wifehood”), though not over her person, and he undertakes duties toward her, e.g., supplying her with food and clothing, and adhering to the conjugal rights (Ex. 21:10), both parties must seek to raise their marriage to the highest level by means of mutual consideration and respect. The husband must deny himself in order to provide for his wife and children (Hul. 84b). He must not cause his wife to weep (BM 59a). If he loves her as himself and honors her more than himself, he will merit the blessing in Job (5:24) “And thou shalt know that thy tent is in peace” (Yev. 62b). If husband and wife are worthy, God will dwell with them; otherwise, there will be a consuming fire between them (Sot. 17a; Pārē 12). The rabbis, like the prophets, use marriage to symbolize other perfect relationships: e.g., God and Israel, Israel and the Torah, and Israel and the Sabbath.

### In Medieval and Modern Times

The positive attitude of the rabbis to marriage was maintained in post-talmudic literature and Jewish practice. Asceticism and
celibacy continued to be rare. Polygamy was finally prohibited among Ashkenazi Jews by a ban attributed to R. "Gershom b. Judah (see "Bigamy; "Monogamy). Early marriage became general practice. Divorce, though relatively easy to obtain, was not common, partly due to the social pressures of the closed Jewish society since the family was firmly established as the basis of Jewish life (see I. Abrahams, *Jewish Life in the Middle Ages* (1932)), 99ff.). With the cultural changes which followed the emancipation, the Jewish marriage rate tended to be lower than the non-Jewish one, divorce and mixed marriage increased, early marriage was uncommon, and the urban Jewish birth rate fell (see A. Ruppin, *The Jews in the Modern World* (1934), 277ff.; J. Freid (ed.), *Jews and Divorce* (1968)). These trends intensified after World War II as environmental attitudes were increasingly being reflected among Western Jewry. Marital stability has been relatively less and traditional moral codes have been questioned. To counteract these tendencies, Jewish communities are promoting marriage education and guidance, largely through rabbis and social welfare agencies. [Raymond Apple]

### MARRIAGE CEREMONY

#### In the Bible

There is hardly any data about the marriage ceremony in the Bible. The act of marriage is called simply “taking” (“when a man taketh a wife,” Deut. 24:1; “and there went a man of the house of Levi, and he took a daughter of Levi,” Ex. 2:21). However, from the story of Jacob and Leah it is obvious that some sort of celebration took place: “And Laban gathered all the people of the place and made a feast” (Gen. 29:22) and later, when Jacob complained that he had been cheated and demanded Rachel, the daughter for whom he had worked, he was told: “Wait until the bridal week of this one is over and we will give you that one too” (Gen. 29:27). No details are recorded as to the nature of the feast or the bridal week. The same is true in the case of Samson (Judg. 14:12) except that there it is said that the groom posed a riddle to his companions and gave them the seven days of the feast to solve it. It appears that processions for both the bride and groom were a central part of the celebrations and were accompanied by music (Ps. 78:63; I Macc. 9:39) and there is ample reference to special marriage attire and adornment. From Deuteronomy 22:15 it seems that the exhibition of evidence of the bride’s virginity (the blood-stained sheet) was part of the ceremony. It is reasonable to presume that even in the earliest times the act of marriage must have been accompanied by some ceremony; the biblical authors, however, give no direct description of it and usually refer to it only in passing or as a figure in their imagery.

#### In the Talmud

In the talmudic period – and presumably for a considerable time before then – the marriage ceremony was in two parts. The first, called *kiddushin or erusin* (betrothal; but see below, Legal Aspects, for the difference between this concept and what is commonly called betrothal), was effected by the bridegroom handing over in the presence of two witnesses any object of value (more than a *perutah*) to the bride and reciting the marriage formula, “Behold, you are consecrated unto me with this ring according to the law of Moses and Israel.” On this occasion two benedictions were recited, one over wine and the other for the actual act. The second reads: “Blessed art Thou, O Lord our God, King of the universe, who has hallowed us by Thy commandments, and hast given us command concerning forbidden marriages; who hast disallowed unto us those that are betrothed (to us – variant in some rites), but hast sanctioned unto us such as are wedded to us by the rite of the nuptial canopy and the sacred covenant of wedlock. Blessed art Thou, O Lord, who hallowest Thy people Israel by the rite of the nuptial canopy and the sacred covenant of wedlock” (Hertz, *Prayer*, 1011). This benediction is already recorded in the Talmud (Ket. 7b), and since cohabitation of the bride and groom was forbidden until the second ceremony, the *nisu’in* (see below, and Legal Aspects), which in the case of a virgin usually took place a year later, it appears that the benediction was in fact a warning to the betrothed couple not to cohabit until that ceremony.

The second part of the ceremony took place at a later date and was called *nisu’in* (marriage proper). It was also called *huppah* (see below) after either the groom’s house to which the bride was led or the canopy, symbolic of that house, under which the ceremony took place. Originally *nisu’in* was effected by the bride entering the groom’s house and cohabiting with him. On the occasion of the *nisu’in* a series of benedictions was recited (see below). After this stage the couple were completely married and liable to all the responsibilities and privileges of that state (see also below, Legal Aspects).

There is ample evidence in the Talmud that the wedding ceremony was accompanied by great rejoicing and some times even hilarity. The question of how one should dance before the bride was discussed and even occasioned a difference of opinion between the schools of Hillel and Shammai (Ket. 16b–17a). Although Rashi interprets the phrase "*keizad merakdim*" used there as meaning "what does one say" in order to fit the continuation of the text, the phrase must be understood in its literal sense “how does one dance.” Judah b. Ilai is recorded as having danced before the bride with a myrtle branch and Samuel b. Rav Isaac was rebuked by his colleagues for having performed what seems to have been a juggling dance. The Talmud, however, justified his behavior entirely. Rav Aha went so far as to dance with the bride on his shoulders, something which astonished the other rabbis (Ket. 17a). Indeed the custom of shattering a glass at the marriage ceremony (see below) stems, according to the medieval commentators, from Mar berei de-Ravina and Rav Ashi who deliberately smashed expensive glassware at their sons’ weddings in order to reduce the unseemly hilarity of the rabbis who were present (Ber. 31a). Until the destruction of the Temple both the bride and groom wore distinctive headdresses, sometimes of gold (Sot. 9:14, 49a; Git. 7a; for details see "Crowns, Decorative Head-
dresses, and Wreaths). For the marriage of a virgin (as opposed to a widow or divorcée) special rites took place. She went out in a hinnumah (variously interpreted as a bridal veil or a special bridal litter used in the marriage procession); dried corn was distributed to the children (Ket. 2:1); games were played before the bride; a goblet of tithe wine was passed before her; according to some, a sealed (opened for a widow or divorcée) barrel of wine was used instead (Ket. 16b). The performance of all these ceremonies was sufficient evidence that the bride had been a virgin and was thus entitled to the larger ketubbah (see *Virgin). The bridal procession took precedence over a funeral procession and King Agrippa was praised by the rabbis for giving right of way to a bridal procession although his, being the royal procession, had precedence. At Tur Malka the disturbances which destroyed the town were started, according to talmudic legend, when Roman legionnaires took the hen and rooster which led a marriage procession as a fertility symbol (Git. 57a). Participation at the marriage ceremony and celebrations was considered a mitzvah and he who entertained the bride and groom was compared to one who had sacrificed a thanksgiving offering (Ber. 6b). The groom was required to devote at least three days to the preparation of the wedding feast and even if a parent of the bride or groom died on the set day of the marriage its consummation took place and the funeral was held afterward (Ket. 3a). The wedding of a virgin originally took place on a Wednesday (Ket. 1:1). This is explained in the Babylonian Talmud by the fact that the court sat on Thursdays and thus if the groom claimed that the bride had not been a virgin he could immediately complain to the court. However, it does appear that superstition was involved and that Wednesday was considered an auspicious day (cf. 71, Ket. 1:1). A widow was married on Thursday so that her husband should devote at least three days to her without going back to his work. However, even in talmudic times the requirement that weddings be held on specific days fell into disuse for which a variety of reasons is given. It seems that in talmudic times the exhibition of the stained bridal sheet was discouraged. Originally the shushbinim (“friends,” i.e., groomsmen) were appointed to ensure that no trickery was employed by either side (Tosef., Ket. 1:4 and Ket. 12a). For a virgin seven festive days were celebrated which, for the bride and groom, had something of the status of a religious holiday. The marriage benedictions were recited at meals (for details see below) and neither bride nor groom was allowed to mourn.

Post-Talmudic Period
The most important development in the marriage ceremony was the joining of the two parts, erusim and nissuin, into one ceremony performed at one time. This took place during the Middle Ages and was presumably because of the uncertain and perilous conditions in which the Jews lived. It was also exceedingly inconvenient to have an interval between the two ceremonies since on the one hand the parties were prohibited from cohabiting while on the other all the stringencies of the married status applied to them. Thus from the beginning of the 12th century it became customary to perform both ceremonies together, a practice which has been universally followed except for a few Oriental communities (see Freimann, bibl., 29ff.). Other developments are the addition of various prayers to the ceremony, the inclusion of a sermon by the officiating rabbi and, in some present-day communities, the invocation of a blessing on the bridal couple.

The ceremony may be performed anywhere. In many communities – particularly Sephardi and Oriental – it is performed inside the synagogue although there are halakhic opinions against it. In some places it is performed in the hall where the subsequent festivities are held and among some circles (ultra-Orthodox Jews and Ḥasidim and generally among Ashkenazim in Israel) it is invariably performed in the open. This latter custom is perhaps due to the fact that ideally the ceremony takes place after nightfall and the stars above are associated with God’s assurance to Abraham that He would “make your descendants as numerous as the stars of heaven” (Gen. 22:17; see Isserles to Sh. Ar., EH 61:1). In the western hemisphere Sunday is a popular day for weddings because of the convenience to the guests, while Tuesday is favored in Orthodox circles because of the repetition of the sentence “And God saw that this was good” in the biblical account of the creation on that day (Gen. 1:10, 12). However, any day of the week is valid except Sabbath; also festivals, the three weeks between the 17th of Tammuz and the Ninth of Av, and the sefira period between Passover and Shavuot (there are exceptional days in the last-mentioned period, notably Lag ba-Omer: see *Omer). According to the general Sephardi custom marriages are not performed on Lag ba-Omer but are performed from the following day onward. Usually a person in mourning for a parent does not marry until the year of mourning is out although in certain circumstances it is permitted to marry earlier (Sh. Ar., YD 392). There are no specific requirements for the way in which the bride and bridgroom dress. It is customary for the bride to wear white and for her to have a headdress and a veil. The bridgroom in some Orthodox circles wears a kitel either as an evocation of death or since his wedding day is compared to the Day of Atonement when the kitel is worn. In some communities the bridgroom wears a tallit, as does, in some, the officiating rabbi. In many Oriental communities brides wear elaborate costumes richly embroidered and ornamented which were loaned from bride to bride; the Yemenite bridal costume is an outstanding example (see also *Dress).

The ceremony is presently performed as follows. Before being led to the huppah (wedding canopy; see below) the bridgroom, in the presence of witnesses, undertakes, by an act of kinyan (see *Acquisition) the obligations of the ketubbah. This is done by the groom taking a piece of cloth, handkerchief, or some other object from the officiating rabbi, lifting it, and returning it. The witnesses then sign the document and in many communities (including the State of Israel) the groom also signs. The groom is then escorted to the place where the bride is waiting (many modern synagogues have
special bride's room) and lets down her veil over her face, at which time the rabbi or cantor pronounces the blessing invoked on Rebekah “O sister! May you grow into thousands of myriads” (Gen. 24:60). This ceremony is known in Yiddish as “bedeken di kale” (lit. “covering the bride”) and is not practiced by Sephardi Jews. The groom is then led to the huppah by his and the bride's father (or two other male relatives or friends if he or the bride has been orphaned) and stands facing Erez Israel, in Israel itself facing Jerusalem, and in Jerusalem facing the Temple site. The bride is then led to the huppah by her mother and the groom's mother, usually to the accompaniment of a blessing of welcome chanted by the rabbi or cantor, the text of which is: "He Who is supremely mighty; He Who is supremely praised; He Who is supremely great; May He bless this bridegroom and bride." It is customary among Ashkenazim for the bride to be led in seven circuits around the groom which is presumably to be associated with the magic circle to ward off evil spirits. The bride then stands at the right hand of the groom, and, where customary, the rabbi delivers the sermon; the ceremony proper then begins. The rabbi recites the blessing over a goblet of wine and the marriage blessing (see text above) after which the father of the bridegroom gives the goblet to the bridegroom who drinks, and then the mother of the bride gives the bride the goblet, from which she drinks. In many communities the officiant gives the goblet to the bride and groom. The groom then places the ring (see below) on the forearm of the bride's right hand and recites the marriage formula (see above). In some communities the glass is crushed by the groom at this stage. The ketubbah is then read out loud by the rabbi or some other man whom the bridal couple wish to honor. In many communities it is read in the original Aramaic and followed by a précis in the vernacular; in Israel a Hebrew précis is often substituted. The purpose of the reading of the ketubbah is to divide between the two parts of the ceremony. The celebrant (rabbi, cantor, or some other person) then recites the seven marriage benedictions (see below) over a goblet of wine. In many places it is customary to have different men recite the different benedictions. The father of the bride then gives the goblet to drink from the goblet and the mother of the groom does likewise to the bride. In most rites the groom crushes a glass under his right foot and where customary, the rabbi invokes the “priestly blessing. The couple are then escorted to a room where they remain alone for some time, usually breaking their fast together (see below, Legal Aspects, for reasons). The breaking of the glass by the groom is explained by some authorities as a token of the seriousness desirable in even the most happy moments (see above, In the Talmud); however, the act has become understood over the ages as a sign of mourning for the destruction of Jerusalem. In some communities the bridegroom threw the glass against a special wall instead of treading on it. It has been suggested that originally the glass was broken to frighten away evil spirits. In some rites the memorial prayer, El Maleh Rahamim, is recited for departed parents if either member of the couple is an orphan.

The Marriage Benedictions. These benedictions, commonly known as the Sheva Berakhot (Heb. “seven benedictions” – when recited with the benediction over wine) are recorded in the Talmud (Ket. 7b–8a) where they are called Birkat Hatanim (“the bridegroom’s benediction”). When recited under the huppah the benediction for wine precedes the other six which are:

1) “Blessed art Thou … who hast created all things to Thy glory.
2) … Creator of man.
3) … who hast made man in Thine image, after Thy likeness, and hast prepared unto him, out of his very self, a perpetual fabric. Blessed art Thou, O Lord, Creator of man.
4) May she who was barren (Zion) be exceedingly glad and exult, when her children are gathered within her in joy. Blessed art Thou, O Lord, who maketh Zion joyful through her children.
5) O make these loved companions greatly to rejoice, even as of old Thou didst gladden Thy creature in the garden of Eden. Blessed art Thou, O Lord, who maketh bridegroom and bride to rejoice.
6) Blessed art Thou … who hast created joy and gladness, bridegroom and bride, mirth and exultation, pleasure and delight, love, brotherhood, peace, and fellowship. Soon O Lord, our God, may there be heard in the cities of Judah, and in the streets of Jerusalem, the voice of joy and gladness, the voice of the bridegroom and the voice of the bride, the jubilant voice of bridegrooms from their canopies, and of youths from their feasts of song, Blessed art Thou, O Lord, who maketh the bridegroom to rejoice with the bride” (Hertz, Prayer, 1013).

This series of benedictions raises some problems from the point of view of their formulation since normally only the first should begin with the formula “Blessed art thou …” Rashi (to Ket. 7b–8a) gives the following explanation. The first benediction is not for the bridal couple but in honor of the assembled congregation; the second is a benediction in honor of the creation of Adam and the next three are for the couple being married, while the last is an invocation for all Israel including the couple. The series begins with the blessing over wine because of its festive nature. The blessings are recited at the marriage ceremony and at every meal during the next seven days at which there is “a new face,” i.e., somebody who was not present at any previous recitation for that couple. This rule applies to all the seven days except the Sabbath, which is itself considered to be a “new face.” At the meals the series is recited immediately following the Grace after Meals, which itself is introduced by a special invocation. The series then ends with the benediction over the wine and both the bride and groom and the person who led the Grace drink from the wine. A minyan (ten males) is required for the recitation of the marriage benedictions both at the huppah and after the grace; if no minyan is present the last of the marriage benedictions may be recited as long as there are three males (Sh. Ar., EH 62 and see also: “Grace after Meals”). In talmudic times special formulas were added to the grace after meals for some
MARRIAGE

considerable period before the actual wedding and after it. The present-day custom is limited to the recital of the benedictions for the seven-day period immediately following the wedding, except in the case of a marriage between a widower and widow when it is recited on the first day only.

HUPPAH (HEB. הַעֲפַח). The term originally referred to the bridal canopy or the bridal chamber (Gen. R. 4:4) and sometimes to the wedding itself (Avot 5:21). In ancient times the huppah was the tent or room of the groom into which, at the end of the betrothal period, the bride was brought in festive procession for the marital union (cf. Ps. 19:6; Yad. Ishut 10:1). In talmudic times it was customary for the father of the bridegroom to erect the huppah (Gen. R. 28:6; Ber. 25b; Sanh. 108a). In *Bethar (near Jerusalem) the custom was to make the staves or beams of the huppah from a cedar and pine tree which were planted for this purpose at the birth of male and female children respectively (Git. 57a). The huppah was sometimes made of precious scarlet and gold cloth (Sot. 49b; Tj. Sot. 9:16, 246). The Talmud tells that God made ten huppot for Adam and Eve and that He will build such huppot for the pious in the world to come (ib. 75a). In the early Middle Ages, the huppah was not usually used at weddings; this is obvious from the phrasing of Isserles (Sh. Ar.) who regarded it as a novelty (Isserles to Sh. Ar., YD, 391; ibid., EH 55:1). In France the groom covered the bride's head with his tallit as a symbol of his sheltering her. This custom was based upon the words of Ruth to Boaz: "Spread … thy cloak over thy handmaid; for thou art a near kinsman" (Ruth 3:9). This ceremony was also called huppah and was the custom among the Jews of North Africa. Since in talmudic times the huppah was the place of marital union and therefore required privacy, medieval responsa dealt with the question whether the act of entering the huppah was sufficient to constitute marriage or whether it was only to be regarded as a symbol which would still require the couple to retire in privacy (cf. Tos. to Suk. 25b and see below, Legal Aspects). In the late Middle Ages the huppah, consisting of a cloth spread on four staves, was placed inside the synagogue (Isserles to Sh. Ar., YD 391:3), but later it was moved to the courtyard of the synagogue, either because it was deemed improper to have the huppah, as a symbol of the marriage tent, erected inside the synagogue or because of the need to accommodate the wedding party (and see above). In modern Israel, for the weddings of soldiers on active duty, the huppah often consists of a *tallit which is supported by four rifles held by friends of the bride and groom.

THE RING. Although the act of marriage can be effected in different ways (see below, Legal Aspects) it has become the universal Jewish practice to use a ring, except in a very few Oriental communities where a coin is used. The ring, which must belong to the bridegroom, should be free of any precious stones but can be of any material (usually it is of gold or some other precious metal) as long as its value is more than a perutah, the smallest denomination of currency in Talmud times. In the ceremony the groom gives the ring to the bride as an act of acquisition and the bride, by accepting it, becomes his wife. Generally the groom places the ring on the forefinger of the bride's right hand; there are, however, many varied customs as to which finger the ring is placed on. In some Reform and Conservative congregations in the U.S. the "double ring" ceremony is practiced in which the bride also gives a ring to the groom and recites a marriage formula. Since, according to the halakhah, it is the groom who is acquiring the bride, this innovation raises serious halakhic doubts which, according to some authorities, even affect the validity of the marriage.

[Richard Posner]

VARIUS CUSTOMS. The marriage ceremony marks a crucial period in man's life cycle and it is only natural that it became surrounded by a multitude of different customs which generally had one of two purposes: to protect the couple from malignant spirits and to invoke God's blessing of fertility on the marriage. Many of the customs were adopted by the Jews from their non-Jewish environment and thus some are of almost a universal character. Many customs, however, are merely manifestations of the goodwill and joy felt at the happy occasion. Among Ashkenazi Jews the most widely practiced customs, besides breaking the glass which has been interpreted as a defense against evil spirits (but see above) are that the women leading the bride to the huppah carry lighted candles as do other members of the marriage party and that the bride makes seven circuits around the groom under the canopy. It is customary for the bride and groom to refrain from seeing each other for a time preceding the wedding. The actual duration of this period varies in the different communities from about one week to one day, i.e., that of the wedding itself until the ceremony. The bridegroom has precedence over all others to be called to the Torah reading on the Sabbath before the wedding (a ceremony known as oyfrafn in Yiddish) and in some Ashkenazi communities the bride, if she is an orphan, visits the cemetery some time before the wedding. The bride and groom usually fast on the day of the wedding itself until after the ceremony unless it takes place on a day when fasting is forbidden, such as a new moon. A peculiar custom, common in Eastern Europe as well as in Oriental communities, was for the bride and groom to attempt to tread on the other's foot at the end of the ceremony, the one who succeeded thus being assured of dominance in their life together. In many places among both Ashkenazim and Sephardim it was and is customary to throw rice, wheat, nuts, and candies at the groom on various occasions during the marriage cycle: at the wedding itself, and particularly when the groom was called to the Torah reading on the Sabbath prior to the wedding. The bride's entry into her future home was marked by many ceremonies. In Libya and Djerba the groom would drop an earthenware pitcher of water from the roof and the bride would enter the house by walking through the water and broken pottery. In Jerusalem the Sephardim used to break a specially baked cake, called ruskah, above the heads of the bride and groom, while in Baghdad a loaf was cut above the head of the groom.
In Afghanistan a fowl was slaughtered to mark the occasion. In Djerba the bride broke open eggs on the doorposts of the house and in Daghestan and Gruzia (Russian Georgia) the doorposts were smeared with butter and honey. In Salonika the groom would stand at the head of the stairs when the bride first entered the house and scatter sweetmeats, rice, and coins at her feet as she came in. In Georgia the groom would set a white fowl free from the roof of the house on that occasion and drop rice, wheat, and raisins on the bride’s head. In Libya the groom broke the glass at the wedding ceremony when it was almost full of wine which would spill on the floor as a sign of plenty; whereas the groom in Georgia would put the wedding ring into the glass of wine after he had drunk from it, give it to the bride to drink, extract the ring, and formally present it to her with the declaration. In Kurdistan the bride would hold a male infant as the assembled guests called out “May your first be a boy too.” In Morocco fish was always served at the wedding meal and the subsequent festivities as a fertility symbol and in Salonika the groom would buy live fish and put them in water in a brass bowl; on the eighth day after the wedding the bride jumped three times over this bowl to the blessings of the guests “May you be as fertile as the fish.” In Persia the groom would plant three sticks in the courtyard of his house and uproot them on the sixth day after the wedding and throw them behind him to ward off evil spirits. In most Oriental communities the hinnah is celebrated the night before the wedding. In this ceremony the women of both families and female friends (men are entirely excluded) gather at the home of the bride and there her hands are painted with red henna. This ceremony is to ward off the evil eye and is sometimes accompanied by a ceremonial compounding of the dye by the bride’s mother and feeding the bride seven times during the evening. Among the mountain Jews of Libya nearly all weddings take place two days before Sukkot. On the second day of the festival all the grooms participate in foot races symbolic of “And he is as a bridegroom coming out of his chamber, and rejoiceth as a strong man to run his course” (Ps. 19:6). Afterward celebrations are held at their homes. In all communities the groom is honored on the Sabbath after his wedding at the synagogue, where he is given precedence to be called to the reading of the Torah. In some communities special piyyutim are recited on this occasion and in many the groom is seated in a place of honor with a ceremonial canopy spread above him (Kurdistan). In Libya a second Torah scroll is taken out and an additional section (Gen. 2:4–4) is read. This is also the custom in Tunisia where the section is translated into Arabic. In Tunisia the groom is invited to the bride’s home on the Sabbath preceding the wedding and has to find a roast chicken which has been especially hidden. On the fifth day after the wedding a competition between bride and groom is arranged in which they each have to dissect a large cooked fish for serving. The groom is always at a disadvantage in that he is given a blunt knife. In some communities (Afghanistan and, in a modified form, Yemen) it was sometimes customary to arrange a private wedding ceremony the night before the announced day. On the morrow the announced ceremony would also be held. This was in order to outwit evil spirits or malicious persons who had cast spells on the couple. At the ceremony it was also common for a relative of the couple to hold a pair of scissors and cut paper or cloth for its duration. In Kurdistan the officiating rabbi would publicly warn the assembled guests not to cast spells. The custom of examining the bride’s linen after the first night for spots of blood as a proof of her virginity was very widespread and is still practiced in some Oriental communities. The mother of the bride would preserve the sheet or underclothing to uphold the family honor if later required.

LEGAL ASPECTS

In Jewish law, marriage consists of two separate acts, called kiddushin and nissu’in respectively. The kiddushin (also called erusin) is an act performed by a man and a woman which leads to a change in their personal status, i.e., from bachelorhood to a personal status which remains unchanged until the death of either party or their divorce from one another. However, the kiddushin alone does not bring about all the legal consequences of this change of status, as all those will follow only from a further act between the parties, namely the nissu’in. The common usage of the term erusin, which refers merely to shiddukhin, i.e., engagement (see *Betrothal), is therefore not identical with its legal meaning.

Modes of Effecting Kiddushin

There are three ways of effecting a kiddushin, namely by way of kesef (“money”), shetar (“deed”), or bi’ah (“cohabitation”).

Kesef. The bridegroom, in the presence of two competent witnesses, transfers (see *Acquisition) to his bride money or its equivalent – today normally an unadorned ring – to the value of at least one perutah, for the purposes of kiddushin. It is customary for the bridegroom – after the officiating rabbi has recited the Birkat ha-Erusin – to place the ring on the bride’s right-hand forefinger while addressing her with the words: Harei at mekudeshet li be-tabbatit zo ke-dat Moshe ve-Yisrael (“Behold, you are consecrated unto me by this ring, according to the law of Moses and of Israel”); Kid. 2a; 5b; Rema Sh. Ar., EH 27:1; i.e., by transferring the ring to the bride the groom signifies his intent to reserve her exclusively to himself and by accepting it she signifies her consent. Hence it is necessary that the ring belong to the bridegroom and not to the bride, since a person cannot alienate something that is not his own, nor can a person acquire something that already belongs to him (Kid. 5b; 6b; 47a; Sh. Ar., EH 27:1, 7; 31:2).

Shetar. In the presence of two competent witnesses, the bridegroom hands over to the bride a deed in which is written, besides the names of the parties and the other particulars required for the purposes of a kiddushin by shetar, the words, “Behold you are consecrated unto me with this deed according to the law of Moses and of Israel” and the bride accepts the
**MARRIAGE**

deed with the intention of thereby becoming consecrated to the bridegroom (Kid. 9a; Sh. Ar., EH 32:1, 4). Delivery of the deed is therefore not merely evidence that the *kiddushin* has taken place before, but is the means whereby the tie is created, and in this respect it differs from the *ketubbah* deed which the bridegroom has to give to the bride after completion of the *kiddushin* (see also *Civil Marriage*).

**BI‘AH.** If a man in the presence of two competent witnesses, addresses to a woman the words, “Behold you are consecrated to me with this cohabitation according to the law of Moses and of Israel,” and in their presence he takes her into a private place for the purpose of *kiddushin*, she will, upon their cohabitation, be reserved to him (Kid. 9b; Sh. Ar., EH 33:1). Although valid this mode of *kiddushin* was regarded by the scholars as tantamount to prostitution, and they decreed that any person employing it was punishable by *flogging* (Kid. 12b; Yad. Ishut 3:21; Sh. Ar., EH 26:4; 32:1). On the other hand, this mode of *kiddushin* has served as the basis for the halachic presumption that a man does not cohabit with a woman for the sake of prostitution (Git. 81b; Rema EH 33:1), and for the various rules founded on that presumption see *Husband and Wife; Divorce*.

In practice, in present times, only *kiddushei kesef* is observed since the other two modes of *kiddushin* have long become obsolete. The version “Behold you are reserved … according to the law of Moses and of Israel” (which does not appear in the TB and is only found in the Tosefta (Ket. 4:9) and in the Tj, where the version is “according to the law of Moses and of the Jews” (Yehudah; Ket. 4:8)), means that the bridegroom reserves the bride unto himself “according to the law of Moses” – i.e., the law of the Torah – “and of Israel” – i.e., in accordance with the rules of the halachic scholars as applied in Israel, so that the *kiddushin* shall be valid or void in accordance with the regulations laid down by the scholars (Yev. 90b; Ket. 3a; Git. 33a; Rashi and Tos. ad loc.; see also Rashbam and Tos. to BB 48b). The version thus formulated provided the basis for the halakhah which empowered and authorized the scholars, in certain circumstances, to invalidate a *kiddushin* retroactively in such a manner that even if it was not defective in principle it was deemed to be void *ab initio*. The question whether this power to make regulations for the annulment of the *kiddushin* is conferred also on the rabbis of the times after the redaction of the Talmud has remained in dispute. One opinion is that a *kiddushin* which is valid according to talmudic law, even though it is celebrated contrary to a *takkanah* which expressly prohibits the celebration of a *kiddushin* in any manner except as therein provided (e.g., in the presence of a rabbi and a quorum of ten), will not be declared void *ab initio* and the woman will not be free to marry another man unless she first obtains a divorce (out of precautionary stringency; Resp. Ribah no. 399; see also Resp. Rashba, vol. 1, nos. 1185 and 1206 where no absolute decision is arrived at; Resp. Hatam Sofer, EH 1:108; Et. 2, (1949), 137–40; Elon (1988), 2:686–712; Elon (1994), 2:846–79; see also *Agunah, *Takkanot*).

**The Nissu’in**

The act of *nissu’in* requires that the bride, after completion of the *kiddushin*, be brought to the bridegroom under the *huppah* before two competent witnesses, for purposes of the marriage proper, i.e., the *nissu’in “according to the law of Moses and of Israel.” There are different opinions concerning the import of the term *huppah*. One view is that the bride must be brought to the home of the groom for the *nissu’in* (Ran to Ket. 2a; Beit Shemuel 55, no. 4), an interpretation forming the basis of the present custom of bringing the bride to a place symbolizing the domain (resCut) of the bridegroom, i.e., to the place where a canopy is spread across four poles and where the bridegroom is already waiting. According to another opinion *huppah* embraces a private meeting (YD) between bridegroom and bride, at a place set aside for the purpose, as an indication of their marriage proper (Ket. 54b; 56a; Rosh 5:6; Yad. Ishut 10:1, 2; Isserles EH 55:1; 61:1; Sh. Ar., EH 55:2). In order to dispel doubt, custom requires that, in addition to *huppah*, the couple also have the said private meeting.

**Legal Consequences**

As already indicated, the legal consequences of the act of *kiddushin* differ from those of the act of *nissu’in*. The *kiddushin* creates a legal-personal tie between the parties which can only be dissolved upon divorce or the death of either party, and the *arasah* (“affianced bride”) is regarded as a married woman (es-get isth) for all purposes under the de-oraita law, which thus renders invalid a *kiddushin* between herself and any other man (Kid. 5; Yad. Ishut 1:3; Sh. Ar., EH 263). The *aras* too is prohibited, as is a married man proper, from taking an additional wife, and although in his case the prohibition stems not from the de-oraita law but from the herem de-Rabbenu Gershom (see *Bigamy*), the prohibition for the *aras* is as stringent as it is for a married man proper (Rema EH 1:10; Oẓar ha-Posekim EH 1, n. 65; other scholars differ, see Taz EH 1, n. 15). *Kiddushin* alone, however, does not serve to call into being the mutual rights and duties existing between husband and wife (see *Husband and Wife*), and, in particular, cohabitation between them is prohibited (Rashi, Ket. 7b; Sh. Ar., EH 55:1, 6). This prohibition is also contained in the Consecration Blessing in the words, “and has prohibited us the aros but has permitted us those who are married to us by huppah and kiddushin” (see Ket. 7b and Sh. Ar., EH 34:1). The *aras* is also not liable for the maintenance of his bride except after the lapse of 12 months from the time of the *kiddushin*, or any lesser period of time agreed upon between them, and then only if he has failed to marry her notwithstanding her demand and readiness to be married to him (Ket. 2; 57a; Sh. Ar., EH 55:4; 56:1, 3 and commentaries). The *arasah* also has no ketubbah, unless the bridegroom executed such a deed in her favor at the *kiddushin* stage (Ket. 54b; Sh. Ar., EH 55:6). The absolute change in their personal status, with all the rights and duties it entails, is created by the *nissu’in*.

**Manner of Celebrating Kiddushin and Nissu’in**

In order to avoid irregularities which might possibly bring
about complications, custom decrees that the kiddushin be solemnized by a rabbi who supervises that everything is done according to law. It is also the generally accepted custom that there shall be present at least a minyan (ten men). Custom further decrees that the bridegroom shall always recite the above-mentioned formulation in the precise words, "Behold, you are consecrated ... etc."; although post-factum the kiddushin will not be invalidated if any like version with a similar content is used, any change in the recognized version should be avoided at the outset (Yad, Ishut 10:6; Resp. Rosh 37:4; Sh. Ar., EH 55:3 and Rema EH 61). The presence of two competent witnesses at both stages of the marriage ceremony is mandatory; as they do not merely serve as eyewitnesses but their presence is an essential part of the legal act, their absence will invalidate both the kiddushin and the nissu'in. Hence if a man and a woman acknowledge that there were not two witnesses present at their marriage, their acknowledgement (hoda'ah) that they are married will not serve as a basis for determining that this is the case (Kid. 65a; Yad, Ishut 4:6; Sh. Ar., EH 42:2). Conversely, if two competent witnesses testify to the celebration of a marriage between a particular couple, they will be regarded as duly married notwithstanding their own denial of the fact (Warhaftig, 132, 139). For a full description see above. Theoretically, kiddushin being an act of legal effect, it may also be performed between the parties through an agent; i.e., the bridegroom may appoint an agent to enter, on his behalf, into a kiddushin with a particular woman and the woman may do likewise for the purpose of accepting kiddushin. However, it is a mitzvah for each personally to take and be taken in marriage (Yad, Ishut 3:19; Sh. Ar., EH 35:36). Similarly, in principle, the couple may celebrate a conditional kiddushin in such a manner that, provided all the rules applicable to conditions are observed (Sh. Ar., EH 38:2) and the condition itself fulfilled, the kiddushin will be valid from the start, or from the time of fulfillment of the condition, in accordance with the stipulation of the parties, but will be invalid if the condition is not fulfilled (Sh. Ar., EH 38). However, on account of the possible complications arising therefrom, and the stringency of the laws concerning a married woman, no conditions are permitted in kiddushin or nissu'in.

Legal Capacity of the Parties

Since marriage is an act of legal effect, it can be celebrated only by parties who have legal capacity. Hence if one of the parties to a marriage is a minor, acting independently, it will be invalid. In Jewish law a male is a minor (katan) until the age of 13 years; from the age of 13 years and one day he is a major (called gadol) and only then may he contract a valid marriage (Kid. 50b; Yad, Ishut 2:10, 47; Sh. Ar., EH 43:1). A female is a minor (ketubbah) until the age of 12 years; from the age of 12 years and one day until the age of 12½ years she is called a naarah (Yad, Ishut 2:1). Although as a naarah she is considered a major (gedolah; Yad, Ishut 2:6), her marriage (when she is acting independently) will only be valid if she is orphaned of her father, but if he is alive, since a naarah remains under her father's tutelage (reshut), her marriage, when she is acting independently will be valid only after the tutelage ceases to exist, namely when she becomes a bo geret, i.e., when she reaches the age of 12½ years and one day (Kid. 43b; 44b; Yad, Ishut 2:21: 3:11–13; 48; and Gerushin, 11:6; Sh. Ar., EH 37:11; 155:20, 21; see also "Legal Capacity). As regards the validity of a marriage entered into by a minor represented by his parents, see "Child Marriage.

For the same reason, i.e., lack of legal capacity, a marriage to which an idiot (shoteh) is party will be invalid when it is clear that such a party is a complete idiot (Yev. 69b; 96b; Sh. Ar., EH 44:2; 67:7). However, if such person be of sound, although weak, mind his marriage will be valid (Tur and Beit Yosef, EH 44; the statement attributed to Isserles, in Sh. Ar., EH 44:2 is apparently a printing error; see Beit Shemuel, ad loc., n. 4; Hilkat Mehokek, ad loc. n. 2). In case of doubt as to the soundness of a person's mind, as when he has lucid intervals, his kiddushin will, out of apprehension, be regarded as a doubtful kiddushin and the parties will not be permitted to marry anyone else except after their divorce (out of precautionary restriction (PDR loc. cit.). A deaf-mute (heresh, Yad, Ishut 2:26) is precluded, by Pentateuchal law, from entering into a kiddushin since his/her legal capacity is the same as that of the minor or the idiot. However, the scholars regulated that a kiddushin entered into by a deaf-mute shall be valid (Yev. 112b; Yad, Ishut 49; Sh. Ar., EH 44:4), but they did so without creating any obligations between parties to such a marriage. Hence if one of the parties is a deaf-mute, none of the legal obligations flowing from marriage will devolve on them – neither the obligation of ketubbah (i.e., in places where no ketubbah deed is written), nor of a ketubbah condition, nor of maintenance (Sh. Ar., EH 67:8–10), except possibly where a deaf-mute expressly undertakes these pecuniary obligations in the ketubbah deed (PDR 8:65, 69–71, 74–77). The herem de-Rabbenu Gershom does not apply to a husband who was a deaf-mute at the time of his marriage, nor does a deaf-mute's express undertaking not to take an additional wife or not to divorce his wife against her free will have any binding force, since he is incapable of undertaking obligations – at any rate as regards matters of a non-pecuniary nature (PDR loc. cit.).

Kiddushin Conducted by Deception, Fraud, or in Jest

The tannaitic literature (Kid. 31a; 58b) states that if a person sent an agent to betroth a wife for him, and the agent went and betrothed her for himself, the betrothal is valid, except if "he [the agent] treated him (the principal) deceptively." The talmudic commentators explain that this statement emphasizes that although the act was fraudulent, it does not invalidate the kiddushin, which are valid by Pentateuchal law, nor do the rabbis invalidate the kiddushin because of the agent's fraudulent act against the principal prior to the kiddushin (Tos. ad loc.; Nov, Rashba Kid. 58b). Fraudulent kiddushin include frauds against the woman, e.g., where a man betroths...
a woman in jest or coercively, or by giving her a ring in the presence of two witnesses, but against her will or understanding. Although the woman’s consent is absent in these cases of kiddushin, the rabbis require the woman to accept a get (bill of divorce), in view of the doubt that perhaps these kiddushin are valid (see ‘Agunah). This requirement of a get led to problems of iggun when the husband refused to give a get (see ‘Agunah). As a result, to prevent fraudulent kiddushin, many Jewish communities enacted regulations regarding marriage ceremonies and how they should be conducted, such as conducting the kiddushin in the presence of ten persons, in the presence of a rabbi, etc. Such regulations appear as early as the geonic period (S. Assaf, Teshuvot ha-Geonim, para. 113, p. 101), and later in Ashkenaz (the Franco-German center) and in North Africa. The regulations enacted in the geonic period annulled all kiddushin conducted contrary to these rules. At later periods, sanctions were imposed on the offenders, but halakhic authorities were hesitant and questioned their authority to annul such kiddushin. A responsa by the sages of 12th-century Ashkenaz (Resp. Raban, EH, vol. 3 no. 47:2) reflects the differences of opinion between the sages of Worms and Speyer, and those of Mainz. The former argued that since the one who fraudulently betrothed the woman acted “improperly,” the act of kiddushin should be invalidated and annulled. In contrast, the sages of Mainz reasoned that after the completion of the Talmud, rabbis are no longer empowered to annul kiddushin, and thus such a step could not be taken (see ‘Agunah; ‘Takkanot). When a similar case was brought before the Rosh (Resp. Rosh 35:2), he ruled that the sages are not empowered to annul the kiddushin, but since the kiddushin were fraudulent, similar to other instances in which the geonim ruled that the husband may be forced to give his wife a bill of divorce, the husband may be compelled to divorce his wife, and this would not be a coerced get (get me’useh; see ‘Divorce). In another responsa, he rules that when kiddushin is performed contrary to a regulation enacted by the community stating explicitly that kiddushin performed in opposition to the regulation would be annulled, these fraudulent kiddushin may be annulled (ibid. 35:1). Rashba took a similar view, and stated that in places where such a regulation had not been enacted, the rabbinical court should impose fines and even corporal punishment in order to deter fraudulent kiddushin (Resp. Rashba, vol. 1, no. 551).

Doubtful Kiddushin
The legal status of certain kiddushin is sometimes doubtful. Tannaitic literature provides two categories of cases of factual doubt which create doubtful kiddushin. In the first case the doubt relates to whether the kiddushin was conducted properly, for example whether or not the object given for kiddushin was in fact worth a perutah (Tos. Yev. 5:3). In the second case the doubt is created by a dispute in the public perception of the act that was performed, for example, the suspicion that the object used for the betrothal, while not worth a perutah in that particular location, may be worth a perutah somewhere else. The result would be that while the woman would not be regarded as betrothed in one location, she would be regarded as betrothed in another location, and hence the kiddushin is considered doubtful (Kid. 12a). Doubtful kiddushin may also ensue from a legal doubt, when it is not known, or there was no decision, whether a certain act of kiddushin was valid or not; such a case is treated stringently, and the woman is doubtfully betrothed. For example in a situation where a man gave the money for kiddushin, but the woman (instead of the man) recited the sentence to be said after the giving of the money (see above; Kid. 5b).

In some instances in the post-talmudic literature, a majority of posekim rule that even when the kiddushin do not take effect, for instance, kiddushin in the presence of only one witness (Rema EH 42:2), stringency is appropriate (Yad, Ishut 4:6; Semag, Hilkhot Kiddushin), and we should consider such cases as doubtful kiddushin. Accordingly, it was ruled that due to the severity of relations with a married woman: “in these generations they imposed all the stringencies of the posekim in divorce and marriage” (Resp. Radbaz, vol. 4, no. 129; Resp. Maharashdam, EH 13), except for in cases where the kiddushin was additionally flawed, or would cause the woman to become an agunah, in which case stringency is not applied (Resp. Maharashdam, ibid.).

Determining kiddushin as doubtful results in stringencies in two directions. On the one hand, in order to be married to another man, the woman requires a get and on the other hand, if another man betroths her, he too is considered doubtfully betrothed to her. In practice, under certain circumstances, if the parties wish to marry, they are required to conduct a second kiddushin; and if they do not desire to continue a shared life, the husband might be compelled to give her a get. Incidental to divorce, the woman might be prohibited to marry a Cohen (see ‘Marriage, Prohibited), which has led many authorities to criticize the proclivity to stringency in determining doubtful kiddushin and ordering divorce as a precautionary measure (get le-humrah – גט להחמרה; Resp. Maharashdal, no. 21; Resp. Radbaz, no. 382).

A national rabbinical conference held in Jerusalem in 1950 instituted the “herem de-Yerushalayim,” which, inter alia, enacted that “no Jewish man and woman may engage in kidushin and erusin [= kiddushin] other than by a proper wedding ceremony, with a quorum of ten men, which is then recorded in the offices of the rabbinate in every location. This prohibition carries with it a severe herem (= ban) by which any man who betrothed a woman, other than in a proper wedding ceremony, must divorce his betrothed with a bill of divorce in accordance with Jewish law.” The herem de-Yerushalayim is recognized by Israeli law as part of the binding Jewish law for marriage (HIC 130/66, Sgev v. Rabbinical Court of Appeals, 21 (2) PD, p. 505, 525, per President Agranat). Today, most marriages are conducted under the supervision of a rabbi authorized by the Chief Rabbinate, and therefore the question of doubtful kiddushin can generally arise only in one of the following instances:
1. Civil marriage. For civil marriage and its validity as doubtful kiddushin, see *Civil Marriage.

2. Cohabitation without marriage (yedu'im ba-zibbur). See *Concubine.

3. Private marriage. The herem de-Yerushalayim does not state that privately conducted kiddushin would be declared null and void. The Israeli Supreme Court has often addressed questions concerning the status and validity of private marriages. These marriages may be performed for any of a variety of reasons; for example, when because of various prohibitions (see *Marriage, Prohibited), the parties cannot be married by the Israeli rabbinate, and the parties circumvent this by conducting a full but private marriage ceremony. Another example is when parties who are able to be married by the rabbinate prefer not to have a rabbinically approved ceremony. These cases are a focus of friction between the rabbinical courts (that have exclusive jurisdiction in marital law) and the civil courts. The rabbinical court refuses to recognize such marriages, on the grounds of not “aiding transgressors.” In contrast, the civil court system recognizes marriages of parties forbidden by Jewish law to be valid. In this context the civil court distinguishes between the “religious” component, which prohibits the conducting of the marriage, and the legal component, which despite the religious prohibition, gives legal validity to such unions. This distinction is derived from the rabbinical court’s perception that such marriages are, minimally, “doubtful marriages,” which, as a precautionary measure, require divorce. However, the recognition afforded by the civil court only affects the legal civil status of the couple (such as the registration of the marriage), and not the enforcement of the parties’ mutual obligations from such a marriage. In the event of a private marriage, when the parties were eligible for a rabbinical marriage, but chose otherwise, the Supreme Court refused to validate such marriages and declare that the parties could register as married. The Supreme Court was guided by its perception of public policy stating that: “This judicial policy of invalidating private marriages is founded on the principle of maintaining the public good, proper administration, and basic social order, which are especially significant in determining the validity of the status of the marriage and the consequences ensuing from this status, for both the relationship between the parties and their relationship with the public as a whole” (CA 32/81, Zonen v. Shtal, 37(2) PD, p. 766; Justice Menachem Elon).

[Menachem Elon (2nd ed.)]

In the State of Israel

Matters of marriage in the State of Israel are governed by Jewish law, in accordance with the provisions of sections 1 and 2 of the Rabbinical Courts Jurisdiction (Marriage and Divorce) Law, 5713/1953. As regards the customs relating to the celebration of kiddushin and nissu’in, takkanot were issued at an Israeli rabbinical conference in 1950, imposing a strict ban on anyone solemnizing kiddushin and nissu’in contrary to the accepted customs.

By virtue of the Marriage Age Law 1950 (as amended in 1960) a woman may not be married before the age of 17 years. This law further renders it a punishable offense for any person to marry a woman under the age of 17 years (it is no offense for the bride), or to solemnize or assist in any capacity in the celebration of the marriage of such a woman, or for a father or guardian to give her away in marriage, unless prior permission of the competent district court has been obtained – the latter being empowered to give this on the grounds specified in the law (see *Child Marriage). No minimal age is specified for the bridegroom. This offense, although punishable, has no effect on the personal status of the parties; i.e., if the marriage is valid according to Jewish law, the fact that the offense has been committed will in no way affect the validity of the marriage, whether the question arises in relation to a matter of Jewish or of civil law, in the rabbinical or in the civil courts. However, in the event of a marriage with a woman below the said minimum age, the law provides that application may be made to the rabbinical court – by the persons and in the circumstances specified in the law – in order to oblige the husband to grant his wife a divorce. It must be emphasized that this provision does not create grounds for action for divorce under Jewish law, so that in fact it is a dead letter, for in matters of divorce the rabbinical courts apply Jewish law only.

[Ben-Zion (Benno) Schereschewsky]

The Marriage Age Law was amended in 1988, and the Law currently has the same age requirement for both males and females.

Contemporary Innovations

Several opposing tendencies have brought significant changes to Jewish wedding practices during the last quarter of the 20th century, particularly in North America. One trend is characterized by the recovery and reinstatement of certain traditional nuptial rituals, often as part of a rejection of a growing conformity of Jewish marriage customs to Protestant models during the 1950s–70s. Thus, in the early 21st century, it is not uncommon for both bride and groom to immerse in the *mikveh during the week prior to the wedding. The badeken ceremony is frequently performed following a tisch for the groom, and there may be a tenaim ceremony where the mothers of the bride and groom break a plate.

At the ceremony itself Wagner’s Lohengrin Wedding March has generally been replaced by Jewish music and brides, and often grooms, now walk to the huppah with both parents, rather than the bride on the arm of her father. The use of some form of ketubbah has been reinstated in the Reform movement, alongside several of the traditional sheva berakhot (wedding benedictions). Brides and grooms from all movements often prepare wedding booklets explaining aspects of the traditional Jewish wedding ceremony so that their Jewish and non-Jewish guests will be able to follow the proceedings.

On the other hand, there has also been an effort to make the traditionally unilateral wedding ceremony as egalitarian
as possible. With the exception of the Ashkenazi custom of circling the groom seven or three times, sipping wine twice, and putting out a hand for the ring to be slipped on her finger, the Jewish bride is passive during a traditional Jewish wedding ritual and in the preparatory ceremonies that precede it, as when the ketubbah is signed and witnessed. The most common egalitarian innovations include replacing the traditional language of the ketubbah with reciprocal wording concerning the obligations of bride and groom to each other (this innovative ketubbah may be in Aramaic, Hebrew, or English, or a combination of two or more of these languages); both bride and groom participate in kinyan and sign the ketubbah prior to the huppah; the groom circles the bride after the bride circles the groom; a double ring ceremony with both bride and groom speaking and placing a ring on the other’s finger (usually the groom says the traditional formula and the bride says some variation of it or recites a verse from the Song of Songs); and the inclusion of women among those eligible to officiate, read the ketubbah, and say one of the sheva berakhot.

Since 1990, more radical departures from halakhah have also become frequent. Within the Reform, Reconstructionist, and Humanist movements, these may include the use of special written ketubbot at interfaith weddings and at gay and lesbian commitment ceremonies and marriages, where the couple often stands under a huppah and breaks a glass. Some of the interfaith ceremonies are syncretistic, which has elicited protests from the liberal and progressive denominations, as well as the more traditional movements.

MARRIAGE, PROHIBITED. A marriage is prohibited whenever there is a legal impediment to a kiddushin (see ‘Marriage’) between the particular parties. In some cases the prohibition has the effect of rendering the marriage, if it is celebrated nevertheless, null and void ab initio; in other cases it does not invalidate the marriage, but provides a ground for having it terminated by divorce.

Prohibited and Void

This category includes marriages which are prohibited (gillui arayot) according to pentateuchal law, i.e., punishable by ‘karet or death, namely: (a) marriages between parties related to one another within the prohibited degrees of kinship: i.e., the marriage between a man and his mother, daughter, sister, and certain other relatives (Lev. 18:26ff.; Kid. 67b and codes); the marriage between a man and the sister of his wife is also void during the latter’s lifetime (i.e., even after divorce), as is marriage with his brother’s widow (except in the case of the levirate widow) or divorced wife: such marriages are punishable by karet (Yad, Issurei Brakha, 2:1, 9; Sh. Ar., EH 15:22, 26; 44:6; see also *Levirate Marriage); and (b) marriage between a man and a married woman, such *adultery being punishable by death (see also *Bigamy); (2) A marriage with a non-Jewish partner (Sh. Ar., EH 44:8; see also Mixed *Marriage); (3) Other cases enumerated in Shulhan Arukh, Even ha-Ezer 15.

Prohibited but Valid

In this category are included marriages which, although prohibited, do not constitute gillui arayot according to pentateuchal law and therefore are not null and void unless by the death of either party or by divorce (Sh. Ar., EH 15:11, 18; 44:7). Since these marriages are nevertheless prohibited and remain tainted with the prohibition during their subsistence, their dissolution by divorce is generally compelled, whether or not both of the parties consented to, or had prior knowledge of, the true situation. Marriage prohibitions of this kind derive either from the pentateuchal law imposed and
punishable as a plain prohibition only (Yad, Ishut 1:7) or from the rules laid down by the scribes, i.e., marriage prohibited, as “incest of a secondary [minor] degree,” not by the Torah but only by rabbinical enactment (ibid., 1:6; Sh. Ar., loc. cit.). The following are examples of such prohibitions:

(1) A married woman who has sexual relations with anyone but her husband becomes prohibited to the latter as well, and also to her lover even after her divorce from her husband (Sotah 27b; Sh. Ar., EH 11:1; 178:17). If she has had sexual relations of her own free will, she is prohibited to her husband forever, i.e., he must never remarry her after divorce from him even if in the meantime she has not married anyone else (Sh. Ar., EH 13:13). If she has been raped (see *Rape), she is prohibited to her husband only if he is a priest, but, if he is an ordinary Israelite, she is permitted to him. He need not divorce her and, if he has done so, he may remarry her provided she has not married someone else in the meantime (Sh. Ar., EH 6:10, 11).

Similarly, the adulteress is also prohibited for all time from marrying her lover, i.e., even after divorce from her husband or his death (Yev. 24b and Rashi ad loc.; Sh. Ar., EH 11:11). This is because her lover has destroyed her family life, inasmuch as, owing to the adultery, he has rendered her prohibited to her husband. By the same token, and, because the wife of an ordinary Israelite does not become prohibited to her husband when someone else has sexual relations with her against her own free will, some scholars are of the opinion that, although beforehand she is prohibited to such a lover in order to penalize him, if they have nevertheless married each other, he will not be compelled to divorce her (Sh. Ar., EH 11:1; Ba’er Heitev n. 5 and Beit Shmiuel n. 2; but cf. Rema, EH 159:3, and Ba’er Heitev n. 6; Ozar ha-Posekim, EH 1:11, n. 44).

(2) A divorcer who has remarried and her second marriage has also been terminated (by divorce or death) is therefore prohibited to her former husband, in terms of an express prohibition in pentateuchal law (Deut. 24:4).

(3) A priest is prohibited by an express prohibition in the pentateuchal law from marrying a divorcer, a zonah, or a *halalah (see Lev. 21:7; Sh. Ar., EH 6:1). This prohibition is still in force (Rema, EH 3:6; PDR 5, 219, 221) despite the lack of certainty that all those known as priests are in fact the descendants of Aaron, for all of them are merely presumed to be priests (Yad, Issurei Bi’ah, 201). A divorced woman remains prohibited to a priest even if after her divorce she has remarried and become a widow (Hokhamat Shelomo, EH 6:1; Sh. Ar., EH 66:11, Isserles, Helkat Mekokeh, 66, n. 41). A priest is forbidden to remarry even his own former wife (Resp. Ribash no. 348; see also *Divorce). For the purposes of the above prohibition, the term zonah is not to be interpreted in its ordinary sense – i.e., a woman who has sexual relations other than within matrimony (Yev. 61b). Here it refers to a woman who is not a Jewess by birth, such as a proselyte, and also to a woman who has cohabited with a man to whom she must not be married by virtue of a general prohibition (i.e., not one relating to the priesthood as such) e.g., if she has cohabited with a non-Jew or a *mamzer (Yev. 61a and Rashi; Sh. Ar., EH 6:8).

(4) A Jewish man or woman must not marry a mamzer (et). For details see *Mamzer.

(5) A married man is prohibited, according to the decree of Rabbenu *Gershom, to marry another woman while his marriage still subsists. If contracted, the second marriage is valid but the parties will be compelled to divorce (see *Bigamy).

(6) Marriage with a divorcee or widow is prohibited before the lapse of 90 days from the date of her acquiring her new status; in order to avoid doubt concerning the descent of her offspring; similarly, for the good of her child, it is forbidden to marry a pregnant woman or nursing mother until the child has reached the age of 24 months (Sh. Ar., EH 13:1, 11–14; for further instances of prohibited, but valid marriages see Sh. Ar., EH 15).

Legal Consequences of Prohibited Marriages

family law aspects. So far as the parties themselves are concerned, no legal consequences at all attach to a marriage which is forbidden as *mamzer (incestuous) according to pentateuchal law, and there is therefore no need for them to be divorced (Sh. Ar., EH 15:1, and Ha-Gra thereto, n. 3; Sh. Ar., EH 44:6); their children will be *mamzerim. Only a marriage of a married woman to another man, although invalid, requires that the woman obtain a divorce not only from her husband but also from the paramour (see *Divorce; *Bigamy; *Agunah).

In the case of prohibited but valid marriages either party is entitled to demand a divorce, whether or not either or both parties were aware of the impediment at the time of the marriage or at any time thereafter. In case of the other party’s refusal, divorce may be compelled, except in the case of a marriage contracted within 90 days of dissolution of the wife’s previous marriage (Rema, EH 13:10). The need for divorce is also relaxed with reference to marriage with a pregnant woman or nursing mother (PDR 4:60). On the status of children born of such marriages, see *Yuḥasin.

civil law aspects. Since the law requires that a prohibited marriage be dissolved, there is no place for the imposition of reciprocal marital rights and duties which are designed to sustain the marriage. In principle this is the position whenever the husband has married his wife without knowing that she is prohibited to him (יהוה אֱלֹהֶיךָ אָנֹךָ, lo hikkir baḥ). However, if he has done so knowingly, there will be no justification for his release from a husband’s marital duties, and these he must fulfill, with the exception of those likely to impede dissolution of the marriage. This distinction between the husband’s knowledge or lack of it is drawn mainly in regard to the most important cases of prohibited but valid marriages, i.e., cases of plain prohibition (_MUTORES, issurei lav); (for the prohibitions concerning other cases of prohibited marriage, see Sh. Ar., EH 116:2ff.). Since a man who marries without knowing that his wife is prohibited to him is released from all the marital duties of a husband, the wife will not be entitled to receive her “main” or minimal *ketubbah and therefore also not to fulfillment of
the ketubbah conditions since “the ketubbah conditions are as the ketubbah itself” (Ket. 54b and Rashi ad loc. s.v. *tenáci ketubbah*; see also *Husband and Wife*). Similarly, the wife will not be entitled to *maintenance*, either during the husband’s lifetime or as his *widow* (Yad, *Ishut* 24:2; *Sh. Ar.*, EH 116:1). In the same way, the wife too will be released from all her matrimonial duties, since these are imposed on her by law only in return for her husband’s actual fulfillment of his duties toward her (see *Ketubbah*; *Husband and Wife*; *Downry*). The husband will, however, remain liable for her ketubbah “increment” (*toseft ketubbah*), as this is not an obligation imposed on him by law but one that he has voluntarily undertaken to fulfill for as long as she is willing to remain his wife, and this the law has forbidden her to do, independently of her own will in the matter (Yad, *Ishut* 24:3; *Taz*, EH 116, n. 3).

In cases where the husband knowingly contracts a prohibited marriage, the scholars regulated that in principle he should not be released from any of the matrimonial duties imposed upon the husband by law. Hence, in these circumstances he, or his estate, will be liable to his wife or widow for her ketubbah (including the *toseft*) as well as its conditions as in every regular marriage. However, since everything should be done in order to bring about the dissolution of such prohibited marriages, the scholars further ruled that the husband was exempt from maintaining his wife during his own lifetime, in order to discourage her from remaining with his wife (*Sh. Ar.*, loc. cit., and *Taz* n. 1). He will consequently not be entitled to her handwork, since he is entitled to this only in return for actually maintaining her. Divergent opinions are expressed in the codes concerning the husband’s usufruct of his wife’s property. According to some of the *posekim* the husband does not have this right, since it is in return for the obligation to ransom his wife from captivity, a duty which does not hold in the case of a prohibited marriage (see *Downry* as marital life with her is forbidden to him; therefore the husband must return the equivalent of any benefit he may have derived from this source (see, e.g., Yad, *Ishut* 24:4 and *Maggid Mishneh* ad loc.). Other *posekim* are of the opinion that only when the wife is taken captive must the husband make available for purposes of her ransom, the equivalent of the fruits of her property that he has enjoyed, but otherwise he will be exempt from compensating her in this regard (see, e.g., *Hilkat Mehokek* n. 4 and *Beit Shemuel* n. 2 to EH 116). Since the marital rights afforded by law to the wife in respect of her husband are conditional on the existence of corresponding legal duties of her husband toward her and, in the same way, the wife’s duties to her husband do not exist independently but are in return for her enjoyment of her rights against him (Yad, *Ishut* 12:1–4) – a position which depends on his knowledge or ignorance of the prohibited nature of the marriage – her knowledge or ignorance in this respect is of no legal significance.

**In the State of Israel**

Apart from rules of private international law, the problem of prohibited marriages is governed by Jewish law (see sects. 1, 2 of the Rabbinical Court Jurisdiction (Marriage and Divorce) Law, 5713/1953.

**MARRUS, MICHAEL R.** (1941– ), Canadian historian, author. Marrus was born in Toronto, Canada. He is one of the foremost Canadian historians of modern Europe, specializing in the Jews of France and in the Holocaust. He received his B.A. at the University of Toronto in 1963, and his M.A. and Ph.D. at the University of California, Berkeley in 1964 and 1968, respectively. In 1968 he joined the Department of History at the University of Toronto and served as dean of the School of Graduate Studies from 1997 to 2004. He was the Chancellor of the University of Cape Town. He was the recipient of numerous awards, including appointment as a fellow in the Royal Society of Canada and a Guggenheim Fellowship; he was a fellow of the Holocaust Royal Historical Society. Marrus published more than 100 articles, reviews, and books. His most notable works include *The Politics of Assimilation: A Study of the French Jewish Community at the Time of the Dreyfus Affair* (1971); with Robert Paxton, *Vichy France and the Jews* (1981); *The Unwanted: European Refugees in the Twentieth Century* (1985); *The Holocaust in History* (1987); and *Mr. Sam: The Life and Times of Samuel Bronfman* (1991). He was editor of *The Nazi Holocaust: Historical Articles on the Destruction of European Jews* (15 vols., 1992) and *The Nuremberg War Crimes Trial, 1945–46: A Documentary History* (1997); and coeditor of *Contemporary Antisemitism: Canada and the World* (2005). Among his most important contributions to the study of the Holocaust are his works dealing with the Vichy government and the Third Reich, the Nuremberg War Crimes Trial, and the role of the Vatican during the Holocaust. In 1999 Marrus was appointed to an interfaith team of historians, the Catholic-Jewish Historical Commission on the Vatican and the Holocaust, charged with examining the role played by the Vatican during the Holocaust.

**MARSALA,** town in Sicily. Though Jews probably lived in Marsala in Roman times, the first mention of them is made in the city statutes of the Norman period restricting the rights of Jews and Muslims with regard to property claims. In 1282, after the Sicilian Vespers, King Peter 11 of Aragon ordered the restitution of property of the Jews of Marsala lost during the upheavals of the uprising. In 1321, following the complaints of the Jews in the area of Val di Mazara (which included Marsala), the Infante Peter ordered the officials in Marsala to prevent the bishop and church in Mazara from exercising jurisdiction.
over the local Jews because they belonged to the Crown according to their status as serfs of the Royal Chamber. The Jews are then mentioned in a royal decree of 1374, in which approval was given for the enlargement of the synagogue. Toward the end of the 14th century the community protested against the abuses inflicted on them by the citizens, who forced them to attend church functions, and stoned them when they returned to their own quarter. Royal decrees of 1402 and 1405 exempted the Jews from the authority of the bishop, restored the ritual bath which had been confiscated, and restricted the taxes paid by the Jews to one-tenth of those imposed on the whole town. Every year, on October 16, councilors (proti) were elected to administer the community affairs. On the expulsion of the Jews from Sicily in 1492, about 2,600 Jews were forced to leave the town. The synagogue was converted into a church.

**MARSCHAK, JACOB** (1898–1977), U.S. economist. Born in Kiev, Marschak taught at the University of Heidelberg from 1930 to 1933. From 1933 to 1939 he lectured at All Souls College, Oxford, and was the director of its Institute of Statistics. During this period, his articles on measurement of economic variables and estimation of economic relationships provided the foundation for the field of econometrics. In 1940 he became professor of the graduate faculty of the New School for Social Research in New York City, which he left in 1942 to teach at the University of Chicago, directing at the same time the Cowles Commission for Economic Research (1943–48). In 1950 he became a consultant of the RAND Corporation and a member of an inter-society committee on the training of social scientists in mathematics. He was a professor of economics at Yale from 1955 to 1960. His major interests were microeconomics, econometrics, and business administration. In 1966 he went to teach at the University of California at Los Angeles, with a joint appointment as professor in the School of Business Administration (now Graduate School of Management) and the Department of Economics. He became professor emeritus at UCLA in 1965 and served as director of the Western Management Science Institute (1965–69).

Over the years, Marschak served as president of the Econometric Society; vice president of the American Statistical Association; fellow of the American Academy of Arts and Sciences; member of the National Academy of Sciences; and president of the American Economic Association.

In the 1920s Marschak helped a number of his fellow Russian intellectual exiles to establish a life for themselves in the United States. In the 1930s he took part in assisting scholars who were refugees from Nazi Germany. Subsequently, he helped the newer emigrant intellectuals from the Soviet Russia.

**MARSEILLES**, capital of the department of Bouches du Rhône; second largest town in France. The earliest recorded presence of Jews in Marseilles can be traced to the sixth century. In 574 there was a sufficient number to provide asylum for the Jews who fled from *Clermont-Ferrand to escape the coercive measures by Bishop *Avitus to convert them. In 591 Bishop Theodore of Marseilles also attempted to compel the Jews of the town to accept baptism, but Pope *Gregory I intervened in their favor. Although scant information is available on the Jews of Marseilles during the early Middle Ages, the importance of their settlement there is confirmed by the names of sites alluding to them. At the close of the tenth century there is mention of a *valle Judaica* in an area of fields and vineyards and at the end of the 11th century, of a vineyard named *rua Judaica*. During the 12th century, the Jews formed two communities; one in the upper part of the town, which was under the jurisdiction of the bishop; the other in the lower town, which belonged to the viscount. Both communities were placed under the authority of the bishop. (It was this right which Frederick 1 Barbarossa ratified for Bishop Peter in 1164.) The two communities are mentioned by the traveler *Benjamin of Tudela*, who also indicates that the yeshivot and the scholars were established in the upper town. As might be expected, the merchants settled in the lower part in the vicinity of the port. There they traded with Palestine, Egypt, North Africa, Spain, and Italy, dealing mainly in wood, spices, textiles, metals, pharmaceutics, various products for dyeing, and slaves. Commercial partnerships with Christians were very common. They rarely engaged in moneylending, although toward the end of the 12th century they did advance loans to the Monastery of Saint Victor and to the squire of Trets. In 1257 the statutes of Marseilles granted Jews the status of citizens. Nevertheless they were subject to some important restrictions. Jews were prohibited from working in public on Christian festivals, or from taking an oath in a lawsuit against Christians, and no more than four Jews were allowed to embark on a ship.
bound for Egypt. By at least the middle of the 14th century, all the Jews of the town had united into a single community, led by three officers who administered the schools, the three synagogues, the almshouse, and the mikveh.

In the 14th century, Jews were granted equality with other citizens of Marseilles, yet they continued to have special privileges. Thus, although it was forbidden for all other citizens to sell flour in any place but on the bridge, a municipal ordinance of 1359 authorized Jews to sell or buy flour for unleavened bread (maazzot) in the Jewish quarter. Similarly, an ordinance issued in 1363 stipulated that whereas all other inhabitants were to sweep the street before their houses on Saturday, Jews were permitted to do so on Friday. Finally, in 1387 Jews were exempted on evenings of Jewish festivals from the general obligation to walk about with a lamp after curfew.

Although they lived in an international trading port, the Jewish population remained relatively stable. For much of the Middle Ages, new arrivals in the town constituted little more than 10% of the population. (An important exception was in 1351, after an influx caused by the “Black Death persecutions, when the percentage of new arrivals in the community reached 30%.) Although Jews did not generally participate in the maritime trade, limiting their transactions mainly to Spain, they were well represented in the town’s urban commercial life, many of them acting as brokers. The Jewish surname Sabonarius has led to the belief that it was the Jews who introduced the soap industry to Marseilles. They had a virtual monopoly over coral craftsmanship, although those engaged in this occupation made very little money. Poorly off, too, were the Jews who earned their livelihood as laborers, porters, stoncutters, and tailors. Since they dealt only in small sums, even Jewish moneylenders were not noticeably wealthy. Jews did, however, distinguish themselves in the medical field, the number of Jewish physicians in the town often exceeding that of their Christian colleagues. During the 15th century, Jewish economic life experienced a setback and economic activity was reduced to the retail trade, mainly the sale of wheat and textiles. Jews also suffered more than the rest of the population when the town was plundered by the Aragonese in 1423. Most of them became impoverished, and struggled to recover economically.

Late in 1484 and early in 1485, shortly after the incorporation of *Provence into France (1481), the Jewish quarter of Marseilles was attacked. In the wake of plunder, destruction, and murder, the Jews of Marseilles began to flee. In 1486, however, the municipal council curbed their emigration and drew up an inventory of their belongings. The ensuing period is marked by severe upheavals in the composition of the community, as reflected in the extant lists of the heads of families; at least one half of the community’s members were relatively new arrivals. Jews from Spain began to arrive in large numbers, particularly after 1491. Many shipowners in Marseilles amassed fortunes as a result of their expulsion in 1492. Spanish Jews hired vessels at exorbitant prices to transport them to Italy and Constantinople, and many of these ships called at the port of Marseilles. At times, the exiles attempted to remain in the city without the authorization of the municipal council. A general expulsion order for Provence was issued in 1500 and enforced in 1501. For about 20 years, conversions increased considerably as great numbers of Jews chose baptism to evade expulsion.

The 12th-century Jewish traveler Benjamin of Tudela refers to Marseilles as a “town of learned men and scholars.” Among those he mentions is R. *Isaac b. Abba Mari of Marseilles, a renowned commentator and author of prayers. Several members of the Ibn *Tibbon family also lived in Marseilles, or were born there. (Records of a rabbinical lawsuit in this family about 1250 mention family relationships and marriages between the Jews of Marseilles and those of *Naples, *Aix-en-Provence, and *Montpellier.) *Nissim b. Moses of Marseilles was the author of a commentary – which some regard as “almost rationalist” – on the Pentateuch, entitled Sefer ha-Nissim or Masseh Nissim. Samuel b. Judah ha-Marsili (also known as Miles Bonjudas), born in Marseilles in 1294, translated several philosophical and scientific works from Arabic into Hebrew. Other scholars born in the city include Judah b. David (also known as Bonjudas Bendavi or Maestre Bonjua), a talmudist and physician of the late 14th/early 15th century, and the talmudist and commentator Jacob b. David *Provencal (second half of the 15th century), both of whom emigrated to Italy.

In the second half of the 15th century, a second community was established in Marseilles for a brief period. As a result of an edict issued by Louis XIV in 1669, which granted tax exemption to the port of Marseilles, two Jews of Leghorn, Joseph Vais Villareal and Abraham *Athias, settled there in 1670 with their families. Their commercial success rapidly attracted other Jews. The local authorities soon protested against the presence of Jews and particularly objected to the existence of two places of Jewish worship. They obtained an expulsion order which was carried out in 1682. Despite successive renewals of the expulsion order, a new community was founded in 1760. About 1768, it owned a small synagogue and in 1783, it erected a cemetery. Although the community’s membership remained relatively stable, a split occurred at the end of 1790, and both the municipality and the civil court were called upon to intervene to settle the differences. Forcibly reunited, the community established a new synagogue and a cemetery in 1804. The community was then composed of about 300 members, of whom over one third were living in poverty. The Jewish population increased rapidly to 450 in 1808, 1,000 in 1821, and 2,500 in 1865. As a result, several new institutions were established, including schools for both boys and girls, a poorhouse, and a synagogue on the Rue de Breteuil that remains in use today.

**Holocaust Period and After**

Between 1940 and 1942, Marseilles, along with *Lyons, was the city in the southern or “free” zone where the greatest number of Jews and Jewish organizations and institutions found sanctuary from the German invasion. After the Allied landing in
North Africa and the German occupation of France in November 1942, there was a vicious hunt for Jews in Marseilles, which led to mass arrests and deportations. At the same time, the resistance movement increased its activities in the city. The synagogue on Rue de Breteuil was pillaged, the facade destroyed, the prayer books and the Torah scrolls burned. With the defeat of the Germans, about 5,000–10,000 Jews remained in Marseilles. The population, which was comprised of refugees from Provence and Alsace, immigrants from Eastern Europe, and Sephardi Jews from the eastern Mediterranean and from North Africa, gradually rebuilt the community and its institutions, including the Rue de Breteuil synagogue. The former military camp of Grand Arenas near Marseilles became a transit camp for Jewish survivors migrating to Palestine. Beginning in 1956, the city attracted Jewish immigrants from North Africa, and in 1962 it became their main port of entry into France. In 1969, there were an estimated 65,000 Jews in Marseilles. In 1987, the Jewish population stood at 70,000, making it the third largest Jewish community in Western Europe. Although the community’s buildings and institutions expanded, they could not keep pace with the population growth. In 2002 Marseilles and the immediate vicinity was said to have over 40 synagogues. It also had three community centers, a Jewish primary school, an ORT vocational school, and a network of institutions and organizations including youth movements, kosher restaurants, and mikvāot. A consulate general of Israel was located in Marseilles.

[Bernhard Blumenkranz / David Weinberg (2nd ed.)]

MARSHAK, SAMUEL YAKOVLEVICH (1887–1964), Zionist and Russian poet. Marshak was born in Voronezh. Though his father received a solid religious education, Marshak himself seems to have experienced traditional Judaism only when he lived, as a child, with his observant grandparents in Vitebsk. There, for two years, he studied Hebrew with a teacher by the name of Khalameyzer, whom he lovingly remembered and described in his childhood reminiscences V nachale zhizni (“At Life’s Beginning,” 1960). But it seems that he mastered Hebrew, as well as ancient and modern Jewish literature, sufficiently well to be able to translate it into Russian. Marshak received his formal education in Russian high schools in St. Petersburg and also in the Crimean town of Yalta, where he lived in Maxim *Gorki’s house.

According to his second autobiographical note “O sebe” (“About Myself”), published posthumously as an introduction to the eight-volume collection of his writings, he “began being published in almanacs in 1907.” But actually his first verse had already appeared in Russian-language Jewish journals (Yevreyskaya Zhizn, Molodaya Iudeya) in 1904–07, all of them enthusiastically Zionist, such as poems on the death of Herzl (“20 Tammuz” and “Na grobe”), poems based on biblical themes (from Ezekiel and Song of Songs), on midrashic legends, about the Spanish Inquisition, and programmatic Zionist poetry (especially for youth), etc. Later he published his poetry, including translations from *Bialik, in the Zionist Razsvet, in which, after a visit in 1911 to Erez Israel, he also published his observations and impressions of the various Jewish communities in the country. In his poem “Palestina,” published in 1916 in Yevreyskaya Zhizn, he contrasted the Jewish plight in Russia during World War I to the elation he experienced in Erez Israel. His poem “Jerusalim,” which depicts his journey to the Holy City, was included in the Russian-language anthology of Jewish poetry Safrut (1918). The Evreyskaya Anthologa (“Hebrew Anthology”), which appeared in Moscow in 1918, edited by L. Jaffe and V. Khodasevich, published Marshak’s translations from Bialik, Z. Shneur and D. Shimonovich (“Shimoni”).

As a high school student, during his stay in Gorki’s house in Yalta, he was active until the summer of 1906 in organizing Zionist youth circles of Molodaya Iudeya (“Young Judea”). Under the influence of the clandestine *Po’alei Zion delegate, Isaac Shimshelevich (later Izhak *Ben-Zvi, the second president of Israel), Marshak became an activist of the illegal Po’alei Zion movement, and his address at Gorki’s house even served as a liaison between the center of the movement in Poltava and its delegate in the Crimea. According to Ben-Zvi’s letters, seized by the Czartist police, Marshak was active in organizing the Po’alei Zion branch in Yalta and the distribution of Yevreyskaya Rabochaya Khronika (“Jewish Workers’ Chronicle”). During his stay in London (1912–13) Marshak was still in touch with Po’alei Zion, and Ber *Borochov mentions him in one of his letters to a London friend. Thus, from his high school days in Yalta until after the Russian Revolution, when he participated in the editing of the Russian-language anthologies of Jewish literature in Moscow, Marshak was a dedicated Zionist. This chapter in his life has been completely omitted from Marshak’s biographies and autobiographical notes published in the Soviet Union.

[Matityahu Minc]

Most historians of Russian writing would probably accept Marshak’s designation by his friend Maxim Gorki as the founder of Soviet children’s literature. His first children’s book was Detki v kletke (“Children in a Cage,” 1923). There is hardly a Russian child or young adult who does not know some of Marshak’s verse by heart. His nursery rhymes, songs, and verse form part of the Soviet kindergarten and school curriculum, and his plays have long been among the mainstays of the Soviet children’s theater. There are few ideological elements in
his verse, in which he usually exhorts children to be truthful, to obey their parents, to study diligently, and to be kind to animals. Four volumes of his writings, including his first autobiographical note, appeared in 1957–60. Marshak was also famous as a translator of the great European poets, including Shakespeare, Blake, Byron, and Heine.

Marshak’s sister, YELENA YAKOVLEVNA ILLINA (pen name of Liya Yakovlevna Preis, 1901–1964), was a well-known children’s writer in her own right, and his brother, M. ILIN (pen name of Ilya Yakovlevich Marshak, 1895–1953), was probably the best-known Soviet writer of popular science, particularly for children. He won the Stalin Prize four times (1942, 1946, 1949, 1951), and the Lenin Prize in 1962.

[Maurice Friedberg]

MARSHALL, DAVID SAUL (1908–1995). Singapore labor politician, lawyer, and diplomat. Marshall was born of a Sephardi family of Iraqi origin. He went to London to study, and, after being admitted to the English bar, returned to Singapore to practice law. He entered politics as a member of the Legislative Assembly and became president of the Workers’ Party. When the island was granted partial independence in 1955, Marshall led the United Labor Front party to victory in the elections and became chief minister and minister for commerce, serving in these positions until 1956. Marshall was president of the Singapore Jewish Welfare Board from 1946 to 1953. From 1978 to 1993 Marshall served as Singapore’s ambassador to France, Spain, Portugal, and Switzerland.

[Moshe Rosetti]

MARSHALL, LOUIS (1856–1929), lawyer and communal leader. Born in Syracuse, New York, the son of German-Jewish immigrants, Marshall graduated from Syracuse High School and served a two-year apprenticeship in a local law office. In 1876 he left for New York City where he completed the two-year Columbia Law School course in one year. Returning to Syracuse, Marshall joined a prominent law firm and in 1894 became a partner in the leading New York firm of Guggenheim, Untermyer, and Marshall.

Marshall specialized in constitutional and corporate law. Many of the numerous cases that he argued before the U.S. Supreme Court were of major constitutional significance. His legal eminence was recognized by appointment or election to three constitutional conventions in New York State (1890, 1894, and 1915). Although he never sought public office, he was at one time seriously considered for appointment to the Supreme Court. A leading supporter of the Republican Party, Marshall participated in local and national politics, led in the establishment of the New York State College of Forestry, and served on numerous non-sectarian committees and boards.

In New York City, Marshall joined the German-Jewish elite and quickly became the chief spokesman for this group in matters affecting the Jewish community at home and abroad. His national leadership became evident in 1911 during the successful campaign against the United States-Russian Commercial Treaty of 1832, which was being used by the Czarist regime to discriminate against American Jews. Marshall’s eloquence, legal knowledge, and skillful management, joined with intense public pressure, resulted in congressional action leading to abrogation of the treaty. In 1912 Marshall became president of the American Jewish Committee and held this post until 1929. During World War I, he participated in a bitter internal power struggle within the Jewish community over the establishment of an American Jewish Congress in preparation for peace negotiations. Playing a key role as mediator, Marshall joined the Jewish delegation to the Paris Peace Conference in 1919, where he supported the granting of national minority rights to the Jews of the new East European states.

Marshall vigorously attempted, without success, to block the American publication of the antisemitic Protocols of the Elders of Zion, imported from Europe in the immediate postwar years. American Jewry was shocked when the Dearborn Independent, a publication owned by Henry Ford, embarked in 1920 on a crusade to popularize and elaborate the distortions and misrepresentations emanating from the Protocols. Unable to dissuade Ford directly, Marshall utilized quiet pressure and influential intermediaries in an attempt to abate this antisemitic campaign. Finally, in 1927, after lawsuits brought by individuals maligned by the Independent, Ford agreed to cease his attacks and to sign a formal apology to the Jews prepared by Marshall.

Marshall participated in the legal defense of Leo *Frank, who was convicted and subsequently lynched in Georgia for a murder he allegedly committed in 1913. He played a significant part in the campaign to delay the imposition of progressively harsher immigration-restriction legislation. His intervention in 1922 helped reverse Harvard University’s announced intention to impose a quota system on Jewish students. He quietly opposed the powerful Ku Klux Klan and vigorously condemned the perpetrators of the Massena ritual murder libel in 1929.

Marshall was a dedicated Jew. He served as president of Temple Emanu-El in New York, the most important Reform Jewish congregation in the United States. At the same time, he served as chairman of the board of directors of the *Jewish Theological Seminary. During World War I, he was president of the American Jewish Relief Committee and helped organize and guide the *American Jewish Joint Distribution Committee. Although not a political Zionist, Marshall acknowledged the need for Palestine as a center of Jewish settlement, especially after the United States severely limited immigration in the early 1920s. He cooperated with Chaim *Weizmann in attempting to arrange a modus vivendi which would allow wealthy and influential non-Zionists to share in the support of Palestine without actually becoming Zionists. Weizmann’s and Marshall’s efforts, opposed by Stephen Wise and other American Zionists, finally came to fruition after many years of dis-
In August 1929, shortly before Marshall's fatal illness, a pact was ratified in Zurich for the establishment of a "Jewish Agency, which would include both Zionists and non-Zionists in the management of Jewish colonization in Palestine under the terms of the British mandate. Marshall's death was a blow to the full implementation of the venture, but his work helped create a tradition of American non-Zionist support that was of great value in the crucial decade after World War I.

Believing in the indivisibility of civil rights, Marshall was a consistent champion of other minorities. Active in the National Association for the Advancement of Colored People, he fought major legal battles on behalf of blacks. In 1920, alarmed at hysterical anti-Bolshevism, Marshall defended five socialist assemblymen, who were refused their seats in the New York State Legislature.

Marshall's period of leadership coincided with the great era of mass Jewish immigration to the United States and the integration of the immigrants into an urbanized, industrialized society. Representing the native Jewish establishment, he nevertheless displayed a remarkable sensitivity to the needs and desires of the Jewish immigrants, encouraging, guiding, criticizing, but not patronizing. Aided by American democratic traditions and the political power of Jewish voters, Marshall generally used the traditional methods of intercession and quiet diplomacy to achieve his ends. While not uniformly successful, his dignity, sincerity, devotion, and strength combined to produce what a contemporary called "the foremost leader of American Judaism… the American Jew par excellence."

His son, George Marshall (1904–1939), conservationist, served as an economist with the National Recovery Administration from 1934 to 1937. Marshall devoted his efforts to the cause of conservation. He was managing editor of The Living Wilderness from 1957 to 1961 and was a director of the Sierra Club and the California Conservation Council.

Another son, James Marshall (1896–1986), lawyer and educator, studied law at Columbia University and was associated with his father's firm, Guggenheimer, Untermyer, and Marshall from 1920 to 1930. After independent practice from 1930 to 1934, he became a member of the firm of Marshall, Bratter, Greene, Allison and Tucker. In addition to numerous other civic responsibilities, Marshall was a member of the New York City Board of Education from 1938 to 1952 and served as its president from 1938 to 1942. Active in Jewish communal life, he held important posts in the American Jewish Committee, Joint Distribution Committee, Jewish Publication Society, and American Friends of the Hebrew University.

A third son, Robert Marshall (1901–1939), served as director of the forestry division of the U.S. Office of Indian Affairs from 1933 to 1937. He became chief of the division of recreation and soil conservation of the U.S. Forest Service and held the position until his death.

"MARTUS, C. VIBIUS, successor to Petronius as Roman governor of Syria (42 C.E.). Marsus appears to have regarded the Judean king Agrippa I with more than the average Roman suspicion toward Jewish leaders and went so far as to inform the emperor *Claudius* of these suspicions. When Agrippa began to fortify the walls of the northern side of Jerusalem, the act was immediately reported by Marsus to the emperor. Claudius ordered the immediate cessation of the fortification, suspecting that a revolution was at foot. Marsus again intervened in Judean affairs when he disbanded the meeting of vassal kings convened by Agrippa at Tiberias. From that time, according to Josephus, Agrippa was at odds with Marsus. Marsus was succeeded in Syria by Cassius Longinus in 45 C.E.

[Isaiah Gafni]

**MARTHA**, daughter of Boethus, mentioned in Mishnah Yev. 6:4 (cf. Sifra, Emor ch. 2:6) as a widow who was betrothed to *Joshua b. Gamla. According to this Mishnah, Joshua, who was subsequently appointed high priest, was nevertheless permitted to consummate the marriage. Martha's sons are mentioned in Tosef. Yoma 1:14 as priests serving in the temple, but it is not clear whether these are the children of Joshua b. Gamlia, or of her first husband, who may also have been a priest. A tannaitic midrash already uses Martha as a paradigmatic figure of an extremely wealthy widow (cf. Yer. Ket. 5:11, 30b), and the Talmud (Yev. 61a) relates that she paid King Yannai a small fortune in order to assure that Joshua b. Gamlia would be appointed as high priest. In the *aggadot* concerning the fall of Jerusalem (Git. 56a), Martha is portrayed as one of the wealthiest women in the period preceding the destruction of the Temple (70 C.E.), who was forced during a time of famine to venture out on her own to seek a morsel of food. When some excrement came into contact with her skin she died, thus fulfilling the prophecy of Moses in Deut. 28:36. Presumably the traditions concerning Miriam, daughter of Boethus (Lam. R., 1:47), whose family rose to a position of prominence in Herod's time, are also a later literary development of the tannaitic traditions concerning Martha, daughter of Boethus.

"MARTI, KARL (1855–1925), Swiss-German Bible scholar. Marti studied at Basel in Switzerland with Emil Kaftanz, and with Franz Delitzsch at Leipzig in Germany. He taught at Basel university (1881–91) and was professor of theology (from 1895) and of Semitic philology (from 1901) in Bern(e) until his death. Marti wrote critical studies on Jeremiah (1889) and Zechariah (1892), and a concise grammar of biblical Ara-
maic (1896; 1911). He edited the second edition of A. Kayser's *Theologie des Alten Testaments* (1894; 1907), bearing the title *Geschichte der israelitischen Religion*, a critical evaluation of biblical religion based on the *Wellhausen-Graf reconstruction of Israel's history. Though a staunch Wellhausenian with regard to the biblical texts, Marti paid more attention to the ancient Near Eastern world in which they were produced. In the *Kurzer Hand-Commentar zum Alten Testament*, of which he was a co-editor, he wrote the volumes on Isaiah (1900), Daniel (1901), the Minor Prophets (1904), and the introductory volume, *Die Religion des Alten Testaments unter den Religionen des vorderen Orients* (1906; *The Religion of the Old Testament*, 1907). In the series *Die Heilige Schrift des Alten Testaments* he annotated Deuteronomy (1909), Daniel, and the books of Joel, Obadiah, Zechariah, Haggai, and Malachi of the Minor Prophets (1910). Among his numerous articles on biblical studies and Judaica there is a strongly biased one on the nature of the Christian mission to the Jews ("Zur Judenmission," in: *Kirchenblatt für die reformierte Schweiz*, 1886). Yehezkel *Kauffman was a student of his."

"MARTIAL (M. Valerius Martialis); c. 40–104 C.E., Roman epigrammatist. Martial ridiculed the Jewish rite of circumcision (*Epigrammaton*, 7:55) and speaks mockingly of women who fast on the Sabbath (*ibid.*, 4:4). In common with other classical writers (e.g., Augustus, Strabo, Pompeius Trogus, Persius, and Petronius), Martial confuses the Sabbath with a fast day, probably the Day of Atonement. He referred to licentious Jews who shared vices with their fellow Romans (*ibid.*, 7:36). Martial scolded a circumcised rival poet from Solymae (*ibid.*, 11:94). In common with other Roman satirists (e.g., *Juvenal*), he depicts unfavorably Jewish life in Rome, expressing indignation at the constant growth of that community which he considered strange.

"MARTIN, name of five popes, two of whom were significant in Jewish history.

**MARTIN IV pope 1281–85.** Although he employed a southern French Jewish physician, Martin IV was generally repressive in his actions concerning the Jews. He directed the inquisitors to proceed against lapsed Jewish converts (March 1, 1281), and issued an instruction to the archbishops and bishops of France not to hamper the work of the Inquisition, even suspending the right of sanctuary in the case of Jewish converts suspected of falling away from the faith. A series of articles specifying reforms for Portugal (1284) is partly concerned with the position of the Jews.

**MARTIN V pope 1417–31.** On the whole Martin V was well-disposed toward the Jews. In the first two years of his reign he confirmed the Jews of Germany, Savoy, and Rome in their former privileges, and received favorably a delegation of Italian Jews and another from Spain. In 1419 (and again in 1422 and 1429) he issued a bull protecting the Jews in their synagogues. He resisted the imposition of the "badge, but ordered the Jews to abstain from work on Sundays and feast days. His aim seems to have been to encourage the fullest possible intercourse between Jews and Christians, excepting from his protection only those Jews who conspired to overthrow the Christian faith. His personal relations with Jews appear to have been good: he employed Elijah b. Shabbetai Béér as his physician and gave the Jewish physicians in the Papal States every encouragement in the practice of their profession. Martin may have been the pope who discussed theology with Aaron b. Gerson Abulrab of Catania. To some extent he seems to have striven to moderate the worst excesses of the Inquisition. In 1418, after receiving a complaint that the Jews of Avignon practiced sorcery, infected simple Christians with Jewish superstitions, and demanded interest at a rate of 10%, he instructed the local inquisitor to proceed against them, but he soon attempted to restrain the inquisitor's zeal. The same situation was repeated in his dealings with John of *Capistrano, against whose excesses many of his edicts of protection were probably directed. Thus in 1422 he issued an edict forbidding forcible baptism, since a "man who is known to have undertaken Christian baptism unwillingly rather than of his own accord cannot be supposed to possess true Christian faith," but barely a year later he was induced to withdraw it. In May 1427 John of Capistrano persuaded the queen of Naples (Joanna II) to cancel the privileges of the Jews in her kingdom, but Martin's intervention resulted in the repeal of this edict in the following August.

**MARTIN, BERNARD** (1928–1982), U.S. rabbi and educator. Martin was born in Seklence, Czechoslovakia, and educated in the U.S. He was ordained as a rabbi at Hebrew Union College in 1951, receiving his M.H.L. degree with highest honors. He pursued a combined career as pulpito rabbi and scholar, and received a doctorate in philosophy from the University of Illinois in 1960.

Martin served as rabbi of Sinai Temple in Champaign, Ill., from 1951 to 1957, with a leave of absence to serve as a chaplain in the U.S. army in Japan from 1953 to 1955. He was associate rabbi of Sinai Temple in Chicago from 1957 to 1961 and then senior rabbi of Mount Zion Temple in St. Paul, Minn., until 1966. He held a “centrist” position in the Reform rabbinate, welcoming increased use of Hebrew and ritual, while urging the formulation of “a statement of Jewish theological
belief that will satisfy both the mind and heart of the groping and intellectually sophisticated contemporary Jew.” Martin also served on the boards of Jewish and civic organizations in St. Paul, including the Jewish Fund and Council, Talmud Torah, Jewish Community Center, Council on Religion and Race, and Zionist District.

In 1966, Martin accepted a professorship at Case Western Reserve University in Cleveland, where he became chair of the department of religion in 1967 and Abba Hillel Silver Professor of Jewish Studies in 1968. He was active in the American Academy for Jewish Research, Academy for Jewish Philoso-

MARTIN, DAVID (1915–1997), Australian poet and novelist. Born Ludwig Detsinyi in Budapest, Martin was educated in Germany, but left in 1935 with the rise of Nazi power, spending a year on a kibbutz in Erez Israel. He fought in the Spanish Civil War, and lived in London from 1938, working for various newspapers and the European Service of the B.B.C. He moved to Australia in 1949, and was briefly editor of the Sydney Jewish News. His works include verse collections such as Battlefields and Girls (1942); From Life (1953); and The Gift (1966); and the novels, Tiger Bay (1946); The Stones of Bombay (1950); The Young Wife (1962); and The King Between (1966). Martin contributed stories, criticism, and occasional verse to Jewish publications in England, the U.S.A., and Australia. One of his best-known poems, “I am a Jew,” was published in his Collected Poems, 1938–1958 (1958). His other major Jewish works are a play, The Shepherd and the Hunter (1946), dealing with the Palestine problem in the 1940s, and the autobiographical novel, Where A Man Belongs (1968), which deals with aspects of contemporary Jewish life. Martin was a member of the Australian Communist Party from 1951 until 1959 and remained on the left until the end of his life, advocating a policy of “armed neutrality” for Australia in the 1980s. He wrote an autobiography, My Strange Friend (1991).

MARTIN, TONY (Alvin Morris; 1912– ), U.S. actor and singer. Born in San Francisco, Martin sang over a national radio network in 1932, and was signed for the popular radio show of George Burns and Gracie Allen. His lilting tenor and good looks led to film contracts.

After the Japanese attack on Pearl Harbor in December 1941, Martin enlisted in the U.S. Armed Forces, serving first in the Navy and then with the Army in the Far East. He also sang for a time with the Army Air Forces Training Command Orchestra directed by Glenn Miller. He received several military honors, including the Bronze Star.

Martin combined his singing with acting, notably in the film Casbah (1948), in which he played Pepe Le Moko, the jewel thief. Some of Martin’s other films include Follow the Fleet (1936), Banjo on My Knee (1936), Sing and Be Happy (1937), Kentucky Moonshine (1938), Ziegfeld Girl (1941), Till the Clouds Roll By (1946), Two Tickets to Broadway (1951), Easy to Love (1953), Here Come the Girls (1953), Deep in My Heart (1954), and Let’s Be Happy (1957).

Martin had a successful recording career as well. His biggest hit song was “There’s No Tomorrow” (adapted from the classic Italian song “O Sole Mio”). Some of his other popular hits include “South of the Border,” “It’s a Blue World,” “Tonight We Love,” “To Each His Own,” “It’s Magic,” “La Vie En Rose,” “I Get Ideas,” “Domino,” “Kiss of Fire,” “Stranger in Paradise,” and “Walk Hand in Hand.”

Martin was active on radio from the 1930s to the 1950s on shows such as Walter Winchell’s Lucky Strike Hour, along with his own programs. He then moved to television, where he appeared on variety shows and hosted The Tony Martin Show (1954–56). In 1955 he was nominated for an Emmy for Best Male Singer.

Martin married actress Alice Faye in 1936; they divorced in 1940. He married dancer/actress Cyd Charisse in 1948. He formed a nightclub act with Charisse in 1964, and for many years the couple performed on the cabaret circuit in the U.S. and abroad.

[Martinez, Ferrant]
successor John I in 1382 but John’s edict of 1383 also did not deter Martínez. In 1388 the Jewish community of Seville finally resolved to summon the archdeacon before the supreme court of the crown. In his defense, Martínez claimed that his actions were beneficial to Church and crown and that he had acted with the consent of his superior, the archbishop. Due to the intervention of Queen Leonora in favor of the archdeacon, little resulted from the trial. Even the archbishop of Seville’s prompt removal of Martínez from office was fruitless, for after the deaths of King John and the archbishop in 1390 the archdeacon was reinstated to his former position. Immediately after his reinstatement, he ordered that all synagogues within his jurisdiction be destroyed. The intervention of King Henry 11, who demanded that Martínez rebuild the synagogues and resign from office, went unheeded. As a result of his continued activities, riots broke out throughout Castile in 1391 and spread rapidly to Aragon. In the ensuing destruction and massacres, many Jews were forced to accept baptism. In 1395 Martínez was imprisoned on the order of the king, but he was soon released; after his death the people revered him as a saint.

MARTÍNEZ DE OVIEDO, GONZALO (d. 1340), major-domo (dispensero de la casa del rey) of King Alfonso XI of Castile. He instigated the proposal to expel the Jews from the kingdom of Castile. When in the royal service, Martínez enjoyed the protection of the Jewish courtier Joseph de *Ecija. According to Solomon *Ibn Verga in Shevet Yehudah, he was jealous of his Jewish master and petitioned the king to sell him Joseph and nine other Jews, including the physician Samuel *Ibn Waqr. The king granted his request and the two courtiers R. Joseph and R. Samuel died under torture in prison. Martínez’ influence increased until he was appointed head of the Order of Alcántara. When Abu al-Malik, son of the sultan of Morocco, declared war on Castile in 1339, Martínez advised Alfonso to expel all the Jews from the kingdom and confiscate their property. In spite of the objections of some of the court ministers, the king accepted his suggestion and the Jews of several towns were arrested and their property seized. Martínez led the troops who defeated the Moroccan army, but after his victory he lost favor with the king, probably as a result of the intervention of Alfonso’s mistress Doña Leonor de Guzmán; he was arrested, charged as a traitor, and executed by royal command. Ibn Verga relates that all the tyrant’s property was sold to Jews and his ring handed over to the courtier Moses, probably Moses *Abzardiel.

MARTINI, RAYMOND (1220–1285), Spanish Dominican friar and polemicist. Born in Subirat, Catalonia, Raymond lived for a long time in a monastery in Barcelona, temporarily also in Tunis where he engaged in missionary activity among Jews and Arabs. He studied Hebrew and other Oriental languages at the college of Murcia, founded to train selected friars in the conduct of religious disputations with Jews and Muslims for the purpose of converting them to Christianity. Raymond was able to read rabbinical writings with ease. He took an active part in the disputation with Nahmanides at *Barcelona in 1263 where Pablo *Christiani was the Christian spokesman (see *Barcelona, Disputation of). In 1264 he was appointed a member of the first censorship commission to examine Jewish books for passages allegedly offensive to Christianity. After the disputation of Barcelona, Raymond Martini became one of the chief executors of the anti-Jewish policy of the church.

Raymond’s main work is his Pugio Fidei (“The Dagger of Faith”; c. 1280), divided into three parts of which the second and third are devoted to anti-Jewish polemics. The last part contains extracts from the Talmud, the Midrash, and later rabbinical writings (Rashi, etc.). The book is clearly an attempt to regain the ground lost after the Christian failure in the disputation of Barcelona. Raymond’s polemics are innovative in that he derives his “proofs” of the truth of Christianity or falsehood of the Jewish faith not solely from the Old Testament but mainly from the Talmud and other rabbinical literature. Thus, according to Raymond, Jesus is also announced as Messiah in the aggadah, and the talmudic passage, according to which “the commandments will be abolished in the Hereafter” (Nid. 61b) after the advent of the Messiah, heralds the abrogation of the Jewish laws after the advent of Jesus. Furthermore, Raymond claims that the emendations to the Bible undertaken by Ezra’s collaborators and cited in the Talmud as tikkun soferim have distorted the original text. But his own interpretation of the aggadic text was not always correct, and by arbitrary grouping of sentences out of their original context he often gave them a christological meaning.

Pugio Fidei became the most important and widely circulated medieval anti-Jewish polemic, and supplied polemical source material to disputant friars, Christian scholars, and Jewish apostates (see *Nicholas of Lyre, *Abner of Burgos, *Pablo de Santa Maria, *Arnold of *Villanova, Joshua *Lorki (in his Hebraecomastix, especially for the disputation of *Tortosa)). The manuscript, which was lost for a long time, was brought to light by Justus Scaliger and published by Joseph de Vosius under the title Pugio Fidei… adversus Mauros et Iudaeos (Paris, 1651). A second edition was published by I.B. Carpzov (Leipzig, 1678), who added an anti-Jewish preface “Introductio in Theologiam Judaicam” and a biography of the author. Another anti-Jewish book written by Raymond Martini, Capistrum Iudaeorum, was less important and never printed.

Solomon b. Abraham *Adret took part in a disputation with Raymond or with one of his disciples. Adret wrote a small apologetic work refuting Raymond’s main fictitious proofs from the aggadah for the validity of Christianity, without mentioning the author’s name or work. These refutations, as well as a detailed defense of tikkun soferim against charges of forg-
eries of the biblical text, are also included in Adret's aggadic commentary Ḥidudsei Aggadot (see: Rashba, Resp., 4 (1958), nos. 31 and 187, and J. Perles, 30–56, Heb. sect.).

**MARTON, ERNŐ JECEZKEL** (1896–1960), editor and leader of Transylvanian and Hungarian Jewry. Born in Dicsőszentmárton (now Târnăveni, Romania), Marton was the son of the city’s rabbi. Toward the end of World War I, he participated in Hungarian public life and in 1918 he was appointed general secretary to the district governor. But he quickly left this position, moved to Kolozsvár, and took part in the “Zionist revolution” that was then taking place among the Jews of Transylvania. He joined the group that established the Hungarian-language Zionist newspaper Új Kelet (“The New East”) and was soon appointed editor in chief (1919). From then until his death he was editor of the paper (in Cluj and later in Tel Aviv). Marton was elected to major posts in the Zionist movement in Transylvania.

Marton was one of the founders and leaders of the Jewish Party in Romania and succeeded in convincing Romanian politicians to view the Jews of Transylvania as a national minority. In 1919 he was elected to the city council of Cluj on behalf of the Jewish Party and was appointed vice mayor. In 1932 he was chosen on the same list as a member of the Romanian parliament, where he defended the rights of the Jews.

During World War II, with the reannexation of Cluj to Hungary (1940), the publication of Új Kelet was discontinued. Marton moved to Budapest and joined the executive of the Hungarian Zionist Movement. In 1944, when the Nazis occupied Hungary, he moved to Bucharest and organized rescue activities on behalf of Hungarian Jewry. He renewed his ties with Romanian politicians and designed a program for the large-scale rescue of Hungarian Jews. With the liberation of Hungary, Marton headed a convoy to Budapest to organize welfare programs for the survivors of the ghetto. In 1946 Marton settled in Palestine. Two years later, together with David Dezső Schoen, he renewed publication of Új Kelet in Tel Aviv. He also founded the World Federation of Hungarian Jews and was its first chairman. In addition to numerous articles that appeared for decades in his newspaper, he also published books of ideological problems of Zionism. His most important work is A magyar zsidóság családjai (“Family Tree of Hungarian Jewry,” 1941), in which he developed new theories on the history of the Jews in Hungary. The book also appeared in English translation in Hungarian Jewish Studies (1966), 177–222. (Yehouda Marton)

**MARTOV, JULIUS** (Iuli Osipovich Tsederbaum; 1873–1923), Russian revolutionary, leader of Menshevism. Born in Constantinople, where his father represented the Russian Steamship Co. and trade companies, Martov was the favorite grandson of Alexander *Zederbaum, the Hebrew writer and founder of Ha-Meliz,* but his father, Osip, was a conscious assimilationist. Active in revolutionary student circles in St. Petersburg, Martov was arrested and exiled to Vilna, where he worked from 1893 to 1895 in the Jewish social democratic organization (which in 1897 became the *Bund.* In a programmatic address (later published as *A Turning Point in the History of the Jewish Labor Movement,* Martov urged the creation of a “separate Jewish workers’ organization to lead the Jewish proletariat in the struggle for its economic, civil, and political emancipation”; it would use Yiddish as its language of agitation and champion “equality of rights for Jews.”

Returning to St. Petersburg in October 1895, he joined *Lenin as co-founder of the “Union of Struggle for the Emancipation of the Working Class,”* was arrested in 1896 and was exiled to Siberia. After his term of exile, Martov, together with Lenin and Alexander Potresov, founded the Marxist journal *Iskra* and joined its editorial board abroad (1901–05). He participated in *Iskra’s* crusade against revisionism and “economics” and, reversing his earlier stand on the Jewish question, vigorously opposed the national “separatism” of the Bund, urging Jewish socialists to “assist the organization of the vast majority of the [Russian] proletariat” rather than waste their revolutionary talents on their “own little corner” in the “Pale of Settlement.”

Martov broke with Lenin at the Second Congress of the Russian Social Democratic Party (1903), opposing his bid for personal domination of the party. He led Menshevik opposition to Lenin’s scheme of a narrow party of professional revolutionaries, advocating a broad, inclusive workers’ party adapted to Russian semi-illegal conditions.

During the 1905 Revolution Martov returned to Russia, worked in the St. Petersburg soviet and edited Social Democratic newspapers. In 1906–12 he lived abroad, mainly in Paris, where he edited the Menshevik *Golos sotsialdemokrata.* He supported cooperation with the Bolsheviks and sought to combine legal with underground activities.

During World War I Martov was a central figure of the pacifist Zimmerwald movement. He thwarted Lenin’s attempt to turn the movement into a Bolshevik-dominated tool for civil war and the destruction of the Second International. Upon his return to Petersburg on May 9, 1917, Martov led the faction of Menshevik-Internationalists, who opposed the “defensive” policies of the Menshevik majority and advocated the establishment of a popular front government.
After the Bolshevik seizure of power in October 1917, Martov, together with Raphael "Abramowitz, urged the creation of a socialist coalition government in a vain attempt to prevent the Bolsheviks from establishing a minority dictatorship. He became the leader of a vociferous, semi-loyal opposition that tried to function in the Soviet system by making the Bolsheviks respect their own Soviet constitution. Martov denounced the Bolshevik terror, whether directed against "bourgeois" newspapers, liberal parties, the Czar's family, church dignitaries, or Socialist Revolutionaries, and thus became the revolution's "true voice of conscience." But his supported the Soviet regime against counterrevolution and foreign intervention. When the Menshevik Party was finally outlawed, Martov was allowed to leave Russia (1920). He settled in Berlin to lead the Mensheviks in exile and assist the underground Menshevik remnant in Russia. He edited the Sotsialisticheskii Vestnik and was a leader of the short-lived "Vienna International," which tried to thwart the Comintern's bid to take over the Western independent left-wing parties.

Brave, honest, and gentle, and a beloved figure of Russian and European socialism – even the Bolsheviks mourned him as their "most sincere and honest opponent" – Martov personified the dilemma of revolutionary socialists with humanism and democratic commitments when facing the amoral authoritarianism of Lenin and the Soviet regime.

Martov believed that the advent to socialism would also solve the problem of the Jewish people. He was deeply shaken by the pogroms of 1905–06 and by the "Beils trial, remained personally involved in the struggle against antisemitism, and wrote a little book, Russkii narod i evrei ("The Russian People and the Jews," 1908).

His works, fragmentary and scattered, include Istoriiia rossiiskoi sotsial-demokratii ("History of the Russian Social Democracy," 1918; published in German translation as Geschichte der russischen Sozialdemokratie, Berlin, 1926); Obshchestvennye i umstvennye techenia v Rossii 1870–1905 ("Social and Intellectual Trends in Russia 1870–1905," 1924); Razvitie kropol'nyi promyshlennosti i rabochiy dvizhenie v Rossii ("The Development of Heavy Industry and the Workers' Movement in Russia," 1923). He was chief editor of the monumental Menshevik study Obshchestvennoe dvizhenie v Rossii v nachale XX veka ("The Social Movement in Russia at the Beginning of the 20th century," 4 vols., 1909–14), which is his major scholarly achievement. His moving autobiographical Zapiski sotsialdemokrata ("Notes of a Social Democrat," 1923) is his literary masterpiece.

MARWICK, LAWRENCE (1909–1981), librarian and Oriental scholar. Born in Poland, Marwick immigrated to the United States in 1929. During World War II he served in the U.S. intelligence corps. From 1948, for more than 30 years, he was head of the Hebraic section of the U.S. Library of Congress. After the war he was the assistant director of the Board of Jewish Education in St. Louis. In 1954–56 he lectured in Arabic and Islamic studies at Dropsie College and from 1961 in modern Hebrew literature and Arabic at New York University. Marwick was a member of the American Academy of Jewish Research and the board of governors of Dropsie College.

In 1993 the Library of Congress published Yiddish American Popular Songs, 1895 to 1950, a bibliographic catalog of Yiddish music based on Marwick's work. He had compiled entries of more than 3,000 Yiddish songs from the Catalog of Copyright Entries. Focusing on Yiddish-American plays and sheet music that had been deposited in the Library of Congress for copyright registration but were virtually unknown to scholars, Marwick's work provides a historical perspective on the evolution of Yiddish music in America. Musicologist Irene Heskes completed the volume for publication.

[Alfred Einstein]

MARX, ADOLF BERNHARD (1795–1866), German musician. Born in Halle, he was originally a lawyer, but in 1810 became professor of music at Berlin University, a post that had been intended for but declined by the 21-year-old Felix Mendelssohn. In 1850 he helped to found the school still known as the Stern Conservatory and taught there till 1856. He wrote operas, lieder, a piano sonata, a symphony, and an oratorio Moses (1843), but achieved no importance as a composer. His theoretical and critical works, however, retain their value, the most important being a four-volume work on composition, Die Lehre von der musikalischen Komposition (1837–47); Ludwig van Beethoven, Leben und Schaffen (1859); Gluck und die Oper (2 vols., 1863); and a work on the interpretation of Beethoven's piano works (1863). Marx's memoirs, Erinnerungen aus meinem Leben, were published in two volumes in 1865, and a collection of his articles appeared in three parts, from 1912 to 1922.

MARX, ALEXANDER (1878–1953), historian, bibliographer and librarian. Born in Elberfeld, Germany, Marx grew up in Koenigsberg (East Prussia). His studies were interrupted by a year in a Prussian artillery regiment where he excelled in horsemanship. Later he studied at the University of Berlin and at the *Rabbiner-Seminar (Berlin), marrying in 1905 Hannah
the daughter of D.Z. *Hoffmann, rector of the Seminar. In Berlin, he was influenced by Moritz Steinschneider. In 1903 Marx accepted Solomon Schechter's invitation to teach history at the Jewish Theological Seminary of America and became its librarian.

His mastery of the materials of history and of languages became proverbial. He published articles in many languages and was at home in classical and Semitic languages. Marx contributed monographs and articles to journals on a wide variety of subjects, published two volumes of collected essays (Studies in Jewish History and Booklore (1944); Essays in Jewish Biography (1947)), and with Max L. Margolis wrote A History of the Jewish people (1927, 1962). This pioneering work, stressing economic and social life, organization and legal status, offers the general reader a soundly researched, authoritative, and objective Jewish history in one volume. Marx amassed a private collection of 10,000 books. The JTS library on his arrival in 1903 contained 5,000 volumes and 3 manuscripts. At his death it possessed 165,000 books and over 9,000 Hebrew, Samaritan, Aramaic, and Yiddish manuscripts, comprising the largest Judaica collection in the world. Marx's ability to determine a manuscript's age merely by looking at it was legendary. His annual reports of the library's growth, containing a detailed description of materials acquired, were eagerly awaited by bookmen and scholars.

In 1926 Marx was elected to the Medieval Academy of America; he served as president of the American Academy for Jewish Research (1931–33), president of the Alexander Kohut Memorial Foundation, vice president of the American Jewish Historical Society, and member of the publications committee of the Jewish Publication Society of America.

His sister, Esther, married S.Y. *Agnon.

His brother Moses (1885–1973) was also a bibliographer and librarian. Best known for his contributions to the field of Hebrew incunabula and 16th-century Hebrew printing, he was a founder of the Soncino Gesellschaft and a Berlin publisher. He issued, inter alia, bibliophile editions of early works by his brother-in-law S.Y. Agnon, and co-edited with Aron Freimann in the 1920s the Thesaurus Typographiae Hebraicae Saeculi XV. In 1926 he went to the United States and joined the staff of the Hebrew Union College Library in Cincinnati. Retiring as head cataloger in 1963, he served briefly as curator of rare books and then settled in Israel. Much of Marx's research in early Jewish printing remained unpublished.

The young Marx's ideas attracted the attention of older radicals and socialists. Moses *Hess, one of the editors of the Rheinische Zeitung, wrote in a letter to the German-Jewish writer Berthold *Auerbach: “Dr. Marx, as my idol is called, is still a very young man; he will give medieval religion and politics their last blow. He combines the deepest earnestness with the most cutting wit. Imagine Rousseau, Voltaire, Holbach, Lessing, Heine, and Hegel united in one person. I say united, not lumped together — and you have Dr. Marx.” While in World War 1 and then worked as a freelance writer for the Havas news agency. He was prominent in politics during the Weimar period, particularly because of his work in the organization of German democratic youth movements. In 1933 he fled Germany and eventually reached England. He returned to Germany in 1946 and was co-founder of a Jewish communal paper for the British zone that later became the Allgemeine Unabhängige Jüdische Wochenzeitung (Dusseldorf), which advocated reparations and diplomatic relations with Israel and opposed neo-Nazi manifestations.

---

**MARX, KARL HEINRICH** (1818–1883), German social philosopher and the chief thinker of modern socialism. Marxism became in the 20th century a new creed for hundreds of millions of socialists, often hardening into a dogma, particularly in the communist movement and in the Soviet bloc, the People's Republic of China, and other communist countries. Born in the Rhineland town of Trier (then West Prussia), Marx was the son of Jewish parents, Heinrich and Henrietta Marx. Heinrich Marx became a successful lawyer, and, when an edict prohibited Jews from being advocates, he converted to Protestantism in 1817. In 1824, when Karl was six years old, his father converted his eight children. Karl Marx was educated at the high school in Trier and studied history and philosophy at the universities of Bonn and Berlin. He was strongly influenced by Hegel's philosophy and joined a radical group known as the Young Hegelians. In 1841 he received his degree of doctor of philosophy at the University of Jena where he presented his dissertation on the "Differenz der demokratischen und epikureischen Naturphilosophie." When his connection with the Young Hegelians prevented him from obtaining a teaching position at the University of Bonn, he turned to journalism. He became the editor of the liberal Cologne daily Rheinische Zeitung in 1842. In the following year he married Jenny von Westphalen, daughter of a high Prussian official. Soon afterward, the Rheinische Zeitung was suppressed and the young couple went to Paris where Marx expected to edit the Deutsch-Französische Jahrbuecher. In fact only one issue was brought out (1844).

The young Marx's ideas attracted the attention of older radicals and socialists. Moses *Hess, one of the editors of the Rheinische Zeitung, wrote in a letter to the German-Jewish writer Berthold *Auerbach: “Dr. Marx, as my idol is called, is still a very young man; he will give medieval religion and politics their last blow. He combines the deepest earnestness with the most cutting wit. Imagine Rousseau, Voltaire, Holbach, Lessing, Heine, and Hegel united in one person. I say united, not lumped together — and you have Dr. Marx.” While
evolving from his philosophy as a Young Hegelian to his own concept of man as creating himself by labor, he transmitted in his writings a passionate yearning for a new, free society in which socialist man will transcend the imposed “alienation” from state – controlled society and from his labor and its fruits. An article contributed to the Deutsche-Franzoesische Jahrbucher by Friedrich Engels led to a lifelong friendship between Marx and Engels. Engels, a fellow Rhinelander of socialist and Hegelian leanings, was the son of a wealthy industrialist with factories in Germany and England and was able to support Marx financially for the rest of his life. Marx, who maintained personal friendly contact with Heinrich *Heine, was one of the editors of Vorwaerts, a German newspaper published in Paris, which contained sharp attacks against the Prussian government. Its ambassador in Paris protested and Marx was expelled from France.

He went to Brussels where he wrote “Misère de la philosophie, Réponse a la philosophie de M. Proudhon” (1847), an attack on the Utopian social order advocated by Proudhon. Marx argued that the capitalistic society leads to the strengthening of the proletariat, a class which of necessity must become revolutionary and must overthrow the contemporary social organization based on exploitation. Socialist theorists should not waste their time in describing how society should be ideally built, but rather analyze what is going on in the present world.

In 1845, while in Brussels, Marx was forced to renounce his Prussian citizenship, and thus became “stateless.” (Sixteen years later he vainly tried to regain it with the help of Ferdinand *Lassalle. He also applied for British citizenship, but the Home Office rejected his application (1874) on the grounds that “this man was not loyal to his king.”) Marx cooperated with the “League of the Just” which became “The League of the Communists” (Bund der Kommunisten) which had its headquarters in London. He attended its second congress in London at the end of 1847 and together with Engels presented a new program for the League called The Communist Manifesto. It was published in February 1848 under the title Manifest der Kommunistischen Partei and rapidly became the best known work of modern socialism. It began with the words “A specter is haunting Europe – the specter of Communism,” and postulated that “the history of all hitherto existing society is the history of class struggles. Freeman and slave, patron and plebeian, lord and serf, guild-master and journeyman, in a word, oppressor and oppressed, stood in constant opposition to one another, carried on uninterrupted, now hidden, now open fight, a fight that each time ended, either in a revolutionary reconstitution of society at large, or in the common ruin of the contending classes.” It ended with the words, “The proletarians have nothing to lose but their chains. They have a world to win. Working men of all countries, unite!” A month after the publication of the Manifesto, Marx was expelled from Belgium and went to Paris. He left for Cologne soon afterward, following the outbreak of revolution in Germany, and became editor of the Cologne daily Neue Rheinische Zeitung. When the revolution failed and political reaction set in, he was expelled first from Cologne and then from Paris. He settled in London soon afterward where, in spite of the financial assistance that he received from Engels, he led the hard life of a political exile until his death.

From 1852 to 1861 Marx partly supported himself by being the London correspondent of the New York Tribune, commenting on current world affairs. He also drafted a resolution of English workers congratulating Abraham Lincoln on his election as president of the United States. For years he was an almost daily visitor to the British Museum Library, where he studied the great economists, many governmental “Blue Books” on industrial and labor relations, gathering material for his magnum opus Das Kapital, Kritik der politischen Oekonomie the first volume of which appeared in Hamburg in 1867. (Volumes 2 and 3 were completed and edited by Engels in 1885 and 1893 respectively.) Marx’s other writings include Die Klassenkämpfe in Frankreich 1848–1850 (1850; Eng. translation The Civil War in France, 1882); Der achttzehnte Brumaire des Louis Bonaparte (1852), and Zur Kritik der politischen Oekonomie (1859; Eng. trans. Critique of Political Economy, 1904).

Marx was not only a theoretician, he also took active part in the labor and socialist movement, and especially in the International Workingmen’s Association (The First International), being a leading member of its General Council. But he lacked the qualities of a popular leader and his followers constituted a small minority of the association.

**Marx’s System**

Marx had an exceptionally powerful mind and a rare capacity for research; his knowledge was encyclopedic. His influence on the modern world has been compared to that of the great religions, or Newton and Darwin. His work is the more difficult to understand as Das Kapital remained unfinished, and certain aspects of his doctrine only slightly sketched. His (and Engels’) system – Marxism – is also known under the names of “economic” or “materialist determinism,” “dialectical materialism,” or “scientific” (as opposed to “utopian”) socialism. From Hegel he took the dialectical method, but ultimately applied it in a sense opposite to Hegel’s idealist philosophy.

In what Marx calls “the social production” men enter into relations that are indispensable and independent of their will. These “relations of production” correspond to a definite stage of development of the material powers of production. The totality of these “relations of production” constitutes the real basis on which rises a legal and political “superstructure,” and to which correspond definite forms of social consciousness. The consciousness of men does not determine their existence, but on the contrary, is determined itself by their social existence. At a certain stage of their development, the “material forces of production” come in conflict with the existing “relations of production” or – what is but a legal expression of the same thing – with “the property relations” within which
Marx and the Jews

Marx's father Heinrich, whose original name was Hirschel ha-Levi, was the son of a rabbi and the descendant of talmudic scholars for many generations. Hirschel's brother was chief rabbi of Trier. Heinrich Marx married Henrietta Pressburg, who originated in Hungary and whose father became a rabbi in Nijmegen, Holland. Heinrich received a secular education, obtained a law degree, detached himself from his family and eventually also from his religion. Marx's mother spoke German with a heavy Dutch accent and never learned to write a grammatical letter in German. Intellectually she had little in common with her husband and son.

Carl Marx's attitude to Jews and Judaism has been discussed from different points of view, and therefore it is not surprising that it evolved into what was later described as "self-hatred," too. At the age of 15 he was solemnly confirmed and became deeply attached to Christianity and German culture. Great influence on him was exercised by his future father-in-law, Baron Johann Ludwig von Westphalen, who was a neighbor of his family. But later his relations with other members of his wife's aristocratic family became strained. For them he was a Jew, an atheist, a nonconformist, a man lacking in good manners.

Marx's first essay in the Deutsch-Französische Jahrbücher was entitled Zur Judenfrage ("About the Jewish Question"), in which he criticized Bruno Bauer's book on the topic. Bauer had insisted that the Jewish question was essentially a religious one, insoluble unless the Jews gave up their faith and joined the society of the state as atheists or non-Jews. Although Marx favored political emancipation of the Jews, he used violent anti-Jewish language to present his view. Judaism for him was synonymous with the hated bourgeois capitalism. "The chimera of the hated bourgeois capitalism is larger than M, else the whole process would involve no more than gratuitous trouble to the capitalist. Thus the labor power produces more than its value. This surplus value is the evidence and measure of the exploitation of the laborer by his employer.

Compared with this point of view, which positions Marx in an antisemitic context, new research has emphasized the fact that he did not criticize Jews as Jews but as representatives of capitalism. These studies point to his closeness to other contemporary Jewish intellectuals like Moses Hess in Uber das Geldwesen (1845).

For six years Marx lived in London at 28 Dean Street, the house of a Jewish lace dealer. While on a holiday, he met the Jewish historian Heinrich Graetz in Carlsbad and sent him his book on "The History of the Commune" as a present. Two years prior to his death the wave of anti-Jewish pogroms occurred in Russia (1881) and the influx of Jewish immigrants into London began. But there is no evidence of Marx's reaction to these events. His beloved daughter Eleanor, however, who acted as his secretary, considered herself Jewish, took interest in her ancestors, and had a warm appreciation for the Jewish workers in the East End of London. (She committed suicide in 1898 after an unhappy marriage to Edward Aveling.)

Marx's Jewish origin became a catalyst of anti-Jewish emotions. Already his rival in the First International, the Russian anarchist Michael Bakunin did not refrain from anti-Jewish outbursts while attacking Marx. Later it served right-wing propagandists, particularly the fascist and Nazi regimes of the 1930s and 1940s, as a means to spice their anti-socialism with outright violent antisemitism. They used the term "Marxism" as denoting a sinister, worldwide "Jewish" plot against their national interests. In the Soviet Union, where Marxism-Leninism became the obligatory ideology, Marx's Jewish origin was generally mentioned in research works and encyclopedias until the 1940s, but from the later 1940s, when "Stalin's policy became anti-Jewish, it has been studiously concealed.
MARX BROTHERS

Collected Editions

The Marx-Engels (later the Marx-Engels-Lenin, and still later Marx-Engels-Lenin-Stalin) Institute in Moscow started in 1927 the publication of an academic edition of the collected works of Marx and Engels. In 1935 the publication was interrupted. There appeared the following: Marx-Engels, Historisch-kritische Gesamtausgabe; Werke, Schriften, Briefe first part: Saemtliche Werke und Schriften mit Ausnahme des “Kapital” (7 vols., 1927–35); third part: Der Briefwechsel zwischen Marx und Engels (4 vols., 1929–31). The volumes published thus far include the writings of Marx and Engels up to 1848 and all the known correspondence between Marx and Engels, 1844–83.

The early volumes were edited under the direction of D. Ryazanov. An earlier collection is Franz Mehring’s edition, Aus dem literarischen Nachlass von Karl Marx, Friedrich Engels und Ferdinand Lassalle (4 vols., 1902). D. Ryazanov edited the Gesammelte Schriften von Karl Marx und Friedrich Engels 1852 bis 1862 (2nd ed., 1920). For a bibliography of Marx’s works, see Ernst Drahm, Marx-Bibliographie (2nd ed., 1933). Reliable and good selective bibliographies on Marx, Engels, and cognate subjects are found in Donald Drew Egbert and Stow Persons (eds.), Socialism and American Life (vol. 2, 1952, pp. 34ff., and passim). After World War II a new edition of Karl Marx’ and Friedrich Engels’ works, Werke (ed. by the Institute of Marxism-Leninismus beim ZK der SED), was published in the German Democratic Republic in 39 volumes and one supplementary volume in two parts and two index-volumes from 1956 until 1971 (Abhrev. MEW). Another similar new edition of Karl Marx’ and Friedrich Engels’ works was begun in 1975 as Gesamtausgabe (ed. by Institut fuer Marxismus-Leninismus beim ZK der KPdSU and the Institut fuer Marxismus-Leninismus beim ZK der SED), and continued, after the fall of the Communist regime in Russia and East Germany, by the International Marx-Engels Foundation in Amsterdam (Abhrev. MEGA).

MARX BROTHERS, U.S. theatrical comedy team. Zany and irreverent, their wild and impromptu humor appealed to lowbrows and intellectuals alike. Originally, there were five Marx Brothers. All were part of a vaudeville act called “Six Musical Mascots” (their mother, Minnie, a sister of the vaudeville actor Al *Shean, was the sixth). The brothers, all born in New York, were chico (leonard, 1891–1961), harpo (adolph, later arthur, 1893–1964), gummo (milton, 1894–1977), groucho (julius, 1895–1977), and zeppo (herbert, 1901–1979). When their mother left the act, they became “The Nightingales” and played in vaudeville as singers and comedians until they reached the Palace Theater in New York in 1918. They made their Broadway debut in 1924 in a revue called I’ll Say She Is. By that time, the brothers had developed a distinct comic style. chico donned a pointed hat over a deadpan face and affected an Italian accent. He was also an accomplished piano player, and he frequently broke the comedy with a turn at the keyboard. harpo, with a battered hat over a frizzled wig of blond curls, never spoke during the act. He used two means to communicate—a bulb horn on stage and a romantic harp. He played the harp at concerts as well as in films. groucho, wearing a swallowtail coat, chewing a long cigar and wearing a large black moustache, was master of the insult. After the brothers’ film career had ended, Groucho confirmed his reputation as a wit as the master of ceremonies on a tv weekly quiz show. zeppo, the straight man of the team in the movies, left the act in the early 1930s, and became a successful theatrical agent. gummo, who was in the act only briefly, also became a successful agent. Their succession of stage and film comedies—as such as The Cocoanuts (1929); Animal Crackers (1930); Horsefeathers (1932); Duck Soup (1933); A Night at the Opera (1935); and A Night in Casablanca (1946)—were considered cinema classics which continued to attract audiences on their many replays. Harpo’s autobiography, Harpo Speaks, appeared in 1961. Groucho wrote Groucho and Me (1959), an autobiography, and Memoirs of a Mangy Lover (1963). His prolific and unconventional correspondence was published as The Groucho Letters in 1967. The Library of Congress asked him for the letters and papers, which included the manuscripts of his books. In one celebrated letter, he wrote gov. William Scranton of Pennsylvania in 1964 to tell him he had heard him mispronounce a Yiddish term. “If you are going to campaign in Jewish neighborhoods,” Groucho counseled, “rhyme mish-mash with slosh.”

The comedy world of Groucho, Chico, and Harpo was
wildly chaotic, grounded in slapstick farce, lowbrow vaudeville corn, free-spirited anarchy, and assaults on the myths and virtues of middle-class America. Groucho was larger and more antic than life. His humor was based on the improbable, the unexpected, the outrageous. Animal Crackers gave Groucho his most celebrated character, Capt. Jeffrey T. Spaulding, a bumbling African explorer ("My name is Captain Spaulding, the African explorer," Groucho sang, "did someone call me schnorrer?"). Groucho was a master of the ad lib and refused to follow the scripts of his plays and movies, although some of them were turned out by such masters of comedy as George S. *Kaufman and S.J. *Perelman. Groucho supplemented his meager formal education by reading omnivorously. For some years he carried on a correspondence with the poet T.S. Eliot, and in 1965 he was invited to speak at a memorial for Eliot. Typically, he used the occasion to say something outrageous: "Apparently Mr. Eliot was a great admirer of mine – and I don't blame him."

[Stewart Kampel (2nd ed.)]

MARYAN (pseudonym of Pinchas Burstein; 1927–1977), U.S. painter. Born in Nowy-Sacz, Galicia, Poland, the artist was deported at the age of 12 to concentration camps, including Auschwitz. All of his family perished in the camps. Maryan survived but with one leg amputated. He spent three years in German displaced persons camps, working as a stage designer for detainee-organized Jewish drama groups. In 1948 he immigrated to Israel, studying art for a short period at the New Bezalel School of Art, Jerusalem. In 1950, he traveled to Paris and attended the École des Beaux-Arts, where he studied lithography. In Paris, he was briefly affiliated with the CoBra group, as well as the artists of the École de Paris. Paris also exposed Maryan to the influence of such artists as Pierre Soulages, Victor Brauner, and Jean Dubuffet. Maryan relocated to New York in 1962, where he became a successful artist and illustrator. He attained American citizenship in 1969, further changing his name from Maryan to Maryan S. Maryan. The artist's unsettling compositions, what he termed "truth-paintings," depict traumatized, ravaged, and distorted figures posed frontally in a shallow space, references in part to Maryan's recollections of the Holocaust. In the 1950s, Maryan composed Jewish figures with prayer shawls and phylacteries. Later, these religious adornments are abstracted, contributing to the striped bloated appendages characteristic of so much of Maryan's mature compositions; they also recall the striped garb of concentration camp prisoners. Many of Maryan's figures are bound, twisted, and penetrated, with mouths agape, genitals sometimes visible in a show of both exhibitionism and terrible vulnerability. His figures exude all manner of bodily fluids from every orifice, often in large, stylized drops. Beginning in the 1960s, Maryan titled his biomorphic figures "Personages" in reference to their theatrical aspects. Many of these compositions reference the Holocaust directly; for example, his 1962 painting Personage depicts a mocking Nazi stormtrooper tinted a garish yellow. This figure mockingly challenges the viewer at some ominous game, suggested by the blood-red chess pieces positioned at the end of a tilting table. The artist continued the motif of the Nazi soldier in many works in 1962–63, repeating an iconography of hat, armband, and repugnant facial features. Maryan's "Personages" often bear some sort of insignia or suggestions of military authority. However, the artist unmoors these singular, isolated figures from any narrative content, mocking their authority, and depicting them as impotent and ridiculous. Maryan subverts the distinction between torturer and sufferer, master and servant, self and other, often combining these players into a single figure. Maryan made a film in 1975 entitled Ecce Homo. In addition to stock images of famous persons ranging from Pope Pius XII to Moshe Dayan and Jesus, the film featured a series of Maryan's drawings, and the artist himself in various costumes relating his memories of the concentration camps. He illustrated Kafka's The Trial in a 1953 edition, Golem (1959), and La Ménagerie Humaine (1961). In 1956, the French government commissioned him to design a tapestry for the Monument to the Unknown Jewish Martyr in Paris. His work influenced Philip Guston and Peter Saul. From 1949, Maryan had numerous solo shows in such cities as Jerusalem, Paris, Amsterdam, Munich, New York, and Chicago. His art is represented in museums around the world, including the Art Institute of Chicago; the Musée national d'Art Moderne, Paris; Museum Moderner Kunst Stiftung Ludwig Vien, Vienna; the Museum of Modern Art, New York; the National Museum of Modern Art, Washington, D.C.; the Nationalgalerie, Staatliche Museen, Berlin; and the Tel Aviv Museum of Art.

[Nancy Buchwald (2nd ed.)]

MARYLAND, state on the E. coast of the U.S., one of the 13 original states. A one-crop tobacco economy and the existence of few major towns caused Jews, with rare exceptions, to avoid the colony during the first century and half after its establishment in 1634. David Fereira, a Jewish tobacco trader from New Amsterdam, appeared in Maryland as early as 1657 and later the same year colonial records mention a Jewish physician, Jacob Lumbrozo, who was also engaged in trade. Lumbrozo, a colorful figure who was often in conflict with his neighbors, was arrested in 1658 for blasphemy after offending Christians colonists during a conversation about religion. He was released before trial, however, due to the proclamation of a general amnesty. After the 1740s, with the growth of commerce in the colony, individual Jews appeared in Annapolis, Fredericktown (now Frederick), and a
few other towns, but a Jewish community with supporting institutions did not emerge until the period of the American Revolution, when Baltimore became one of the region’s leading ports and attracted several Jewish families. By 1825, there were about 150 Jews in the new state. Although Baltimore Jews like Solomon Etting and Jacob I. Cohen, Jr., achieved a degree of prominence in the larger, non-Jewish community, the state constitution barred them from holding public office unless they would submit to a Christian oath. This requirement was finally removed with the passage of the 1826 “Jew Bill,” which was championed by the non-Jewish legislator Thomas Kennedy.

Between 1830 and 1870 over 10,000 Jews, primarily from Germany and other areas of Central Europe, settled in the state. Eastern European Jews began to trickle into Maryland during the 1850s and arrived in large numbers from the 1880s. While the vast majority of Jewish immigrants were drawn to Baltimore, Jews also settled in smaller towns as peddlers and merchants. In 1853, the first congregation outside Baltimore was established in Cumberland, an important trading and transportation center in the western part of the state. By the time mass immigration ended in the mid-1920s, there also existed congregations in Frederick, Hagerstown, Annapolis, Frostburg, Brunswick, and Salisbury. Statewide, the Jewish population reached about 40,000 in 1900 and grew to 65,000 by the end of the immigrant period.

In the years following World War II, Jews entered more fully into the life of the general community and were among the state’s top officeholders. Marvin Mandel, a Baltimore native, served as governor from 1969 to 1979. This period was one of great demographic change, with more than 50,000 Jews from Washington, D.C., settling in the nearby Maryland suburbs of Montgomery and Prince George counties. By 1998, this region was home to 104,500 Jews and had come to rival Baltimore and its surroundings (Jewish population 94,500) as the state’s largest Jewish population center. Jews also increasingly established themselves in areas outside the Washington suburbs and Baltimore, with 10,000 residing in Howard County, almost 2,000 in Annapolis, and more than 1,000 in Frederick and in Harford County. Overall, the estimated Jewish population of Maryland in 2001 was 213,000 out of a total of 5,311,000.

[Eric L. Goldstein (2nd ed.)]

**MARZOUK, MOSHE** (1926–1955), *Cairo-born* Karaite Jew of Tunisian origin who was tried by a military court in Cairo on charges of spying for Israel and was executed on Jan. 31, 1955. In 1954 three Jews were arrested in *Egypt and accused of setting fire to the USIS Library in Alexandria. Their arrest led to the discovery of a spy ring in Egypt and the imprisonment of ten other Jews, among whom were Marzouk and Samuel Azaar. Two of the prisoners managed to escape and the others were brought to trial on Dec. 10, 1954. According to the indictment, the accused had gathered information for Israel, carried out acts of sabotage, and spread false reports in Egypt designed to create public unrest. During the course of the trial, Max Bennet – described as the leader of the ring – committed suicide, after which Marzouk became the chief suspect. It was alleged that he had organized the Cairo group, had been trained in Israel, and had arranged wireless transmissions to Israel.

During his student days at the Cairo Medical School, Marzouk had become convinced that the future of all Egyptian Jews lay in their migration to Erez Israel. He dedicated his life to the realization of his Zionist ideals and, while working as a doctor at the Jewish Hospital, organized the self-defense of the Cairo Jewish Quarter, helped to send young Jews to Israel, and, although he himself could have left, stayed at his post and worked for Israel.

**SAMUEL AZAAR** (1929–1955), native of Alexandria of Turkish parentage, had been active in Zionist youth movements at an early age. A youth of great promise, he was awarded a scholarship that enabled him to study electronic engineering. Like Marzouk, he chose to stay in Egypt and carry out his mission. During the trial he was described as the head of the Alexandria group and was accused of operating an underground workshop to manufacture sabotage devices.

The trial of the ten defendants came to an end on Jan. 27, 1955. Two were acquitted, six were sentenced to prison terms ranging from five years to life, and Marzouk and Azaar were sentenced to death. In Israel, “Kedoshei Kahir” (the Martyrs of Cairo) as they came to be known were honored and commemorated in various ways.

[Mordechai Shalev]
MASADA (Heb. מְצָדָה, *Meẓadah*), Herod’s palatial fortress and the last stronghold during the Jewish War against Rome (66–73/74 C.E.).

**Geography**

Masada is situated on an isolated rock plateau on the eastern fringe of the Judean Desert near the western shores of the Dead Sea, south of En Gedi. It is a mountain bloc that rose and was detached from the fault escarpment, surrounded at its base by two wadis. The rhomboid shaped rock is approximately 1,950 ft. (600 m.) long and approximately 1,000 ft. (300 m.) wide in its center. The plateau at its top rises 1,475 ft. (450 m.) above the Dead Sea level. The site was close to two ancient routes: one that crossed the center of the Judean Desert leading to southern Moab and one that connected Edom, Moab, and the Arava Valley with En Gedi and Jerusalem. The remote location and natural defenses of Masada made it an exceptional fortified site during the Second Temple period. The natural approaches are steep and arduous and include the “snake path” mentioned by Josephus on the east, and approaches on the cliff’s northern and southern sides.

The name Masada appears in Flavius Josephus’ writings in Greek transcription. It derives from the Hebrew and Aramaic word *mezad* (“stronghold”). Masada is mentioned in a divorce deed and an *ostracon* (inscribed pottery sherd) that were uncovered in the Murabba’at caves.

**Sources**

The only significant source of information about Masada is the writings of Flavius *Josephus* (Ant., 14, 15; Wars, 1, 2, 4, 7). Josephus was the commander of Galilee during the First Jewish Revolt, who later surrendered to the Romans at *Jotapata* (Yoѓfat). At the time of Masada’s siege he was in Rome, where he devoted himself to chronicling the history of the Jews and thereafter the occurrences of the revolt. He presumably based his narration upon the field commentaries of the Roman commanders that were accessible to him. Masada is also briefly mentioned by Strabo (Geography 16, 2:44) and Pliny the Elder (Natural History 5:17, 73), which was the source for Solinus (third century C.E.) and Martianus Capella (c. 400 C.E.).

**History**

Josephus provides us with two versions regarding the identity of the founders of the fortress at Masada. In one passage he attributes the first construction to “ancient kings” (Wars, 4:399). According to another passage, Masada was first fortified by “Jonathan the High Priest” (Wars, 7:285). Scholars disagree as to the identity of this Jonathan – whether he was referring to the brother of Judah Maccabee (mid-second century B.C.E.) or Alexander Ḥananai (103–76 B.C.E.), who was also called Jonathan.

During an uprising against the house of Antipater, Masada came under the rule of Felix in 42 B.C.E. It was *Herod* who soon seized back control of the fortress (Ant., 14:296; Wars, 1:236–38).

In 40 B.C.E. Herod fled from Jerusalem to Masada with his family to escape from Mattathias Antigonus, who had been made king by the Parthians. He left his family, his brother Joseph, and 800 men there to defend it against a siege by Antigonus (Ant., 14:361–2; Wars, 1:264, 267). According to Josephus the defenders almost died of thirst during the siege but were saved when a sudden rainstorm filled the creeks and pits on the summit of the rock. Herod, returning from a trip to Rome, raised the siege and carried his family off to safety (Ant., 14:390–91, 396, 400; Wars, 1:286–87, 292–94). As a result: “Herod furnished this fortress as a refuge for himself, suspecting a twofold danger: peril on the one hand from the Jewish people, lest they should depose him and restore their former dynasty to power; the greater and more serious from Cleopatra, queen of Egypt” (Wars, 7:300). During his reign, Herod transformed Masada into a palatial fortress, providing it with luxurious palaces, bathhouses, well-stocked storerooms, cisterns, all encircled with a casemate wall.

Following the death of Herod in 4 B.C.E. the site was in the boundaries of Herod Archelaus’ kingdom. After his removal from power by the Romans and the annexations of Judea to the Roman Empire in 6 C.E. it can be assumed that a Roman garrison was probably stationed there until the out-break of the First Jewish Revolt in 66 C.E. Masada was captured “by stratagem” in that year by a band of *sicarii* under the command of *Menahem son of Judah* (Wars, 2:408, 433). This group was named after a curved dagger, the *sica*, which they carried. After Menahem was murdered in Jerusalem, his nephew, *Eleazar ben Jair*, fled Jerusalem to Masada and became the commander of the rebel community on the mountain until its fall in 73/74 C.E. Masada became a place of refuge for a heterogeneous population, apparently including *sicarii*, Essenes, and Samaritans. *Simeon bar Giora* also stayed there for a time. The last of the rebels fled to Masada from Jerusalem in 70 C.E. In 73/74 C.E. the Roman governor, Flavius Silva, marched against Masada. After a siege that lasted a few months, the Romans breached the wall of the fortress and set a fire to the inner wood and soil wall. When the hope of the rebels dwindled, Josephus put in Eleazar ben Jair’s mouth two speeches in which he persuaded his followers to take their own life rather than fall into the hands of the Romans. Josephus narrated these occurrences that ended in the mass suicide of 960 men, women, and children and the burning of the buildings and stores of food. The gloomy end of Masada was told by two women who together with five children survived by hiding in one of the cisterns. After Masada’s conquest, Silva left a garrison there.

The Church Fathers note that during the Byzantine period a monastery was established in a place named “Marda,” which some scholars identify with Masada (Cyril of Scythopolis, Vita Euthymii 11; Johannes Moschus, Pratum Spirituale 158).

**History of Exploration**

Masada was identified for the first time in 1838 by the Americans E. Robinson and E. Smith who viewed the rock which the
Arabs called al-Sabba through a telescope from En Gedi. The site was first visited in 1842 by the American missionary S.W. Wolcott and the British painter Tipping and next by members of an American naval expedition in 1848. Ten years later, F. de Sauly drew the first plan of Masada. C. Warren in 1867 heading the “Survey of Western Palestine” climbed Masada from the east along the “snake path” and in 1875, C.R. Conder, on behalf of the survey, drew plans which were the most accurate up to that time. Sandel discovered the water system in 1905. The first detailed study of the Roman camps was made by A.V. Dosamewski and R.E. Bruenow in 1909. Others followed in the beginning of the 20th century, foremost among them, the German A. Schillen, who surveyed Masada for a month in 1932. Aerial photographs were the basis for the studies of C. Hawks (1929) and I.A. Richmond (1962).

The major impetus for the extensive excavations of the site was provided by Israeli scholars, especially S. Guttman, who correctly traced the serpentine twistings of the “snake path” and with A. Alon studied Herod’s water system (1953). He also excavated and restored the walls of one of the Roman camps (Camp A). Large-scale Israeli surveys were conducted in 1955 (headed by M. Avi-Yonah, N. Avigad, Y. Aharoni, and S. Guttman) and again in 1956 (headed by Y. Aharoni and S. Guttman) which established the general outline of the buildings and prepared new plans of the rock. Masada was mainly excavated between 1963 and 1965 by Y. Yadin with a large staff of archaeologists and thousands of volunteers from all parts of the world. Large percentages of the built-up area of the mountain were uncovered as well as probes in Camp F, and restoration of the buildings was carried out at the site simultaneously. A small-scale excavation was conducted by E. Netzer in 1989. Excavations were resumed on top of Masada in 1995 under the direction of E. Netzer and G. Stiebel on behalf of the Hebrew University of Jerusalem. Several seasons were conducted between 1995 and 2000, focusing on the Northern Palace complex, the northwestern sector of the site, the Roman breach, the eastern section of the casemate wall, the Byzantine church, and water installations throughout the mountain. In 1995, a short season was conducted in Camp F and the Roman ramp under the direction of G. Forester, B. Arubas, H. Goldfus, and J. Magness.

Archaeology

Early Periods. As in many Judean Desert sites, evidence of a Chalcolithic occupation (mid-fifth-fourth millennium B.C.E.) including botanical remains, textiles, mats, and pottery sherds were found in a small cave on the lower part of the southern cliff. Few sherds, but no architectural remains, were uncovered on the plateau from the Iron Age I1 (tenth-seventh centuries B.C.E.).

The nature of the Hellenistic presence at Masada is still enigmatic. None of the buildings uncovered to date may be attributed to the pre-Herodian era but possibly two cisterns, located in the eastern sector and the southeast cliff. In addition, merely one oil lamp derives from that period of time. However, Josephus’ testimony concerning the identity of the founders of Masada need not necessarily be taken as contradictory, for it may be narrating sequential occurrences, as indeed emerges from the numismatic finds. The dozen Ptolemaic coins from the third century B.C.E., mainly of Ptolemy II, appear to agree with the reference to “ancient kings” (Wars, 4:399) as the original builders, while the allusion to “Jonathan the High Priest” (Wars, 7:285), clearly a Hasmonaean ruler, is supported by the discovery of four coins of John *Hyrcanus I (130–104 B.C.E.) and dozens of Alexander Yannai’s coins (103–76 B.C.E.).

Herodian Period. Two square enclosures, facing the outlet of the “snake pass,” were noticed in aerial photographs. Although claimed to represent the camp of the pioneer force of the Roman army during the siege of 73/74 C.E., the larger enclosure of the two clearly antedates Camp C and appears to reflect indeed a chronological rather than technical stage. Being a camp of an earlier episode it was seemingly erected during the siege that Mattathias Antigonus laid against Herod’s family and supporters in 40 B.C.E.

The major construction period of Masada was under King Herod’s rule. Netzer demonstrated that the works were carried out in three chronological phases. During the first were built three small palaces, the core of the Western Palace, a building in the upper terrace of the Northern Palace, and soldier barracks, all exhibiting a structure with a central courtyard, as well as three dovecotes (colombaria). The Northern Palace complex, consisting of the public storerooms, the large bathhouse, and Northern Palace, the expansion of the Western Palace, and the water system were seemingly erected during the second phase, while the main feature to be constructed in the third phase was a casemate wall (double wall divided into rooms) that enclosed the perimeter of the plateau. The stone for the constructions derives from two sources: the walls were built from the local dolomite stone which was cut in quarries on top of the mountain and in the huge water cisterns, whereas the more elaborate architectonic features, such as the pillar drums, capitols, and architrave’s parts, were shaped from non-local softer stone. A large group of iron chisels from that period was uncovered at the site. The mason markings, of Hebrew letters, visible on all pillar drums, indicate the origin of the stone cutters.

The Northern Palace Complex. Herod constructed the most important buildings in the northern part of Masada – the highest point of the rock (“acropolis”). The Northern Palace was serviced by public storerooms, administrative buildings, and large bathhouse.

The main entrance to the Northern Palace complex was through its south part, near Building no. VIII, which seemingly served as the “commandant’s residence.” The excavations of Netzer and Stiebel revealed the varied features of the main entrance, the dominant building of which is a large hall that occupies the eastern part of the courtyard. It was originally...
decorated with stucco reliefs and apparently served as a reception hall for Masada’s visitors. Together with the “commandant’s headquarters,” west of the courtyard, this hall formed a lavish entrance, that made it possible to monitor the incoming goods and visitors.

**Northern Palace.** Josephus gives a detailed account of a royal palace situated beneath the walls of the fortress. This palace enjoyed improved climate conditions and commanded a magnificent view of the surroundings as far as En Gedi. It was built in three tiers, the upper containing the living quarters whereas the lower ones were designed for pleasure. The upper terrace is an extension of the narrow tip of the summit and contains a large semicircular balcony bounded by a double wall. A four-room building south of it with two rooms on each side of a court was apparently Herod’s private abode. It is decorated by a typical Roman-style black and white mosaic floor in geometric designs. The walls and ceilings were decorated with frescoes. To the south a great white plastered wall separated the palace from the rest of Masada and left only a narrow passageway at its eastern end for a staircase. Columns had probably stood on the facade of the building and around the semicircular balcony. G. Forester showed that the plan of the upper terrace was directly influenced by villa Farnesina in Rome, which is attributed to Marcus Agrippa, Herod’s benefactor and close friend in Rome. Descent to the lower tiers was through a flight of stairs, parts of which survived in the middle and lower terraces. The middle terrace, approximately 65 ft. (20 m.) beneath the upper one, contained two concentric circular walls which served as a platform for a columned building. A staircase on the west led to the upper level and on the east stood a large room with traces of frescoes; between them was a roofed colonnade, seemingly a library. This terrace was apparently designed for relaxation and a leisurely enjoyment of the view. The bottom terrace, approximately 50 ft. (15 m.) below the middle one, tapers to a narrow point; great supporting walls were built to form a raised, nearly square platform which was surrounded by low walls forming porticoes. Both the inner and exterior walls contained columns composed of sandstone drums plastered and fluted to resemble large monolithic columns. Frescoes on the lower part of the walls were painted to imitate stone and marble paneling. In the eastern corner of the terrace was a small bathhouse built in Roman style.

One of the difficult aspects in the study of the past is to determine the exact time of transition. Herod represents such a case, for in his time Roman trends diffused into the dominant Hellenistic style. Hence, the upper terrace of the Northern Palace was built in Roman style, while the middle terrace is completely Hellenistic in nature. The lower terrace was furnished with a Roman-style small bathhouse.

**Bathhouse.** South of the Northern Palace was a large bathhouse with four rooms and a court built in traditional Roman style. The bather would enter the dressing room (apodyterium), from which one could have enjoyed the tepid room (tepiderarium), hot room (caldarium), and cold room-stepped pool (frigidarium).

The floors of all rooms, except the last, were decorated by mosaic floors which were later replaced by pink and black triangular tiles (opus sectile), while the walls were decorated by frescoes. A Greek inscription praising the tyche was found on the walls of the dressing room. This room underwent changes during the revolt when an immersion pool and a bench made from dismantled pillar drums were constructed there. The largest room, the hot room, was heated through a hypocaust system beneath it and its floor stood on about 200 tiny columns, mostly made of bricks. A furnace drove hot air which heated the floor and the double walls that were furnished with clay pipes. Hot water flowed into a bathtub and quartz fountain set in the room’s niches.

The bathhouse was used by the rebels and a charcoal graffiti of the Legio X Fretensis indicates the presence of the conquering Roman soldiers.

**Storerooms.** Under the northeastern corner of the synagogue building, Netzer and Stiebel uncovered, in 1995, a storage cave from the early days of King Herod’s reign. Sixteen storage jars were found in situ, alongside wine amphoras. The cave appears to antedate the construction of the large storeroom complex. It was presumably destroyed in the severe earthquake of 31 B.C.E., the damage of which is discernible at Qumran.

During the second construction phase public storerooms were built east and south of the bathhouse. The long and narrow rooms were designed to hold food, liquids, and weapons: “For here had been stored a mass of corn, amply sufficient to last for years, abundance of wine and oil, besides every variety of pulse and piles of dates” (Wars, 7:296). The discerning taste was evident in the contents of the storerooms, which included a uniquely large number of inscription-bearing vessels (tituli picti). Among the inscribed jars was a group noting a shipment of wine to Herod, King of Judea, in 19 B.C.E. (the year of the consul C. Sentius Saturninus), from southern Italy by a supplier named Lucius Lanius. Indeed, Josephus mentions that Herod had a special wine servant. In a manner appropriate to a gourmet like Herod, one inscribed vessel was found to exhibit the name of the celebrated fish sauce garum – a product of southern Spain. Fish bones from this delicacy were found adhering to the inner face of this vessel. Following the Roman custom, the king ended his banquets with apples imported from Cumae, Italy.

It seems that valuable goods, like jars containing balsam, or weapons and raw materials sufficient to equip 10,000 warriors, were stored in a group of three storerooms that is situated in the southwest wing of the Northern Palace complex. The entrance to these storerooms was monitored by a guard room. Weapons from Herod’s time were found at Masada, most notably a sheathed gladius Hispaniensis (Spanish sword) and several groups of dozens of spare armor scales.
Near these storerooms was located the service entrance to the Northern complex. Interestingly, the expedition of Netzer and Stiebel excavated courtyard 174, under the floor of which two early phases corresponding to the first and second Herodian building phases were uncovered. It is the first time that stratified material in sealed archaeological contexts from Herod's time was found.

Western Palace. On the western side of Masada Herod erected the Western Palace complex. Covering an area of nearly 37,500 sq. ft. (4,000 sq. m.) it is the largest building found on the site. Yadin attributed ceremonial functions to this Palace, a notion rejected by Netzer, who assigned this function to the Northern Palace. The Western Palace was a self-sufficient unit and consisted of four wings: official wing ("the core"), storeroom wing, service wing, and administrative wing.

The official wing was built around a large central court with a large reception hall leading into a room interpreted by Yadin as the throne room. This notion is based on four depressions in the plastered floor in which the legs of the canopied throne may have been set. In the hall was a magnificent, richly colored mosaic pavement with circles and border ornaments of plant and geometric designs. Recently a charcoal "blueprint" of this mosaic was found on a nearby plastered wall. This wing also contained service rooms as well as bathrooms with tubs, a steeped cold water pool, and other installations, all paved with mosaics. During the period of the revolt, parts of the Palace were clearly used for public functions by the rebels' community, such as a storeroom, bakery, and smithies (see below).

Water System. One of the most impressive engineering projects at Masada is the water system Herod constructed to ensure an adequate supply of water. The system included dams that diverted floodwater of the two wadis, west of Masada, into two plastered channels that fed a dozen large cisterns. The cisterns were hewn on two parallel levels into the rocky slope. Each cistern had a capacity of up to 140,000 cu. ft. (4,000 cu. m.) and together could hold about 1,400,000 cu. ft. (40,000 cu. m.). The cisterns are mostly square in shape and have two openings, one leading from the aqueduct and a second, higher one connected with an inner staircase for drawing out water. Pack animals then bore the water up to the cisterns on the mountain-top. The pass leading from the upper level of the cisterns ended in a gate just south of the Northern Palace ("water gate"). Another pass led from the lower level to the "snake pass."

Casemate Wall. Towards the end of his reign, Herod enclosed the entire summit of Masada, except for the northern tip, with a casemate wall (a double wall with the inner space divided into rooms). Its circumference measures about 1,530 yards (1,400 m.) which corresponds exactly with the 7 stadia of Josephus' description. About 70 rooms, 30 towers, and four gates were found in the wall. The gates consisted of a square room with two entrances, benches along the walls, stone slab pavements, and "masonry-style" stucco decoration. They include the "snake path" gate in the northeast; the western gate in the middle of the western wall, the location in which the Byzantine gate was later erected; the southern ("cistern") gate which led to a group of cisterns; and the northern ("water") gate near the bathhouse which served mainly for bringing water from the upper row of cisterns and was probably also the gate for the northern part of Masada.

From the period when the Roman garrison was stationed at Masada between the time of Herod and the Jewish War hundreds of coins were found from the reigns of Herod Archelaus, Agrippa I, and all Roman procurators.

Period of the Revolt (66–73/4 C.E.)

The site of Masada appears to be a microcosm of the material culture of Second Temple Judea and even beyond. The many finds from this brief eight/seven-year period throw much light on the character of the rebels, their way of life at Masada, and the end of the Jewish War. The rebels made use of the casemate walls' rooms for dwelling. They divided the rooms into small units and erected clusters of shacks constructed of mud and small stones adjoining the wall and other buildings. Cooking stoves and niches for the cupboards were built into the wall. In rooms which had not been burned remains of their daily life were strewn on the floors: clothing, leather, baskets, glass, stone and bronze objects, etc. Piles of charcoal with remnants of personal belongings indicate that they had collected all their possessions at the end and had set fire to them. Hundreds of coins and several scroll fragments were found in the rooms. The towers on the wall seemingly served mainly as public rooms or workshops. One of the workshops in the western casemate wall (1. 1276) was identified as a tannery. However, ecological considerations and the nature of the plastered installations and cross beams discovered there indicate this tower had been transformed into a laundry.

The Herodian palaces were not used for dwellings but rather functioned as command posts, public buildings, etc. Their decorative architectural parts were dismantled for building materials and furniture: floors, roofs, columns, tables, etc. A prominent place was given to the Western Palace. The biggest storeroom at Masada (1. 502) was used for storing food. When excavated, lines of vessels were found, each of which was marked by an ostracon declaring the purity or impurity of the line. Next to this storeroom was located the central bakery of Masada (1. 493). A huge oven (furnus, פורנא) with two grinding posts on each side of the door was uncovered. This domed oven, 3 m. in diameter, was capable of producing hundreds of loaves of bread, the distribution of which was seemingly done in a centralized manner in the nearby courtyard (1. 401), where many receipts mentioning bread were found. These ostraca instruct that on day X was the handing over of Y amount of loaves to Z, the head of an extended family or group of people, who was always a male, manifesting the patriarchal atmosphere of the period. Two smiths, in which iron trilobite arrowheads were forged, are reported from the Western Palace as well.
MATERIAL CULTURE. The historical narration of Josephus and even more the archaeological finds indicate that the community of the rebels was in fact rather heterogeneous and dynamic in nature.

Coins. Numerous coins struck during the Jewish War (66–70 C.E.) were found both in large hoards (of 350, 200, and 100 coins) and in small numbers. Mostly ordinary bronze coins, they also include 37 silver shekels and 35 half-shekels representing all the years of the war and including the rare Year Five. This was the first discovery of shekels in a dated archaeological stratum.

Epigraphy. Outside Qumran, the site of Masada yielded the largest collection of epigraphic finds in Israel. The collection consists of several hundreds of Hebrew- and Aramaic-inscribed ostraca and 14 parchment documents and one papyrus in Paleo-Hebrew characters.

Ostraca. More than 700 ostraca were found, mostly written in Hebrew or Aramaic. Since they can be dated exactly between 66 and 73/74 C.E. they are of great paleographic value and they also shed much light on the organization of life at Masada and the national and religious character of the defenders who scrupulously observed the ritual laws. About half of them were found near the storerooms. These bore single or several letters in Hebrew and may have been connected with the rebels’ community rationing system during the siege. Others indicate tithes and names on others may be those of priests or levites.

Scrolls. Parts of 14 biblical, apocryphal, and sectarian scrolls found at Masada are the first scrolls discovered outside of caves in a dated archaeological stratum. The biblical scrolls are mostly identical with the Masoretic Text but some show slight variations. These include parts of the books of Psalms, Genesis, Leviticus, Deuteronomy, and Ezekiel. Apocryphal scrolls include part of the original Hebrew text of the Wisdom of Ben Sira 39–44, dated to the first century B.C.E., and several lines of the Book of Jubilees.

A fragment of a sectarian scroll of the Songs of Sabbath Service is identical with a scroll found at Qumran. Other small fragments exhibit phrases that appear to be sectarian in nature. It is important for dating the Dead Sea Scrolls and because it indicates that members of the Dead Sea Sect (apparently Essenes) took part in the Jewish War.

This applies also to a papyrus scroll noting in Paleo-Hebrew script the idiom “Har Gerizim” (Mount Gerizim), which is the holy mountain of the Samaritans, the location of their temple. This indicates the presence of Samaritans amongst the rebels’ community at Masada.

RECOMMENDATIONS. The historical narration of Josephus and even more the archaeological finds indicate that the community of the rebels was in fact rather heterogeneous and dynamic in nature.

Religious Life. Mikva’ot (Ritual Baths). Masada was the first site in which ritual immersion pools (mikva’ot) were recognized as such, an installation that came ever since to be a fossile directeur of Jewish settlements. The plastered, commonly stepped, pool had a source for rainwater that flowed directly into it. A relatively large number of mikva’ot was uncovered at Masada. Two were constructed in the southeastern sector of the casemate wall (l. 1197, 1162), one in the Northern Palace complex’s administrative wing (l. 151), and near the synagogue (l. 1301). Another mikveh was documented in a cave in the southern cliff (l. 2006/1), in small palace XI (l. 601), and near the middle terrace of the Northern Palace (l. 67). To this group we may add two plastered pools, from the time of the revolt, that were built in the Large Bathhouse (l. 105, 104). It was suggested that during the revolt the stepped pools were in the frigidaria of the lower terrace of the Northern Palace (l. 8), in the Large Bathhouse (l. 107), and in the Western Palace (l. 546), and in the courtyard of the Large Bathhouse (l. 103, 112).

A unique public mikveh, with a dressing room, in the walls of which locker-like niches were used for the depositing of the bathers’ clothes (l. 653), was excavated near Building X1. The mikveh that was constructed during the time of the revolt differs from any other example at Masada and is much akin to the examples uncovered at Qumran.

The “Essenes’ Quarter.” Interestingly, the entrance of this immersion complex turns towards Building XIII. The closest structure, situated in the northern annex of Building XXI, is a hall built in the time of the revolt (l. 809). This is an elongated hall with a bench extending along three sides of the wall and a low bench along its axis. The excavators named it bet midrash (religious school). However, its features appear to concur well with the “dining hall” at Qumran, a structure that according to the accounts of Pliny the Elder and Josephus was used by the Essenes for ritual activity. Hence it may be proposed to identify this area as the “quarter of the Essenes” at Masada, the presence of which is further attested in the characteristic sectarian documents that were found at the site.

Synagogue. A rectangular building located in the northwestern sector of the casemate wall was seemingly used as a stable in the first half of the first century C.E. During the time of the revolt its plan was transformed into a large hall with two rows of columns in the center and a back service room. A series of four peripheral tiers of plastered benches were built along the walls. The building was identified by Yadin as a synagogue. Examples from that period of time are known from Herodium and more decidedly at Gamala. This identification was further supported by the discovery of parts of two biblical scrolls, Ezekiel and Deuteronomy, buried in pits dug into the floor of the back room (possibly a genizah; a ritual deposition of religious documents). An ostraca inscribed mdaser kohen (“priest’s tithe”) was uncovered in the main hall.

Human Remains. Twenty-five skeletons of men, women, and children were found thrown in a heap in a small cave on the southern cliff. Although the skulls were reported by Yadin to be of the type found in the Bar Kokhba caves in Nahal Hever, the fact that pig bones were found with the skeletal remains may suggest according to Zias that they belong to the Roman
soldiers killed in 66 C.E. Skeletal remains of three individuals were uncovered in the lower terrace, including a woman's scalp and braids and leather sandals. They were claimed by Yadin to represent a rebels' family. However, the condition of the three skeletons and the fact that many protein-rich bones are missing may indicate that the bodies were dragged there by hyenas.

The Roman Siege. Despite the fact that Masada was the last rebel stronghold in Judea, it seems that the Roman considerations for commencing the Masada campaign, three years after the triumphant parade celebrating the victory over Judea took place in Rome, were not security but rather financial gain. The rebels' presence at Masada, which formed a base for raids, endangered a highly profitable resource – the balsam plantations of En Gedi. According to Pliny the Elder within five years of the suppression of the revolt, a staggering sum of 800,000 sesterces was obtained from the perfume trade in Judea. Indeed, the balsam trade is mentioned in two Latin military documents from Masada.

The Roman siege system at Masada appears to be one of the most complete and best preserved in the Roman world. Under the command of Flavius Silva a Roman force of 7,000–8,000 soldiers deployed around Masada in eight camps. The fortress was surrounded with a 2.17 mi. (3.5 km.) long siege wall (circumvallation), the flat eastern sector of which was fortified by towers to prevent the nearly 1,000 rebels from escaping and attacking the Roman force. All of the architectural elements of this system were of dry-constructed fieldstone. Taking into consideration the historical information concerning the length of the siege works at Jerusalem and the calculations of the working capacities of trained soldiers it seems that the construction of the camps and siege wall at Masada did not exceed a period of two weeks. The Roman military body consisted of the Legion X Fretensis and six auxiliary units. The legionaries were garrisoned in the two large camps, one in the east (B) and one in the northwest (F) which served as Silva Flavius' headquarters. A rare pay record of a legionary cavalryman, one Gaius Messius, was uncovered at Masada. The six small camps were located at strategic points around the base of the mountain commanding the ascents and possible escape routes. Camp H, which was built south of the fortress on higher elevation, allowed the Romans to observe part of Masada's summit. Communication was ensured by a trail that climbed the fault escarpment and connected all camps. Surveys, aerial photographs, and excavations of the camps indicate that the soldiers were housed in leather tents which were pitched over low walls and secured by iron pegs. In many of the contubrenia (eight-man tents) a raised bench was found along their walls. Small hearths, for cooking, were built in front of the tent units. Three larger ovens, which were presumably intended for bread baking, were found west of Camp F. Water was apparently brought in from the oasis of En Gedi by Jewish captives.

Roman military attention focused on a narrow section of the west wall of the fortress. The main undertaking was to provide the platform for the effective operation of the battering ram against Masada's wall. For this end an assault ramp (agger) was erected. Hewn from the nearby white spur, a mass of earth and stones that was stabilized by tamarisk and date-palm branches was laid on the natural spur of the western slope. A stone platform paved the head of the ramp in order to allow the 60-foot siege tower to be raised. The siege engines were most likely constructed in a secured courtyard ("bauplatz") located west of the ramp. Roth's work suggests that the completion of the entire siege works at Masada would have been achieved in a matter of two months.

During the excavations of Netzer and Stiebel's expedition four rooms of the Western casemate wall were excavated for the first time. The section directly above the ramp is entirely missing, in all likelihood being breached by the action of the battering ram. According to Josephus the rebels built an inner wall made up of wooden beams and soil. Mapping the burn pattern of the buildings at Masada, E. Netzer proposed that the lack of conflagration signs in many of the structures was the result of an intentional dismantling of the ceilings for the purpose of the inner wall's construction. Ballista balls shot from torsion artillery machines, arrowheads, and slingshots were found in the breach's immediate environs, testimony to the battle that raged there. The defenders' return fire included slingshots, arrows, and large rolling stones. This was seemingly the purpose of the scavenged wagon's wooden wheel that was found on the floor of the adjacent tower. There were apparently few casualties on the Roman side. A unique Latin medical care manual details the treatment of wounded and sick Roman soldiers. One typical burial of a Roman soldier, consisting of a cooking pot that contained cremated human remains, was found west of Masada.

The Mass Suicide. According to Josephus, when the Romans penetrated the fortress, they came face to face with the multitude of nearly 1,000 dead rebels. Apparently, this act of suicide was honored by the conquerors. The discovery of a group of ostraca near the Large Bathhouse, each inscribed with a single name and all written by the same person, including the name "ben Jair" (son of Ya'ir), led Yadin to the conclusion that these were the lots described by Josephus. According to his account the last ten survivors at Masada drew lots to choose who would kill the other nine and then himself. It should be noted that over 200 ostraca were also found in this location, and they all seem to be more likely part of the administrative organization of the rebels (tags or coupons) rather than the actual "lots." This notion is seemingly strengthened by the recent discovery of an ostraca bearing one of the names that appears in the "lot" group by Netzer and Stiebel. Nonetheless, the association of the "ben Jair" tag with the commander of the rebel community seems to be very likely.

The Aftermath. After the fall of Masada a Roman garrison cleared the site; scattered remains of this activity were found on top of Masada. This garrison erected a small camp within
the boundaries of Camp F, in which it was stationed for several decades \((f_2)\). The latest coin that was uncovered at the site is a silver coin from Trajan’s days dating from 112 C.E.

**Byzantine Period**

Following the abandonment of the site in the early second century C.E. Masada remained uninhabited for a few centuries. During the fifth century C.E. a monastery (\(\text{laura}\)) was founded at Masada, after a series of earthquakes had caused considerable damage to many of the buildings. Some of the scholars identify this monastery with a site named Marda (lit. “fortress”), noted by the Church Fathers. The group of hermits erected a small church with mosaic pavements of which little remains aside from a rich colored floor in a side room with medallions containing representations of a basket with a cross, fruits, and vegetal designs. These mosaics were locally manufactured. Remnants of this production were discovered near Building XI at the center of Masada. Fragments of the church’s marble screen and window glass were uncovered in and near the building. West of the church was a refectory and kitchen. These last occupants of Masada dwelt in small stone cells scattered over the summit and in caves. With the rise of Islam in the seventh century C.E. this settlement apparently ceased to exist.

**Modern Era**

In many respects the perception of the episode of Masada by Israeli society, throughout the 20th century, mirrors the history of the state. The Hebrew translation in 1923 of *The War of the Jews* by Josephus, as well as the poem “Masada” by Lamdan published in 1927, brought Masada closer to the hearts of the young people in the country’s Jewish community. S. Guttman, who led numerous trips to the mountain, was particularly instrumental in transforming Masada into a symbol of defiant resistance and the choosing of death over a life of slavery, in particular for Zionist and, later, Israeli youth. This trend appears to have climaxd in the late 1960s–early 1970s, when one of its manifestations was the swearing of the oath of allegiance by the recruits of Israel’s Armored Corps on the summit of the site: “Masada shall not fall again.” However, the last three decades witnessed a gradual shift in public perception, which was now determined more by political affiliation. Since the opening of Masada’s National Park (1966) and the construction of a cable car (1971), it has become one of Israel’s most visited tourist sites. In 2001 Masada was inscribed on the UNESCO World Heritage List.

*MASARYK, JAN GARRIGUE* (1886–1948), Czechoslovak diplomat and statesman, son of president Thomas G. *Ma-saryk*. From 1925 to 1938 Masaryk was his country’s envoy in London, but resigned after the Munich Pact (Sept. 30, 1938), which compelled Czechoslovakia to give up the Sudetenland. In 1940 he was appointed foreign minister of the Czechoslo-
vvak exile government in London and retained the post after Czechoslovakia’s liberation in 1945 and after the Communist takeover on Feb. 25, 1948. On March 10, 1948, his corpse was found beneath the window of the Czernin Palace in Prague, in which the Foreign Ministry was situated. It is still controversial whether he was murdered for political reasons or committed suicide. During his stay in London he formed ties of friendship with Chaim “Weizmann and became an ardent supporter of Zionism. He fought against antisemitism during and after the Nazi period. In one of his speeches, Masaryk stated: “Every antisemite is a potential murderer whose place is in prison.” Due to his intervention, Czechoslovakia allowed the *Berihah to cross its territory and actively supported the proposal to establish a Jewish state. He believed that “to establish a Jewish state is one of the great-est political ideas of our time.” In the years of Israel’s War of Independence (1948–49) Masaryk assisted in arranging the export of Czechoslovak weapons to the struggling state. The Mauser rifles with the Czech lion were known as “Czech rifles” and played an important part in the defense and conquest of the Jewish part of Jerusalem and other localities where critical fighting took place.
**MÁŠHÁ’ALLAH (Heb. Manasseh)** B. ATHAÑ (754–813), astronomer. Máshá’allah was probably born in Egypt, which is possibly the reason why he was also called al-Misrī, the Egyptian, but part of his life was spent at the court of the caliphs al-MAʿṣūr and al-MAʿmūn in Damascus. His name appears in many different versions, such as Macha Allah al Mesrí, Máshálah, MESSAHALLA, MESSALAHACH, MASALLA, MESCALLATH, MACELAMA, MACELARAMA — mainly due to distortions in Latin manuscripts.

Máshá’allah was one of the earliest independent and original scientific thinkers and scholars. His main efforts led to the transfer of astronomical knowledge from the East to the West by means of later translation; he also adapted Arabic data for the Cordoba astronomical tables. Unfortunately, none of his writings appears to have survived in the original texts and the main source is Latin translations, some of which give rise to confusion, since they list the same works under different titles.

Máshá’allah may also have written an interesting astrological treatise in Hebrew *Sheklot*, which was translated about 1146–48 by Abraham *Ibn Ezra. In 1493 and again 1519 there appeared in Venice a smaller treatise on lunar and solar eclipses, *Epistola de rebus eclipsium et de conjunctionibus planetarum in revolutionibus annorum mundi...* translated by Johannes Hispalensis from a Hebrew text. Some of the available manuscripts list 12 short chapters, all beginning with the words “Máshá’allah says...” His treatise on the astrolabe was translated into Latin and English (R.T. Gunther, *Chavuva and Messahalla on the Astrolabe* (1929). A crater on the moon is named after him.

**MASHÁ’TRÍ, AL-** family in Iraq. The al-Mashá’trí family members in Babylonia during the 13th century included some distinguished personalities who occupied important positions in the state. They are mentioned by *Eleazar b. Jacob in his poems (see Divan R. Eleazar b. Jacob ha-Bavli, Jerusalem, 1935). They included: ISAAC MUHADHDIB AL DAWLA IBN AL-MASHÁ’TRÍ and his sons, ELEAZAR, ELIZEER, and OBA-DIAH (poem 8); and ELEAZAR AMIN ABU (OF IBN) MAṈŪR IBN AL-MASHÁ’TRÍ and his sons, EZEKIEL, YESHU’AH, and ISAAC (poem 185). The nature of their public positions is unknown. In the Arabic chronicle of Ibn al-Fūṭi, a Jewish state official named MAḤADHXIB AL-DAWLA NASR MAṈĪ is mentioned. In 1284 during the rule of the *Mongol governor Argūn (1284–91)*, he was appointed adviser in affairs of the state to the government diwān. In 1289, when *Sa’d al-Dawla ibn al-Ṣāfī became vizier of the Mongolian Empire, he, in turn, appointed Muhadhhib al-Dawla Naṣr as commissioner of Babylonia. Muhadhhib occupied this position until his assassination in 1291. Some scholars believe that he is the same person as the above-mentioned Isaac Muhadhhib al-Dawla.

[Chaim Yahil / Yeshayahu Jelinek (2nd ed.)]

[Abraham David]

MASHASH, SHLOMO (1909–2003), Sephardi rabbi. Mashash was born in *Meknes, Morocco, and received his rabbinic education in Yeshivat Pahad Yitzhak. In 1931 he was appointed head of the Jewish school and talmud torah in Meknes, remaining there until 1949, simultaneously serving as head of the local yeshivah until 1947. In 1937 he founded a society Dovev Sifrei Yeshenim for the purpose of publishing works of early rabbinic authorities still in manuscript, and in 1944 established an institution for the training of religious officials.

In 1949 Mashash was appointed dayyan in the Regional Beth Din of *Casablanca, in 1959 chief rabbi, and in 1977 he was appointed Sephardi chief rabbi of *Jerusalem.

Mashash published a number of rabbinical works, most of which include the word Shemes – an anagram of his name – in the title. They include Mizraḥ Shemes on ritual law (Casablanca, 1962), Tevuot Shemes on the Shulḥan Arukh, and Beth Shemes on the Talmud and *Maimonides.

MASHGI’AH ( Heb. מֵשִׁיב, “overseer” or “inspector”), designation of the person entrusted by the rabbinate with the supervision of kasher butcher shops, food factories, hotels, and restaurants. He is to ensure that the food products sold or prepared in those places comply with the requirements of the traditional dietary laws. The mashgi’ah must be an observant Jew and know all the particulars of the dietary laws. He is, however, not competent to decide on his own whether a product is kasher or not. In some places the mashgi’ah is also called shomer (i.e., “watchman”).

MASHIV HA-RA’U’AH ( Heb. מַשִּׁיב הָרוּעָה, “He causes the wind to blow”), a phrase in the Amidah prayer, inserted after the first verse of the second blessing. It has two variants. The one for the winter season, “Thou causest the wind to blow and the rain to fall” is said from the last day of Sukkot (after the Prayer for Rain) until the last day of Passover (until the Prayer for Dew), and “who causeth the dew to descend” is recited during the summer months in Erez Israel, but only in the Sephardi ritual elsewhere. The praise of God as the dispenser of rain is referred to in the Mishnah (Ber. 5:2; Ta’an. 1:2) which ordains that it should be mentioned together with the resurrection of the dead, as the sustenance of the living and the resurrection of the dead are both manifestations of the gevurot (“powers”) of God. Another prayer for rain is recited in the ninth blessing of the Amidah.

MASIE, AARON MEIR (1858–1930), physician. Born near Mogilev, Belorussia, Masie studied at the yeshivah in Mir and moved to Berlin in 1878, where he joined the Union of Hebrew Socialists, founded by Aaron *Liebermann. In 1879 he was sentenced to a term in prison together with his comrades. Set free, he went to Zurich where he attended the Institute of Technology and came under the influence of Russian socialists, leading to his activity in the student revolutionary movement. Deeply affected by the 1881 pogroms, Masie actively supported the idea of a Jewish state. He joined the Jewish nationalist movement, and decided to study medicine so that he might have a profession which would be useful in Erez Israel. Graduating in 1887, he went to Paris where he specialized in ophthalmology, and in 1888 he settled in Rishon le-Zion. There he was appointed medical officer for the Rothschild settlements in Erez Israel.

From 1900, he lived in Jerusalem where he was active in medicine and in various cultural spheres. He was mainly interested in the revival of Hebrew and saw his task in the development of a Hebrew terminology in medicine and in the natural sciences. A member of the Va‘ad ha-Lashon, he advised Eliezer *Ben-Yehuda in medical terminology. He published a monograph, Mahalat ha-Shivhah (“Meningitis,” 1910), and articles in Ha-Zefirah, Ha-Or, Ha-Refu‘ah (vol. 2, 1923), and Leshonenu (vols. 1 and 2, 1928–30). Masie’s dictionary of medical terms, Sefer ha-Munah li-Refu‘ah u-le-Maddai ha-Teva, was completed by S. *Tchernichovsky and published posthumously in 1934.

[Joseph Gedaliah Klausner]

MASKILEISON, ABRAHAM BEN JUDAH LEIB (1788–1848), Russian rabbi and author. Born in Radoshkovich, Belorussia, Maskileison studied under his father, who was av bet din of Khotimsk in the district of Mogilev. Abraham served as av bet din in Novogrudok. Toward the end of his life he moved to Minsk, where he died. He lived in poverty all his life. He was the author of Maskil le-Eitan (Vilna, 1818), novellae to the tractates of orders Moed and Koshim. His reputation as a result of this work was such that the title of his book (from Ps. 88:1) became his own designation and family name. Be‘er Avraham (1844), his novellae to tractate Berakhot and the order Moed, was published by his son Aaron. In the introduction Abraham lists the seven aims of the work among which were to give explanations of those passages of Talmud in which the tosafists found difficulties, an exposition of those passages of Rashi where the tosafists disagree with him, and a profound examination of those laws of Maimonides for which the commentators were unable to find sources.

Some of his works were published posthumously: Nahal Eitan (1855), published by his son Naphtali, contains novellae on the first two parts of Maimonides’ Mishneh Torah as well as novellae by Maskileison’s brother Moses Nisan, compiled
when he was 16. **Mizpeh Eitan**, novellae and glosses to tracts of the Talmud, was published in the Zhitomir edition of the Talmud (1858–64). It was subsequently republished in the Vilna Talmud with additional material to the author's manuscript entitled *Toseft Merubbah.* Ya‘akov Avraham (Vilna, 1880) is on the Shulhan Arukh, Yoreh De‘ah. His glosses and novellae on Maimonides’ *Mishneh Torah* were assembled from various manuscripts and collected in the *Yad ha-Hazakah* (1900) under the title *Yad Eitan.* Comments and novellae on the Ein Yaqov were assembled in *Ahavat Eitan* (1883–84). His notes on the *Sifrei* were published in *S. Luria’s edition* (1866).

His sons included Aaron, Moses Nisan, and Nahptali.

**Moses Nisan** was *av bet din* of the community of Shumia and author of the *Hikkre Halakhot* (1875), consisting of 32 halakhic studies, *pilpulim,* and *novellae.* Particularly well known was *Nahptali* (1829–1897), a book dealer and an accomplished scribe and poet, to both talmudists and *maskilim.* His main work is his critical edition, with additions, of the Seder ha-Dorot (1877–82) of Jehiel *Heilprin.* Aaron’s son was **Abraham Isaac Maskileison** (1840–1905), born in Smolevichi, where in 1874 he was appointed rabbi, an office he held for 15 years. He then served in Haslovich. He was a member of the *Hovevei Zion.* In 1904 he was appointed rabbi of Stopyitza where he remained until his death. He left works in manuscript which were lost. Reuven *Katz,* the chief rabbi of Petah Tikvah, was his son-in-law.

[Yehoshua Horowitz]

**MAŠL‘AH ŠALIH** (d. 1785), Babylonian liturgical poet. He and his son *Nissim* (d. after 1816) wrote poetry and *piyyutim* on various subjects. Some of these were published in regular and festival prayer books according to the rite of the Jews of *Baghdad* and its surroundings. Others were published by A. Ben-Jacob in Shirah u-Piyyut shel Yehudei Bavel ba-Dorot ha-Aharonim (1970) which includes poems written in the Spanish meter in honor of events and personalities (rabbinical emissaries, etc.). Šalih held the rabbinical seat of Baghdad from 1773 to 1785, and enquiries were addressed to him from *Syria, Persia, Kurdistan,* and other places on halakhic problems and community organization. Torah novellae of the father and the son are to be found in the works of their contemporaries.

**BIBLIOGRAPHY:** A. Ben-Jacob, *Yehudei Bavel* (1965), 121–4.

[Abraham Ben-Yaacob]

**MASLIAŃSKY, ZVI HIRSCH** (1856–1943), popular Yiddish orator, the most eloquent and influential *Maggid* on the American scene at his time. Masliansky was born in Slutsk, Belorussia. He taught at the Polish *talmudei torah* and at the yeshivah of Pinsk (1882–90), where one of his students was Chaim Weizmann. Stirred by the pogroms of 1881, he became a proponent of the idea of a return to Zion. He was active in *Ḥibbat Zion,* and fellow-Zionists M.M. Ussishkin, M.L. Lilienblum, Aḥad Ha-Am, and L. Pinsker encouraged him in his activity as a wandering preacher of Zionism. His fame as an impassioned orator spread rapidly throughout Russia. Compelled to leave the country in 1894, he undertook a lecture tour of Central and Western Europe and in 1895 emigrated to New York. During the three decades that followed, he helped popularize Zionism, wielding a great influence upon Yiddish-speaking immigrants, especially through his Friday evening sermons at the Educational Alliance on East Broadway. He combined the qualities of a *maggid* and those of a modern speaker. He was able to hold the attention of a popular audience and scholars as well. His imposing figure further strengthened the impression he made. He was also active in U.S. Zionist organizations.

[Sol Liptzin]

**MASLOW, ABRAHAM H.** (1908–1970), U.S. psychologist. Maslow was professor and chairman of the psychology department at Brandeis University from 1951. He was president of the American Psychological Association. Maslow was best known as a personality theorist, interested in motivational structure. In his work, he conceptualized within a phenomenological frame of reference that emphasizes the inherent goodness of man. He postulated a hierarchical theory of human motivation, wherein needs arrange themselves in a hierarchy from basic biological needs to those of self-esteem and self-actualization. Maslow’s books include: *Principles of Abnormal Psychology* (1951) with B. Mittelmann; *Motivation and Personality* (1954); *New Knowledge in Human Values* (1959); and *Toward a Psychology of Being* (1962).

[Manny Sternlicht]

**MASLOW, SOPHIE** (1911— ), U.S. dancer and choreographer. Maslow was born on the Lower East Side of New York. She joined the Martha Graham company in 1931 and became a member of the New Dance Group in the mid-1930s and its artistic director in 1968. From 1942 to 1954 she performed in the Dudley-Maslow-Bales trio and choreographed many works for that company. Maslow’s first works reflected social unrest, exemplified by *Dust Bowl Ballads* (1941) and *Folksay* (1942). *The Village I Knew* (1949), based on a story by *Sha-
lom Aleichem, portrayed a Jewish village in Czarist Russia. She re-staged this work when she worked in Israel with the *Bat-Sheva company (1950). Her other works were *Manhattan Transfer (1953); *Champion (1948); and *Celebration (1954), based on Israeli song and dance material; and Poem (1963). From 1951 she frequently choreographed the annual Hanukkah Festival at Madison Square Garden. In 1991 she received the Award of Artistry of the American Dance Guild.

[Amnon Shiloah (2nd ed.])

MASNUT, SAMUEL BEN NISSIM (13th century), talmudist and leader of Aleppo Jewry. Scarcely any biographical details are known of him, even the place from which his family originated being uncertain since some manuscripts mention Toledo and others Sicily. Judah *Al-Harizi, who visited Aleppo about 1218, waxed eloquent in praise of “Samuel b. Rabbenu Nissim of Aleppo.” He wrote a special composition in his honor called *Iggeret Leshon ha-Zahav (published by Z.H. Edelman in Divrei Hefez, 1853). Because of the similarity of the names and the places, scholars are inclined to regard the two as identical, in spite of an explicit statement by Samuel in one of his commentaries (Dan. 7:25) to the effect that it was written in 1276, which would make him about 90 years old at the time. Masnut’s renown rests on his extensive midrashic commentary, *Ma’yan Gannim, which apparently embraced most, if not all, of the Bible. The following parts have been published: Genesis (1962), which the editor entitled Midrash Bereshit Zuta; Job (1889); and Daniel and Ezra (1968). His commentary on Chronicles is extant in manuscript and is remarkably similar verbally to the commentary of David *Kimhi. Fragments of his commentary on Numbers have also been preserved. Masnut’s work is totally unlike other midrashic commentaries, even those of *David ha-Nagid and Jacob b. Hananel *Sikili – who were near him in place and time and bear some resemblance to him – in that he rarely uses his own words in the presentation of his commentary. It is, in effect, a verbal amalgam of different and independent midrashic sources woven together into a unique exegetical fabric. His familiarity with halakhic and aggadic sources (for which he rarely gives references) is quite exceptional. His books contain important halakhic material for research on the history of *halakhah, the texts of the Talmuds and the Midrashim, and particularly the various Ara maic *targumim, of which he made frequent use. A piyyut by Masnut for the morning service of the Day of Atonement has been preserved in the liturgy of Algeria and Tunisia.

[Israel Moses Ta-Shma]

MASON, JACKIE (1931– ), U.S. comedian. Born in Sheboygan, Wisconsin, and raised on the Lower East Side of Manhattan, Mason (Jacob Maza) was ordained a rabbi, in a family of rabbis, before he became a comedian. His three brothers were rabbis and their father, grandfather, and great-grandfather were rabbis, too. In the early 1960s, Mason was one of the country’s hottest comics, appearing frequently in nightclubs and on television. He delivered his bold monologues in a Yiddish-inflected New York voice, and became instantly recognized for his sharp and funny comments on Jewish and American life. He became a regular on the nation’s leading variety program, *The Ed Sullivan Show, only to fall into disfavor in 1962 during a live telecast when Sullivan interpreted a finger gesture Mason made as a lewd insult. Mason was ousted from the show and although he sued Sullivan for libel and won, he did not appear on the show again for 18 months. The incident cast a pall over Mason’s career for more than a decade. But in 1984, Mason opened in Los Angeles in a one-man show, *The World According to Me!, and convulsed audience after audience. He moved the show to Broadway in 1986, and it had a run of more than two years. Mason won a Tony Award and other honors, and the show toured the United States and Europe for two years. Mason returned to Broadway with the one-man shows *Jackie Mason: Brand New (1990), *Jackie Mason: Politically Incorrect (1994), *Love Thy Neighbor (1996), *Much Ado About Everything (1999), and *Prune Danish (2002). He also had a variety of small film roles and his distinctive “Jew-ish” voice appeared in voice-overs and in animated cartoons. Mason, who had strong conservative political views, had several radio and television interview programs, often teaming with the divorce lawyer Raoul Felder, with whom he published *The Jackie Mason, *Raoul Felder Survival Guide to New York (1997) and *Jackie Mason and Raoul Felder’s Guide to New York and Los Angeles Restaurants (1996). Mason’s offhand and tasteless comments sometimes got him into trouble. In 1991, when David Dinkins, an African-American Democrat, was campaigning for mayor of New York City, Mason called him “a fancy shvartze with a mustache.” After protests from groups like the National Association for the Advancement of Colored People, Mason apologized.

[Stewart Kampel (2nd ed.)]

MASORAH. This article is arranged according to the following outline:

1. THE TRANSMISSION OF THE BIBLE
   1.1. THE SOFERIM
   1.2. WRITTEN TRANSMISSION
      1.2.1. Methods of Writing
         1.2.1.1. THE ORDER OF THE BOOKS
         1.2.1.2. SEDARIM AND PARASHIYOT
      1.2.2. IRREGULARITIES IN THE WRITING
         1.2.2.1. EXTRAORDINARY POINTS
         1.2.2.2. “ISOLATED” LETTERS
         1.2.2.3. SUSPENDED LETTERS
         1.2.2.4. LARGE AND SMALL LETTERS
         1.2.2.5. OTHER ODD LETTERS

1. ORAL TRANSMISSION
1.1. Ancient Evidence
1.1.1. Miqraʿ Soferim
1.1.2. ʾIṯṭur Soferim
1.1.3. Qere We-Laʿ Ketiv; Ketiv We-Laʿ Qere
1.1.4. Qere
1.2. The Verses
1.3. Accentuation
1.4. The Masorah

2. THE MASORAH AND THE BEGINNINGS OF GRAMMAR
2.1 General
2.1.1. The Indians
2.1.2. The Arabs
2.1.3. The Syrians
2.2. Among the Jews
2.2.1. The Codex
2.2.2. Dating
2.2.3. The Invention of Punctuation
2.2.4. Karaites and Rabbanites

3. THE WRITTEN MASORAH
3.1. The Masorah (Narrow Sense)
3.1.1. The Term
3.1.2. Definition and Scope
3.2. The Masorah Parva (Qetanna)
3.2.1. The Qere and Ketiv
3.2.1.1. Methods of Notation
3.2.1.2. The Development
3.2.1.3. The Symbols
3.2.1.4. Vocalization of the Qere
3.2.1.5. Qere We-Laʿ Ketiv (Read and Not Written)
3.2.1.6. Ketiv We-Laʿ Qere (Written and Not Read)
3.2.1.7. The Scope of Qere
3.2.2. Types of Qere
3.2.2.1. Euphemisms
3.2.2.2. Correction of Forms
3.2.2.3. Correction of Errors
3.2.2.4. Maleʿ and Hasar (Plene and Defective)
3.2.2.5. Qere Perpetuum
3.2.3. The Masoretic Notes
3.2.3.1. Terminology
3.2.4. The Babylonian Masorah
3.2.4.1. Terminology
3.2.4.2. Contamination of Masorah
3.2.5. The Palestinian Masorah
3.2.6. Deviating Versions
3.2.6.1. Madinjahāʾ
3.2.6.2. Versions of Particular Masoretes and Manuscripts
3.2.6.3. Sevirin
3.3. The Masorah magna (Gedola)
3.3.0.1. Method of Notation
3.3.1. The “Simanim” (Mnemonic Devices)
3.3.2. Accumulative Masorah

3.3.3. The Babylonian Masorah
3.3.4. The Palestinian Masorah
3.3.5. Agreement between the Masorah Magna, the Masorah Parva and the Text
3.3.5.1. Lack of Agreement
3.3.5.2. Methods of Copying
3.3.5.3. The Non-Crystallization of the Masorah
3.3.5.4. Ornamentation of the Text
3.3.6. Jacob ben Hayyim ibn Adonijah
3.3.6.1. Editing and Arranging the Masorah
3.3.6.2. Cross References
3.3.6.3. His Terminology
3.3.6.4. The Accepted Terminology
3.3.7. Summary Lists

4. THE DIACRITICAL POINTS
4.1. Graetz’s Theory
4.1.1. Details of the Proof
4.1.1.1. Ancient Usage of “Milleʾel” and “Milleraʾ”
4.1.1.2. The Diacritical Point in Syriac
4.1.1.3. Development in Hebrew
4.1.2. Refutation
4.2. Milleʾel and Milleraʾ
4.2.1. Development of the Usage
4.2.1.1. Tonal Meaning
4.2.1.2. Vocalic Meaning
4.2.1.3. Connection between the Meanings
4.2.2. The Babylonian Terms
4.2.3. The Parallel Usage of Qames and Pattah

4.3. RELATIVE NOTATION
4.3.1. Vowels
4.3.2. Accents

5. VOCALIZATION AND ACCENTUATION
5.1. The Palestinian System
5.1.0.1. The Term
5.1.0.2. The State of Transmission
5.1.0.3. Types of Texts
5.1.1. The Vowel Signs
5.1.1.1. The Signs
5.1.1.2. History of the System
5.1.2. The Diacritical Signs
5.1.2.1. Sin-Sin
5.1.2.2. Mappiq and Dagesh
5.1.2.3. Rafeh
5.1.3. The Accentuation Signs

6.4.10. Seligmann Isaac Baer
6.4.11. Later Scholars

I. THE TRANSMISSION OF THE BIBLE

The transmission of the Bible is as old as the Bible itself, according to the ancient tradition in Avot that “Moses received the Torah from Sinai and handed it on to Joshua and Joshua to the elders and the elders to the prophets and the prophets handed it down to the men of the Great Assembly” (Avot 1:1). This concept of “Torah” which is handed down from generation to generation includes all of the Bible as it was developed, with all the components which accompanied it and were added to it and which also shared in its holiness. As the form of the Bible became increasingly canonized and set in all its specific details, the tradition of reading the text and its exact pronunciation grew and became closely attached to it, developing together with it, and being handed down from father to son through the generations.

1.1. The Soferim

The work of the transmission of the Bible was by its very nature destined to be in the hands of *scribes (soferim), transcribers who were skilled in the exact copying of the Bible and were therefore legally recognized as people knowledgeable in Torah, and who were accomplished scholars of it. The term soferim, which in the beginning was a term for scholars of the Torah in general (divre soferim, Sanh. 11:3), in time became limited to those scholars who specialized in the Written Law and in its exact transmission. Some were transcribers, and in this capacity they were called also לָכְתבִּים (kotvanim; “skilled kotvanim were in Jerusalem,” Tj, Meg. 111 (71d)) or נוֹפְלֵי (lavlar, lavlarim – librarius = libellarius; thus, “R. Meir was a lavlar”); Eruv. 13a), while others were teachers and instructors of school children (“and the sofer (scribe) teaches according to his way”; Tosef. Meg. 4:38). The main interest of these scribes was the preservation of the text of the Bible, and they are credited with a number of rules and regulations which were established for this purpose. It is not known who those scribes were, but some of the scholars of the Talmud are conspicuous by their special interest in every legal discussion dealing with the problem of the text of the Bible, its transcription, and its teaching, such as R. *Meir (Tj, Ta’an. 1:1 (64a); Tj, Meg. 4:1 (74d); Eruv. 13a; Sot. 20a et al.), R. Hananel (Tj, Meg. 1:11 (71c, d); Meg. 18b et al.), and R. *Samuel b. Shilat (Tj, Meg. 71c, d; BB 8b, 21a; Ket. 50a). This preoccupation with the exact transmission of the Bible gradually became important, and the term sofer tended to lose its original connection with sofer (“book”) and came to designate all learned people. Thus the original meaning of the term became obscured through its connection with the act of counting by the preservers of the text, as stated in the Talmud (Kid. 30a): “Therefore the ancients were called soferim (סופרים), because they counted דִּבְרֵי הָיָה all the letters in the Torah…. Originally the activity of the soferim and the preservers of the exact version of the Bible was an oral one. The main point of their work was instruction in the reading of a text lacking vocalization and accentuation signs, and passing this reading orally from generation to generation. Since the text was holy it was not permissible to add anything to the skeleton of the letters of the Bible, and only a small part of what they established as reading aids was noted in the sacred text, that is, the very text which to this day has served for the public reading prescribed by the halakah. It can be said that those items which did penetrate into the holy text did so during the very earliest period of its development with the result that they too became sanctified. Anything which did not find a place in the text itself, such as the vocalization and the accentuation signs and the various masoretic notes, at first had to be transmitted orally, and even when they were committed to writing they were still not allowed to be introduced into the sacred text.

1.2. Written Transmission

There are two types of items which penetrated into the holy text itself:

(1) those connected with the methods of writing the text – the pages, the lines, the marking of the lines, the division into sections, the manner of setting out the songs (Shirat ha-Yam, Shirat Ha’azinu, and others), and the order of the books;

(2) irregularities in the script and in the actual writing – dots above the letters, suspended letters, isolated נָנָס, large letters, small letters, and the like.

1.2.1. Methods of Writing

Most of the matters connected with the writing of the Bible are closely regulated by the halakah and the customs of earlier generations. This applies especially to the Torah. Since it serves for the public reading in the synagogue it must comply with exact ritual conditions, without which the reader and the listener do not fulfill the religious duty of reading the Torah. These laws and customs became established during the time of the Talmud and were collected after a time in the tractate Soferim (which was presumably edited not later than the eighth century C.E.), and in the legal compilations of the rabbinic authorities (such as Maim. Yad, Hilkhot Sefer Torah). These instructions deal with the actual form of the book (the scroll, the size of the parchment and the pages), the writing (the size and shape of the letters, the addition of *tagin [tittles,
crowns) on the letters ג״ץ שעטנ״ז – Men. 29b), the writing materials (the parchment and ink), the manner of writing (marking guidelines, structure of lines), the arrangement of the text (the spacing of letters and words, the division into sections, the linear arrangement of the songs in the Torah, Shirat ha-Yam, Shirat Ha’azinu, the beginnings of the columns – the first letter generally being waw, except for ח"ש and other topics connected with the laws of the reading and the care of the scroll. These laws apply only to scrolls which are intended for public reading, not those which are not for ritual use.

Since these matters are governed by the halakah, they are not considered part of that which is usually called “Masorah,” although they are also, by their very nature, included among all the matters connected with the writing of the Bible that are handed down from generation to generation. Although the term “masorah” today includes all the matters connected with the writing and recitation of the Bible, it is not permitted to write them in a copy intended for public reading. These items could be written in the margins and even in the text itself only after some time, when people began to make copies of the Bible in the form not of a scroll but of a codex (תּוֹנָשָׁה) meant for the everyday study and teaching of the Bible.

1.2.1.1. The Order of the Books. The order of the books of the Bible and the division of the texts into sections is the same for the scrolls and the codices. The oldest arrangement of the 24 books of the Bible is mentioned in a *baraita (ב ע) and adopted also by Maimonides (Yad, Hilkhot Sefer Torah 7:15). In it, the order of the Pentateuch and the Early Prophets is the same as it is commonly accepted today, but the order of the Latter Prophets is: Jeremiah, Ezekiel, Isaiah, and the Minor Prophets – the order which was kept later in the German and the French manuscripts (sometimes also with Isaiah preceding Ezekiel), as opposed to the Oriental and Spanish manuscripts whose order is that which is common today.

The order of the Hagiographa as found in the baraita (and also by Maimonides, Yad, Hilkhot Sefer Torah 7:15) is Ruth, Psalms, Job, Proverbs, Ecclesiastes, Song of Songs, Lamentations, Daniel, Esther, Ezra (and Nehemiah), Chronicles – but this order was followed in only a few isolated manuscripts. In the manuscripts of the Oriental and Spanish masoretes the order is as follows: Chronicles, Psalms, Job, Proverbs, Ruth, Song of Songs, Ecclesiastes, Lamentations, Esther, Daniel, Ezra (and Nehemiah); while in the German-French manuscripts and in most of the printed editions of today the order is: Psalms, Proverbs, Job (the term וְאָדָם comes from the initials of these three in reverse order), Song of Songs, Ruth, Lamentations, Ecclesiastes, Esther, Daniel, Ezra (and Nehemiah), Chronicles. See *Bible: Canon.

1.2.1.2. Sedarim and Parashiyot. The accepted order of the books rejects the Babylonian tradition, as listed in the baraita, in favor of the Palestinian and other traditions. However, the Babylonian tradition was followed in the division of the Torah into short units for recitation in the synagogue (see *Torah, Reading of the). In Palestine the reading of the Torah was completed once in three years (see *Triennial Cycle) and therefore the Pentateuch was divided into 154 (or, according to another version, 167) weekly portions called מִרְדָּד (sedarim). In Babylonia the full cycle of the reading of the Torah was completed in one year, so that the Torah was divided into 54 תּוֹרָה מִסְפָּר (parashiyot), weekly portions (תורָה מִסְפָּר or sedar in Yiddish) and that division is followed today, in continuance of the Babylonian tradition. The sedarim which served in the Torah as units for the (Palestinian) weekly portions for public ritual reading were applied to break also the text of the whole Bible into small units. However, since in the Prophets and Hagiographa this division was hardly necessary for use even in ancient times, except for some definite small parts (haftarot, megillot, etc.), there are differences in manuscripts as to the exact location of the divisions and even in the number of sedarim.

1.2.1.3. Sectional Divisions (Petuhot and Setumot). The division of the body of the text into sections is an ancient one, and unlike the above-mentioned division into sedarim and parashiyot, involves the very copying of the text whether in a scroll or a codex. These sections are of two kinds, with the type of space preceding them varying:

(1) a parashah petuhah (open parashah) which starts at the beginning of a line, the preceding line being left partly or wholly blank (in some manuscripts and print editions this is indicated by מ"ם);

(2) a parashah setumah (closed parashah) which begins at a point other than the start of a line, whether the preceding section ended in the preceding line (at its end or not) or whether it ends in the same one, in which case a space of approximately nine letters is left between the two sections (in some print editions this is noted by מ"ם). This ancient division is attested to in the Babylonian Talmud (Shab. 103b): “a parashah petuhah should not be made setumah, a setumah should not be made petuhah.” Sifra to Lev. 11:1; 1:9 asks: “And what purpose did the תּוֹרָה מִסְפָּר (sections) serve? To give Moses an interval to reflect between parashah and parashah and between issue and issue.” Despite their antiquity different traditions or customs developed on the matter of the parashiyot, as to the placing and number of each type. In printed editions today there is a great degree of uniformity in the Torah due mainly to the halakhic fixing of this issue and that of the shape of the songs by Maimonides following "Ben-Asher (Yad, Sefer Torah 8:4).

1.2.2. Irregularities in the Writing

Various irregularities in the actual shape of the writing are part of the copied text. These go back to early sources and are discussed here in their assumed chronological order.

1.2.2.1. Extraordinary Points. There are dots over 15 words in the Bible and sometimes also under them, one dot over each letter of the word or over some of the letters. The words are distributed as follows: ten in the Torah (in the
tent place in the Torah, Deut. 29:28, the dots in most traditions cover 11 letters of three words – all but the last letter – וָלַלְכָּנֵינוּ, four in the Prophets, the dots being above in each case, and one word with a varying number of dots in the Hagiographa (Neh. 27:13), where there are dots also beneath the word. There are different traditions on the details. (See the full lists in the Masorah Magna for Numbers 3:39, and in Okhlah we-Okhlah (ed. S. Frensdorff, 1864), §96, with the additional bibliography there.) These dots are a very ancient tradition, the evidence concerning some of them going back to the second century C.E.; see, for example, R. Yose in the Mishnah (Pes. 9:2) concerning the he with a dot, in the word הָרָּא (Num. 9:10). A comprehensive list of the location of these dots in the Torah is already found in Sifre Numbers chap. 69 (ed. Horovitz p. 64–65). R. “Simeon bar Yohai being mentioned there; and further evidence is to be found in the Talmud and in the Midrashim. (The references were noted in the Arukh ha-Shalem under "naqad" and to these should be added Ber. 4a; Naz. 23a; Hor. 10b.) There have been various theories put forth concerning the origin and meaning of these dots (see L. Blu, Masoretische Untersuchungen (Strassburg, 1891), 6–40; Zur Einleitung in die Heilige Schrift (Budapest, 1894), 113–20; R. Butlin, The Ten Neguddoth of the Torah (Baltimore, 1906, repr. New York, 1969); S. Lieberman, Greek and Hellenism in Jewish Palestine (Jerusalem 1962), 182–184). However, they do not belong to the system of vocalization and they also appear in Torah scrolls designated for public recitation.

1.2.2.2. “Isolated” Letters. The isolated letters (אותיות נפרדות) are the nine signs which appear between verses – in the Torah before and after the section of הָרָּא ὡς נִמְצָא (Num. 10:35–36), and seven in Psalms, chapter 107 (there are differences of opinion as to their exact place and number). Rather than being referred to by the name אותיות (letters), they are already called אותיות (signs) in a baraita (about the Torah – Shah 13b; ARN 34, 4; about Psalms – RH 17b). Their form was not fixed in the ancient sources and the scribes were quite liberal in the manner in which they marked them. There is early evidence that these simanimiyot were nothing but simple dots. This is the impression given by Sifre Numbers, ch. 84 (ed. Horovitz, p. 80), already in the name of R. Simeon (second century C.E.). As time passed, these signs assumed various shapes and changed names accordingly. In tractate Soferim (prior to the eighth century) 6:1, it is called, according to the version of various manuscripts, שיפוד (horn) – perhaps the sign really resembled a shofar, “and it appears indeed in the section on travels (ָּכֶנּוּ מִן הָיאָרִים) – or שיפוד (spit), which is reminiscent of the sign of the דְּבָּק (spit). In Diqduqe ha-Té’amim (ch. 2) the term שיפוד is found, and according to “Dunash b. Labrat it is תֵּשָׁעְבוֹת (Teshuvot al Menahem), ed. Filipskovi, p. 6a). The term is neutral and does not indicate the shape of the sign, and according to the basic meaning of its root it refers to letters which are separated from the consonantal text. In the manuscripts the sign developed into the shape of a reversed nun. It is not known whether all of it was reversed (see Okhlah we-Okhlah, §179), or only its top or bottom, and there was much confusion about it in the commentaries (see Minhah Shai on Num. 10:35; Nahalat Talakov on tractate Soferim 6:1). There were even those who wrote it into the text itself in the place of regular nuns of the text (see also Ginsburg, The Massorah, vol. 2, p. 259, §15a). Later the names of these signs, too, were interchanged with the name for the regular reversed nun (see below 1.2.2.5). Hence the otiyot menuzzerot became pronounceable nun names (see Masorah Magna to Ps. 107:23), which was explained, following R. Zehi or אזור, “they turned backward” (Isa. 1:4), to mean reversed nun (Minhat Shai on Ps. 107:23), though there is no linguistic support for this interpretation. If the opinion already expressed in ancient sources regarding the signs in the Torah is generally accepted, that is, that the purpose of these signs is to separate the section “when the ark set forward” as if it were a book by itself, there is no similar consensus of opinion concerning the signs in Psalms (see S. Lieberman, Greek and Hellenism in Jewish Palestine (Jerusalem 1962), 178–181).

1.2.2.3. Suspended Letters. There are four suspended letters אותיות מנויות in the Bible: the nun of nouns (Judg. 18:30), and the ‘ayin in the words מְעָרַע (Job 38:13), and מְעָרַע (Job 38:15). The tradition concerning them is quite ancient, going back to the third century C.E. (see *Samuel b. Nahman in TJ, Bet. 9:3, 13: ARN 34, 4) and to later sources. In most instances midrashic explanations on these suspended letters are also mentioned.

1.2.2.4. Large and Small Letters. The custom of writing some letters differently – smaller or larger than usual – never became halakhically fixed. Thus there are several discrepancies between the various manuscript texts of the Bible. Even the lists of the Masorah are not uniform: Ginsburg compared some ten different lists (The Massorah, vol. 4 (1905), 40–41). The number of large letters is greater than the number of small letters. One of the large letters is already indicated in the Talmud (Meg. 16b) in the name of R. Johanan (third century C.E.). In Soferim 91:7 at least four large letters and one small one are mentioned. Their number grew as time passed, but in the older manuscripts, such as those of *Aleppo and Leningrad, there are still relatively few of these letters.

1.2.2.5. Other Odd Letters. For these there is generally no evidence in ancient sources. The Talmud (Kid. 66b) mentions in the name of R. Nahman (third century C.E.) a יִשְׁרֹע (in the word סָלָל (Num. 25:12), which is explained as a waw with a crack in the middle, but it is not certain that they did not mean a waw which was cut short, that is, a small waw. Maimonides (Yad, Sefer Torah 7:8) lists “[and] odd letters like winding (תֵּשָׁעְבוֹת) pes, and the crooked (קְפֵי) letters.” The Masorah Parva mentions a קְפֵי ("crooked nun": נון, Ex. 3:19), as well as וָאֵין וָאֵין וָאֵין ("an inverted nun": ונון, Gen. 11:32), and מִיאָרֵך ("attached qufin": נון, Ex. 32:25; see also Okhlah we-Okhlah, §161). The Masorah Marginalis of the
Venice Bible (1525) states that the second lamed in the word תֵּהוֹ רִמְרִי (Num. 1: 22) states that the second lamed in the word תֵּהוֹ רִמְרִי (Num. 1: 22) is shaped like a saw, stands upright, and has no cap on its head). Seligman “Baer described at length the shape of the various odd letters in his book Tiqqun ha-Sofer we-ha-Qore (Roedelheim (1875), p. 18 of supplement).

1.3. ORAL TRANSMISSION

Apart from these matters which mainly are connected with the very writing of the Bible – and there could not be copying without their clear establishment – all of the other issues were originally part of oral transmission. The notes concerning the text of the Bible and the instructions for its proper pronunciation and its exact copying were handed down orally from generation to generation before they were set down in writing. It may be assumed that these notes were permitted to be written down and were actually committed to writing with the institution of the use of the codex among the Jews – apparently in the sixth or seventh century C.E. Therefore one must differentiate quite clearly between the oral Masorah which is endless and cannot be defined even though there are allusions to it and evidence thereof, and between the written Masorah whose notations were written in the margins of the codices and which is called simply "the Masorah."

1.3.1. Ancient Evidence

In addition to the main evidence offered by the very existence of the text which was passed down from father to son and from teacher to student, there is an explicit statement about the oral transmission in the name of R. Isaac (about the third generation of Palestinian amoraim, at the end of the 3rd century C.E.): "R. Isaac said, 'Miqra soferim were handed down as Law to Moses at Sinai'” (Ned. 37b–38a). All the items listed there are thus considered as coming from a most ancient period, when it was not yet possible to list the items – there were neither signs to use (vocalization and accentuation) nor permission to write down such signs.

1.3.1.1. Miqra Soferim. The saying of R. Isaac continues with an explanation: מִקְרַא סוֹפֵרִים – רָאָא שֵׁמֶשׁ נְמוּרִים (see the comment attributed to Rashi which is probably that of *Gershom b. Judah Me‘or Ha-Golah and see R. Nissim ad loc.), it seems that miqra’ is to be taken in its literal meaning – the correct “reading” of the words as handed down by the scribes. The three words cited above are an example of the possibilities for various readings of words whose pronunciation can be known only by the transmitted reading of the soferim. Similar to this is the principle in the Talmud (Sanh. 4a and elsewhere) that the text as read (with vowels) is authoritative only as far as ש (i.e., the consonantal text – the actual letters – is authoritative; see below).

1.3.1.2. ‘Ittur Soferim. The other items listed by R. Isaac are also a very ancient tradition which was not permitted to be written down and which was transmitted orally from generation to generation: ‘ittur soferim are obviously omissions (see the comment attributed to R. Haim b. Sheria, and additional explanations in Minhag Shai to Num. 12:14) of the conjunctive waw as evidenced by the examples which are listed there: רַעַת קְרֵיָה – ראָא שֵׁמֶשׁ נְמוּרִים (Gen. 18:5). Ḥa-Camar (Gen. 24:55), (Num. 31:2), פְּרָה קְרֵיָה, נְמוּרִים (Ps. 68:26), פְּרָה קְרֵיָה (Ps. 36:7). Possibly other omissions are also to be included.

1.3.1.3. Qere We-la Ketiv; Ketiv We-la Qere. The last two items – words which are to be read although they are not written (qaryan we-la ketivan) and conversely, words which are not to be read although they are written (ketivan we-la qaryan) – issues which are discussed later on – are also an ancient tradition and could not be written down until long after the statements were made. They are listed thus: קרין – קרין אַלּ קרין, קְרֵיָה – קרין אַל קרין (11 Sam. 8:3); אֵל קְרֵיָה אַלּ אֵל אֵל (11 Sam. 16:23); חָיָה לְפָלְשִׁיָּה (Jer. 3:12); דָּאָר לְפָלְשִׁיָּה (Jer. 50:29); אֵלָא לְפָלְשִׁיָּה (Ruth 2:11); אֵלָא לְפָלְשִׁיָּה (Ruth 3:17); אֵלָא לְפָלְשִׁיָּה (Deut. 6:25); אֵלָא לְפָלְשִׁיָּה (Deut. 5:13); אֵלָא לְפָלְשִׁיָּה (Ezek. 48:16); אֵלָא לְפָלְשִׁיָּה (Ruth 5:12); אֵלָא לְפָלְשִׁיָּה (Deut. 6:25). This list in Nedarim, like the two which preceded it, is a sample and not complete. It is also not in complete agreement with the detailed lists of the Masorah for our texts. A correct list is found, for example, in Okhlah we-Okhlah, §97 and in it there are ten qere we-la’ ketiv (it does not include Ruth 2:11), and eight ketiv we-la’ qere (and it does not include Deut. 6:25).

1.3.1.4. Qere. Although ordinary qere notes were not explicitly mentioned in the Talmud, it is clear that they too are to be included in migra’ soferim, and the tradition of the qere, that is, words which are to be read differently from the form in which they are written, is ancient and returns to oral transmission.

1.3.2. The Verses

The above also applies to the division into verses. Here too we have an ancient tradition (so ancient that it is generally in agreement with the Samaritan reading) which was handed down orally. This antiquity is evident from the meaning of migra’ soferim which really means the complete reading including the transmitted vocalization and the transmitted division. Undoubtedly the division of the text into minimal units – the verses, and even the division of every unit into its parts, the accents – is also part of correct transmitted division. This transmission, like all oral transmission, while it strives for great precision and generally achieves it, still contains some doubtful instances and contradictions between different transmissions which have to be decided.

There is evidence in talmudic literature for the existence of the tradition of division into verses, a division which was handed down orally and was not permitted to be marked in
the text. Evidence similarly exists about a tradition of internal verse division by accentuation and about differing traditions concerning both division of the text into verses and the division within verses and about reaching decisions concerning these differences.

One statement was repeated in three main versions as seen in the table below.

A comparison of sources in the rabbinic literature on ancient oral traditions regarding the biblical text: division into verses, vocalization, accentuations, etc.

Upon study one clearly sees the difference between the two Babylonian sources (vs. 1) and the two Palestinian sources, **TB Megillah 3a and TB Nedariim 37b** and **TB Megillah 4:6** (74d); and there is a difference between the Babylonians and the Palestinians in the method of study and interpretation of the text. Their common factor is that in all of them the verses, the accents, and the traditions (masorot) are linked to Ezra the Scribe, i.e., to a very early period.

Regarding the division into verses there is even earlier evidence, from the Mishna: “He that reads in the Torah may not read less than three verses (תנאיא פיסוקים) he may not read to the interpreter more than one verse (at a time), or, in the Prophets, three” (Meg. 4:4); and there is the statement in Kiddushin 3oa, that derives from the period of the tanaim (Bacher, 92), which lists, among other things, the middle verse of the Torah (Heel: Lev. 13:33).

There is evidence of some confusion as to the verse division in some sections: Rav. Joseph [third century C.E.] asks “to which half does we-hitgallah belong?” (the reference is to the word we-hitgallah which is considered to be the middle of the Torah with regard to verses; does it belong to the first or the second half?). ‘Abbaye answered him: “Verses can be counted” (in contrast to what was said before about plene and defective spelling, about which R. Joseph states that in Babylonia they are not experts in it and that it is therefore impossible to establish the number of the letters of the Bible). Rav Joseph replied: “We are also not expert in the division of verses, because when Rav Aha bar Ada came [to Babylonia], he said that in the West [i.e., Erez Israel] they divide this verse into three: And the Lord said to Moses: ‘Behold I come to you in a thick cloud’ (Ex. 19:9)” (Kid. 30a). It follows, therefore, that the Babylonian scholars were also not expert in the division of the text into verses. It can be assumed that the Palestinians were more particular than the Babylonians in the transmission of the text of the Bible. Indeed, there are considerable differences between the number of verses recorded in the Talmud and our texts of the Bible. (See Kid. ibid.: The Rabbis taught: “there are 5,888 verses in the Torah” – according to the Masorah the number is 5,845.) For Psalms and Chronicles the numbers are completely different and there was, apparently an error somewhere. In any event, this statement is the primary source about the difference in the text between the Palestinians and the Babylonians.

The term פיסוקים ("beginnings of the verses") in contrast to masorot ("verses") in the above quotation does not indicate a substantive difference between the two countries but is a terminological difference only. The division into verses requires the notation of either the beginnings or the ends of the verses and it makes no difference which. The term “beginnings of the verses” from the Palestinian sources has a continuation in additional, later Western sources, e.g., Soferim 3:7: “A book which he punctuated, wherein he marked the beginnings of...”

Rav Iqa bar Abin said in the name of Rav Hananel who spoke in the name of Rav: ‘What does it mean ‘And they read in the book of the Law of God’ refers to the תרגום, ‘distinctly’ refers to the תרגום, ‘and they gave the sense’ these are the供应 (the accents); ‘and caused them to understand the reading’ refers to the מדרש (the tradition), and some say to the אומרים פיסוקים (‘beginnings of the verses’).’

R. Ze’ura said in the name of R. Hananel: ‘and they read in the book of the Law of God’ refers to the תרגום; ‘distinctly’ refers to the תרגום; ‘and they gave the sense’ these are the供应 (the accents); ‘and caused them to understand the reading’ refers to the מדרש (the tradition), and some say to the אומרים פיסוקים (‘beginnings of the verses’).’

R. Yudan said: herefrom (is understood) the targum; ‘and they read in the book of the Law of God’ refers to the תרגום, ‘distinctly’ refers to the תרגום, ‘and they gave the sense’ these are the供应 (the accents), ‘and caused them to understand the reading’ refers to the מדרש (the tradition), and some say to the אומרים פיסוקים (‘the beginnings of the verses’).’

R. Hiyya b. Luliy said: these are the המדרש (another reading has the מדרש (the tradition). The rabbis of Caesarea said: herefrom (are understood) the供应 (traditions).”

the verses, should not be (publicly) read. Similarly *Diqduqe ha-Te'amim*, chapter 10, has “the chapter of the beginnings of the verses.” In contrast there is an indication for the actual marking of the beginnings of the verses in Babylonia itself (of a later period, of course) as found in texts using the Babylonian vocalization system (see Kahle, M.d.O. text, 35a).

Differences with regard to the details of the verse division existed not only between the West and the East, but within the same tradition itself. Sometimes there are differences between the division into verses and the division into sections, which is older; the *masoret* ("paragraphs [which end] within verses") are evidence of that (e.g., Gen. 35:22; Num. 26:1 (some texts = 25:19), etc.). However, there are differences in detail between printed texts and manuscripts.

1.3.3. Accentuation

There is evidence for the antiquity of the accents earlier than the above mentioned source (1.3.2.) and again the reference is not to the written signs, which were set relatively later, but to the tradition of reading the verses with the necessary accents and pauses, which was passed from generation to generation. A teacher of children should not receive payment for teaching Torah, but he can take a fee for teaching accentual division; ("a fee for teaching accentual division"); Ned. 37a). Even here, as with all oral transmission, doubts developed concerning the parsing and the accentual division and it is possible that the word *הכרעים* (דרכיון, הכרעים) refers to just that in the Palestinian version of the above-mentioned saying. Thus there are words in the biblical text whose syntactical adhesion is undecided; "Issi b. Judah said: there are five verses in the Torah the construction of which is uncertain: *תנאים* (Gen. 47); משלכון (Ex. 25:33); מלחין (Gen. 49:7);تلفק (Deut. 31:16)” (Yoma 52a/b). For similar doubts, see, for example, 71, Beshah 24:61c for 1 Chr. 29:21; Yoma 52a for 1 Kings 6:19; Bava Mezia 73b for Lev. 5:21; Bava Mezia 73b for Lev. 25:46. Most instructive is the question of R. "Hisdas (Hag. 6b; Yoma 52b): "Rav Hisdas asked: How is this verse (Ex. 24:5) written? 'And he sent the young men of the children of Israel and they offered burnt offerings,' meaning sheep; 'and they sacrificed peace offerings of oxen to the Lord;' or were both types of sacrifices of oxen? [i.e., does the word ‘oxen’ refer to the second half of the verse only and thus the peace offerings were oxen but the burnt offerings were not, but sheep, or does the word “oxen” refer to all the verse and thus both the burnt offerings and the peace offerings were oxen?] What difference does it make (what they sacrificed on that occasion in the wilderness)? Mar "Zutra said (the division of the accents [= punctuation]); i.e., this question has no practical relevance, other than for the issue of correct punctuation, that is, how one is to read the verse and where to pause in it.

This tradition of reading with stress and pauses involved the tune with which one should read the Bible. According to R. Johanan (Meg. 32a): “He who reads (ורו) without melody (והנני) and studies (ויש) without a tune (והד בד) is referred to by the verse ‘And wherefore I gave them statutes which were not good...’ (Ezek. 20:25).” This evidence of reading the Bible and the Mishnah (ותנאים) with a tune has an even more ancient basis, at least as far as the Bible is concerned. Thus the reason of R. Akiva for the custom of “Why do people not clean themselves with the right hand but rather with the left hand” is “Because one shows the people knowledge with the left [the right] hand” (Ber. 62a). The *masorah* ("accents of the Torah") which are shown by hand are the signs of conducting with the movements of the hand according to the tune, as attested to by Rashi (Ber. 62a): "Talame Torah: The tunes of the reading accents of the Pentateuch, the Prophets, and the Hagiographa, whether by signs in the book, whether by raising the voice, and with the notes of the melodies of the tune of *pashta* and *darga* and *shofar mahpakh*; he (the reader) moves his hand according to the melody; I have seen readers who come from the land of Israel do it.” This is, therefore, an ancient custom which was followed in Palestine still in the days of Rashi (the 11th century). There is also explicit evidence of the custom in *Mahberet ha-Tijan* (J. Derenbourg, *Manuel du lecteur* (1871), p. 108): “And know that the grammarians have a hand movement for every accent in addition to the melody articulated by the mouth...” This custom continues among Yemenite Jews to this day.

During the entire period of the Talmud the accents had no written signs and it is generally accepted that the invention of the vocalization signs took place at the same time as the invention of accentuation signs. At the only place where *sWith משמית* ("accent signs") are mentioned in the Talmud (Eruv. 21b) the term is usually interpreted according to this assumption: "Rava explained: what is the meaning of ‘he also taught the people knowledge; yea, he pondered, and sought out and set in order many proverbs’ (Eccl. 12:9)? ‘He taught the people knowledge’ means he taught them with accent signs.” “Accent signs” are explained as not being necessarily written signs (see Rashi ad loc.). Yet, perhaps the term “accent signs” may be understood in its literal meaning? There is no clear evidence either way and it is not impossible. However, if it is to be understood as accent signs, one must date the invention of the accent signs to an earlier period— that of Rava, about the first half of the fourth century.

1.3.4. The Masorah

The Masorah referred to in the above sources (1.3.2) as *masoret* or *masorot* has already been discussed. Undoubtedly, it means the traditions concerned with the writing of the text with regard to plene and defective orthography. There is evidence in talmudic literature to this effect, such as the principle that *מהorses תחתא היא תتحمل תחתא* (Sanh. 4a and elsewhere); that is, the spelling as handed down in the tradition (*masoret*) is decisive, i.e., the tradition of writing with or without the *matres lectionis* (as opposed to *אילא לא ת持って המר שיתם המר* “the reading of the text is authoritative” — i.e., the common reading and pronunciation — see above). It seems that the statement of R. Akiva, *masorot ספורותestyle* is a fence for the Torah” (Avot 3:13), also refers to the same thing, i.e., that the written text as handed down with all the details is a fence of defense for
the Torah. Even in this matter we learn of the precision of the
Palestinians, as from the statement of R. Ishmael to R. Meir
who was a scribe (Eruv. 13a): “Be careful in your work, for
your work is the work of the heaven; lest by your omitting
one letter or adding one letter the whole world be destroyed.”
In contrast to this there is the lack of precision on the part
of the Babylonians, as admitted by Rav Joseph, the Babyl-
onian amorah (Kid. 30a): “They [the Palestinians] are expert in
מַסְאוֹרָה
(= defective and plene spelling, matres lectionis); we are not expert.”

This is the source of the lists of differences between the
Palestinians and the Babylonians – the differences between
מערבי
(Westerners) and
מזרח
(Easterners) – which are
mainly variants in spelling and in the manner of the writing
(in one or two words). These lists, which include about 200 to
250 variances – there are differences between the various man-
uscripts as to number and detail – cover mostly the Prophets
and the Hagiographa and less the Pentateuch.

The care about the orthography and the matres lectionis
is the justification for the rule
שָׁה
דַּעְתָּה
בְּאַלּוֹת
and opened the
way for many homiletical interpretations based on the spell-
ing of the letters (especially when it allows for a reading dif-
f erent from that of the traditional pronunciation). The largest
collection of this type of interpretation is in "Midrash Haserot
wi-Yerot" (from the ninth or tenth century) which is devoted
completely to it. Even earlier than this the sages had arranged
lists for remembering words which are written with and with-
out matres lectionis, e.g., Soferim, ch. 7. They are, in fact, the
beginnings of the lists of the written Masorah which are based
on the short and sketchy notes on peculiarities of spelling or
form in the text, marked in the margins of the books. With
that we come to the written Masorah.

2. THE MASORAH AND THE BEGINNINGS OF GRAMMAR

The purpose of the Masorah, whether it be oral or written, was
clearly and undoubtedly the precise preservation of the holy
text. This purpose was the primary thrust for the occupation
with grammar after a period of many years. In this respect the
development and growth of Hebrew grammar is different than
that of other ancient grammars; although it was influenced by
them – to a smaller or greater degree – it differs from them in
its motivation and its beginnings.

2.1. GENERAL

Other peoples also came to occupy themselves systematically
with language and grammar because of the need to preserve
their holy texts: the Indians on the one hand and the Arabs,
to some degree, on the other.

2.1.1. The Indians

From the time the Indians felt that they were drawing further
and further away from their ancient language, Sanskrit, the
language of the Vedas, their holy writings, and that they were
facing the danger of forgetting that language and that thus the
holy writings were liable to be forgotten or – at least – to be
corrupted, they turned to the study of the ancient language
as a means for preserving the holy writings. Their approach
was analytical (the word "grammar" in Sanskrit is wyakaranay
= analysis) and they analyzed the holy text into small units
in order to recognize each unit and to write it down so that it
would not be forgotten. This is actually a descriptive method
which establishes the minimal units – mainly morphological
and phonological – and lists them in all their details. The in-
ventory lists of Sanskrit are in fact the perfect means for re-
alizing the goal which the Indian grammarians had set for
themselves, the preservation of their holy texts in the ancient,
original language.

The greatest Indian grammarian of the ancient period
was Panini, whose descriptive grammar became known in
Europe only in the 19th century and greatly influenced mod-
ern linguistics and the structural-descriptive school. However,
Panini lived in the fourth century B.C.E., and he certainly
had no influence on the Hebrew Masorah. The aim was the
same – preservation of texts – and such an aim does not stem
from foreign influence but is an internal, original need. The
means, therefore, for achieving this goal would be completely
different in each case.

2.1.2. The Arabs

While the Arabs are much closer to the Jews, both geogra-
pherically and chronologically, their principal motive was the need
to preserve the language, and not particularly their holy writ-
ings. The territorial expansion of the Arabs and the conse-
quently dominance of Arabic in all the area of their empire ex-
posed the language to the penetration of foreign influences
from the languages of the conquered peoples. The purity and
clarity of Arabic was in danger and a call went out in the first
years after the Islamic conquests – it mentions the name of the
caliph Ali – to make efforts to maintain its purity (لغة
ال方言). The first Arabic grammarians set the rules of the lan-
guage on the basis of the language of their ancient poets and
the Koran. The religious power of the Koran, which is written
in the dialect of the Quraysh tribe, the tribe of the prophet, and
its distribution among the believers made its language – with
all the adjustments made in it – into the model Arabic lan-
guage. Thus the preservation of the language of the holy writ-
ings was not the main purpose of the grammarians, but rather
the preservation of the purity of Arabic against foreign influ-
ences of non-Arabs who adopted Arabic as their language and
spoke it. Due to the status of the Koran in Islam, knowledge of
the Arabic language and grammar became a religious science,
one of whose purposes was also the correct interpretation of
the Koran and the other holy writs (the Ḥadith).

At this point the aims of Hebrew and Arabic grammar
have become identical, but the beginnings are completely dif-
ferent, both as far as motivation and early methodology are
concerned. The oral Masorah for the preservation of the text
of the Hebrew Bible was a living study for the Jews for hun-
dreds of years before their contact with Islam and before the
necessity for dealing with the language systematically was felt. However, the situation is analogous to some degree. In the same way that the Arabs came to study the language because of an internal, practical need, yet drew the methodological tools from outside, mainly from Greek language science, the Jews came to deal with language – with the Masorah – from an internal, practical need, and in that they preceded the Arabs. However, they also took the methodological tools for the development of grammar as a science at a later period from outside, mainly from the Arabic grammar.

2.1.3. The Syrians
Alongside these two peoples, the Indians and the Arabs, among whom the science of language developed, mention must be made of the Syrians, who were not very original in their treatment of language but who do have a point in common with the Jews. The Syrians were influenced both by the Arabs and by the Greeks. Next to the Indians, the Greeks are in reality the originators of the science of language, without any connection to a holy text but from a philosophical approach to literature and speech. The first grammatical works of the Syrians are translations from the Greek, yet for all the lack of originality in Syrian literature, including grammar books – and perhaps because of it – a need was felt for preserving the text of the holy writings, the Peshitta, in all details concerning its reading and pronunciation. This aim became intensified all the more when Syriac ceased to be a spoken language and, later, even a literary medium. In this it has something in common with Hebrew, and there are several points of contact between the Syrian Masorah and the Hebrew written Masorah. Like Hebrew, Syriac developed a system, or a set of systems, of dots and other signs to mark vowels, accents, and other diacritical marks. These systems became more and more sophisticated as time passed. One of the challenges of research into the Masorah has been the establishment of the relationship between the two traditions, the Hebrew and the Syrian, i.e., which is the original and influenced the other, and which came later and imitated the other. This applies to the method of notation, to the signs themselves and to the terminology. This question cannot be decided unequivocally, but in any case, it is clear that the beginning of the Hebrew Masorah – that oral system which is as ancient as the public reading of the text of the Bible and which was finally written down – undoubtedly precedes the Syrian Masorah, for the translation of the Peshitta is relatively late. The fact that Syriac manuscripts with diacritical marks from the fifth century have been found and that they therefore precede the dated Hebrew manuscripts which have vocalization and accentuation signs by about 300 years cannot affect this basic consideration.

2.2. AMONG THE JEWS

2.2.1. The Codex
When did the Masorah begin to be committed to writing? Since we do not have ancient dated manuscripts, one must accept external proofs. As already stated, the prerequisite for writing the Masorah systematically was the institution of a change in the means of writing and the abandonment of the common use of the scroll. The codex is a more sophisticated form for writing than the scroll; it consists of units of leaves of parchment or paper which are placed – bound – between two plates of wood. Every unit had a number of sheets, most often apparently five (hence the Hebrew word פסוק, qunteres (= quin tertius)). The codex was already in use by the Romans in the fourth century C.E. and perhaps earlier. It is first mentioned in Jewish literature in the Halakhot Gedolot, that is, in the eighth century and at the latest in the first half of the ninth century, by the name מצוות (mezuzah) which is borrowed from the Arabic mashaf. A codex is not valid for the public ritual reading of the Torah, and it has wide margins where different notes could be marked.

2.2.2. Dating
Despite the fact that actual evidence for the conditions necessary for the writing down of the Masorah is rather late, there is clear evidence from other sources that the Masorah was committed to writing prior to the eighth century. This evidence can be considered reliable in the light of the fact that scrolls which were invalid for ritual reading also served, as it seems, for the noting of Masorah. Scrolls of this type were also found in the Cairo Genizah. The evidence points to a period of 200 years within which vocalization and accentuation signs were initiated: not before the sixth century nor later than the seventh.

The terminus a quo is based on a number of facts:

(1) Jerome (end of the fourth century-beginning of the fifth) states explicitly (in his commentary on the Bible) that the Jews did not have signs to note the vowels (he does not speak of accents).

(2) In the Jerusalem Talmud (which was completed in the first half of the fifth century) and in the Babylonian Talmud (which was completed at the end of the fifth century) there is no mention of vowel and accentuation signs; similarly there is no mention of them in the earliest Midrashim. This evidence of silence is undisputed, especially in the light of interpretations like that in Song of Songs Rabbah on the sentence (Songs 1:11) ‘ויהי ותועמש לעם נקודות תהֶ sẻם’ ”We will make thee circlets of gold (םתְּךְ) with studs (nuqudot) of silver (נַקְדוֹת הַתָּשֶׁם)”: ‘With studs of silver’ – R. Aba b. Kahana said these are the letters. R. ‘Aha said these are the words. Another interpretation: ‘We will make thee circlets of gold’ means the writing; ‘with studs of silver’ means the stiles lines (drawn on the parchment).” In this context a homiletic interpretation of נקודות to signify vowel points is obviously called for, yet none is found. Evidence from late Midrashim is obviously not reliable; for example in Exodus Rabbah, ch. 2:6 (to Ex. 5:4) פסוק (paseq) is actually mentioned, but this Midrash is later than the tenth century. It follows, therefore, that the use of the vowel and accentuation signs was not instituted before the sixth century.

The terminus ad quem is established by a number of indirect proofs:
(1) Phinehas Rosh ha-Yeshivah is one of the early masoretic sages whose work in Masorah and vocalization there is definite knowledge, and he lived in the first half of the ninth century at the latest. This suggests that vocalization and accentuation signs were already in use before then.

(2) Asher b. Nehemiah (the grandfather of Aaron Ben-Asher) lived apparently at the same time as Phinehas, and his grandfather Asher was the “great elder,” the founder of the dynasty of famous masoretic scholars who dealt with vocalization and accentuation signs like his descendants. This Asher the Elder must have lived in the second half of the eighth century at the latest, which means that the vowel and accentuation signs were fixed before that time.

(3) In the ninth century there was already no definite knowledge as to who invented the vowel and accentuation signs, and so we hear from Natronai Gaon of Babylonia (d. 858) in his prayer book, Mekh Berakhot: “The ten vowel signs (niqqud) were not given at Sinai but the sages marked them for signs.” Thus in the first half of the ninth century, although vowel and accent signs were known and accepted, the inventors were already unknown. It can be assumed therefore that the institution of their use preceded that time by several centuries. In the eighth century there were sages dealing with vocalization (see above); the latest possible time for the first use of vocalization and accentuation signs is therefore the seventh century.

2.2.3. The Invention of Punctuation
Today there is general agreement as to when the use of punctuation (including accentuation signs) was begun, but this was not always so. All scholars agreed that the tradition of pronunciation and the tradition of reading with pauses and melody are ancient, and that (without going into any detailed explanation of the phrase “law handed down to Moses at Sinai”) they were handed down by the earliest sages. An allusion to this is the talmudic expression miqra’ soferim (see above 1.3.1.1.), which is also considered as law handed down to Moses at Sinai.

2.2.4. Karaites and Rabbanites
There was, however, a difference of opinion with regard to the graphemic points which accompanied the text or were appended to it – the Masorah in the narrow sense:

(2) the graphemes which, by their very nature, are of two types: (a) the vocalization signs; (b) the accentuation signs.

As far as chronology is concerned, it is difficult to differentiate between the main category and particularly between the two types of graphemes. It can be assumed that once it was permitted to write on the manuscript of the text itself, signs were permitted to be used. However, for reasons of convenience, we shall treat them here in three separate paragraphs.

3. THE WRITTEN MASORAH
The written Masorah can be divided into categories:

(1) the masoretic notes in the margins of the text and the longer lists which accompany the text or are appended to it – the Masorah in the narrow sense;

(2) the graphemes which, by their very nature, are of two types: (a) the vocalization signs; (b) the accentuation signs.

But the Rabbanites considered only the consonantal text to be holy, and the inclusion of vowel and accent signs makes a scroll invalid for public ritual reading. Therefore, as far as they are concerned the signs are late. This view is expressed in the statement of Natronai Gaon, “the vowel signs were not given at Sinai but the sages marked them by signs.” A fuller statement is that of Simhah b. Samuel of Vitry, France, a disciple of Rashi, in his Mahzor Vitry (written about 1100): “for the descriptions of the melodies were said to Moses: which tears out (다는), stands straight (spoken), sits (spoken), stands (spoken), goes up (ḥased), goes down (ḥased), and leans (spoken) [referring to accent names]; but the signs of the melodies (= accents) were set by the soferim” (ed. by S. Hurowitz (Nuremberg, 1923), p. 462).

However, the Rabbanites were not unanimous; some shared the Karaite view, others thought that the punctuation signs were ancient and if Moses did not receive them at Sinai, at least it was Ezra the Scribe who set them. The matter was explicitly decided by Abraham *Ibn Ezra in Sefer Zahot (ed. Lippmann, p. 7a): “Thus is the custom of the Tiberian sages, and they are the source, for from them came the masoretes and we received all the punctuation from them.” The whole question was again clarified by R. Elijah Bahur *Levita in Masoret ha-Masoret in the third introduction (ed. Ginsburg, p. 121–31). Following them, it was generally accepted – with the exception of a few dissenters (J. Bachrach, Ishadalat im Shedal, Warsaw, 1896–97) – that the vocalization and accentuation signs were invented by the masoretes.

3.1. THE MASORAH (NARROW SENSE)
3.1.1. The Term
The early sages explained the term as deriving from הַשְּפִּיָּרָה ("to hand over")." i.e., something which was handed down from generation to generation: the text of the Bible which is precisely transmitted (as stated e.g. by Elijah Levita at the beginning of his third introd. to Masoret ha-Masoret; ed. Ginsburg, 102–3). Others explained the term and the related one וַעֲסֵר ("to bind"); cf. commentaries to Ezek. 20:37, עֲסֵר, that is, something which...
is bound and gathered: the detailed instructions for reading joined together to the text (thus Bacher and Levias). Most convincing is the explanation of S.D. “Luzzatto, who proves that ושמעתי and ובראש (“sign”) are synonyms, arrived at by extended meaning. At first they said “he handed (מָבֹל) a sign (מָסַר) to them” and later the sign which was transmitted was called masoret. The expression מָסַרִים תִּפְעַל ("masoret is a fence for the Torah") thus means that the devices concerning the writing with and without mater lectionis (and also those for the talmudic laws) are a fence – an aid – for remembering the Torah. The expression מָסַר יְיָא אָלֵם (see above, 1,3,4.) is also nicely explained according to this, i.e., that the written sign or the letter is authoritative.

Z. Ben-Hayyim has suggested a new explanation which seems plausible. He has demonstrated that the verb מָסַר can also mean “to count” (מסָרִים) both in Hebrew and in Samaritan Aramaic. Indeed, counting was a large part of the work of the masorettes, according to the Talmud (Kid. 30a): “Therefore the early sages were called soferim for they counted all the letters of the Torah…” In the period following the Talmud the term “sofer” more and more came to refer to a skilled scribe and copyist of the Bible, while the wisdom required in the work and the understanding and exact knowledge of the text needed a special name, and for that a noun from the root מָסַר began to be used, i.e., מָסָרִים masorah (and this without detracting from the older meaning of masoret = sign). The form מָסַרִים which is found in a poem of Hai Gaon (d. 1038) is from Palestinian Aramaic where it serves as a participle, that is in Hebrew מָסָרִים ("counting"), and it is this name which fits the skill of noting the peculiar details in the biblical text. This form was even translated correctly in various participial forms in Hebrew and in manuscripts of the second collection of Firkovich in St. Petersburg: no. 9 – the beginning of the tenth century; no. 39 – from the year 989; and no. 144 from the year 1122) and in the piel conjugation (in a manuscript in the same collection: no. 17 – from the year 930) with the meaning “to write Masorah.”

3.1.2. Definition and Scope
In the Masorah (in the narrow sense) everything that is written outside of the biblical text, but accompanies it, is included. This is even stated in one of the oldest chapters which describe the Masorah, “and he commanded to write one outside (מדאיה) and one inside” (Dikduke ha-Tē’āmin, ed. Baer-Strack §8, and cf. §65, and Mahberet ha-Tījān ed. D. Derenbourg, 127, 129–31), and it seems that the term מָסָרִים תִּפְעַל (“the external ones” – Dīqaqē ha-Tē’āmin, ed. Dotan, ch. 2) includes all the notes listed outside of the text. These notes vary in their degree of importance to the text, antiquity, trustworthiness, and degree of agreement in various manuscripts. It is therefore convenient to follow here an external-technical division of these notes and not one based on their nature. The modern commonly accepted technical division is the following:

1. Masorah Parva (Small Masorah);
2. Masorah Magna (Great Masorah) which is further divided into: (a) Marginal Masorah and (b) Final Masorah (written at the end of the text).

3.2. THE MASORAH PARVA (QETANNA)
The notes of the Masorah Parva are expressed in extreme brevity and generally by abbreviations. These notes are listed in the manuscripts at the margins of the biblical text, mostly at the right or left. There is a small circle (or star) in the text over the word to which the note of the Masorah is directed. In the fragments of the Bible with Babylonian punctuation, the Masorah Parva is sometimes written in small letters between the lines of the text, each comment above the word to which it refers.

3.2.1. The Qere and Ketiv
The most important notes in the Masorah Parva for the purpose of the reading are those of qere (including qere ve-la’ ketiv and ketiv ve-la’ qere, “read although not written,” and “written but not read,” respectively; see above, 1.3.1.3.). Initially all the notes were written together, but in a few manuscripts and especially in printed editions, the notes concerning qere were emphasized more than the others.

3.2.1.1. Methods of Notation. Qere (the passive participle in Aramaic = the read [Hebrew הָרָא]) means the form of the word as it should be read – ignoring the written letters. The vocalization and the accentuation signs which are diacritical marks for correct reading are adjusted, therefore, only to the form which is read and not to the written form. Yet there is an ancient custom, which was followed in most of the printed editions, to write the vowel and accent marks of the qere upon the skeleton of the letters of the ketiv (= the written) and to write the consonantal skeleton of the form which is read without its vocalization and accentuation signs as a masoretic note in the margin: for instance, inside the text (Josh. 20: 8 הביא יהודה) and in the margin: קָרָיָא מִדֶּבֶר הָיָה (= "read"); inside the text (Isa. 36:12) מִדֶּבֶר הָיָה and in the margin: מִדֶּבֶר הָיָה (= "written"); and in the margin: מִדֶּבֶר הָיָה (= "written").

3.2.1.2. The Development. The older method of marking the qere was to note it in the margin, or in the Babylonian system to mark sometimes between the lines, only that portion of the word in which there is a change. This method is quite frequently used in the Palestinian system. The full word containing the variant reading is found in relatively later texts.

3.2.1.3. The Symbols. There is noticeable development also in the manner of notation. In the earliest stage only the letter which was different was noted in the margins (when the qere indicated a change in letter), such as in the Palestinian vo-
calization אָבוֹת (Jer. 2:20), and in the margin מְבַלֲּהִים (Ezra 4:4, 18). In the course of the development there was noted alongside the form of the qere in the margins – in all the vocalization systems – a sign resembling a final ת or a ת whose meaning has not been explained. It has been suggested that if it is a nun it refers to the word הָלָה (in Aram. "they are reading"), or it is an abbreviation of אָבוֹת הָלָה (“version”). If it is the letter רזינ (“the sought for, the desired [reading]”, a term found once in an ancient masoretic list (Ginsburg, Masorah, 3, p. 278; Diqduque ha-Te’amim, ed. Dotan, p. 73) not exactly in the sense of qere. There is, however, no proof for these suggestions since the full word is never found instead of the symbol in a qere note. It seems that it is nothing more than a sign which was generally agreed upon and not a letter of the alphabet (cf. another sign of the Masorah, which came to resemble a reversed nun – see above 1.2.2.2.).

As time passed רַע or its abbreviation ר (was written in addition to this sign alongside or under the qere version. In Babylonian manuscripts רַע (“reading”) is also found written out. In these texts the sign ת ("ketiv") too is occasionally found written over the forms of the ketiv which are in the text itself. Another notation found in a few manuscripts and used in each of the punctuation systems to note the qere where one letter in the ketiv form is extra, is רַע, רַע, for example.)שָׁאֵשׁ (Dan. 4:14) in the margin: רַע רַע. A note of this type also may, sometimes does denote a spelling with matres lectionis, such as מְבַלֲּהִים (Dan. 35, 7) in the margin: מְבַלֲּהִים; also לְעִיָּא (Ezra 4:18) for noting a qere form which differs from the ketiv only in the omission of letters, for example, מְבַלֲּהִים in and in the margin מְבַלֲּהִים (Ezra 8:1, Leningrad Ms.) that is, רַע (aleph not read), namely, read רַע רַע.

3.2.1.7. The Scope of Qere. There are differences between manuscripts and between printed editions with regard to the number of qere notations; some versions mark the qere very frequently while others do so rarely. This refers of course to those instances where the remark concerning qere is not required and the reading can be understood without it, especially when the difference is with quiescent letters, like ב (Deut. 33:9), וַיְהִיטָם (11 Sam. 11: 24), etc. Some manuscripts note qere for these and some merely have a masoretic note, רַע (haser), מְבַלֲּהִים (male’), or רַע (yattir), etc. Some make no comment at all. Thus there is no fixed number of qere notations in the Bible. Elijah Leviata, for example, counts 848 cases (Masoret ha-Masoret, the third introduction, ed. Ginsburg, p. 115), and he is not a maximalist.

3.2.2. Types of Qere

Essentially there are four or five main types of qere notations in addition to qere we-la’ ketiv, which are really words omitted from the text, and in addition to ketiv we-la’ qere, which is actually not a qere but a la’ qere instruction (“not read”).

3.2.2.1. Euphemisms. Strong language is changed to euphemisms. This is a substitution which dates back to the time when Hebrew was a spoken and understood language. Evidence for this type of change is already found in the Tosefta (Meg. 439–41): “Every derogatory written expression is replaced by one of refinement, e.g., ‘Thou shalt betroth a wife and another man shall ravish her (שִׁמְעַת)’ (Deut. 28: 30): everywhere where שִׁמְעַת is written, they read שָׁמַע (shall lie with her); ‘with the boil of Egypt, and (בְּאָיֵן) [unknown disease]’ (Deut. 28: 27): everywhere where בְּאָיֵן is written, they read it as בְּאָיֵן וְלָשׁוֹן … (with the hemorroids).” Cf. a better version in Meg. 25b.

3.2.2.2. Correction of Forms. Archaic forms or grammatically exceptional forms are substituted by a standard one, e.g., the suffix of the second person feminine – קָרָאת (Jer. 3:4), קָרָאת (11 Kings 4:1), יָדְךָ (11 Kings 4:7), and, e.g., the suffix of the verb in the perfect, plural third person feminine – נִשָּׁתָה (Jer. 2:15), etc.

3.2.2.3. Correction of Errors. Errors, or what appeared to the masoretes to be errors, are corrected. These are likely to be of various types, as metathesis, substitution of letters, the omission or addition of letters, changes in the division of the words, the substitution of whole words, and so on, such as יָדְךָ קָרָאת (1 Sam. 14:27); נִשָּׁתָה יָדְךָ (1 Sam. 4:13); רַע רַע (1 Sam. 14:32); בָּנָו נִשָּׁתָה (Jer. 26:6); שֵׁלָת שֵׁלָת (Sam. 14:32); שֵׁלָת שֵׁלָת (11 Sam. 21:12); נִשָּׁתָה נִשָּׁתָה (11 Kings 20:4) and so on.

3.2.2.4. Male’ and Haser (Plene and Defective). Changes in the spelling because of matres lectionis. It is with
regard to this group that variants in the different manuscripts are the most frequent. Some manuscripts note them as a version of qere, whereas others ignore them, because it is possible to read the ketiv with the vowels of the qere and not make an error (for examples see above, 3.2.1.7.).

3.2.2.5. QERE PERPETUUM. In addition to the above types of qere there are others which are not noted at all, the qere perpetuum. These were handed down orally from generation to generation and one must observe them even though there is no qere notation concerning them. In these instances the vocalization of the qere is attached to the ketiv. Among them are the name of God, which is read differently from the way in which it is written; in the Torah the feminine third personal pronoun is אֶלֹהִים (except for 11 places where it is אֶל); נְעֵרִי is written in the Torah without the ה (except for one place, Deut. 22:19); the name of the city Jerusalem is written without the yod (except in five places) but it is always read בֵּית יְרֵמְאוֹן; the name בְּשִׁשַּׁשָׁהָּל (Issachar) – at least in the Ben-Asher version – see below. Some have suggested to consider other forms as examples of qere perpetuum, for example, שָׁם, שָׁמֶם which are supposed to be שָׂם, שָׂמֶה, (see *Gesenius $17c, 97d), but there is no evidence for this.

3.2.3. THE MASORETIC NOTES

The other notes of the Masorah Parva point out forms in the text concerning which there is some apprehension that the reader or the scribe-copyist will err, that is, spelling with or without the matres lectionis (plene or defective), certain vowels or accentuation signs, certain grammatical forms, the joining of certain particles, the unusual combination of words, and so on. In most of the masoretic notes the view is descriptive-comparative and not normative. In general the question is not what is the standard form and does the item in question deviate from it, but rather what is the common form and is the item in question different from the common form – whether or not it be standard or exceptional itself – and does the item belong to the majority or the minority. This last principle necessitates the constant enumeration of the forms in the various divisions of the text (in the entire Bible, in one of the three parts of the Bible, in a book, or even in a specific section), and reference to this number.

3.2.3.1. TERMINOLOGY. Below is a list of the common terms in the Masorah and their usual abbreviations. From the definitions and examples the nature of the notes of the Masorah Parva will become clear. It is to be noted that most of the terms of the Masorah are Aramaic, which is itself an indication of the time of the creation of this terminology: לְהֵינִיק (Gen. 1:27), ל (the word in this form does not occur again in the Bible); הֵינִיקוּ (Gen. 2:1), ה (this word with the conjunctive waw occurs four times in the Bible); בְּעַלֵי, בְּעַלְיָם (Gen. 1:27), ב (the word does not occur again in the Bible and here it is written with the waw): בְּתוֹלָדוֹת (Gen. 2:4), ב (this word is found twice in the Bible with two waws);دوֹל (Dan. 2:21), ד (the word does not occur again and here it is written with yod); תִּרְשָׁא (Gen. 3:1), ת (occurs only here and written without waw); יַרְשָׁא (Gen. 3:16), י (this combination appears nowhere else at the beginning of a verse); מַסְפִּיר = מַסְפִּיא (Gen. 1:25), מ (these two words are found together 10 times); מַסְפִּי (in the Torah): מַסְפִּיא (Gen. 2:20), מ (this word is written in the Torah nine times with the waw); אֶרֶי = אֶרְיָא, אֶרְיָא (Aramaic for Torah): יָשָׁה (Gen. 57), י (without the waw throughout the whole Torah); בְּצַלְמֹן = בְּצַלְמֹי (in this book of the Bible): בְּרָק (Gen. 8:13), ב (occurs twice in the Book of Genesis); יִבְּרָק = יבְּרָק (in the Prophets): יִבְּרָק (Ezek. 22:24), יִבְּרִיק (occurs 10 times in the Prophets with the second waw); יִבְּרַק = יִבְּרַק (in the Hagiographa): יִבְּרָק (Ruth 2:8), יִבְּרִיק (nine times with waw in the Hagiographa); יִבְּרִיק יִבְּרָק = יִבְּרָק (in this context): יִבְּרָק (Gen. 58), י (this combination occurs seven times in this section, i.e., in the section of the generations from Adam to Noah. In contrast, יִבְּרָק יִבְּרָק occurs three times); יִבְּרָק יִבְּרָק (in the language, i.e., 1. root, basic form; 2. meaning):

1. מֵינִיקו = מֵינִיק (Gen. 21:7), מ (there are five words from the same root written with two yods). This is the only occurrence of this form, but there are four others from the same root מֵינִיק which are written with two yods: מֵינִיק (Gen. 32:16), מ (the word occurs twice in the Prophets); מֵינִיק (Isa. 49:23), מ (in this context): מֵינִיק (Gen. 43:3), and see Minhat Shai to Ex. 2:9.

2. לְהֵינִיקו = לְהֵינִיקו (Gen. 29:10), ל (the word occurs twice in this form, with two meanings. Here it means “and he rolled” – the hif'il of לָלָל; in Ps. 16:9 it means “and he rejoiced” the qal of לֵל); ל (Gen. 22:2), ל (this word occurs 14 times with this accent).

In addition to this group of terms there are also basic grammatical expressions: דָּגֶס (dagesh) and רָפֶל (rafel), מִילְּיעָה (mille'el) and מְלָכָה (millerah), רָפֶל (masculine) and נְקֶף (feminine), קַפָּר (games) and הָנָה (pattah), and the names of the other vowels and accentuation signs. For a more comprehensive list of terms see Yeivin, Introduction to the Tiberian Masorah, pp. 80–120.

3.2.4. THE BABYLONIAN MASORAH

The Masorah Parva and the Masorah Magna are appended also to texts of the Babylonian system (see 5.2.). They are slightly different from the Tiberian system (see above), but the main difference is in the very paucity of masoretic notes – for most of the parts of the Bible there is no Masorah or there is very little – and in their terminology.

3.2.4.1. TERMINOLOGY. Some of the terms are the same in the two systems; the following are the most important terms which are unique to the Babylonian Masorah: 한국 = 한국 (Aram. “which is read”) = in most cases equal to Tiberian
3.2.6.1. MADINH. Other opinions are also cited in the Masorah. The degree to which they are mentioned obviously depends upon the masorete or transcriber of the manuscript. The most common case is the mention of the Babylonian version (Easterners), as opposed to the Tiberian (Westerners), for example, (i Sam. 1:3) = תִּכְּנֵאָה (Et DH אָה מְּלֶתֶּם יִלְּדֵה) = תִּכְּנֵאָה (DHH אָה מְּלֶתֶּם יִלְּדֵה) = (ditto) = games, מִיתַּקָּחָה מְתָמִים מַשָּׁמָּה ("opening of the mouth") = מִיתַּקָּחָה מְתָמִים מַשָּׁמָּה (= patalla; so too some of the names of the accents: תַּקָּחָה מְתָמִים מַשָּׁמָּה = Entity; מִיתַּקָּחָה מְתָמִים מַשָּׁמָּה = qere; מִיתַּקָּחָה מְתָמִים מַשָּׁמָּה = qere). Other grammatical terms named differently are (Aram. "contraction of the mouth") = games, מִיתַּקָּחָה מְתָמִים מַשָּׁמָּה. The number of cases of contamination of Masorah is also found in the opinion of the reader another version which is, in the opinion of the masorete, also worthy of being considered.

3.2.2. CONTAMINATION OF MASORAH. In some cases we find a mixture of the Masorah. Some Tiberian codices show a certain degree of Babylonian influence in terminology or even in essence. The best example of sporadic absorption of Babylonian terms is the Tiberian Pentateuch codex London Or. 4445 (see Dotan, Babylonian Residues), and isolated cases may be found in other manuscripts too (e.g., the Aleppo codex). The best example of a Tiberian codex where the essence, the very readings, of the Masorah is by nature often Babylonian or close to Babylonian is the Pentateuch codex Gottheil 14 (א), which was apparently an adaptation of the Babylonian Masorah (see Breuer, Masorah Magna ע). The contamination of Masorah is also found in the opposite direction, where a Babylonian manuscript is mixed with Tiberian Masorah (Tiberianization). The most representative example is the codex Petropolitanus of the Latter Prophets (dated 916).

3.2.3. The Palestinian Masorah
In the texts vocalized in the Palestinian system there are almost no masoretic notes, except for the qere notations. In the few fragments where there are masoretic notes, they are the same as in the Tiberian system; most common are the basic terms: מִיתַּקָּחָה מְתָמִים מַשָּׁמָּה and also the letters used for numbers. All of these signs are generally written between the lines above the relevant words, but occasionally also in the margins.

3.2.6. Deviating Versions
3.2.6.1. MADINH. Other opinions are also cited in the Masorah. The degree to which they are mentioned obviously depends upon the masorete or transcriber of the manuscript. The most common case is the mention of the Babylonian version (Easterners), as opposed to the Tiberian (Westerners), for example, תִּכְּנֵאָה (Easterners) = תִּכְּנֵאָה (Westerners). The number of cases of contamination of Masorah is also found in the opinion of the reader another version which is, in the opinion of the masorete, also worthy of being considered.

3.2.6.3. SEVIRIN. There is another type of variant version which is different from all these in that it is cited in order to be rejected, i.e., in order to prevent possible error by the reader. These variants, which are occasionally more reasonable than the text, are called sevirin ("there are some who believe [that the text is...]"); (there are those who believe and err [that the text is...]); and in the Babylonian Masorah רָשָׁבוּת תִּכְּנֵאָה = (= there are some who err in them), and in the Babylonian Masorah רָשָׁבוּת תִּכְּנֵאָה = (= there are some who err in them), (= which fits the text better).

For example, מִיתַּקָּחָה מְתָמִים מַשָּׁמָּה = (Gen. 19:23): is written and some think better to read it תִּכְּנֵאָה; they are not correct and it is not to be read that way.

There are also cases where the term sevirin is a warning about a possible error and not a record of a version.

The number of cases of sevirin is not uniform and varies from dozens of sevirin in some of the older manuscripts to about 350 in later editions (such as the C.D. Ginsburg edition of the Bible). These differences stem from the fact that some manuscripts completely ignore the sevirin version in many places, while others bring the errant version, sevirin, as ketiv and the correct version as qere. Although the origin of some of these variants is clearly ancient, it seems that the number of logically possible — but rejected — variants increased with time and the copying of the manuscripts.

3.3 THE MASORAH MAGNA (GEDOLA)
A large part of the notations of the Masorah Parva, with the exception of the qere notations and the indications of unique forms (א), etc., occur in greater detail in the Masorah Magna. In principle the Masorah Magna is a detailed explanation and expansion of the Masorah Parva; it does, however, contain additional notes, the abbreviations of which do not occur in the Masorah Parva.
3.3.0.1 Method of Notation. Owing to its length the Masorah magna was not written at the side of the text but in either the upper or lower margin of the page, or in both, and, in a few manuscripts, also in the side margins. The Masorah magna is a continuous text of a few lines on every page, and not like the Masora parva where letters and abbreviated words are written opposite the relevant word in the text. However, sometimes there was not enough space on the page and the scribes would leave part of it, especially the long lists, for the end of the book.

The details of the Masorah magna generally include the citation of all the words or parts of the verses which contain a certain form, for which only the number is listed in the Masorah parva: for example: וַיְהִי (Gen. 6:8) – Masorah parva: וַיְהִי (it occurs three times in this form – with the conjunctive waw – at the beginning of a verse); Masorah magna: וַיְהִי, נְתָנָה (סְמִכָּה) וּרְאָה (תַּמְדִּיד), הַחַדָּה (7:6), ובו לְדָלָיָא (Ezek. 14:20).

3.3.1. The "Simanim" (Mnemonic Devices)

The detailing of the verses or parts of verses is often introduced by the term אֲדֹנֵי ("and their sign") or its abbreviation, אֲד. This term (in addition to its later use for denoting chapters of the Bible) serves mainly to mark the mnemonic devices which the masoretes fixed for remembering the itemized biblical verses. These devices are of various types. Sometimes they are like the devices in the Talmud which are made up of initials. For example, in order to remember the sequence in chapters of the Bible (not necessarily in the order of occurrence in the Bible) results in an understandable sentence: יִדָּוַא ("the lad Samuel"); I Sam. 2:26; מַגְּרוּ ("chosen man"); I Sam. 9:2; תַּמְדִּיד ("ran"); Gen. 18:7; יְמַגְּדוּ ("found"); 1 Chron. 4:40; אֲדֹנֵי ("wisdom"); 1 Kings 10:7; thus (the siman in Aramaic is: "the chosen lad Samuel ran and found wisdom").

This type of siman is very frequent and there is more than a bit of sophistry and amusement in it. There are even longer simanim, as e.g., the mnemonic for the word אֲבָרָם (Micah 7:9) is: ( = (the blind one called out and hoped to get out in the morning and got up at night). For the word ה (Gen. 17:18) there is a sentence of 22 words, and even longer ones are extant. In some manuscripts devices like these were found even in Arabic (A. Dotan, "Masorah magna in Arabic Translation").

3.3.2. Accumulative Masorah

The most common notations of Masorah magna, discussed so far, apply to forms of words which occur a number of times in the Bible. There is another type of Masorah magna notations which list words that occur only once and which are marked in the Masorah parva by ב. In recent research such lists are termed "Accumulative Masorah" (in Hebrew: סְמִכָּה פָּרְדָּס), for they list together unique words of a certain common peculiarity, such as a common beginning, e.g., an initial letter תתי; a word:וּשְּמִלָה etc.; or e.g., combinations with or without he in the second word:הִיא שָׁמֶש etc.; or even a common combination of words, e.g., combinations with different parts:גֶּדֶר שָׁמֶש etc. Sometimes an Accumulative Masorah may consist of pairs (וג) of unique similar words or combination of words differing in only one detail from each other, e.g. words with or without an initial waw: יָשָׁר נַח Williamson, תָּרָם נַח etc.; or e.g., combinations with or without he in the second word:דָּוַא יָשָׁר מָו etc.; and many more variations of accumulation of unique words or sometimes even pairs of unique words. The items in these lists may have no definite order or they may be arranged by order of their occurrences in the Bible or alphabetically or by the order of some other principle (A. Dotan, The Awakening. Pp. 31–44).

3.3.3. The Babylonian Masorah

The Babylonian Masorah magna does not differ from the Tiberian in principle, but it is more limited in scope and methods of expression. In contrast to the Babylonian Masorah parva,
which is written in ancient manuscripts, especially in those vocalized with the simple Babylonian vocalization, between the lines, the Masorah Magna is recorded in the margins at the sides or the top and bottom. In texts vocalized according to the composite Babylonian system, there was not enough space between the lines; the Masorah Parva was written at the sides and the Masorah Magna at the top and bottom. In all the periods there were mixed texts, influenced by other vocalization systems, and this influence finds expression in the masoretic notes, in their terminology, and even in their methods of writing. A detailed description is now available in Y. Ofer, *Babylonian Masora*.

### 3.3.4. The Palestinian Masorah

The Palestinian *Masorah Magna* is even more limited in scope. Its few notes are mainly written in the bottom borders and occasionally at the top, too. The *Masorah Parva* is written in the side margins or between the lines. In its content – terminology and methods of expression – the Palestinian Masorah is closer to the Tiberian than to the Babylonian, although the influence of the Tiberians must be taken into account. In scope it is closer to the Babylonian Masorah and is even shorter than the latter, which is undoubtedly due to its very early date.

### 3.3.5. Agreement between the Masorah Magna, The Masorah Parva and the Text

In essence the *Masorah Magna* complements the *Masorah Parva* – particularly in the Tiberian Masorah, which has been transmitted to us in sufficient quantity to allow a comprehensive study – and it is entirely logical to expect a fixed relationship between the two, as between any text and its extension. However, only rarely is this the case.

#### 3.3.5.1. Lack of Agreement

There are many instances where there are notes in the *Masorah Parva* for which there are no counterparts in the *Masorah Magna* and vice versa. Furthermore, sometimes there is disagreement between the masoretic notes and the version in the text itself; for example, one finds occasionally the gloss ל́א מתעומד (not found elsewhere *plene*) in the margin, while in the text the word is actually written defectively, without *matres lectionis*.

#### 3.3.5.2. Methods of Copying

These differences between the two Masorahs themselves and between them and the sacred text increased as time passed. In early manuscripts such instances are still rare, but in later manuscripts they become more common. The cause is to be found in the method of copying the manuscripts. The precision was preserved as long as the manuscripts of the Bible text were copied by experts, each one a skilled craftsman – the scribe in the writing of the consonantal text and the learned masorete (הומלא) in the placing of the vowels, the accentuation signs, and the masoretic notes – a division of labor that was maintained generally in the earliest period, the ninth, tenth, and 11th centuries, and perhaps even later. In this way the masorete did his work on a consonantal skeleton which was transcribed for him by an expert scribe. When the consonantal text did not agree in every detail with the Masorah that he followed, he was able to correct the writing (mainly to add or remove wawes or yods). Even so there were discrepancies between the text and the Masorah. For the masoretes, even the most expert, generally did not create the Masorah, but merely transmitted it as they had received it from their forerunners, sometimes adding new notes or amending notes that were inadequate. They undoubtedly used older manuscripts and older lists of Masorah from which they transferred the notes – obviously with deep understanding – onto the new copy in front of them. As the years passed the masoretic material increased by virtue of the innovations and additions of each generation, while the selectiveness of the masoretes became less and less severe. The degree of coordination between the various notes of the Masorah itself and between the Masorah and the text of the Bible decreased as the quantity of the masoretic notes grew. Furthermore, the separation between the two types of notes, the *Masorah Magna* and the *Masorah Parva*, was not maintained and more and more long notes of the type of the *Masorah Magna* were recorded in the margins, the place of the *Masorah Parva*.

#### 3.3.5.3. The Non-crystallization of the Masorah

It can be said that there never was one single uniform Masorah. One can assume that the early, great masoretes composed an exact Masorah which fitted a specific text of the Bible. A version like this was, therefore, "the Masorah of so-and-so," but not the *Masorah*. Even though no such perfect version is extant, we do know that they existed; for example, the Masorah of Ben-Asher (*അംഗാവർണം*; "and he said in his Masorah"). Versions of this type served as exemplary models for later masoretes, but some of them followed the principle that the more models the better, which ultimately had an unfortunate effect.

#### 3.3.5.4. Ornamenation of the Text

As time passed copying the text became a less intelligent work, and there were copyists who lacked all understanding of the Masorah, to the extent that some of them used the material of the Masorah for mere ornamentation of the text. They created frames for the text out of the lines of the Masorah; they sketched geometric patterns, pictures of animals in the margins of the pages; they even wrote names, such as the name of the scribe or that of the owner, using masoretic notes as fillers. The masoretic material was not copied to fit each page of text exactly, but according to aesthetic and space criteria. In some places the copyist stopped the copy in the middle of a masoretic note for lack of space, or copied an irrelevant note to fill the space. Manuscripts like these, some of which are most ornate, are worthless for the study of the Masorah.

### 3.3.6. Jacob b. Haiyyim ibn Adonijah

#### 3.3.6.1. Editing and Arranging the Masorah

Jacob b. Haiyyim ibn Adonijah of Tunis (c. 1470–c. 1538) tried to correct this situation. He was employed as a proofreader in the printing house of Daniel *Bomberg in Venice at the beginning of*
the 16th century. He collected a large number of manuscripts of the Bible and from them edited a new clear version of the Masorah. He corrected the errors in it and adapted it to that text of the Bible which seemed to him to be the most correct version. In addition he arranged most of the notes of the Masorah Magna in the alphabetical order of the words to which they are directed and printed them in a lexical list at the end of the Bible. The Masorah of Ben Hayyim was printed with the second edition of the Rabbinic Bible published by Bomberg – Migrárot Gedolot, Venice 1524–25, and it was issued in a scholarly edition by S. Frensdorff, Die Masorah Magna (Hanover and Leipzig, 1876; repr.: New York, 1968).

3.3.6.2. Cross References. Besides his correction of errors, Jacob b. Hayyim’s innovation was to introduce cross references for parallel comments and to add the systematic list at the end. This was the first attempt to arrange all the masoretic notes alphabetically.

3.3.6.3. His Terminology. In this arrangement every alphabetical unit is called a מָעָרְקֶת (ma‘arkeha) and the whole came to be called מָעָרְקֶת מָעָרְקֶת (Masorah ma‘arakhit). Ben Hayyim himself named the collection at the end מַסְרָא הַגָּדְלוֹת or מַסְרָא הַקָּטְנִית, or for the marginal notations he used the name מַסְרָא אוֹרִיָּה or מַסְרָא שְׁכָנָה (middle Masorah; see his introduction, ed. Ginsburg, pp. 82–83). This terminological differentiation, like his systematic arrangement, is unique to Ben Hayyim. Yet he was not the first in moving part of the Masorah Magna to the end of the text. The early Masorah copyists had already preceded him in that in the ancient manuscripts. They had had to draft long lists for which there was no room on the pages; and so they copied them together at the ends of the books. In the manuscripts, therefore, there was no essential difference between the lists of the Masorah Magna on the page and those at the back of the book, but for practical reasons, the lists which were longer and more comprehensive in their content were recorded at the end.

3.3.6.4. The Accepted Terminology. This situation necessitates precision in our concept of the terminology of the Masorah. A differentiation must be made between ancient manuscripts and the codified orderly Masorah of Ben Hayyim, which had been for many years the one referred to when one speaks of Masorah. One can say that the Masorah Magna is divided into a marginal Masorah and a final Masorah. In the ancient manuscripts the final Masorah includes summation lists, which deal with complete books or sections of books (see below), and long systematic lists of Masorah for which there was no place in the margins. In Ben Hayyim’s work the final Masorah includes a lexical arrangement of most of the words, discussed in the Masorah Magna sometimes with the details of the masoretic notations.

3.3.7. Summary Lists
The summary lists which are at the end of the books (and sometimes at the beginning) are tallies of the verses, the para-

3.4. The Independent Masorah
Fragments of manuscripts were discovered in the Cairo Genizah which appear to be remnants of independent works of Masorah; that is, works which contain masoretic notes in the order of the books of the Bible but without an accompanying biblical text. It is possible that these works go back to a very ancient period, perhaps even to the time when it was not permitted to write the Masorah in the margins (see above, 2.2.2.). Such fragments were also discovered of the Babylonian Masorah and a few of the Palestinian Masorah. Some of these works contain topical lists of Masorah, i.e., lists arranged according to specific subjects, like exceptional spellings, specific issues about vocalization, unique words, and so on. One independent work in which the notes do not follow the text of the Bible but are arranged systematically according to topics is Okhlah We-Okhlah. This work has the widest scope of all those known to us, comprising almost 400 lists of Masorah. The lists, arranged alphabetically, contain unique words with a common characteristic, or pairs of words which differ from each other in one detail, extraordinary spellings, vocalizations, or accents, and so on. The book gets its name from the first two words of the first list, which enumerates alphabetically pairs of unique words, one occurring with the conjunctive waw and the other without it. This list begins with the pair 알’in, אול’in. The book was also known to the early scholars by the name of המִסְרָא הַגָּדוֹלָה (Masoret ha-Gedola), and in Arabic المَسْرَة الْكَبِيرَة (al-māsirah – the Masorah) by Saadia Gaon in his Grammar book, and almāsirah al-kabīrah (al-māsiṣrah al-kabīrah = the great Masorah) by David ben Abraham al-Fasi in his dictionary. The name Okhlah We-Okhlah is mentioned already by Jonah *Ibn Janah in his dictionary (Sefer ha-Shorashim, entry בָּן). The book was first published by S. Frensdorff (Hanover, 1864) according to the Paris manuscript; it was published again by F. Díaz Esteban (Madrid, 1975) according to the first part of the Halle manuscript and later by B. Ogniben (Madrid-Fribourg, 1995) according to the second part of the Halle manuscript. Most of the lists in this book are known from other sources in the marginal Masorah or from independent manuscripts, but here they are more complete and were apparently taken, in part, from an ancient source. However, the work also contains lists from relatively late periods, and it follows that the
book is not a uniform work, a fact which can be strengthened by the existence of more than one version of the book. The exact date of its editing has not been established, though there is evidence of its antiquity and it was certainly not edited later than the tenth century.

3.5. THE MASORAH TO TARGUM ONKELOS

Masoretic notes were also appended to Targum *Onkelos, which was considered the official translation of the Torah for the purpose of public reading and which, therefore, also came to be considered sacred to some extent. The purpose of these notes was to preserve the text of the Targum exactly and to achieve precision in the manner of translation from the Hebrew original: which Aramaic roots are used in translating the same Hebrew root, and the number of times that each translation occurs, etc. It counts the words much less than does the biblical Masorah. It does list changes in vocalization and in pronunciation of the Targum and even discrepancies between various versions of translation, such as the Nehardee and Suran, and it takes a position against other possibilities (possible errors, מִטְבָּה, מִטְבָּה, מִטְבָּה). Since the main interest of this Masorah was the manner of translation, terms such as מִטְבָּה and מִטְבָּה (= which is translated) and their abbreviations are quite common. An example is מַשָּׂ (Gen. 22:5): מַשָּׂ (wait) is translated מַשָּׂ (wait, instead of מַשָּׂ מֻנָּה = three times in the Torah) – מַשָּׂ מֻנָּה (Gen. 22:5); מַשָּׂ מֻנָּה (Ex. 24:14); מַשָּׂ מֻנָּה (Num. 22:19).

The Masorah notes of the Targum were sometimes written in manuscripts on the margins of the Targum and sometimes in lists in independent works arranged according to the order of the biblical text. The Targum also has a Tiberian Masorah as well as a Babylonian one with Babylonian vocalization. The terminology of this Masorah, whether Tiberian or Babylonian, does not differ much from the terminology of the biblical Masorah.

4. THE DIACRITICAL POINTS

The written Masorah was divided here into two categories (see above, 3.). We have dealt with the first – the notes and the abbreviations which accompany the text externally or are appended to it – Masorah in the narrow sense. We now turn to the second category – the graphemes – i.e., the system of signs (the vowel and accentuation signs) which are added to the letters in order to constitute, together with them, a complete orthographic system including all the information necessary for exact reading and recitation.

Just as the Masorah in the narrow sense began with a relatively few early attempts at abbreviated notes and developed into a large sophisticated system of short and long notes and even complete rules, it can be assumed that the graphemes also had their beginning in a few signs which were most necessary for reading and for distinguishing between similar forms, and only in the end, after long development, became a fully crystallized system of vowel and accentuation signs. For this assumption, in the opinion of many scholars, there is proof in vestiges from the ancient period.

4.1. GRAETZ’S THEORY

According to this opinion, in the period before the invention of vowel signs as they are known, diacritical points were used in Hebrew to distinguish between words which were identical in writing – homographic – but whose pronunciation differed by one vowel. A dot above the word marked the pronunciation with the fuller vowel; a dot under the word noted the pronunciation with the weaker vowel. There are, however, no manuscripts in which there is any trace of these signs, and their very existence is postulated only by the theory of Graetz.

4.1.1. Details of the Proof

4.1.1.1. ANCIENT USAGE OF “MILLÈ’EL” AND “MILLERA”.

Graetz found in various lists of the Masorah in Okhlah we-Okhlah that the terms מיללה (“mille’el”) and מילול (“millera”) were used, in addition to their regular common meanings. (paroxytone and oxytone), in other meanings as well. These lists (§§ 5, 11, 45, 47, 48, 49, 50) in Frensdorff’s edition contain unique homographic pairs which differ in one vowel only. One member of the pair is called mille’el and the other millera. It is evident that these terms do not have a fixed but a changing meaning, and they mark the difference between vowels. Thus the following are so termed:

<table>
<thead>
<tr>
<th>Mille’el</th>
<th>Millera</th>
</tr>
</thead>
<tbody>
<tr>
<td>מילל (Neh. 7:61)</td>
<td>מילל (Ezra. 2: 59)</td>
</tr>
<tr>
<td>מילל (Ezek. 25:8)</td>
<td>מילל (Prov. 25:7)</td>
</tr>
<tr>
<td>מילל (Neh. 8:6)</td>
<td>מילל (Josh. 22:22)</td>
</tr>
<tr>
<td>מילל (Job. 9:2)</td>
<td>מילל (Job 25: 2)</td>
</tr>
<tr>
<td>מילל (Isa. 61:1)</td>
<td>מילל (Joel 4: 8)</td>
</tr>
<tr>
<td>מילל (Jer. 13:22)</td>
<td>מילל (Job 4:14)</td>
</tr>
<tr>
<td>מילל (11 Kings 7:4)</td>
<td>מילל (Hos. 6:2)</td>
</tr>
<tr>
<td>מילל (11 Chron. 33:3)</td>
<td>מילל (11 Kings 23:11)</td>
</tr>
<tr>
<td>מילל (Gen. 48:9)</td>
<td>מילל (Lev. 11:37)</td>
</tr>
<tr>
<td>מילל (Ps. 97:11)</td>
<td>מילל (1 Sam. 29:3)</td>
</tr>
<tr>
<td>מילל (11 Sam. 1:10)</td>
<td>מילל (11 Sam. 1:10)</td>
</tr>
</tbody>
</table>

All of these are in list no. 5 in Okhlah we-Okhlah (which is also cited in the terminal Masorah in the Miqraot Gedolot of Jacob b. Hayyim, letter ‘alef, list no. 24). It can be seen that forms with games, for example, are sometimes called mille’el (מִילֶל), and sometimes millera (מִילֶל). This is not an indication of a definite marking of the vowel, but only its relation to the vowel which is parallel to it and which can occur in that position. Thus in the list the vowel o is called mille’el while the millera is o (this Tiberian vowel is parallel to the two types of games, called today games gadol and games qatan, but which in the Tiberian pronunciation constituted one vowel quality – see below), a, and e; the vowel u is contrasted to a, a, e, i; and the o is contrasted to a, e, i.

In some lists of pairs of unique homographs the terms signify other constrasts:

---

Mille'el | Millera'
---|---
Ezek. 37:10 | Ezek. 37:9
Ex. 32:4 | (Isa. 8:1
Jer. 23:9 | (Amos 2:11
1 Kings 21:13 | (Ezek. 21:10
1 Sam. 13:8 | (1 Sam. 13:6
Isa. 61:10 | (Ps. 19:6
Zach. 11:13 | (Gen. 18:5
Songs 5:15 | (Num. 24:6
Ps. 55:18 | (Ex. 16:7
from lists no. 11, 45–50 of Okhlah we-Okhlah (ed. Frensdorff).

Here too the forms with a patah, for example, are sometimes called mille'el (םילא), and sometimes millera' (מילירה), and here too it only indicates the relationship to the vowel parallel to it which can possibly occur in that position. Consequently, in these lists, the forms called mille'el are those whose formative letters (ל, נ, ת) have a vowel (א, א, א), while those whose formative letters (ל, נ, ת) do not have a vowel; thus, for example, the Syriac words міларэ (milleræ) to indicate earlier and later locations in a continuous text is an ancient usage in Hebrew which goes back to rabbinic Hebrew. This use is rooted in general writing practice and is widespread and accepted in most languages (cf., Eng.: below, above; Fr.: ci-dessous, ci-dessus; Lat.: infra, supra) to note different places in the linear sequence of the written text. These terms were actually being used and in any event are self-evident. Certainly there is no need to revert to the Syriac orthographical customs to explain them.

4.1.1.2. THE DIACRITICAL POINT IN SYRIAC. These uses of the terms mille'el and millera' did not seem to Graetz to fit their regular meaning in which they are also used in the lists of the Masorah such as Okhlah we-Okhlah (ed. Frensdorff), lists no. 32, 51, 225, 226, 372 and 373. However, this manner of distinguishing between homographs of different pronunciation did exist in Syriac and a dot was used to mark this distinction: a dot above a word (more precisely, above the letter) marked a fuller, stronger pronunciation, and a dot below it marked a finer, weaker pronunciation or even the complete lack of a vowel; thus, for example, the Syriac words מְלַא (milla) and לַא (la), when they are marked with a dot above, their (Eastern) pronunciation is מִלְּא (millæ), מָלָא (malæ), מֻקְּלָה (meklah), מַלְּקָה (malkah, tavă, hau, hai, hannan, măn), but when they have a dot beneath them the pronunciation is: מִלְּא (millæ), מָלָא (malæ), מֻקְּלָה (meklah), מַלְּקָה (malkah, hă, hi, hennan, men.

4.1.1.3. DEVELOPMENT IN HEBREW. By analogy to Syriac, Graetz reached the conclusion that in Hebrew the terms mille'el and millera' also indicated the place of a dot above or below the word, and that they thus also indicates used in the Hebrew to mark the “fuller” vowel in contrast with the “weaker” vowel. The nature of the concepts “full” and “weak” and their synonyms have been explained in various ways by different scholars: some of them considered it to be a quantitative concept (long/short – thus Frensdorff), others a qualitative one (dull, closed/bright, open – Kahle). This distinguishing dot had in Hebrew the additional function of marking contrasts in stress: on the penultimate syllable and on the ultimate one. This last use was not found in Syriac and constitutes therefore an additional development in Hebrew. However, this use too is ancient, being found in older sources of the Masorah: cf. David b. Abraham (middle of the tenth century), Kitâb Jami’ al-'Alfâz (ed. Skoss, vol. 1, p. 185, i. 149f.).

Graetz's theory on the source of the terms mille'el and millera', and subsequently as to the origins of the vowel signs in Hebrew, has been unanimously accepted.

4.1.2. Refutation

However, in the entire inventory of Hebrew manuscripts there is not one example of dots above and below to mark such a distinction, especially not the distinction between different vowels. The very existence of these dots is unproven, based on a supposition which itself is open to doubt. The theory assumes diacritical dots which were borrowed from Syriac but which in fact did not remain in Hebrew; only the terms remained. These, however, do not exist and never did exist in the supposed source language, Syriac. One cannot explain the “disappearance” of the diacritical dots from Hebrew by pointing to the full Tiberian vocalization which made them superfluous, for the same process would apply just as well to Syriac, and yet, there the dots remained alongside the vocalization. Furthermore, a single example was discovered in a manuscript in which the point of stress in a word is noted by a dot under the word even on the penultimate syllable (cf. Rabin's comment in Textus II, p. 106. n. 11). While it is doubtful whether one can learn about a system from one lone example, clearly such an example can serve as evidence to the contrary.

4.2 Mille'el and Millera'

4.2.1. Development of the Usage

4.2.1.1. TONAL MEANING. It is possible to offer a satisfactory explanation for the two meanings without involving non-existent diacritical dots, both for the vocalic and tonal meanings. With regard to the tonal meaning, the use of מילר (miller) and מילר (millæ), to indicate earlier and later locations in a continuous text is an ancient usage in Hebrew which goes back to rabbinic Hebrew. This use is rooted in general writing practice and is widespread and accepted in most languages (cf., Eng.: below, above; Fr.: ci-dessous, ci-dessus; Lat.: infra, supra) to note different places in the linear sequence of the written text. These terms were actually being used and in any event are self-evident. Certainly there is no need to revert to the Syriac orthographical customs to explain them.

4.2.1.2. VOCALIC MEANING. The vocalic meaning of mille'el/milleræ goes back to an ancient idea concerning the theory of vowels in Hebrew which was stated in the fifth chapter (concerning the vowels) of Kitâb Faṣlh Lugât al-‘Irânîyyin by Saadia Gaon. According to this theory the vowels are arranged as a scale, at the top of which is the hilem and at bottom the hireq. Such an arrangement of the vowels fits a certain morphological theory which is not relevant here, and in any event. There were a number of other such arrangements which were based on different principles, as Z. Ben-Hayyim has shown. One of them was based on the phonetic principle of the origins of the vowels ך, מ, מ, מ, מ, מ, מ, מ. The vowels are arranged as a scale (from the top to the bottom): each vowel is above (mille'el) those which follow it and below (millera') those which precede it. Thus qames is millera' in relation to
holem and šuruq, and milleʿel in relation to pattah, šere, and hireq. pattah is milleraʿ in comparison to qames and milleʿel in comparison to the sewa and its alternates. The vocical use of the terms milleʾel and milleraʿ which is also undoubtedly ancient, can thus be explained.

4.2.1.3. CONNECTION BETWEEN THE MEANINGS. Which meaning of this pair of terms preceded the other is still difficult to establish; it is possible that there is a connection between them by way of homographic pairs, such as, תָּשְׁרָע (Num. 5:28) / השורע (Isa. 3:26), which appear in the had milleraʿ we-hад milleʾel list of pairs (Okhlāh we-Okhilah, list no. 51). Although the reference in this list is to the tonal meaning of the terms, in this specific pair the vocical sense would also be applicable.

4.2.2. THE BABYLONIAN TERMS

The terms קמץ and אֱלֹה (of doubtful etymology), which are used in the Babylonian Masorah as parallel to milleʾel and milleraʿ, have a tonal meaning, that is, paroxytone and oxytone. Yeivin (The Hebrew Language Tradition as Reflected in the Babylonian Vocalization, pp. 246–53) cites additional occurrences of the Babylonian terms with different meanings (some of them doubtful) but none of these cases exhibits a vocical meaning parallel to the Tiberian terms (Yeivin, p. 253).

4.2.3. THE PARALLEL USAGE OF QAMES AND PATTAH

However, in place of the pair of terms milleʾel and milleraʿ, in the vocical sense, the terms קָמַץ and מְלֵלָה are used. This usage is found in a manuscript (published by Ginsburg, The Massorah, 2 (1883), 310–311, §§ 606a, 606b) in which there are two versions of the list of Masorah which appears in a fuller and more precise form also in Okhlāh we-Okhilah (§5). Instead of the terms milleʾel and milleraʿ the terms qames and pattah are used: there they are not the names of specific vowels but are used in a relative sense like milleʾel and milleraʿ: i.e., a more contracted (קָמַץ) vowel versus a more open (מְלֵל) vowel.

4.3. RELATIVE NOTATION

4.3.1. VOWELS

This use of the terms qames and pattah belongs to a most ancient period in which they did not as yet serve to note definite vowels. The vestiges of this use, both of the terms qames and pattah and the terms milleʾel and milleraʿ, indicate that in the period which preceded the invention of vowel signs a system of relative notation of vowels was followed. In a period when no vowel notation existed it was necessary to indicate the vowels which distinguish between homographs, generally in homographic pairs. There was, however, no need for a complicated system of terms (and there is no evidence for signs); a relative distinction was sufficient: a vowel higher in the scale of vowels (further back in pronunciation), more closed, in contrast to the other possibility, lower, more open.

4.3.2. ACCENTS

This custom of relative notation and marking also existed apparently for the accentuation signs; the vestiges of relative terms like לָאִם, which marks a major disjunctive, may serve as an indication. It is possible that the terms קור in (not קְדֹם; see N. Reich, Shalshelet) and לָאִם (when used as an accent’s name), and others, had this connotation: it is even possible that the origin of the accentuation signs was in signs which had a relative meaning only (see below). In summation: among the Hebrew vocalization signs there are no diacritical dots of the type which were used in Syriac, and it is doubtful if there ever were. The only signs known in Hebrew are the defined marks of vocalization and accentuation.

5. VOCALIZATION AND ACCENTUATION

There are three graphic systems of vocalization and accentuation for Hebrew: Palestinian, Babylonian, and Tiberian. There is no imperative connection between the pronunciation traditions in Hebrew and the graphic systems which were used; one graphic system is not necessarily specific to one of the traditions of pronunciation, and therefore a certain tradition of pronunciation is not necessarily limited to one system of notation. One can assume, though, that each one of the systems developed against the background of one defined tradition of pronunciation. Only graphic systems are relevant to this discussion since they are part of the development of the written Masorah (but see *Pronunciations of Hebrew).

The vocalization and accentuation signs in each system constitute a complete indivisible set of graphemes to guide the reader in exact reading, including not only the correct pronunciation of the words but also the correct intonation of the verses and, as pointed out above, precise cantillation. This being the case, the accentuation and vocalization will be treated together in each one of the systems. The period in which punctuation began has already been discussed above (2.2) and, as has been stated, it is not possible to establish exact dates. However, the postulate of a relative date for each of the systems in relation to the other two has been accepted. The Tiberian system is the most sophisticated and complete in the items which it transmits, and there is no doubt that, in the state in which it is known, it is the most recent (for details, see below). Most scholars tend to believe that the Palestinian is the older of the other two systems. However, since these two systems developed in different countries, Babylonia and Palestine, and since at the beginning of their development there was no contact between them, and since the signs differ in the two systems (letters in the Babylonian and dots in the Palestinian), it is impossible to arrive at a definite decision in this question on the basis of the data available today. In line with the generally accepted opinion the Palestinian system is discussed first; however, this is not meant to indicate a view on the relative dating of the systems.

5.1. THE PALESTINIAN SYSTEM

5.1.0.1. THE TERM. This system is so named because many of the texts in which it is used show signs of Palestinian origin (mainly the piyutim). The term לָאִם is already found in Mahzor Vitry (ed. Hurwitz, Nuremberg (1923), 462)
in the commentary on *Avot* attributed to Jacob b. Samson (12th century) of France; however there is no proof that this term refers to the system called Palestinian.

**5.1.0.2. The State of Transmission.** The Palestinian is not a crystallized system. Almost every one of the manuscripts has a number of individual and characteristic traits with regard to the use of signs. It is possible to point to the common and similar aspects but not to all the deviations of each manuscript. For what we find in the manuscripts is actually a system in development. Scholars endeavor to fix the date of a text on the basis of the degree of progress shown by the use of the signs in it: the oldest manuscripts (apparently from the eighth century) have generally very few signs, sometimes no more than one or two for a word and sometimes not even that; and even the latest of them never reach the stage of fully marking each vowel and its nuances, as is the case in the Tiberian system.

**5.1.0.3. Types of Texts.** In this matter a distinction must be made between texts of the Bible, at times including an Aramaic translation, as opposed to texts of *piyyut*. The amount of vocalization is generally fuller in the latter, while the biblical texts, which had a strong tradition of reading, have relatively fewer vocalization signs but many accentuation signs. It seems that the precise cantillation was likely to trouble the educated reader more than the pronunciation of the biblical words. Therefore, vowel signs in ancient biblical texts are mainly in places where there was room for error in the reading and at points where the orthography allowed different pronunciations. When the spelling is plene, with waw or yod, one almost never finds vowel signs in ancient manuscripts.

Additional evidence of the fluency of the reader of the Bible text is offered by the ניבים (intermittences) texts. These are manuscripts written in a system of abbreviation in which generally only the first word of every verse is written in full and of the rest only the important words, or those which cause problems, are indicated by one or three letters of each with the vowel or accentuation sign, or both, as a mnemonic device. Manuscripts of *serugin* are already mentioned in the Talmud (e.g., Git. 60a). and Rashi certainly saw examples of them, for he comments: “At the beginning of the text [= the verse] was written the full word and at the end initials.” It is clear that these texts of *serugin* with the vowel and accentuation signs served as an aid to the reader when he read from a text complete but unvocalized (because of its sanctity), and to the reader or copyist who knew the text by heart and needed only a few reminders.

As time passed this high standard of knowledge declined and more notations were needed. This need is also evidenced in the later manuscripts where there are more signs and by the fact that in some of the manuscripts signs were added by a second hand. Sometimes there is evidence that signs were added by a third and fourth hand, depending on the transfer of the manuscript to owners whose knowledge of reading was less developed. For that reason there are many Palestinian manuscripts which contain vocalization by several hands, into which signs of other vocalization systems, with more detailed notation, have been mixed (see below, 5.3).

**5.1.1. The Vowel Signs**

In the presentation and explanation of the signs one must refrain as much as possible from drawing parallels with the Tiberian system, at least as long as the influence of this system or the Tiberian tradition of pronunciation is not being discussed, since at times the signs are anchored in a different reading tradition, i.e., with different grammar, and the comparison is likely to give a distorted impression. The values of each sign will therefore be described by phonetic signs, out of a desire to be faithful – as much as it is possible today – to their original pronunciation. The presentation is schematic, deviations of details, even quite numerous, are neglected for the sake of clarity.

**5.1.1.1. The Signs.** The following are the vowel signs (they are located above the letter and a little to the left of it) and reference here to quality only. There is no marking for quantity (length) in this system.

- **ם** = i. This is the only sign which has hardly any changes in form or meaning in the different manuscripts.

- **ם** or **ם = c** in all its nuances. The first sign is the most common and in the ancient manuscripts it is used exclusively, but there are manuscripts in which both signs are used side by side without distinction. In individual, relatively late manuscripts there is a distinction or the beginning of a distinction, apparently through the influence of the Tiberian system, so that **ם** parallels **ם** and **ם** parallels **ם** and sometimes **ם** as well.

- **ם** or **ם = a** in all its nuances (if it did really have different nuances). In the ancient manuscripts the signs are used side by side with precisely the same meaning. In some relatively late manuscripts there is a distinction, apparently through the influence of the Tiberian system, so that **ם** is parallel to *pattah* and **ם** parallels the Tiberian *games* in all its variations, even in a position where it parallels in certain traditions (such as the Sephardi and apparently the Palestinian) not *a* but *o*. A *games* of the latter type is marked in ancient texts by the sign for the vowel *o* (**ם**). The transition stage between the original use of the signs and this completely “Tiberianized” usage can be found in a number of manuscripts in which one can see the beginning of Tiberian influence. They evidence a tendency to use those signs as parallels to the Tiberian *pattah* and *games*, whose value was therefore *a*, and also – and this applies especially to the sign **ם** – as parallels to the *games* pronounced in other traditions, as stated above, with a nuance of *o* (“*games qatan*”). This Tiberian influence is not necessarily in regard to pronunciation, i.e., that the sign expresses in effect the same pronunciation as the signs **ם** **ם** **ם**, but is mainly a graphic analogy, that is, the sign **ם** (in the main) parallels the Tiberian sign **ם** in all of its pronunciations, and one cannot deduce anything regarding a change in the pronunciation of the Palestinian text.
ד = o in all its nuances. In relatively late texts, which were under the Tiberian influence, the vowel o, which paralleled the Tiberian gameš in a closed, unstressed syllable ("gameš qatan" and others like it) was removed from the range of this sign. Kahle's supposition that this sign marks the vowel u in exceptional manuscripts is not proven, for it seems that there we have a different realization of the phoneme u, that is, a different pronunciation of the form (for example יְתֻרָה, Ezek. 16:4, does not necessarily show the pronunciation to be as the Tiberian יִתְרָה, but rather יִתְרָה, a form which is incidentally found in the Babylonian tradition, and before reš in the Tiberian tradition, for example יְתֻרָא, Job 33:6).

ב (and in individual mss. ב) = u. There are a number of instances, especially in piyyutim, of the use of this sign in place of the Tiberian holem. However, that is no proof that the sign marked the vowel o. It seems more likely that there is here a different realization of the phoneme u under specific conditions. Therefore, it represents differences in the pronunciation tradition and not differences in notation. There is evidence for the allophonic realization, although not strictly parallel, of the phonemes of the back vowels also from other pronunciation traditions, such as the Samaritan tradition (which is Palestinian as well) in which, as Z. Ben-Hayyim has demonstrated, ḥ is an allophone of h in closed syllables. Therefore there was no need to distinguish graphically between the two vowels (see below 5.6.); and as much is evident, although less consistent, from the Greek transcriptions of biblical Hebrew, from Galilean Aramaic, and from mishnaic Hebrew, in which, equally, as E.Y. *Kutscher has shown, o is an allophone of u (apparently, mainly short unstressed).

There is no sign for the šewa and when there is a sign in a place where we would expect šewa – though in most cases there is no sign – it is always a sign of one of the vowels (mostly e or a).

5.1.2. HISTORY OF THE SYSTEM. The Palestinian system is basically phonematic and it does not make finer distinctions than to note the five cardinal vowels, at least in its most ancient stage as known to us. There are no nuances of vowels and no notation of quantity. Yet one cannot ignore the fact that six signs are used to denote the five vowels. That is, there are two signs of equal value to mark a. (The two signs for the noting of e are, as stated, the product of a relatively later stage). This is unimaginable in a primitive, economic graphic system such as this. Dietrich's attempt to account for the duplication by reasons of calligraphy (ב only above lamed, ב above the other letters) agrees neither with the manuscripts nor with the manner of this system in notation (compare the clear and definite distinction between ב and ב). One cannot escape the conclusion that the signs of the Palestinian system were not used, in the manuscripts which came down to us, in their original function. In their original employment there were of necessity two different vowels, probably a and u, designated by two different signs. For this reason only, two distinct signs were fixed. However, no vestiges have remained from this period, or from this use of the signs. The system was adopted by vocalizers whose tradition of pronunciation did not distinguish between the two vowels (exactly as occurred afterwards with the Tiberian vocalization), and they used the two signs indiscriminately. The original Palestinian system, which we do not have, was therefore not similar to the Sephardi tradition of pronunciation but was closer to the Tiberian tradition. It was closer, but not however identical; for in its original form it had only one e vowel and not two. Thus it was a tradition of pronunciation which had six vocalic qualities, as opposed to the Tiberian tradition which had seven qualities and the Sephardi which had five. The influence of the Tiberian tradition upon relatively later texts of the Palestinian system is, therefore, something of a restoration of the original situation, at least with regard to the signs ב and ב.

5.1.2. The Diacritical Signs

In addition to the vowel signs there are also a number of diacritical marks to distinguish between different pronunciations of the same letter. These marks occur in the Palestinian texts with even less frequency than the vowel signs.

5.1.2.1. SIN-SIN. To distinguish between the two pronunciations of the ב, the marks י, י, י, י, י are used for sin, and in contrast to them י, י, י, י, י are used for sin; in addition, mostly in the texts of piyyutim, there is yet another sign for sin, י, with its variations י, י, which has no counterpart in a sign for sin. In the other texts, too, in most of the places where there is a sign to distinguish between the two pronunciations, it indicates the sin alone.

5.1.2.2. MAPPIQ AND DAGEŠ. The last sign mentioned, with its variations (א, א, א, א, א), is not specifically a sign to mark sin, but a general diacritical mark which serves to distinguish between different pronunciations of the same letter. Thus, it is also used to mark the consonantal pronunciation of a letter which may also be quiescent, mostly consonantal he (ה, ה, ה, ה, ה), not only for the he with mappiq at the end of a word (הכ, ה, ה, ה, ה, sometimes also the consonantal waw (ו, ו, ו, ו, ו) and the consonantal alef (א, א, א, א, א)). In addition, though in fewer instances, it denotes a dageš, originally only the geminate dageš (ḥazaq, forte) and later, perhaps under Tiberian influence, also the explosive dageš (qal, lene). It is also found at times even in places where the Tiberian vocalization is likely to have the dageš of ‘ate merahiq (or dehiq; עמי, עמי, עמי, עמי, עמי, עמי, עמי; it is marked, according to Levias, even in the last letter of the first word בנה). It is infrequently used in an exceptional manner, as a dageš at the beginning of a syllable which was preceded by a syllable that ended with a laryngeal (י, י, י), such as י, י, a use which is found at times also in manuscripts in the Tiberian system (with a dageš sign).

5.1.2.3. RAFEH. The opposite of the above signs is —, which is apparently a development of ו in which form it also found sometimes (and it is thereby close to the Tiberian rafeḥ sign). This sign denotes the opposite of the dageš, both lene and forte, especially where there is the possibility of error in the
reading and there is need to emphasize the lack of dageš. In a few manuscripts this sign is used mainly in its ancient form (₪) to cancel extra waw and yod in the scriptio plene of the piyyutim, and in its later rounded form (.Mapper) also to note quiescent 'iṭef in biblical manuscripts. Because of this it is difficult to accept the opinion (of Kahle and others) that in a few manuscripts where this sign occurs above the letters waw,_he, het, and ayin it marks precisely their consonantal pronunciation (i.e., consonantal waw, and _he, het, and ayin which did not become silent). With regard to the _he, _het, and ayin there are only a few examples and at least a part of them allow for a different explanation. As to the letter waw, on the face of it the sign refers to a consonantal pronunciation. However, one should not consider the sign’s purpose to mark consonantal pronunciation, which is the opposite of its meaning in all of its other contexts, but rather as a sign which indicates the rafeḥ pronunciation of the waw [ו], actually just like a fricative (rafeḥ) ש, namely, ש = ש. This indeed was the pronunciation of the waw by Palestinians according to the testimony of Mishael b. Uzzziel (Kitāb al-Khudaf, ed. Lüpschitz, 20; similar indirect evidence in David b. Abraham, Kitāb Jāmi’ al-ʿAlfāz, ed. Skoss, 2 (1945), 451 and likewise in other sources). Emphasis like this of the pronunciation of waw by the sign ש is likely to serve as a counter-direction for the Babylonian pronunciation of the waw as [ו], a pronunciation which is also attested to by Mishael b. Uzzziel, or perhaps it was a counter-direction to the consonantal plosive pronunciation of the waw as [ב], a pronunciation which was common in Palestine itself, though by the Samaritans.

Alongside of the sign ש and its variants for the noting of a pronounced consonant, a dot under _he (ת) is used in some biblical texts – and in a few isolated manuscripts a dot in the _he itself (ת) as in the Tiberian system – to note the consonantal nature of the _he, apparently already through Tiberian influence.

In summation, unlike the relative consistency of the vocalic notation, there was relatively little uniformity in the diaritical marks of the Palestinian system. This is quite natural, since all that was needed was a distinguishing sign, and not necessarily an agreed one, to indicate the other possible pronunciation, generally, the less frequent one, of the letter: sin versus sin, consonantal, waw and yod, consonantal _he, etc.

5.1.3. The Accentuation Signs
5.1.3.1. Formation and Chronology. The accentuation signs are apparently more ancient than the other two types of signs, and anyhow older than the vowel signs (some reasons advanced in 1.3.3.). This is substantiated by perhaps the most decisive proof: the use of a single isolated dot to mark some of the accentuation signs. In the notation of the vowels and among the other diaritical marks the single dot is not used at all. It stands to reason that the single dot was already used for another purpose, for the notation of accents.

In addition to this, most of the signs in the oldest extant manuscripts of the Bible are accentuation signs and only here and there is a vowel sign inserted; obviously, one reason – among others – is that the correct punctuation and cantillation of the biblical text posed a more serious problem for the reader than the pronunciation. On the other hand, the set of accentuation signs differs from that of the vowel signs in that it is less uniform, and less governed by rules. It is difficult to generalize from all of the biblical manuscripts, or even the majority of them, that a specific accentuation sign was always used for the same purpose. This means that different signs were used to mark the same accent in different manuscripts – a situation which does not exist among the vowel signs. It follows that what we have is a set of accentuation signs along different stages of development, and we possess neither any manuscript nor any set of accentuation signs about which we can state with certainty that it is the ultimate stage of development, i.e., the set of Palestinian accentuation signs.

In spite of this, one may yet claim that the vowel signs are older than the accentuation signs, since the vowel signs are already fixed and uniform even in the most ancient manuscripts, while the accentuation signs are seen to be continually changing in the manuscripts. This claim, though, is only apparently valid. According to this supposition the abstention from the use of the single dot in vocalization would be unimaginable, since it is a diacritical mark which is just waiting to be used and is quite natural (as found in the writing systems of other languages). Furthermore, the double usage of a few signs, such as ס, ס, etc., which mark both vowels and accents, would not be understandable.

It seems that the two sets of signs had two cycles of growth: (a) the growth cycle of the accentuation signs (the older) in the biblical text; (b) the growth cycle of the vowel signs (relatively later) in non-biblical texts, mainly in piyyutim. The essential difference between the two types of texts, with the different nature of the demands that each made on the reader, as well as the different expectations of the reader from each type of text, evidently brought about the divergent crystallization of the two sets of signs.

(a) The Bible was the first text which required additional signs as reading aids. Chronologically their addition may have preceded even the beginnings of the ancient piyyut. These aids consisted only of the most primitive, simple mark – the single dot – and their function was to guide the educated reader, who was generally fluent in the pronunciation of the words, as to the manner of punctuation and cantillation of the verses. However, this notation did not necessarily have to be unequivocal, since, as is well known, the accentuation signs in the more developed systems, too, are relative, i.e., they designate the measure of pause in one place in a verse in relation to a greater or smaller measure of pause in another place in the same verse. It follows that in the highly developed accentuation systems (not in the Palestinian) each accentuation sign denotes the relativeness of the punctuation. Yet one need not assume that this rule necessarily held in earliest times. It seems likely, and there is evidence for it, that one specific sign served to mark pauses of different strength (see for example
the many uses of the sign ָ – precisely in the most ancient manuscripts). In the most primitive system it was sufficient, therefore, to note the very fact that there is a pause, without necessarily indicating its degree; for that purpose there was no imperative need for a uniform set of signs (cf. the section on diacritical signs – 5.1.2. – which also did not necessarily have to be uniform, for the same reason). It is only natural that scribes would not consider themselves bound to a specific set of signs, even an older and more prestigious one, and that they improvised and varied the notation system. As time passed they added signs, to indicate differences and note the degrees of the pause. They also did not refrain from using the double dot and the line, which are more complex forms, and which in part had in the meantime been fixed for other functions in the cycle of non-biblical texts.

(b) The other growth cycle of signs occurred in non-biblical texts, the (*piyyut*). Here, too, additional signs were needed as reading aids. The main problem with *piyyut* was however not in the punctuation, but in the actual reading of relatively new texts, which had not been handed down from generation to generation but had recently been written in a difficult language not always understood by the reader. Here a system of vowel signs was imperative, and had to be, by its very nature and for its main purpose, unequivocal: each sign had to have, at least originally, only one function and only one meaning, so that it should note only one vocalic quality (or, to be more precise, one range of a set of vocal nuances which the reader felt to be one vowel – in other words: a phoneme). At the time that these signs were fixed for the vowels – six signs (to denote six qualities; see above, 5.1.1.2.) – they were apparently free of any other significance even in the area of accentuation. These signs remained unchanged, except for slight variations (ב, ג), without the slightest deviation in function, except for changes which took place following modification in the tradition of pronunciation (ב, ג, cf. above, 5.1.1.1.).

Alongside this stability and regularity in the use of the vowel signs there arose in the growth cycle of the biblical texts, sets of accentuation signs which were relatively “free”: as they developed and more signs were added, no attention was paid to the other growth cycle, in which rules had already been established concerning the vowel signs. As long as the two systems were not mixed no difficulties were encountered, but when the punctuators of biblical texts added vowel signs to the Bible they sometimes found themselves forced to use vowel signs which had in the meantime come to be used as accentuation signs in the system which they followed. This is the source of the duplicate use of a few signs in some of the biblical texts.

5.1.3.2. The (21) Prose Books. The identification of the Palestinian accent signs with Tiberian equivalents should perhaps *prima facie* be avoided, as was the case with the vocalization signs. However, with regard to the actual division of the verses of the Bible there are, in general, no major differences between Palestinian manuscripts and the Tiberian text; therefore in this case the Tiberian terminology can be used to identify the accentuation signs. This will, however, be done only after the presentation (independent of the Tiberian system) of the function of each sign.

5.1.3.2.1. Disjunctives. The largest disjunctive which separates a verse from the one which follows it (henceforth D₅) is in most cases not marked at all. The external technical marks (generally two dots – a colon) are sufficient to note the end of a verse. In the few instances where the end of a verse is indicated by an accentuation sign, use is made of the basic sign – the single lower dot ׀, which also notes a number of other pauses. It denotes the main divider of a verse into two, its prelude accent, the divider of the first half of the verse and, placed in different positions, the single dot also indicates a number of other accents.

This can be presented in a schematic way approximately as follows:

An average verse is generally divided into a main division by ב (henceforth D₃, with the function of *etnah*), its prelude accent (henceforth D₂p, in the function of *tippeha* and identical with D₁p) being ב. This main disjunctive, D₃, is also missing at times, yet less frequently than the last disjunctive in the verse, D₁. Generally, however, the scribes show a great degree of consistency with the notation of the prelude accent of both of them, D₁p, D₂p (henceforth D₁₋₂p). In some manuscripts instead of the lower dot of D₂ the sign ב or ב, or, in the Tiberianized texts, ב, is used. Instead of the dot of the prelude accent D₁₋₂p, which occurs in a number of texts also inside the letter, ב, the sign ב or ב is found in some texts; i.e. in the function of *tippeha*-etnah, ב–ב occur in some manuscripts, and in others ב–ב, while in others ב–ב instead of the most common pair ב–ב or ב–ב.

A secondary division of each one of the two parts remaining after the first division (henceforth D₁ – the function of the *zaqef*) is sometimes also noted by a lone dot above the word ב, but in some manuscripts a specific sign was used for this ב, and in certain others not necessarily Tiberianized ones – even ב. Yet even in the manuscripts in which the sign is ב and is identical with the main pausal form, D₁, it is easy to distinguish between them with the aid of the prelude accent (henceforth D₁p – the function of *pašta*) which always has the same form ב, irrespective of the form of the major disjunctive D₅.

When the first part of the verse is very long it is likely to be divided by a special major disjunctive (henceforth D₁ – with the function of *segol*) which is generally noted by a single dot above the word ב. In a number of manuscripts it had a special place set aside for it, above the word and to the left, that is, as a postpositive sign ב, or as a single lower dot ב. The prelude accent D₁p (with the function of *zarqa*) is also a postpositive sign in the form of ב or ב, sometimes identical with its major disjunctive, ב, and sometimes occurring as a sublinear point ב or ב.

When there is a need for an additional division in the domain of the prelude accent D₁₋₂p the accent adjacent to it
will be ו, and in one manuscript מ (henceforth D – with the function of the tevir).

An additional division larger than the prelude accents in the domain of the accents ꡀ, ꡁ, ꡂ is designated by ꡃ, (with the function of revia') which was marked מ or מ or מ. The domain of this accent and the domain of the prelude accents ꡄ, ꡅ, ꡆ are likely to be subdivided by a series of accents of lesser pausal strength which have various forms, and they are (in the order of their frequency and their increasing pausal strength): מ or מ or מ (a sort of gereš), מ or מ or מ (a sort of munah legarmeh), מ or מ or מ (a sort of teliša' gedola), מ or מ or מ or מ (a sort of pazer). All of these signs have no fixed function in isolated manuscripts and it is difficult to draw conclusions concerning them.

The Palestinian system is also the most primitive of all the systems in that the marks are not placed over the stressed syllable; that is, one of the three functions of the accents had not yet been developed in it. This use of the accentuation signs did not reach even the texts which were already influenced by the Tiberian system. It is, however, customary in the interminences; see also 5.10.3) texts where the accent is naturally marked on the single letter which represents the word, which is usually a letter of the stressed syllable. (Concerning the use of the Tiberian signs within the Palestinian system, especially in the domain of conjunctives, see below, 5.5.)

The names of the accents in the Palestinian system are not known and there is no way of connecting the names known to us from various masoretic notes with them.

5.1.3.3. THE (3) POETICAL BOOKS. The accentuation signs for Psalms, Proverbs, and Job are very rare in the Palestinian system and occur in very few manuscripts. The following are the signs and their functions in verse division.

5.1.3.3.1. Disjunctives. The major disjunctive, which separates one verse from the next (D), is never marked. If it has a prelude accent (D), it is marked מ. The verse itself may be divided into a main division (D) by מ and sometimes also by מ (with the function of 'ole we-yored), the prelude of which is מ on the first word (D) with the function of revia' qatan) or מ on the second word (D) with the function of simnor). However, in most instances, since the verses are short, they are not divided by the major disjunctive (D), but by the smaller disjunctive (D) which is marked מ (with the function of eynah), the prelude accent (D) of which is מ (with the function dehi). The disjunctive D is sometimes marked also מ, apparently when there is no prelude accent DP preceding it. Even when D divides the verse it is noted only infrequently in the manuscripts because it is self-evident, both from the arrangement of the text (generally there is a space in the line at the point of the main division) as well as from the notation of the prelude accent D, which announces a D when it is not marked (see above concerning the omission of D). A major disjunctive within the domain of D and D is D which is marked as מ (with the function of revia' gadol). This sign is therefore common to D, D, D and D, and thus parallels the three revia's of the Tiberian system: revia magras, revia qatan, and revia' gadol, respectively. Additional signs, occurring infrequently, with the function of minor disjunctives are: מ (as mahpak legarmeh), מ (with the function of azla' legarmeh) and once מ (perhaps with the function of pazer). A sign similar to the last or מ (or perhaps מ) denotes on one occasion a disjunctive (with the function of šilelet gedola).

5.1.3.3.2. Conjunctives. The connection between the words is marked even less consistently in the poetical books than in the other 21 books of the Bible. However, when it is marked, a dot between the words in the middle of the line is used (ט).
sometimes also a dot is added above the first word (ד = ד). This sign is not dependent on the context of disjunctives, except for ד which is specifically used for words that have in the Tiberian system a conjunctive mahpak (cf. above, the sign of the mahpak legarmeh). In one place it is possible that ד serves as the parallel of the Tiberian conjunctive šâlelet qetanna.

5.2. THE BABYLONIAN SYSTEM

5.2.0.1. THE TERM. This system was called Babylonian in accordance with references by a number of early scholars. The following are the most important and the most unequivocal; they undoubtedly refer to a specific vocalization system and not to a different pronunciation tradition:

(1) *Nissi b. Noah (a Karaite scholar of the 11th century): “to learn points (= vowels), conjunctives, accent pauses, defective and plene spellings of the people of Sinâr” (= Babylonians; S. Pinsker, *Lickute Kadmoniot, Zur Geschichte des Karaismus und der karaischen Literatur*, Vienna, 1860, p. 112);

(2) the colophon of a manuscript of the Torah with Tar-gum Onkelos from 1311 (Parma, De Rossi Library, no. 12): “this Targum was copied from a book which was brought from Babylonia and which was pointed above [the line] with the vocalization of the land of Assyria, and R. Nathan b. R. Machir b. R. Menahem of Ancona... changed it, corrected it, and copied it to the Tiberian vocalization” (Zunz, *Zur Geschichte und Literatur*, p. 110).

5.2.0.2. EXPANSION AND CHRONOLOGY. The name “Babylonian vocalization” refers to the birthplace of the system and not to the expansion of its use. There is no doubt that it was used beyond the borders of Babylonia and reached, according to Jacob al-*Kirkisānī* (937), Persia, the Arabian Peninsula, and Yemen; Yemenites have used manuscripts with Babylonian vocalization until today. We are not dealing here with the Babylonian tradition of pronunciation, but only with the graphic system.

The most ancient dated manuscripts which are vocalized in the Babylonian system, including accentuation signs, are a Cairo *Genizah* fragment now in Cambridge which was written in Persia, in 904 (H.P. Rüeger, *VT*, 16 (1966) 65f.), and a complete manuscript of the latter Prophets from the year 916 (Peterburg, the first Firkovich collection, no. 83 = Petropolitans). The early date of the latter does necessarily indicate a relatively ancient state of vocalization and accentuation.

The texts with Babylonian vocalization show great development, more than is found in any other system; and they can be classified into a number of groups according to various criteria, such as that of I. Yeivin (*The Hebrew Language Tradition as Reflected in the Babylonian Vocalization* [1985], pp. 21–23) who discerned three stages: the ancient, the intermediate, and the later; and he divides the linguistic material into five types according to characteristics of pronunciation, beginning with the ancient Babylonian pronunciation (type v) and continuing to the completely Tiberian pronunciation with Babylonian signs (type i).

5.2.0.3. MADINHA’E READINGS. It would stand to reason that the texts vocalized in the Babylonian system should correspond to the Madinха’e (Eastern) versions of the Masorah, although they include almost no vocalization issues but mostly differences of plene and defective spelling, differences of qere and ken and differences in division of words. That is why Elias Levi (*Massoreth Ha-Massoreth*, edit. C.D. Ginsburg, p. 113) considered the official lists of variants (ں) between the Westerners and the Easterners (for Prophets and Hagiographa only) as preceding the invention of the vocalization and accentuation signs. However, there are many manuscripts vocalized in the Babylonian system which contain many readings that correspond to the Western (Maʾarvaʾe) versions and vice versa. Still, in the Babylonian sources a large number of readings, sometimes the majority, correspond to the Eastern (Madinха’e) tradition and they correspond with it more than any Tiberian manuscripts do. It can be assumed that mistakes occurred in the transmission of the lists of variants between Maʾarvaʾe and Madinхаʾe, and also one cannot ignore the possibility that perhaps the term Madinхаʾe, like its counterpart, Maʾarvaʾe, was a broad geographical concept, and that a universally accepted, uniform text for all the minute details never did exist, neither in the West nor in the East. It follows therefore that a list of variants based on one of the versions can neither invalidate nor establish the Babylonian nature of any source.

Everything stated above concerning the consolidation and uniformity of the Palestinian system applies also to the Babylonian system, although not to the same degree. This system also came down to us in different stages of development, and in it too there are great differences between the various manuscripts; here, too, the punctuation is not complete, and there are differences between manuscripts with regard to the degree of punctuation in them.

5.2.1. THE VOWEL SIGNS

5.2.1.1. THE SIMPLE SYSTEM. There are two sets of signs in Babylonian vocalization:

(a) the regular Babylonian set, which consists (in part) of lines, whose origin is in letters, and (in part) of dots;

(b) a set which consists entirely of dots and is relatively rare.

5.2.1.1.1. The Signs. The signs are located in each case above the letter and to the left of it:

ד = i is used in both sets and it sometimes has the shape of a small yod. ד = e is used in both sets. ד is used in the regular set and it is shaped like a small ayin with different angles (also ד); in the dot set its counterpart is ד. The phonetic value of the sign has not been sufficiently clarified. It occurs in positions which correspond to the pataḥ and segol in the Tiberian system, and it might have been pronounced like one of them, that is, or e (in which case that vowel of the two which is not extant in the Babylonian system would have merged with its remaining companion). It seems, however, more reasonable that it was pronounced as a medium vowel between a and e, and this has been the pronunciation of Yemenite Jews until
today in certain circumstances. The sign is called in the Babylonian Masorah פָּתָח ("opening of the mouth") or פָּתָח הַמַּעֲמֶה ("opening") פָּתָח for short. ה is used in the regular set and has the shape of alef with one leg missing; in the dot set ה (or ה) serves as its counterpart. Apparently the phonetic value of the sign was ā and it corresponds to the Tiberian qames (the opinion that its value was ā is untenable). Names in the Babylonian Masorah are: יָמִית מַעֲמֶה or יִמָּמִית מַעֲמֶה for short; "contraction of the mouth") and sometimes פִּ mktime יַמִּיק (for short) from the root יָמִיק whose meaning is also "bringing together" (see Yalon, Leshonenu, 32 (1968), 2–4). ה = o is used in both sets. 호 = u is used in the regular set and it sometimes has the shape of a small waw. Its counterpart in the dot set is ה. ה = šewa. It is called פומא for short) in the Babylonian Masorah. This sign denotes both mobile and quiescent šewa, although the mobile šewa is marked more frequently. In only a certain type of manuscript it is the sign for mobile šewa exclusively, and the quiescent šewa is not marked at all. The realization of the Babylonian šewa may have been close to its Tiberian equivalent (see 5.3.1.2).

5.2.1.1.2. The Two Sets and Syriac. The dot set is used exclusively in only a few manuscripts. Generally it was mixed with the signs of the regular set. Both of these sets have counterparts in the two Syriac vocalization systems: the vocalization system of Eastern Syriac, which is one of dots, and that of Western Syriac, which is a system of signs made up of letters (albeit Greek). Two of the signs have the same form in the Babylonian dot set and in the Eastern Syriac system and their functions are surprisingly similar: ה, ה – the first denotes ā in Syriac and a in the Babylonian: the second signifies a in Syriac and ā (in the opinion of some, ā) in the Babylonian. Kahle believes that this indicates a connection between the Babylonian system and the Eastern Syriac, though not in the known form which goes back to the eighth century, but to an earlier stage of which there are no traces. It is difficult to accept this theory, since in the meantime we have come to know from the material reviewed by J.B. Segal (The Diacritical Point and the Accents in Syriac, pp. 152–3) the shapes of signs dating even earlier than the eighth century. From this material it is clear that in the seventh century and even earlier the form of the sign for the vowel ā in Syriac was ה (and not ה). The possible solution lies, therefore, in one of two directions: either the Babylonian system followed the late stage of Syriac, i.e., after the eighth century (but such a late date for the formation of the Babylonian system does not seem reasonable and even Kahle did not consider it), or the influence was in the opposite direction and it was the Syriac that followed the Babylonian.

5.2.1.1.3. The Antiquity of the Two Sets. Kahle feels that of the two Babylonian sets the dot set is the older, because it is simpler, because it is similar to the vocalization of Eastern Syriac (but see above), and because it is found in its purest state in a relatively early manuscript. The regular set developed, in his opinion, from the dot set. Yeivin does not agree, especially since there are older manuscripts than the one mentioned in which the regular set is used. In his opinion the dot set is just another set, ancient in itself, but not necessarily older than the regular set. It is possible that the two sets were used at the same time and that the dot set was used in a certain geographical area or by a specific school. His opinion seems reasonable. Furthermore, the only regular set, which uses letters, combines with the Babylonian accentuation, which too uses letters, to form a complete system. In any event, the dot set was preserved only briefly and was rejected in favor of the regular set. Two of its signs, however, (ה, ה) were preserved in the regular set with a special function (see below).

5.2.1.2. The Compound System. As time passed, the Babylonian vocalization system was improved and signs were added to indicate further differentiations, mainly to note the special nature of the vowel which was influenced by the syllable structure (not, however, quantitative signs). The special signs which were added are, for the most part, graphemes composed of two signs. The system that evolved was the compound Babylonian vocalization system.

5.2.1.2.1. The Signs. There are a few signs under which there is an additional horizontal line when the vowel occurs in an unstressed syllable closed with a šewa, and a horizontal line above them when the vowel occurs in an unstressed syllable, open or closed by dagēš forte. The details of the signs are not uniform in all the manuscripts. There are manuscripts which contain special signs and exceptional forms, and it is difficult to find two manuscripts whose use of vowel signs is completely identical. The main signs which occur rather frequently are the following:

(1) a sign to mark a vowel in an open, unstressed syllable (including syllables where the Tiberian vocalization has a hataf with a laryngeal consonant) or an unstressed syllable closed by quiescent šewa: ה (= i), ה (= e), ה (= a), ה (= o), ה (= u);
(2) a sign to mark a vowel occurring in an unstressed syllable closed by dagēš: ה (i), ה (e), ה (a), ה (o), ה (u).

5.2.1.2.2. Perfect and Non-Perfect. Yeivin differentiates between perfect and non perfect compound vocalization. In the former there are special signs for each type of syllable and they are used consistently. In the latter, the sets of signs are incomplete, that is, there is a special sign for only one type of syllable, or the special signs are used only for certain vowels and not for all of them, or the simple and compound signs are mixed together without differentiation. The phenomenon of lack of perfection is found in three types of manuscripts:

(1) ancient ones, in which the compound vocalization had not yet reached its full maturity;
(2) manuscripts in which there is a mixture of the two systems;
(3) late manuscripts in which only some signs of the compound vocalization were chosen for use.

5.2.1.2.3. Tiberian Influence. The increase of Tiberian influence in late manuscripts is evidenced in grammatical forms
and in the reading tradition, and is even found in the set of graphemes. This is particularly noticeable in late manuscripts in which there are attempts to introduce a special sign parallel to the Tiberian segol. For this they used:

1. ג (in place of ג) as the parallel of segol, and this in addition to its function as the equivalent of the Tiberian sere; this sign sometimes occurs as an addition to the original sign and above it (ג) to note the nuance with which one is to pronounce ג;

2. ג (an inverse Tiberian segol);

3. ג – the parallel to ג from the dot set, which by way of differentiation was specifically used for the segol.

5.2.2. The Diacritical Signs

Certain additional diacritical marks are used to distinguish between different pronunciations of the same letter.

5.2.2.1. Sin-sin. To mark ג = ג a small sin above the letter is used (ג) and to mark ג = ג a small samek is placed above the letter (ג). These signs are rarer than the vowel marks, especially in ancient manuscripts. Only in some relatively late manuscripts do they occur almost regularly.

5.2.2.2. Mapiq, Dagesh, Rafeh. The consonantal nature of a he at the end of a word (mapiq) is sometimes marked by a small he above the letter (ה).

A dagès is marked by placing a small gimmel above the letter (ג and later also ג) which perhaps alludes to its Babylonian name שמח (abbreviated as 'שוח' ('שוח', 'שוח')). The first letter of the name was not chosen as usual, since a small dalet (ג) is used as one of the accentuation signs (another proof that the system of accentuation signs is the earlier).

The rafeh nature of a letter is sometimes marked by a small qof above the letter (ג), which is an abbreviation of its Babylonian name שמח (abbr. שמח) and means “light” according to H. *Yalon (Sinai, Sefer Yovel (1998), 239).

These signs are ambiguous, since they show both gemination (dagesh forte) or the lack of it and note the plosive pronunciation of דגש (dagesh lene) or their pronunciation as fricatives. They are used only infrequently, mainly in places where a misunderstanding might arise. In manuscripts using the dot set exclusively, these marks are not added.

To mark ג� (dehiq) a dot in the center of the line between the words is in a few manuscripts: גי. גי (Josh. 24:29), which means that the dot is not a dagès (cf. Dotan, in Fourth World Congress of Jewish Studies, 2 (1968), Hebrew part, 105), although in some manuscripts, some of them late, the sign of a dagès or its substitute (the preceding vowel marked by the sign for a syllable closed by a dagès) is given in these instances.

5.2.3. The Accentuation Signs

5.2.3.1. The Nature of the Notation. Unlike the Palestinian system of accentuation signs, the Babylonian accentuation signs have reached us as a series of fixed marks above the letter, most of which are small letters or parts of them. The division of the verses according to the Babylonian Masorah sometimes differs, especially in ancient manuscripts, from the Tiberian division, and at times a comparison with the Tiberian system is liable to give a false impression. Some of the Babylonian signs have slightly different functions in different manuscripts and it seems that a shift of their pausal strength occurred with the passage of time. This together with the fact that in the relatively late manuscripts, especially in those vocalized with the compound vocalization, accentuation signs are marked over the stressed syllable, make it possible to classify the manuscripts as earlier or later according to their use of the accentuation signs. This classification tallies in general, but not always, with that of the vowel notation.

In the Babylonian system there are no conjunctive accents at all. However, there are manuscripts, mainly those vocalized with compound vocalization, in which the vocalizer or a second hand wrote in the conjunctive Tiberian signs, and they obviously are placed with the stressed syllable.

As opposed to the Tiberian situation there is no difference in principle between Prose and Poetical books. The same signs are used in both, but the degree of subdividing the verses is not as great in the Prose books and the possible arrangements of the accentuation signs are not as numerous because of the brevity of the Poetical verses.

5.2.3.2. Types of accentuation. A gross, incomplete classification into three types of manuscripts according to their use of accentuation signs was suggested by A. *Spanier (1927). The functions of the accentuation signs are presented here in a general way according to the most ancient situation (group a) and will be followed by the main changes in the functions of the signs in the groups which Spanier called a, b, and c. A more precise grouping was suggested by R. Shoshani (2003), who maintains a fourfold subdivision: early a, later a as one group; and b and c as parts of the latest group.

5.2.3.3. The accents. There is no accentuation sign for the last word in a verse. Sometimes there is no sign separating the verses but occasionally there is a sign at the end of the verse, in group a mostly: occasionally signs such as או or או, and sometimes, at the beginning of the verse (cf. Soferim 3:7), a sign like או או. The main pause of the verse is marked by (לטיה) equal to the sign of the Tiberian 'etnah, but above the line; this and the next sign are the only Babylonian signs not shaped as letters). The next largest pause, whether within the domain of או or within the domain of the end of the verse, is marked by (לטיה) (apparently an abbreviation of the accent name פיקי or פיקי). As the main or single pause within the domain of או, או is used (perhaps an abbreviation of פיקי), and when it is not the only one and there is place for an additional pause after it, או is used (like a slanted meme) as a final, small pause before או. The accent או is not imperative, and when there is need for only one pause, even a small one, in the domain of או it will be או. The smallest pause before או is או (לטיה), and this accent serves as a prelude before או. In general או is not marked, but only its prelude או (which is also sometimes omitted). The smallest pause before the final word of the verse is או, sometimes או or
5.3. THE TIBERIAN SYSTEM

5.3.1. The Vowel Signs

Unlike its predecessors, the Tiberian vocalization has reached us as a consolidated, uniform, and complete system, although in some isolated and exceptional manuscripts there are remnants of other systems, such as the Palestinian sign י to denote o (cf. Kahle, Masoretten des Westens, 1 (1927), 35).

5.3.1.1. The Vowels. There are seven vowels, for which there are eight signs, and it is clear that they do not indicate quantity in any way. This system, like its predecessors, was used by different communities and by people who had different traditions of pronunciation and who interpreted the signs and read them accordingly. In the Tiberian tradition in which the signs were created, their phonetic values are approximately as follows:

\[ \begin{align*}
\text{א} &= \text{a};
\text{א} &= \text{e};
\text{א} &= \text{a}, \text{this sign is generally under the letters like the others, but when it serves as a furtive patah in the ancient manuscripts, it precedes the letter (ג).}
\end{align*} \]

The Tiberian accent may be used as the only divider of the verse. In the rare occasions when this sign is accompanied by a waw the vowel is placed over it; \(\text{א} = \text{a};\) the two signs have exactly the same value. When a waw was adjacent to the letter in the biblical text it was marked with a dot; when there was no adjacent waw it was marked with three dots below. The vocalizers neither added to nor deleted from the sanctified orthography of the Bible.

5.3.1.2. The šewa and the hátefs. Besides the eight signs, an additional one is used, י, to indicate the furtive nature of the consonant. This furtiveness does not have a fixed value but changes according to the position of the sign within the word. Sometimes it indicates total furtiveness – a “zero” vowel (quiescent šewa) and sometimes it indicates a partial furtiveness of a vowel (mobile šewa). The nature of the furtive vowel changes again according to the position of the sign within the word according to the Tiberian tradition: preceding a laryngeal, it resembles the vowel of the laryngeal; preceding a yod it becomes i; in all the other cases, it is pronounced a. On the rare occasions when this sign is accompanied by a ga’yah (šewa-ga’yah; see below 5.3.2.6), it is pronounced as a full vowel (according to the above conditions).

This sign therefore has many functions: it can denote the lack of a vowel, a furtive or very short vowel, or any full vowel. In this it differs from the whole Hebrew graphemic system. One can explain its function by the theory that it was first used to divide a word into syllables, that is, as a sign to indicate the boundaries of a syllable. A sign of this type is
Masorah
likely to appear in a variety of phonetic garb according to the
structure of the syllable and its position between the syllables
adjacent to it within the word (in general: at the end of a syllable – quiescent, at the start of a syllable or as an independent
syllable – mobile). This sign, which was basically a punctuation sign within the word, is apparently borrowed from the
Syriac accentuation system, where such a sign (albeit within
the line) with a similar name (šewaya) is a divisional accent,
i.e., a sentence divider.
When the vocalic nuance of this sign is fixed in one of
the three vowels, a, ε, å it combines with the respective vowel
sign ‫ ֲמ‬, ‫ ֱמ‬, ‫ ֳמ‬and its phonetic value is then the furtive, short
pronunciation of these vowels.
5.3.1.3. THE NAMES OF THE VOWELS. For the Tiberian system, more than for any other system, the names of the vowels (the ancient Hebrew term for them is ‫“ מלכים‬kings” and
later ‫ תנועות‬as a loan translation of the Arabic ḥ araka = movement) can be traced. Apparently several series of names were
applied to them in the beginning (according to the changing
needs and conditions). As time passed the names became intermingled and in masoretic notes and in the works of the
earliest grammarians we find the terms from different series
being used side by side. One can schematically reconstruct
the series approximately as follows:
(1) The most primitive series has no names, but a number of sounds which express the vowels: ‫ ִאי‬, ‫ ֵאי‬, ‫ ֶא( ֶאי‬, ‫) ֶאה‬, (‫ ַא)ה‬,
(‫ ָא)ה‬, ‫או‬
ֹ , ‫א ּו‬. One can assume that the vowels were thus called
even before the invention of the vowel signs, these names being used orally and could not be written simply for lack of
graphic signs for them. Only after the introduction of vocalization did it become possible to use these appellations in writing, and then we do find them, though rarely.
(2) A series in which the vowels are named according
to the labial movements, whether closed or open, and the
names were therefore derived from ‫( קמץ‬close, contract)
and ‫( פתח‬open). These terms and their derivatives (such
as ‫קמצה‬, ‫ פתחה‬and so on) were first used in a broad sense – a
closed vowel versus an open vowel. Qameṣ thus applied at first
to the vowels å, e, while pattaḥ (sometime also ‫ )פשט‬applied to
the vowels a, ε. As time passed special names were determined
for e – ‫ קמץ קטן‬and for ε – ‫( פתח קטן‬also [‫)פשט צבחר ]צבחד‬,
while qameṣ and pattaḥ marked only one vowel each, å, a.
Later we find these special names: ‫( קמץ שלם‬kāmil in Arabic),
‫רחב‬, ‫ גדול‬and also ‫פתח גדול‬. ‫ קמץ פום‬also apparently belongs
to this series for u, and perhaps also ‫ מלָ א פום‬for o (in a later
period in Europe ‫ מלופום‬is used to indicate ‫) ּו‬. It is difficult to
establish the name of the vowel i in this series; perhaps it was
‫ =( שפילתא‬the low one) because it stands lowest in the scale
of the vowels.
These names also are not directly connected with vowel
signs. It is therefore possible that, like the above primitive series,
they were instituted before the invention of the vowel signs; but
some of the names were used in a later period as well.
(3) In the third series the vowels are named according

634

to their symbols: ‫“( נקודה אחת‬one point”; i), ‫“( שתי נקודות‬two
points”), ‫“( שלוש נקודות‬three points”), ‫“( נקודה בתוך הוי״ו‬a
point within the waw”; u), ‫“( נקודה עליונה‬upper point”; o,) and
similar names in Aramic and Arabic. Only qameṣ and pattaḥ
were employed as before. These names of course, came into
use after the invention of vowel signs and while they made
for a brevity of language – as for example, when a word was
said to have ‫“( שש נקודות‬six dots”) by which term two segols
were meant, and so on – there is ambiguity (two dots = ‫ ֵמ‬, ‫ ְמ‬,
three dots = ‫ ֶמ‬, ‫ ) ֻמ‬and apparently because of this the series
did not prevail.
(4) This series of names, in use until the present day, is
based on the type of sound produced (some of the names are
in Aramaic): ‫“( חרק – ִמ‬a squeak”); ‫( צרי – ֵמ‬from the Aramaic
for “splitting,” i.e. “splitting of the lips”); ‫מ‬
ֹ – ‫( חלם‬meaning
“completeness,” i.e., a vowel using the whole mouth, melaʾ
pum); ‫ ֻמ‬, ‫“( שרק – מ ּו‬whistle, hiss”). Only ‫“( ְסגוֹ ל – ֶמ‬cluster”
in Aramaic) stems from the similarity of the sign to a cluster [of grapes]. Qameṣ and pattaḥ also continued to be used
in this system. The orthography of the new names is without
matres lectionis, and there has been disagreement as to their
forms. Often they were segholate names: ‫ ֶח ֶרק‬, ‫ ֶחלֶ ם‬, ‫ ׁ ֶש ֶרק‬, and
also ‫ ְצ ִרי‬, ‫ ֶצ ִרי‬and even ‫ ְצ ֵרי‬. From approximately the 11t century the custom of introducing the indicated vowel within
the name began to spread, and from then on the orthography
‫חירק‬, ‫חולם‬, ‫שורק‬, ‫ צירי‬became common. Since the time of the
*Kimḥ is the name ‫ ִקבּ וּץ שפתיים‬or ‫ ִקבּ וּץ‬is specifically used for
the sign ‫ ֻמ‬. This name was formerly a synonym for šuruq and
as a translation of the Arabic damm (contraction), it also indicated the o, u group of vowels.
The name šewa (‫ ׁ ְשוָ א‬known also by the spellings ‫שבא‬,
‫שבה‬, ‫ )שוה‬for the sign ‫ ְמ‬is relatively newer than the other
names, for when Saadiah Gaon uses it for the first time he finds
it necessary to describe it: šewa ʾaʿni nuqṭ atayn qāʾimatayn
(“šewa, that is, two upright dots”; commentary to Sefer Yeẓ irah,
4:3), which he does not do for the other names. The name ‫חטף‬
is apparently older than šewa, although after a certain time it
was used specifically for the šewas which are joined to a vowel,
ḥ aṭ af pattaḥ , ḥ aṭ af segol, ḥ aṭ af qameṣ .
5.3.2. The Diacritical Signs
5.3.2.1. THE PRONUNCIATION OF CONSONANTS. 5.3.2.1.1.
Šin-Sin. The single dot is employed as a diacritical sign to
distinguish between the two pronunciations of ‫ ש‬: ‫ = ׁש‬š, this
dot sometimes is assimilated into a preceding ḥ olem ;(‫משה‬
ֶׁ )
ׂ‫ = ש‬ś, this dot is sometimes assimilated into the ḥ olem of the
same letter (‫)שׂנֵ א‬.
5.3.2.1.2. Dageš. A dot within the letter marks both a plosive
dageš (lene) in ‫ בגדכפ״ת‬and also the geminative dageš (forte)
in all of the letters except ‫אהחע״ר‬. An unusual dageš does occasionally occur in the reš (but there is no connection between
it and the various statements concerning the double pronunciation of the reš, in which a reš with dageš is also mentioned).
According to the Masorah the dageš occurs also in the ʾalef four
times in the Bible (although there are manuscripts in which it


occurs more often) but these seem to belong to the category of Mappiq. Therefore the dageš in דֵּבָה בְּדֵבָה is ambiguous (lene or forte) and its function is determined only by the context. The term בָּדָה and its synonyms (דָה, etc.) are explained according to Syriac, in which the verb dagas = to pierce, to make a hole. If this etymology is correct, the name was adopted in the Tiberian vocalization because of the sign’s shape and thence it was borrowed into the Babylonian Masorah.

A special type of dageš is that of ‘ate merahiq (or dehiq), which in origin is not a geminative dageš but a dot used to mark the separation of two connected words, so that they should not be joined together (cf. Dotan, in Fourth World Congress of Jewish Studies, 2 (1968), Hebrew part, 101–5, and see especially n. 23). Because this dot is identical with the sign of the dageš, as time passed it was taken to be a dageš forte, denoting geminate pronunciation, and is so pronounced in various communities.

5.3.2.2. The Ga’yah. The sign of the rafeh (ר) is the opposite of the dageš lene and indicates the lack of the dageš in the spirant דֵּבָה. It does not occur regularly even in ancient manuscripts. In addition to this main function, it is sometimes used in an irregular manner above the letters ח and ט to note quiescence, and also, infrequently, to mark the lack of dageš forte, that is, to point out the lack of gemination of certain letters. The frequency of this sign varies in the different manuscripts, and with the passage of time it stopped being used altogether since it was tautological.

5.3.2.4. Mappiq. Another dot marks the consonantal nature of a final he. Generally this dot is located in the center of the he (ה), but there are manuscripts in which it is written in the lower part (ה), or even under it (ה).

Additional usages of the signs enumerated here, such as dageš lene in letters other than דֵּבָה, or a mappiq in the letters alef, waw and yod, etc., are found in exceptional manuscripts, and they must be considered as the influence of a vocalization system which was not accepted (see below 5.4).

5.3.2.5. The Ga’yah. The sign ג which is generally written to the left of the vocalization sign (in ancient manuscripts also sometimes at the right) is a reading aid that serves various purposes, but basically it can be considered a device to improve the phonetic structure of a word. The condition for such use is sometimes rooted in the musical-accentual context of the word.

In the most general way one can distinguish between the main types of ga’yah as follows:

5.3.2.2.2. Minor Ga’yah. A minor ga’yah occurs in a closed syllable. There are many varieties of this type, and the distinction between them is a matter requiring detailed description. One of the most common types, whose definition is already found in Dikduke ha-T’amim by Aaron Ben-Asher, is the ga’yah that occurs in a closed syllable which is the third before the stress when the syllable adjacent to the stress is a furtive syllable (that is, a clear mobile šewa or a hatef), or the ga’yah which occurs in a closed syllable that is the fourth before the stress when the syllable adjacent to the stress and also the third before it are furtive syllables: הֵדֵכָה, etc.

There is no certainty as to how this ga’yah was realized but it seems that it marked some delay in the pronunciation or melody, or in both. Its special phonological conditioning was also instrumental in phonetic realization, particularly of the šewa. For example, הָּהֵדֵכָה – the ga’yah in the he also indicates a mobile šewa for ה.

This type is already called הֵדֵכָה (minor ga’yah) in ancient sources connected with Dikduke ha’-T’amim and is apparently the name for all the ga’yot of this type. The minor ga’yah is the most common in the best ancient manuscripts, among them Leningrad b19a and the Aleppo codex, and it has a greater degree of regularity than the other types of ga’yah. In spite of this, however, the reason for these ga’yot was not clear, nor apparently were their precise conditions understood, although their connection to the accentuation system was obvious and they occur more often with disjunctive than with conjunctive accents. Because of this lack of clarity, and perhaps also because of uncertainty concerning the realization of the ga’yot, the scribes disregarded them when they were copying and their frequency diminished as time passed. Unlike the type listed below, which generally did affect pronunciation, the minor ga’yah seemed without a defined purpose and difficult to understand.

5.3.2.2.3. The Terminology. Strangely enough, the confusion as to its purpose led Jekuthiel ha-Nakdan to establish the name of the minor ga’yah as הֵדֵכָה דֵּבָה (“heavy” [in the sense of: difficult] ga’yah) as he himself states (Sha’aar ha-Metigot, ed. Gumpertz, in Leshonenu, 22 (1958), 142). “Therefore I called them heavy, for the heart of many sages is heavy for not having understood them and they did not show them in their function … and the second [reason] that I called them heavy and different from the first ones is that the gate which is open for the light ones is closed for these which are heavy...” This name, used by a few scholars even today, thus has no justification, despite Yeivin’s opinion (The Aleppo Codex of the Bible (1968), p. 93, n. 3). In fact, there is evidence that such a name in Arabic was used precisely to indicate the following type of ga’yah.

The process of the decline of the minor ga’yah was slower in the Sephardi manuscripts, and Jekuthiel ha-Nakdan (apparently of Prague) already declares that it had disappeared from most of the non-Sephardi manuscripts.
5.3.2.2.4. Major Gaʿyah. This gaʿyah occurs in an open syllable. Here, too, there are several types, and all of them occur in a syllable which is separated from the stress by at least one syllable. In the separating syllable, however, different kinds must be distinguished: it is likely to be a vowel (א). or a compound šewa (א, פ, ו, א), or a simple mobile šewa (א, פ, ו). There are a number of proofs that this gaʿyah is the one which is called הלל (major gaʿyah) in ancient sources (Dotan, ed., Diqdūqe ha-Tecomim, pp. 286, 302); in the treatise on the šewa (in: Kurt Levy, Zur masoretischen Grammatik (1936), pp. 7, 7) it is called gaʿyah šaqlilah (heavy gaʿyah).

This gaʿyah neither occurs regularly nor follows general rules in the ancient manuscripts. In comparison to the minor gaʿyah, which is found marked with a very great degree of consistency, we can find no full consistency in the notation of the major gaʿyah in the different ancient manuscripts, not even in the best of them. Inconsistency is also found within a single text. Yet, as time passed, the major gaʿyah became more and more common in the manuscripts until it was marked with great regularity and consistency in every open syllable. This adherence of the scribes to the major gaʿyah at the same time that they turned away from the minor gaʿyah is part of the process of systematization of the rules of the gaʿyah, a process whose beginnings were among non-Sephardi scribes but which ultimately became accepted by all. The Sephardi Menahem di Lonzano (second half of the 16th century) complains about it: “I am weary of my life through the abundance of the extra gaʿyot, which are superfluous, which the Ashkenazim put in their books and called meteg (= bridle), while I have called them bridle (= meteg) for the ass. They are a nuisance to me I am weary to bear their correction for they are more than the grasshoppers and are indeed infinite in number” (Or Torah, Amsterdam, 1659, p. 2b).

5.3.2.2.5. Development. One can assume that the origin of the major gaʿyah as a sign to distinguish between the mobile and the quiescent šewa, i.e., the basic location of the sign is in an open syllable preceding a mobile šewa, and from here it spread to other open syllables (as above). However, there was no regularity in the notation of this gaʿyah neither before a simple šewa nor in the other positions. It was only in the late Middle Ages that this sign was used more and more, since the scribes considered it a sign to indicate a necessary phonetic entity which exists in pronunciation, whether the sign points to it or not, according to the statement of Jekuthiel ha-Nakdan (ed. Gumpertz, in Leshonenu, 22 (1958), 141): “And the custom that many followed – not to point them [i.e., the gaʿyot] everywhere because they are very numerous throughout all of the Bible and the vocalizers said [if] we will write them in every instance their number will exceed that of the accents, and perhaps the readers will go astray because of them and will forget the normal accents because of the abundance of metegs (former) while the wise man will know them by himself even if the vocalizers lightened their burden and did not indicate each of them.” This statement practically permits major gaʿyahs to be added to every open syllable even in places where they are not written according to the Masorah.

This situation is completely different from the concept which was common at the start of Hebrew grammar and which is manifest in the ancient manuscripts. Here the major gaʿyah was the main indicator of the mobile šewa. There are quite a number of rules, both in Diqdūqe ha-Tecomim and in works of Masorah related to it, from which it is clear that only a šewa which is preceded by a gaʿyah is mobile and a simple šewa in the middle of a word which is not preceded by a gaʿyah is always quiescent (except for known types). There is corroboration for this also in the writings of the early grammarians (Allony collected the evidence for it). If so, the major gaʿyah is not a “self-evident” diacritical mark, but, to the contrary, has phonetic significance. While the above evidence derives from the facts, it is difficult to accept it, for it would mean that the pronunciation of the words, especially those with a šewa, varied according to different manuscripts, even in one single text. Such arbitrariness in the exact pronunciation of biblical Hebrew, which each generation labored to preserve and transmit faultlessly, seems unlikely.

It is difficult to explain this phenomenon, and on the other hand it is easy to understand the tendency of the later masoretes toward unification and systematization. The major gaʿyah became, as time passed, the only gaʿyah. In addition to its function as an indicator of the “mobility” of the šewa or the length of the vowels, it was considered – in order to take into account also the instances in which the gaʿyah did not precede a simple šewa – also a sign indicating the phonetic Ge-genton to the main stress, a function which fits all the types of the major gaʿyah. In this capacity it became known more and more as meteg (meteg), and Jekuthiel ha-Nakdan already used this term along with metigah (metigah).

5.3.2.2.6. Šewa-Gaʿyah. his is a gaʿyah which occurs in a furtive syllable, that is, in a syllable with a mobile šewa, or with a hataf patah or a hataf segol (henceforth called šewa-gaʿyah).

It is generally marked to the left of the šewa or hataf (ן, נ), and in ancient manuscripts it sometimes is marked to the right (ן, נ); with the hatefsi it is sometimes between the šewa and the vowel (ן, נ).

Nothing is known about the conditioning of this gaʿyah. It is found in manuscripts without any regularity; it is more common in the Poetic books (Psalms, Proverbs, and Job) than in the other books, and it is mainly noted at the beginning of the word. On the other hand, we do know quite clearly its purpose – to indicate the pronunciation of the šewa as an actual full vowel. This is attested to by the rules of pronunciation of the šewa copied in different sources in Masorah literature. In this it has a common feature with the major gaʿyah; for a šewa which is pronounced as a full vowel has ceased to constitute a furtive syllable and has become open, and the gaʿyah which occurs in it is similar to a major gaʿyah. Šewa-gaʿyah never occurs in the syllable before the stress; it requires a separation of
one syllable at least between it and the stressed syllable, just like the major ga’yah.

On the other hand, there is rather general agreement in the notation of the šewa-ga’yah in ancient manuscripts, and in that it bears a similarity to the minor ga’yah. Yet, unlike the minor ga’yah, šewa-ga’yah was not rejected from the text; it is still copied today in most of the editions of the Bible. The reason for this is that because of its relative rareness and because of its special method of notation (next to the šewa and not next to a vowel like the other two types of ga’yah) it was considered an anomaly and an exceptional sign, and like the other exceptional signs of the Masorah it was treated with special respect.

5.3.2.7. Ha’amadah. This is a ga’yah of a special type which perhaps does not merit the name ga’yah, though it is noted in the same manner. It is better to call it, for the purpose of differentiation, by the name given by Jekuthiel ha-Nakdan and following him, by Wolf “Heidenheim, מְחָא (’causing to stop’); although this name is used also for ga’yah in other places).

The function of the ha’amadah is to emphasize, perhaps by a slight pause, the pronunciation of a sound which was likely to be swallowed. This danger threatens unstressed sounds at the end of a word which is connected to the following one, and in these instances ha’amadah is likely to occur (and its function is then similar to that of the dageš of ’ate merabiq – see above, 5.3.2.1.2.). It is a relatively rare sign and there is no consistency in its notation. In this position, that is, in an unstressed syllable at the end of a word which is connected to the following (whether by a maqqaf or by a conjunctive accent) which is (generally but not always) stressed at the beginning, it is likely to occur before a laryngeal consonant, e.g., לֶחָא (Deut. 29:19); וַיַּעַסֵא יִיָּה (Gen. 24:7); וַיִּשְׁנֵא וּיִת (Deut. 4:33) – and even with another consonant where the stress is retracted from it, mainly when the vowel is sere, e.g., יַנְּבָא צָע (Isa. 40:7); or sometimes even with other vowels and without the retraction, e.g., שַׁנְּבָא אֲנִי (Gen. 28:5), שַׁנְּבָא אֵל (Eccl. 2:11), שַׁנְּבָא וַיַּעַסֵא (1 Kings 1:13), שַׁנְּבָא וַיַּעַסֵא (Deut. 32:13).

In ancient manuscripts the ha’amadah is found more than in the recent editions of the Bible. But even in the ancient texts there are no fixed rules and there is disagreement among the manuscripts. Yeivin (The Aleppo Code of the Bible (1968), 180ff., 271ff.) described and discussed the situation in the Aleppo codex and in related manuscripts.

5.3.3. The Accentuation Signs
The Tiberian system, unlike the other two, was a consolidated, complete system of disjunctive accents and conjunctive accents with defined functions, complete orderliness, and a very uniform textual transmission. This is the result of improvement after improvement, and it can be considered the zenith of the development of the graphemes in Hebrew.

5.3.3.0.1. The Functions. In addition to the two functions which the accentuation signs perform in the other systems – dividing the verse, and setting the melody of the reading of the text – in the Tiberian system they also indicate the point of the stress in the word. This is very important not only for the correct reading of the Bible but also for recognizing the grammatical structure of the language: the Tiberian system of accentuation is the only means for establishing the stress structure of ancient Hebrew.

As a musical guide for reading, this system is also more sophisticated than the others: for actually one fixed sign would have been sufficient for indicating the lack of pause; and it was only for musical variation that different signs were established for words which are connected in different contexts, the conjunctive accents.

Its sophistication and completeness as a system of punctuation are manifest also in (1) the fact that its signs are attached to each and every word and they indicate different degrees of pause as well of juncture (= “zero” pause); (2) the fact that the value of each punctuation sign (= accent) is relative, and changes according to its position within the verse, the length of the verse, and the relationship to the other accents within it.

5.3.3.0.2. The Principles of Parsing. The principles of parsing of the system are varied:

(1) each division is always into two only – a dichotomy, i.e., the result of every division is always only two smaller units and never more;

(2) the dichotomy continues time after time in every one of the resultant units until there remain in each small unit only two words (which do not have to be divided) or until all the accentuation signs have been used and there are technically no more possibilities for indicating another division.

5.3.3.1. The (21) Prose Books. The Tiberian accentuation signs are a system of dots and lines, some simple, others compounded. The names of the signs are in part Aramaic and in part Hebrew, and they sometimes refer to the melody or to the manner of reading, sometimes to the shape of the sign, and at other times to the hand movement which accompanied the melody in the ancient period (see 1.3.3.).

5.3.3.1.1. Disjunctives. מ – מֶלֶךְ (cessation; also מָתָח – end of the verse). It occurs only at the end of a verse and it is located only on the stressed syllable (this is not to be confused with the ga’yah sign, which does not occur with the stressed syllable). מ (originally מ – אֲנָה, אֲנָה = “rest”). מ – מָחַת, מְמָחַת, מְמָחַת (Aramaic: a [grape] cluster – refers to its shape). מ – מְחַת, מְקַח (variant of מ – מְקַח used in specific conditions. מ – מְקַח, מְקַח, מְקַח (Aramaic: a [grape] cluster – refers to its shape). This is a postpositional sign – always written at the end of the word, but in some editions of the Bible it is placed an extra time on the stressed syllable in penultimate words. מ – מְקַח (chain; refers to the shape of the sign and perhaps to the melody as well). מ – מְקַח (Ara-
...extending, stretching; the long vowel is indicated in some manuscripts by a prepositive accent – located always at the beginning of the word, and to the right of the lower vocalization sign. ב (originally כפולה – קָכֶפֶל), נָשָׁיָה, or נֶשֶׁיָה, referring to the broken melody. ב (originally כפולה – קָכֶפֶל) or נָשָׁיָה is an abbreviation of the name נָשָׁיָה, which moves (“expels”) a word, and to the right of the lower vocalization sign.

A variant of the preceding accent in specific conditions, it is a prepositive accent – located always at the beginning of the word, and to the right of the lower vocalization sign. ב (originally כפולה – קָכֶפֶל), נָשָׁיָה, or נֶשֶׁיָה, referring to the broken melody. ב (originally כפולה – קָכֶפֶל) or נָשָׁיָה is an abbreviation of the name נָשָׁיָה, which moves (“expels”) a word, and to the right of the lower vocalization sign.

pazer at a distance from it. A pazer can be repeated if necessary.

The hemistichs of the paṣṭaʿ, ṣarqaʿ, or tevir are likely to be divided by geres, telisa ʿedola or pazer, all according to the distance of the division from the end of the hemistich—grees in a closer position and pazer at a distance. A pazer can be repeated if necessary.

The hemistichs of pazer, telisa ʿedola, and munah legarmeh are not subdivided. That of geres is sometimes divided, irregularly, by a telisa ʿedola and pazer.

These main rules have many by-rules and laws of transformation of accents causing changes and the use of variant accents conditioned by musical considerations.

5.3.3.1.4. Rules of Joining the Conjunctives. For each of the conjunctives there is a specific conjunctive which is joined to it. This joining of the conjunctive is not always imperative and even the number of the conjunctives which are added to a disjunctive depends upon the context and the verse structure. Sometimes only one conjunctive is added, sometimes more, up to a maximum of six conjunctives with certain disjunctives. Below is a list of the conjunctives which can join each disjunctive, arranged in reverse order, from the disjunctive backward:

* silluq – its conjunctive is merkaʿ.
* ʿetnah, zaqef qatan, segol – conjunctives: munah, munah. tippeha – its conjunctive is merkaʿ (14 times in the Bible: double merkaʿ, dargaʿ).
* revia – its conjunctives are munah, dargaʿ, munah.
* paṣṭaʿ – the conjunctives are mahpak (or merkaʿ), ʿazla (or munah), telisa ʿetnah, munah, munah, munah.
* sarqaʿ – the conjunctives are munah (or merkaʿ), ʿazla (or munah), telisa ʿetnah, munah.
* tevir – its conjunctives are dargaʿ (or merkaʿ), ʿazla (or munah), telisa ʿetnah, munah, telisa ʿedola – the conjunctives are munah, munah, munah, munah, munah.
* pazer – its conjunctives are munah, munah, munah, munah, munah.
* qarne parah – the conjunctives (at least two) are yerah ben yomo, munah, munah, munah, munah.
* geres – its conjunctives are ʿazla (or munah), telisa ʿetnah, munah, munah, munah.
* geršayim – its conjunctive is munah.
* munah legarmeh – conjunctives: merkaʿ, ʿazla (or munah).

5.3.3.2. The (3) Poetical Books. 5.3.3.2.1. Disjunctives. יָשָׁר (transliterated yishar, “elevation,” “raising”), an abbreviation of מְשִׁיחַ (meshiah, “Messiah”). This is the ancient name of one of the types of accents which were called shofar (horn, trumpet), and it was so named because of the ascending melody. Only in a relatively late period did it refer to the sign of the shofar which was written above, that is, upper, superior shofar. Another name is מֵיהַ נֵמִית (memet, “burden”) and meaning, consequently, laboring, heaviness. It is sometimes also called מֵיהַ נֵמִית. It is always placed under the stressed syllable and it is thus differentiated from the disjunctive dehi. Some of the early scholars differentiated between three types of tarha according to the disjunctive which they join: before silluq – revia (inclined), from the Arabic màlah “inclining,” see below, 5.3.3.3.2.1.; before ʿetnah (or its substitute) – tarha (or its substitute) – (14 times in the Bible: ʿetnah (or its substitute) – (thrust back); before revia mucrasha (or silsala ʿedola) – rekha “reclining.” יָשָׁר – מְשִׁיחַ, יָשָׁר – מְשִׁיחַ ("wheel"). Two different signs merged in this one, but they are still found separately in ancient manuscripts: יָשָׁר – the conjunctive for a pazer (and apparently the name galgal refers...
to this; it is also used in the 21 books), and ו (in the form of an inverse ancient ’etnah) – which is used as a conjunctive for ’ole we-yored. ב – a rare accent which appears only eight times in Psalms, Proverbs, and Job.

5.3.3.2.3. Main Rules of Dichotomy by the Disjunctives. The relative brevity and parallel structure of most of the verses in Psalms, Proverbs, and Job were liable to cause monotonity in the reading and even in the melody. In order to avoid this, special accents were used which allowed for more variety of tone than in the other books. These different accents based on the context, and even more on the syllable structure of the words themselves, helped reduce the monotonity.

Here, too, the sign which marks the end of the verse is always sillaq, although a few manuscripts do not mark it at all. A verse is divided by ’ole we-yored, or by ’etnah and infrequently even by revi’a (which in later manuscripts and editions is then marked with additional prepositional gereš) – all according to the length of the verse and the distance of the point of division from the end of the verse. The further the division is from the end of the verse, the more ’ole we-yored is used.

The hemistich of ’ole we-yored is likely to be divided by revi’a qatan at the first word or by sinnor at the second word and by revi’a gadol at the third word and further. When the hemistich is divided by revi’a gadol, a sinnor or revi’a qatan will be used, in any event, for an additional division between it and ’ole we-yored.

The hemistich of ’etnah is likely to be divided by dehi, and when it is long, by revi’a gadol, and then it is possible that dehi will also occur after the revi’a gadol.

The hemistich of sillaq which remains after the division by ’etnah (or by ’ole we-yored), is divided again by revi’a mugraš; and when revi’a mugraš is far from the sillaq, there is a second, smaller division made by the disjunctive ’azla’ legarmeh or mahpak legarmeh (according to the structure of the word and the context of the accents). In special situations šalšelet gedola will occur instead of revi’a mugraš.

The hemistich of revi’a mugraš or šalšelet gedola is not further subdivided. However, when revi’a mugraš is used instead of ’etnah (and it is then written in the ancient manuscripts without gereš), it is likely to be divided in the same manner as the hemistich of the ’etnah (see above).

The hemistichs of the revi’a qatan and pazer are likely to be subdivided only by ’azla’ legarmeh or mahpak legarmeh. The hemistich of ’azla’ legarmeh is never subdivided.

Often enough these rules, or at least some of them, are not put into effect because of very precise rules of transformation. These rules, which are based upon musical considerations, cause the exchange of one disjunctive for another, or the replacement of a disjunctive by a conjunctive. In most cases of substitution the conjunctive accents of the original division remain in their positions and it happens, therefore, that sometimes the conjunctives of one disjunctive serve another disjunctive, or even another conjunctive. In order to trace a verse’s division one must therefore take the rules of transformation into consideration. Sometimes even in a place where there is a conjunctive, the intention of the accentuators was a pause, and only the melody is that of the conjunctive. The opposite phenomenon – a disjunctive occurring for a musical reason in a place where no division is needed (prelude accent) – is very common in the accents of Psalms, Proverbs, and Job, and even more in the accents of the 21 books (see above).

5.3.3.2.4. The Use of Conjunctives. The rules of the conjunctives in Psalms, Proverbs, and Job became very slack with their transmission throughout the generations. While the musical side influenced their selection even more than in the 21 books, these rules were most complex and dependent upon the syllabic structure of the words, the number of conjunctives, and the distances from the disjunctive. Despite all these rules, the exceptions were still quite numerous. Furthermore, the reading tradition for the books of Psalms, Proverbs, and Job was not preserved by the various Jewish communities, and the system of the signs – and even more so, the rules behind them – were not understood by the scribes and printers, and they lacked all meaning for the readers. This accounts for the fact that as time passed the manuscripts – and even more so, the printed editions – differed from one another more and more, until complete confusion was reached in the rules of the conjunctives. The rules of the disjunctives also suffered, but to a lesser degree. Even in ancient manuscripts with an excellent textual tradition, the rules of the conjunctive are very complicated and sometimes there are no rules but different parallel possibilities for the conjunctive accents without any obvious causality. I. Yeivin has described the situation as found in the Aleppo codex (The Aleppo Codex of the Bible (1968), 281–350).

5.3.3.3. Special Signs. In addition to the accentuation signs, which have been treated until now, each of which indicates both a degree of pause and a melody (the noting of the place of stress in a word is restricted to the Tiberian system), there are a number of other signs used in the Tiberian system of accentuation, each for only one of the following purposes.

5.3.3.3.1. Signs for Pause and not for Melody. 5.3.3.3.1.1 Paseq. The sign א (a vertical line between words; originally a small line א א – קספ (Aramaic: cutting off), קספ (Aramaic: cut off)); a symbol for punctuation only and not for melody. It occurs only after conjunctive accents and indicates a pause. One should consider it an additional improvement in the system of accentuation, for it is a sign used to complete the punctuation system after the system of the melody was stabilized. With regard to its phonetic influence upon the pronunciation of the word it is also a disjunctive in that it voids the fricative nature of קספ at the beginning of the following word; that is, it cancels the fricativeness which is caused by the conjunctive accent near it. A distinction should be made between a paseq which is wont to occur after any one of the conjunctives as opposed to the similar sign which goes with one of the disjunctives: šalšelet, munah legarmeh, šalšelet gedola,
‘azla’ legarmeh, mahpak legarmeh. With these disjunctives the sign is part of the accentuation. To distinguish between the two kinds, the masorites arranged lists of the *paseqs* (‘=res) found in the Bible. The lists are not identical, but in general the number of *paseqs* reaches about 400. Already in Ben-Asher’s *Dikduke ha-Te’amim* five rules for *paseq* were enumerated, and in effect it was possible to explain most of the *paseqs* in the Bible with the aid of a set of rules. Yet these rules did not always work, and one cannot explain why they were not applied in every instance.

The five *paseq* rules of Ben-Asher may be sorted into two main categories of means for perfection:

1. In a unit of mostly two words, which according to the principle of dichotomy needs no further division, the *paseq* occurs nevertheless to indicate division for a definite, phonetic or punctuational-exegetic, reason:

   a. a phonetic need – to separate between equal or similar consonants at the boundaries of adjacent connected words in order to avoid assimilation and, consequently, wrong joining of the words. Mostly the sonorants ʾא, ע, י, א are involved, e.g. יִגָּה מְתוֹן־ת (Jer. 51:13);

   b. a punctuational need – to separate between a pair of identical or similar words, e.g., מֶלֶךְ וַדַּל (Gen. 39:10), מַהַל (Gen. 17:13);

   c. an exegetic need – to separate between words, one of which is a name of God, which are joined according to the accentuation needs, but their conjunction is liable to allow for a different understanding, in which God’s name would be profaned, e.g. יִתְמָר אֲלֹהִים (Ps. 139:19) – “if Thou shall kill, O God, the wicked!” (not “if you kill the wicked God!”);

   d. an exegetic need – to separate between words in order to avoid an understanding arising from the division of the accentuation and which seems either wrong, impossible or unacceptable, e.g. וּאְפִּי (Ps. 55:20), חֹדֶר לָלַע (Gen. 18:21).

2. In a unit of three words or more to separate words which should be separated according to the context, but for which proper disjunctives do not exist in the accentuation system to show this separation. This refers mainly to an additional division of the hemistichs of the smallest disjunctives – *pazer*, *telisa* gedola and sometimes *geres* – which cannot be further divided with accent signs: e.g. בְּאֵל גּוֹד (Ezek. 8:3). Recently another early attempt to formulate rules for the occurrence of *paseq* was detected in Saadia Gaon’s longer commentary to Exodus (Y. Ratzaby, *Rav Saadia’s Commentary on Exodus* (Jerusalem 1998), pp. 224, 394–5), where he formulates five rules of his own, two of which do not coincide with Ben-Asher’s rules (see Dotan, *Paseq*).

However, all the above are not rules for the placement of the *paseq*, but categories according to which one can classify and understand most of the *paseqs* occurrences. Yet there are many places in the Bible which come under these classifications and a *paseq* is not found there. A relatively small part of the *paseqs* are not explained even according to these classifications, and there is no doubt that hidden explanations and exegetical homilies played a part in the placing of the *paseq*, as with the accentuation signs.

5.3.3.3.1.2. *Maqqaf*. The sign ְ (originally an extremely small line which joined words) – יְ = (‘bind’), is only a conjunctive sign and has no melody. It indicates that the word before it is connected to the next word; the first word has no accent of its own, and the melody indicated by the sign occurring with the word that follows it applies to it too. The *maqqaf* usually connects two words, sometimes three or even four and the dominant melody is indicated by the accent of the last word. The *maqqaf* can be classified into three main types:

a. that which connects any type of small word, mostly prepositions and conjunctives, but also nouns, names, and other parts of speech, and makes it proclitic;

b. that which connects a word whose stress is ultimate, although it is not a short word, to a word whose stress is at the beginning, in order to avoid adjacency of the stresses. By this connection the melody of the first word is voided, but it is doubtful whether its stress is completely cancelled. It seems that in these cases the stress regresses (רָאוּד) and is sometimes indicated by a *gāyāh*; sometimes it is not indicated but the regression does exist in the pronunciation (latent regression);

c. that which connects words which the accents (the conjunctives) were insufficient to connect, or some other difficulty in the accentuation left unconnected. This is another improvement in the system of accentuation, parallel to the *paseq*, but for conjunctive needs.

The rules of the *maqqaf* are only partially fixed (especially for type a), and there are variants with regard to details between different editions of the Bible. There are also principle differences between the Poetic books (Psalms, Proverbs, and Job) and the Prose books of the Bible. In ancient manuscripts the *maqqaf* was sometimes omitted, apparently through scribal error.

5.3.3.3.2. Signs for Melody and not for Pause. Signs for pause only are common to all 24 books of the Bible since they do not have any special melody. However, the signs for melody only are of necessity different in the two groups of books.

To this category belongs every conjunctive serving as a secondary accent in a word where another accent, disjunctive or conjunctive, marks the main stress. In this case the secondary conjunctive accents have no other function but melody. Signs serving solely for melody are the following:

5.3.3.3.2.1. The (21) Prose Books: (a) The sign ֱ (a sign similar in shape to ‘azla’ or *pasta* occurring on a word with *zaqef qatan*) – it is called *[chet* (= “stroke,” “rod”) and also *hes* (“rod”), because of the shape of the sign. Other names are: רָאֵד ("spr. "goad"), or its Arabic parallel, hamza, whose Hebrew spelling הָאִמָּה was understood by copyists, who did not know Arabic, as a Hebrew noun with the article which they pronounced הָאִמָּה. We also know of the names יְ ("bridling"), which was used equally for *gāyāh*, יְ ("indicator"),
and קָטָן פָּשְׁט because of its graphic similarity to the sign of the פָּשְׁט. The maq̱q̱eq is used in a word with zaq̱eq qatān when there is no פָּשְׁט or yetiv before it as a prelude accent, and when the conjunctive munah does not precede the word or occur within it. That means that it is used as a sort of a prelude melody for zaq̱eq, when the zaq̱eq does not have another prelude accent in the form of פָּשְׁט or munah. The maq̱q̱eq is always located in the closed syllable which is furthest from the stressed syllable and separated from it by at least one syllable (a mobile šewa is considered a syllable for this purpose) and it never occurs in a syllable which has g̱ayah; e.g., מַשְׁמַר הָרָּה (Lev. 20:7), בֵּית הַלַּעֲשָׁה (Ex. 34:11). In general the maq̱q̱eq is not used at the beginning of a word, except in special cases.

(b). The sign ה (a sign similar to a tippehā which occurs in the same word with etnah or sillaq) is called מְカーָא and commonly pronounced מְカーָא. Wickes believes that one should pronounce it מְカーָא as Az. māʿilaḥ from mala = 10 incline, to be inclined, and thus the name parallels the Hebrew names for this sign which are less common (תְּנוּיָה and הֲנָה) and have the same meaning.

The מְカーָא is one of the peculiarities of the Masorah. It has no rules and occurs under no special conditions 15 or 16 times in the Bible: five times with a sillaq, 10 or 11 times with an etnah; and it is located at the position of the major g̱ayah in the word (e.g., מִמְּסְרָה – Num. 15:21). Sometimes when the disjunctive applies to two words joined by maq̱q̱eq, it is located in the original position of the accentuation sign of the first word (e.g., מָלָא הָעֲדָה – Ruth 1:10). It thus serves as a secondary accent in a disjunctive word and one can assume that its melody was like that of the tippehā, and hence the similarity of the signs. Indeed, where a מְカーָא is used one never finds a tippehā, while a conjunctive accent of tippehā can precede the מְカーָא. Yet the opinion that the מְカーָא is a disjunctive cannot be accepted. Most of the cases of מְカーָא, but not all of them, can be explained as contamination of two versions, one with maq̱q̱eq and one with the conjunctive tippehā. In the works of the Masorah this sign is considered a conjunctive.

5.3.3.3.2.2. The (3) Poetical Books: (a) Ṣinmorit. The sign ה (originally מ is called מְידַרְאָה [little sinmor], and its form is like that of the final accentuation sign sinmor, from which it is differentiated by the position of its notation. It is a pretonic sign and occurs in an open syllable adjacent to the stress in a word with the conjunctive maḥpak, e.g., מִתְבַּאֲלָה מְדִירָה (Ps. 39:12), מְדוּר (Ps. 96:4), and rarely also in a word with the conjunctive merkā (e.g., מְדָה מְדַרְאָה ... נֶשֶׁר (Ps. 118:25). There is no doubt that it indicates a prelude melody for that of the conjunctive. Since it is joined only to the conjunctives, it is considered a “servant” for the “servants” (conjunctives), and it is thus also called דֶּה ("slave"). It occurs regularly in a word that has a maḥpak – which is used as a conjunctive for these accents: revisa' gadol and aızel legarmeh – on the first word that precedes them; deʰi – on the second word preceding it; sillaq, 'etnah, and revisa' (mugraš – the substitute for 'etnah), on the third word preceding them. It does not occur regularly in a word with merkā, and there are variants among the printed editions and manuscripts of the Bible. It is likely to be found mainly in a word with merkā which is used as a conjunctive before the accents sillaq, 'etnah, and revisa' mugraš – on the first word preceding them.

(b) Metiga. The sign ח, similar to the maq̱q̱eq, is known from a few manuscripts and from works of Masorah in which it is called hamza in Arabic and מְעָרָה in Hebrew, names which are also used for maq̱q̱eq. The metiga is a pretonic sign. It is used in a syllable adjacent to the stress of a word with a merkā which serves as the conjunctive for either the accent sillaq or revisa' mugraš, in the first word preceding it. Thus the metiga was used as a prelude melody for merkā. It disappeared from most manuscripts and from all printed editions of the Bible.

5.4. THE NON-CONVENTIONAL TIBERIAN SYSTEM

In many Bible manuscripts graphemes of the Tiberian system are used in different manner from that set by the Tiberian vocalizers. This was due to: (1) a tradition of pronunciation which differs from the Tiberian; (2) a different method of notation and different rules for the use of some of the Tiberian graphemes.

The most famous of these manuscripts is the Codex Richlinianus of the Prophets, which was written in 1105/6 C.E. There is no uniformity in these manuscripts and this system, unlike the conventional Tiberian system, is not consolidated. Thus, like the Babylonian and Palestinian systems, it came down to us in stages of development and its various characteristics are not found in every manuscript. Inconsistency in details of vocalization is found even in the same manuscript.

5.4.1. THE TYPIFYING CHARACTERISTICS

This system is distinguished from the regular Tiberian system by elements whose origin is in a different tradition of pronunciation; and by Tiberian symbols which are used according to different principles. No manuscript contains all traits of both these characteristics, especially some of the second category, also occur at times in regular Tiberian texts.

5.4.1.1. THE PRONUNCIATION TRADITION. The main traits of a different tradition of pronunciation are as follows:

(i) The lack of distinction between qames and pattah and between šere and segol; but even this typifying characteristic is not common to all manuscripts of this type.

(ii) - kald - at the beginning of a word becomes -ה, -ב, -ה.

(iii) - at the beginning of a word becomes -י.

(iv) The lack of furtive pattah before פ– (written as פ–, פ–), unless i (-) and in a number of manuscripts even u (-) preceded them; also its absence before פ– (written as פ or פ only). Whether this characteristic is rooted in a different tradition of pronunciation is doubtful. Perhaps it is only a graphic variant in the system, that is, the consonants פ–, פ–, פ– in the final position are always pronounced with the preceding glide vowel, and there is no need to write it in. The pattah
only following \textit{matres lectionis}, i.e., in a position where there are graphic conditions for its notation, reinforces this possibility.

5.4.1.2. Vocalization. The principles of different notation in vocalization are:

(5) The principle of the \textit{dagesh lene} – that the \textit{dagesh} is placed in a letter at the beginning of a syllable which is preceded by one that ends in a consonant – is extended to the letters \( \text{ת, ע, ר, ש, צ, ק, ר, פ, ק} \) (hence it applies to all the letters except \( \text{ל, ד, נ, ג, ר, י, ת, ה} \)). The notation of the \textit{rafeh} is correspondingly extended to these letters in an almost regular manner; it is added to a letter which is at the beginning of a syllable preceded by one that ends with a vowel. This characteristic is very frequent although its execution is not always perfect, and the symbols are also found outside the above conditions. In the opinion of Morag its function was to remove the doubt about the \textit{šewa}: a \textit{dagesh} would indicate that the \textit{šewa} preceding it (at the end of the preceding syllable) was quiescent, and \textit{rafeh} would indicate that the \textit{šewa} preceding it was mobile. From here the distinction was transferred to positions in which there is no \textit{šewa} at the boundary of the syllables and also to the beginning of a word.

(6) A \textit{dagesh} in \( \text{כ, ל, נ, ג, ר, י, ת, ה} \) indicates their consonantal nature; \textit{rafeh} above them (\( \text{כ, ל, נ, ג, ר} \)) indicates that they are \textit{matres lectionis}.

(7) \( 1 \) – in the middle of a word indicates that the letter is a consonant; \( 1, 1, 1 \) – indicates its consonantal nature at the end of a word. \( ^{\text{5}} \) indicates its consonantal nature at the beginning and in the middle of a word; \( ^{\text{5}}, ^{\text{5}}, 1 \) – a consonant at the end of the word.

(8) The \textit{mappiq} is written at the bottom of the \textit{he} - \( \text{י} \).

(9) \( \overline{\text{ס}}; \overline{\text{ש}} \) (or \( \overline{\text{ס}} \)) = \( \text{s} \); and the \textit{dagesh} is written above the letter: \( \text{ס} \) with \textit{dagesh}, \( \overline{\text{ש}} \) = \( \text{ש} \) with \textit{dagesh}.

(10) Instead of \textit{games} in a closed, unstressed syllable (our \textit{qames qatan}) \( \text{ל} \) is written and in some isolated manuscripts \( \text{ל} \).

(11) Instead of a mobile \textit{šewa} preceding a consonantal \textit{yod} with any type of vowel, a \textit{hireq} is written (\( \text{ר, ה} \), equivalent to actual Tiberian pronunciation.

(12) The consonants \( \text{ר, ר} \) are written with \textit{šewa} even at the end of a word, and sometimes also the consonantal \( \text{ר} \).

(13) When \textit{hatafs} occur with \( \text{ר, ר} \), and sometimes \( \text{כ, ל, נ, ג, ר} \) too, the \textit{šewa} sign is written above the vowel sign and within the letters: \( \text{ר, ר} \).

(14) With the letter \( \text{ר} \) and sometimes also with \( \text{ל} \) within a word, a \textit{hataf patrah} occurs in place of quiescent \textit{šewa}. It would seem that this is not a major change in pronunciation but in the notation only (which originated perhaps with the perception of a slight vocal glide adjacent to the \( \text{ר} \)). The nature of the \textit{šewa} is established, as in the other cases, by the \textit{dagesh} or \textit{rafeh} in the adjacent letter: \( \overline{\text{ך}} \) before a \textit{dagesh}, quiescent; \( \overline{\text{ך}} \) – before a \textit{rafeh}, mobile. This is not done consistently, however. The opposite tendency is seen in ancient manuscripts: a simple \textit{šewa} is used everywhere, even in such positions where in the regular Tiberian system we would find definite \textit{hatafs}.

5.4.1.3. Accentuation of the (21) Prose Books. The following characteristics occur in the 21 books:

(15) Two different accents are used as conjunctives before \textit{zaqef}: the regular \textit{munah} (\( \text{פ} \)) and the sign \( \text{פ} \) (a type of inverse \textit{mahpak}). The latter is used as the single conjunctive of \textit{zaqef} when the stress is at the beginning of the word, or as the first of two conjunctives before \textit{zaqef} in any situation of stress. In the other instances the regular \textit{munah} is used. These conditions fit those of the conjunctive \textit{ya}, (for its meaning see Dotan, ed., \textit{Dikduke ha-Të'amim}, p. 341, note 108), which are found in various works of Masorah (for example, \textit{Mahberet ha-Të'jân}, ed. Derenbourg, p. 95).

(16) No conjunctive occurs within a word with a \textit{zaqef} even in cases where it should occur according to the regular Tiberian system.

(17) There is no \textit{geršayim} (\( \text{ב} \)), and \textit{gerš} (\( \text{ב} \)) is used instead in every instance.

(18) The sign of the conjunctive \textit{darga} is similar to the \textit{šalšelet} below the word (\( \text{פ} \)); cf. also the Aramaic name of \textit{darga}, \( \text{רלפ} \ (= \text{chain}) \), and even the Hebrew \textit{Tashla}.

5.4.1.4. Accentuation of the (3) Poetical Books.

(19) Instead of the disjunctive \textit{dehi} (\( \text{פ} \)), the sign of \textit{tevir} (\( \text{פ} \)) is used with the same function.

(20) There are distinctions made between the types of \textit{revi'a}: \textit{revi'a} \( \text{פ} \) \((\text{gadol} \text{ פ})\) (like a doubled \textit{gers}, but the first mark is prepositive and the second is above the stressed syllable); \textit{revi'a} (which is not preceded by \textit{etnukh} \( \text{ב} \) or \( \text{ב} \)); and other signs and distinctions similar to these.

(21) There are deviations from the regular Tiberian system with regard to the rules of the conjunctives, and they are different in the various manuscripts.

(22) The use of \textit{sinnirot} (in words with \textit{mahpak} and \textit{merka}) is more frequent and more consistent than in the regular Tiberian system, and also the \textit{metiga} (above 5.3.3.2.2.) (in words with a \textit{merka}) is more common. More sign variations and markings of peculiarities as used in some manuscripts were brought by Yeivin (\textit{The Accentuation}, 1992).

5.4.1.5. Other Signs. (23) To distinguish between the \textit{legarmeh} signs (\textit{munah legarmeh, 'azla' legarmeh, mahpak le-garmeh}) and the \textit{paseq}, there is \( \text{נ} \) or \( \text{נ} \) written in the margin among the masoretic notes almost regularly.

(24) The omission of the \textit{maqaf} is more common than in the regular Tiberian manuscripts and apparently not necessarily because of oversight of the scribes.

(25) There is a much more extensive use of \textit{ga'ya} than in the ancient Tiberian manuscripts, especially the different types of major \textit{ga'ya}.

The above is thus a summarized list of the main differences found in most of the manuscripts. There are additional characteristics found in one or another isolated manuscript, which have not been listed above. These characteristics seem to indicate a definite tendency, but this tendency reveals itself...
in various stages of development and crystallization, namely, a pronunciation other than that known as Tiberian, and the use of the Tiberian graphemes in a way differing from the common one found in conventional Tiberian manuscripts. However, the manuscripts differ even among themselves in regard to the degree of development or perfection in each of these two divisions. Some of them show marked differences from the Tiberian tradition of pronunciation, especially with regard to the pronunciation of the vowels, and others — a minority of the manuscripts — are closer to it, at times almost identical. Furthermore, in some manuscripts the non-conventional use of the Tiberian graphemes seems to be inconsistent, random, while others have a more complete and precise method approaching systematization which does not leave one letter without a symbol.

5.4.2. An Analysis of the System
In all fairness it must be said that the variant usage of graphemes, the different graphic method, is in itself insufficient to separate this vocalization system from the Tiberian tradition. Yet, since this method is usually associated with the indication of non-Tiberian pronunciation, especially its substitution of qames for patah and sere for segol, and vice versa (characteristic 1 above) — all the others are not necessarily non-Tiberian characteristics — it is clear that this entire system is non-Tiberian. Even if isolated manuscripts have been found in which the free substitution of these vowel signs does not occur, their very scarcity and even their relative lateness testify to the fact that they constitute something of a further improvement of the system in order to bring it closer to the regular Tiberian system.

5.4.2.1. PALESTINIAN-SEPHARDI. The lack of distinction between qames and patah and between sere and segol is common to the Palestinian and to the Sephardi pronunciation traditions. The rest of the characteristics of pronunciation are not necessarily typifying for either of these two traditions. For example, characteristic 2 is also found in the Tiberian tradition itself in the school of *Ben-Naphtali, and vestiges of it can even be discerned in manuscripts and various editions of the accepted Tiberian text, e.g., נִבְנָחַלְתָּי (Ps. 45:10); נבנתלי (Jer. 25:36); נבנתלי (Prov. 30:17). It is difficult to decide one way or another even according to the graphic method. Most of the characteristics are neutral; some have doubt reflect ancient Tiberian characteristics (15, for example), while others are not necessarily specific to Palestine but are also found in the Babylonian tradition and sometimes in the Tiberian tradition as well (19, for example). Only two characteristics seem to be common to this system and the Palestinian — the way of noting the diacritical dots in the letters נ, ס, ב (characteristics 8,9). However, Palestinian manuscripts which follow this method of notation reveal clear signs of Tiberianization with regard to the notation of vowels, and diacritical signs such as these are not found in purely Palestinian manuscripts. The noting of the mappiq in the lower part of ס is also found, for instance, in the Tiberian vocalization of the Kaufmann manuscript of the Mishnah. Then even this loose connection between the two systems loses its significance.

5.4.2.2. GEOGRAPHICAL AND CHRONOLOGICAL DISTRIBUTION. On the other hand, one must consider the fact that the manuscripts vocalized in this manner are most widespread in European libraries; even those from the Genizah, at least some of them, originated — as N. Allony has emphasized — in Western European countries (especially Germany), and not necessarily in the East. The dated manuscripts among them range from the 11th century to the 14th. The pronunciation of the vowels during that period among the Jews of Western Europe, including the Ashkenazi Jews of Germany and France, was similar to that of the Spanish (Sephardi) Jews. The system under discussion is just a further verification of this fact, which was first pointed out by Yalon (Leshonenu, 3 (1931), 204). Thus the tendency of the system is in this direction, too, toward the Sephardi-Ashkenazi pronunciation tradition, no less and perhaps more than its attraction toward the Palestinian pronunciation tradition.

5.4.3. The Relationship to the Conventional Tiberian System
Various opinions have been expressed concerning the relationship of this system to the conventional Tiberian vocalization system. Different names for this system have also been offered according to these opinions.

5.4.3.1. BEN-NAPHTALI. Kahle focused on one characteristic (2) which is common to these manuscripts and to the Ben-Naphtali versions of the Tiberian tradition. Although he did not find additional principal characteristics common to this system and to the Ben-Naphtali tradition, and despite the fact that most of these manuscripts do not accord with a large part of the Ben-Naphtali readings, he did not hesitate to name the whole system “the Ben-Naphtali System.”

5.4.3.2. OTHER NAMES. It has become clear that this opinion is unfounded, and other suggestions have been offered in regard to the system. Some consider it a more primitive system than the conventional Tiberian and suggest that it be considered as “proto-masoretic” or “pre-masoretic” (thus Sperber and Diez Macho); others take it to be a more sophisticated system than the Tiberian, trying to reach complex phonetic notation, and therefore they date it later, hence it would be necessarily “post-masoretic.” Because of its connection with the pronunciation tradition of the Palestinian vocalization, it has been suggested to call it the “fuller Palestinian” system (Morag) or the “Palestinian-Tiberian” system (Allony and later also Morag). These two names are based on the assumption that the system under discussion is nothing more than an expansion of the Palestinian vocalization, that is, the transmission of the Palestinian pronunciation in a fuller manner with the aid of Tiberian signs. Yet even the theory of the lateness of the system has not universally been accepted, and the idea has formed that these manuscripts are not of a uniform nature. Diez Macho has suggested that the manuscripts be divided
into three groups according to their chronological-typological parallels to the Tiberian system, and then they would show both pre- and post-masoretic vocalization of this type.

Two other names which have been suggested are based on dissatisfaction with the chronological connotations of the names – which are no more typifying – and from the connection with the Palestinian system of vocalization, which is based on conjecture and interpretation of facts and not on actual facts. Since this is a system which differs from the traditional one, the name “non-masoretic” has been suggested (Yeivin). Yet this too misses the mark, for even if the system does not agree with our Masorah, which was universally accepted, it is still within the range of the concept Masorah, and even these manuscripts have their masoretic notes. A more recent suggestion was “Expanded Tiberian” (Yeivin) indicating the wider range of its graphemes but saying nothing about the nature of the system. According to the term “non-receptus” (Goshen-Gottstein) the system is one of two Tiberian systems which developed at the same time, both representing the same Tiberian reading tradition by different graphic systems. The difference between the two systems is that one was accepted (receptus) and the other was rejected. Following this opinion it is in that minority of manuscripts in which the free interchange of the vowel signs (characteristic i) does not occur, that we find the main principle of our system; while the vast majority of manuscripts in which this interchange does occur shows no more than a late subsystem with characteristics of Sephardic pronunciation. Not only does such a presentation disagree with the facts, but it is also not fitting to describe a system which was accepted by large Jewish communities for hundreds of years, until the 15th century or perhaps later, as non-receptus only because it is not accepted today. Moreover, this system of vocalization was so thoroughly accepted in Western Europe that it was considered the official system of the Jews there, and as Allony has illustrated, they called it by the name שלנו (our vocalization), as follows from the commentary to Avot in Mahzor Vitry (see above, 5.1.). They presented it in explicit contrast to even the conventional Tiberian system as “ours.” They vocalized not only the Bible with it, but also prayer books, texts of piyyutim, Mishnah etc.

5.4.3.3. Definition of the System. Without going into the question of the relation of the system to the Palestinian or Sephardi tradition or into the question of the time of its growth and its relation to the accepted Masorah, we remain with one clear fact: this is a system which uses the Tiberian graphemes to denote a non-Tiberian pronunciation; it is a “non-Tiberian” use – that is, not accepted by the Tiberians – of the Tiberian graphemes. Thus the most fitting name is the “Tiberian Non-Conventional” system. This was a system which intended to present a Palestinian-Sephardi pronunciation by means of Tiberian graphemes. The terms “Palestinian” and “Sephardi” are nothing more than different names for a pronunciation tradition of five vowels and from this aspect they are synonymous. They differ from each other only with regard to the origin of the system. From the widespread distribution of most of the manuscripts one can consider this is an attempt of Sephardim and of Ashkenazim whose pronunciation was Sephardic to use Tiberian symbols for their own pronunciation, i.e., “Sephardi vocalization,” which first developed in Europe. However, a similar pronunciation is known also in the East, mostly within the boundaries of Palestine; but its special system of notation – the Palestinian vocalization – was not sufficiently developed and when the Tiberian vocalization was instituted, those who practiced the five-vowel pronunciation adopted it for themselves, adapted it to their needs, improved it, and made it even more phonetic. Since this vocalization was fitting for every Sephardi pronunciation, it was transferred afterwards to Europe where it spread. If this was indeed the process, it was something of a repetition of the history of the Palestinian vocalization, which was also an adapted system for a five-vowel pronunciation that was originally set for a six-vowel pronunciation tradition (see above, 5.1.1.2.). Those who followed the Palestinian tradition of pronunciation repeated, therefore, the conduct of their ancestors who adopted a different vocalization system and adapted it to their needs. It follows from this that Hebrew never had a graphic system which was originally intended for a five-vowel pronunciation tradition.

5.5. The Contamination (Mixing) of the Systems

Although the non-conventional Tiberian notation is a mixture of Tiberian signs and non-Tiberian pronunciation, because of its other characteristics, its uniqueness, and the relative systematization of the manuscripts one must define it as a “system” in its own right. But, indeed, the principle of mixing the systems was not strange to the masoretes and the Hebrew scribes. It turns out that the various systems were not limited to closed communities with no contact between them. The cultural connection between the dispersed Jewish communities was close and active throughout the generations, and there is no doubt that this also included mutual influences in the realm of language between communities which were geographically or spiritually close. Of necessity the scribes everywhere were trained in the methods of writing Hebrew, as this language was the connecting link between the scattered Jewish communities. It is not only shapes of letters which are included in the methods of writing, but also the signs of the different vocalization systems. This knowledge of vocalization systems, the initial purpose of which was to gain a passive knowledge so as to understand written records from other places, ultimately led to the use of these signs to a greater or lesser degree, sometimes in order to complete the local method of writing and sometimes for other needs. See also above 3.2.4.2. Contamination of Masora.

5.5.1. Transcriptions

One of the most extreme instances of the mixture of systems is seen in extant manuscripts of the Bible in Arabic transcription (Arabic script being in itself quite rare among medieval Jews) with Tiberian vocalization and accentuation signs. These manuscripts were common among the Karaites in the tenth
and 11th centuries and for a short time after, apparently to prevent the holy manuscripts in Hebrew script from being used as reading primers.

5.5.2. Process of Tiberianization
The major mixing is that of the vowel and accentuation signs. Indeed, most of the mixed manuscripts have as their general trend the increased use and dominance of the Tiberian system, both in pronunciation and in graphic notation. With regard to pronunciation, we see that this is the process of Tiberianization that was ever-increasing in all the vocalization systems (Palestinian as well as Babylonian) and affected the set of signs of the systems themselves. It left its traces also in both the phonology and the morphology of the language in each of the systems. In the appropriate sections above, references were made to the specific stages in both the Palestinian and the Babylonian vocalizations in which the influence of the Tiberian pronunciation increased. As time passed this admixture became part of the actual development of these vocalization systems.

5.5.3. Types of Mixture
There are several types of mixture in graphic notation:

(a) A systematic mixture for the purpose of completeness, adding a series of graphemes which do not exist in the original system of the scribe. An example is the Leningrad manuscript of the Prophets from 916, which is vocalized and accented with the complex Babylonian system with a mixture of Tiberian signs for all the conjunctive accents, the dagol, the maqaf, and other Tiberian signs. Examples are also found, although to a lesser degree, in the Palestinian system which was mixed with Tiberian symbols, especially the signs of the conjunctive accents.

(b) A random mixture of signs from two systems, for no apparent reason, which sometimes seems to be merely the result of the expertise of the scribe in the two systems. There are examples of Palestinian/Tiberian and Babylonian/Tiberian mixtures.

(c) A mixture of isolated signs from a different vocalization system for the purpose of ornamentation, mostly in masoretic notes, but also in other instances. Examples of that are usually found in Tiberian texts in which isolated Babylonian signs (for example the Aleppo codex), or isolated Palestinian signs, as well as others had been added.

5.6. THE SAMARITAN SYSTEM
The reading tradition of the Samaritans constitutes a branch of its own among the reading traditions of the Jews, both for Hebrew and Aramaic, and it developed as an independent offshoot, sometimes in contact with the local Hebrew tradition or traditions. The Samaritans cherished the exact transmission of the language from generation to generation no less, and perhaps even more, than the Jews, as it was a characteristic policy in their attempt at preserving and nurturing everything which had some Samaritan uniqueness in which they differed from the Jews. They also developed an entirely separate and distinct vocalization and accentuation system for themselves. It is possible that the impetus for this came from contact with the Jews and from an attempt to imitate them, but the development of the system and its details are different from the Jewish systems. In this matter, the vocalization system is distinct from the accentuation system; the former is built according to the pattern of the systematic transcription from one vocalization system to another in the course of the copying of manuscripts which wandered from one place to another. Apparently there were special experts for this work, according to the testimony of that colophon (see above, 5.2.0.1.): “This targum was copied from a book which was brought from Babylonia and which was vocalized above [the line] with the vocalization of the land of Assyria and R. Nathan changed it … and corrected it and copied it in the Tiberian vocalization.” Thus in copying the manuscript, they also “changed” its vocalization. A manuscript from faraway places required an adaptation of the vocalization; but when the entire manuscript was not recopied, this adaptation already meant a contamination of the vocalization systems.

Changes like these were sometimes the work of several scribes who altered and corrected one after the other until one finds several hands having dealt with the vocalization of a single manuscript. The possibility of consistency would become less and less as more hands handled a manuscript. One who wishes to trace the methods of vocalization of mixed manuscripts such as these will find that he must learn to know the different scripts, the different colors of ink, and other such factors, in order to be able to distinguish between the various notations of each one of the vocalizers. The vocalization of these manuscripts cannot be considered uniform; the notation of each vocalizer must be investigated by itself.
of the Jewish systems and some of the signs are identical or similar to the Palestinian vocalization which originated in the same area as the Samaritan; the accentuation system, however, is of a type completely different from the Jewish systems and closer to the Syriac system (see below).

5.6.1. The Vowel Signs

5.6.1.1. The Problems. The Samaritan vocalization system, like the primitive strata of the Jewish vocalization systems, does not mark all the vowels consistently, but mainly those which are likely to prevent error and especially those in syllables in which there are no *matres lectionis*. The number of manuscripts containing vocalization is extremely small and their use of signs is not uniform. In any event, it is difficult to establish the exact meaning of the signs, and it is known that their functions changed as time passed. In fact almost every sign refers to more than one vowel quality. Some of the Samaritan grammarians and masoretes already did not know the exact meaning of the signs and did not use them in their works except by rote and as a tradition of their teachers, and thus their testimonies are not uniform and do not agree with the traditional Samaritan pronunciation or with the structure of the language. For hundreds of years now these vowel signs have had no practical use. Only through a comprehensive historical-comparative investigation is it possible to trace the original use of the signs and their later applications and to follow the various layers which are discernible in the set of signs. Such an examination was made by Z. Ben-Ḥayyim and the following description is based upon his conclusions.

As in the other vocalization systems of Hebrew there is no indication of quantity in this system either and the suppositions of scholars who thought that they had found signs for length were based on false premises. Even the similarity of some signs to the Palestinian is only apparent. In fact, the two systems have only two signs in common; the two of one pair have different uses, while the other two are only somewhat similar. Since the two which are alike are basic grapheme signs (–, i), which are likely to be adopted independently in any vocalization system, there is no need to assume borrowing or dependence of the Samaritan system upon the Palestinian, even though both of them were native to approximately the same region.

5.6.1.2. The Vowel and Diacritical Signs. There are ten signs in the Samaritan system: nine signs for vowels and one diacritical sign for the *dagesh*. However, since some of the vowel signs are sometimes used with the function of a diacritical sign or embody within them a combination of a vowel sign and a diacritical sign, it is more convenient to deal with them together. Six of the ten signs belong to the ancient layer, that is, they are assumed to have been used at the beginning of Samaritan vocalization (there are no biblical manuscripts of this layer), and the others are substitutes and later developments. All ten are never used in one and the same manuscript. There are no dots at all in the Samaritan vocalization as known today, and the six basic signs all consist of lines and angles, which are placed above the letter and a little to the left. According to the Samaritan grammarians the signs are parts of Samaritan letters.

- **י** (sometimes a kind of e which is derived from a final post-tonal i). The grammarians called it by the Arabic name of this vowel, *kasr* or *hafṣ*, and according to a Samaritan grammarians the sign is part of the letter adjacent to *yod* – i.e., tet (ג).

- **א**. One of the three types of the *fath*, called by the grammarians *fath al-nidāa* (the *fath* of exclamation), and they considered it part of the letter *ʿalef* (א).

- **א̣** (according to Ben-Ḥayyim’s notation). One of the three types of *fath*, called by the grammarians *fath al-ʿimād* (the *fath* of indication), and they considered it part of the letter *he* (ה).

- **א̣ו̣א̣**. This sign was called by the grammarians *dammm*, the Arabic name of the vowel, and they considered it part of the letter *waw* (ו). There was no need for two different signs since the two vowels are allophones in complementary distribution: *u* – only in an open tonal or pretonal syllable (and then it is long), *o* – only in an open, post-tonal syllable or in a closed syllable (and then it is always short).

- **א̣א̣א̣**. This is also one of the three types of *fath* and was called by grammarians *fath al-ʿlāhā* (the *fath* of brotherhood) and sometimes just by the name *fath*; they believed it to be part of the letter *het* (ח) or *ayin* (ג).

- **א̣̀א̣̀א̣̀** – A diacritical sign only, it indicates gemination (*dagesh forte*). The grammarians called it by the name of the corresponding Arabic sign, *shadd*, and they considered the sign to be part of the the letter *qof* (ף) of the Hebrew word *ḥazaar*, which indicated the *tashdid* according to them.

These basic signs were used in a rather ancient period, according to Ben-Ḥayyim even prior to the Arabic-speaking period of the Samaritans. Obviously their Arabic names are later. As Arabic influence increased after the conquest, other signs penetrated the system; they can be seen as direct borrowings from the Arabic system of graphemes. These signs are not listed in the works of the grammarians:

- **א̣̀א̣̀א̣̀** – a stylized form of א and is actually the Arabic sign of *damma*. In an even later period the precise use of part of these signs declined and was forgotten, especially א̀ which indicates sometimes even i. Sometimes the sign came to mark the fuller pronunciation of a consonant in the environment of the vowel, e.g., to indicate the plosive pronunciation of *waw* (ו월 יבֶר), or to indicate the gemination of the consonant. In the course of time, apparently not before the 13th century, the necessity arose to mark a pronounced *ʾayin* (as the outcome of either an original *ʿayin* or an original *het* occurring almost always at the beginning of a word (as a result of two adjoining weakened gutturals: נק, יק, רח, ונ). This sound has two signs. א̀ – a prepositional sign. It is apparently a combination of the Arabic letterُ with the basic vowel sign for a – א. The combination א̀ is also found in a manuscript and it is apparently the source of the cursive combinations דא.
There were scribes who abstained from using an additional sign for the vowel, since the vowel of the consonant ‘א is always a in any event. This use of the Arabic letter ‘א as a diacritical sign is borrowed from the Arabic custom to use that letter as a diacritical sign. In Arabic, however, unlike Samaritan usage, it denotes a consonantal ‘א (that is, an ‘א which is to be pronounced almost like an ‘א), this mark being in fact the sign of the hamza (א) which is a shortened Arabic ‘א. Moreover, Arabic manuscripts have been found in which a full ‘א is used to indicate hamza (א) just like the aforementioned Samaritan sign.

5.6.2. The Accentuation Signs
For Samaritan as well it can be clearly established – perhaps more clearly than for the other systems – that the accentuation signs are older than the vocalization signs: whereas all the names of the vowels are Arabic, all the names of the accents are Aramaic. Nonetheless, this does not constitute evidence of the origin of the vowel signs in the period of Arabic speech of the Samaritans, but simply that at the time when the accentuation signs already had names – and this was still in the period of Aramaic speech of the Samaritans – the vowel signs did not have names as yet. It follows from this that the set of vowel signs was not yet fixed at the time that the set of accentuation signs was already established and firmly set. The accents are called by the Samaritans מְרַפְּאִים מַקְרָה (sêdârî maqrâta, “arrangements of the Scripture”); they are ten in number and are listed in the works of Samaritan grammarians (see the edition of Ben-Ḥayyim). They are located always at the end of a group of words to which they apply. These are the signs and their names:

- כא, “leading”; פסק, “cutting”; הנד, “rest”;
- און, “an order,” as Ben Hayyim has proved; שאל, “a question”;
- רכון, “a call”; פקודה, “a wonder”;
- שקע, “a request”; טעם, “a rebuke”; ניח, “instruction”.

This is clear from the nature of the translations of the terms that the main function of the accents is that of pausal signs which indicate the types of speech in the syntactical units preceding them, and thus also indicate the manner of reading and the melody, but not in the detailed way of the other systems which indicate an accent for almost each word. Needless to say, they do not show the position of the stress in the word. In this function of an exegetical-syntactical guide to the text they are similar to the Syriac accents. The names of some Samaritan accents are etymologically related to the names of Syriac accents, e.g., (according to the order above):

- קראיה, מְשַׁפְּאִים, מַקְּרֵא הָנָּה, פַּסָּק, מַכְּרָה, מָרָא הָנָּה, מַזְּכָרָה, מַזָּכָרָה, מַמְּכָרָה, מַמְּדֶרֶך, מַמְּדֶרֶךְ, מַמְּדֶרֶךְ, מַמְּדֶרֶךְ, מַמְּדֶרֶךְ, מַמְּדֶרֶךְ.

The division of speech into different types is rooted in the writings of the medieval grammarians (already dating from Saadia Gaon among the Jews) and goes back to Greek philosophy (Aristotle). It is not, therefore, necessary to consider the Samaritan accentuation system as a borrowing from Syriac, although it might be that it is an imitation.

Already in ancient times the precise functions of the signs were forgotten and there is no regularity in their usage in the Samaritan manuscripts. One grammarian from the end of the tenth century (Ibn Dartha) still knew their exegetical-syntactical functions, but had nothing to say of the melody which accompanies them. No need to say that the reading handed down from generation to generation until today is not connected at all to any written system of accentuation signs, all the more so as there is no extant uniform system.

In the Samaritan orthography a dot is used regularly to separate words. This dot is neither an accentuation sign nor a regular punctuation (or conjunction) sign, but a continuation of the ancient orthographic custom of the Canaanite and Hebrew inscriptions in which the dot is used to separate words.

6.6. THE FIRST MASORETES

6.1. Dosa ben Eleazar
The Masorah concerning the total number of verses in the Bible is attributed in a well-known masoretic note quoted in several sources – among them in a manuscript of Okhlah we-Okhlah – to Dosa ben Eleazar (apparently end of the fourth century-beginning of the fifth). He received it from his teachers from whom it goes back to Rav Hammuna, the Babylonian amorah (end of the third century) whom it reached from Palestinian sources more than one hundred years earlier. This is thus the first testimony, apart from various hints in talmudic literature, about masoretic activity, that mentions the names of sages and points to Palestine as the source and the example for the Babylonian sages.
6.1.2. Moses Moḥeh

Primacy is apparently granted by Solomon b. Yeruhim (Jerohaim) (a Karaite early in the tenth century) in his Muqd-dimah to the decalogue (Pinserk, Likkute Kadmoniot, p. 62) to the sages Rav aḥa (error in the manuscript: Ḥama) and to his son Moses (paragus masek). Pinserk, however, has already pointed out that does not mean inventors (Einleitung in des Babylonisch-Hebräische Punktationssystem, p. 10). On the other hand, Rav Moses Moḥeh (not Moses ben Moḥeh) is known from a list of masoretes in the “Treatise on the Šewa”, and he is later than the eighth century; therefore the testimony of Solomon is open to doubt. There is in any case no evidence about the inventors of vocalization.

6.1.3. Other Masoretes

Various masoretes are mentioned by name in works of Masorah and in masoretic notes. The details of their activities are not known and it is usually only the details of a reading which are cited with their names. One of the earliest of them is Phinehas Rosh ha-Yeshivah (no later than the first half of the ninth century and perhaps even earlier than that). It is known that he followed a system of marking the mobility of certain šewas by means of a hataf pataḥ. The most famous of the masoretes are the descendants of Asher the Elder (the Great), a family of five generations, the last two of whom were Moses and his son, Aaron Ben-Asher.

A schematic division of the early masoretes into three major generations was suggested by Yeivin (Textus, 1x, 60–62). The first generation (about the second half of the eighth century or even earlier) was still occupied mainly in matters pertaining to plene and defective spelling and qere/ketiv. In this context the schools of מַגָּגֶס and מַעֲקָפִים, and scholars like Moses Moḥeh and others are mentioned. The scholars of the second generation (not later than the middle of the ninth century) differed mainly in matters of magqef and conjunctive accents, and sometimes also in matters of vocalization. Among these scholars are מַשֵּׂש מַהצ (Moses Moḥeh – again!), Phinehas Rosh ha-Yeshiva and others. In the third generation (about the first half of the tenth century) mainly matters of gāḏya were the issue, rarely letters, vowels, and accents. Here the main actors are Aaron Ben-Asher and Moses Ben-Naphtali and their schools. This division can serve as a tentative outline for a general view.

6.2. Aaron Ben-Asher and His Period

6.2.1. Diqduque ha-TeVamim

Precise details about a work of Masorah by the father Moses *Ben-Asher are not known, but his son, Aaron, was the first masorete who in addition to manuscripts of the Bible and readings which are attributed to him also left a well-defined work of Masorah and grammar, ספר דִּיקדוּקֵי תְּמֵאָמִים. Aaron Ben-Asher collected in this book different rules regarding vocalization and accentuation from among the rules of the Masorah which were continuously being copied in the margins of the manuscripts of the Bible and in independent works which were part of the Masorah literature. The collection of Aaron Ben-Asher is the first known by the name of the author. It is also the first such work compiled with a grammatical aim, and not just as a collection of masoretic peculiarities, whose compiler adapted it and added his own rules in order to make it correspond to his readings. The original version of the work was published in the Dotan edition (1967); the previous edition, of Baer and Strack (Leipzig 1879), included a wide collection from masoretic literature but did not pretend to reflect the scope of the authentic, original work. The central subject of the work is the problem of the šewa, its mobility in the context of certain accents and the methods of marking the šewa. However, other rules of vocalization and accentuation, which are not germane to the šewa, also occur.

6.2.2. His Other Works

Other works of his have not reached us, but it is known that he wrote a Masorah, and it is apparently the one which was added to one of the manuscripts of the Bible that he vocalized and to which he added the masoretic notes. He also arranged a list of words, בִּנְפָּר לְשׁוֹנָה (“two [words] of two meanings”), homophonic pairs from the Bible recently discussed by Dotan (The Awakening of Word Lore, 87ff.). There are also allusions to his having written an additional work concerning grammatical matters.

6.2.3. Biblical Manuscripts

The manuscripts of the Bible whose vocalization is attributed to Aaron Ben-Asher are as follows:

(1) the Leningrad manuscript B19a, which was written in 1099 and whose vocalization was adjusted to the system of Aaron Ben-Asher, as attested by the colophon at its end;

(2) the Aleppo Codex, of which less than two-thirds of Scripture remain, also has genuine vocalization which corresponds to the system of Ben-Asher, but it too, was apparently not vocalized by him, although a later colophon which was added to the manuscript attributes the vocalization to him.

The British Library Pentateuch manuscript Or. 4445, which had also been attributed to Aaron Ben-Asher (Kahle and others), was established as a pre-Ben-Asher manuscript (Dotan, Reflections). Likewise the Cairo Codex of the Prophets, written in 895 C.E. by Moses Ben-Asher (father of Aaron), published in Madrid with its Masora, is no longer regarded as part of the Ben-Asher school, but on the contrary represents a text closely related to Ben-Naphtali.

6.2.4. Kitāb al-Ḥulaf

Some of the biblical readings of Aaron Ben-Asher are known from the work of Michael b. Uzziel, Kitāb al-Ḥulaf allad bāyn al-Muṭallayn ben Asher wa-ben Naftali (“The Book of Differences between the two Masters, Ben-Asher and Ben-Naphtali”). This is a collection of the points of controversy and agreement between the two masters of the Masorah, which was collected – after their death – from manuscripts which they had vocalized. Some of the differences are stated in the form of rules and variants of principle, while the majority are
lists of details. The date of the author has not been established precisely (not before the first half of the 11th century nor after the 12th century). This work is an important source for the readings of Ben-Asher and the only one for the readings and the method of his famous disputation, Moses b. David Ben-Naphtali, from whose works nothing is extant, except for a few fragments of the Bible which perhaps reflect his method of vocalization. The lists of variants were copied and recopied many times in the Middle Ages and consequently a large number of errors were introduced. Even the first name of Ben-Naphtali became confused in the transmissions of the copies.

6.2.5. Ben-Naphtali
As a consequence of the decision in favor of the readings of Ben-Asher, as opposed to the readings of Ben-Naphtali, which originated in ancient times and was further strengthened by the support of Maimonides for the Ben-Asher version (albeit only with regard to the division of parashiyot setumot and parashiyot petuhot and for the manner of the writing of the songs in the Pentateuch), the readings of Ben-Naphtali were more and more rejected from most of the accepted versions of the Bible. As time passed even the details of his readings were forgotten, so much so that all exceptional readings which deviate from the accepted version were ascribed to him. For example, Elijah Levita identifies Ben-Naphtali (he calls him Jacob Ben-Naphtali) with the Eastern version ("Madinhah") (Mesorot ha-Masoret, the third introd., ed. C.D. Ginsburg, (1867), 114) and Pinsker still subscribed to that idea. Moreover, recently Kahle identified the non-conventional Tiberian system with Ben-Naphtali (see above, 5.4.3.1.). Actually, Moses Ben-Naphtali too is one of those who shaped the Tiberian version of the Bible and only within this framework are there differences between him and others over the minutest details, mainly over ga’ot and less over conjunctive accents and so on.

6.3. THE ANONYMOUS CODIFICATION OF THE MASORAH
Ben-Asher’s work of compilation draws on a vast literature which remains shrouded in anonymity. This literature is presented to us in bits and pieces on the pages of the Bible and in fragments of rules, just as it was handed down from generation to generation. Yet, even in very early times there were those, also anonymous, who collected it into larger works. One product of this type is the book Okhlah we-Okhlah (see above, 3.4.).

6.3.1. Hidāyat al-Qāri
6.3.1.1. THE TREATISE AND ITS TRANSFORMATIONS.
6.3.1.1.1. Hidāyat al-Qāri. Another work of the above nature, originally written in Arabic, is Hidāyat al-Qāri ("The Direction of the Reader"), is a manual of instruction of the correct reading of the Bible and yet another step toward the formulation of grammar since it contains a system of rules based on masoretic notes and tries to introduce order and method into them. It has three main parts: the letters, the vowels, and the accents for the 21 prose books and for the three poetical books, all parts being sets of rules for instructing the proper reading of the Bible – reading in the expanded sense: both pronunciation and melody; hence its name. The work used to be regarded as one of the main examples of the anonymous type of masoretic literature, until Eldar (Art of Correct Reading, p. 40–43) drew attention to a Geniza fragment where the work was ascribed to the eleventh-century Karaite grammatian, Abū al-Faraṭ Hārūn. This connection has not yet been corroborated by substantial evidence of grammatical affinity by Abū al-Faraṭ’s other works.

Most of the work, which is not extant in its entirety, is still in manuscript, but was extensively discussed by Eldar (ibid.). The manuscripts, however, are not uniform and it seems that the work passed through many transformations: abridgments, adaptations, and translations. An abridgment (al-Muḥtasār; partly published by Eldar, Leshonenu, 50 (1986), 214–31) or even abridgments were made from the original Arabic source. The shorter version was translated into Hebrew more than once, and by more than one translator. The abridgments and translations do not always contain the same parts of the work; even the original order of the parts changes and differs in the various versions. Moreover, parts of the work were adapted, especially from the Hebrew version, and were incorporated into other works as citations or as an integral part of new works. An attempt to reconstruct the history of the text of the work has been made by Eldar (Art of Correct Reading, 15–19) who tried to establish the precise relationship of all the transformations to one another and to the original.

6.3.1.1.2. Horayat ha-Qore – European Branch. As matters seem, the abridgement (al-Muḥtasār) wandered to various countries, Germany, Italy, Turkey, Yemen, and was translated into Hebrew several times independently, and adapted respectively in different ways. One abridgement brought to Mainz and translated into Hebrew also kept the Hebrew equivalent of the original title Horayat ha-Qore ("The Guidance of the Reader"). The abridgement that reached Italy came down to us in two Hebrew copies, the earlier one as Tokhen Ezra, and the later one bearing the name Ta’amē ha-Miqra ("The Accents of the Bible"). The latter attributed, undoubtedly by mistake, to R. Judah b. Bal’am (end of the 11th century). It is only this version that was published; in two parts (Poetical Accents and Prose Accents) in the middle of the 16th century by J. Mercerus (Mercier).

6.3.1.1.3. ‘Adat Devorim. One transformation of the Muḥtasār is found in the Hebrew compilation ‘Adat Devorim ("A Swarm of Bees") which was written by Joseph ha-Qostandini ("from Constantinople") not earlier than the second half of the 11th century. In it he incorporated large parts of the original work in Hebrew translation. It was published by R. Peretz (1984).

6.3.1.1.4. Mahāberet ha-Tījān – Hebrew and Arabic Versions. The original Arabic work wandered also to Yemen where two abridgements were made, one in Arabic and one in Hebrew.
While the first is a uniform text, the second is an eclectic work much enlarged by additions from other sources.

These most important adaptations, which went beyond the original to a certain degree and are copied together with Yemenite Pentateuchs (tāj), are usually named Mahberet ha-Tījān (in Hebrew and in Arabic), which were both published: the first Hebrew version by Derenbourg with the mistaken title of Manuel du lecteur (1870), which is a translation of the name of the original work, but which certainly was not the title of the adaption; and the second, an abridged version in Arabic, by Neubauer, under the title Petite grammaire hébraïque provenant de Yemen (1891).

6.3.1.2. Its Sources and Tradition. 6.3.1.2.1. Distribution, Chronology, and Pronunciation Tradition. The various adaptations and translations of the work were found throughout the dispersed Jewish communities; among them are translations which were made in Germany, such as one of the versions of Horayat ha-Qore; some of the adaptations were made in Byzantium, as 'Adat Devorim by Joseph ha-Qostandini, and some apparently in distant Yemen e.g., Mahberet ha-Tījān (concerning the assumed Yemenite origin of the Hebrew treatise, see Dotan, ed., Dikduke ha-Te’amim, p. 334, note 9). Undoubtedly these are not the only countries to which the work was brought. Adaptations of a work like this, by their very nature, leave an impression of their locale upon it, and sometimes the adaptation itself was made only in order to adjust the work to the local pronunciation and reading customs, etc. As it became clear after Eldar’s studies, the original Hidāyat al-Qāri stems from Palestine and follows the Tiberian pronunciation and vocalization. There is no real basis to determine the exact date, but from one of the Arabic fragments it appears to have been written in Palestine, in the atmosphere of the conflict between the various traditions of pronunciation for dominance over the language. The author came to prove the superiority of his Tiberian tradition and its ancient roots. This fact is probably enough to make it necessary not to date him any later than the tenth century. From the stand he adopts in his readings and rules between the schools of Ben-Asher and Ben-Naphtali, it seems that he is indifferent to both of them, a fact which strengthens the dating suggested. Sometimes he goes his own way, although at times he reveals a closer affinity to the rules and detailed readings of Ben-Naphtali than to those of Ben-Asher.

6.3.1.2.2. Influence of Local Elements. These statements do not apply to the offsprings and adaptations of the original work, certainly not with respect to date and, apparently, not even with regard to pronunciation tradition. There remains room for investigation whether or not other elements penetrated it – the Sephardi, for example (as per Yalon’s view). One should not look for a common denominator between the original and its adaptations, nor even between the adaptations themselves. While every adapter, translator, and person who made an abridgment stressed that which was preferable to him and included it in his version – whether particularly the letters and the vowels or the accentuation, etc. – he sometimes omitted that which contradicted his own custom and even added, when necessary, material from the Masorah and from other sources. The result was that the original work, Hidāyat al-Qāri, branched out and became a large number of works whose common denominator was the systematization and codification of the minutiae of Masorah and their crystallization into clear rules for the reader – an important step toward systematic grammar.

6.3.2. Works on the Šewa

Another work of the above type, although apparently unconnected genetically with these works, is the Arabic treatise which deals with the rules of the šewa, which was published by Kurt Levy (1936), and is known in modern research as the “Treatise on the šewa.” In this case not only is the author anonymous, but the work has no title. The assumption is that it was written approximately in the middle of the tenth century. This work also contains directions to the reader, and more than any of the adaptations of Hidāyat al-Qāri it literally integrates quotations from the rules of the Masorah, and even their rhymes – some of those which were used by the author of Dikduke ha-Te’amim. Unlike the other works this is a deep, comprehensive treatise on a subject which though narrow is central to the field of Tiberian pronunciation. It contains most of the information which we have on the šewa. A fragment in Arabic entitled הָלֵבָת שֵׁפָא, dealing with rules of vowel alternation (published by Allony, HUCA. 35 (1964)) was suggested by Eldar (Te’uda. 6 (1988)) to have been part of one and the same anonymous grammatical treatise in which the šewa and the Hebrew vowels were discussed, perhaps together with other grammatical issues. Anonymous works of this type are rather numerous and most of them are still in manuscript and scattered in libraries. Only a few have been published, such as the anonymous treatise in Arabic on the šewa which Allony published (Leshonenu 12 (1943/44). This anonymous literature is thus still far from being exhausted.

6.4. The Perpetuators of the Way of the Masorah

Although most of the above works have a grammatical approach they are only on the threshold of grammar and can still be classified as Masorah literature. They do however constitute a start and the beginnings of grammatical works. Many grammarians in the Middle Ages had to depend, if at all reluctantly, upon these works and they drew upon them. In almost every one of their writings one finds a connection to the Masorah and its literature. At the same time however there were sages who continued their work on the Masorah for its own sake, whether for the clarification of versions or
for the vocalization and the actual formation of the text. There were also scholars who gave Masorah a central place in their works and did not consider it a subordinate to grammar, vocalization, and accentuation. Only the most famous ones are discussed here, in chronological order.

### 6.4.1. Meir ben Todros ha-Levi Abulafia

In his book *Masoret Seyag la-Torah* Meir ben Todros ha-Levi Abulafia (אהביה, D. 1244) deals mainly with plene and defective spelling in the Torah. His comments are arranged alphabetically in dictionary form according to the roots of the words. After them he adds excerpts from the Masorah which deal with various particles and the peculiarities in the writing of a Torah scroll, the form of the Songs, and the open and closed parashiyot. His book was a basic work for scribes and for publishers in following generations.

### 6.4.2. Jekuthiel ben Judah ha-Kohen ha-Naqdan

Jekuthiel's (abbr. as יכתי, first half of the 13th century) book *En ha-Qore* is a collection of masoretic-grammatical notes dealing with vocalization and accentuation for the Pentateuch and the Book of Esther. The work is arranged according to the order of the verses and includes a general introduction which deals with various methodological questions, such as the rules of the ga’yot. This book, with its rules and its vocalization variants, was the basis for a whole school of grammarians and editors of the text of the Bible.

### 6.4.3. Menahem ben Solomon ha-Meiri

Ha-Meiri (1249–1316) was considered one of the posekim ("deciders") for everything connected with the writing of the Bible and scribal customs. His book *Kiryat Sefer* consists of two parts. The first contains the halakhic laws for writing a Torah scroll, and the second is a collection of Masorah issues having rules on reading and pronunciation, plene and defective spelling, open and closed parashiyot, and various other matters of Masorah.

### 6.4.4. Jacob ben Hayyim ibn Adonijah

Jacob ben Hayyim ibn Adonijah (15th/16th century) was the first to publish a text of the Bible which had been selected carefully from a large number of manuscripts and was accompanied by the notes of *Masorah Parva, Masorah Magna*, and *Masorah Finalis* (see 3.3.6.1.) which were likewise gathered and selected from many manuscripts. This text is the *Mikraot Gedolot* edition of the Bible which was published in Venice, in 1524–25, by Daniel Bomberg, who employed Ben Hayyim as a proofreader. This edition became known as the “accepted” version of the Bible, “the Masoretic Text,” upon which everyone has relied and which all have copied and imitated. Even the Masorah which was published in this edition has been unjustly recognized ever since as the exclusive text of the Masorah. In fact Ben Hayyim’s work has been considered as the codification of the Masorah, and for generations has been the only complete Masorah in print, up to the 20th century when the Ben-Asher codices (Leningrad and Aleppo) started to appear in print. Ben Hayyim also printed for the first time other works together with the *Masorah Finalis: the Diqqat ha-Te’amim of Aaron Ben-Asher* (see 6.2.1), attributed to Moses ha-Naqdan; various lists of Masorah, some of them resembling those in *Okhlah we-Okhlah*, as well as lists of variants between the Western and Eastern traditions and between Ben-Asher and Ben-Naphtali for the Torah.

### 6.4.5 Elijah Bahur ben Asher ha-Levi (Levita)

Elijah *Levita* (1468/9–1549), a grammarian and lexicographer, is also worthy of being considered a masorete because of his book *Masoret ha-Masoret* which was published in Venice, in 1538. He presents a historical survey of the Masorah, the vocalization and the accentuation, and proves that they were not given at Sinai but were fixed by the masoretes. He also describes the Masorah, its methods, types and terminology along with examples. This book can be considered the prime work of the Masorah and a clear, convenient guidebook for the student.

### 6.4.6. Menahem ben Judah di Lonzano

In his *Or Torah*, Menahem ben Judah di Lonzano (end of the 16th century), gives masoretic comments only on the Pentateuch. The work is arranged in the order of the biblical text. Apparently he uses the text of Ben Hayyim as his base and adds comments to make the text more precise also with regard to matters of orthography, but mostly on issues of vocalization, accentuation, and ga’yot; this was done on the basis of many manuscripts and works of earlier scholars. Jedidiah Solomon Raphael of *Norzi* (see below) valued his opinion highly.

### 6.4.7. Minhat Shay

Jedidiah Solomon Raphael b. Abraham of Norzi (16/17th century) wrote the most important and the most comprehensive book dealing with Masorah. It contains an introduction and comments upon the entire Bible in the order of the text with regard to matters of Masorah, orthography, vocalization, accentuation, ga’yot, the form of the Songs and the parashiyot, even the tittles (tagin) of the letters and other exceptional items in the text. At times he even discusses questions of grammar and meaning. His comments bear upon almost every word about which there is room for error, a variant reading, or any other problem. Although his remarks are based mainly on the Bomberg Bible edition of 1546–48 and as Bester (*Addenda to Minhat Shay*, 33–37) has shown, his book in fact constitutes a type of correction to and improvement of the Ben Hayyim text of the Bible. From his time on editors of the Bible have considered themselves permitted to make corrections in the text of the *Mikraot Gedolot* according to him. He called his book, which was finished in 1626, תריי דלד (*the repairer of the breach*), but the title was changed by its first publisher (only in 1740–42 was it printed for the first time) to יבש מֵרַחֲטִית מַיָּה (*Minhat Shay* (יש being the initials of Solomon Jedidiah) and it remains known by that name. This book is the most famous of all the works of Masorah. A critical edition of
**Minhat Shay on the Torah** was published by Z. Betser (2005, posthumously).

### 6.4.8. The Yemenites

Two Yemenite scholars who were active at about the same period should be mentioned. Yahya *Bashiri* (abbr. מַחְוֶה בֶּשֶׁר; end of the 17th century), was a well-known sage, scribe, copyist, and calligrapher; his work *Havaasselet ha-Sharon* on the letters of the alphabet and matters of Masorah, vocalization, and accentuation is extant in manuscript form. Comments in his name are also incorporated in the work of Yahya b. Joseph *Salih* (abbr. מַחְוֶה סַלִיח; second half of the 18th century), the other Yemenite scholar, who in his *Heleq ha-Diqduq* comments upon the whole Torah in the order of the text on matters of vocalization and accentuation, on other issues of Masorah and even, sometimes, on actual grammatic issues. The book is based upon a comparison of manuscripts, mostly Yemenite, and printed editions. This book holds the same position among the Jews of Yemen as *Minhat Shai* among the other communities.

### 6.4.9 Wolf Benjamin Ze'ev ben Samson Heidenheim

Wolf Benjamin Ze'ev ben Samson Heidenheim (abbr. וֹלפִּי זְעֵיב בֶּן סָמוּס הַיְדֶנֶהִימ; 1757–1832) marks a turning point in the chain of those who dealt with Masorah, in that besides working on the text of the Bible itself and producing new editions thereof he also systematically discussed problems of Masorah and its rules. He edited five different editions of the Pentateuch: *Torat Elohim* (only the beginning), *Me'or Enayim*, *Ezrat ha-Sofet, Midda la-Bina*, and *Torat Moshe*, as well as the Book of Psalms and others. His editions are outstanding for their precision and his choice of the text is based upon ancient sources, both manuscript and print, especially on Jekuthiel ha-Kohen, Menahem di Lonzano, and Jedidiah Norzi. Very important textual and masoretic comments of his own accompany the text. In the Pentateuch *Me'or Enayim* he even printed the text of Jekuthiel's *En ha-Qore* in the margins. No less important is his contribution to the study of the Masorah and the rules of the accentuation in his book *Mishpeta ha-Té'amim*, in which he lists, in great detail, the rules of the accentuation of the 21 books, in general according to citations from early sources beginning with Ben-Asher. He thereby consciously withdraws from the analytical approach of the Christian and Jewish scholars of accentuation and returns to the methods of the early sages, in his method of discussing accentuation and in the importance which he ascribes to a clear and well-established text. He laid down the foundations of the rules of the *gá'yah* and the *maqqaf* in the last chapter of his book.

### 6.4.10. Seligmann Isaac Baer

*Baer* (1825–1897) continued the way of Heidenheim and completed his activity. Baer continued in the area of clarification of the text of the Bible and edited a new version of the text for almost every book of Scripture, mainly for those which his predecessor did not publish: Genesis, all the Prophets and the Hagiographa (called the Baer-*Delitzsch* edition, although the latter only added prefaces). In the investigation of the Masorah he completed the work of his predecessor and wrote precise rules for the accentuation of Psalms, Proverbs, and Job, in his book *Torat Emeth*. This book is arranged on the pattern of *Mishpeta ha-Té'amim*, but unlike it, it is almost entirely the work of the author and does not draw on earlier sources. Baer elaborated a rather consolidated system for the rules of accentuation and *gá'yah* and other masoretic issues on the basis of early works and manuscripts. This study brought him to the conclusion that he was closely approaching the original "correct" version of the Bible. He edited the text of the Bible in the light of that conclusion and many of his readings are based exclusively on his own views. He did not hesitate to alter manuscript readings to fit his ideas, for example in the list of variances between the western and eastern traditions and between Ben-Asher and Ben-Naphtali, which he published from manuscripts in the appendices to his editions of the Bible, he adapted the Western readings and those of Ben-Asher which were in the manuscripts to the readings of his edition of the biblical text, since he was certain that he had succeeded in establishing the Ben-Asher version and that on the strength of it he could correct even the manuscripts’ readings.

The Baer version was used for a long time, especially because of Delitzsch, as the accepted, "scientific" version, and the scientific grammars, such as *Gesenius-*Kautzsch, were based on it. Even the rules of accentuation in his *Torat Emeth* are based, first and foremost, upon his own version of the Bible. This also applies to the detailed rules of the *meteg* which he published in German. Although taken from his predecessors, especially from Jekuthiel ha-Kohen and Heidenheim, and supplemented, these rules are actually a near-complete development of the theory of the *meteg* as Baer saw it. His approach to manuscripts is manifest in his edition of various texts including the *Diqduqe ha-Té'amim* of Aaron Ben-Asher. His treatment of the manuscripts and his corrections (without any indications to the reader) do not accord with modern methods of textual criticism. In his edition of *Diqduqe ha-Té'amim* he made little attempt to define the work or its scope. His main aim was to collect Masorah texts in order to clarify the "correct" text of the Bible.

### 6.4.11. Later Scholars

Despite Baer's shortcomings (as stated above), his erudition and great expertise in the Masorah should not be underestimated. Other scholars of his time did not encompass the entire range in which Baer was active, and it is doubtful whether one should properly consider them along with the masoretes. S.D. *Luzzatto* and, more than he, W. *Wickes*, made a significant contribution to the study of accentuation and to the consolidation of its theory with regard to its grammatical description. In contrast to them, C.D. Ginsburg and P. Kahle played a major role primarily in publishing ancient texts from manuscripts: Ginsburg mainly published many texts of all types of Masorah; and Kahle, biblical texts in Tiberian vocalization (the Lenin-
grad manuscript – see above, 6.2.3.) as well as fragments of the Bible with Babylonian and Palestinian vocalization.

[Arron Dotan (2nd ed.)]

BIBLIOGRAPHY:

MASORATIC ACCENTS (Musical Rendition).

HISTORICAL DEVELOPMENT.

In Jewish tradition, the formal reading of certain of the books of the Bible in worship and in study is carried out with a musical intonation linked closely with the masoretic accents of the text and governed by fixed rules and practices (see *Masora; in supplementary articles). Public reading from the Bible is attested much earlier than the establishment of the written systems of accentuation. In the Bible itself, such readings are mentioned only in connection with special occasions (cf. Deut. 31:12; 11 Kings 22:1–3; Neh. 8:8, 10:30). The practice was not a prominent part of the Temple liturgy but became so in the *synagogue. Talmudic sources attest the detail with which the practice was regulated, citing the choice and order of the scriptural passages for Sabbaths and weekdays (Monday and Thursday) and the feasts, the qualifications of the reader, the translation of each verse into the vernacular, the *somēk (“supporter”) who aided the reader, or the replacements of the lay reader by a specialist (sometimes the *hazzan). As to the musical element, the sources merely say that the Bible was to be read and studied only by melodic recitation (cf. Meg. 32a; Song R. 4:11). It is doubtful whether the terms *pissuk/piskei te’amim (the division by the te’amim) refer to the melodic element, al-
though they are connected with the aide-memoire movement of the reader’s or somekh’s hand (Meg. 3a; Ned. 37a; Hag. 6a; see Figure 1). The talmudic usage of the term te’vim is still not sufficiently clear; however, considering the strict regulation of every other element of the scriptural reading, it is inconceivable that the melodic rendition could have been left to the ad hoc invention or choice of the reader.

A comparison with the practices of “scriptural” reading in other religious traditions—such as Vedic recitation in India or Buddhist recitation in Japan and other countries—reveals that none is spoken or sung but they are “cantillated”; that this cantillation is based upon strict conventions handed down by oral tradition (which were described explicitly only in the respective Middle Ages of each culture); and, most important, that a basic similarity of constructive principles (not of melodic content) can still be recognized in all such practices throughout the Asian continent, including all Jewish traditions throughout the Diaspora. The melodic structure in all these traditions is of the kind defined by Curt Sachs as “logogenic,” where the musical element is generated by the words, bonded to the verbal and syntactical structure, and subordinated to the communication of the text, with no attempt at musical autonomy.

This “pan-Asiatic” style must already have been present in cantillated Bible reading in the synagogue preceding the period in which the system of written accents began to be developed. The Tiberian system of accent signs and vowel signs and their functions was based on existing practices not only of the pronunciation and grammatical basis and syntactical structure of the text, but also of its musical rendition. The earliest surviving treatise of this system, *Ben-Asher’s Dikdukei he-Te’aim*, mentions the ne’imah (melody) in the characterization of several of the accents. Neither this nor the preceding “Palestinian” and “Babylonian” systems seem to show the intention of establishing a complete correspondence between each accent sign and a specific and different melodic motive, which implies that no such correspondence existed in practice at that time, and that there was no intention on the part of the masoretes to create it artificially.

Figure 1. Hand movements indicating the accents and their melody, used as memory aids and prompting signs for the reader. Shown here are the movements still practiced in Rome. Several other communities preserve relics of a similar practice, although the movements are not identical. From I. Adler, “Histoire de la musique religieuse juive,” in J. Porte (ed.), Encyclopédie des musiques sacrées, vol. 1, 1968, 472–3.

Figure 2. The earliest known notation of Pentateuch cantillation. Western Ashkenazi perhaps notated by Johann Boeschenstein. In J. Reuchlin, De accentibus et orthographia linguae hebraicae, Hagenau, 1518, fol. [83b]–[87a]. The motives are given in the tenor part, while the discantua, altus, and bassus parts are mere harmonizations in contemporary art-music style, added arbitrarily to enhance the presentation. Jerusalem, J.N.U.L.
Comparative studies of the living traditions of the present and the evidence gleaned from the medieval and later masoretic treatises reveal that only in the Ashkenazi Diaspora was the system developed and augmented with the aim of having each accent sign expressed by a distinct melodic formation. The farthest point along this path is reached by the Ashkenazi cantillation of the Torah. Even there, however, one finds different accent signs expressed by identical melodic formations (e.g., segol, zakef, and tippeh in the "Polish-Lithuanian" tradition), or identical accent signs expressed by different melodic formations (e.g., the darga preceding a tevir as against the darga preceding a munah-revi'a, in the Western Ashkenazi tradition). Other traditions are still more limited in their repertoire of distinct melodic motives and content themselves with the expression of the divisive accents, or even of the major divisive accents only. This style is probably not the result of any erosion or loss of knowledge, but may well be the surviving evidence of the earliest stages of the system, perhaps even of the Proto-Tiberian or Palestinian or Babylonian ones. In all traditions, the rendition of the accents of the prophetic books, the haftarah, and the Hagiographa is also partial and selective as is their rendition in the special style used for study in the "heder.

**Practice**

The musical rendition of the text in conformity with the accent signs is based on the convention (as described above) of each sign or group of signs representing a certain melodic motive. The graphic symbol does not stand for an absolutely predetermined sequence of tones. As in all music cultivated by oral tradition, the motives exist as "ideals" to be realized in performance, within certain margins of flexibility. Preservation of the "ideals," i.e., the style, is assured by several factors: the support of the well-defined and strict doctrine of the grammatical and syntactical functions of the accents; the deliberate teaching, by which the tradition is handed on from generation to generation; and the constant public practice of the system in the synagogue, where not only the layman's rendition (when "called up to read") but even that of the specialized reader, ba'ali kore – not always, and in some communities never, identical with the hazzan – is always subject to the critical ear of the more learned members of the community. The margin of flexibility, on the other hand, makes it possible to link, or rather blend, the motives as they are recalled and enunciated successively by the reader so as to create a melodic organism. The style itself remains constant, but each reader may interpret it with a certain individuality and will never
repeat his previous performance precisely when he reads the same passage upon another occasion.

Theoretically, the accent signs are divided into only two categories: the accents of the "twenty-one books" (א״ך) and those of the Psalms, Proverbs, and Job (אמ״ת). In practice, the musical renditions show a much greater diversity of styles. These are determined by

1. the text, i.e., the specific book, chapter, verse, or contents;
2. the liturgical circumstances;
3. the medium of performance;
4. regional stylistic traditions;
5. the above-mentioned margin for individual interpretation.

**Style Determined by Text.** Separate melodic conventions exist for the Pentateuch (Torah), the prophetic books (haftarah), and for several of the Hagiographa (cf. The Five Scrolls, Musical Rendition). These may not be interchanged, and explicit prohibitions are found in several rabbinic sources (e.g., Sefer Hasidim, par. 302). Nevertheless there is a kind of infiltration of motives from one book to the other, as evinced by the appearance of motives from the cantillation of the Torah in that of the hafṭarah. Some motives may also be common to more than one book, such as certain motives in the cantillation of the Book of Esther and Lamentations in the Ashkenazi tradition. In principle, however, each book has its distinct and characteristic “melody,” i.e., melodic style.

Most regional traditions have special “festive” styles for the reading of certain chapters or paragraphs – the Song of the *Sea, the “Decalogue, and often also for the Blessing of Moses (Deut. 32) and the Priestly “Blessing (Num 6:24–26), and also a “low” intonation for the “rebuking” text of Deut. 28:15–68. The Ashkenazi tradition is particularly rich in special intonations. A kind of “roster formula” is used for some verses in the story of the wanderings in the desert (Num. 10 and 33). Another intonation emphasizes the importance of certain single verses in the Torah (see A. Baer, Baal T’fillah (1883), 39–40, nos. 117, 118, 121). Another one is used for the dramatic turning points in the Book of Esther (1:22; 2:4, 15, 17; 3:15: 4:1, 14; 5:7, 13:6, 10). Chapters and verses referring to calamities, such as several verses in the Book of Esther, are read in the style of the Book of Lamentations. Verses or parts thereof which denote supplication and the request for pardon are intoned in the style in which the Torah is read on the High Holy Days (see below). In the reading of the Book of Esther in the Ashkenazi tradition there is even one “quotation” from the prayer mode of the High Holy Days (Esth. 6:1) and another from that of the *selihot (ibid. 6:3).

**Style Determined by Liturgical Circumstances.** During the three pilgrimage festivals the reading is more festive, with more ornamentations and prolongations. The atmosphere of the Ninth of *Av influences the reading of the haftarah on the preceding Sabbath, the reading of the Torah on the Ninth of Av itself, which should be in a “low” voice and is sometimes rendered “almost without the accents,” and its hafṭarah (which is often read with a verse-by-verse translation into the vernacular – Arabic or Ladino). The Ashkenazim of Holland read the Torah on the Ninth of Av in a style related

---

to the haftarah style of the Polish-Lithuanian region. On the High Holy Days and Hoshana Rabba, the Ashkenazi tradition has a special style for the reading of the Torah (“in a low melody, as if plaintive,” as mentioned in the mahzor ed. Sabionetta, 1537). On the Sabbath nearest to the wedding day, among some Near Eastern communities, the section “And Abraham was old” (Gen. 24) is read in front of the bridegroom in a special festive style. Other modifications applied on Hoshana Rabba and Shavuot are described below.

**STYLE DETERMINED BY THE MEDIUM OF PERFORMANCE.** When part of the regular prayer service, the reading of the Torah, haftarah, or Scrolls is always carried out by a single reader. On certain other occasions, however, the reading may become communal. On the night of Hoshana Rabba and Shavuot, when there are assemblies for “studying” the Torah, chapters or sections are cantillated in alternation by several members of the group. The style is an abbreviated version of the regular Torah style, or that of the study of the Torah in the heder. Cantillation by the entire congregation according to the accents is found in the Sephardi communities for the “Shema Yisrael” (i.e., Deut. 5:7 and 11:19) during prayer and for the “Thirteen Divine Attributes” (i.e., Ex. 34:6–7) during the selihot. In the heder, the study of the Torah is traditionally carried out through constant, loud repetition by all the children together. This was done in many communities in a special intonation, related to the accents but more simple in structure than the one practiced by the adults in the synagogue. There are also other kinds of “heder tunes” based upon the sequence of accented (long) and unaccented (short) syllables in the text, similar to those found in the group recitation of passages from the Mishnah and other prose texts in many Near Eastern communities (cf. Talmud, Musical Rendition). It can be assumed that the “heder tunes” have remained unchanged for very long periods, since under these circumstances there is no inducement, or indeed any possibility, for personal expression and initiative and the melodic element is wholly subjugated to the pedagogical task.

**REGIONAL STYLISTIC TRADITIONS.** A.Z. Idelsohn’s assumption (see bibliography, and frequently repeated in later writings) that the living traditions of masoretic cantillation developed out of one common – i.e., pre-Exilic – base does not seem to be confirmed by a more thorough examination. This is one of the central problems in research of Jewish music (cf. Music, Introduction), and, by its very nature, this research is particularly prone to conscious or unconscious wishes to justify a foregone conclusion that there is, indeed must be, a common base. In the present state of research, it may tentatively be proposed that while the principle of cantillation as such is a common heritage (see introduction, above), the diverse regional and functional styles observable today stem from an albeit small number of distinct source styles. It can be assumed that several “melodies” for the reading of the Bible were current and equally legitimate at the time in which the forms of synagogue worship began to be stabilized. Later, by processes which we are unable to reconstruct, some of these “melodies” and melodic elements were accepted as normative by one or several communities, were attached to specific books, and were sanctified by custom. It must always be remembered that the accent signs themselves are not, and never were, a sound script with the same possibilities and limitations of the music.

notation which developed in Western Europe. They are only reference aids to the evocation of “motivic ideas” which, in themselves, are an orally transmitted patrimony. Some late medieval and renaissance writers mention the “style of the Sephardim,” but with hardly any concrete definitions which would enable its character to be understood (Simeon b. Zemah *Duran, *Magen Avot; the Karaite Elijah *Bashyazi (1420–90) in his *Sefer ha-Mitzvot (ed. 1870), fol. 71 and 81; Elijah *Levita in his *Tuv Ta'am).

The living traditions of the present may be classified according to five major regional styles:

1. Yemenite,
2. Ashkenazi,
3. Middle Eastern and North African,
4. Jerusalem Sephardi,
5. northern Mediterranean local diverse styles.

(1) The Yemenite Style
This is particularly rich in distinct sub-styles for the biblical books and for particular chapters and in various divisions among single and group performers. One of the “heder tunes,” built upon the pentatonic scale, is related to the Ashkenazi Torah style.

(2) The Ashkenazi Style
This is the earliest to be documented in musical notation, in Johannes *Reuchlin’s *De accentibus… (1518) and soon afterward by several other scholars. The melodic elements have been pre-
served most tenaciously among the Western Ashkenazi communities, including southern Germany. The Eastern Ashkenazi Torah style (known as “Polish-Lithuanian”) is somewhat different from the Western one. The haftarah style is particularly developed in Eastern Europe, and is nowadays common to both the Eastern and Western Ashkenazi communities.

(3) The Middle Eastern and North African Style
This is the style designated by Idelsohn as “Oriental.” Its distribution, with many sub-styles, ranges from Cochin to Algeria, through Persia, Bukhara, Iraq, Syria, Kurdistan, the Caucasus, and North Africa. There is a close connection between this and the styles of the European Sephardi communities in Italy, France, Holland, England, and America. It can also be traced in some Balkan communities (those of the “Romaniote” rite). Its influence is also noticeable in the intonation of the Song of Songs of the “Polish-Lithuanian” tradition. The earliest notation of this style was published in 1699 in the Hebrew Bible edited by Daniel Jablonski, to whom it was given by David de Pinna, a parnas in the Portuguese community of Amsterdam.

(4) The Jerusalem Sephardi Style
This is the style designated by Idelsohn as “Oriental Sephardic.” It is found around the eastern shores of the Mediterranean, from Turkey and the Balkan communities to North Africa, and centered in Erez Israel. Due to the prestige of its association with Jerusalem and Erez Israel, it overlaid and frequently even ousted many local traditions throughout the Mediterranean countries. The Torah style in this tradition cannot represent the pre-expulsion Spanish tradition, since it is found neither in North Africa nor among the European Sephardim, but is based upon the Maqam Sigah. It seems to be a relatively recent development, but this phenomenon needs further study before a conclusion can be confirmed.

(5) The Northern Mediterranean Styles
Several communities in this area, such as Rome and “Carpentras (in Provence), have distinct local styles of their own. The Carpentras tradition survives only in notation (M. and J.S. Cremieu, Zemirot Yisrael, c. 1887), since the community itself no longer exists.

In Israel, the “ingathering of the exiles” has caused a major deterioration in many of the local and regional traditions brought into the country, since the immigrants often could not keep up their homogenous associations centered around the synagogue. The breakdown of the traditional education system (there is no organized heder of any community except the East Ashkenazi) has also broken the chain of tradition. The regional styles tend to disappear, yielding to two dominant and dominating styles: the East Ashkenazi is gradually adopted in most Ashkenazi synagogues and the “Jerusalem Sephardi” prevails, especially for the reading of the Torah, in the synagogues of all the Near Eastern and North African communities. In the latter, the virtuoso status and ambitions of the haazzan or baal kore and the influence of the maqam-based Arabic art music at present come near to completely eroding the traditional base of masoretic cantillation proper.

See also articles on the musical traditions of the various major communities.

[Avigdor Herzog]

MASSACHUSETTS

New England state of the U.S. Massachusetts had a population of 6,357,000 in 2001, of whom 275,000 were Jews. Both the Jewish population and the state population have been relatively stable during the past 35 years. In 1917 the state’s Jewish population was 190,000; by 1937 it had risen to 263,000, dropping to 223,000 in 1959, and then rising over the following decade to 260,000. Nearly 80% of the Jews in the state live within an hour’s ride of “Boston.

In 2000, the Greater Boston metropolitan area, embracing large sections of New England, was the sixth-largest Jewish metropolitan area in the United States, including some 10,500 Jews from the former Soviet Union, most of whom arrived after 1985. More than half of the community’s Jews were engaged in professional and technical work, and 40 percent of Jewish adults held advanced degrees. The number of Jews also significantly increases during the school year as the number of colleges and universities in the Boston area and in all of Massachusetts is high and the Jewish student population significant.

The shift from the older neighborhoods in and around Boston to the suburbs created substantial new Jewish communities in Newton-Wellesley-Brookline; Cambridge-Belmont-Lexington-Concord-Waltham-Woburn; Natick-Framingham; the Massachusetts Bay north shore towns of Lynn, Swampscott, Marblehead, Nahant, Salem, and Saugus; and the southern suburbs. Over the last generation thousands of Jewish scientists, engineers, and manufacturing entrepreneurs have found employment in the industrial complexes that line Route 128 west of Boston, and they have given a new élan to the Jewish communities that have sprung up in the expanded Boston suburbs. In the late 20th and the early 21st centuries the high-tech industries attracted many young Jews who easily made the transition from college to industry.

Beyond metropolitan Boston there were 35 cities and towns with 100 or more Jewish residents. The largest Jew-
ish populations were to be found in Springfield (10,000), Worcester County (12,000), Fall River (1,100), Andover (2,500), Amherst area (1,300), New Bedford (2,600), Lowell (2,000), Pittsfield and Berkshire County (4,000), Haverhill (2,300), and Holyoke (1,300). Several areas, which were once considered virtually off-limits to Jews, now have synagogues and thriving Jewish communities. Synagogue life on Cape Cod, including Martha’s Vineyard and Nantucket, is active, and there is ongoing Jewish life during the winter months. Many Jews who had previously enjoyed the rich cultural life of the Berkshires have chosen to live there year-round and to participate in the active Jewish life now afforded in these communities.

At the beginning of the 21st century there were about 250 synagogues in 85 communities, most of them erected in the 1960s and beyond as either the first houses of worship in newly settled areas or as replacements for older sanctuaries in communities where Jewish residence antedated the massive move out of Boston.

Early History
Aarón *Lopez, a ship owner, was the first Jew naturalized in Massachusetts (at Taunton, 1752). In 1777 he founded the first Jewish community in Massachusetts, at Leicester near Worcester. The families of Lopez and of Jacob Rodríguez *Rivera, numbering 61 people, stayed in Leicester until after the Revolution.

Massachusetts’ first permanent Jewish community was established in the late 1820s in Boston, where Central European settlers established the state’s first Jewish congregation, Ohabei Shalom, in the 1840s. For about 100 years the Boston Jewish community exercised a powerful influence on the growth of new settlements throughout the state.

The first Jews to take up permanent residence outside Boston were German and East European peddlers who replaced the itinerant Yankee traders in the 1840s and 1850s. Typical of these was Abraham *Kohn, later a figure in the Republican Party in Illinois. In 1842 and 1843, Kohn carried a pack through central and northern Massachusetts, praying alone in the fields, sometimes with his brother and partner, Judah, or with other Jewish peddlers he met on the way. Peddlers like Kohn settled down and became storekeepers; they were followed by tailors, watchmakers, cigarmakers, shoemakers, and dealers in dairy products, leather goods, provisions, lumber, and kerosene.

These merchants established themselves in the factory and mill towns, including Pittsfield (1850), where most were of German origin; Worcester (1860); Holyoke (1873; first congregation, Agudas Achim, founded 1893); Springfield (1881); Fall River (1881); Lawrence (late 1880s); Lynn (1893); and Haverhill (1897). Some Sephardi Jews lived in New Bedford, which has a Jewish cemetery said to date from the post-Revolutionary era, as late as the 1850s, when the first German Jews arrived. One of these was Leopold *Morse, who served in Congress from a Boston district in 1877–85 and again in 1887–89. A burial society, B’nai Israel, was formed in New Bedford in 1857. The first Jewish burial took place the same year. East European Jews arrived in New Bedford about 1877, the earliest of them being Isaac Goodman and Simon Siniansky. The first minyan was formed in 1879; services were held in Siniansky’s house. The first congregation, Ahabat Achim, was founded in 1893 and purchased a cottage house as its first synagogue. A new synagogue was dedicated in 1899. In 1898 Congregation Chesed Shel Emes was incorporated; it occupied a new synagogue building in 1903. Springfield also had a colony of Sephardi Jews in the 1830s, but the first Russian arrivals found no trace of them. German and Polish Jews arrived in Worcester in the late 1860s.

Contemporary Life
Massachusetts is the home of several major national Jewish institutions: the nonsectarian *Brandeis University, in Waltham, and the National Yiddish Book Center in Amherst and the Jewish Women’s Archive in Brookline. The *Menorah Society, the first Jewish intercollegiate movement, was organized at Harvard University in 1906.

Jewish students and Jewish studies give Massachusetts a unique flavor. In 2004 there were approximately 90 dedicated staff positions in Jewish studies at seven major private universities in the Boston area with over 30 more similar positions at the universities in Worcester and the Amherst area. Internationally renowned graduate programs in Jewish Studies are found at Massachusetts universities, including the only graduate Ph.D. program in Holocaust and Genocide Studies. The Hebrew College, which has moved from Brookline to Newton, now has a non-denominational rabbinic program with Arthur Green, a distinguished scholar of Hasidism, as its founding dean. Several universities had Jewish presidents in the last quarter of the 20th century and into the 21st. Among them, Harvard has a Jewish president, Lawrence *Sommers, and MIT has had Jewish presidents. Brandeis has always had a Jewish president.
Jewish charitable institutions are coordinated by the Combined Jewish Philanthropies of Greater Boston and by counterpart organizations in 12 other cities, including Jewish welfare federations in Berkshire County, Merrimack Valley (serving Andover, Haverhill, Lawrence, Lowell, Newburyport and 27 surrounding communities), New Bedford, Northshore, Springfield, and Worcester.

Hillel Foundations are found at the following Massachusetts colleges: Amherst College; Babson College; Bentley College; Berklee College of Music; Boston College (a Jesuit University); Boston University; Brandeis University; Clark University; College of the Holy Cross (a noted Roman Catholic College); Curry College; Emerson College; Fitchburg State College; Framingham State College; Hampshire College; Harvard University & Radcliffe College; Hebrew College; Lesley University; Massachusetts Bay Community College; Massachusetts Institute of Technology; Mount Holyoke College; New England College; New England Conservatory of Music; Newbury College; Northeastern University; Quinsigamond Community College; Salem State College; Simmons College; Smith College; Springfield College; Suffolk University; Tufts University; Tufts University Veterinary School; UMass Medical School; University of Massachusetts, Amherst; University of Massachusetts, Boston Harbor; University of Massachusetts, Dartmouth; University of Massachusetts, Lowell; Wellesley College; Wentworth Institute of Technology; Western New England College; Westfield State College; Wheaton College; Wheelock College; Williams College; and Worcester Polytechnic Institute. The presence of Hillel on campus was often symbolic of the Jewish presence. Brandeis has three chapels at the center of its campus – Catholic, Protestant, and Jewish – emblematic of the three great religions of mid-20th-century America. When the new Hillel at Harvard opened, a procession of Torah scrolls marched through the campus. One speaker said that the movement of Hillel from the periphery of the campus to its center reflected the journey of Jews at Harvard and indeed throughout American intellectual life.

Jewish community centers (JCCs) and YM-YWHAs are affiliated with the Greater Boston Associated JCCs, and similar institutions are maintained in Framingham and Marblehead, Newton, North Dartmouth, Peabody, Springfield, Stoughton, Westboro, Worcester, Brighton, and Brookline. Jewish weeklies are published in the state: the Jewish Advocate, in Boston; Metro-West Jewish Reporter; the Jewish Journal/North of Boston; the Jewish Chronicle, in Worcester; and the national monthly Shmata, which is published by Jewish Family and Life in Newton.

George Feingold, who was the Republican nominee for governor when he died in 1958, was the first Jew to win statewide elective office, serving three terms as attorney general (1952–58). Springfield, Worcester, Holyoke, and Pittsfield (Daniel Englander, elected 1902) have had Jewish mayors. In 1961 Jacob J. Spiegel was named to the State Supreme Court, the first Jew to serve in that office. Abraham *Rathesky was ambassador to Czechoslovakia under President Hoover (1930–32). David K. *Niles was one of President Franklin D. Roosevelt’s key White House aides and later served President Truman in a similar capacity (1942–51). Maxwell M. *Rabb served as secretary to the cabinet under President Eisenhower (1953–58). Steven *Grossman was chairman of the Democratic National Committee and ran unsuccessfully for governor as did Robert *Reich, a Brandeis professor and former Clinton secretary of labor. Politics in Massachusetts is considered the domain of the Irish. Boston has never had a Jewish mayor. Remarkably there have only been two Jewish congressmen, Barney *Frank and Leopold *Morse. Franklin Delano Roosevelt appointed Charles E. Wyzanski, Jr., to the United States District Court; Richard Nixon appointed Frank H. Freedman; Jimmy Carter, Rya Zobel; Ronald Reagan appointed Mark L. Wolf; Bill Clinton, Nancy Gertner and Patti Saris. Three Jewish sons of Massachusetts have served on the Supreme Court: Louis *Brandeis, Felix *Frankfurter, and Steven *Breyer.

[ Bernard Postal / Michael Berenbaum (2nd ed.) ]

MASSADAH (Heb. מַסָּדָה), kibbutz in northern Israel, in the Jordan-Yarmuk valley, affiliated with Ihud ha-Kevuzot ve-ha-Kibbutzim. Massadah was founded in 1937, during the Arab riots, as a stockade and watchtower by pioneers from Poland. In the Israel War of Independence the village had to be evacuated before the onslaught of the Syrian army (May 1948) and was completely razed, but the site was taken back 24 hours later by Israeli forces and the kibbutz was rebuilt. After the Six-Day War (1967), the village came frequently under shelling. Its farming was based on avocado and palm plantations, citrus groves, field crops, and dairy cattle. The kibbutz also operated guest rooms. In 1968 the population of the kibbutz was 285. In the mid-1990s it rose to 350, but then dropped to 288 in 2002.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

MASSARANI, TULLO (1826–1905), Italian author and statesman. Born in Mantua, Massarani studied law and painting, at the same time taking part in the conspiratorial struggle for the unification of Italy. As a result of the failure of the 1848 revolution and his collaboration with Mazzini’s followers, he had to take shelter in Switzerland and later lived the life of a refugee in Germany and France. On the proclamation of the Kingdom of Italy in 1860 he returned to Milan. He was elected to parliament for three legislative periods (1860–67), and in 1876 was appointed senator. He also held municipal offices.

An extremely prolific writer, Massarani introduced the works of Heinrich *Heine to Italian readers. He left a great
number of critical essays, historical, political, and autobiographical writings, translations and verse, which were collected after his death in 24 volumes (1906–11). Massarani’s criticism does not delve beneath the surface, but reveals a broad and up-to-date culture in which scholarship is blended with a journalistic approach. Among his most important works are L’idea italiana attraverso i tempi (1869), Eugenio Camerini, i suoi studi e i suoi tempi (1877), and Carlo Tenca e il pensiero civile del suo tempo (1886). During his latter years he devoted himself to an original and erudite study of laughter (1900–02). Massarani’s essays earned him a high reputation among European art critics, and in 1878 he was elected chairman of the international jury of art at the Paris Exhibition.

[Giorgio Romano]

**MASSARANO, JACCHINO OR ISACCHINO** (16th century), Italian choreographer. In 1581 he was commissioned to provide the dances for Bernardo Pino’s *Gli Ingiusti Sdegni* which was performed by the Jewish Theater in Mantua in honor of the marriage of the duke’s heir, Vincenzo Gonzaga, who was an intimate friend. The following year, when Vincenzo visited Ferrara, he was sent to supervise a similar performance there. In 1591, the poet Manfredi corresponded with Massarano and also commissioned him to supervise dances for him. When Giovanni Guarini’s *Pastor Fido*, the most famous play of its day, was staged at the ducal palace in Mantua in 1598, Massarano was commissioned to supervise the “Blindfolded Dance” for the ballet. He was also appointed choreographer for one of the Jewish theatre’s biggest performances, *Accessi de Amor fatta* by Niccolo Grassi, in 1605, when 64 members of the company took part, and in the following year he choreographed the Tasso’s *Delli Intreghi de Amor*. Massarano was also a composer, teacher, and singer. He was father of Abraham Massarano, historian and author of *Ha-Galut ve-ha-Pedut* (Venice, 1634).

**MASSARY, FRITZI** (Friederike Massarik; 1882–1969), Vienna-born actress and singer. In 1903 she converted to Protestantism. Massary made a reputation in musicals on the Berlin stage and created numerous roles in works by Leo Fall, Oscar Straus, and others. After leaving Nazi Germany she appeared in London in Noel Coward’s Operaette, 1938, her last appearance on the stage. In 1939 she settled in California. Her husband and partner on stage was Max Pallenberg, the German actor. Her style as a singer served as a model for modern diseuses.

[Marcus Pyka (2nd ed.)]

**MASSEKHET** (pl. *Massekhot*; Heb. מַסֶּכֶת, pl. מַסֶּכֶת; lit. “a web,” idiomatically a tractate; cf. Lat. *textus*), a main subdivision of each of the six orders, or *sedarim*, of the Mishnah. Each mishnaic order is divided into a number of *masseket*, each *massekhet* is divided into chapters, and each chapter into Mishnayot or paragraphs in the Babylonian Talmud and into *halakhot* in the Jerusalem Talmud. The total number of tractates of the entire Mishnah, which was originally 60, was subsequently, by a further minor subdivision, increased to 63. *Massekhet* also designates the corresponding *Gemara* tractates. Beginning with the *editio princeps* (1520–23, Venice), in all standard editions of the Babylonian Talmud each *massekhet* has a fixed number of folio pages. The most voluminous tractate, numbering 176 folios, is *Bava Batra*; the smallest is *Horayot* numbering 14. In the Jerusalem Talmud the original pagination of the tractates has been preserved only in the Venice edition of 1522–23, and in its later reprints. As there is no *Gemara* on all mishnaic tractates, the number of *massekhet* in the Babylonian Talmud is only 37 and in the Jerusalem Talmud 39. Occasionally the term *massekhet* is also applied to rabbinical books outside the Talmud. See also *Talmud; Mishnah; and Minor Tractates*.

**Bibliography:** Epstein, *Mishnah*, 981–3.

[Jacques K. Miklitzanski]

**MASSELL, SAM JR.** (1927– ), U.S. lawyer and politician. Born in Atlanta, Georgia, Massell received his Bachelor of Commercial Science degree from Georgia State University and a Bachelor of Laws from Atlanta Law School. He served as a flying instructor in the U.S. Army Air Force during World War II. He worked in the commercial real estate industry for 20 years and 13 in the travel business before stepping into the political arena. In 1961 he made his first attempt to win public office and was elected to the office of vice-mayor as a Democrat. He held the position until 1969 when he was elected Atlanta’s youngest and first Jewish mayor with a victory margin provided by a white liberal and poor black coalition. In the course of the campaign Massell charged that members of the “power structure,” meaning the corporations and civic groups who had long ruled Atlanta, were antisemitic. He served as mayor until 1974, when he lost the re-election.

From 1988 Massell was the president of the Buckhead Coalition, a group of CEOs of major companies in Buckhead, an upscale area of Atlanta. Serving as a chamber of commerce for the neighborhood, the coalition’s first successful project, in 1989, was to have Georgia Highway 400 extended through Buckhead. Massell also spearheaded the creation of the Community Improvement District in Buckhead, wherein business property owners impose taxes on themselves to improve the community and then seek matching federal grants.

Active in Jewish affairs, Massell was a member of the American Jewish Committee, Jewish War Veterans, and the B’nai Brith. He was also instrumental in breaking down ethnic and religious barriers in his community, bringing the Reform community together with the Conservative and Orthodox, as
well as reaching out to help integrate the Sephardic and Russian populations.

[Masseurman, Jules Homan (1905–1994), U.S. psychiatrist and psychoanalyst. Born in Chudnow, Poland, Masserman was taken to the United States in 1908. He grew up in Detroit, Michigan, and received his medical degree from Wayne University. Masserman first taught at the University of Chicago. In 1952 he was appointed professor of neurology and psychiatry at Northwestern University's medical school, where he taught until the 1970s and served for several years as co-chairman of the psychiatry department. Masserman's thought and experience in psychiatry and psychotherapy are set forth in his textbook, The Principles of Dynamic Psychiatry (1946, 1961) and in The Practice of Dynamic Psychiatry (1965). These works represent a theoretical and clinical attempt to correlate various physiological and psychological concepts of behavior into a comprehensive system (biodynamics), and to base a therapy upon this. He conducted many animal experiments to check, clarify, and extend psychological premises about human beings. He also added "un-defenses," such as the general delusion of invulnerability and immortality by which man denies danger and death, to the Freudian concepts of defenses against anxiety.

He also directed many instructional motion pictures, such as The Dynamics of Experimental Neurosis (1944). He edited the annuals Science and Psychoanalysis and Current Psychiatric Therapies, and was associate editor of Psychosomatics. He was president of the American Academy for Psychoanalysis and of other learned associations, such as the American Society for Group Therapy, the American Association for Social Psychiatry, the American Society for Biological Psychiatry, the International Association of Social Psychiatry, and the American Psychiatric Association, and served as honorary president of the World Association for Social Psychiatry.

Masserman retired from his clinical practice in 1989 after fending off a flurry of accusations by former female patients of having been drugged and sexually abused. Although Masserman denied the allegations and no criminal charges were made, some of the malpractice cases were settled out of court and he was suspended from the Illinois Psychiatric Society for five years.

Masserman, Jules Homan

Massu’ot Yizhak (Heb. משועות יזרעאל), moshav shittufi on the Coastal Plain, 8 mi. (13 km.) N.E. of Ashkelon, affiliated to the Ha-Poel ha-Mizrachi Moshav movement. Massu’ot Yizhak was originally founded in 1945 by pioneers from Hungary and Czechoslovakia as a kibbutz in the Be'er Sheva Hills, the second village in the Ezyon Bloc, under the name Massu’ot ("Beacons"). The name Yizhak was added in honor of Chief Rabbi I.H. *Herzog in a ceremony attended by him. Along with the other three settlements of the Ezyon Bloc, Massu’ot Yizhak fell in the Arab Legion’s onslaught (May 13, 1948), and was completely destroyed, its surviving defenders being taken to Jordan as prisoners of war. After their release and return to Israel, they established their village on the present site (1949), several years later deciding to go over to the moshav shittufi settlement form. In 1969 the village was based on intensive agriculture and had a metal factory. Over the years the metal factory was replaced by the successful Albaad wet wipes factory. Farming included dairy cattle, field crops, poultry, avocado plantations, and some smaller branches. The population in 1968 was 403; in 2002, 548.

Mastbaum, Joel

Massu'ot Yizhak

Massu'ot Yizhak (Heb. משועות יזרעאל), moshav shittufi on the Coastal Plain, 8 mi. (13 km.) N.E. of Ashkelon, affiliated to the Ha-Poel ha-Mizrachi Moshav movement. Massu'ot Yizhak was originally founded in 1945 by pioneers from Hungary and Czechoslovakia as a kibbutz in the Be'er Sheva Hills, the second village in the Ezyon Bloc, under the name Massu'ot ("Beacons"). The name Yizhak was added in honor of Chief Rabbi I.H. *Herzog in a ceremony attended by him. Along with the other three settlements of the Ezyon Bloc, Massu'ot Yizhak fell in the Arab Legion's onslaught (May 13, 1948), and was completely destroyed, its surviving defenders being taken to Jordan as prisoners of war. After their release and return to Israel, they established their village on the present site (1949), several years later deciding to go over to the moshav shittufi settlement form. In 1969 the village was based on intensive agriculture and had a metal factory. Over the years the metal factory was replaced by the successful Albaad wet wipes factory. Farming included dairy cattle, field crops, poultry, avocado plantations, and some smaller branches. The population in 1968 was 403; in 2002, 548.

[Mastbaum, Joel (1882–1957), Yiddish short story writer and novelist. Born in Miedzyrzec, Poland, he lived in Warsaw from 1905, and from 1906 published extensively in the Yiddish press: feuilletons, short stories, folk tales, travel impressions, and chapters of novels. In 1933 he immigrated to Palestine and wrote stories about life there, collected in Yidn in Erets-Yisroel ("Jews in Palestine," 1935). Overtaken by World War II while visiting Poland, he nonetheless managed to return to Tel Aviv and describe his 60 days under the Nazis. His short stories, which were collected in several volumes beginning in 1912, have a romantic toneality. His first novels, Fun Roytn Lebn ("Red Life," 2 vols., 1912), about the revolutionary youth of 1905, and Maritats Glik ("Marita's Fortune," 1919), about three Jewish generations in Poland, had several editions in Yiddish, and were translated into Hebrew. Nokhmemes Vanderungen ("The Wanderings of Nokhem," 1925), an adventurous romance beginning in a Polish town and ending in Buenos Aires, was followed by Naye Menshn ("New Men," 1926). From a projected trilogy of Palestine between 1933 and 1948 only the first volume, Der Kayekh fun der Erd ("The Power of the Earth," 1951), was published.

Mastema

Massu’ot Yizhak (Heb. משועות יזרעאל), the name of the devil in the Book of *Jubilees. He is there identical with Satan and on one occasion the author speaks also (1:20) about spirits of Belial. Like other works originating in the broader movement within which the Dead Sea Sect came into existence, the Book of Jubilees is characterized by a dualistic trend, and in it the
devil Mastema plays a great role, being the opponent of the forces of righteousness. He is the chief of evil spirits. After the flood a tenth part of his spirits received permission from God to execute the power of his will on the sons of men and the other nine parts were imprisoned in the place of condemnation. Not God, but Mastema caused Abraham’s testing by proposing that God should require Abraham to sacrifice Isaac in order to test his love and obedience. He, and not God, sought to slay Moses on his return to Egypt at the lodging place (Ex. 4:24) and he also helped the Egyptian sorcerers against Moses and slew all the firstborn in the land of Egypt.

The name is found in Hosea 9:7, 8 as a common noun meaning “enmity.” It was not translated in the Greek version of the Book of Jubilees but transcribed in Greek characters, and thus it came into the Latin and Ethiopian versions of the book. But the normal meaning of the name is seen in the term “the prince of the Mastemah” (sar ha-Mastemah) in the same book, meaning also “the prince of enmity.” The same title occurs in its Hebrew original in the introduction of the medieval Hebrew Book of Asaph the Physician in the same context as Mastema in Jubilees chapter 10, an additional indication that this introduction depends on a Hebrew Book of Noah written by an ancient Jewish author from the same circles as those in which the Book of Jubilees originated. Mastema, i.e., the Satan, is also mentioned in the (Greek) Acts of Philip chapter 13 (Acta Apostolorum Apocrypha, 2 (1903), 7). The common noun mastema occurs in the Dead Sea Scrolls in connection with Belial, another name of the Satan frequent in the Dead Sea Scrolls and similar literature, where he is also named “the angel of Mastema.” Thus the term is typical of the whole dualistic trend in ancient Jewish literature.

[David Flusser]

MASTER, ARTHUR M. (1895–1973), U.S. cardiologist. Born in New York City, he graduated with an M.D. from Cornell University (1921). He received his clinical and research training in Mount Sinai Hospital, New York, and with Sir Thomas Lewis at University College Hospital, London, before his appointment as head of cardiology at Mount Sinai. During World War II he was consultant cardiologist at the National Naval Medical Center in Bethesda, Maryland (1942) and served with the U.S. Navy in the Pacific. He was appointed clinical professor of medicine at Columbia University, New York (1947). Master’s clinical research concerned the development of the ECG (electrocardiogram) in the diagnosis of heart disease. The stress test named after him detected cardiac insufficiency during exercise and in principle remains a part of standard diagnostic procedures.

[Michael Denman (2nd ed.)]

MAT, MOSES (c. 1551–c. 1606), Galician rabbi. Mat was born in Przemysl where his father Abraham died a martyr’s death. An intimate disciple of Solomon Luria, he taught in Belz. Subsequently he lived in Vladimir-Volynski, where his father-in-law resided and where Mat wrote his Matteh Moshe, a compendium of Jewish ritual law. The book was completed in 1584 and printed in Cracow about six years later, when Mat was already rabbi and head of the yeshivah of Przemysl. Later he lived in Lyuboml. He spent the last years of his life in Opatow. In 1590 Mat was one of the leading rabbis of Poland who signed an ordinance strictly forbidding the “buying” of rabbinical positions. Mat also wrote: Taruyag Mitzvot (Cracow, 1581), a versification of the 613 commandments, which he composed at the age of 22; a commentary on the Pentateuch and on the Five Scrolls with a supercommentary on the commentary of Rashi on these books, both of which were published after his death by his son Abraham under the title Ho’il Moshe (Prague, 1611); and Minhagei Maharshal (printed in the 1870 Przemysl edition of Jacob Zemah’s Nagid u-Mezaveh) which describes the customs and conduct of his teacher, Luria. Some of Mat’s responsa are quoted or mentioned by his contemporaries Benjamin *Slonik and Joel *Sirkes. In his Ho’il Moshe he mentions novellae which he wrote on the treatise of Ye’omamot, but which have not been published.

MAT, MOSES

MASTIC, the shrub *Pistacia lentiscus, known as “medicinal mastic.” It exudes a gum which in the Midrash is called mastihke. It has been identified by some with the *lot (AV “myrrh,” JPS “laudanum”) mentioned among “the choice products of the land” which Jacob sent to Egypt with his sons (Gen. 43:11; Gen. R. ibid.; but see “laudanum”). The Tosefta (Shab. 12:8) states that mastihke may not be chewed on the Sabbath since it is a medicine. Dioscorides states, “Its gum serves for medicine and tooth powder. It is smeared on the skin of the face to make it shine. When chewed it sweetens the breath and contracts the gums. The best mastic comes from the island of Chios” (De materia medica 1:89). To the present day a special variety of the shrub whose gum is sold as medicinal mastic is grown on the island of Chios. It is widely distributed throughout Israel, particularly in the wadis of the Judean hills, but the medicinal properties of its sap have not yet been tested. It would appear that it is to be identified with *bakhka (pl. behkha’im) of the Bible (II Sam. 5:23; I Chron. 14:14–15; AV “mulberry”; RV “balsam”), the name being connected with the “weeping” (bokhim), i.e., the excretion of the sap. The valley through which the pilgrims walked to the Temple was called emek ha-bakha (Ps. 8:7) because of the shrubs of that name growing there. The phrase was however regarded as meaning “the vale of tears” and it thus became a synonym for the exile.

[Jehuda Feliks]
Matalon, Eli 1924–1999, Jamaican politician. Matalon, a member of a prominent Jamaican Jewish family of Syrian origin, was born in Kingston and served as an officer in the Royal Canadian Air Force during World War II. In 1971, he was elected mayor of Kingston and St. Andrew. When the People's National Party came to power in February 1973, he was appointed to the Upper House as minister of state attached to the Ministry of Education, with a seat in the cabinet. On the appointment of the minister of education as governor-general, Matalon resigned from the Upper House and successfully contested the constituency of Eastern Kingston and Port Royal thus rendered vacant, becoming the first Jew to be elected to the House of Representatives in independent Jamaica. He was subsequently appointed minister of education. Matalon was one of the founders of the Hillel Academy, a primary school sponsored by the Jewish community in 1969, and served as vice chairman from its inception until he was obliged to resign in March 1973, on his appointment to the cabinet. In 1974 Matalon was appointed minister of national security and justice, a newly created post, in the Jamaican government, retiring in 1976. In later years he lived in Miami, Florida, where he died.

Matalon, Ronit 1959–, Israeli writer. Born to Egyptian-Jewish parents in a new immigrant town near Tel Aviv, Matalon later studied literature and philosophy at Tel Aviv University. She worked as a journalist at Israeli Television and the daily Haaretz. Matalon was a member of staff at the Camera Obscura School of Arts in Tel Aviv. Her first publication was a book for children, Sippur she-Mathil be-Levayah shel Nahash (“A Story Which Begins with a Snake’s Funeral,” German 1999). Following her first collection of stories, Zarith ba-Bayit (“Strangers in the House,” 1992), she published her novel Ze im ha-Panim Elenu (“The One Facing Us,” 1998), a complex, postmodernistic family saga, coalescing text and photo material, foregrounding feminine as well as ethnic concerns. Her second novel Sarah Sarah was translated into English in 2003.

Mata Mehasya, town situated in S. Babylonia, on the Euphrates River near “Sura where the river divides into two. In geonic responsa Sura is often identified with Mata Mehasya; thus Sherira Gaon in his famous letter at the end of the tenth century (ed, by B.M. Lewin (1921), p. 79, Spanish version) wrote that “after Rav came to Babylon in 219 he left Nehardea moving to a place where there was no Torah, viz., Sura, which is Mata Mehasya” (the French version reads: “Sura which is called Mata Mehasya”). The same identification is found in the work of Benjamin of Tudela in the 12th century. However, it would seem that the two places are not identical. They were two separate settlements near each other; and elsewhere in his letter (p. 84) Sherira Gaon explicitly distinguishes between the two places, stating that the school of Huna, the pupil and successor of Rav in the academy of Sura, was situated “near Mata Mehasya.” The Talmud also clearly distinguishes between the two places (Bezah 29a). Mata Mehasya is not mentioned in the Talmud before the time of “Ashi, who headed the Sura academy in the years 367–427. He extended the academy and transferred it to Mata Mehasya (pp. 90–92). Of its inhabitants Ashi said: “The people of Mata Mehasya are ‘stouthearted’ (cf. Isa. 46:12), for they see the glory of the Torah twice a year [in the *kallah months of Adar and Elul], and never has one of them been converted” (Ber. 17b). R. Mesharsheya praised the scholars of Mata Mehasya, saying: “Rather sit on the rubbish heap of Mata Mehasya than in the palaces of Pumbedita” (Hor. 12a).

Bibliography: B. Eshel, Jewish Settlements in Babylonia during Talmudic Times (1979), 149–50. [Moshe Beer]

Matas, David (1943– ), Canadian lawyer, writer, human rights activist, teacher. Matas was born in Winnipeg and had a conventional Jewish childhood in the city’s South End. His was the first bar mitzvah in the Herzlia Synagogue in 1956. Following a B.A. in mathematics and economics at the University of Manitoba (1964) and an M.A. in economics at Princeton (1965), he traveled to Oxford for his legal education, receiving the B.A. (Juris) (1967) and B.C.L. (1968). Returning to Canada, he served as clerk to Chief Justice John Cartwright in 1968–69, as a member of the Canadian government’s Foreign Ownership Working Group in 1969, and as special assistant to the federal solicitor general in 1971–72. After six years with a Winnipeg law firm, in 1979 Matas established a private practice in Winnipeg specializing in refugee, immigration, and human rights law. These areas, and his outspoken opposition to Nazi war criminals who found safe harbor in Canada, drove his professional, scholarly, and community activities. He argued several cases dealing with war crimes and hate propaganda before the Supreme Court of Canada, notably those of John Ross Taylor (1990), Imre Finta (1994), Canadian Liberty Net (1998), and Malcolm Ross (2001). He wrote numerous scholarly and journalistic articles and seven books on these topics, including Justice Delayed: Nazi War Criminals in Canada (1987), Bloody Words: Hate and Free Speech (2000), and Aftershock: Anti-Zionism and Antisemitism (2005), and taught courses in these areas at McGill University and the University of Manitoba. He was senior legal counsel to both Amnesty International Canada (from 1980) and B’nai B’rith Canada (from 1989), and was a member of the Canadian delegation to the U.N. General Assembly (1980), Task Force on Immigration Practices and Procedures (1980–81), Legal Committee on War Crimes of the Canadian Jewish Congress (1981–84), Manitoba Association for Rights and Liberties (1983–87), B’nai

[James Walker (2nd ed.)]

**MATHEMATICS.**

**Bible**

The Bible does not deal directly with proper mathematical subjects; however there are some parts that do relate indirectly to different mathematical topics. These are widely discussed by the various commentators on the Bible and Talmud: the ratio of 300:50:30 between the three dimensions of Noah’s ark (in the past, a basic ratio in shipbuilding), the mathematical model of a rainbow, the number of 220 sheep and goats sent by Jacob to Esau (220 as the first number of the smallest pair of amicable numbers), the calculations of the visibility of the crescent of the new moon, the total amount and volume of the daily *manna*, Moses’ financial report on the donations for the building of the Tabernacle (*mishkan*), the commandment of keeping exact measures and balances, chance and probability in relation to the fair division of the land of Israel, lot-drawing to insure the fair division of holy duties and privileges, the curve of “projectile motion” in relation to the unintentional killing of a man by throwing a stone, the surprising distribution of the 12 tribes into two equal groups of six on Mt. Gerizim and Mt. Ebal, and more.

The members of the tribe of Issachar were known as “Marei de-Hushbenu” – the masters of calculations – as their elders specialized in astronomical and calendar calculations. Christian scholars have dealt extensively with Bible mathematics. Among others, an early 18th-century scholar, J.J. Schmidt published an interesting tractate called *Biblicus Mathematicus* (Zuellichau, 1732) in which many biblical-mathematical subjects are discussed, often based on Jewish sources. In another tractate there is a report on a request to the rabbinical court of Frankfurt to elaborate upon the issue of the geometry of the “Sea of Solomon” in the holy Temple. Many examples of biblical mathematics can be found in *Be'er Hetev* (Vilna, 1866), a commentary on Leviticus by R. Aryeh Huminer.

**Sefer Yeziarah**

According to ancient Jewish tradition, *Sefer Yeziarah* is ascribed to Abraham, as stated at the end of *Sefer Yeziarah*. Others ascribe the authorship of the current version of *Sefer Yeziarah* to R. Akiba (second century). At its very beginning, “*sefar*” (arithmetic = the wisdom of mensuration and numbers) is mentioned as one of three dimensions in which the world was created (*Kuzari and others*). *Sefer Yeziarah* deals extensively with permutations and combinations of the 22 letters of the alphabet. The end of Chapter 4 concludes with the statement that the number of permutations of all the 22 letters of the alphabet = \(22! = 1,124,000,727,777,607,680,000\) is a number “which the mouth cannot speak and the ear cannot hear.” (It would take 3,564,182,926 people and more than 10,000 years to speak out this number, even at a rate of one number per second.) R. Joseph ben Kalonymos (the elder; mid-13th century), in his commentary to Chapter 2 – erroneously ascribed to R. Abraham ben David (1120–1198) – was one of the earliest to use the decimal system to express large numbers using Hebrew letters. This was noticed by R. *Elijah of Vilna* (1720–1797), who indicated that the Hebrew word *"א"נה* which appears in the calculations is actually the result of \(144 \times 22 = 3,168\), written in Hebrew numerals.

**Mishnah and Talmud**

The Mishnah and Talmud, dealing with all aspects of daily life, discuss many mathematical subjects. Yet the main reason for dealing with mathematics was mostly either to bolster the study of the Bible and its commandments or to clarify everyday applications of mathematical methods. As is clear from tractate *Avot*, the study and transmission of pure mathematical knowledge per se were matters of secondary importance. Nevertheless, for many practical halakhic issues, a considerable body of basic mathematical knowledge is required. The following are a few examples only: the basics of plane geometry in connection with the measuring of the Sabbath *eruv* boundary (2,000 cubits) over hills and ditches (methods of leveling); elements of knot theory in relation to the Sabbath laws; the layout of family graves; the mathematics of calculating an optimal seeding area without violating the biblical laws of prohibition of sowing with mixed seeds; the number of grapes that are within a circle with a given radius (i.e., Gauss’ circle lattice point problem); the mathematics of inheritance leading to geometric progressions and exponential equations; the calculation of square roots leading to irrational numbers; the mensuration of circular and polygonal geometric forms or the proper division of assets among people with different kinds of claims. Another well-known topic is found in tractate *Kinnim*, the last in the Mishnah order *Kodashim*. Among other things, it deals with the laws concerning the “confusion of birds,” e.g., birds assigned as sin offerings mixed up with those assigned as burnt offerings. Especially the last chapter requires advanced algebra and logic. Among the more recent mathematical commentaries are those by Moshe Koppel of Bar-Ilan University (1998) and B. Engelman of the Nahal Sorek Nuclear Research Center (1992). Knowledge of basic trigonometry and astronomy was needed for the fixing of the new month by reckoning and calculating. The exact methods used by the rabbinical court (*bet din*) were not made public. It was Maimonides who described appropriate calculations in his “Laws of Sanctification of the New Month” in his *Mish*-
Many of these topics were discussed and elaborated upon by commentators throughout the ages. It has to be remembered that most of these scholars had acquired their knowledge autodidactically and lacked any formal education. From a comment by R. Hai Gaon on Mishnah Kelim (16:1; 24:7) it seems that the Pythagorean writing table (abacus) and “Indian arithmetic” (i.e., numeration system and numerals) were known and in use at this time (Smith 2, 177). Although the Mishnah and Talmud use an approximation of 3 for the better value of 3.1415… for π, it is clear from various discussions in the Talmud, that the *amora'im must have been aware of much better values for both π and √2.

The Mishnah and Talmud mention a few individuals as having outstanding mathematical knowledge. Rabban *Gamaliel, who used a Heron-type of dioptre to reckon distances; R. *Eleazar Hisma and R. *Johanan ben Gudgada, whose vast mathematical knowledge was described as enabling them to estimate “the number of drops in the sea”; R. *Zadok, who revealed to the Romans an advanced system of finger-calculation as well as the underlying mathematics of what later came to be known as the “Roman Stvatra” (steelyard). R. *Joshua b. Hananiah – called the Escolasticus – was versed in astronomy and mathematics. R. *Abba'hu is mentioned as having calculated the length of the cycle of service of the different tribes in the Holy Temple. The amora *Samuel Yarihna'im was versed in calendar calculations. This enabled him to calculate the calendar for the Diaspora for more than 60 years in advance. Nevertheless this knowledge was called “simple calculation,” as it did not show a deeper understanding of Jewish law proper. In the name of the amora *Adda a more accurate estimate of the duration of the seasons is reported. The Talmud also mentions a “Kippah shel Hesbonot,” i.e., a covered place outside Jerusalem serving people visiting the holy city in arranging their financial calculations and transactions.

Mishnat ha-Middot. Bible commentators of the Middle Ages mention the existence of a treatise called the Baraita of 49 Rules (Middot). This treatise from the tannaitic era was said to contain geometrical formulas and calculations. It was Abraha'm ben Solomon, the son of R. Elijah of Vilna (the Gaon of Vilna) in his Rav Peidim (Warsaw, 1894), who first drew attention to this treatise, though without any existing copy of it was known. In 1864 Moritz Steinschneider found a Hebrew mathematical manuscript, identified it as Baraitat ha-Middot and published it in 1864. A critical edition including the geometrical drawings omitted by Steinschneider was published by the mathematician Hermann Schapira in 1888 as Mishnat ha-Middot. Among other things, Mishnat ha-Middot contains the Pythagorean formula allowing the calculation of the square root of 2 and uses a value of 3½ for π. Haim Horovitz of Frankfurt tried to prove that this Mishnat ha-Middot was actually part of a Tosefta to the Mishnah tractate Middot (describing the measurements of the Holy Temple). This suggestion was later supported by the discovery of additional fragments and accepted by Solomon *Gandz in his critical edition of the Mishnat ha-

Middot. This suggests that the Mishnat ha-Middot is one of the oldest known Hebrew mathematical works.

The Era of the Geonim

R. *Nahshon bar Zadok, who headed the yeshivah of *Sura from 874 to 882, stated that the order of the weekdays on which any particular festival occurs in successive years repeats itself after a cycle of 247 years. Thus he was able to arrange these years and their characteristic dates in 14 tables. This system is known as “Iggul de-Rav Nahshon” (R. Nahshon’s cycle). R. Abraham Azulai (1570–1643) explains in Nahshon Gaon’s name the concept of “amicable” (or “friendly”) number pairs. He also mentions the common belief in the peacemaking powers of these pairs of numbers. This was known to Jacob and explains the number of 220 sheep and goats that Jacob sent to his brother. The suggestion has been made that R. Nahshon Gaon received this information from his contemporary Thabit ibn Qurra (836–901), a Sabean mathematician in Baghdad famous for his work in amicable numbers. R. *Hai ben Sherira (939–1038), head of the yeshivah of *Pumbedita, in one of his responses, explains the use of the Heron-type dioptra used by Rabban Gamaliel. His mathematical description of the various methods is practically identical to the way Heron himself described it in his book, including the accompanying diagram. This gives rise to the conjecture that R. Hai Gaon was familiar with the original source of Heron himself. The gaon who dealt most extensively with mathematical subjects was R. *Saadiah ben Joseph (892–942), head of the yeshivah of Sura. Examples are his commentary on Sefer Yezirah and his Sefer ha-Yerushot (“The Book of Inheritances”). The latter is an extensive mathematical-halakhic text showing how to divide an inheritance according to Jewish law. Other figures from this era who commented on mathematical subjects were Rabbench *Hananel ben Hushiel, head of the yeshivah of Kairouan (980–1050), in his commentary to the Talmud and R. *Shabbetai Donnolo (913–c. 982), an Italian physician and writer on medicine, in his Takhemoni, a commentary on Sefer Yezirah.

11th and 12th Centuries

France. The *tosafists concentrated their literary efforts on the elucidation of the Bible and the Talmud and did not hand down much mathematical work per se. Although they had no formal education in mathematics, and in most cases had no possibility of learning from Greek or Latin sources, they did acquire some basic knowledge in an autodidactic way. Thus they commented on various talmudic discussions involving arithmetic and simple geometry. On the one hand their comments show a basic knowledge of arithmetic, e.g., in proposing several ways to calculate the connection between the basic halakhic unit of a ¼ of a log (revi'it) and the required amount of 40 se'ah of pure water for the ritual bath – the *mikveh – yet it seems that some of the tosafists were unaware of the Pythagorean law and did not have a good approximation of π or of irrational numbers like √2 or √5. But evidently they were aware that surveyors used a better value than 3. They also used
a method of applying and proving the Archimedean formula for the calculation of the area of a circle based on the radius and the circumference. It is highly probable that they adopted the method of their Spanish contemporary R. *Abraham bar Hīyya. His geometrical treatise Hībir ha-Meshiḥah ve-ha-Tishboret ("Treatise on Mensuration and Calculation") was written for the rabbis of southern France. *Rashi (1140–1205), the forerunner of the tosafists, himself used a very interesting geometric method for calculating the square root, a method which had its sources in the Jerusalem Talmud. One of the tosafists, R. *Asher ben Jehiel (called the "Rosh"; c. 1250–1327), raised the following question: Why does the Talmud, as a book of law, discuss an inaccurate approximation of 3 for the value of π rather than using a better value, which had been known for a long time? The place for such an excursus would be a geometry text and not the Talmud. In reply, he showed that the famous Mishnah in question (Er. 1:6) was not intended to teach a geometrical principle but rather to introduce the halakhic rule that in certain instances this approximate value of 3 should be used. After his escape from Germany to Spain, R. Asher ben Jehiel asked one of his disciples – the astronomer R. Isaac ben Joseph *Israel – to elaborate on the Pythagorean law and other geometric principles. It was in response to this request by R. Asher ben Jehiel that he wrote his famous trigonometric-astronomic treatise Yosod Olam.

Spain and Portugal. In Spain and Portugal Jewish intellectual and scientific growth continued to flourish. There was a lively exchange of mathematical knowledge between Jews and Arabs, and many Arabic mathematical ideas are reflected in Jewish literature. Likewise Jews contributed much to the Arabic corpus of scientific knowledge. Thus one finds much more elaborated mathematical ideas in both talmudic literature proper and original mathematical works.

Among the best-known mathematical figures of the 11th and 12th centuries was the above-mentioned Abraham bar Hīyya. Until the publication of Hībir ha-Meshiḥah ve-ha-Tishboret in 1910, this mathematical magnum opus was known only in manuscript. This text is probably the earliest post-talmudic mathematical text per se. The author states that the reason he compiled the discourse was the lack of knowledge of geometry among the Jews of southern France. As he writes in his introduction, the text was meant to serve as a textbook for judges who had to deal with legal issues concerning the surveying and measuring of fields. Towards the end Bar Hīyya provides an interesting demonstration – using a model built from concentric circles of thin rope – of the Archimedean formula for the calculation of the circle’s area based on its radius (r) and its circumference (c) [½·c·r], without actually using the value of π. It is this very demonstration that is used by the tosafists in their Talmud commentary. Bar Hīyya gives the fair approximation of 1.4143 (1 ²/5 + ½) for the square root of 2 and 3.141593 for π. He was also among the first to introduce to Europe the complete solution of quadratic equations. This fine textbook was translated by Plato of Tivoli in 1145, just a few years after the death of Bar Hīyya, under the title Liber Embadorum.

Other works by Bar Hīyya dealing with mathematics are Zarat ha-Areẓ ("Form of the Earth"), a basic introduction to spherical trigonometry and astronomy, and Sefer ha-Ibbur ("Book of Intercalation"). Based on a statement by Maimonides, it seems that he knew this text. Another work of his is Yesodot ha-Tevunah u-Migdal ha-Emunah ("The Foundations of Understanding and the Tower of Faith"), an encyclopedia on arithmetic, geometry, optics, astronomy, and music. Parts of it were translated into Latin by the Hebraists Sebastian Münster (1488–1552) and his disciple Erasmus Oswald Schreckenfuchs (1511–1575).

Abraham b. Meir ibn Ezra. *Ibn Ezra (1092–1167), a tosafist, was one of the most prolific commentators on the Bible, who at the same time also wrote extensively on mathematics. The best known of his mathematical contributions are Sefer ha-Shem ("Book of the Holy Name"), Sefer ha-Ehad ("Book of the Number 1"), Sefer Keli ha-Nehoshet ("Book of the Copper Instrument [i.e., the astrolabe]"), and Sefer ha-Mispar ("Book of Numbers"). (Some 100 years later, Jacob b. Machir ibn Tibbon, known as Profatius Judeaus, invented an improved version of the astrolabe, known as the quadrant.) Ibn Ezra also translated into Hebrew the commentary of al-Biruni on al-Khwarizmi’s tables. In the introduction to this work he gives an historical account on the involvement of Jews in the introduction of Indian mathematics to the Arabic world. Ibn Ezra is one of the earliest Hebrew writers to introduce the “0,” which he called galgal (wheel). In his Sefer ha-Mispar Ibn Ezra presents many exercises, which also appeared more than 250 years later in the Sefer ha-Mispar of Elijah *Mizrahi. In addition, Ibn Ezra deals with the mathematics of inheritance and with the history of π and mentions perfect numbers. He is also famous for his “prisoner problem,” a mathematical puzzle first presented by *Josephus Flavius in his Jewish War and which is often used in introductory courses in mathematical programming. Many scientific articles have been written on Ibn Ezra’s mathematical writings.

Maimonides. Aside from a short tractate on calendar calculations, the works of Maimonides (1135–1204) are primarily nonmathematical. Yet in his Mishnah commentary Maimonides mentions that the ratio between the circumference of a circle and its diameter (π) cannot be expressed as a ratio of two natural numbers, and that this fact is not due to a lack of our understanding but is in the very nature of this number. He further states that there is no possibility to know the exact value of this ratio, that mathematicians have written various treatises on this subject, and that the approximation used by scientists is ²²/₇. Yet in his halakhic Mishneh Torah Maimonides requires the use of the old talmudic (and Babylonian) approximation of ³. A similar statement by Maimonides relates to two other irrational numbers, namely ½ and ½√5000. It is interesting to note that in the Western world it was Lambert (1728–1777)
who first proved the irrationality of π in 1761. Much has been written in rabbinic literature about Maimonides’ geometrical explanation of the mishnayot in Kilayim 31 and 53. In his Moreh Nevukhim (Guide of the Perplexed), Maimonides mentions the difficulty in imagining the concept of the hyperbola and its asymptote, i.e., a curved line and a straight one, constantly approaching one another ad infinitum, without ever meeting. This subject – including the detailed explanations of the Jewish writers – was later elaborated by S. Motot, a 14th-century Jewish mathematician, and by Francesco Barozzi in his Admirandum Illud Geometricum Problema, Tredicim Modis Demonstratum (Venice, 1585).

13th and 14th Centuries

Levi ben Gershon. *Levi ben Gershon (Ralbag/Gersonides; 1288–ca. 1344) was probably the most advanced Hebrew mathematician of his generation. Widely known for his biblical commentaries, he dealt with all the three branches of Arabic mathematics: arithmetic, geometry, and trigonometry. An extensive corpus of research about Gersonides has come into being (spearheaded by Bernhard Goldstein of Yale University). A comprehensive bibliography on Gersonides has been published by Menachem Kellner of Haifa University (1992). Gersonides mentions both Abraham Ibn Ezra and Abraham bar Hiyya as sources from which he derived some of his knowledge. His arithmetical works – Ma‘aseh Moshe (“The Practice of Arithmetic”) and “De numeris harmonicos” have been studied since the publications of Ma‘aseh Moshe by R. Joseph Carlebach of Hamburg, and some years later, at the beginning of the 20th century, by Gerson Lange. A hitherto missing part of problems of Ma‘aseh Moshe has been published by S. Simonson of Stonehill College. In this treatise Gersonides deals with arithmetic, algebra, and combinatorics. The short tractate on harmonic numbers was written as a response to an inquiry by Philip of Vitry, the bishop of Maux, shortly before Gersonides passed away. Another mathematical work is a commentary on Euclid’s Elements. Gersonides’ text on trigonometry, *De sinibus, chordis et arcubus* (originally written in Hebrew but immediately translated into Latin) is a commentary on the relevant chapters of Ptolemy’s *Almagest* and was originally part of Gersonides’ major work Milhamot Adonai (“The Book of the Wars of the Lord”), part v, ch. 1. It was omitted in the printed Venice edition of 1560. In it, Gersonides presents a proof of the theorem of sines. He had arranged for a translation into Latin which is still extant. Carlebach showed that Gersonides was the inventor of the “cross-staff” (sometimes called “hacculus” or “Jacob’s staff”), a simple yet powerful surveying device which allowed nautical and astronomical measurements. Carlebach even reconstructed a model of this instrument following Gersonides’ description. The Jacob’s staff was in use until the 17th century.

Immanuel ben Jacob Bonfils. Another Jewish mathematician of this era is Immanuel ben Jacob *Bonfils of Tarascon (1300–1377), a contemporary of R. Levi b. Gershon. He is known as Ba‘al Kenafayim after his astronomical tables published under the name of Shesh Kenafayim (“Six Wings”). Bonfils taught astronomy and mathematics at Orange for some time. He also was one of the forerunners of exponential calculus, some 150 years before its adoption in Europe, as is evident from his Derekh Hilluk. A great number of his many mathematical and astronomical works are still in MS. A special volume on the history of science in the Middle Ages by G. Sarton was called Six Wings after Bonfils’ astronomical tables.

Important findings relating to Jewish mathematics in the 12–14th centuries have been contributed by various researchers, among them G. Freudenthal, G. Safatti, T. Levy, and D. Zeilberger.

15th Century

Moses ben Abraha am Provencal. Moses ben Abraha am *Provencal (1503–1575) was considered one of the greatest talmudists and most illustrious scholars of Italian Jewry in the Renaissance period. For many decades he was rabbi of the Italian community of Mantua, which therefore became a center of talmudic study. His mathematical knowledge is evident from his Be‘ur Inyan Shenei Kavvim. In his Guide of the Perplexed Maimonides mentions the concept of the asymptote, a straight line constantly approaching a curved line without ever touching it, referring to the *Comics* of Appolonius. Provencal wrote a four-page Hebrew explanation of this subject, which was added to the Sabionetta (1553) edition of the Guide of the Perplexed. This kuntres (pamphlet), which became famous, was translated into Italian by Joseph Shalit (Mantua, 1550) and was included in the well-known volume on the concept of the asymptote by Francesco Baroccius (Venice, 1586). The latter also contains geometric explanations by other Jewish commentators on the Guide of the Perplexed. The subject itself became a major topic of rabbinical mathematics and was discussed in rabbinical literature from the 14th to the 19th centuries. It has been suggested that Provencal was familiar with Simon Mottot’s book on algebra. In his pamphlet, Provencal includes an explanation of the Greek concept of the “mean and extreme proportion” (the “golden section”) and proofs related to the connection between the lengths of the sides of a regular hexagon and a regular decagon, both inscribed to the same circle. This concept, described by Euclid and mentioned by Joseph Albo in his Sefer ha-Ikkarim, inspired many discussions in the rabbinical literature, mainly because of the lack of knowledge of the proper definition of the Greek concept of “mean and extreme proportion.” Provencal specifically refers the reader to the source in Euclid’s Elements.

Mordecai Comtino. Mordecai Comtino (1420–d. before 1487) was the teacher of R. Elijah ben Abraham *Mizrahi. He was on friendly terms with the Karaites and was the teacher of two of their leaders, Caleb *Afendopolo and Elijah *Bashyazi. His literary output includes Sefer ha-Heshbon ve-ha-Middot on arithmetic and geometry and commentaries on Abraham Ibn Ezra’s Sefer ha-Ehad, Yosef Mora, and Sefer ha-Shem, in which various mathematical subjects are discussed. His Sefer ha-Heshbon ve-ha-Middot was known only in manuscript un-
til a careful analysis and partial translation was published by Moritz Silberberg of Schrimm in 1905. The plan of this treatise follows a statement of the Greek Nichomachus of Gerasa regarding the logical order of basic mathematical subjects. Following Ibn Ezra, Comtino introduces the full decimal numeration, including the "0," which again he called "galgal" (the wheel). After introducing standard subjects in the first part, on arithmetic, Comtino deals with the measurement and division of plane figures and then proceeds to calculation of volumes of geometrical bodies and their parts. He also provides a detailed vocabulary of the different scientific terms. A special addition is the collection of problems part of which are borrowed from Ibn Ezra. Mizrahi in his Sefer ha-Mispar (see below) drew upon some of the problems presented by Comtino. Besides this, Comtino also dealt with the construction of astronomical instruments.

ELIJAH BEN ABRAHAM MIZRAH. Mizrahi (Re'em; c. 1450–1526) is known primarily from his famous supercommentary to Rashi's Bible commentary. Mizrahi's mathematical works are Sefer ha-Mispar (Constantinople, 1534), on arithmetic, and a commentary on Ptolemy's Almagest (no longer extant). The former book became a standard text for the study of arithmetic. It deals with whole numbers, fractions, and mixed numbers, with the extraction of the square and cube roots, proportions, and arithmetical and geometrical problems. In his lengthy introduction he describes the importance of the study of mathematics as a bridge between the different sciences. Sefer ha-Mispar is based on Ibn Ezra's Sefer ha-Mispar and the mathematical work of his teacher Mordecai Comtino (see above). A Latin abridgment by Sebastian Muenster was published by his disciple Schreckenfuchs (Basel, 1546). At the end of the 19th century an in-depth description of Sefer ha-Mispar (Die Arithmetik des Elia Misrachi) was published by Gustav Wertheim (Frankfurt, 1893). An excerpt and analysis of those of his mathematical problems related to physics (Uber physikalische Aufgaben by Elia Misrachi) was prepared by E. Wiedeman in 1910.

MORDECAI B. ABRAHAM FINZI. Finzi (c. 1407–1476), a banker and mathematician, was known mainly for his mathematical and astronomical works, which included Luhot, tables on the length of days (published by Abraham Conat, Mantua, c. 1479), and an astronomical work entitled Netiv Hokhmah (unpublished). He translated into Hebrew the Algebra of the Arab mathematician Abu Kamil Soga (c. 850–930). In 1343, a young Jewish mathematician by the name of Joseph Weinberg, submitted a critical edition of Finzi’s translation as a thesis to the University of Munich. (Weinberg later was murdered by the Nazis.) An English translation of Finzi’s commentary on Abu Kamil’s Algebra was published in 1966 by Martin Levey. Finzi also translated into Hebrew various works on astronomy and geometry, wrote commentaries on some of them, described and explained recently invented astronomical instruments, and wrote treatises on grammar and mnemonics.

ABRAHAM BEN SAMUEL ZACUTO. Zacuto (1452–c. 1515) was known as a talmudic scholar, historian, mathematician, and astronomer. He was appointed professor of astronomy and mathematics at the University of Salamanca. His famous almanacs and astronomical tables became a principal base for Portuguese navigators. Thus, Columbus, whom he met in Salamanca, was able to garner important information before his famous expedition. Using the tables of Zacuto, Columbus was able to predict an eclipse of the moon and so save the lives of his men by demonstrating to hostile natives that he could shut out the light of the sun and moon. R. Levi ben Habib, a contemporary of Zacuto, remarks in one of his responsa that Abraham Zacuto wrote a commentary on the Talmud, from which he quotes a small geometrical explanation. Zacuto’s well-known Sefer Yuhasin contains several references to mathematics.

16th and 17th Centuries

DAVID B. SOLOMON GANS. The astronomer, mathematician, and historian David b. Solomon Gans (1541–1613) was raised and educated in the home of R. Moses Isserles, the Rema. He also belonged to the circle of Judah Loew ben Bezalel (the Maharal). Gans was in close contact with Tycho Brahe and Johann Kepler. Besides his history, Zemah David, Gans compiled an astronomical–mathematical textbook called Nehmad ve-Na’im (Jesnitz, 1743), an extract of which appeared in Prague in 1612 under the name of Magen David. In the preface to Nehmad ve-Na’im he presents an abridged history of the transmission of mathematics and astronomy among the Jews, based on Jewish sources. The main part is devoted to pre-Copernican celestial mechanics, whereas toward the end he introduces basic instrumentation as well as trigonometry and its applications in daily life, enriching the text with many contemporary examples.

MENAHEM ZION PORTO (RAFA). Porto was an Italian rabbi born in Trieste toward the end of the 16th century; he died in Padua around 1660. He was an excellent mathematician and astronomer. His works were highly praised by Andrea Argoli and extolled in Italian sonnets by Tomaso Ercaloni and Benedetto Luzzatto. In 1641 Gaspard Scappius, editor of the Mercurius Quadrangularis, recommended Porto, in terms that were very complimentary to the rabbi, to Johannes Buxtorf (the younger), with whom Porto later carried on an active correspondence. Among other works, Porto published a “Handbook for the Merchant” (Over la-Soher, Venice, 1627), a compendium of basic arithmetic and many examples of business calculations for merchants. He also published a two-volume treatise of close to 400 pages – פורטואנוניוס מציון פעמיים – Porto Astronomico – dealing with trigonometry and astronomy.

JOSEPH SOLOMON ROFE DELMEDEGO. Delmedego (YaSHaR; 1591–1655) studied mathematics, mechanics, and astronomy under Galileo at Padua. His major work, Elim (Amsterdam, 1629), is a classic compendium of 17th-century mathemat-
ics, physics and astronomy, and scientific instruments. He 
describes his use of Galileo’s telescope to observe the planet 
Mars. Delmedigo displays a profound knowledge of the Greek, 
Renaissance, and contemporary literature dealing with 
mathematics and physics. The first part of Elim contains math-
ematical discourses dealing with both classical problems of 
Greek mathematics like the solution of the famous Alexan-
der problem leading to Diophantine equations, the trisection 
of angles using the Conchoid of Nichomedes, the calculation 
of the octagon, and post-Renaissance mathematics like the 
solution of the cubic equations or the “squaring” of a circle, 
and the $355/113$ and Ludolphine approximations to $\pi$. In Mayan 
Ganim Delmedigo deals mainly with spherical trigonometry, 
with the proof and application of the law of sines, the history 
of trigonometry, the prosthaphaeresis (trigonometric formulas 
for the conversion of a product of functions into a sum or a 
difference), and the law of tangents of the sine function. Gevorut 
Adonai deals mainly with astronomy but has some mathemat-
ics as well. Another part, Ma’ayan Hattum, is devoted mainly 
to the discussion of physical problems and paradoxes – mostly 
from Aristotle’s Mechanical Problems – as well as to topics 
from early 17th-century classical physics.

JAIR HAYYIM BACHARACH. *Bacharach (1638–1702), rabbi 
of Worms, had a keen interest in mathematics. His first vol-
ume of responsa, Hut ha-Shani (“Scarlet Thread,” Frankfurt, 
1679) contains a lengthy responsum (§98) dealing first with 
talmudic metrology and then, in the second part, with many 
mathematical subjects. His main source is Gevorot Adonai 
by Joseph Solomon Delmedigo (see above). He mentions Hero’s 
formula for extracting the square root, the (Roman) system of 
finger calculation, the approximation of a circle’s circumfer-
ence by polygons, mathematical problems from the Sefer ha-
Mispal of R. Elijah Mizrahi (see above), the famous Alexander 
problem from R. Joseph Solomon Delmedigo, and others. In 
his second volume of responsa Havvat Ya’ir, Bacharach deals 
at length with the Euclidean concept of “mean and extreme 
proportion” (the golden section) mentioned by R. Joseph Albo 
in his Sefer ha-Ikkarim (Responsa §111).

MOSES HEFETZ GENTILI. In both his Hanukkat ha-Bayit 
(Venice, 1696), on the architecture of the Temple, and Me-
lekhet Malshevet, a commentary on the Torah (Venice, 1710), 
Gentili (1663–1711) presents material that reflects mathemati-
tical thinking. Referring to the weekly portion of Noah, he 
describes Descartes’ mathematical model of the rainbow and 
in his commentary to the weekly Torah portion Ma’asei, he 
describes Tartaglia’s model for the motion of a projectile. In 
Hanukkat ha-Bayit he makes extensive use of the “Pythago-
orean theorem” in discussing the structure of the altar.

ELIJAH BEN SOLOMON ZALMAN OF VILNA. Already in his 
very early life *Elijah ben Solomon Zalman (the Vilna Gaon; 
1685–1779) showed great interest in the study of mathemat-
ics and astronomy as an aid to furthering and deepening 
the study of Jewish law. In his halakhic commentary on the 
Shulhan Arukh he added a great number of notes which dis- 
lose his profound mathematical and astronomical knowledge. 
He encouraged his students to translate basic mathematical 
texts into Hebrew, and even wrote a small and very concise 
tractate on arithmetic, geometry, and trigonometry with an 
introduction to basic astronomy (Ayil Meshulash, 1834). An 
analysis and description of Ayil Meshulash was published 
by Elias Fink (Elijah Wilna und sein elementar-geometrisches 
Compendium, Frankfurt, 1903). Fresh interest in this compe-
dium was aroused with the publication of a new edition with 
a modern Hebrew commentary. One of his students, Baruch 
*Schick, a rabbi and physician, published various Hebrew texts 
on astronomy and medicine as well as a Hebrew translation 
of the first six books of Euclid’s Elements.

RAFAEL LEVI OF HANOVER. Raphael Levi *Hannover (1685–1779) showed his mathematical talent already as a child, 
when studying at the Jewish orphanage. One day, upon re-
turning from his studies, observing the construction of the 
new royal stables in Hanover, he was able to prevent a seri-
ous engineering mistake. This drew the attention of Leibniz, 
the famous mathematician, who after meeting the young Ra-
phael Levi offered to pay part of his tuition and to tutor him 
privately in mathematics and astronomy. In the last paragraph 
of his Tekhnat ha-Shamayim (Amsterdam, 1756) on geo-
metry, trigonometry, astronomy, and calendar-making, Levi de-
scribes and strongly supports the Copernican system. In an 
addendum, Raphael Levi’s disciple Moses Titkin elaborates 
a few difficult talmudic passages connected to mathematics. 
In addition to the Hebrew works, Raphael Levi also invented 
a system of using logarithms in currency conversions and 
rote two mathematical compendia in German: (1) Wech-
sel-Tabellen Tractaetgen (Hanover, 1746), tables for currency 
conversion, and (2) Vorbericht vom Gebrauch der neuferfun-
denen Logarithmischen Wechsel-Tabellen (Hanover, 1747), a 
preliminary report on the use of the newly invented logarith-
mic currency conversion method. This latter text contains a 
good deal of advanced exercises and numerical examples. He 
also left a Hebrew manuscript of the first part of an introduc-
tion to algebra.

Among many other individuals who dealt with mathemat-
ical subjects were R. Yom Tov Lipmann *Heller Waller-
stein (1579–1654), a disciple of the Maharal, who used his ex-
tensive knowledge of mathematics and astronomy throughout 
the whole of his commentary Tosefot Yom Tov to the Mishnah. 
R. David *Nieto of London (1654–1728), in his Kuzari Shenit, 
devoted a whole chapter to the explanation of some of the geo-
metrical issues discussed in the Talmud and the commentary 
of the tosafists and many others.

18th Century
The expansion of general knowledge caused a shift in the 
content of rabbinical mathematics, from basic arithmetic 
and geometry only to a much broader scope of talmudic sub-
jects related to mathematics. This was made possible by the 
availability of the Hebrew texts of Abraham Ibn Ezra, Elijah
Mizrahi, Joseph Solomon Delmedigo, and others mentioned above. Topics like cubic equations, arithmetic and geometric progressions, logarithms, spherical trigonometry (for calculations not connected directly to astronomy), the use of trigonometric tables, logarithms, and methods similar to calculus – like analysis of functions for maxima and minima – were used. This brought forth a great number of texts containing mathematical excursuses.

At the beginning of the 18th century R. Samuel Schotten mentions in his Kos ha-Yeshuot (Frankfurt, 1711) his plan to publish a collection of talmudic-mathematical essays. His basic knowledge in mathematics enabled him to give several approbations to Hebrew astronomical texts. Some years later Jonathan of Ruzhany published his Yeshu'ah be-Yisrael, a commentary on the laws of Kiddush ha-Hodesh (concerning the blessing of the New Moon) in Maimonides’ Mishneh Torah (Frankfurt, 1720). This tractate has an interesting appendix on some halakhot requiring basic mathematical knowledge. In the same year, Jonathan published a compendium of three astronomical works which naturally contain various mathematical elaborations. Some years later R. Emanuel Haï Rikki (1680–1744) published his Hoshov Mahashavot (Amsterdam, 1727), an interesting halakhic-mathematical discourse of 70 short chapters based on an inquiry concerning the measurements of a mikveh (ritual bath). Within these discussions he elaborates the subject of measuring the circumference of a circle, the calculation of √2, and the concepts of asymptotes, and shows how to calculate and to graph two curved functions, each approaching the other without ever touching it. R. Jonah *Landsofer’s Me’il Zedakah (Prague, 1757) contains a responsum (§28) – an answer to an inquiry from a “learned man well versed in geometry” – elaborating the geometrical aspects of the altar in the holy Temple as discussed in the Talmud. This subject is often discussed in talmudic literature. In his answer, Landsofer shows his profound knowledge of the relevant texts and also provides a proof of the Pythagorean Theorem. This responsum follows the previous one (§27) dealing with the area calculations of various shapes, all of the size of a “lense.” In 1794, David Pavuni published Zikhron Yosef, a textbook on arithmetic, geometry, and plane and spherical trigonometry. In the introduction he explains some of the geometrical aspects underlying Maimonides’ commentary to the Mishnah Kil‘aim 5:5. Three years later, David Friesenhausen published his Keli ha-Heshbon (Berlin, 1797), in collaboration with the Jewish Freeschool in Berlin. This text, an introduction to algebra, contains a variety of challenging examples and exercises. Among the more interesting topics are arithmetical and geometrical series, cubic roots, and Lambert’s law concerning the brightness of an illuminated surface.

Towards the end of the 18th century and in connection with the social emancipation and the resulting assimilation of the Jews, Jewish mathematics began to develop into two main streams: the traditional Jewish talmud scholar who used mathematical knowledge mainly for the purpose of expounding religious subjects and the new type of a modern mathematician of Jewish origin who pursues mathematics as an academic profession.

19th Century

The study of mathematics in the 19th century is widely characterized by the efforts of the *Haskalah movement to introduce general secular education among the Jews. It was one of the goals of the Haskalah to show that the Jewish people too have a basic mathematical tradition. Therefore one finds regular contributions on mathematics in periodicals like Sulamith in German, Ha-Meassef, Ha-Zefirah, and Ha-Carmel in Hebrew – dealing with the study of mathematics in the framework of talmudic studies or dealing with mathematical problems as such. One of the first texts of the 19th century was Beirurei ha-Middot by Tovia Segal of Horoshitz (Prague, 1807), on the geometry of Sabbath distances and diameters of levitical cities. This text contains an introduction to geometry and trigonometry using logarithms. At the beginning of the 19th century Meyer Hirsch published a textbook/collection of exercises on geometry, Sammlung Geometrischer Aufgaben (Berlin, 1809). This collection of problems was used in Germany for almost a century and contains a formula proposed by the 15th-century Simeon ben Zemah *Duran. A little later (1828–31) Michael *Creizenach, a teacher at the Frankfurt Philanthropin Reform school, published a series of textbooks on descriptive geometry, algebra, and technical geometry. In the first quarter of this century the first Hebrew article on “binary numbers” (a basic concept in computer engineering and digital electronics) was written by R. Zechariah *Jolles. (The author passed away two years before George Boole published his paper taking up again the concept of “binary numbers” in 1854.) Jolles’ paper is basically a translation and elaboration of Leibniz’s famous paper on the same subject. It is included, among other mathematical writings, in his Ha-Torah ve-ha-Mmelot ha-Hokhmah (Vilna, 1913). In 1834 Hayyim Selig *Slonimsky published his Mosdei Hokhmah, an introduction to mathematics. A second edition of David Friesensohn’s Keli ha-Heshbon was reprinted in Zolkiev in 1835. In 1845 the famous Leopold *Kronecker (baptized 1863) began his brilliant career as mathematician after receiving his Ph.D. In 1856 the great historian of mathematics Moritz Cantor published his fundamental paper “Ueber die Einführung unserer gegenwärtigen Ziffern in Europa” (“On the Introduction of Our Present Numerals in Europe”). Later on he published his monumental Vorlesungen über Geschichte der Mathematik (“Lectures on the History of Mathematics”), which is considered as marking the beginning of the modern history of mathematics. In keeping with the spirit of the Haskalah, the works of Joseph Solomon Delmedigo were reprinted (Odessa, 1865) as was Shevilei de-Raki’a by Eliaj Hochheim (Warsaw, 1865). The editor of this tractate, Baruch Lowenstein, added a monograph of his own, Bikkurei ha-Limmudiot (“Firstlings of Mathematics”), discourses on various historical topics in Jewish mathematics. About the same time Zevi ha-Cohen *Rabinowitiz published his fine series of Hebrew texts on popular experimental physics, Yesodei
**Hokhmat ha-Teva** (Warsaw, 1865), including special parts on mathematics and a short bibliography of Hebrew mathematical works. In those years Yom Tov Lipman *Lipkin – a son of the famous R. Israel *Lipkin Salanter, the founder of the *Musar movement – invented the “Lipkin linkage,” a mechanical device to transform circular motion into linear motion, and became a famous mathematician who contributed mathematical problems to the Ha-Zefirah periodical. In the last quarter of the 19th century the first modern systematic texts on Jewish mathematics appeared: Baruch *Zuckermann’s *Das Mathematische im Talmud (Breslau, 1878; see J. Szechman, “Notes on Dr. Zuckermann’s Introduction to his Mathematical Concepts in the Talmud,” in: *Scripta Mathematica*, vol. 25 (1960), pp 49–62). The most important work in this field is Moritz *Steinschneider’s series of articles on Jewish mathematics, published between 1893 and 1898 in Enneström’s *Bibliotheca Mathematica*. Part of these articles (covering the 9th–16th centuries) were reprinted as *Mathematik bei den Juden* in 1964. Additional relevant information can be found in Steinschneider’s contributions to the famous *Realencyclopaedie* by Ersch and Gruber. This was made possible with the opening of German and Italian libraries, allowing the study of ancient Hebrew mathematical manuscripts and books. In 1879 Hermann *Schapira, at that time still a student in Heidelberg, edited and published a German translation of the Mishnath ha-Middot, discovered by Steinschneider in 1864. Towards the end of the 19th century Gustav Wertheim published *Elemente der Zahlentheorie* (Leipzig, 1887) and some years later an interesting monograph on the mathematics of Elijah Mizrahi (*Die Mathematik des Elia Misrachi*, Frankfurt, 1893). A year later Israel Michel Rabinowits of Paris published a Hebrew introduction to the Talmud containing an interesting appendix on the extraction of square roots, based on Heron’s algorithm, as well as a discussion of negative and irrational numbers (*Mavo le-Talmud*, Vilna, 1894).

**20th Century**

Jewish mathematicians continued to make major contributions throughout the 20th century and into the 21st, as is evidenced by their extremely high representation and books. In 1879 Hermann *Schapira, at that time still a student in Heidelberg, edited and published a German translation of the Mishnath ha-Middot, discovered by Steinschneider in 1864. Towards the end of the 19th century Gustav Wertheim published *Elemente der Zahlentheorie* (Leipzig, 1887) and some years later an interesting monograph on the mathematics of Elijah Mizrahi (*Die Mathematik des Elia Misrachi*, Frankfurt, 1893). A year later Israel Michel Rabinowits of Paris published a Hebrew introduction to the Talmud containing an interesting appendix on the extraction of square roots, based on Heron’s algorithm, as well as a discussion of negative and irrational numbers (*Mavo le-Talmud*, Vilna, 1894).

[Shimon Bollag (2nd ed.)]

27% for the Fields Medal (the “Nobel Prize of Mathematics”) and 40% for the Wolf Prize. Of those still active around the outpost of the 20th century mention may be made of Rudolf Otto Sigismund *Lipschitz (1832–1903), whose contributions to mathematics and physical mathematics were mostly in the theory of numbers, the computation of variations, progressive series, and the theory of potential and analytic mechanics. With the French mathematician Augustin Louis Cauchy (1789–1857), he proved the theorem of prime importance in differential calculus and equations concerning the existing solutions to the equation $dy/dx = f(x, y)$. Herman *Minkowski (1864–1909) is entitled to nearly all the credit for creating the geometry of numbers. He was one of the earliest mathematicians to realize the significance of *Cantor’s theory of sets at a time when this theory was not appreciated by most mathematicians. The later work of Minkowski was inspired by *Einstein’s special theory of relativity which was first published in 1905. He produced the four-dimensional formulation of relativity which has given rise to the term “Minkowski space.” James Joseph *Sylvester (1814–1897) dominated the development of the theories of algebraic and differential invariants, and many of the technical terms now in use were coined by him.

In Italy Vito *Volterra (1860–1940) wrote numerous papers on partial differential equations, integral equations, calculus of variations, elasticity, and topology, and initiated the subjects of functionals and mathematical biology. Tullio *Levi-Civita (1873–1942) developed the absolute differential calculus, which was the essential mathematical tool required by Einstein for his development (in 1916) of the general theory of relativity. Levi-Civita’s most important contribution in this field was the theory of “parallel displacement.” He also produced significant papers on relativity, analytical dynamics, hydrodynamics, and systems of partial differential equations.

Two outstanding French mathematicians were Jacques Salomon *Hadamard (1865–1963), who produced important work in analysis, number theory, differential geometry, calculus of variations, functional analysis, partial differential equations, and hydrodynamics, and inspired research among successive generations of mathematicians, and Laurent *Schwartz (1915–2002), whose work broadened the scope of calculus and brought Paul Dirac’s ideas of “delta functions” in quantum mechanics within the scope of rigorous mathematics. For this work he was awarded the Fields Medal in 1950.

Another winner of the Fields Medal was Paul Joseph *Cohen (1934– ), for his fundamental work on the foundations of set theory. Cohen used a technique called “forcing” to prove the independence in set theory of the axiom of choice and of the generalized continuum hypothesis. Felix *Hausdorff (1868–1942) was also an authority on set theory and its applications to sets of points and real analysis. His textbook *Mengenlehre* (Leipzig, 1935) is recognized as one of the great classics of set theory. The depth and simplicity of his research into fundamental problems was a source of inspiration in the rapid development of modern mathematics.

Johann Ludwig von *Neumann (1903–1957) sought to develop the subject of quantum mechanics as a mathematical discipline, which led him to research in Hilbert space and the initiation of continuous geometry. In addition, Von Neumann made important contributions to measure theory, ergodic theory, continuous groups, topology, classical mechanics, hydrodynamic turbulence, and shock wave, and was a pioneer of game theory. Issai *Schur (1875–1941) specialized in the theory of numbers, particularly with regard to finite groups and their representations. He is widely known as the author of “Schur’s lemma,” which states that the only operators that commute with a unitary irreducible representation are the scalar multiples of the identity operator. Schur is also credited with extending the finite group theory to compact groups, and is noted for his work in the representation theory of the ro-
tation group. André *Weil (1906–1998) contributed widely to many branches of mathematics, including the theory of numbers, algebraic geometry, and group theory. Norbert *Wiener (1894–1964) invented the science of cybernetics. As a mathematician, Wiener’s main innovation was to develop a mathematics based upon imprecise terms reflecting the irregularities of the physical world. He sought to reduce these random movements to a minimum in order to bring them into harmony. During World War II, he applied his concepts to work connected with antiaircraft defense, and this led to advances in radar, high-speed electric computation, the automatic factory, and a new science he created called cybernetics, a word he coined from the Greek word for “steersman,” meaning the study of control. This followed his attempt as a mathematician to find the basis of the communication of information, and of the control of a system based on such communication. Wiener suggested the use of cybernetics in diagnostic procedures and indicated the similarity between certain types of nervous pathology and servomechanism (goal-directed machines such as guns which correct their own malfunctioning). See also Benoit *Mandelbrot and Robert *Aumann.

**MATKAH, JUDAH BEN SOLOMON HA-KOHEN** (Ibn Matkah; first half of 13th century), author of the Midrash ha-Ḥokhmah, commonly considered the first of the great medieval Hebrew encyclopedias of science and philosophy. Judah was born in Toledo and belonged to the Ibn Shoshan family. He is listed in various books by the name Ibn Matkah. However, there seems to be little ground for maintaining this appellation, since in the sources it appears only once, in a 16th-century manuscript of the Midrash ha-Ḥokhmah, and there not in the body of the text but in an annotation at the top of the page.

Judah was a disciple of Meir ha-Levi *Abulafia*. At the age of 18 he became engaged in correspondence with one of the scholars at the court of Emperor Frederick II, as a result of which he eventually moved to Italy. It is not known which position he held at the court, nor where he resided, perhaps in Lombardy. Around 1247 he composed the Hebrew version of his encyclopedia, which, according to his own testimony, he wrote originally in Arabic when still in Spain. The Arabic original has not been preserved. The Midrash ha-Ḥokhmah consists of an introduction, two parts, and three treatises. The first part provides a survey of Aristotelian logic, natural philosophy, and metaphysics, primarily based on Ibn Rushd’s Middle commentaries on these works, but occasionally also on other sources. The first treatise, an explanation of verses from Genesis, Psalms, and Proverbs, follows this part. The second part is devoted to geometry (based on Euclid’s Elements), astronomy (based on Ptolemy’s Almagest and al-Bitruji’s Principles of Astronomy), and astrology (based on Ptolemy’s Quadrupartitum). To this part two treatises on the letters of the Hebrew alphabet and talmudic aggadot, respectively, are appended. Only the first treatise (Goldberg 1981) and the section on astrology (Spiro 1886) have been edited so far. There are two complete manuscripts of the work (Bodleian Library, Mich. 551 and Vatican ebr 338) and some 40 more parts of the text; for a complete list see Manekin’s Addendum in Harvey 2000, 475–79). It has not yet been established with certainty whether Judah ha-Kohen wrote other works (Langermann, in: Harvey 2000).

The Midrash ha-Ḥokhmah thus presents a combination of secular and religious knowledge. It constitutes the first systematic Hebrew survey of Aristotelian natural philosophy and metaphysics as interpreted by Averroes. In composing his encyclopedia Judah aimed at disseminating scientific secular learning, while at the same he sought to convey that true knowledge, or “divine wisdom,” cannot be attained by Aristotelian metaphysics but by traditional Jewish religious learning. Throughout his work he displays a critical attitude towards Aristotelian philosophy. His encyclopedia should be seen as an attempt to delineate the value of secular knowledge against the background of the Maimonidean controversy and the debate about the permissibility of the study of secular science.

[Resianne Fontaine (2nd ed.)]

**MATLIN, MARLEE** (1965– ), U.S. actress. Born in Morton Grove, Illinois, Matlin lost most of her hearing at 18 months after a bout with measles. She learned English, Hebrew, and

sign language at Chicago’s Congregation Bene Shalom/Hebrew Association for the Deaf and made her acting debut at age seven as Dorothy in a children’s theater version of The Wizard of Oz. In 1987, at the age of 21, she won the Academy Award for Best Actress for her role as Sarah Norman in Children of a Lesser God, the youngest performer ever to receive the award and the only hearing-impaired person to be awarded the prize. Subsequently Matlin acted in numerous films, including Walker (1987), It’s My Party (1996), Hear No Evil (1993), and What the Bleep Do We Know? (2004). She also appeared in numerous television series, including Picket Fences (1992), for which she won an Emmy; ER (1998); Law and Order (2004); The West Wing (2001, 2002, 2003, 2004, 2005); and Desperate Housewives (2005). When not acting, Matlin works with various charity organizations such as the Children Affected by AIDS Foundation, the Elizabeth Glaser Pediatric AIDS Foundation, the Starlight Foundation, and the Red Cross Celebrity Cabinet. Matlin is also the author of Deaf Child Crossing (2002), a novel based on her own childhood experiences. In 1993 Matlin married Kevin Grandalski (in Henry Winkler’s back yard). Together, they have three children.

[Alex Frankel (2nd ed.)]

MATLIN, MOSHE MEIR (1855–1927), Orthodox rabbi. Born in Slutzk, Lithuania, he went to Kovno to study with Rabbi Isaac Elchanan Spector, who was chief rabbi of Kovno, and was ordained there. In 1891 he came to New York at the invitation of Rabbi Jacob Joseph to become a dayyan in the newly formed bet din. He then headed the kashrut supervision for Rabbi Jacob Joseph. For two decades he was a mashgiach for kosher meats and wine while teaching Talmud privately. When his son was ready for yeshivah he helped establish the Rabbi Isaac Elchanan Theological Seminary, named in honor of his mentor, and he offered lectures there though he was not a regular member of its faculty. He was also a founder of the Agudat ha-Rabbonim, which was linked to RIETS. Because of his deteriorating health, he tried moving to Montana and farming, but he could not attract others to so rural a life and apparently he was not a skilled farmer. Then he moved to Sioux City, Iowa, where he served as a rabbi and kashrut supervisor for major meat companies.

[M. Berenbaum (2nd ed.)]

MATRIMONIAL PROPERTY.

In Jewish Law

GENERAL. In Jewish law, spousal property relations are regulated by the ketubbah. Maimonides describes how, when a man marries, he undertakes to provide his wife with ten things and is entitled to four things (Yad, Ishut 11:1–4; see at length Husband and Wife). In general, according to Jewish Law each of the spouses has a specific role which determines the scope and nature of their respective rights to property and other rights and obligations. According to this view, the husband is analogous to a “foreign minister” or “finance minister” of the family and thus bears the legal obligation of supporting the family, which under Jewish Law is exclusively the husband’s obligation. In order to discharge this obligation, he has possession and control of the property belonging to himself or his wife. Any property acquired during the course of the marriage is his, such that property bought with his own money belongs to him, while property bought by the wife with money that she earned is usufruct (nikhsei melog) – in other words, the principal belongs to her, while the control thereof, including the benefit of its proceeds, belongs to the husband, being intended for household needs.

In Israeli Law

Since the early 1960s, a doctrine of “presumption of joint property between spouses” has developed in Israeli law. Initially, the Israeli Supreme Court recognized the presumption as governing the relationship between the couple vis-à-vis the estate tax authorities. Accordingly, where an apartment was registered exclusively in the name of a deceased husband, the Court ruled that half of it belonged to the wife, by force of the presumption of joint property, and therefore the husband’s estate only included half of the apartment (CA 300/64 Berger v. The Estate Tax Administrator, 19(2) PD 240). Gradually however, the doctrine was recognized and applied in relations between the spouses themselves. The Afẖah decision, delivered by a bench of five justices, is generally regarded as the landmark decision on this subject (CA 595/69 Afẖah v. Afẖah, 25(1) PD 561). Since then, Israeli case law regarding the joint property presumption has developed at all judicial levels, from the Family Court through to the Supreme Court. This has been regarded by some as an example of Israeli common law.
The doctrine, in essence, is based on the presumption that a couple living together harmoniously intend that all property acquired during the course of the marriage will be jointly owned in equal shares by both partners, even if registered in the name of one of them. The legal force of this presumption was originally based on what was perceived as the presumed intention of the parties. Case law notes that this intention is presumed even when the husband and wife have different levels of earnings, even when the wife does not work but takes care of the house and children, leaving to her husband the task of supporting the family. The parties were presumed to have intended that the family's income and its accumulated assets would be their joint property. Case law extended the scope of this presumption to include partnership in future assets, such as pension rights, continuing education funds, life insurance, etc. In the early stages of its development, the Court ruled that it applied to a couple's apartment, but that regarding commercial property, a greater level of proof was required to prove the intention of joint ownership. Over the years this distinction was abolished, and today the doctrine applies to all of the couple's assets, regardless of whether these consist of the couple's apartment or of other forms of savings, business assets, reputation, etc. At all events, the Supreme Court held that with respect to the couple's apartment, there could be cases in which it would be regarded as joint property even when purchased before the marriage, and part of the purchase price was paid during the course of the marriage (CA 806/93, Hadari v. Hadari, 48(3) PD 685).

As the doctrine developed, the empirical-consensual aspect was abandoned, and several judicial pronouncements indicated that the doctrine of joint spousal property is based on the principle of equality between spouses, in accordance with the general principles of the Israeli legal system, which regards equality as a fundamental value.

In 1973, the Spouses (Property Relations) Law, 5733 – 1973, was enacted. Pursuant to the law, a married couple constitutes a kind of obligatory delayed partnership that only finds expression when the marriage is terminated (by divorce or death). Until such time, the couples' assets are separated. Upon termination of the marriage (either through death of divorce), an accounting is made of the couple's assets; if more than half the assets are owned by or registered in the name of one of the spouses, that person pays half of the difference to his spouse (CA 1295/90 Hanokh v. Hanokh, 45(5) PD 584). Section 5(a) of the law explicitly provides that gifts and inheritances received during the course of the marriage are not considered as joint property.

There is disagreement in the case law as to whether the joint property presumption – which was a judicial, and not a legislative creation – applies to couples married after January 1, 1974 (the date that the new law came into force), or whether the only applicable law for the latter is contained in the provisions of the aforementioned law, that establishes an obligatory delayed partnership. This controversy is mainly relevant when deciding on whether a party is entitled to claim half of the property prior to termination of the marriage, pursuant to the partnership doctrine, or whether a spouse's right to claim it arises only on the day that the marriage is terminated (on this matter see CA 1915/91, Yaakobi v. Yaakobi, 49(3) PD 529).

The Supreme Court's position vis-à-vis rabbinical court decisions. Since the early days of the State, the position of the Israeli Supreme Court has been that the rabbinical court must apply religious law, i.e., Jewish Law, not only in matters of personal status (e.g., the validity of marriages and divorces), but also in cases involving financial matters, insofar as "the nature of a Jewish religious court is to rule according to the religious laws of Israel" (CA 22/49 Levanon v. Elmeliah, 3 PD 68, 80; per Justice M. Silberg; see also HC 323/81 Wilozni v. The Rabbinical Court of Appeals, 36(2) PD 733, per Justice Menachem Elon). In its capacity as the High Court of Justice, the Supreme Court had traditionally taken this approach when confronting questions of whether to vacate rabbinical court judgments on financial and property disputes between couples. Questions of this nature were adjudicated by the rabbinical courts in accordance with Jewish Law, as part of their incidental jurisdiction, when arising in the course of divorce proceedings (see “Bet Din, addendum”). For example, one case concerned an apartment given by the husband to his wife during the course of a marriage, and subsequently registered by the husband in the wife's name. The rabbinical court was required to decide whether the gift was absolute or conditional, and in doing so it applied the Jewish Law, which in such a case presumed that the gift was conditional, having been given "subject to the understanding that if she leaves him, he would not be regarded as having given it to her." The Supreme Court rejected the wife's argument that the rabbinical court exceeded the limits of its jurisdiction (HC 609/92 Boehm v. The Rabbinical Court of Appeals, 47(3) PD 288; per Deputy President Justice Menachem Elon).

Nonetheless, in a later decision, Justice A. Barak (then deputy president, and subsequently president of the Supreme Court) held that the Supreme Court's judicially created joint property doctrine must also be applied in the rabbinical court. His first argument was the obligation to act in accordance with the Woman's Equal Rights Law, 5711 – 1951, and the second, broader, argument was that the rabbinical courts are subject to the Israeli secular law with regard to property relations. Essentially, the underlying rationale of the decision is that Israeli civil law is territorial, and thus obligates all legal forums, including the religious or rabbinical courts (HC 1000/92 Bavli v. The Rabbinical Court of Appeals, 48(2) PD 221). (In accordance with this approach the Supreme Court also intervened when the rabbinical court ruled, in accordance with Jewish Law, on a matter involving an injunction against leaving the country. The Supreme Court's position was that the Israeli civil law should be applied, rather than the religious law on whose basis the rabbinical court had ruled – HC 3914/92 Lev v. The Rabbinical Court of Appeals, 48(2) PD 491.)
In an article published several years after his retirement from the bench, Professor Menachem Elon wrote a comprehensive critique of these decisions. Elon emphasized that the deviation from the Supreme Court's consistent position, whereby rabbinical courts rule in accordance with the religious law, was unjustified on a substantive level, as well as constituting a blow to the independence of the rabbinical courts and their ability to develop Jewish Law. In his article, Professor Elon proposed a number of options for the application of the joint property doctrine in accordance with Jewish Law (see "Minhag; "Dina de-Malkhuta Dina; and see Bibliography, Elon, "These Are Obiter Dicta" ("Elch Hen Imrot Agav")). Professor Elon also warns that decisions such as these are liable to create tension between the various judicial forums, thereby jeopardizing the fundamental values of the legal system, which aspire, inter alia, to preserve peace and attain practical solutions to controversies between parties. Professor Elon further noted that decisions of this kind, while aspiring to harmony within the legal system, cause two other sources of disharmony: (a) between the law of the State and Jewish Law, which is the national law of the Jewish people, and (b) between the past (when the Jewish Law was developed) and the present and future, inasmuch as acceptance of Barak's position compromises the ability of the Jewish Law to develop, given that, in practical terms, the rabbinical courts in the State of Israel are the only forum in which Jewish Law is applied in an operative manner (see also the addendum to the entry "Bet Din").

RABBINICAL COURT'S RESPONSE TO THE SUPREME COURT'S POSITION. In their respective responses to the *Bavli* decision, the *dayyanim* of the Rabbinical Court of Appeals were divided. Rav Shlomo Dikhovsky opined that the rabbinical courts were obligated to rule according to the joint property doctrine by force of the rule "*dina de-malkhuta dina*" (see his article cited in Bibliography). He contended that halakhic rulings should be consonant with the halakhic view that *dina de-malkhuta* also applies in Israel. Moreover, the rule applies equally to legislation enacted in a democratic regime and to laws that are the product of judicial legislation. Inasmuch as the Israeli Supreme Court and the Knesset itself views court decisions as a part of the binding legal system of the State, there is no difference between judicial decision and legislation. Therefore, in his opinion, such case law should not be subject to the distinction that the halakhic authorities make between explicit legislation – to which "*dina de-malkhuta dina*" applies – and to rulings that are the result of local judicial discretion, in which the rule is inapplicable. All citizens of the State are cognizant of the "joint property rule" and guide their conduct accordingly, giving it the status of a custom (see "Minhag"). Moreover, the fact that it is anchored in Jewish practice militates in favor of its acceptance by force of "*dina de-malkhuta dina*." Such is the case regarding the joint property doctrine, insofar as it derives from case law. Rabbi Dikhovsky finds halakhic anchorage for the Supreme Court's doctrine of joint property in the pre-nuptial written conditions (tena'im) agreed upon by the couple. The tena'im provide that the couple "will have equal control of their assets, and will not smuggle or hide them from one another, but rather will live together in love and affection." Based on his interpretation of this document, R. Joseph Colon (Resp. Maharik, no. 57), imposed a ban on a husband who smuggled assets from his wife. Rabbi Dikhovsky contends that an additional step should be taken, by declaring that in our generation the presumption regarding the couple is not confined to their reciprocal trust that neither of them will smuggle assets away, but rather is broader, and confers the wife actual control over half of the assets acquired by her husband (in this matter he also relies on *Resp Maharsham* 1.45, dealing with a gift that the wife received from her sister).

The Spouses (Property Relations) Law, 5733 – 1973 provides that the law also applies to rabbinical courts, in the absence of explicit agreement that the religious law will apply (Section 13 of law). Following the enactment of this law, the presumption is that every couple who married after its enactment knew that this was the legal position, and thus consented to premise their financial relations on the joint property rule. Under such circumstances, the rule of "*dina de-malkhuta dina*" should clearly be applied to such couples, and the rabbinical court should rule according to the joint property doctrine, and certainly to its delayed version regarding couples married after January 1, 1974.

When the parties agree to have their property disputes governed by secular law, that agreement should be honored, and the rabbinical courts should apply the joint property doctrine, by force of that agreement. Rabbi Dikhovsky ruled accordingly when on appeal, he overturned a decision of the Regional Rabbinical Court that refused to apply the joint property doctrine even though both of the parties had previously signed an agreement that the rabbinical court would rule according to this doctrine. In addition to the rationale of honoring the parties' expressed will, Rabbi Dikhovsky warned that failure on the rabbinical court's part to apply the joint property doctrine is liable to impair its status, and result in the loss of its jurisdiction over financial and property matters, even in its current limited format (the decision in its entirety is published after the article in *Tehumin*, 18 (1998), 18ff.).

A different opinion on the matter was expressed by Rabbi Avraham Sherman – also a *dayyan* on the Rabbinical Court of Appeals (see *Tehumin*, 19 (1998), 32–40; 20 (1999), 205–20). In his view, legislative enactments and legal pronouncements that stem, not only from the imperative of creating an orderly society and correcting faults occasioned by particular circumstances, but which rather reflect the world view of the legislators and the judges of the state courts, do not fall within the ambit of "*dina de-malkhuta dina*," because this contradicts the world view of the Torah. Empirically, it cannot be claimed that the "joint property doctrine" is a custom accepted by all, nor may one, on that basis, make a presumption that all married couples marry with the intention of distributing their assets
equally. Furthermore, it is difficult to anchor the joint property doctrine in Jewish Law. When the law concerned is one that is intended to regulate the financial relations between a husband and wife, and not the well-being of the society and the State, the rule of "dina de-malkhuta dina" does not, according to this view, apply. Rabbi Sherman argues with Rabbi Dikhovsky regarding the significance of the written conditions, but the main thrust of his argument is on the theoretical level: it is appropriate to adopt the Supreme Court’s ideology, which is classified, in his view, as “the laws of the [non-Jewish] nations,” or to act according to the original Jewish law without deviating from it.

According to Rabbi Sherman, it is precisely the Supreme Court’s rationale for the joint property doctrine – namely, that it is a revolutionary step that alters relations within society, and intended to promote and ensure social justice based on gender equality – that justifies rejection of this doctrine by the rabbinical courts, which should rather continue to adhere to the traditional position of Jewish Law. He adds that it is precisely the application of the joint property doctrine, supplemented by the husband’s continued exclusive obligation to support his wife and children, which creates inequality and, rather than equalizing the parties’ status, confers a preferred status on the wife.

**APPLICATION OF JOINT PROPERTY PRESUMPTION TO “COMMON LAW” SPOUSES.** Another question that the Israeli legislature and case law was required to address in this (and other) contexts concerns the phenomenon of couples that were not married in a religious or civil ceremony, but live together as a couple and raise families. In the beginning of the 1980s the Supreme Court decided by majority that the joint property presumption applies to such couples, relying on its conclusion that their way of life attested to their intention to be partners in their property (CA 52/80 Shahar v. Freedman, 38 (1) PD 443, per justices Barak, Bach). In his dissenting minority opinion, Justice Steinbaum argued that the joint property presumption should not be extended by way of judicial legislation to include common law spouses. Justice Steinbaum reasoned that the parties had knowingly and intentionally decided to live as a couple without binding themselves by a ceremony of marriage. As such, in the absence of a formal agreement between them, the application of the joint property presumption would not be consistent with their expectations and anticipations regarding the nature and consequences of their connection, to which they had given expression by their failure to enter into the binding legally recognized marriage. Furthermore, the aforementioned law of 1973 omitted granting any recognition of the “common law spouses” or “common law marriages” and hence there is no justification for applying the presumption by way of judicial legislation.

In later rulings the Supreme Court extended the scope of the joint property presumption as it applied to common law marriage, stating that it was not limited exclusively to their domestic assets, but also covered their commercial assets, although a higher level of proof should be required to persuade the court to apply the joint partnership presumption with respect to commercial assets or other non-domestic assets (CA 4385/93 Salem v. Carmi, 51 (1) PD 337).

The Supreme Court further held that where one of the partners in a common law marriage was killed in an accident, the surviving partner should be entitled to the same compensation (as a dependent) awarded by law to a surviving spouse who was legally married to the deceased (CA 2000/97 Lindorn v. Karnit, 55 (1) PD 12).

The common law spouse’s right to the pension of a government employee, or of a soldier killed in action, was already recognized by Knesset legislation in the early years of the State of Israel.

**Conclusion**

Israel law’s approach to gender equality is not unique to the question of spousal assets, but rather is broader in its scope. In the early 21st century, the Supreme Court considered equality as one of the constitutive values of Israeli law, and found anchorage for it in the Basic Law: Human Dignity and Freedom (notwithstanding that this subject is not explicitly mentioned in this law; see 'Human Dignity and Freedom). In a famous decision concerning the matrimonial property of a couple that immigrated from Iran, President Barak stated that according to the principle of good faith, it is presumed that the couple intended that the infrastructure of their relationship would be based on the basic principles of the legal system of Israel, one of which is the principle of equality. Therefore, by applying the doctrine of joint property, a social goal is accomplished, leading to the promotion of social justice (CFH 1558/94 Nafisi v. Nafisi, 50 (3) PD 573, 605).

We have noted the various approaches of the dayyanim of the Rabbinical Court of Appeals. It remains to be seen how the rabbinical courts will in fact rule in matters regarding spousal assets. In any event, the rabbinical courts (the regional and the Rabbinical Court of Appeals) decided that where each of the spouses owned an apartment prior to their marriage, there is no presumption of joint property, and they based their judgment on section 5 of the Spouses (Property Relations) Law. When their ruling came before the Supreme Court, President A. Barak did not interfere with their ruling, and rejected the petition against the Rabbinical Court (HC 3995/00 Anon. v Rabbinical Court of Appeals, 56 (6) PD p. 883).

[Moshe Drori (2nd ed.)]
MATSAS, JOSEPH (1918–1986), Greek merchant, partisan, and researcher, the foremost Jewish intellectual in Greece after World War II. Matsas lived most of his life in Ioannina and devoted himself to his city, to his Jewish community, and to the research of the Jews in Ioannina and Greece.

Coming from a line of merchants, he owned a glass product store in the heart of the Ioannina bazaar, where Ioanniot Jewish merchants had worked and thrived for generations. By the beginning of World War II, he had finished his studies in philosophy at Aristotle University in Thessalonika (Salonika) and was teaching high school in a village near Kilkis. When the ghettoization process started in Salonika in late January–early February 1943, the youth of the Jewish community started to flee in small numbers to the mountains in order to join the partisans. The Jews were welcomed by the military arm ELAS, which belonged to the leftist resistance movement EAM (The National Liberation Front), and Matsas was one of the first to leave to join.

After facing great difficulties in escaping from Salonika, crossing rivers and avoiding German-controlled bridges, he reached the partisans. Since he had been a fighting soldier in the Greek army in the Albanian campaign, he was integrated into ELAS as fighting combatant, together with nine other Jews in a unit of 40 men. At the end of 1943, he went with his unit to Western Macedonia where the allies dropped equipment to them by parachute. In general, his unit lived under difficult circumstances in the mountains of Pieras, Vermious, and Pindou.

After the war Joseph Matsas established himself in Ioannina. In 1945 he was president of the Ioannina Jewish Council and in 1947 Matsas became the secretary of the Jewish community.

Matsas’s main scholarly contribution lay in his research on the language, culture, and ancient traditions of the Romaniot Jews of Ioannina. His research into Judeo-Greek was a pioneering and valuable scholarly effort. In Ioannina in 1953 he published Yianniotika Evrika Tragoudia (“Greek Jewish Songs”), which consisted of 16 hymns taken from two manuscripts written between 1853 and 1870, translated into modern Greek. In 1955 he also published Ta Onomata Ton Evraion Sta Ioannina (“The Names of the Jews of Ioannina”).

In the field of poetry he researched Judeo-Greek kinot (elegies) from Corfu from as early as the 13th century. He uncovered valuable collections of centuries-old Judeo-Greek piyutim from Ioannina and contributed research and documentation to Jerusalem’s Ben-Zvi Institute on Judeo-Greek poetry and language. He published several articles on the unique festivities of the Sicilian Purim celebrated in Ioannina.

MATSAS, NESTORAS (1932–), Greek author, painter, and motion picture director. Born in Athens, Matsas was in hiding during the Nazi occupation of Greece. During this time he was baptized into the Greek Orthodox Church, but his Jewish background and tragic memories of the war were to find expression in several of his books. When he was only 16 some of his stories appeared in the periodical Nea Estia. In 1950 he published three plays: Animeni ("Unmarried"), Flegomeni batos ("Burning Bush"), and Yiom Kipur ("Yom Kippur"). Animeni, written in collaboration with K. Asinakopoulos, was a considerable stage success. His first novel was Klsti ourani ("Closed Heavens," 1955), a story of life in the slums of Athens. He also published several volumes of short stories. Two of Matsas’ most significant earlier works are on Jewish themes. I meghali irini ("The Great Peace," 1957), a collection of three short novels, dealing with an Athens Jewish family, is dedicated to the author’s father “who sleeps in the barren earth of Auschwitz.” Another novel, O Messiah ("The Messiah," 1959), describes the tragic fate of a Greek Jew who survives imprisonment in Dachau but who, on his return to Greece, entertains the delusion that he is the Messiah. Other books by Matsas include two children’s novels, the prizewinning Khoris aghapi ("Without Love," 1960) and To koritsi me t’ asteria ("The Girl with the Stars," 1968); To paramanti tou Theofilou ("The Fairy Tale of Theophilus," 1963), a fictional biography of a Greek painter that was awarded the National Prize for literature; Plevsate vorios Sporadon Skyiathos ("Travel North to the Sporades, Scyathos," 1964), verse written in the style of the Psalms and containing “Letters from Joseph to the sleeping Rebecca”; and O mikros stratiotis ("The Little Soldier," 1967), an anti-war novel. Later in his literary career, he returned to chronicling his Holocaust experience in hiding in Athens in his book I Istoria Ton Hamenon Peristerion: Imerogio Enos Paidou Ston Emfilio ("The History of the Lost Pigeon: Diary of a Boy in the Civil War," 1995). He also wrote the popular biography of Alexander the Great titled To Hirografo Tis Babilonas, Mega-lexandro Apornimomenvata (1980), which was translated into French as Les Memoires D’Alexandre Le Grand, d’apres Le Manuscrit de Babylone (1983). Matsas wrote the scripts for many documentary films and directed feature films.

[MATTS, C. DAVID (1887–1951), U.S. rabbi. Born in Kovno, he was raised in Philadelphia where he came with his family in 1890. C. (Calman) David Matt grew up in Rabbi Bernard Levinthal’s synagogue; Levinthal’s sons Rabbi Israel Levinthal and Judge Louis Levinthal were literally life-long friends and spoke at his funeral. He went to public school, Yeshiva Miskan Israel, and Gratz College. He earned his B.A. in 1909 at the University of Pennsylvania and was ordained at the Jewish Theological Seminary in 1913.

As a young rabbi he served in Adath Jeshurun in Minneapolis, the first English-speaking rabbi the then 18-year-old Orthodox congregation ever had, and oversaw the transition toward a newly emerging Conservative Judaism. He laid
plans for a new building and organized the religious school. He was the associate editor of the American Jewish World. During World War I, he served as a volunteer representative of the Jewish Welfare Board at Fort Snelling. After 15 years he left for Beth David in Buffalo (1927–29), where he served two years, and then went back to Philadelphia, where he served as rabbi of the West Philadelphia Jewish Community Center. He remained there for the rest of his life. Matt was an ardent Zionist and served as president of the Philadelphia Board of Rabbis and of the local Rabbinical Assembly.

Matt's columns appeared in the American Jewish World and the Anglo-Jewish Press. His work also included texts of radio sermons, 1920s–1950. He worked as an arbiter in the Jewish community in Philadelphia, particularly during a dispute among moheleim. Also of note is his list of yeshivot in Europe and Palestine in the 1930s, with estimates of the sizes of their student bodies. These reflect Rabbi Matt's efforts to raise money for the yeshivot. He had, in the words of Israel Levinthal, "a poetic soul, which made him a dreamer and interpreter of Israel's fondest hopes in beautiful verse." Louis Levinthal spoke of his "simplicity, his earnestness and sincerity."

He made his mark as a poet and published his sermons. Among his five children were Rabbi Herschel Matt, himself a sensitive poet and liturgist. His grandson Daniel Matt is translating the Zohar into English in a multi-year project that has gained wide respect. C. David Matt's papers are found at the Jewish Theological Seminary.

[Michael Berenbaum (2nd ed.)]

**MATTATHIAS**, priest from the village of Modi'in, and first leader of the uprising of the *Hasmoneans against "Antiochus IV Epiphanes (167 B.C.E.).* A number of discrepancies appear regarding the genealogy of Mattathias, and it is not certain that he was a native of Modi'in. According to 1 Maccabees 2:1, Mattathias was "the son of Johanan, son of Simeon, a priest of the family of Joarib" (נִזְנֶּה; cf. 1 Chron. 24:7) who "moved away from Jerusalem and settled in Modi'in." Josephus twice alludes to Mattathias' background. In Antiquities 12:265 he is described as "living in Modi'in in Judea.... the son of Johanan, the son of Simeon, the son of Asamaius, a priest of the family of Joarib, and a native of Jerusalem." In Wars 1:36 Mattathias is called simply "son of Asamaius, a priest of a village called Modi'in." It appears that the name "Asamaius" or "Hasmonae" is a family title, although later rabbinic tradition regards "Hasmonai" as a particular person e.g. "...neither did I abhor them" [Lev. 26:44] – in the days of the Greeks, when I raised up for them Simeon the Righteous and Hasmonai and his sons, and Mattathias the high priest" (Meg. 11a; some variants however omit "Hasmonai and his sons"). The anachronistic description of Mattathias as high priest is also found in tractate Soferim (20:6, ed. M. Higger (1937), 346), and was inserted into the special prayer recited on Hanukkah.

Although a number of minor differences exist, the general descriptions of Mattathias' activities, transmitted by Josephus and in 1 Maccabees are fairly similar. A company of Greek officers arrived at Modi'in with the intention of forcibly implementing the king's ordinances regarding sacrifices to idols. As Mattathias was held in high esteem by the villagers, he was ordered to begin the sacrificial offerings. When Mattathias refused, another Jew proceeded to fulfill the officer's command. Mattathias then attacked and killed both that Jew and the Greek officer at hand (named Appleus in Jos., Ant.; Bacchides in Jos., Wars), and together with his sons and a number of similarly minded fellow countrymen sought refuge in the desert and mountains of Judea. One such group of fugitives was attacked on the Sabbath. Refusing to defend themselves on the day of rest, the group, numbering about 1,000, was almost totally annihilated. This led Mattathias to decree that defensive military action is permissible on the Sabbath (cf. M.D. Herr, in: Tarbiz, 30 (1961), 243–4). Both 1 Maccabees and Josephus further attribute to Mattathias the circumcision of all those uncircumcised children brought up under the influence of enforced Hellenization. Mattathias led the rebellion for only one year, and before his death appointed two of his five sons to continue as leaders of the revolt: *Judah Maccabee was declared military commander and Simeon the *Hasmonean counselor. Of Mattathias' other three sons, *Johanan b. Mattathias and *Eleazar b. Mattathias both met violent deaths during the early years of the uprising while *Jonathan, who succeeded Judah, was killed by treachery in 161 B.C.E.

[Isaiah Gafni]

**MATTATHIAS** (or Mattityah ben Moshe; 15th century), Spanish or Provençal Hebrew poet. Mattathias has sometimes been identified with *Mattathias ha-Yitzhari, one of the masters who represented the Jewish communities of Aragon at the Tortosa disputation (1413–14) and the author of a commentary on Psalm 119 with references to the disputation, a commentary to Pirke Avot (preserved only in part), and a lost homiletical commentary to the Pentateuch. This identification is not accepted by all scholars. Z. Malachi has even shown that it is very unlikely.

The *maqāma Ahituv ve-Zalmon*, attributed to Mattathias and written before 1453, was inspired by the religious *disputations held in Spain. Its action is simple. The pagan queen of a legendary island sends three messengers, Zalmon, Eker, and Ahitub, to inquire into the religions of the world. Seven years later, the messengers return and engage in a stormy discussion. Zalmon, who was in Hebron and became converted to Islam, accepts the arguments of Ahitub, himself converted to Judaism in Spain, and becomes a Jew. Eker, converted to Christianity in Constantinople, argues in favor of that reli-
gion; however, since the queen and her court, persuaded by Ahitub, have also adopted Judaism, Eker hangs himself in anger, bringing the story to an end. Most of this narrative is still in manuscript.

Another allegoric maqāma, Begidat ha-Zeman, in which the characters receive symbolic names, was likewise written around 1450, also bears the name of a poet known as Mattathias; it is almost certain that both maqāmat were written by the same author. Both narratives, with clear pedagogic, apologetic, and moral purpose, resemble each other in style and vocabulary. The second is written in the first person and the personal element is important. The author repents the sins of his youth, describing his experiences so that his tale might serve as a warning. It was printed in 1560 (Tihingen) and three more times before the end of the 17th century. Z. Malachi has found in this composition some autobiographical clues: according to him, the book was written in 1450 in Aix-en-Provence, when the author was 50 years old; he was probably born in Spain and left for France at the age of 19, becoming familiar with Ashkenazi culture.

[Yaḥonan David / Angel Sáenz-Badillos (2nd ed. )]

**MATTATHIAS BEN SIMEON**

Son of *Simeon the Hasmonenean. During the winter of 135 B.C.E., Mattathias, together with his mother and brother Judah, was seized at a banquet given in Simeon’s honor by his son-in-law *Potlemy, who was governor of Jericho. Simeon was killed, probably at the instigation of the Syrian monarch Antiochus VII Sidetes, but a third son of the high priest, John *Hyrcanus, managed to escape. Potlemy withdrew to the nearby fortress of Dok, where the two brothers and their mother were tortured in full view of the grief-stricken Hyrcanus, who was unable to take the stronghold. When the sabbatical year came around, it was impossible to maintain an army for any great length of time, and Hyrcanus was forced to withdraw. Potlemy thereupon killed the woman and her two sons and fled to Philadelphia (but according to Maccabees they were slain together with their father; 1 Macc. 16:15ff.; Jos., Wars, 1:54ff.; Jos., Ant., 13:228ff.).

**BIBLIOGRAPHY:** Schurer, Hist, 66; Graetz, Hist, 1 (1891), 530.

[Isaiah Gafni]

**MATTATHIAS HA-YIZHARI**

(14th–15th century). Spanish scholar. He was a descendant of a Narbonne family which immigrated to Aragon after the expulsion from France in 1306. Mattathias, who had a profound knowledge of philosophy, was apparently a pupil of Hasdai * Crescas. A commentary on Psalm 119 is attributed to him (Venice, 1546, partly translated into Latin by Philippe d’Aquin, Paris, 1629). Mattathias also wrote a number of other works, including a commentary on Avot (extant in Ms.) and homiletical explanations to the Pentateuch, known only by later references. It is possible, however, that at least some of them were written by an earlier Mattathias ha-Yizhari, perhaps his grandfather. He played a prominent but not overly courageous part in the Disputation of *Tortosa (1413–14), where he was one of the representatives of the Saragossa community.

**MATTERSDORF**

(official name since 1924, Mattersburg; Hung. Nagymarton), town in *Burgenland, Austria; one of the “Seven Communities,” and after 1813 one of the “Five Communities.” The town was traditionally divided into two districts, Izraelita-Nagymarton and Keresztesény (“Christian”)-Nagymarton. The Jewish neighborhood comprised a separate administrative unit (see “Politische Gemeinden”) until 1902. Jews are traditionally believed to have settled there in about 800 or 1222. A tablet on the synagogue wall dates its building to 1354. At any rate, Jews were already living there before the Turkish conquest in 1526, when Mattersdorf absorbed numerous refugees from *Sopron. In 1569 there were 67 Jews living in 11 houses. After 1622 the community came under the protection of the Esterházy family. In 1694 the Esterházyhs granted the Seven Communities letters of protection, subsequently renewed four times and newly formulated in 1800. Some of the Jews were expelled by Leopold I in 1671 but were allowed to return in 1675. The community was looted several times by the Turks. In 1744, some 352 Jews inhabited 30 houses; in 1770, 179 Jewish families were registered; in 1785, some 767 persons lived in 43 houses; permission was granted to build 12 more houses in 1818. They paid fees to the towns of Sopron and Wiener *Neustadt for the right to trade within their boundaries. In 1848 there were 1,500 Jews in the town (one-third of the total population). From the beginning of the 20th century their numbers declined due to emigration to larger towns; in 1902 they had fallen to 752 and at the time of the Anschluss (1938) to 511.

The centuries-long autonomy gave rise to a powerful communal regime, which regulated not only religious but also economic and social life. Among the prominent rabbis who served the community were Gershon b. Abraham *Chajes; Jeremiah *Mattersdorf; Issachar Baer b. Samson *Bloch; Moses *Sofer; and Simon *Sofer. The Mattersdorf yeshivah attracted students from all over Europe. In 1938 the Nazis destroyed the synagogue and other communal institutions and damaged the Jewish quarter. Part of the community emigrated and the remainder were deported to the death camps. The remains of the Jewish quarter were demolished during development projects, and by 1970 only an old cemetery was left to com-
memorate this ancient community. About 7,000 documents from the community's archives have been preserved in the central state archives in Eisenstadt. A Kiryat Mattersdorf was founded in Jerusalem in 1963, and some of its inhabitants originated from there.

[Yehouda Marton]

**MATTERSDORF, JEREMIAH BEN ISAAC** (d. 1805), Hungarian rabbi and author. Born in Oswiecim, Galicia, Mattersdorf originally had the family name of Rosenbaum, but took the name Mattersdorf after serving as rabbi of the community of that name in Burgenland. He was appointed rabbi of Mattersdorf (now Mattersburg) around 1770 and stayed there until about 1801, when he went to Abaujzanto, remaining there until his death. Mattersdorf was renowned for his extensive knowledge of halakhah. His spiritual authority extended beyond the borders of Hungary. In 1791 he gave his approbation to the edition of the Talmud published by Joseph Hirschszky, who called him one of the most distinguished rabbis of the generation. In Mattersdorf he headed a yeshivah which had among its students Aaron *Chorin, the pioneer of religious reform in Hungary. Among Mattersdorf’s works is a commentary to Hayyim Shabbetai’s Moda’ah ve-Ones (Lemberg, 1798) under the title Moda’ah Rabbah, published along with his son Joab Mattersdorf’s commentary Moda’ah Zuta. He gave approbations to a number of works, and is mentioned in the responsa of Moses *Sofer. L. Loew states that he wrote the comments on the Shulhaei Shibbolet of Isaac b. Reuben, but this work has been attributed to other authors.

**BIBLIOGRAPHY:** L. Loew, Gesammelte Schriften, 2 (1890), 257; M. Pollak, in: IMIT (1900), 164–6; J. L. Greenwald (Grunwald), Hayehudim be-Hungaryah (1913), 53; P. Z. Schwartz, Shen ha-Gedolim me-Erez Hagar, 1 (1913), 216 no. 243.

[Yehouda Marton]

**MATTHAU, WALTER** (1920–2000), U.S. actor. Born in New York to Russian immigrant parents, Matthau started out selling soft drinks and playing bit parts at a Yiddish theater at age 11. After graduating from Seward Park High School, he worked as a forester, gym instructor, and boxing coach for police officers. During World War II he served on an Army Air Force bomber in Europe and returned home a sergeant with six battle stars. Afterwards he attended acting classes and performed on Broadway. Matthau appeared in more than a dozen Broadway plays, among them *Anne of the Thousand Days* (1949), *Will Success Spoil Rock Hunter* (1955), *Once More, with Feeling* (nominated for a Best Actor Tony, 1959), *A Shot in the Dark* (won a Tony Award for Best Supporting Actor, 1962), and *The Odd Couple* (Best Actor Tony, 1965).

Matthau appeared in several TV movies, such as *Awake and Sing!* (1972), *The Incident* (1990), *Mrs. Lambert Remembers Love* (1991), *Incident in a Small Town* (1994), and *The Marriage Fool* (1998).

[Jonathan Licht / Ruth Beloff (2nd ed.)]

**MATTHIAS BEN THEOPHILUS, the name of two high priests at the close of the Second Temple period.**

**Matthias ben Theophilus I (early first century c.e.)**

Matthias ben Theophilus I was for all practical purposes the first high priest originating from Erez Israel to be appointed by Herod after *Aristobulus III*. He succeeded *Simeon b. Boethus, the king's father-in-law, and preceded Joezer b. Boethus (see *Boethusians*). Josephus notes that Matthias was a Jerusalemite (Ant., 17:78). He also relates that on one occasion Matthias was prevented from officiating on the Day of Atonement through being ritually unclean, and *Joseph b. Elea held him to officiate in his place (ibid., 165). This incident is also recorded in the Talmud (Yoma 12b; TJ, ibid., 11, 38d). Herod, although on his deathbed, replaced Matthias as he held him partially responsible for the disorders in the Temple caused by the two patriots, Judas b. Sepphoraeus and Matthias b. Margalus. It would appear that Matthias was connected in some way with the house of *Anan and presumably it was no coincidence that one of Anan’s sons was named Matthias (Jos., Ant., 19:316, 342) and another *Theophilus (ibid., 18:123; 19:297). It is possible that the elder Anan married the daughter of Matthias.

**Matthias ben Theophilus II (late first century c.e.)**

Matthias ben Theophilus II was appointed high priest by Agrippa II in succession to *Joshua b. Gamala (ibid., 20:223). It seems probable that he was the son of Theophilus b. Anan. His period of office witnessed the outbreak of the Jewish War (66 c.e.).

**MATTIAH** (Mattityahu) **BEN HERESH** (second century c.e.), tanna, mentioned twice in the Mishnah (Yom. 8:6, Avot 4:15), and a few times in the tannaitic midrashim. One tannaitic midrash lists Mattiah among a group of scholars who fled Erez Israel (apparently after the fall of “Betar”), who, as they were leaving, were overcome with the love of Erez Israel, tore their clothes, and proclaimed, tears streaming from their eyes, that one who dwells in Erez Israel is as if he has fulfilled all the commandments of the Torah (Sif. Deut. 80).

Another tannaitic midrash (Mekh. of R. Ishmael, Bahodesh 7) relates that Mattiah once went to visit R. Eleazar Hakappar in Lydda to inquire about one of R. Ishmael’s teachings. According to the Babylonian Talmud (Sanh. 32b) Mattiah founded a yeshivah in Rome, and, according to the Talmud, when “Simeon b. Yohai visited Rome to protest to the emperor against the Palestinian governor’s emergency decrees, Mattiah consulted him on points of halakhah and aggadah (Me’ill. 17a; Yoma 35b).

In Mishnah Yoma (8:6) Mattiah applies the principle that Sabbath prohibitions may be overruled in order to save human life to a specific case, but he is not accredited as the author of the principle itself (cf. Tosef. Shab. 15:17, Yoma 85b). He is quoted in both the Babylonian and Jerusalem Talmuds (e.g., Yev. 61b; TJ, Sanh. 101a, 27c). His most famous maxim is: “Be a tail to lions, and not a head to foxes” (Avot 4:15; in TJ, Sanh. 410, 22b), which stands in contrast to the Roman proverb, “Be a head to foxes, rather than a tail to lions” (cf. Zohar Ḥadash, Song, 18b). In the later aggadah Mattiah’s piety became legendary. The Tanhuma relates that on one occasion, he deliberately blinded himself rather than be seduced by Satan (who appeared to him in the guise of a beautiful woman). He only accepted healing at the hands of the angel Raphael, after a divine promise that he would not be tempted again (Yal., Gen. 161).

**MATTNAH** (second half of third century c.e.), Babylonian amora. He studied under *Samuel (Mar Samuel) and was considered one of his outstanding pupils (Er. 6b; Mak. 3b). He quotes numerous halakhic decisions in his name (Ket. 43b; Nid. 27a; et al.) He also studied under *Rav (Shab. 24a). He was a younger colleague of Judah b. Ezekiel (Kid. 70b), and when, after the death of Rav and Samuel, R. Judah taught at Pumbedita, Mattnah taught at the neighboring town of Popuna (Hul. 139b). He is one of the authors of the tradition that the fourth blessing of the Grace after Meals (“He who is good, and bestows good”) was instituted by the rabbis after permission was granted to bury the slain of “Bethar, whose bodies had miraculously not decomposed (Ber. 48b). Mattnah had three sons, Ahadboi, Tobi, and Ḥiyya (Nid. 60b; BB 151a), all of whom were scholars. Among the sages of the next generation who were his pupils and who quote decisions in his name was R. Zeira (Ber. 36a). Another amora called Mattai lived in the fourth century. He was a pupil of Hisdas (Kid. 32a), and a colleague of Abbaye (Ket. 35b).

**MATUCK, ISRAEL I.** (1884–1954), Liberal rabbi. Born in Lithuania, he came as a child to the United States with his family and grew up in Worcester, Massachusetts. A graduate of Harvard University, he was ordained at the Hebrew Union College in 1910 having only spent two years in residence. He held a pulpit in Far Rockaway, New York, for a year and then went to England to serve a young congregation, the Liberal Synagogue in London. He served as senior minister for 36 years and then after 1947 was minister emeritus. Under his leadership the synagogue grew into one of the largest synagogues in London. The building that he helped build was bombed in World War II, but Mattuck lived to see it restored and rededicated. He was succeeded by his disciple and son-in-law Rabbi Leslie Edgar.

He was a leading figure, perhaps the leading figure in English Liberal Jewry, its philosopher and its public face. He was known as one of the “Three Ms”: Montagu, Montefiore, and Mattuck. He helped form the Union of Liberal and Progressive Synagogues and helped establish the World Union for Progressive Judaism in 1926 and served as its first chairman from 1926 until his death. He was chairman of the Society of Jews and Christians. He compiled and edited the Liberal prayer book, first in three volumes in 1923–26 and in a revised edition in 1937.

He is the author of several books: *What are the Jews* (1939); *The Essentials of Liberal Judaism* (1947); *Jewish Ethics* (1951); and *The Thought of the Prophets* (1953). His last two works were written after a long illness that afflicted his body, but left his mind as clear and lucid as ever.

He also edited *Aspects of Progressive Jewish Thought* (1955), which was dedicated in honor of Leo Baeck’s 80th birthday. It was published posthumously.

**MA'TUK, SULAYMAN BEN DAVID** (18th century), paytan and astronomer who lived in Baghdad. Ma’tuk was a descendent of R. Ma’tuk, the nasi of the Jewish community of ‘Ana. The latter fled to Baghdad with his family in the first quarter of the 17th century, under the threats of the tyrannical governor who had persecuted the community. Of Sulayman’s piyyutim, 16 are known, and about half of them were included in books published in Baghdad and India; they are
still familiar to Iraqi Jews. During the lifetime of his grandson R. Judah b. Jacob, the family name was changed to Yehuda. The family’s descendants include two modern scholars, the brothers R. Isaac Yehuda and Prof. Abraham Shalom Yehuda.

**BIBLIOGRAPHY:** A. Ben-Jacob, Yehudei Bavel (1965), 95. [Abraham Ben-Yaacob]

**MATZ, ISRAEL** (1869–1950), U.S. manufacturer, philanthropist, and patron of Hebrew literature and scholarship. Matz, who was born in Kalvarija, Russian Poland, immigrated to America in 1890. He became an accountant, later entering the drug business. In 1906 he founded the Ex-Lax Company and served as its president. Long an admirer of Hebrew authors, Matz aided Eliezer *Ben-Yehuda in the publication of his Hebrew-language thesaurus. From 1922 to 1925 he was publisher of the Hebrew monthly Ha-Toren, edited by Reuben *Brainin. Matz was also a founding patron and honorary chairman of the Hebrew monthly Bitzaron. He established the Israel Matz Foundation in 1925 for the support of Hebrew authors. A pioneer Zionist, in 1928 he founded a company in Palestine called Gan HaYyim for the development of an orange plantation. Matz also contributed to various schools of higher learning.

**BIBLIOGRAPHY:** Orlans, in: Hadoar, 30 (1950), 396–7. [Jacob Kabakoff]

**MATZAH** (*mazzah*; *matzoh*: Heb. מַצָּה), unleavened bread made from one of five species of grain – wheat, barley, spelt, rye, and oats – mentioned in the Torah, and the only bread which is permitted for use during *Passover. Matzah* (pl. *matzot*) is the object of a specific commandment calling for *matzah* to be eaten on Passover because the children of Israel “baked the *matzot* of the dough which they had brought forth out of Egypt, for it was not leavened; because they were thrust out of Egypt and could not tarry” (*Ex*. 12:39) – the speed with which *matzot* are prepared identifies it with the bread made in the Bible, when there was no time to prepare ordinary bread (cf. *Gen*. 18:6; 19:3). To fulfill the biblical precept on the first night of Passover, the *matzah* must be made from “guarded” grain, and must be processed with the intent – *kavvanah* – of fulfilling the commandment. Only grains capable of fermentation are valid for the manufacture of *matzah*, and such grains are therefore limited to the five species. In practice, however, only wheat has been used historically.

Ashkenazi *matzah* is a hard thin wafer, while Sephardim make softer, thicker *matzot* by using a much more watered batter. This soft *matzah* does not have a long shelf life, which necessitates baking and freezing it shortly before Passover, and indeed, before the advent of freezers, Sephardim baked *matzah* daily during the holiday.

*Matzah* is referred to as *lechem oni*, “the bread of affliction” (*Deut*. 16:3). On this basis the *Karaites*, who interpreted the Bible literally, make *matzah* only from barley, which was used to make the poor man’s bread. The same phrase is used in the talmudic discussion of whether *matzah* made from flour mixed with wine, oil, honey, or eggs instead of water may be used on Passover. Although it is not regarded as fermenting if there is no admixture of water, *matzah* made from any such ingredient is forbidden on the first night since it constitutes “*matzah ashirah*,” the “*matzah* of opulence,” in contrast to the “bread of affliction” (*Pes*. 36a). Generally, *matzah ashirah* was permitted only for the sick or the aged (101 462). Rashi, and subsequent Ashkenazi decisors (*posekim*), give credence to the concern that liquids other than water increase the rate of fermentation, and therefore prohibit healthy people from using egg *matzah*, i.e., *matzah ashirah*, for all of Passover. In recent years, people with celiac – an intestinal disorder with a dangerous reaction to the gluten in wheat – have been able to fulfill the mitzvah with oat *matzah* made from a specific non-gluten strain of oats. Spelt *matzah* is also commercially available for people with medical needs.

**The Duty of Eating Matzah**

Whereas the prohibition against eating *hamez* or having it in one’s possession applies to the whole of Passover, the positive commandment of eating *matzah* generally applies only to the first night (in the Diaspora the first two nights). According to R. *Elijah of Vilna, one fulfills a commandment to eat *matzah* on the other days of Passover as well. In Temple times, this duty was based on the verse “with *matzah* and bitter herbs shall they eat it,” i.e., the Paschal lamb, and is also based on the verse “In the evening ye shall eat *matzot*” (*Ex*. 12:18). In many circles, only “*matzah mitzvah*, i.e., *matzot* baked on Passover eve, is used at the *seder*. This is reminiscent of the Passover sacrifice, which in Temple times was offered on Passover eve and eaten at the *seder*. There is also the widespread custom of eating only “*matzah shemurah*” on the night of the *seder*, although some, as a special act of piety, eat it throughout the festival.

One must abstain from eating *matzah* on the eve of Passover beginning with sunrise on the 14th of Nisan, but a long-time hasidic custom was also adopted to abstain beginning at Purim a month before, while others refrain for two weeks starting with Rosh Hodesh Nisan.

**The Flour**

The manifold precautions which must be taken at the various stages of the *matzah*’s production are designed to prevent any fermentation whatsoever of the flour. The flour suitable for the baking of *matzah* can be divided into three categories of decreasing stringency:

1. “guarded flour,” which is closely supervised from the time the wheat is harvested and is used for the preparation of *matzah shemurah*;
2. “Passover flour,” where supervision to prevent fermentation begins with the milling of the wheat;
3. “ordinary flour,” which does not have supervision until the point of being mixed and is used to make “ordinary,” or machine, *matzah*. 

**689**
**MATZENAUER, MARGARETE**

**The Preparation**

Under normal conditions of climate and temperature, flour mixed with water begins to ferment in approximately 18 minutes. Should the water be above room temperature, however, the process is accelerated, but it can be delayed by the continua-\*al manipulation of the dough. In order to prevent water from becoming too warm, only “mayim she-lau” – “water which has rested” (Pes. 42a) – i.e., water which has been left in a vessel overnight to reach room temperature – is used in the baking of matzah, and thereafter the mixture of flour and water is constantly manipulated until it is ready for baking. Care must be taken that the whole process from kneading to final baking does not exceed the 18 minutes. No ingredients other than flour and water are permitted for Passover matzah. Although it is accepted by most decisors that salt is not a fermenting agent, its use in matzot is forbidden in order to prevent fermentation (Sh. Ar., Ḥ 1:455:5). Some Yemenites, however, do have the custom of baking their Passover matzah using salt.

Over decades, special equipment was developed for the baking of hand-made matzah, which can be found almost universally throughout the Jewish world. Immediately after the flour is first mixed with water, the relatively dry batter is kneaded using a specially designed smasher, in which the batter is placed on a flat surface and a hinged bar is used to pummel the dough. The dough is then flattened by using rollers made only of solid pieces of wood or metal without crevices, to prevent the possibility of pieces of dough getting wedged and becoming hameẓ. Perforation of the dough, after being rolled into shape and before baking, enables air bubbles to escape, and prevents the dough from rising and swelling during baking. The holes are made by rolling a small wheel with sharp teeth attached to a handle, known as a “reddler,” back and forth across the dough.

**Machine-made Matzah**

The industrial revolution combined with a growing urban population across Europe resulted in the amounts of traditional hand-made matzah produced being insufficient to provide enough matzot for everyone in need. The result was the introduction in 1838 of the first primitive machine that rolled matzah. Twenty years later, a bitter halakhic debate ensued over its permissibility, owing to the fear that the machine process might cause fermentation, and also whether a machine was able to fulfill the requirement of matzah being made with the proper intent. The dispute continued for more than half a century, until the machines improved technically and the rabbinic authorities began to accept those superior machines. Today the tons of world matzah – over $100 million in sales – are produced primarily by two major companies in the U.S.: Manischewitz, which built the first matzah factory in the United States, and Streit’s, as well as a dozen factories in Israel.

A major shortage of matzah for the Jews of Russia occurred in 1917 with the collapse of czarist rule and the takeover by the Communists, and again beginning in 1929, with the collectivization of farms by Stalin. The crisis became so severe that world Jewry was called upon to help provide the Passover needs of the Jews of Russia. During the two world wars, the widespread mobilization of Jewish soldiers created an additional need for matzah distribution never before experienced in modern Jewish history. Organizations such as the American Jewish Joint Distribution Committee and the Jewish Welfare Board provided matzot for them and for needy Jews around the globe.

[Max Loppert (2nd ed.)]

**MAURITIUS,** island in the Indian Ocean about 500 mi. E. of Madagascar, where Jewish refugees from Central Europe – passengers of the Atlantic – were put into detention during World War II after being forcibly deported from Palestine by the British as “illegal” immigrants (see *Patria*). On their arrival in Mauritius (Dec. 26, 1940), they numbered 1,580 persons: 1,320 landed in Haifa on Aug. 26, 1945, after the ban on their return was rescinded; 128 died while in Mauritius; 212 men joined the Allied forces, 56 of whom entered the *Jewish Brigade. About 60 children were born after the original strict regulation on separation of the sexes in the camp was abolished. The detainees consisted of a Maccabi-He-Halutz transport from Czechoslovakia, remnants of the Jewish community of Danzig, and a transport launched from Vienna. They were interned in the town of Beau Bassin, the men in a former prison, the women in adjacent huts of corrugated iron. They were not brutally treated, but were afflicted by tropical diseases, such as malaria, and by a lack of suitable clothing; food was often inadequate. Considerable moral and material assistance was given by Jewish organizations, particularly the South African Jewish Board of Deputies, the South African Zionist Federation, and the Jewish Agency. The detainees conducted manifold communal and cultural activities; they struggled for release and retransfer to Palestine through the...
Zionist Association of Mauritius, to which about 70% of the detainees belonged. Their struggle was supported by official Jewish institutions which regarded the "Exile in Mauritius" as a political challenge and an infliction of needless suffering upon refugees from the Holocaust through the implementation of the anti-Jewish Palestine White Paper of May 1939. The ultimate liberation of the detainees was hailed as a moral and political success for the Zionist movement.

[Aharon Zwergbaum]

In 1946 the St. Martins Jewish Cemetery, where Jewish detainees who died on the island during the war are buried, was entrusted to the South African Jewish Board of Deputies. Since that date the SAJBD, in cooperation with local benefactors (both Jewish and non-Jewish) and in recent years in partnership with the African Jewish Congress, has overseen its maintenance, including an extensive restoration project in 2001. Towards the end of the 20th century, a steady trickle of Jews began settling in Mauritius. In 2004, there were an estimated 60 Jews living permanently there. These were primarily engaged in tourism (three leading hotels were under Jewish management), agriculture, and the diamond and burgeoning textile industries. Plans were afoot for the opening of a Jewish community center, incorporating a synagogue, in the first half of 2005.

[David Saks (2nd ed.)]

Relations with Israel
In 1960, while Mauritius was still a British colony, Israel, represented by a consul general, extended it technical aid particularly through scholarships for young Mauritians to study medicine in Jerusalem and technical assistance on the spot. Mauritius became independent in 1968 and joined the United Nations. An Israeli delegation attended the celebration, and full diplomatic relations were established between the two countries. Israel's ambassador in Tananarive (Malagasy) serving as non-resident ambassador to Mauritius. Offers for new scholarships in Israel, as well as Israel assistance by experts in agriculture and other fields, were accepted by Mauritius. Mauritian professionals trained in Israel founded a Mauritius-Israel Friendship Society. Strong Indian influence in Mauritius, as well as Muslims of Pakistani origin who constitute 20% of its population, make themselves felt in Mauritius' attitude and policy toward Israel. The general attitude to Israel, however, is basically friendly, with the elder generation still remembering sympathy the Jewish refugees from Europe exiled there in 1940, and the mutual relations between the countries remained fruitful.

[Zvi Loker]

MAUROIS, ANDRÉ (originally Emile Herzog: 1885–1967), French biographer, novelist, and essayist. Born in Elbeuf, Maur- rois was descended from Alsatian industrialists who moved to Normandy after the Franco-Prussian War. Raised in a staunchly patriotic home, he experienced antisemitism as a student at the time of the "Dreyfus Affair and was influenced by the philosopher Alain (Emile Chartier). He spent ten years in his father's factory and his experiences there were later used in his fiction. A French liaison officer and interpreter with a Scots division during World War I, he published a light-hearted book about his British army comrades, Les Silences du Colonel Bramble (1918; Eng. tr., 1919) using his pseudonym, André Maurois, for the first time. He followed it with Les discours du docteur O'Grady (1922). Maurois earned a reputation as an acute interpreter of the English scene and as an outstanding biographer. During the 1920s and 1930s he published Ariel, ou la vie de Shelley (1923; Eng. tr., Ariel, 1924); La vie de D Israëli (1927; Eng. tr., 1927); La vie de Lord Byron (1930; Eng. tr., 1930), and historical works such as Edouard VII et son temps (1933; Eng. tr. 1933) and Histoire de l'Angleterre (1937; Eng. tr., 1937). In writing his biographies, Maurois combined documentation, erudition, and imagination, to unfold the psychological development of his subjects. His books in this genre include studies of Voltaire (1935), Chateaubriand (1938; Eng. tr., 1938), George Sand (1952; Eng. tr., 1953), and Hugo (Olympio, 1954).

Two outstanding biographies were A la recherche de Marcel Proust (1949; Proust, a biography, 1950) and Prométhée, ou la vie de Balzac (1965). Maurois also wrote short stories and several semiautobiographical novels, notably Bernard Quesnay (1926; Eng. tr., 1927); Climats (1928; Whatever Gods May Be, 1929); and Le cercle de famille (1932; The Family Circle, 1932). In the first of these he told the story of his refugee Alsatian family.

After the armistice of 1940, Maurois supported the Vichy regime, but then violently opposed Hitler and fled to the U.S., where he taught at Princeton until the end of the war. He claimed that the Jews of the Diaspora had to choose segregation, assimilation, or some difficult intermediate path. Himself a convinced assimilationist, he nevertheless remained interested in problems of Jewish identity, to which he referred in the first part of his Mémoires (1942; I Remember, I Remember, 1942). In later years he confessed to "a deep sadness" within himself and praised the intellectual enrichment which the Jews had brought to French literature. Maurois' other works include: Aspects de la biographie (1928; Eng. tr., 1929); Magiciens et logiciens (1935; Prophets and Poets, 1935); Histoire des États-Unis (2 vols., 1943–44; Eng. tr., 1948); and Histoire de la France (1947; Eng. tr., 1949); and the autobiographical works Portrait d'un ami qui s'appelle moi (1959) and Mémoires 1885–1967 (1970). His collected works appeared in 16 volumes (1950–55).

He was elected to the French Academy in 1938.

BIBLIOGRAPHY: G. Lemaître, André Maurois (Eng., 1939), Chaingne, in: A. Maurois, Poésie et action (1949); J. Suffel, André Maurois (Fr., 1965).

"MAURRAS, CHARLES (1868–1952), French nationalist writer and antisemitic politician. In association with "Daudet,
Maurras founded L’Action française – both the newspaper and the movement by that name. His call for a return to the traditional values of “la vieille France” and his extreme political attitudes are reflected in all his books, especially *Quand les Français ne s’aimaient pas* (1916), *Mes idées politiques* (1937), and *La contre-révolution spontanée* (1943). Maurras’ love of monarchy, hierarchy, and the rural virtues was paralleled by his hatred of the republic, democratic institutions, and the “multitudes” (a word he coined himself), i.e., recently naturalized foreigners, and above all the Jews. He believed that the Jews – together with their allies the Freemasons, the Protestants, and the métèques – sought to control the entire political life of France. The *Dreyfus Affair* (which obsessed him for the rest of his life) was for him the supreme example of Jewish dominance. Nevertheless, his passion for the French nation did not prevent Maurras from welcoming Hitler as a savior from democracy and the Jews, and he hailed the German invasion of France in 1940 as the “divine surprise.” When the Jews in occupied France were forced in May 1942 to wear the Jewish badge, Maurras regarded it as a suitable opportunity to rid France, too, of the “Jewish scourge.” For his subsequent collaboration with the Germans, Maurras was condemned in January 1945 to life imprisonment.

**MAUSS, MARCEL** (1872–1950), French ethnologist, sociologist, historian of religion, and polyhistorian. Born at Epinal, Mauss was a nephew of Émile *Durkheim*, who guided his education and greatly influenced him. His early interests were mainly philosophy and the history of religion. He taught the latter subject throughout his life, but enriched the entire domain of social science and contributed to the growth of the French school of anthropology. Mauss was professor of the history of religions of noncivilized peoples at the École des Hautes Études in Paris and also taught at the Collège de France. In 1925 he helped to found the ethnological institute of Paris University, of which he became joint director. He worked with his uncle in both practical and theoretical studies, carrying forward some of Durkheim’s basic ideas such as the total social fact, collective representations, and the correspondence of morphological social structure with moral, legal, and symbolic facts. He was one of the team of young scholars assembled by Durkheim for his journal *L’Année sociologique* (1898–1913), and directed its section on religion. He revived the journal after World War I. Of Mauss’s works on anthropology, the best known outside France is *Essai sur le Don* (1926; *The Gift*, 1954), an elaborate study of the relation between exchange patterns and social structure. Mauss was active in French political life participating in the support of *Dreyfus*, and in the socialist and cooperative movements. He never recovered from the mental breakdown caused by the brutalities of the German occupation, though he published two more works before his death.

**MAUTHAUSEN**, Nazi concentration camp in Austria, 12½ mi. (20 km.) S.E. of Linz, established in April 1938 shortly after the annexation in March of Austria to the Third Reich. The “SS employed its prisoners in the local granite quarry called “Wienergraben,” that was incorporated into the camp. Initially, Mauthausen served as a concentration camp for Austrian anti-Nazis. The first commandant was Albert Sauer. Its commander from February 1939 to May 1945 was Franz Ziereis about whom it was stated that “he gave his son 50 Jews for target practice as a birthday present” (see Presser, p. 54). Starting as a satellite of *Dachau*, Mauthausen became an independent camp in the spring of 1939, and expanded continually, with several satellites of its own throughout Austria (Gusen, Ebensee, and others) by the end of the war. After the outbreak of World War II Mauthausen became a camp for anti-Nazis from all over occupied Europe and in 1940 was graded category III, the harshest category of concentration camps (Dachau was in category I). Mauthausen received the so-called “protective custody” prisoners whose “return was not desired” (RU = Rueckkehr unerwuenscht; see *Camps, Concentration and Extermination*). Himmler specially ordered the death of a prisoner in Mauthausen to be communicated to his family only after incineration. The camp had the highest death rate for those in “protective custody” of all the concentration camps. Mauthausen was used for political prisoners. Of over 10,000 Spanish Republicans who were interned there early in 1941, handed over by the Vichy regime, only 1,500 were still alive after one year.

[Ephraim Fischoff]
Work conditions were intolerable; the prisoners had to carry heavy stones up the 186 steps of the “Wienergraben.” It was called Death’s Way. In November 1941 Russian prisoners of war began arriving, destined for immediate death through overwork and starvation. Though able bodied and trained for military combat, they did not engage in an uprising until February 1945; their revolt was unsuccessful and many were killed. The camp authorities used a special measuring installation to shoot their victims in the nape of the neck. Prisoners were also killed by phenol injections or gassed at the euthanasia installation at Hartheim until a gas chamber was constructed in one of Mauthausen’s three sections. From the beginning of 1942 prominent citizens from occupied territories arrested under the “night and fog decree” were brought there. Recaptured prisoners of war were executed under the “bullet decree” (Kugel-Erlaß). When prisoners of other camps were caught for clandestine activities, those not immediately executed were sent to Mauthausen for punishment. Following Heydrich’s death, hundreds of Czech prisoners were killed.

In May 1941 about 400 Jewish “hostages” from Amsterdam arrived via Buchenwald; they were all killed within three days in the forced-labor quarry which also served as a site for execution. There were another two shipments of Jews from Holland to Mauthausen (end of 1941 and 1942) who were killed after a short time in the camp. Up to 1944 Jews were never allowed to live for more than three days. When in early 1945 the camps in the East were evacuated, thousands of prisoners from Auschwitz, including Jews, were brought to Mauthausen; thousands of Hungarian Jews who had slaved building fortifications at the so-called “Southeast Rampart” were also brought to camp. The name of Mauthausen was particularly feared by Holland’s Jews, and the Germans took advantage of this fear to suppress resistance to their measures against the Jews. Jews in Mauthausen were singled out for especially cruel treatment compared to that given non-Jews (see Anklageschrift in der Strafsache gegen Fritz Woehr et al. (1968), 98–102, 228–35). Shortly before the capitulation it was planned to murder all Mauthausen prisoners in a subterranean aircraft-construction hangar in Gusen, but the plan was not carried out. Mauthausen was liberated by U.S. troops in May 1945. In the main camp the prisoners had rebelled. Ziereis hid in the camp but was shot by a U.S. patrol several days later when he tried to escape. According to camp records – and they may be an understatement – 199,404 were interned at Mauthausen; 119,000 died. Of those who died, as often due to work conditions and lack of food as to the gas chambers or killing fields, 38,120 were Jews.

MAUTHNER, FRITZ (1849–1923), German journalist, author and philosopher. Mauthner, who was born in Horice, Bohemia, came of an assimilated family and remained estranged from Judaism. His Erinnerungen (1918) provides a fascinating account of his early upbringing in Prague, portraying also the situation of Jews between three cultures and languages – German, Czech, and Jewish – within the national conflict in Bohemia. After law studies at Prague he settled in Berlin, where he became editor of the Magazin fuer Literatur and wrote reviews for the Berliner Tageblatt, which he directed from 1895. A naturalistic writer and a socialist, he was a co-founder of the Freie Buehne, but later turned to writing historical fiction and philosophical works. Mauthner first attracted attention with Nach beruehmten Mustern, witty parodies of 22 of his contemporaries including Berthold Auerbach, Gustav Freytag, Paul Heyse, and Richard Wagner, which he wrote for the Deutsches Monatsblatt from 1879, before they were published as a book in 1897. This was followed by many novels, novellas, satirical sketches, and fairy tales. One of these is the novel Der neue Ahasver. Roman aus Jung-Berlin (1882), in which he showed how assimilation was rejected by antisemitism. While he was successful as a satirical journalist, and much less so as a novelist, he was highly regarded – and remained so – for his philosophical works, which had a great influence on modern philosophy (e.g., Ludwig Wittgenstein) and literature (e.g., Hugo von Hofmannsthal). His main work were the Beitrage zu einer Kritik der Sprache (3 vols., 1901–2), on which he worked from 1893. Following Friedrich Nietzsche as well as Ernst Mach and arguing that thinking never allows access to reality but is always mediated by language, he dealt with the psychology and science of language, and with the role of grammar and logic. In his Woerterbuch der Philosophie, neue Beitrage zu einer Kritik der Sprache (2 vols., 1910) he expanded his work on philosophical ideas; here he subjected more than 200 philosophical concepts to critical examination. A militant agnostic, Mauthner was denied academic appointments because of his anti-religious stand and political views. He radicalized his skepticism in his last literary work, Der letzte Tod des Gautama Buddha (1912), preaching an areligious, skeptical mysticism without God, as well as in his last and encyclopedic, philosophical work, Der Atheismus und seine Geschichte im Abendlande (4 vols. 1920–23), where he claimed that all dogmas – religious or scientific – were mere human inventions and that their origin, efflorescence, and decline had their basis in history. Mauthner then sought to show how the West had begun to shake off the once dominant concept of God. His work was thus intended to trace the disintegration of this concept, an “anthropomorphic illusion” that had held peoples spellbound for several millennia. From 1911 until his death he lived in Meersburg at Lake Constance, where he also edited the Bibliothek der Philosophen.

Mautner, Konrad

Mautner, Konrad (1880–1924), Austrian folk song collector, publisher of important primary sources on folk song and music, folk art and costume, and industrialist whose family was of Bohemian origin. In 1893, his father Isidor founded the largest textile business of the monarchy. Konrad Mautner studied in Vienna with private teachers and in Schotten high school. In 1902 he left for a year in the U.S., where he worked for his father’s textile concern. In 1909 he married Anna Neumann, his cousin, whose family comprised large-scale silk manufacturers. She was, like her husband, talented and interested in art. With the advent of the Nazis the family had to leave Austria. From his childhood, Mautner used to spend his vacations with his parents in Goessl on Grundsee, where he practically grew up together with local inhabitants. In 1910 he prepared for publication a collection of the “Steyersiche Rasplwerk,” folk songs, as a documentation of his happy childhood and youth years in that region. Verlag Staehelin and Lauenstein, publisher of limited editions, produced this material in a luxury edition of 400 copies. The volume included old songs and street verses that Mautner heard and sang in Goessl and which he transcribed and illustrated by hand drawings. This volume was the first Austrian musical village monograph, which because of its naiveté transmitted the picture as a whole. Since it was based on personal memory, it was held at that time to be of no importance, because of the doubt as to whether the songs were authentic according to the criteria of folk song research of that time. Today, however, its significance is realized. Later, Mautner was in close contact with the professional world, and published one more volume from Salzkammergut, a town in the Austrian province Steiermark, as well as numerous journal articles. In 1914, the Musical Historical Center of the War Ministry used him (together with other professional people) for collecting soldiers’ songs. He worked together with Viktor von Geramb on the book of native costumes in Steiermark (Steirische Trachtenbuch) that was published only after his death. Mautner’s articles in the field of folk song research are characterized by precise observation of the subject and artistic intuition as well as by early use of technical facilities (phonograph, etc.).

[Gerlinde Haid (2nd ed.)]

Mawza’, a town situated in the Tihama in west Yemen about 97 km southwest of Taiz, in an inhabited area of land which the streams of rainwater provide with sweet water. Consequently, the land is quite fertile. The town is one of the oldest ports in Yemen, connecting the country with Africa and the Indian Ocean. The temperature and humidity there are very high. The town is famous for its tombs and domes. It was connected with a crucial event in the history of the Jews of Yemen in 1679, which remained in the historical memory of the Jews of Yemen as Galut Mawza’ (The Expulsion of Mawza’), when apparently all of them were expelled to the salty and barren stretch of land off the town, notorious for its harsh, hot climate. The expulsion, ordered by Imam Ahmad ibn Hasan (1676–1681), was the culmination of a series of anti-Jewish measures responding to the Jewish messianic movement in Yemen in 1666/7 among the followers of *Shabtai Zevi. After a long and comprehensive debate by the Muslim scholars of both religious schools, the Zaydi and the Shafi’i, Imam Isma’il (1464–1476) confirmed their ruling that by the fact that a group of Jews in Yemen had taken some practical steps to materialize the Jewish vision of messianic redemption, the whole community had violated the agreement of dhimma with the Muslim kingdom. The full meaning of that ruling was that they were no longer entitled to government protection and that no Jews were permitted to live there anymore. Imam Isma’il decided then to expel all the Jews from his country but left the practical implementation to his heir Imam Ahmad. Immediately after this the new imam ordered the destruction of all synagogues and prohibited public prayer by Jews. As the Jews rejected the offer to convert and to live in Yemen as Muslims, Imam Ahmad commanded in 1679 that all Jews leave their places and be sent by boat to the Muslim Moghul kingdom in India. But for some reason, probably practical difficulties, this plan could not be carried out and the Jews stayed for more than one year near Mawza’. This event was the worst calamity that befell the Jews of Yemen in their long history. The houses that the Jews had left behind were destroyed or sold cheaply, and all their valuables were either lost or stolen. Many died en route, and those who reached Mawza’ suffered from disease and starvation; as many as two-thirds of the exiles did not survive. The Jews also lost many of their ancient traditions as they could not carry with them most of their old manuscript writings nor their communal books and archives. The event was well documented in both Muslim sources as well as in Jewish ones, especially in the poems of R. Shalem *Shabazi, Yemenite Jewry’s greatest poet who went into exile with his coreligionists. The expulsion deprived Yemen of all its Jewish artisans, and the Muslim population soon came to realize that they could not do without them. Step by step the Jews started to return to their places, but were forced to build new neighborhoods outside the town walls. The district governors petitioned the central authorities in *San’a to bring the Jews back, and a year after their expulsion the Imam permitted their return. During the aftermath of the expulsion the Jewish communities sank into a deep social, economic and spiritual crisis (many hundreds converted to Islam), from which they recovered only after many years.

[Yehuda Ratzaby / Yosef Tobi (2nd ed.)]

“Maximilian I (1459–1519), king of Germany from 1486 and Holy Roman emperor from 1493. His Jewish policy, like that of his father, *Frederick III, was erratic and motivated by
financial considerations. In 1496 he expelled the Jews from *Carinthia and *Styria, after the estates there had undertaken to reimburse him for the loss of Jewish taxes, but he permitted them to settle in *Burgenland. He forbade Jews to live in *Vienna, with the exception of his agent Hirschel of Zistersdorf, with whom he "had to have patience" because he was so much in his debt. In 1509 he gave power to Johannes *Pfefferkorn to confiscate Jewish books and to destroy those which were offensive to Christianity. Reversing this decree in 1510, he ordered expert opinions to be asked from the universities as well as from Johannes *Reuchlin, Victor von *Carben, and Jacob van *Hoogstraaten. After banning Reuchlin's Augenspiegel in 1512, a year later he ordered both sides to keep silent. He issued a decree forbidding rabbis to apply the "herem" (ban) against those appealing to gentle courts. Under his rule, "Joseph (Joselmann) b. Gershom of Rosheim became the shadlan of German Jewry, and in Moravia the first "Landrabbiner was appointed.

**MAXIMILIAN II** (1527–1576), from 1564 ruler of the Hapsburg dominions and Holy Roman emperor, successor to *Ferdinand I. His policy toward the Jews was generally lenient, though he suspected them of supporting the Turks. In 1567 he reaffirmed the charters of Bohemian Jewry, promising to maintain their rights to practice trades they had previously engaged in, and issued decrees against usury. Foreign Jews were forbidden to trade in his dominions without explicit license. Against the will of the local ruler, in 1570 he permitted the Jews free passage through the duchy of *Brunswick (Braunschweig), and asked the "Worms municipality not to harass its Jews because their rights were long standing. While permitting seven families to settle in Vienna in 1571, a year later he decided to concentrate them in one building in the center of the city for easier surveillance, then expelled them in the same year. Maximilian was the first to grant a Jewish craftsman, a diamond cutter from "Breslau (Wrocław), a permit to pursue his craft. The baptized Jew, Paul Rizius (Ricci, d. 1542), was his court physician.

[Meir Lamed]

**MAXIMON** (Maximowski), **SHALOM DOV BER** (1881–1933), essayist and educator. Maximon, who was born in Skvira, left Russia at the age of 21 and traveled to Galicia, Switzerland, France, and England. In London he met Aḥad Ha-Am who exerted a permanent influence on his writings. He was also befriended by Brenner who published his first article in *Ha-Meorer*. In New York, he was employed by the Bureau of Jewish Education and edited a paper for children, *The Jew-...ish Child*. He was also one of the founders and editors of the monthly *Ha-Toren* in 1913 and edited the pedagogical journal *Shevil ha-Hinnukh* for two years (1927–29). He was a member of the faculty of Hebrew Union College School for Teachers in New York and in 1930 was appointed registrar of Hebrew Union College in Cincinnati, Ohio. Maximon contributed articles to Hebrew periodicals in Europe and Palestine. Most of his articles were collected in his book *Gevilim* ("Rolls of Parchment," 1925).

[Eisig Silberschlag]

"**MAXIMUS, MAGNUS CLEMENS** (Maximus the Usurper; d. 388 C.E.), Roman emperor 383–388. A native of Spain, Maximus was proclaimed emperor by the army in Britain in 383. To secure his position Maximus invaded Gaul and occupied it, defeating the western emperor Gratian. In a treaty negotiated with the eastern emperor Theodosius, Maximus received recognition of his conquests in return for an assurance that he would honor the sovereignty of Valentinian II (Gratian’s brother) in Italy, Western Illyricum, and Africa. He violated his promise and he invaded Italy in 388. Theodosius together with the Franks, Goths, Alanis, and Huns took up arms against him, and within two months Maximus was deserted by his troops and forced to take refuge in Aquileia. He subsequently capitulated and was executed in August 388.

The relationship between Maximus and the Jews is difficult to establish because of the paucity of sources available. The only substantial document of relevance is a letter sent by St. Ambrose to the emperor Theodosius in December of 388. In it, St. Ambrose admonishes Theodosius for his punishment of those involved in the burning of a synagogue in the East. He argues that the imperial punishment imposed upon those involved in the burning should be rescinded, and that the local bishop who instigated the affair should not be held financially responsible for the renovation of the synagogue. St. Ambrose reminds Theodosius of the many offenses committed against Christians by the "scheming Jews," and goes on to suggest that penalties for civic offenses should be viewed differently when there are religious considerations. He further asks the question: "Shall a place be provided out of the spoils of the Church for the disbelieve of the Jews?"

To illustrate his point Ambrose utilized the recent example of Maximus. According to Ambrose, Maximus condemned the burning of a synagogue in Rome on the basis that it was a breach of public order. Ambrose records the hostile reaction of the Roman people to this course of action, their charges that Maximus had converted to Judaism, and their grim prophecies of Maximus’ downfall. Ambrose clearly hoped that Theodosius would profit from the mistake of his former adversary, and adopt a more lenient attitude toward those involved in Jewish persecutions.

"
MAXWELL, ROBERT (1923–1991), British publisher. Maxwell was born Jan Ludvik Hoch, son of a poor Jewish farmer, in Solotvino in the Carpathians, then part of Czechoslovakia. Although his family was Orthodox, he appears to have abandoned Judaism at about the time he left his native village and traveled to Budapest. Maxwell later stated, “I ceased to be a practicing Jew just before the war... I certainly do consider myself a Jew. I was born Jewish and I shall die Jewish.” After the German occupation of Czechoslovakia in March 1939, Maxwell made his way to Hungary where he was arrested at the end of the year. He escaped and made his way to southern France where he joined members of the free Czech forces with whom he was transported to Britain in 1940. After a spell in the Czech Legion and the British Pioneer Corps, he joined the North Staffordshire Regiment in 1943 and served with distinction during the campaign in Northern Europe. He was decorated with the Military Cross in 1945 and had risen from the rank of corporal to captain by the end of the war. He served with the Allied Control Commission in the British Zone of Occupation in Germany in the department of Public Relations and Information Services Control. At this time he also engaged in commercial activities and following his demobilization in 1947 he entered business, specializing in import and export between Britain and Eastern Europe where he established extensive connections. He first entered publishing by way of an agreement to distribute German scientific periodicals in 1947. Two years later he acquired Pergamon Press, although he lost control of the company for a time in the early 1970s when his business activities were subjected to a critical report by the Department of Trade and Industry. In 1981 he bought the British Printing and Communication Corporation, of which he was chairman, and in 1984 acquired Mirror Group Newspapers (MGN). As chairman of MGN he became the publisher of several mass-circulation titles. Pergamon Press was the world’s largest distributor of scientific periodicals. Between 1964 and 1970, Robert Maxwell was Labour Member of Parliament for Buckinghamshire. By the 1980s, Maxwell had acquired a major international business empire, which included The Daily Mirror and The People newspapers in Britain, the New York Daily News, and the famous publisher Macmillan, as well as a range of firms in Europe. In 1990, Philip Beresford’s Book of the British Rich, the predecessor to the Sunday Times’ “rich lists,” claimed that Maxwell was then Britain’s tenth richest man, worth an estimated £1.1 billion. He was active in various philanthropic causes and was chairman of the National AIDS Trust. In 1986 he was involved in the financing of the Commonwealth Games in Edinburgh and had an interest in several football clubs, notably Oxford United and Derby County. Most of his own family perished in the Holocaust and in 1988, he provided £1 million to fund the major international conference on the Holocaust, “Remembering for the Future,” which took place in London and Oxford. Maxwell had business interests in Israel – Pergamon Media purchased a 45% stake in Modi’in Publishing House which owned the Israeli daily newspaper Ma’ariv – and invested in Scitex, Keter Publishing House, and Teva Pharmaceutical Industries Ltd.

Maxwell's downfall apparently came through unwise expansions and, unusually for a successful tycoon, overly generous payments for the acquisition of new assets, together with a secretive operating style in which no one but Maxwell himself understood the complexities of his business empire. Components of his business empire ran into difficulty in the business downturn of the late 1980s, and he was accused of raiding the assets of others to support them, including the MGN’s pension fund. By the second half of 1991 the British Fraud Squad had compiled a lengthy dossier on Maxwell, and rumors of his true position increasingly surfaced in the press. On 5 November 1991 Maxwell disappeared from his yacht near the Canary Islands. His death caused a worldwide sensation. It has never been ascertained whether his death was caused by suicide, accident, or murder, and many conspiracy theories later came to the fore, especially those in which various intelligence agencies (including the Israeli Mossad) were responsible for his death. At his death, his debts totaled at least £400 million, with some estimates putting his total debt as high as £2.2 billion.

Like many self-made tycoons, Maxwell was widely regarded in a negative light. Consequently, his very notable record of charity and the scale of the business empire he briefly organized have largely been forgotten.

MAXY, MAX HERMAN (1895–1971), Romanian artist, and director of the Art Museum of the Socialist Romanian Republic. Maxy was born in Brăila, educated at a Jewish school and studied at the school of Belle Arét. He completed his studies in Berlin and in 1925 exhibited with the “November Group.” In the 1930s he exhibited in Rome, Paris, the Hague, and Brussels. He designed sets and costumes at the company of Vilna for The Night in the Old Market of Peretz and Shabbetai Zevi.

MAY, ELAINE (1932– ), U.S. screenwriter, director, and actress. Born Elaine Berlin in Philadelphia, Pennsylvania, to Yiddish theatrical actor Jack and actress Jeannie Berlin, May began acting on stage as a child in the Yiddish theater run by her father. She married Marvin May in May 1949; the couple had one daughter together, Jeannie Berlin, before divorcing. May studied at the University of Chicago and Playwrights Theater
in 1950. She then joined the Compass Players in 1953 and began working with fellow member Mike *Nichols in 1955. Along with Alan *Arkin, Barabara Harris, and Paul Sills, Nichols and May went on to found the improvisational group the Second City. In 1957, the pair developed a nightclub act based on sophisticated parodies of popular culture and mock interviews. Nichols and May spent the next few years appearing in cabaret shows, on television programs, and on Broadway with their show *An Evening with Mike Nichols and Elaine May* (1960). The pair produced several albums together, even winning a Grammy in 1961, the same year they amicably brought their partnership to an end. In 1967, May appeared in the films *Bach to Bach*, *Enter Laughing*, and *Luv*. May honed her playwriting through the 1960s, and in 1969 produced her one-act play *Adaptation*. Her first credited screenplay was *A New Leaf* (1971), which she costarred in and directed. In 1972, May directed Neil Simon’s *The Heartbreak Kid* (1972). When May came in over budget and past deadline on a film she wrote and directed, *Mikey and Nicky* (1976), Paramount tried to remove her from the project. Her next screenplay, *Heaven Can Wait* (1978), an update of *Here Comes Mr. Jordan* (1941), was cowritten with its star Warren Beatty. While the film received mixed reviews, it did well at the box office and received an Academy Award nomination. But May won the Oscar that year as best supporting actress in *California Suite* (1978). While uncredited, May helped rewrite *Reds* (1981) and *Tootsie* (1982). May and Beatty reunited for *Ishtar* (1987), a project so marred by cost overruns that it became one of the largest financial failures in motion picture history. May wrote the screenplay for *The Birdcage* (1996), an adaptation of *La Cage aux Folles* directed by Nichols, and the pair teamed up again for *Primary Colors* (1998), which earned May another Oscar nomination. In 2000, she appeared in the Woody Allen film *Small Time Crooks*. 

**[Adam Wills (2nd ed.)]**

**MA'YAN BARUKH** (Heb. מַעֲיָן בָּרוּךְ), kibbutz on the Israeli-Lebanese border near the Tannur waterfall, affiliated with Ihud ha-Kevuzot ve-ha-Kibbutzim. It was founded in 1947 by South African and Rhodesian World War II veterans, joined by Israel-born youth and immigrants from the United States, Great Britain, and other countries. Its founding at the time was regarded as an act of defiance against the British administration which imposed martial law on Tel Aviv and the Jewish sectors of Jerusalem. In the Israeli *War of Independence* (1948), the kibbutz resisted strong Syrian contingents who attempted to penetrate into the Huleh Valley, and in the years preceding the *Six-Day War* (1967) Ma'yan Barukh was repeatedly shelled by the nearby Syrian positions. Its economy was based on fruit orchards, irrigated field and garden crops, and dairy cattle. The kibbutz maintained a local museum. Its name, “Baruch’s Spring,” commemorates Baruch (Bernard) Gordon, a South African Zionist. In the mid-1990s, the population was approximately 360, dropping to 305 in 2002. The kibbutz operated a steel factory and ran its dairy farm in partnership with kibbutz *Loḥamei ha-Gettauṭot*. The kibbutz also operated guest rooms and water recreation facilities at the nearby Jordan River.

**[Efram Orni / Shaked Gilboa (2nd ed.)]**

**MA'YAN ZEVI** (Heb. מַעֲיָן צְבִי), kibbutz in central Israel, on Mt. Carmel near Zikhron Yā’akov, affiliated with Ihud ha-Kevuzot ve-ha-Kibbutzim. It was founded in 1938, initially as a *stockade and watchtower settlement, by pioneers of Maccabi ha-Za’ir youth from Germany, Austria, and Czechoslovakia. In 1969 Ma’yan Zevi had 540 inhabitants. In the mid-1990s the population was 612, dropping to 491 in 2002. The farm economy was based on avocado plantations, citrus groves, and field crops, carp ponds below on the Carmel Coast plain, and dairy cattle and poultry. The kibbutz also operated factories for optical equipment (Scopus, Meprolight, the latter specializing in military and security needs). The name, “Spring of Zevi,” commemorates Zevi Henri Frank, a director of the *Jewish Colonization Association (ICA)* in Palestine.

**[Efram Orni / Shaked Gilboa (2nd ed.)]**

**MAYBAUM, IGNAZ** (1897–1976), Reform rabbi and theologian. Born in Vienna, Maybaum served as rabbi at Bingen (Rhineland), Frankfurt on the Oder, and Berlin. In 1939 he immigrated to England. From 1947 to 1963 he was minister of the Edgeware Reform Synagogue (London) and lecturer on theology and homiletics at the Leo Baeck College (established 1956). In addition to publications in his German period (*Parteibefreites Judentum*, 1935; *Neue Jugend und alter Glaube*, 1936) he wrote books in English including *Synagoge und Society* (1944); *Jewish Mission* (1951); *Sacrifice of Isaac* (Leo Baeck College Publication, no 1, 1959); *Jewish Existence* (1960); *The Faith of the Jewish Diaspora* (1962); and *The Face of God after Auschwitz* (1965). In his writings Maybaum considers the theological and religious problems presented by the Holocaust and the dual existence of the Jewish people in the Diaspora and its ancient homeland. He was a nephew of Sigmund *Maybaum*.

**BIBLIOGRAPHY:** 1C (Feb. 24, 1967), 13.

**MAYBAUM, SIGMUND** (1844–1919), rabbi and lecturer on homiletics. Born in Miskolc, Hungary, Maybaum studied at the yeshivot of Eisenstadt (under I. *Hildesheimer) and Pressburg (Bratislava) and at the university and rabbinical seminary of Breslau. He officiated as rabbi in Dolní-Kubin, Hungary (1870–73), and Zatec, Bohemia (1873–81). In 1881 he was called to Berlin, where from 1888 he also lectured on homiletics at the *Hochschule fuer die Wissenschaft des Judentums*. In 1903 he was appointed professor. Active in the association of rabbis in Germany, in 1897 Maybaum was among those rabbis who protested against the idea of convening the Zionist Congress in Germany. His works include *Die Anthropomorphien und Anthropopathien bei Onkelos und den spateren Targumim* (1870), *Die Entwicklung des alt-israelitischen Priesterums* (1880), *Die Entwicklung des israelitischen Prophetentums* (1883), and *Juedische Homiletik* (1890). His important article
on the life of Leopold *Zunz appeared in 1894 (in the 12th report of the Hochschule). Maybaum was an excellent preacher and his sermons were published in several volumes. A jubilee volume was published on the occasion of his 70th birthday.

**Bibliography:** Xll. Cahn, *Religiöse Streunungen...* (1912), passim.

[Nahum N. Glatzer]

**Mayer, Arno Joseph** (1926– ), U.S. historian. Born in Luxembourg, Mayer fled the Hitler menace and found refuge in the U.S. (1940). He served in the U.S. Army in World War II, during which time he was assigned the duty of tending to Werner von Braun after the German rocket scientist was taken into custody by the American forces. Following his military service, Mayer studied at the Geneva Institut des Hautes Études Internationales and received a Ph.D. in political science from Yale University. After teaching at Brandeis and Harvard, he was a professor of history at Princeton from 1961 to 1999. Upon his retirement, Mayer became professor emeritus of history at Princeton. His research was in the field of 20th-century diplomacy.

[Ruth Beloff (2nd ed.)]

**Mayer, Daniel** (1909–1996), French socialist politician. Born in Paris, Mayer was a journalist by profession, and wrote for the socialist newspaper *Le Populaire*. After the fall of France during World War II, he reorganized the Socialist Party, clandestinely editing the *Populaire*, and after the liberation became its general secretary. Mayer was a member of the Chamber of Deputies from 1946 to 1958 and from 1946 to 1949 held a number of ministerial offices—labor, public health, and veterans’ affairs. He was also president of the parliamentary committee on foreign affairs. He left parliament in 1958 to devote himself to the League for Human Rights of which he was president. In July 1977 he was elected president of the World Federation of the Human Rights League. Mayer was an active figure in Jewish affairs as president of ORT. When French policy toward Israel took a hostile turn, Mayer emerged as a vigorous defender of the Israeli cause both as a speaker and writer. His publications include *Etapes yougoslaves: producteur citoyen, homme* (1962); *Pour une histoire de la gauche* (1966); and *Les Socialistes dans la Résistance* (1968).

[Shulamith Catane]

**Mayer, Gustav** (1871–1948), German historian. Born in Prenzlau (Brandenburg), Mayer studied economics in Berlin and Freiburg and later worked as a journalist. Because of his criticism at the end of World War I his academic career came to a standstill and only in 1920 did he become professor of history, democracy, and socialism at the University of Berlin. He wrote extensively on socialism and the history of the German labor movement. Gustav’s unbiased writings contributed to the appreciation of the historical significance of *Lassalle*, “Marx, and his friend Friedrich Engels, about whom Mayer wrote an important biography. Among his books were: Johann Baptist von Schweitzer und die Sozialdemokratie (1909); Die Anfaenge des politischen Radikalismus im vormaerzlichen Preussen (1912); Der deutsche Marxismus und der Krieg (1916); Aus der Welt des Sozialismus (1927); Bismarck und Lasalle, ihr Briefwechsel und ihre Gesprache (1928); Friedrich Engels, eine Biographie (2 vols., 1933; Eng., 1936). When the Nazis came to power Mayer emigrated to Holland where in 1949 his *Erinnerungen – Vom Journalisten zum Historiker der deutschen Arbeiterbewegung* was published. He refused to go back to Germany after World War II because he felt that German-Jewish symbiosis had failed.

[Boejn Siegel (2nd ed.)]

**Mayer, Leo Ary** (1895–1959), Orientalist. Born in Stanislav (Austrian Poland), he settled in Palestine in 1921 and was successively inspector of antiquities and librarian and keeper of records for the Department of Antiquities. In 1925 he was appointed lecturer in the Institute of Oriental Studies of the Hebrew University of Jerusalem. From 1932 to 1958 he was professor of Near Eastern art and archaeology there. He held numerous positions: head of the Institute of Oriental Studies; dean of the faculty of humanities; rector of the Hebrew University (1943–45); president of the Israel Exploration Society (1940–59); and president of the Israel Oriental Society. With E.L. Sukenik, he excavated the Third Wall of Jerusalem and with A. Reifenberg the Eshtemoa synagogue. Mayer specialized in Islamic art, costume, epigraphy, and numismatics. His works include *Saracenic Heraldry* (1933), *Mamluk Costume* (1952), bibliographies of Jewish art and numismatics, and a comprehensive work on Muslim artists, *Islamic Architects and Their Works* (1956). A museum of Islamic art and culture in Jerusalem was named after him.

[Michael Avi-Yonah]

**Mayer, Leopold** (1827–1903), U.S. community leader and businessman. Mayer, who was born in Abendheim, Germany, immigrated to the United States in 1850. Settling in Chicago, he engaged in private tutoring of Hebrew and German and
became known as "Lehrer Mayer." Mayer exerted great influence on the development of the new Jewish community in Chicago, particularly in religious education and in the movement toward Reform Judaism. In 1851 he conducted the first bar mitzvah service at Kehillath Anshe Maarab (K.A.M. Congregation) and also was a founder of the Hebrew Benevolent Society. In the former, Mayer advocated reforms in worship, including the adoption of the "living language German" in the ritual and preaching, but was unsuccessful in this effort. In 1859 he joined eight others, including Bernard *Felsenthal, to form the Jewish Reform Society (Juedischer Reformverein), which in 1861 founded Sinai Congregation, the first Reform congregation in the city. Mayer actively espoused the Union cause in the Civil War, and, with several other Jews, raised $10,000 to outfit a Jewish company of 100 recruits who formed the Concordio Guard. Later he and his brother entered the banking business.

**BIBLIOGRAPHY:** *M.A. Gutstein, Priceless Heritage* (1953).

[Morris A. Gutstein]

**MAYER, LEVY** (1858–1922), U.S. attorney. Mayer was born in Richmond, Virginia, and was brought up in Chicago. He graduated from Yale Law School, and in 1876 he became assistant librarian of the Chicago Law Institute, a position he held for six years. During this period he edited and revised the works of Judge David Rorer on interstate law, published as American Interstate Law (1879). Mayer became associated with the law firm Kraus, Mayer, and Stein, which he ultimately headed when it became Mayer, Meyer, Austrian and Platt. His major interest was corporation law, and he became one of the leading corporation lawyers in the country. He was a founder of many U.S. and international corporations and was identified with some celebrated law cases. Mayer served as a member of the State Council of Defense of Illinois during World War 1. He was a member of the American Economic Association and the American Academy of Political Science. He was associated with the Zion Temple in Chicago and was secretary of the Zion Literary Society.

[Morris A. Gutstein]

**MAYER, LOUIS BURT** (1885–1957), U.S. motion picture executive. Born in Russia, he was taken to Canada at the age of two. In 1907 Mayer bought a burlesque theater in Haverhill, Massachusetts, began showing films there, and soon owned all the theaters in the city. Moving to Hollywood in 1918, he formed the Louis B. Mayer Pictures Corporation, which merged to form Metro-Goldwyn-Mayer in 1924, with Mayer as vice president in charge of production. His bold use of talent and his gift for understanding public taste made MGM enormously successful. He made *The Merry Widow* in 1925, and he turned the early Goldwyn production of *Ben Hur* (1927) into one of the greatest of silent pictures. A string of money-making successes included *The Good Earth* (1932), the *Andy Hardy* series, and *Treasure Island* (1950).

Mayer was a great exponent of the star system. In addition to “finding” Greta Garbo and Greer Garson, he helped to establish such stars as Norma Shearer, Lon Chaney, Joan Crawford, and Clark Gable. The powerful "L.B." as he was called, liked films with children and presented such child stars as Jackie Cooper, Mickey Rooney, Peter Lawford, Judy Garland, and Elizabeth Taylor. He also knew how to find managerial talent. At MGM, where he remained a power until 1951, he had a series of brilliant production men, from Irving Thalberg to Dore Schary. For seven years he was the highest paid executive in the United States. From 1931 to 1936, he was president of the Association of Motion Picture Producers.

[Harvey A. Cooper]

**MAYER, RENÉ** (1895–1972), French politician who was prime minister of France in 1953. Born in Paris, Mayer became a lawyer and fought in the French Army in World War 1. In 1919 he was made an auditor in the Conseil d’Etat and was later given a senior post as Maître des Requêtes. He lectured at the Ecole Libre des Sciences Politiques from 1922 to 1932. He was vice president and secretary-general of the Chemins de Fer du Nord and from 1933 to 1940 was administrator of Air France, but in September 1940 was compelled by the Vichy government to give up these positions and shortly afterward he joined the Resistance. Mayer became a member of the French Committee for National Liberation in 1943 and in the following year was made minister of transport in the provisional government. He was elected to the National Assembly as a Radical Socialist in 1946 and was made minister of finance in the Pleven cabinet (1947–48). From 1949 to 1951 he was minister of justice in successive governments and after serving as minister of finance for a second term (1951–52), he became prime minister in January 1953. As prime minister, Mayer based his policy on friendship with Great Britain and a strong European defense community. His government fell the following May and Mayer was later active in the movement for European integration, becoming chairman of the Coal and Steel Authority (1955–58). Mayer played an active part in Jewish affairs and was a member of the Central Consistoire of French Jews. He was a member of the executive of the *Alliance Israélite Universelle* and, after 1946, its vice president.

[Shulamith Catane]

**MAYER, SIR ROBERT** (1879–1985), British patron of music and philanthropist. Mayer was born in Mannheim, Germany, the son of a hops merchant. He emigrated to Britain at the age of 17, working as a stockbroker and then as a successful non-ferrous metal dealer. Through his non-Jewish wife, a soprano singer and music patron, Mayer himself became involved as an organizer and sponsor of musical concerts for children, a series which spread throughout Britain and became well known. In 1932, in collaboration with Sir Thomas Beecham, he founded the London Philharmonic Orchestra. Mayer devoted...
MAYER, SALLY (1875–1953), Italian Jewish leader and philanthropist. Born in Alshaim, Germany, Mayer settled in Italy in 1891 and gave a great impetus to the paper industry of the Vita family, which, thanks to his activity, became one of the country’s most important economic concerns. He was also active in Jewish and Zionist affairs. After World War II, he became president of the Milan Jewish community, the second largest in Italy, to which he devoted himself with great energy. He rebuilt the synagogue of Milan, destroyed in an air raid, and reopened the Jewish school there. All other Jewish and Zionist organizations in Milan and Italy, however, also benefited from his generosity and dynamism. Mayer was also a patron of non-Jewish welfare institutions in Milan and in Abbiate Guazzone, where his paper mills were located.

His son, ASTORRE MAYER (1906–1977), born in Milan, graduated as an engineer and carried on and expanded his father’s enterprises in both the industrial and Jewish fields. For some years he was president of the Italian Zionist Federation and led the Jewish community in Milan. He also was honorary consul general of Israel there. He was president of the Standing Conference on European Jewish Community Service and other Jewish welfare and cultural institutions. Mayer also promoted important industries in Israel, the foremost being the Haderah Paper Mills, of which he was a founder.

MAYER, SALLY (1882–1950), Swiss Jewish leader and representative of the *American Jewish Joint Distribution Committee in Switzerland. Mayer was born in Switzerland where he established a successful knitwear factory. He was a member of the Municipal Council of St. Gallen and chairman of the Association of Jewish Communities in 1936. During his term of office, the Association joined the World Jewish Congress. In 1938 he was involved in negotiations with the Swiss government regarding the immigration of Jews but could not overcome the anti-immigrant feeling in Switzerland and thus Swiss policy remained restrictive. In October of that year the Swiss requested that the passport of Jews from Germany be marked with the letter J to distinguish it from non-Jewish passports. During World War II Mayer was appointed director of the Swiss office of the American Joint Distribution Committee, in which capacity he maintained contact with the Jewish community in German-occupied territories and was responsible for the transmission of funds from the JDC. The initial sum at his disposal was a paltry $6,370 in 1940, less than half that sum in 1941. After the Japanese occupation of China in 1941, he was responsible for the transmission of JDC funds for maintaining approximately 25,000 refugees in Shanghai under Japanese occupation. With the United States at war, American money could not be transmitted directly to enemy countries. A ruse was worked out where the Joint supported the Swiss Jewish Community’s efforts to help their own refugees and the Swiss Jewish community would funnel funds to China. He was also involved in attempts to rescue Jews from the Germans. He participated in the Europa Plan of 1942 with the working group in Slovakia whereby, on payment of two to three million dollars provided by Jews in free countries, the remaining million Jews in Europe were to be saved from extermination. In his bitter memoirs Rabbi Michael Dov Weissmandel accused Mayer of ineffectiveness and bad faith. In reality his options were limited as the Joint in Lisbon did not approve the transaction, so Mayer was forced to send Swiss money illicitly to Bratislava. When adequate sums were not available, Mayer proposed that the money be deposited in blocked accounts in Switzerland until the end of the war. The negotiations dragged on until August 1943, when they were broken off on the orders of Himmler. With the knowledge of Himmler, Mayer negotiated with an S.S. delegation headed by Kurt Becher for the ransom of Jews from Hungary. His hands were tied by the American and Swiss governments, which would not permit the transfer of money and the Joint dissociated itself from these negotiations. Still Mayer arranged for a meeting between Becher and the representative of the *War Refugee Board, the arm of the American government committed to rescue and the only arm of the American government with the freedom to negotiate with the enemy. He could not provide substantive funds and he provided some equipment to buy some time. He was able to achieve a significant – albeit meager – result. Two transports numbering 1,391 – mostly Hungarian Jews – arrived in Switzerland from Bergen-Belsen, while 17,000 others were brought to Vienna.

After the war, he was accused from many sides. Hungarian Jewish leaders accused him of not meeting the Nazi sanction. He, in turn, accused them of financial impropriety. He continued to work for the JDC after the war, working with survivors and with the JDC efforts in Hungary and Romania.

The accusations hurled at him are a manifestation of the desperate conditions of his accusers and their inability to perceive how limited – how few – his options were. To the outside world, Mayer may have seemed the gateway to Jewish power; when judged by the scope of the needs he was asked to meet.

[Michael Berenbaum (2nd ed.)]
MAYIM AHARONIM (Heb. אַחֲרוֹנִים מַיִם; lit. “latter waters”), term for the ritual washing of the hands after a meal, and before the recitation of the Grace After Meals. The two-fold injunction “Sanctify yourselves and be ye holy” (Lev. 20:7) was interpreted as commanding ritual ablation both before the meal and before the recitation of the Grace After Meals (Ber. 53b). The amoraim even contended that mayim aharonim was more important than washing before the meal (Yoma 83b; Hul. 106a). According to the Talmud, the duty was particularly insisted upon in order to prevent the danger of touching one’s eyes with the salt which was used as a condiment during the meal (Hul. 103b). Because the variety of salt referred to by “Judah b. Hiyya in the Talmud was a particularly potent one (melah sedomit, “salt of Sodom”), containing an admixture of the acrid potash of the Dead Sea, tosafot (ibid.) maintained that the duty did not apply in France, where this particular salt is not to be found. This view is contested, however, by the Shulhan Arukh (Ohol 181:10). No blessing is said before the performance of mayim aharonim (Sh. Ar., Ohol 181:7).

MAYKAPAR, SAMUIL MOSEYEVICH (1867–1938), pianist, composer, teacher, and writer. Born in Kherson, Ukraine, Maykapar graduated from the Law School of St. Petersburg University (1890) and from the St. Petersburg Conservatory as a pianist in 1893. From 1894 to 1896 he continued his studies with Leschetitzky in Vienna. The period 1898–1910 was divided between Moscow (1898–1901), Tver (where he founded a music school, 1901–03), and Germany (1903–10). From 1910 to 1930 he taught in the St. Petersburg Conservatory (from 1917 as a professor). Maykapar often worked as a concert pianist, in ensembles with Auer and Grzhimali. His short piano pieces for children remain popular, especially Birylulkî (“Spillikins”), Bagatelles, and The Marionette Theater. He also composed chamber music and a sonata for violin and piano. His writings include Muzykal’nyi sluh: ego znachenie, priroda, osobennosti i metod pravil’nogo razvitia (“The Musical Ear: Its Significance, Nature, Peculiarities and a Method of Proper Development,” 1890, 1915); a study on Beethoven (1927), an autobiography, The Years of Study (1938), and other works.

MAY LAWS, a series of “temporary laws” applying to Jews confirmed by Czar Alexander III in May 1882 and repealed in March 1917 by the revolutionary provisional government. The pogroms which broke out in southern Russia in 1881 brought the Jewish problem into prominence. Reports by higher government officials placed the blame on the Jews and pointed to the failure of the relatively liberal policy of Alexander II. On the basis of these reports, the minister of the interior Ignatiev wrote to Czar Alexander III:

Accordingly, on Aug. 22 (Sept. 3), 1881, the czar ordered the formation of special committees in the districts inhabited by Jews. Composed of representatives of the various classes and communities and presided over by the governor of the province, the committees were to determine “which kinds of Jewish economic activity had a harmful effect on the lives of the general inhabitants.” This directive predetermined the attitude adopted by the committees. During their deliberations of September-October 1881 accusations against the Jews were made by the representatives of the peasants and townspeople, while the Jewish representatives endeavored to defend themselves. Their conclusions were passed on to a special committee formed to draft legislation. While the latter was in session during the winter of 1882, an anti-Jewish campaign was fomented by the press (with the support even of the Russian revolutionary movement Narodnaya Volya) and there were renewed outbreaks of violence in towns such as Warsaw and Balta. With the consent of the government, Jewish leaders assembled twice in St. Petersburg (September 1881 and April 1882) to discuss the government proposals, the most far-reaching of which suggested a planned mass emigration of Russian Jewry or the settlement of many Jews on the plains of Central Asia. Against these extreme measures some intercessionary moves were made behind the scenes, and outraged liberal public opinion in Western Europe also had some influence.

As a result, the “temporary regulations” of May 3 (15), 1882 stated: (1) Jews are forbidden to settle outside the towns and townlets; (2) deeds of sale and lease of real estate in the name of Jews outside the towns and townlets are canceled; and (3) Jews are prohibited from trading on Sundays and Christian holidays. The “temporary laws” satisfied the demands of the Russian rural merchant class that sought to be rid of its Jewish rivals in the villages of the Ukraine and Belorussia. In effect they were a contraction of the “Pale of Settlement, since Jews were confined to towns and townlets only. These laws were binding in the 15 “Russian” provinces of the Pale of Settlement (but not in the provinces of the “Kingdom of Poland”). Until 1904 they also applied to those Jews who had been granted the right of residence throughout the empire (with the exception of university graduates). The police were charged with the implementation of these laws, which became a source of constant police extortion and harassment of Jews still living in the villages. Over the years, the May Laws were
interpreted with increasing severity. Thus in 1887 the Jews living in villages prior to 1882 were forbidden to move from one village to another.

Examining the legislation concerning the Jews between 1883 and 1888, the Pahlen Commission condemned the “temporary laws” and advocated that they be abolished, but its recommendations were rejected by the government. At the beginning of the 20th century, criticism of the “temporary laws” was voiced by the generally anti-Jewish Russian ministers of the interior Sipyagin and Plevye. It was decided on May 10, 1903, to authorize Jewish residence in 101 villages, which in the meantime had developed and in practice became townlets. On the outbreak of World War I, there were 300 villages of this kind. Echoes of the May Laws are found in the Jewish literature of Russia (cf. Shalom Aleichem, Teyve der Milkiger; H.N. Bialik, Ha-Hazagerah she-Nitbayyeshah; S. Ben-Zion, Hayyim shel Parnasah, etc.).

MAYMERAN (Maimoran, Mimran), family of rabbis and diplomats in *Morocco and *Algeria, originally from *Marrakesh. R. MEIR MAYMERAN (early 17th century) of Erez Israel sent a letter recommending Isaac Cansino to collect funds in *Oran (Algeria) for his hekedesh (“poor house”). Mayerman was the head of a largely *Shabbatean Marrakesh community in the second half of the 17th century. The two best known members of the Mayerman family were JOSEPH (d. 1683) and his son ABRAHAM (d. 1723), who served as financial advisers to the ruler Moulay Ismail (1672–1721) in *Meknès. Joseph was instrumental in formulating and negotiating the commercial treaties between Morocco and the Netherlands in 1682. According to the priest Busnot, Joseph played a major role in bringing Ismail to power, but Ismail caused Joseph’s downfall with an “accident.” Abraham succeeded his father as the king’s favorite, continuing the negotiations with the Dutch and obtaining commercial privileges from the British and French as well. Abraham was involved in ransoming captives in 1688, and like his father was the head of Moroccan Jewry, on whose behalf he attempted to lighten the king’s heavy taxation. His rival in the community was Moses *Benatar, Abraham’s nephew SAMUEL, negotiated with the English and the Dutch, and a relative, Moïse, dealt with the French.

MAYNARD, FREDELL BRUSER (1922–1989), writer. Born in Foam Lake, Saskatchewan, to Boris and Rona Bruser (née Slobinsky). She studied English literature (Honors B.A., University of Manitoba (1943); M.A., University of Toronto (1944); Ph.D., Radcliffe College, Harvard University (1947)). Maynard belongs to a generation of Jewish Canadian women writers that included Miriam Waddington and Adele Wiseman. She is perhaps best known for Raisins and Almonds (1972) and The Tree of Life (1988), two autobiographical works in which she asks “Who am I?” and emphatically concludes: “Woman and Jew, I am also my parents’ child.” The interest of these volumes thus lies in their combination of a vivid portrayal of family dynamics with a pointed representation of the social conditions that affect the life of a Jew and a woman at a particular historical juncture. Maynard’s recollections of her gentle artist-turned-shopkeeper father in Raisins and Almonds are presented against the backdrop of her experience of growing up “Jewish and alien” in the small towns of western Canada during the 1920s and 1930s. The Tree of Life explores Maynard’s complex relationships with her mother, sister, her gentle husband, the artist Max Maynard (they divorced shortly after the publication of Raisins and Almonds), and two daughters Rona and Joyce, while also demonstrating the repercussions of a pervasive gender discrimination that made academic employment unattainable even for somebody with her stellar record. Discouraged but not defeated, Maynard began a successful journalism career that would span four decades, writing about education, child care and development, health and medicine, and family relationships in Canadian and American publications such as Good Housekeeping, Ladies’ Home Journal, Family Circle, Woman’s Day, Chatelaine, Parents, and Reader’s Digest. During the 1970s and 1980s Maynard was the initiator and host of two popular Ontario parenting shows one of which was Parents and Children. Maynard also published two books on parenting and child care: Guiding Your Child to a More Creative Life (1973), and the controversial The Child Care Crisis (1985), in which she advocated stay-at-home parenting over day-care during a child’s formative years. Further light on Maynard’s life is shed by autobiographical writings by her daughters, including Rona Maynard’s personal journalism in various magazines (she was editor of Chatelaine for ten years until 2005), and Joyce Maynard’s memoir At Home in the World (1998). Maynard’s papers are at the University of Manitoba Archives and Special Collections.

[Bintra Toledo Freiwald (ed.2d.)]

MAYSE-BUKH (“Book of Stories”; Heb. מבוק, “story”). Like many other folk-books, the Mayse-Bukh is a vast anonymous collection of stories and folktales, legends and oral traditions handed down from generation to generation orally and later recorded in writing in Yiddish. The book contains much from the talmudic aggadah and Midrash, here translated into the vernacular and copied and recopied by various writers who also adapted and judaized material from other traditions. The Mayse-Bukh was first published in Basel in 1602 under the title Eyn Shoen Mayse Bukh by Jacob b. Abraham of Mezhirech (also known as Jacob Pollak or Bukhhendler), who is known to have been a compiler of religious textbooks, printer, publisher, and bookseller. The Mayse-Bukh with its
255 stories was compiled in the latter part of the 16th century, certainly not before 1580, the year when the book *Kafar va-Feraḥ* by the mystic Jacob Luzzatto was published in Basel, from which the author of the *Mayse-Bukh* borrowed several stories to supplement his collection. However, it is clear that much of the narrative lore included in the book derived from earlier generations; extant manuscripts of Yiddish *mayses* ("stories") bear witness to a lively and continuous productivity in the field of creative narrative traditions.

The *Mayse-Bukh* is part of the folk-literature in Yiddish designed for the use of the common man untutored in the holy language and its literature, and for women who for the first time had access to a written language and through it to education. The rhetorical style mirrors the transition from an oral to a literary tradition. The collection became quite influential, in that the *mayse* became such a foundation for later prose narrative that, even up to the present, Yiddish authors have continued to draw inspiration from it. The book aims to provide a substitute for the widely circulated popular secular literature of the period, which the compiler of the *Mayse-Bukh*, like many others before him, considered impious. His collection, intended to replace this literature and provide a new kind of *aggadah* in the vernacular, is permeated with a spirit of piety to strengthen the reader's faith.

The *mayse* corresponds to the Christian exemplum and serves to teach conduct and ethical principles, while also providing entertainment for the masses. As such, the *Mayse-Bukh* follows the example of numerous medieval Hebrew collections designed to inculcate a moral dictum by way of a narration. It thus had a powerful influence on Old Yiddish didactic literature. The moral of the story was usually appended at the end of the tale and concluded with the hope for an early arrival of the Messiah. Despite his piety, the compiler of the *Mayse-Bukh* did not resist the trend of his time, but, according to popular taste, he included various anecdotes, merry tales and fabliaux, often in keeping with the Italian or French *conte* and German fable collections, with their licentious, sometimes satirical, tone. The author drew profusely on non-Jewish sources, altering the plot or its characters where possible and adapting the tale to suit a Jewish sensibility. In this rich collection, Eastern themes mingle with Western material, and midrashic stories with legendary lore. A product of its times and a reflection of its own problematic, the *Mayse-Bukh* provides a key to understanding Ashkenazi literature, culture, and society in their Germanic context of the early modern period. Between the first edition of Basel in 1602 and the year 1765, 12 subsequent editions were published. Even in the 19th century several shorter and modernized versions appeared. The popular *Mayse-Bukh* nourished to a great extent ethical literature in Yiddish and served as a model for similar collections which were later composed and incorporated into folk-literature.

The *Mayse-Bukh* consists of three parts. The main section is devoted to stories from Talmud and Midrash, drawn in part from the *Ein Tiḳḳor*. The second contains a cycle of 27 legends and narrative traditions centered around R. Samuel and his son R. *Judah he-Ḥasid* (the "Pious"), the great mystics of medieval Germany, and the authors of the Sefer *Ḥasidim*. These stories early entered the oral tradition and were later recorded in Hebrew as well as in Yiddish. The third part consists of a variety of narrative material: medieval stories about *Rashi*, *Maimonides*, and the story of the Jewish pope.

See Yiddish "Literature," "Exemplum."

[Jacob J. Maitlis / Astrid Starck (2nd ed.)]

**MAYSLES, ALBERT** (1926– ) and **DAVID PAUL** (1932–1987), U.S. directors. Born in Brookline, Massachusetts, the brothers attended Brookline High School and studied psychology at Boston University. Albert taught psychology at Boston University in the late 1940s and in 1955 traveled to the Soviet Union to make his first film, *Psychiatry in Russia*. In 1956, David worked as a production assistant on the Marilyn Monroe films *Bus Stop* and *The Prince and the Showgirl*. In 1957, the brothers took a motorcycle trip together from Munich to Moscow. While in Poland, they focused on the student protest movement as the subject of their first film together, *Youth in Poland*. The next documentary for the brothers, *Primary* (1960), focused on the 1960 Democratic primary election campaigns of Kennedy and Humphrey. In 1962, they formed their own production company, Maysles Films, Inc., which made commercials and industrial films to support their *cinéma vérité* style of documentary filmmaking. Their next films were *Showman* (1962) and *What’s Happening: The Beatles in the USA* (1964). In 1965, they released *Meet Marlon Brando*, which followed the actor during publicity interviews, and received a Guggenheim Fellowship. The brothers found themselves caught in the middle of a debate on objectivity in documentary filmmaking with the release of the National Society of Film Critics award-winner *Salesman* (1968), which portrays four door-to-door high-pressure Bible salesmen in Boston who sell to poor Catholic families. They returned to rock ’n’ roll with *Gimme Shelter* (1970), a film that follows Mick Jagger and the Rolling Stones on a North American tour and ends with the infamous concert at Altamont Speedway in California during which a murder occurred. The Maysles’ *Grey Gardens* (1975) portrayed Jacqueline Kennedy Onassis’ cousins, Edith and Edie Beale, an eccentric mother and daughter living in a decaying East Hampton mansion. The brothers also produced films on celebrated artists Christo and Jeanne-Claude, including the Academy Award-nominated *Christo’s Valley Curtains*.

**MAYZEL, MAURCY**

last president of the Warsaw Jewish community before the Holocaust (1937–39). In the elections held in 1936, after *Agudat Israel had been in power for six years, the Bund increased its strength to become the last party. As the three most prominent groups (the Zionists, the Orthodox, and the Bund) could not reach agreement on the establishment of an effective administration, the government dissolved the community council. Mayzel was appointed community president, and a committee of independent personalities, including Adam *Czerniakow, Mark Lichtenbaum, Kaminer (Orthodox), and the lawyer Zondelewicz, was formed to assist him. Mayzel himself was a leader of the merchants' association and an assimilationist in outlook. The attitude of the parties' delegates and the public toward the government appointment was negative. Mayzel was essentially an administrator who sought to assure regular and vital services while obeying the instructions of the authorities; the latter supported him in the face of violent criticism from the public and the Jewish press. Mayzel promoted the publication of the important trilingual organ of the Warsaw community Glos gminy Zydowskiej (1937–39). When the Nazis invaded Poland, he fled from Warsaw; the mayor of Warsaw appointed Adam Czerniakow in his place.

**MAYZEL, NACHMAN** (1887–1966), Yiddish editor, literary critic, and historian. Born in Kiev, Mayzel stemmed from a family of rabbis and rich Jewish merchants and was related to the Yiddish novelists Dovid *Bergelson and *Der Nister, whose fame he helped to spread. He made his debut with essays in Hebrew (1905) and in Yiddish (1909), and, after the Revolution of 1917, founded the publishing house, Kiev Farlag, which issued more than 100 books. He also edited periodicals and anthologies of the Kiev Culture League. Settling in Warsaw in 1921, he helped to found its Culture League and continued his activity as editor and literary critic. He later described this dynamic period in his volume *Geven Amol a Lebn* (“There Used to Be a Life,” 1951). In 1924 he co-founded and co-edited the weekly *Literarishe Bleter*, which exerted a significant influence upon Yiddish literary activity in Poland between the two world wars; he also played a central role in organizing the Yiddish Pen Club (1927). He participated in the Jewish World Congress of Culture (1937) in Paris, which launched YKUF, the international Yiddish Culture League. Immigrating to New York in 1937, he furthered the growth of YKUF’s American section and edited its monthly organ *Yidishe Kultur* from 1939 to 1964, and then settled in Israel at Kibbutz Alonim. Mayzel was a prolific writer, composing more than 40 books and hundreds of major articles. *Noente un Vayte* (“Close and Distant People,” 2 vols., 1924–26) contained his most valuable early articles. His studies on I.L. *Peretz and on Sholem Yankev *Abramovitch contributed important new knowledge. His book *Dos Yidishe Shafn un der Yidisher Shrayber in Sovetnfarband* (“Yiddish Creativity and Yiddish Writers in the Soviet Union,” 1959) surveyed, in 20 essays, Russian Yiddish literature from 1917 until the tragic autumn of 1948 when Yiddish cultural institutions were liquidated and their leaders silenced. In his last years in Israel he completed studies on Chaim *Zhitlowsky (1965) and on the influence of national literatures upon each other, with special emphasis on the influence of foreign literatures upon Yiddish writers (1966).

**MĀZANDARĀN**, region called Tabaristān in the early Islamic period, situated in the southern part of the Caspian Sea, north of Alborz Mountains and east of Gilān. Its length extends to a maximum of 320 km. and its width to 96 km. The oldest reference to the existence of Jews in Māzandarān is in the Persian Chronicle of Eskandar Beg (vol. 2, pp. 900–1) which points to the transfer by Shah *Ābbās I of 100,000 non-Muslim captives of Georgia to Māzandarān and Farah-Ābād south of Caspian Sea, most probably around 1616/17. Farah-Ābād is also mentioned in the Chronicle of *Bābāi ben Lutf* (17th century), as if it was built by the transferred Jews of Georgia. There is no mention of Jews in Farah-Ābād during the 19th century. The cause of their disappearance is not known.

Another important city in Māzandarān is Bārforush, whose name was changed by the Iranian Majles to Bābol around 1935. According to Fraser (1826), Farah-Ābād was a large, prosperous city of 200,000 inhabitants. On his second trip (1838), he was not impressed by the city which was populated by only 30,000 inhabitants. No reason was given for this drastic change, but it is possible that the main reason was the deviation in trade routes to Europe from Bārforush to Rasht. H.A. Stern, a Christian missionary who visited the
Jewish community of Bārforush in 1852, gives us the following information: "150 Jewish families live among 20,000 inhabitants. They have six synagogues. In the past they suffered bitter persecutions. They constantly quarrel among themselves and for this reason some of them have willingly embraced Islam." Stern also writes, "The sorrows and sufferings of the living [the Jews of Bārforush] being, however, insupportable and overwhelming enough, their enemies to satiate their intense and inhuman hate, with an invective cruelty which makes the heart recoil, and the soul shudder, exhume ten, fifteen, or even twenty, recently deceased Israelis, and these amidst wild shouts and pious ejaculations they consume on a lofty funeral pyre." Stern calls this "a savage exhibition of bigotry and fanaticism." About 14 years after Stern's visit, the Muslims of the city attacked the Jews in their Mahalleh, killed 18 men and 6 women, and wounded many of them. Two of the 18 were burned to death with inflammable material. The rest of the Jews fled to find shelter in the jungles around the city. The horrible news reached the British consul, A.H. Mounsey, who complained to Nāser al-Din Shah. The shah simply announced he could do nothing against the fanatical Muslim clergy. The massacre of Bārforush Jews also drew the attention of the Jewish leaders in Paris.

There were in Mazandaran other towns where Jews lived, such as Sāri, Amol, and a few other small settlements. During the first half of the 20th century many Jews left Bārforush and other towns of the province and went to live in Tehran. After 1948, a majority immigrated to Israel. There is no mention of Jewish communities in Bārforush or in any other places in Mazandaran after the 1979 Islamic revolution in Iran.

[Shimon Gibson (2nd ed.)]

MAZAR, AMIHA (1942– ), Israeli archaeologist, with a specialist interest in the Bronze and Iron Ages, and the relationship between archaeology and biblical history. Born in Haifa, Mazar began his studies in 1966 at the Hebrew University of Jerusalem, completing his Ph.D. in 1976, and serving there as lecturer from 1977 to 1981 (as well as at the Ben-Gurion University, Beerseba). A senior lecturer at the Institute of Archaeology at the Hebrew University from 1982, Mazar was appointed associate professor in 1986 and from 1994 was the incumbent of the Eleazar Sukenik Chair in the Archaeology of Israel. Numerous academic duties included serving as head of the Institute of Archaeology (1995–98) and as a member of the Archaeological Council of Israel (1994–98) and the Council of the Israel Antiquities Authority (2001–5). Follow-

ing his survey of the aqueducts of Jerusalem in 1968, Mazar conducted important excavations at Tel Qasile (1971–74, and later in 1982–90), at Tel Batash, biblical Timnah (with G.L. Kelm, 1977–89), and at Giloh near Jerusalem (1978–82). From the late 1980s Mazar directed the Beth Shean Valley Archaeological Project, with excavations at Tel Beth-Shean (1989–96) and, more recently, excavations at Tel Rehov (from 1997). A frequent participant in international scientific meetings and conferences, Mazar was a prolific writer with many scientific papers, monographs, and books to his credit. He is probably best known to students of archaeology as the author of Archaeology of the Land of the Bible (ca. 10,000–586 B.C.E.), which was published in English in 1990, with subsequent translations into Portuguese, Russian, and Japanese. Important monographs have also appeared under his authorship on the Tel Qasile and Tel Batash excavations. Mazar participated in the important tenth/ninth-century chronology debate (see his paper “Iron Age Chronology: A Reply to I. Finkelstein,” in: Levant, 29 (1997), 157–67). Mazar’s strength in his publications was in the reasoned and balanced approach he took to archaeological materials, one which has influenced many of the younger generations of Israeli archaeologists. Mazar is regarded as a very loyal mentor to his students.

MAZAR (Maisler), BENJAM (1906–1995), Israeli archaeologist and historian. Born in Ciechanowiec in Poland, he studied at the universities of Berlin and Giessen. In 1929 he settled in Palestine, becoming the secretary of the Jewish Palestine Exploration Society (1929–43). Mazar joined the staff of the Hebrew University in 1943 and in 1951 he was appointed professor of the history of the Jewish people in the biblical period and the archaeology of Palestine. He was appointed rector of the university in 1952 and president in 1953, holding both positions until 1961. In 1959 he became president of the Israel Exploration Society. He was also chairman of the Archaeological Board of Israel and a member of the Israel Academy of Sciences and Humanities. In 1968 he received the Israel Prize for Jewish Studies. Mazar directed archaeological excavations at *Ramat Raḥel (1931), *Bet She‘arim (1936–40), Tell Qasile (1949ff.), and *En-Gedi (1957–66). He conducted the historic excavation along the outside of the southern and western sections of the Temple enclosure in Jerusalem and the Tyropoeon Valley (1967ff.). Besides over 300 articles, including excavation reports, Mazar has published Untersuchungen zur alten Geschichte und Ethnographie Syriens und Palästinas (1930); Toledot ha-Mehkar ha-Arkheologi be-Erez Yisrael (“History of Palestine Exploration,” 1935); Toledot Erez Yisrael (“History of Palestine” part 1, 1937); Israel in Biblical Times – a Historical Atlas (1941); and the first volume of Beth Shearim (1944, 19572). He headed the editorial board of the biblical encyclopedia Enziklopediyah Mikra’it (1950–89). An important collection of Mazar’s articles was assembled in S. Aḥituv and B. Levine (eds.), The Early Biblical Period: Historical Studies.
MAZE, IDA (1893–1962) Yiddish poet. Born near Kapuly, Belarus; she arrived in Canada with her family in 1907, eventually settling in Montreal. Her family, the Zhukovskys, were distantly related to Sholem Yankev *Abramovits (Mendele Mokher Sforim) and were intellectual though poor. She began writing poems of grief in 1928, following the death of her eldest son. These poems were collected in A Mame ("A Mother," 1931). Throughout her career the majority of her poems were either for children or about her children (she had two surviving sons); some of them took in natural themes. Her talents lay chiefly in her ability to write engaging, fluid, and sometimes urgent rhythms and rhymes. Her later books were Lider far Kinder ("Poems for Children," 1936), Naye Lider ("New Poems," 1941) and Vaksn Mayne Kinderlekh ("Grow, My Little Ones," 1954). An autobiographical novel, Dinah, was published posthumously (1970). More important than her own output, however, was her role in the Montreal Yiddish artistic community which centered around the Jewish Public Library. Her apartment served as a literary salon for writers at every level, the more famous coming simply to read aloud and find literary companions while the lesser known workedshop their poems with a critical audience. In addition to this, Maze spent most of her time arranging visas, work permits, or actually finding jobs for the Yiddish-speaking refugees who came through Montreal. Although much of her aid went to Yiddish writers, she was as generous with the lesser as with the major talents. Canadian historian David Rame reported her appeal on behalf of one struggling poet: "He needs help, not only because he is penniless and his family is falling apart, but because he doesn't have a speck of talent" (Massey, 54). These endeavors earned her the nickname "the mother of Yiddish writers." Among those who spent a great deal of time in her apartment were Melech *Ravitch, Rokhl *Korn, and J.J. *Segal. Visitors from the United States included Kadya *Mołodowsky, Moyshe *Nadir, and H. *Leivick. The English-language poet Miriam *Waddington, whose family spoke Yiddish at home, attended these salons as a teenager. Maze's impact seems to have largely consisted of imparting by example her ideas about literature: its place as a feature of everyday life, in which every member of society is equally implicated and from which every individual of whatever talents could draw his or her own intellectual sustenance.

MAZEH, JACOB (1859–1924), Zionist leader and Hebrew writer. Born in Mogilev, Belorussia, he was orphaned in childhood and given a traditional education in his grandfather's home. Later he read and was influenced by the Haskalah, in particular by the works of E. *Zweifel. At the age of 16, he entered a Russian secondary school in *Kerch, Crimea, and in 1886 completed his studies at the law faculty of the Moscow University. After the pogroms of 1882, he joined the *Hibbat Zion movement and was one of the founders of the Benei Zion Society (1884). In his article Elleh Hem ha-Ashamot in *Ha-Meliz (1888) Mazeh rebuked his generation for negligence in the education of their children, charging exorbitant rates of interest, forging currency, evading public welfare activities, despising work, and "lack of positive love of our fathers." He represented the Benei Zion at the founding conference of the Committee for the Support of Farmers and Craftsmen in Palestine (Odessa, 1890), and organized a group of wealthy men for settlement in Erez Israel. Traveling there as their emissary, he even opened negotiations for the purchase of the *Mahanei Tzar tract of land in Galilee for the project, which was brought to a halt as a result of the Moscow expulsion (1891).

In 1893, after S.Z. *Minor was removed from his position as *kazyonny ravvin (government-appointed rabbi) of the Moscow community, Mazeh was appointed as his successor. Being both a maskil and a man steeped in Jewish tradition and nationalism, he was an exception to the usual type of kazyony ravvin. He became the spiritual leader of his congregation and its representative before the local authorities, who were noted for their hatred of the Jews. A brilliant orator, Mazeh was well known for his numerous activities in Jewish public life, which included the promotion of Hebrew culture and the founding of the Hovevei Sfat Ever Society. His appearance as the defense expert on Jewish law at the *Beilis trial in Kiev (1912), when he refuted the evidence of the prosecution "experts", made him famous among Jews everywhere. After the 1917 Revolution, he was a deputy at the all-Russian Constituent Assembly representing the Jewish National List and was also among the founders and devoted workers of the *Tarbut organization. He supported the *Habimah theater during its early years. With the establishment of the Soviet regime, Mazeh interceded with the authorities in order to assure the rights of Hebrew language and culture. In 1920 he participated in the last Zionist Council of Russia. He refused to sign the declaration of the representatives of the various religions in which they denied that religion was persecuted in the U.S.S.R. In his last years, deprived of his functions under the Communist regime, Mazeh wrote his memoirs, which are marked by dignity and humor. He was unable to complete them as he became blind in 1922. The chapters which were brought out of Russia and published in Erez Israel (Zikhronot, 4 vols., 1936) are a valuable source for the history of Russian Jewry and Hebrew literature. Mazeh wrote under the pseudonyms Saadiah, Jacob ha-Kohen, Aharoni, and Kochav. Thousands of local Jews took part in his funeral in Moscow.

MAZER, U.S. family of business executives. ABRAHAM MAZER (1876–1953) was born in Goshcha, Ukraine. He went to the United States at the age of 17 and started a paper business in Hartford, Connecticut, later managing it from New York City. In 1952 the company, the Hudson Pulp and Paper Corporation, had a sales volume of $36 million and plants in four states, and held half a million acres of woodland in Florida and Maine. Mazer played a leading role in the United Jewish Appeal, the Federation of Jewish Philanthropies, and the Jewish National Fund. He supported Yeshiva University in New York and the Hebrew University of Jerusalem, and founded the Abraham Mazer Free Loan Bank of Israel. His three sons, JACOB (1898–1968), JOSEPH M. (1899–1979), and WILLIAM (1905–1998), took over the corporation's executive posts. They were active in Jewish charity work, taking a special interest in undertakings benefiting Israel. The family sponsored the American-Israeli Paper Mills in Hadera, Israel.

MAZERET BATYAH (Heb. מזראת בתיה, “Memory of Batyah”), moshavah with municipal council status, in the Coastal Plain of Israel southeast of Rehovot. Its name commemorates Baron Edmond de *Rothschild's mother. It was the first village founded upon Baron Edmond de Rothschild's initiative (1883), and was known up until the early 1900s mostly by the name of Ekron (see *Kiryat Ekron). The name Ekron was given in the desire to identify the moshavah with the biblical site *Ekron from which the neighboring Arab village A'qir (א'דיר) also took its name. Baron Rothschild worked to give the village a truly rural character, and was aided by the *Hibbat Zion movement in bringing some Jewish families who had been farmers in Russia to settle at Mazkeret Batyah. Until the 1940s, when rich groundwater reserves were tapped, the village's progress was slow, not only because little water was available but also because of bad communications. After the change, citrus groves became prominent. New immigrants settled there and more arrived in the first years after 1948. A further phase of expansion began in the mid-1960s and by 1969 the village had 845 inhabitants. By the mid-1990s the village had 690 inhabitants. In applying this enactment, the scholars did not im-

MAZLI'AH BEN SOLOMON HA-KOHEN (d. 1139), the first of the Egyptian geonim. His father, R. *Solomon b. Elijah ha-Kohen, left Tyre and settled in Hadrak (near Damascus), where he founded the Yeshivah Erez ha-Zevi. Upon his father's death, R. Mazli'ah, who had no doubt studied at the yeshivah when it was still in Tyre, headed this institution. For some unknown reason R. Mazli'ah left Syria and arrived in Fostat in 1127. The yeshivah which he founded within the synagogue of the Jerusalemites occasionally rivaled that of Damascus because its leaders felt that it also possessed the right to refer to itself as yeshivat Erez ha-Zevi (i.e., of Erez Israel). R. Mazli'ah assumed the title of rosh yeshivat Ge'on Ya'akov ("rosh yeshivah of the Glory of Jacob"). It appears that his spiritual influence was important and that it extended to the whole of Yemen. Many letters and documents issued by his bet din are extant. Upon his death, he was succeeded by R. Moses b. Nethanel ha-Levi, who was his deputy and av bet din in the yeshivah.

MAZRANUT (Heb. מזרנות, "abutter"), the right of preemption available to the owner of land over the abutting land of his neighbor, when the latter is sold. The rule is not a provision of strict law but is derived from a rabbinical enactment to compel any prospective purchaser to yield to the abutting neighbor, in terms of the Pentateuchal injunction to "do that which is right and good, " if the other prospective purchaser does not sustain a great loss, since he will find land elsewhere, and should not burden the abutting neighbor with property in two separate localities. The right of the mazran ("abutting neighbor") is a proprietary right (in rem) in the neighboring land itself (Nimnikayei Yesof *B M ibid.), similar to the right of a creditor in the case of lien or mortgage and other *jura in re aliena. In applying this enactment, the scholars did not impose on the purchaser a duty to resell the land to the abutter, but rather endowed the abutter with the right to receive the land on the conclusion of the (putative) sale – without any additional act of acquisition being required – the purchaser thus becoming the agent of the abutter in regard to all the conditions of the sale to which the former agreed. Accordingly the purchaser is subject to all the laws governing an agent and holds the land in question on behalf of the abutter, the latter only acquiring actual title to it if and when he pays the price paid by the purchaser and fulfills the remaining terms agreed by the purchaser. As the abutter's right originates from the purchaser's obligation to "do what is right and good," if the latter is a non-Jew – to whom the obligation is not applicable – the corresponding right will also not accrue to the abutter (Rashi to B M 108b). The abutter also forfeits his preemptive right if he had indicated, by speech or conduct, that he does not wish to avail himself thereof (Sh. Ar., ḤM 175:32).

MAZER, U.S. family of business executives. ABRAHAM MAZER (1876–1953) was born in Goshcha, Ukraine. He went to the United States at the age of 17 and started a paper business in Hartford, Connecticut, later managing it from New York City. In 1952 the company, the Hudson Pulp and Paper Corporation, had a sales volume of $36 million and plants in four states, and held half a million acres of woodland in Florida and Maine. Mazer played a leading role in the United Jewish Appeal, the Federation of Jewish Philanthropies, and the Jewish National Fund. He supported Yeshiva University in New York and the Hebrew University of Jerusalem, and founded the Abraham Mazer Free Loan Bank of Israel. His three sons, JACOB (1898–1968), JOSEPH M. (1899–1979), and WILLIAM (1905–1998), took over the corporation's executive posts. They were active in Jewish charity work, taking a special interest in undertakings benefiting Israel. The family sponsored the American-Israeli Paper Mills in Hadera, Israel.

MAZERET BATYAH (Heb. מזרת בתיה, “Memory of Batyah”), moshavah with municipal council status, in the Coastal Plain of Israel southeast of Rehovot. Its name commemorates Baron Edmond de *Rothschild’s mother. It was the first village founded upon Baron Edmond de Rothschild’s initiative (1883), and was known up until the early 1900s mostly by the name of Ekron (see *Kiryat Ekron). The name Ekron was given in the desire to identify the moshavah with the biblical site *Ekron from which the neighboring Arab village A’qir (א’דיר) also took its name. Baron Rothschild worked to give the village a truly rural character, and was aided by the *Hibbat Zion movement in bringing some Jewish families who had been farmers in Russia to settle at Mazkeret Batyah. Until the 1940s, when rich groundwater reserves were tapped, the village’s progress was slow, not only because little water was available but also because of bad communications. After the change, citrus groves became prominent. New immigrants settled there and more arrived in the first years after 1948. A further phase of expansion began in the mid-1960s and by 1969 the village had 845 inhabitants. By the mid-1990s the population had risen to 3,410, more than doubling to 7,300 in 2002, on an area of 2.7 sq. mi. (7 sq. km.). Residents earn their living in farming, industry, and commerce and also work outside the settlement.

MAZLI’AH BEN SOLOMON HA-KOHEN (d. 1139), the first of the Egyptian geonim. His father, R. *Solomon b. Elijah ha-Kohen, left Tyre and settled in Hadrak (near Damascus), where he founded the Yeshivah Erez ha-Zevi. Upon his father’s death, R. Mazli’ah, who had no doubt studied at the yeshivah when it was still in Tyre, headed this institution. For some unknown reason R. Mazli’ah left Syria and arrived in Fostat in 1127. Residents earn their living in farming, industry, and commerce and also work outside the settlement.

[Effraim Orni / Shaked Gilboa (2nd ed.)]
The abutter’s right or preemption, being an application of the equitable principle to “do what is right and good,” is a flexible right (Resp. Rashba vol. 1, no. 915) and does not prevail where it is not supported by the factors of “right and good.” Thus the law of mazranut does not apply if the exercise of the preemptive right would cause loss to the seller or purchaser or any loss to the public in general, or if the abutter were to derive no benefit therefrom. Consequently, the law of mazranut is not applicable to a gift (BM 108b) as the recipient cannot get another gift in its stead and he would therefore suffer a loss (Ran, Kid. 59a). For the same reason the right of preemption is precluded when the purchaser is a woman since “it is not fitting for her to search in many places.” Nor does the right exist in the following cases: when the purchaser is a co-owner of the land together with the seller, or if he is the mortgagee, for a sale of the land to such parties invokes the factors of “right and good” in their own cause; when the coins offered by the purchaser are of greater weight or more marketable than those offered by the abutter, for here the seller would lose; when all the seller’s assets are sold to a single purchaser, lest the sale as a whole is prejudiced; when the landowner sells a distant field in order to purchase one that is nearer, or when the land is sold to defray funeral expenses or taxes or to provide maintenance for a widow, or when an orphan’s land is sold, for in such cases the seller would suffer if he waited for the abutter. Furthermore, an abutter who wishes to cultivate the land must yield to a purchaser who wishes to build a house there, as public interest prefers habitation. Similarly, the preemptive right is excluded whenever its exercise would cause a loss in any other manner to the seller or purchaser, provided only that the judge is satisfied that there is no evasion of the abutter’s right (ibid.).

The law of mazranut is mentioned neither in the Mishnah nor in the Palestinian Talmud, but only in the Babylonian Talmud by the amoraim of Babylonia. It may be assured that in Erez Israel conditions were not such as to justify the application of the preemptive right on the equitable ground of doing “right and good.” The scriptural injunction teaches that the standards of proper conduct between man and his fellow are determined in accordance with the prevailing circumstances of the time and place and the scholars applying it created different rules accordingly (Maggid Mishneh to Maim. Yad, Shekhenim concl.). In post-talmudic times the right of preemption was customarily applied (in France, Germany, Spain, and in the Orient) and, in many places, also in relation to buildings even though it is doubtful whether the law was so extended in the talmudic period (Piskei ha-Rosh BM 93:4). In modern times the law of mazranut has been less and less frequently applied although the rabbinical courts of the State of Israel have given several decisions in which various problems have been determined in accordance with these laws.

In the State of Israel the law of mazranut was abolished by the Israel Land Law, 1969.

**MAZUR, ELYIYAHU**

(1880–1971), communal worker and businessman in Poland and Israel, son of Zevi Meir Mazur, rabbi in Zagorow and later in Warsaw. His public activity encompassed political, economic, and social fields. He was a member of both the world executive of “Agudat Israel and of its executive board in Poland. He served as president of the Jewish community council (kehilla) of Warsaw from 1931 to 1937, when Maurici *Meisel was appointed commissioner by the government. He also acted as director of the administrative council of the Hakhmei Lublin yeshivah. Mazur was the largest importer of rice in Poland, and he established rice-processing factories in the port of Gdynia. He was a member of the board of the Polish chamber of commerce. In 1940 he escaped from Poland and immigrated to Erez Israel, where he continued to pursue his public and economic activities. He set up a diamond factory with his brothers in Tel Aviv, becoming a central figure in the country’s diamond industry. In 1948 he was elected to the first *Knesset as a delegate of Agudat Israel.*

**MAZUR, JAY**

(1932– ), U.S. labor leader. Mazur was born and raised in the Bronx, the son of immigrants, and spent his professional life in the organized labor movement. He became president of the International Ladies Garment Workers Union, spearheaded its historic merger with the Amalgamated Clothing & Textile Workers Union, and was elected first president of the merged group, the Union of Needletrades, Industrial and Textile Employees (UNITE). Mazur, whose father was a coat presser, joined the ILGWU when he was 18, focusing on organizational and educational efforts for Dressmakers’ Local 22. He graduated from the ILGWU’s Training Institute in 1955 and became director of organization and education for Beltmakers’ Local 40. While rising through the ranks, he resumed his formal education at night, earning a B.A. in Industrial Relations from the City University of New York in 1965 and an M.A. in Labor Studies from Rutgers University in New Jersey in 1977. He was appointed managing secretary of the Blouse, Skirts & Sportswear Workers’ Local 23–25, then the union’s biggest local, in 1977, embarking on a hard-fought campaign to organize workers in New York City’s Chinatown. In 1983 he was named general secretary-treasurer of the ILGWU. He succeeded Sol C. *Chaikin as president in 1986, inheriting a union with a declining membership. Increased competition from low-wage countries, a surge of imports, and the growth of multinational apparel and textile firms had further depressed membership in the two leading garment unions. From a combined peak of almost 1 million in the 1960s, membership tumbled to about 355,000 by the mid-1990s. In 1995 Mazur and ACTWU president Jack Sheinkman were able to merge...
both unions and Mazur was named UNITE’s first president. Even though membership kept shrinking, falling to 230,000 in the next decade, the merger helped both unions survive at a critical time. It gave them a greater voice in government and social affairs and a stronger negotiating position with management. Mazur, who was on the executive boards of the AFL-CIO and the Central Labor Council, retired from UNITE in 2001 and was succeeded by Bruce S. *Raynor, but his efforts on behalf of workers did not stop. He was a vocal opponent of free trade, and a passionate lobbyist for anti-sweatshop legislation, a higher minimum wage, and the right of workers to organize. A leading advocate for the rights of immigrants, he was named to the boards of the Work in America Institute and the International Rescue Committee and appointed a vice president of the National Immigration, Refugee and Citizenship Forum. In 1999, President Clinton appointed him to the Advisory Committee for Trade Policy and Negotiations. He was on the presidium of the International Textile, Garment & Leather Workers Federation, president of the National Committee of Labor Israel-Histadrut, and a member of the Council of Foreign Relations. He was also a member of the U.S. Holocaust Memorial Council and the U.S.-South Africa Business Development Committee.

MAZUZ, MENI (1955– ), Israeli attorney general. Mazuz immigrated to Israel with his family shortly after his birth in Tunisia, settling in the town of Netivot. He completed his legal studies magna cum laude at the Hebrew University of Jerusalem and did his law clerkship in the High Court of Justice department of the State Attorney’s Office (which processes petitions to the Supreme Court in equity matters). In 1981, he received his law license and appeared as an attorney in both civil and criminal matters at the State Attorney’s Office. He later became responsible for the High Court of Justice department. In 1992–95 Mazuz served as legal advisor and member of the Israeli delegation in negotiations with the Palestinians and Jordanians and headed the legal team which negotiated the Gaza and interim agreements with the Palestinians. In 1994, he was appointed deputy attorney general. He specialized in military and security matters related to the Israel-Palestine entity relationship, international peace and agreements, the Population Registry, and local council planning and building. Mazuz initiated legislative efforts regarding the Court Law which led to a reform in the Israeli judicial system. He wrote legal commentary on this subject and also played a leading role in legislation amendments to the General Security Law, which deals with the status, authority, and supervision of Israel’s intelligence community.

In February 2004, Mazuz was appointed attorney general and undertook an administrative reorganization of the office to achieve a clear separation between the prosecutor and the political system. During his first year in office he reviewed traditional positions of the government in various fields. He emphasized alternate methods of law enforcement and limitations on the connection between elected officials and members of the elective body and adapted an egalitarian approach to single-sex couples in regard to social and property rights.

During his term in office, he initiated substantial reforms in several fields, including appointment and supervision of civil servants, budgetary allocations for political parties, and creation of the state agency responsible for monitoring and supervising the Planning and Construction Law. His decisions on various subjects, including the security fence between Israel and the Palestinian West Bank, emphasized the obligation of the State of Israel to recognize human rights and international principles of law.

[Leon Fine (2nd ed.)]

MAZZUVAH (Heb. מַצְזֻוָה, kibbutz near the Israel-Lebanese border S.W. of Hanitah, affiliated with Ihud ha-Kevuzot ve-ha-Kibbutzim. Founded in 1940 by Youth Aliyah graduates originating from Germany and Austria, Mazzuva joined Hanitah and *Elon as a third border outpost in western Galilee. In its initial years, the kibbutz was confronted with the task of heavy reclamation work on its hilly soil, a lack of water and high incidence of malaria, and with sea winds damaging fruit orchards. By 1948 most of these difficulties had been overcome. In 1969, Mazzuva’s economy was based predominantly on hill farming (fruit orchards) and a spinning mill. Later it developed citrus groves, fruit orchards, and poultry
When Culi died in 1732 he was about to publish his commentary on the first part of Exodus. He left many unfinished manuscripts on the other books of the Bible, which later writers used as the basis for their continuation of his work. Isaac b. Moses Magriso completed the volumes on Exodus (2 vols., Constantinople, 1733, 1746), Leviticus (1753), and Numbers (1764). Isaac Behar Argési wrote only a part of his commentary on Deuteronomy (1772). Both Magriso and Argési followed Culi so faithfully that the *Me-Am Lo'ez* on the Pentateuch may be considered a unified work. Using the same method, others sought to cover the rest of the Bible and complete the undertaking. Joseph di Trani of Constantinople wrote on Joshua (2 vols., 1850, 1870); Raphael Yiyya Pontremoli on Esther (1864); Raphael Isaac Meir ibn Venisti on Ruth (1882); Isaac Judah Abba on Isaiah (1892); Nissim Moses Abod on Ecclesiastes (1898); and finally Hayyim Isaac Sciaky worked on the Song of Songs (1899). There may have been other volumes, written in the spirit of Culi, that are no longer extant or that were destroyed before printing. One such work was Isaac Perahyah's commentary on Jeremiah, lost in the 1912 fire in Salonika. The commentaries on Genesis and Exodus were the most popular. There were at least six editions of Genesis between 1730 and 1897, and eight of Exodus between 1733 and 1884. The different places of printing show the popularity of the work among the Sephardim of Turkey and the Balkans, and there was even a partial Arabic translation in North Africa. Those who did not own the expensive complete set (sometimes given as a dowry) studied it in reading groups. For a long time the *Me-Am Lo'ez* was the only literature for thousands of Sephardi Jewish families, and its reading was often considered a religious duty. It was so well thumbed by generation after generation that very few sets remain in existence. The *Me-Am Lo'ez* played a role in Sephardi culture parallel to, but wider than, that of the Yiddish *Zerenah u-Refenah* in the Ashkenazi world, its main difference being that it was not intended primarily for women. As a vast synthesis of everything that had been written in Hebrew, the *Me-Am Lo'ez* was directed to all — men, women, and even children. A Hebrew translation was undertaken by Shmuel Yerushalmi, titled *Yalkut Me-Am Lo'ez*. From 1967 through 1979, he published 20 volumes, which included his own "*Me-Am Lo'ez*" commentary on the books of Samuel, 1 Kings, Ecclesiastes, Ruth, and the Song of Songs. All of *Yalkut Me-Am Lo'ez* has appeared in English translation (New York, 1977–94). In addition, an edition in Latin transliteration was initiated by the Ibn Tibbon Institute at Granada University, Spain (*Me'am Lo'ez, El gran comentario bíblico Sefardi*, vol. 1, 1964). Unfortunately, the apparent lack of knowledge of Ladino and Turkish led to an edition with many inaccuracies. *Yalkut Me-Am Lo'ez* has been translated into a number of other languages, including Russian. Thus, *Me-Am Lo'ez* continues to be a source of knowledge and inspiration to this day.

[Henri Gutel / David Derovan (2nd ed.)]

MEARS, OTTO (1841–1931), U.S. railroad builder. Mears was born in Russian Lithuania and was brought to California in 1854. He served in the Civil War. In 1865 he settled in Saguache County, Colorado, as a merchant, later becoming county treasurer and Indian commissioner. He was a road and railroad builder, constructing most of the principal roads in southwest Colorado, building a railroad in Ouray County in 1888, and participating in building and later serving as president of the Denver and Rio Grande Southern Railway. Mears was a presidential elector (1876), lieutenant governor (1883), and state capitol commissioner (1889). A monument honoring him is near Ouray.

[Robert E. Levinson]

MEAT (Heb. ḫeṣar, basar), the flesh of animals permitted for consumption. (For its meaning as human flesh and symbolic connotation, see *Flesh.) The Talmud points out (Sanh. 59b) that according to the biblical account the consumption of meat was forbidden from Adam until Noah (Gen. 1:29) and was specifically permitted first to Noah (ibid. 9:3). Apart from this, however, there is no suggestion of vegetarianism in the Bible. On the other hand, meat is never included among the staple diet of the children of Israel, which is confined to agricultural products, of which the constantly recurring expression in the Bible is “grain and wine and oil” (Deut. 11:14), or the seven agricultural products enumerated in Deuteronomy 8:8. (It has however been suggested that Deuteronomy 11:14 refers to the eating of meat.) In point of fact, meat was regarded in the Bible as a luxury for which the children of Israel would yearn “when the Lord enlarges your territory” (Deut. 12:20), and the lusting of the children of Israel after the “fleshpots of Egypt” (Ex. 16:3 and Num. 11:4) was regarded as highly reprehensible. From Deuteronomy 12:20–22, R. Ishmael (Hul. 16b–17a) deduces that during their sojourn in the wilderness the children of Israel were permitted to eat only meat from an animal which had actually been sacrificed and that it was only when they entered the Land of Israel that “meat of desire,” i.e., the meat of all permitted animals, could be eaten as desired without the animal being sacrificed. R. Akiva, however, interprets it to mean that in the wilderness any method of killing an animal, even stabbing (nehirah), was permitted, but that after their entry into the land only the meat of animals which had been slaughtered by shehitah could be eaten. All agree, however, that the reference is only to “cattle” which could be offered as sacrifices, but that the meat of “beasts” (nondomesticated animals, the “gazelle and the hart”) was freely permitted (cf. Deut. 12:22). That the flesh of birds was permitted is clear from Exodus 16:13 and Numbers 11:31–33. The only limitation on the consumption of meat to non-Jews (“the children of Noah”) is the prohibition against meat cut from a living animal (based on Gen. 9:4; see “Noachide Laws). For Jews however only the flesh of “clean” animals was permitted, and that, only after shehitah and the removal of forbidden blood and fat. The seething of meat in milk was forbidden (Ex. 23:19 et al.) and interpreted to include eating meat and milk together or deriving any benefit from it. It has been suggested that this prohibition is because such practices were connected with heathen fertility rites (Maim. Guide 3:48; see “Dietary Laws). In the talmudic period, meat was regarded as the diet of the well-to-do, and as a feature of festive occasions rather than a staple diet. It was regarded as obligatory only on Sabbaths and festivals since “there is no joy without meat and wine” (Pes. 109a). The immensely wealthy Eleazar b. Azariah laid it down that only a person who possesses 100 maneh may eat meat daily; otherwise it should be eaten only on the Sabbath. In the amoraic period, however, it seems to have become more common. In Ereiz Israel, R. Johanan said that owing to the prevailing physical weakness, “whoever has a penny in his pocket should run to the shopkeeper” (to buy meat daily), while the Babylonian Nahman said that one should even buy it on credit (Hul. 84a). Its nutritive value was recognized. It was specially recommended for pregnant women as they would thus have robust children (Ket. 60b–61a). On the basis of homiletical exposition of Leviticus 11:46, R. Judah ha-Nasi suggested that only those engaged in the study of the Torah were permitted to indulge in meat (Pes. 49b). Poultry was more highly regarded as a delicacy than meat, and meat than fish (Num. R. 21:25). Of poultry the most delectable was the chicken, of meat, the ox (B.M. 86b). Among the things to be avoided by a convalescent, since they “bring on his sickness again in a severe form,” are “beef, fat meat, roast meat, and poultry” (Ber. 57b). As the consumption of meat was associated with joy, abstention from it was a symbol of mourning. For the same reason meat is not eaten by a mourner on the day of burial or in the period of national mourning from the first until the Ninth of *Av (Sh. Ar., Or. 515:9). After the destruction of the Temple there were those who sought to adopt asceticism, including abstention from meat, but it was strongly opposed (B.B. 60b).

[Louis Isaac Rabinowitz]

MECHOULEM, RAPHAEL (1930—), Israeli organic chemist. Mechoulam was born in Sofia, Bulgaria. He received his
M.Sc. in biochemistry from the Hebrew University of Jerusalem (1952) and his Ph.D. at the Weizmann Institute, Rehovot (1958). After postdoctoral studies at the Rockefeller Institute, New York (1959–60), he was on the scientific staff of the Weizmann Institute (1960–65) before moving to the Hebrew University of Jerusalem, where he became professor (1972) and Lionel Jacobson Professor of Medicinal Chemistry from 1975. He was rector (1979–82) and pro-rector (1983–85). His main research interests concern the chemistry and actions of Cannabis sativa (marijuana) constituents and related substances (endocannabinoids) synthesized naturally in body tissues, particularly in the nervous system. This work has important implications in physiology, as the endocannabinoids represent a new type of neuromodulators, and in medicinal chemistry, as these compounds are exploited for their actions in psychiatric, neurological, and inflammatory diseases and as appetite-promoting agents. In 1994 he was elected a member of the Israel Academy of Sciences. His honors include the Kolthof Prize in chemistry from the Haifa Technion (1994) and the Israel Prize in chemistry (2000).

[Michael Denman (2nd ed.)]

MECKLENBURG, former duchy in Germany. Before the middle of the 14th century Jews were to be found in Wismar, Rostock, Parchim, Krakow, Guestrau, Schwerin, Friedland, and perhaps also in Borzenburg and Malchin. A Jewish community is first mentioned in 1279 at Rostock and there were communities from around the same time in Parchim and Guestrau. The other cities had only a few families. The Jews were allowed to engage only in moneylending. A Jew, Salathiel, bought a house and loaned money to the duke and to the city of Schwerin. Accusations of desecrating the *Host in Krakow am See (1325) and Guestrau (1330) and the *Black Death persecutions in Rostock, Parchim, and Wismar practically wiped out Mecklenburg Jewry. After another accusation of desecrating the Host, in Sternberg in 1492, 27 Jews were burned at the stake and all Jews were expelled from the duchy.

From 1679 Jewish merchants from Hamburg, often of Sephardic extraction, were granted letters of protection and commercial privileges, and some became Court Jews. One of them, Michael Hinrichsen (Portugies) of *Glueckstadt (d. 1710), court jeweler and tobacco agent, settled in Schwerin, where he rapidly gained ascendancy. He employed a rabbi so that he might study Talmud with him, and opened a synagogue in his home. He was the first Jew in Germany to be freed (in 1701) from payment of the *Leibzoll ("body tax") for his lifetime. His descendants continued to hold leading positions in Mecklenburg economic and public life for five generations. The first Landesrabbiner, Jeremias Israel, appointed in 1763, was a member of his family. A growing number of communities were established by privileged Jews and their households despite a 1755 enactment making illegal all forms of landholdings. Tax records of 1760 show 141 taxpaying Jews residing legally in the duchy. In this period the history of Mecklenburg Jewry is linked with that of O.G. Tychsen (1734–1816), Orientalist, professor, and unsuccessful missionary, who meticulously recorded the history of the local Jews as well as supporting their emancipation. A dual order (May 30, 1772), that burials be postponed for three days in order to eliminate the possibility of "false" deaths, induced the Jews of Mecklenburg to apply to Moses Mendelssohn, who advised them to erect burial halls, a decision which was contested by more Orthodox rabbis.

On Feb. 22, 1811, M.R. Hinrichsen and I. Mendel presented a petition for emancipation. Although the estates demanded basic reforms in Judaism, the liberal duke, Franz Friedrich I (d. 1839), nonetheless issued an emancipatory edict two years later (March 25, 1813), based on the Prussian model. Markets were not to be held on Jewish holidays and support was given to Jewish rights within the German Confederation. On Sept. 11, 1817, under pressure from the estates, the duke suspended emancipation. During the *Hep! Hep! disturbances (1819) troops had to be called in to Guestrau to suppress the riots. The estates continued to oppose the duke's liberal attitude toward individual Jews and rejected a law of 1830 granting the Jews occupational and economic liberties. In 1847 the estates at last supported emancipation, which endured briefly until 1850; the Jews were not fully emancipated until 1869.

In 1839 statutes were enacted granting autonomy to rabbinical organizations. A year later Samuel Holdheim was elected Landesrabbiner and introduced far-reaching and controversial reforms. Holdheim was active in the struggle for emancipation and succeeded in having the degrading medieval formula of the Jewish oath changed. He was followed by the even more radical David Einhorn (1847–51), whose denial of circumcision as a prerequisite of Judaism was attacked by Franz Delitzsch, the Christian missionary and scholar. For the sake of peace, and on the order of the government, the rabbinate was subsequently filled by Orthodox rabbis.

Mecklenburg Jewry increased from 2,494 persons in 1810 to 3,318 (0.64% of the total population) in 1845. The small communities (11 with more than 100 persons in 1850) subsequently declined numerically, and due to the emigration of Jews to the big cities, the larger ones did not grow. The numbers decreased to 1,413 (0.22%) in 1910 and to 1,225 in 1932. Rostock, the largest city, which excluded Jews until 1867, was then the main community, with about 350 members, followed by Guestrau (120), Parchim (48), and Schwerin (200). The fate of Mecklenburg Jews during World War I was similar to that of the rest of German Jewry. In 1990, very few Jews resided in the state of Mecklenburg.

MEDALISTS. Pewter, seal, and gem engraving were traditional Jewish professions, often handed down from father to son through several generations. By the 18th century, this practice had developed into medal engraving and Jewish medalists were employed at several Protestant courts of northern Germany and Scandinavia. Members of the Abrahams-Abramson family were among the leading 18th-century medalists. The Jacobson family rose to prominence at Copenhangen in the same period. Philipp Aron, active from about 1750 to 1787, and his brother Abraham (1744–1824), did portrait medals for the courts of Mecklenburg and Stockholm, as did Meir Loeser and his son Nathan at the turn of the century. About the same time Abraham Jacobs and Abraham Heilbut spent their active careers working in their native Hamburg. An important 18th-century Russian medalist was Samuel Judin, while the Simon family flourished in Belgium and France. The three Wiener brothers from Belgium are considered among the finest 19th-century medalists, as were Avenir and Abraham Griliches in Russia. France was the home of several distinguished 19th-century Jewish medalists such as René Stern, court engraver to Napoleon I, and E.A. Soldi. One of the few Jewish medals by the French sculptor Emmanuel Hannaux has an excellent portrait of Narcisse Leven, president of the Alliance Israélite Universelle. S.F. Beer engraved the commemorative for the Second Zionist Congress. Aaron Kohn (early 19th century, Germany) is noteworthy for his religious medals, such as his 1817 Tashlih prayer and his 1837 circumcision medals. In the same period Asher Wappenstein (1780–1852) of Vienna engraved patriotic commemoratives. I.W. Loewenbach of Munich struck Bavarian nationalist medals from the 1820s through the 1860s. He also did the earliest German synagogue medal, issued in 1826 for the new synagogue at Munich. H. Oppenheim is well known for his medals dealing with his home city of Frankfurt on the Main. On the other hand, Leo Horovitz, son of the Frankfort rabbi Marcus Horovitz, concentrated mainly on Jewish subjects. Dutch Jewish medalists of this period were M.C. de Vries Jr., A.L. Snoeck, and Jacques Elion, the last having been preceded by his father Samuel Cohen Elion. Two Americans, both born in the Austrian Empire, achieved distinction. One was Moritz Furst; the other, Isidore Konti, a gifted sculptor as well, struck the 1905 commemoration of the 250th anniversary of Jewish settlement in the United States. Among 20th-century Jewish medalists are Victor D. Brenner (U.S.), Benno Elkan (Germany and England), and Harald Salomon (Denmark). Fulop O. Beck (b. 1873) is considered one of the best medalists of the 20th century; though baptized he executed medals for many important Jews. Ed. Teleki (1872–1958), also a Christian convert, became the official medalist for Hungary during World War I. Other noted 20th-century Jewish medalists include the Germans Hugo Kaufmann and Arnold Zadikow; the Austrians Emil Fuchs and Arthur Loewental; the Dutch Loecki Metz; the Hungarian István Csillag; the French Boris Bernstein, Simon Goldberg, and Esther Gorbatova; Paul Vincze, in England, as well as the Americans Abram Belskie, Michael Lantz, Albert W. Wein, and Adolph Block. The American sculptors Leonard Baskin and William Zorach have done occasional medals. Boris Schatz, Ivan Sors, F.J. Kormis, and A. Eisenberg are known for their medals of Jewish subject matter. Israel had a new group of medalists, including Miriam Karoli, Zvi Narkiss, Gabriel and Maxime Shamir, the team of Rothschild and Lippmann ("Rcli"), Alex Berlyne, Mordechai Gumpel, Jacob Zim, Josef Bass, and Moshe Zipper.

See *Medals.

[Daniel M. Friedenberg]
differ on the classification of Jewish medals. Bruno Kisch (see bibliography) gives the following classification:

1. Symbolic representation, biblical personages and scenes, imitation shekels, and biblical medals. (This group should really not be included among Jewish medals, since in most cases they were made neither by, nor for Jews.)

2. Medals referring to political events in connection with Jews, such as the granting of religious freedom, Zionista, etc.

3. Medals referring to Jewish communities, inaugurations and jubilees of synagogues, or institutions, schools, etc.

4. Medals of Jewish personalities, such as rabbis, physicians, philanthropists, etc.

5. Marriage and anniversary medals, tokens, amulets.

Though no medals exist from talmudic or biblical times, the Talmud (bk 97b) speaks of portrait coins bearing the likeness of biblical personages. Probably the oldest Jewish medal extant (1497 or 1503) is one associated with the name of Benjamin b. Elijah Be’er the physician, with a long and enigmatic Hebrew inscription with a text also in Greek and Latin, surrounding what may be intended to represent a Roman emperor. In the 16th century, during the Renaissance, portrait medals were made by or for rich Jewish families. The best known of these is that of Gracia *Nasi (1556), in all probability the younger of the two ladies known by that name. Dating roughly from the same period are the portrait medals of Elijah de Latas (or Lattes; 1552) and Abramo Emanuele Norsa (1557). Mention may be made also of the medals struck for Marranos in Antwerp, such as Luis Perez (1597) and Ursula Lopez, widow of Martin Perez (1580).

At the end of the 17th century, the so-called “Korn Jude” medals are found, a typical example of antisemitica. These medals, made of silver, copper, and tin, all show more or less the same picture: on the front a bearded man wearing a Jew’s hat, a stick in his hand, and carrying a sack of grain on his back, on which sits the devil who rips the sack open. Around this picture is the inscription “Du Korn Jude” and under it a date with the word Theurezeit. On the reverse side is a corn measure and the verse (Prov. 11:26): Wer Korn inhaelt, dem fluchen die Leuthe. Aber Seegen kommt ueber den, der es verkauft, Sprueche (“He that withholdeth corn, the people shall curse him; but blessing shall be upon the head of him that selleth it,” Proverbs). Other examples of antisemitic medals are the “Federjude” medals of the same period. The figure represented is a Jew in a feather hat, carrying a large sack on his back and a money bag in his hand. Similarly anti-Jewish feeling in Germany is expressed by the medals struck on the occasion of the execution of Jew “Suess” *Oppenheimer in 1738. The medals are in silver, lead, and bronze. In the 18th and 19th centuries baptism was for many Jews a way out of the difficult circumstances in which they lived, and this led to the striking of baptismal medals. Among such is a satiric medal in silver, circa 1700. On the front is a clergyman holding a Bible, who pours water on the head of a kneeling Jew carrying a millstone around his neck. On the reverse side is an antisemitic text, and on the rim Wenn die Maus die Katze frisst, dan wird ein Jud ein wahrer Christ (“When the mouse eats the cat, then a Jew becomes a true Christian”). Political accusations against the Jews were also known. When in 1686 the city of Ofen (the old German name for Buda, see *Budapest) was captured from the Turks by Leopold I of Austria, the Jewish community was massacred. As a memento of the event a satiric medal was struck showing a Turk and Jew melting metal in a furnace, the Turk holding the tongs and the Jew the bellows, while ingots appear at the bottom. “Who mints money for peace now that the Turk and Jew are tired of war?” is the ironic inscription.

Two medals were struck on the occasion of the fire in the Judengasse at Frankfurt on the Main in 1711, one in three variants. That with the variants by Christian Wermuth is one of the most vicious antisemitic pieces extant. In 1735 a medal

“Israel Liberata” coin celebrating the 10th anniversary of the State, 1958. The reverse is a facsimile of a “Judaea Capta” coin recording Vespasian’s conquest in 70 c.r. Courtesy Israel Government Medals and Coins Corporation, Jerusalem.

was struck in Amsterdam – by Joel Levi – with a Hebrew text to mark the arrival there of Eleazar of Brody, who had been invited to become rabbi of the Ashkenazi congregation. A portrait of Moses "Mendelssohn, one of the forerunners of the Emancipation in Germany, was made about 1774 jointly by the Jewish medalist Jacob Abraham (1723–1800) and his son, Abraham Abramson (1754–1811). The Emancipation of the Jews was the occasion of commemorations and frequently led to the striking of medals. (The most important medals in this group are listed in Section 2 of the appended list.) The Emancipation of the Jews caused a revival of Jewish communities especially in Western Europe, and an extensive development of Jewish intellectual life. In Germany and Austria, in particular, hundreds of medals were struck on the occasion of various events.

Large numbers of Jewish medalists and sculptors were engaged in the making of medals. Besides the German and Dutch medals there are also a number of French, Italian, and English medals, many American and a few Polish, Scandinavian, and Russian ones. [Arthur Polak]

In Israel

The first commemorative medals and coins were issued in Israel in 1958 on the tenth anniversary of the state, as part of the activities of the Anniversary Committee set up by the Prime Minister's Office. In 1961 a special Israel Government Coins and Medals Corporation was set up, whose charter provides for a board of directors on which a number of ministries are represented and which appoints a director general. State medals are struck for the following purpose: to commemorate events of national or international significance in the field of culture, science, history, and the various stages of Israel's development and achievement. In keeping with Jewish tradition, living personalities are not commemorated. Commemorative coins are issued by the Bank of Israel and are legal tender, while official state medals are the monopoly of the Coins and Medals Corporation. Apart from the purposes mentioned, these coins and medals have a great publicity value both among Diaspora Jews and in official circles of other states. They earn revenue and foreign currency for the Israel treasury; the income is earmarked for the restoration and preservation of historical sites in Israel.

The first medal issued in 1958 was the Liberation Medal showing the Roman "Judaea Capta" coin on the obverse and "Israel Liberata" on the reverse. This was followed by the Valor medal of 1959, with the symbol of the Israel Defense Forces on the obverse and the Trumpeldor Memorial on the reverse. A medal of the same year commemorated the jubilee year of the founding of Tel Aviv, while a Bar Kokhba medal was struck in 1960, after the Bar Kokhba letters were found in the Dead Sea Caves. More than 100 subjects had been commemorated by 1970, among them the Warsaw Ghetto Rising (1963), Masada (1964), the Rothschild family (on the opening of the new Knesset, 1966), the Sinai Campaign (1966), the Jewish Legion, the Balfour Declaration (1967), and El Al Airlines (1969). There is also a very popular bar mitzvah medal (1961).

Commemorative coins are issued every year on the occasion of Israel Independence Day (1958– ). A series of Hanukkah coins was struck (1958–63), as well as special gold coins to mark the Herzl centenary (1960), the Six-Day War of 1967, and the reunification of Jerusalem (1968). Half-shekels (1961, 1962) to be donated to charity on Purim, and Redemption of the Firstborn shekels (1969) for the Pidyon ha-Ben ceremony have been struck for religious use.

Each medal and coin is accompanied by an illustrated prospectus, in various languages, telling the story behind the medal, as well as numismatic technical details such as mintage figures, metal, weight, diameter, name of the artist, and the place of striking. In order to distinguish state medals from privately issued medals, official medals carry on their edge the emblem of the state and the words "State of Israel" in Hebrew and in English and are engraved with serial numbers. After minting the designated number of medals, the dies from which they were struck are destroyed in the presence of official witnesses. Official catalogs are issued periodically by the corporation and are also published in the Israel Numismatic Bulletin.

**MEDEM, VLADIMIR** (pseudonym M. Vinitski; 1879–1923), prominent *Bund* leader in Russia and Poland. He was born in Libau (Liepaja), Courland, to an army medical officer, who was an extremely assimilationist liberal and had him baptized into the Orthodox Church. In his youth Medem regarded himself as a Russian, and the influence of his association with Jews at the secondary school of Minsk was only revealed later. He studied law in Kiev, became acquainted with the writings of Plekhanov and Lenin, and identified himself ideologically with Marxism. As a result of his role in a students’ strike (1899), he was expelled from the university, and after a brief term of imprisonment was exiled to Minsk under police supervision. He was influenced there by leaders of the Bund: Gershuni, Teiman, and Kaplan. His interest in the Jewish masses was now aroused and he felt himself attracted to them. This evolution, which led him to join the Bund, became for him the way back to Jewish identity. It was precisely this lengthy journey which later won him admiration within the Bundist masses. He was a member of the Bund committee of Minsk and wrote for its organ, Der Minsker Arbeter.

After being imprisoned and suffering from a kidney disease, he succeeded in escaping to Berne, Switzerland. He was active in the Russian student circles there and at the end of 1901 was elected first secretary of the Bund organization abroad. He represented the Bund at the Second Convention (1903) of the Russian Social Democratic Party in London. After the convention he was appointed to the Committee Abroad of the Bund. During the years 1905–08, Medem was also active in Russia as one of the leading contributors and editors of the Bund newspapers Posledniya Ivestiya and Nashe Slovo. At the Seventh Convention (1906) of the Bund, he was elected to its central committee. He was deeply concerned with the national question, and it was he who formulated the so-called neutralist attitude toward the future fate of the Jewish nation which was adopted by the Bund as its official position (“neutralism”). It was only in 1910 that he began to retreat from this position and recognized the need for a positive attitude on the national future of the Jews. He was among the first to call for an active interest by the Bund in the Jewish community organization (*kehillah*); he demanded actual action in the question of Yiddish schools, the right to rest on the Sabbath, and the right of employment for Jewish workers. He played an active role in the revival of the Bundist press during the years 1912–13 (Lebnisfragen, Vienna, and Di Tsayt, St. Petersburg). In 1915, as a result of the Russian retreat during World War I, he was freed before completing a two-year term of imprisonment in Warsaw. During the German occupation he was the ideological leader of the Bund in Poland. He began to speak and write in Yiddish. His anti-Zionist writings became increasingly violent, but he renewed the demand for Jewish national-cultural autonomy. He was even in favor of collaboration with middle-class elements in the field of Yiddish culture. During the years 1919–20, when pro-Communist tendencies gained the upper hand within the Bund, Medem found himself isolated in his violently critical attitude toward Bolshevism and its methods. At the beginning of 1921 he immigrated to the U.S. where he contributed to the Jewish daily, *Forward*. His autobiography (Fun Mayn Lebn, 2 vols., 1923) is of both literary and historical value. Cultural and educational institutions in Poland were named after him.

[Moshe Mishkinsky]

**MEDES AND MEDIA** (Heb. מַדַּי; in Akkadian inscriptions: Madai), a people of Indo-Iranian origin, closely related to the Persians, who inhabited the mountainous area of Iran and the northeastern and eastern region of Mesopotamia. The Medes, located in the Kermanshah-Hamadan (Ecbatana) region, are more prominent in Assyrian texts than the Persians. The Assyrian kings distinguish two groups of Medes inside the empire, and the distant Medes (madaya riiqüti). In the biblical passage enumerating Noah’s sons, Madai, the progenitor of the Medes, like those of other Indo-Iranian peoples, is included among the sons of *Japheth* (Gen. 10:2). In datable sources Medes are first mentioned in the historical inscriptions of the Assyrian kings of the end of the ninth century B.C.E., Shalmaneser III and his son Shamshi-Adad V. The Assyrian kings in military campaigns against Media, which then stretched southeast of Lake Urmia, inflicted heavy losses on its population. Although the Medes did not as yet have a central kingdom, they succeeded in repelling the Assyrian kings in sporadic encounters and by evasive tactics. In the eighth century B.C.E., *Tiglath-Pileser III, in his campaigns, which extended from ‘Ararat (Urartu) to the mountains south of the Caspian Sea, subdued the Medes. Annexing Media to Assyria, he deported 65,000 of its population, whom he replaced with inhabitants of other countries. However, in the days of *Sargon II*, at the end of the eighth century B.C.E., Media, under the leadership of a Median called Dayaku, revolted against Assyria. In Sargon’s military operations conducted in 716–15 B.C.E. against the centers of revolt, Dayaku was captured and exiled to Hamath in Syria, whereupon 22 Median rulers, submitting to the sovereignty of Assyria, presented a gift to the king. Dayaku was undoubtedly identical with Deioces, who is mentioned by Herodotus (1:96–101) as having united the tribes of Media and as having been its first king, reigning for 53 years. However, according to contemporary Assyrian sources, he was merely the forceful local chieftain of a region lying between Assyria...
and Ararat. Apparently a later tradition attributed to him a royal title and the establishment of the Median Empire. Media became a united empire under the leadership of Kaštarita (according to the Persian pronunciation; in Assyrian: Kastartit), who formed a military pact against the Assyrians in the region of the Zagros Mountains and rose to be king of Media (in the first half of the seventh century B.C.E.). The present tendency is to identify Kaštarita with Phraortes king of Media who, according to Herodotus (1:102), reigned 22 years, subdued the Persians, and was killed when advancing on Nineveh. Having consolidated their position at the end of the reign of Ashurbanipal king of Assyria (668–627 B.C.E.), the Medes, in the wars between Babylonia and Assyria in the days of the last Assyrian kings (626–616 B.C.E.), joined forces with the Babylonians, attacked Nineveh, and, after conquering it, assisted in the capture of Haran. The Medes (called in contemporary Babylonian documents Ummān manda, an old traditional term for barbarians) were then ruled by Cyaxares (i.e., native Huvašra; in Babylonian sources: Umnikštar), who, Herodotus reports (1:100–4), defeated the Scythians. After the overthrow of Assyria, Cyaxares extended his sway over the northern part of the Assyrian Empire, as well as over large sections of Iran, Armenia, and Asia Minor. When unable in 500 B.C.E. to conquer Lydia, Cyaxares, through the mediation of the kings of Babylonia and Cilicia, made a treaty with the Lydians. This consolidation of Media under Cyaxares, constituting as it did a danger to Babylonia, finds expression in utterances of the prophets of Israel who saw in the army of Media a relentless foe rising to destroy Babylonia (Isa. 13:4–6, 17–19, 21:1–10) and uniting with other northern peoples to bring about, at God’s command, the overthrow of the kingdom of the Chaldeans (Jer. 51:11–14, 25–36). Astyages (Ass. Išumēgu) the son of Cyaxares and the last king of Media (584–550 B.C.E.) attempted to oust Babylonia from the region of Haran. However, after *Cyrus king of Persia who had revolted against Astyages and defeated him, Media became part of the Persian Empire (550 B.C.E.). The revolts which broke out against Persian rule at the beginning of *Darius I’s reign were unsuccessful, and Media was incorporated into two Persian satrapies (the 11th and the 18th). Nevertheless it occupied an honorable and special position in the Persian Empire, as is reflected in the biblical combination (in Esther and Daniel) of “Persia and Media” or “Media and Persia,” e.g., “the seven princes of Persia and Media” (Esth. 1:14); “the kings of Media and Persia” (10:2); or “the laws of the Persians and the Medes” (1:19). The Bible apparently expresses a view, then prevalent, about the part played by the two empires in the historical events preceding the fall of Babylonia. According to this view, not only did the one empire supplement the work of the other but the Persian Empire was the natural heir of Media. Echoes of this view appear in Daniel’s vision of the destruction of Babylonia by the Medes and Persians (Dan. 5:26–28; cf. 6:1, 29; 8:20) as well as in the prophecies in Isaiah and Jeremiah concerning the overthrow of Babylonia by Media (see above). It is difficult to reconcile elements of the literary sources with archaeological evidence.

Ecbabtana has not yet been excavated but three other sizable Median sites of the seventh century were deserted by the sixth. No Median writing has been found, though some words that are either Median or part of Medo-Persian koiné have been identified in Old Persian inscriptions, nor has any distinctively Median style in art been identified.

---

**MEDIATION,** an alternative means for the resolution of disputes in which the mediator, a neutral professional, meets with the parties to the dispute and aids them in reaching an agreed upon resolution. Unlike a judge, the mediator has no authority to render a decision in the dispute. In the mediation process, the parties are given the opportunity to express themselves, to voice their arguments, and to reach, by themselves, a solution that is appropriate for them.

Mediation is appropriate for the resolution of most types of disputes, be they commercial disputes, private disputes, disputes regarding the family, or even public disputes and international disputes between states.

Jewish legal literature contains many sources that refer to disputes. Many of these sources point to the increase in litigation and consider the use of the judicial process, terminating in a definitive judicial decision as the preferred method to resolve disputes.

Alongside this approach, there are many sources that refer approvingly to making peace between parties, whether this is achieved by a *dayyan* (rabbinical court judge) in the rabbinical court who works out a “compromise” between the parties (see "Compromise"), or by means of mediation that takes place outside the court. It seems that it was not coincidental that the Israeli legislature, in Section 2 of the Foundations of Law Act, 5740 – 1980, provided that “peace” is one of the values according to which the court is obligated to act in the case of a lacuna, a unique provision in comparison to legal systems in other countries. Thus, where the court encounters a legal question which must be resolved, and it is not addressed in legislation or case law and cannot be resolved by way of analogy, the court is instructed to decide “in light of the principles of freedom, justice, equity and peace of the Jewish tradition.”

---

[Samuel Abramsky / S. David Sperling (2nd ed.)]
An expression of the important role of “peace,” alongside that of “law” as a means to dispute resolution, may be seen in the Book of Zechariah, 8:16: “…execute the judgment of truth and peace in your gates.” The Mishnah in Avot elaborates upon this verse, stating: “The world exists on three foundations: On truth, on judgment, and on peace.” The verse from the Book of Zechariah served as the basis for the teaching of the sages in the Mishnah, as follows: “What is the judgment that contains peace? Let it be said: it is compromise.” The Maharsha – Rabbi Samuel Edels, a rabbinic sage in Poland in the 16th century – commented as follows: “Compromise is arrived at with the agreement and willingness of both of the parties, which is not the case with judgment.” (For further explication of this subject see the opinion of Justice Menachem Elon in CA 61/84 Biazi v. Levi, 42(1) PD 446.)

As opposed to modern legal systems that view the court as a central means for conflict resolution, the Torah commands each individual – and not just the legal institution – to try to bring about accord between opponents in a dispute. An expression of this is found in the Mishnah in tractate Peah, that is recited daily in the morning prayers: “These are things that have no measure [that the reward for them is immeasurably great] …a person enjoys their interest in this world and the principle awaits him in the world to come: … and making peace between people and between a husband and his wife” (the last phrase, “between a husband and his wife,” does not appear in all of the ancient manuscripts of the Mishnah, but is found in some of the versions of the prayer and is common in the Sephardi and the Eastern versions of the prayer).

In his classic commentary on the Mishnah, the author of Tiferet Yisrael, Rabbi Israel Lipschutz (Germany, 18th century), discusses the special expression “bringing peace” rather than “making peace,” and he comments as follows:

Bringing peace – even if the two parties do not desire it, one should go to the trouble of persuading them to come together and bring about peace between them. And this is the reason that the tanna did not say “to make peace” but rather “to bring peace,” in other words, to bring counsel from afar in order to compel them by his soft words to bring peace between them.

In the Midrash, the figure of Aaron the Priest, about whom it was said in the Mishnah (Avot 1:12) that he “loved peace and pursued peace,” serves as the archetype for the commandments of bringing about peace. The Talmud even contrasts between Moses, the head of the judges and Aaron’s brother, and Aaron, who serves as a symbol for mediators seeking to resolve disputes outside of court: “Moses used to say: The law must be carried out to its fullest, but Aaron loved peace and pursued peace, and made peace between people.” Rashi commented “Because he would hear the disputes between them before they came before him for a judgment, he would pursue them and impose peace between them.” In other words, as is the case with modern day mediation proceedings, the “mediator,” Aaron the Priest, met with the parties before the legal hearing and outside of the “court,” in order to spare them the pain and suffering that accompany the legal proceedings.

The end product of mediation, unlike a legal proceeding, is not a legal decision in which one side prevails and the other side feels that he has lost, but rather the end of the conflict and its resolution in a “peaceful” manner, in which both sides feel that they are satisfied.

An interesting description of the mediation process is found in Avot de-Rabbi Nathan (12:3): “Two people had quarreled with one another. Aaron went and sat with one of them. He said to him: My son, look what your friend has done, his heart is distraught and he has torn his clothes (out of sorrow regarding the quarrel), and he is saying: Woe is to me, how will I raise up my head and look at my friend? I am embarrassed in his presence, because I am the one who wronged him. And he [Aaron] sits with him until he removes the jealousy from his heart. And Aaron then goes and sits with the other party and says to him: My son, see what your friend has done, his heart is distraught and he has torn his clothes and he is saying: Woe is to me, how will I raise up my head and look at my friend? I am embarrassed in his presence, because I am the one who wronged him. And he [Aaron] sits with him until he removes the jealousy from his heart. And when they met [the two opponents who carried on the dispute between them], they embraced and kissed one another.”

According to the description in this Midrash, Aaron the Priest uses a technique similar to that used by contemporary mediators, of holding separate mediation meetings alongside the joint meetings, with the goal of aiding the parties to end the dispute. In this respect as well, the difference between the mediation process and a court proceeding, which has to be held in the presence of both of the parties, is readily apparent.

It is not unusual for a dispute between parties to be so serious that the two parties cannot communicate with each other. Due to the lack of trust between them, each one is suspicious of the other and holding separate meetings allows them to express themselves freely in front of the mediator and to talk about their feelings in a calm and non-threatening atmosphere, without worrying that what they say will be conveyed to the other party. In this manner, the mediator can assist each of the sides to identify his interests and needs, and to understand the interests of the other party. In the case described in Avot de-Rabbi Nathan, the mediator uses “neutral” language, while emphasizing points that are likely to lead to a resolution of the dispute. Aaron the Priest emphasizes the sorrow of the other party to create an opening to decrease the tension between the parties and to encourage discussion between them. Unlike a judge, the mediator does not express an opinion regarding the dispute before him. He abstains from “awarding grades” to the parties to the dispute, does not appraise their character, and does not judge their deeds. His role is purely one of assisting in carrying out the negotiations between them to resolve the dispute.
In Court Decisions in Israel

Israeli law accords a wide degree of expression to the desired place of reaching a compromise by the court, relying on the position of the Jewish Law sources regarding this matter (see, for example, CA 807/77 Sobol v. Goldman, 33(1) PD 789, per Justice Elon and HCJ 2222/99 Gabai v. The Rabbinical Court of Appeals, 54(5) PD 401; see “Compromise”). However, a distinction must be made between a compromise arrived at by a judge and a mediation proceeding handled by a neutral professional outside of the courtroom. Section 79c of the Courts Law [consolidated version], 5744 – 1984, refers to mediation, along with compromises that take place within the court, as appropriate proceedings for the resolution of disputes. Pursuant to that section, “the court may, with the agreement of the parties, transfer a matter in litigation to mediation.” If the parties reach an agreement in the mediation, the court is authorized to give the agreement the force of a judgment. Detailed regulations have been enacted to govern the mediation process.

[Eliseeva Hacohen (2nd ed.)]

MEDICINE. From the beginning of their history until modern times Jews have exercised a tremendous influence on the development of medical science. They have always been solicitous in their care for the sick and held the medical profession in great esteem. In ancient times medicine and religion were closely connected. The priests were the custodians of public health. The dispute as to the propriety of human interference in sickness – regarded as divine retribution – ceased to trouble the Jews, because they came to regard the physician as the instrument through whom God could effect the cure. Jewish physicians therefore considered their vocation as spiritually endowed and not merely an ordinary profession. By the same token, great demands were made of them, and the ethical standards have always been very high.

The importance of medicine and physicians among the Jews is best seen in the long line of rabbis-physicians, that started during the talmudic period and continued until comparatively recently. Various factors were responsible for this combination of professions. Medicine was sanctioned by biblical and talmudic law and had an important bearing upon religious matters. Since teaching or studying the word of God for reward was not considered ethical, the practice of medicine was most often chosen as a means of livelihood. This trend was further strengthened by the fact that during the greater part of the Middle Ages the Jews were excluded from almost all other occupations, including public office, and medicine was left as one of the few dignified occupations by which they could earn their living.

Jews have contributed to medicine both by the creation of new medical concepts and by the transmission of medical knowledge. It was through the medieval Jewish physician-translators that the medical knowledge of the East and much of ancient Greek medical lore was preserved and transmitted to the West. A general survey of Jews in medicine may be divided into three broad periods:

(a) biblical and talmudic times, which covers the period from antiquity until roughly the fourth to fifth centuries c.e.;

(b) a middle period from approximately the sixth century c.e. to the beginning of the 19th century; and

(c) the 19th and 20th centuries, during which Jews throughout the world have excelled not only in the practice of medicine but in all fields of medical research and teaching. It is significant that over 20% of all winners of the Nobel Prize for medicine up to the end of the 1960s were Jewish.

The high standard of medical science in Israel must be mentioned. Not only have Israeli physicians successfully met the challenge of medical problems in a developing country with a mixed population, but they have continued the ancient Jewish medical tradition by teaching and giving practical aid to those developing countries striving to attain the scientific levels of the 20th and 21st century.

IN THE BIBLE

The main source of information on ancient Hebrew medicine is the Bible, which refers to medicine as it pertains to religious or civil laws or when important characters are involved. No general ancient Hebrew medical documents are extant, although the Talmud reports that King *Hezekiah canceled the “Medical Book” (Ber. 10b; Pes. 56a) and that a scroll on pharmacology was lost. From earliest times, the Jewish faith sought to suppress “magic customs and practices in every field of life, including those concerned with the health of its members. The Hebrews were doubtlessly influenced in their medical concepts and practices by the surrounding nations, particularly by Egypt, where medical knowledge was highly developed. Prevailing superstitions and beliefs in magic medicine were far less accepted and practiced by the Jews, however, than by their neighbors. But like their contemporaries, the ancient Hebrews attributed health and disease to a divine source.

Healing was in the hands of God and the role of doctors was that of helpers or instruments of God. There are numerous references to physicians and men of healing throughout the Bible. It is always implied, however, that although man may administer treatment, it is God who heals: “I am the Lord that healeth thee” (Ex. 15:26). The title rofe (“healer”) was therefore never adopted by ancient Jewish physicians; where it occurs it invariably refers to foreign doctors, who were usually assumed to be helpless because they were not aided by God. Pharmacists and midwives are also mentioned. Hebrew priests had no authority as physicians but rather held the position of health wardens of the community, charged with enforcing the laws pertaining to social hygiene.
The uniqueness of biblical medicine lies in its regulations for social hygiene, which are remarkable not only for their period but even by present-day standards. Hygiene and prophylaxis became religious dogmas intended for the welfare and preservation of the nation. Of the 613 commandments, 213 are of a medical nature. Prevention of epidemics, suppression of prostitution and venereal diseases, frequent washing, care of the skin, strict dietary and sanitary regulations, rules for sexual life, isolation and quarantine, the observance of a day of rest – the Sabbath – these and other provisions inhibited the spread of many of the diseases prevalent in neighboring countries.

The Hebrews were aware of the fact that contagious diseases are spread by direct contact as well as by clothing, household utensils, etc. To prevent the spread of epidemics or infectious maladies they therefore compiled a series of sanitary regulations. These included precautionary or temporary isolation, quarantine, burning or scaling of infected garments and utensils, thorough scrubbing and smoking out of houses suspected of infection, and scrupulous inspection and purification of the diseased person after recovery (Lev. 13–14). Anyone coming into contact with a corpse or carrion, or suffering from purulent discharges from any part of his body, also required a thorough cleansing of himself and his belongings before being allowed back into the encampment (Num. 19:7–16; Lev. 15:2–13). The garments, weapons, and utensils of soldiers returning to the camp after a battle had to be thoroughly cleansed and disinfected to prevent the spread of diseases possibly picked up during contact with the enemy (Num. 31:20, 22–24). The danger of infectious bowel diseases spreading through excrement was also recognized and the Bible instructed how to keep the camp clean (Deut. 23:13–14).

Diseases and Remedies

Many diseases are mentioned in the Bible. Among them are šāhafet – phthisis (Lev. 26:16); afolim – leishmaniasis (Deut. 28:27); yeraqon (yeraqon) – ikerus (Deut. 28:22); shehin porē'ah a'vabuot – pemphigus (Ex. 9:9); zav – gonorrhea-leukorrhea (Lev. 15); dever – pest (Deut. 28:21); shivron mot-nayim – lumbago (Ezek. 21:11); nof el ve-galui 'enayim – epilepsy (Num. 24:4); rekv (regav) āzamot – osteomyelitis (Prov. 14:30). Although not specifically mentioned by name, eye diseases such as blepharitis ciliaris and gonorrhea ophthalmia undoubtedly existed, and senile cataract probably occurred frequently among the ancient Hebrews: “Now the eyes of Israel (Jacob) were dim for age so that he could not see” (Gen. 48:10). The dimness of sight rather than blindness is indicative of cataract. Various forms of skin disease are referred to in Deuteronomy: “The Lord will smite thee with the boil of Egypt, and with the emerods, and with the scab, and with the itch, wherefore thou canst not be healed” (Deut. 28:27). The Hebrew word zarrat, which has been translated as leprosy, was probably a generic term for a number of skin ailments, many of which were considered curable (Lev. 13). However, leprosy in the modern sense was also known, and rigid quarantine, which did not exclude kings (11 Chron. 26:21), was imposed on lepers. The term maggefah refers to plague, epidemics, and contagious diseases in general, very often of a venereal type. A bubonic plague described in 1 Samuel 5 mentions rodents, who are known to be carriers of the disease. Various types of wounds are mentioned: makkah is the generic term for wound; makkah 'eriyyah is a festering wound; makkah 'anushah, a wound which will not heal, often fatal; pe'az, a stab wound; ḥabburah, a boil or hematoma; and mazor, a septic boil.

With the one exception of the incurable serpent bite (Num. 21:9), biblical remedies and treatments are all of a rational character and do not involve incantations or magic rites, nor do they include the so-called "filth pharmacy." Biblical therapeutics consisted of washing; the use of oils, balm, and bandages for wounds and bone fractures; bathing in therapeutic waters (1 Kings 5:10), especially in the case of skin diseases; sun rays, medicated drinks, etc. Among medicaments mentioned by name are myrrh, sweet cinnamon, cassia, galbanum, niter, and the mandrake (ludada'ım) which was considered to possess aphrodisiac properties. The modern method of mouth-to-mouth artificial respiration was also known, as testified by the accounts of Elijah and Elisha (1 Kings 17:22; 11 Kings 4:34–35). The only surgical operations mentioned are circumcision and castration, and these were not specifically Jewish practices. *Embalmimg, though unusual, was not forbidden.

Anatomical Knowledge

The Hebrew had more than a passing knowledge of anatomy. This is attested by the language used in instructions concerning methods of sacrifice and by passages of poetry where the names of organs and limbs are used metaphorically. The heart is mentioned frequently as the seat of emotion and intellect, and the functions now ascribed to the brain were then thought to emanate from the heart. No word for brain is mentioned; no name of organs and limbs are used metaphorically. The heart, for example, body defects or deformities are described solely to emanate from the heart. No word for brain is mentioned; the word mo'āh in Job refers to marrowbone.

It is interesting to note that the Bible has a distinctive nomenclature for parts of the body and types of illnesses. Thus, for example, body defects or deformities are described solely by words constructed in the pi'el grammatical form: 'iqtet – paralyzed, left-handed; 'ilem – dumb; 'iver – blind; pisse'ah – lame; gibben – hunchback. Descriptions of mental or nervous diseases appear in the pi'el-form: dikkāon – depression; shiggāon, ālal – madness; īzzavon – nervousness; ivvaron – mental blindness; shikkaron – drunkenness. Somatic illnesses appear in the pālet (pā'at) form: dalleket (dalleghet) – inflammation; šāhefet – tuberculosis; yabbelet – acne; 'azzevet – neuritis; bahevet – leukoderma, vitiligo; sappahat – psoriasis; zarāt – lepra, skin diseases; gabbahat – loss of hair. Trauma of the body is formed according to the pā'ul model: shuvav – fractured; haruz – split; mā'ukh – crushed; natuq (nataq) – disjointed; razuq – smashed; zarāv – infected; pāzva – wounded. Many anatomical terms have the ancient two-letter root, while most Hebrew words derive from three letters. Thus 27 lev –
The period surveyed in this section extends roughly from the second century B.C.E. to the sixth century C.E. The historical events of that period had a profound influence on the thought and way of life of the Jews and consequently on the development of Jewish medical art as well. As a result of the Babylonian Exile, of Greek rule followed by the Hasmonean Wars, the rise of Christianity and the Exile after the destruction of the Second Temple, the Jewish community became wide open to influences from neighboring countries and to foreign philosophies, which had their effect on every walk of life, including medicine.

**Sources and Influences**

The sources for this period are the Apocryphal books, Greco-Roman writings of Jews and non-Jews, the Mishnah, the Jerusalem and Babylonian Talmuds, the Midrashim, and, in part, the recently discovered Dead Sea Scrolls. None of these sources is a medical book as such. Except for a few cases, such as the praise of medicine and the physician by *Ben Sira, medical matters are dealt with mainly to illustrate points of ritual, or civil and criminal law. In the Talmud, a few medical matters are dealt with extensively in the tractates Hullin, Nega'im, and Bekhorot. The influence of Persian and Babylonian magic medicine is clear from references to *amulets, the *evil eye, *demons, etc. The Greek influence on Jewish medical thought was considerable, but we find that the scholars were not blind adherents of the humoral pathology, but rather followers of anatomic pathology. This was doubtless based on their experiments and observations of sick animals before and after slaughter, as well as on their studies of human bodies and corpses. One of the interpretations given to the name of the sect known as *Essenes is דבעמי, “healers.” Their medicine mainly influenced Christian medicine and medical thought. They studied and collected herbs and roots for healing purposes, though their chief remedies were prayer, mystic formulas, and amulets. Abiding faith was all that was considered necessary for curing physical and mental diseases as well as chronic defects such as blindness, lameness, and deafness. The medicine mentioned in the New Testament is almost entirely of this type of miracle cure. By contrast, the attitude of Jewish scholars of the time, and later those of the Talmud, is generally a scientific one.

The talmudic attitude toward the sanctity of human life and the importance of health is expressed in numerous statements: “The saving of life (pikku'ah nefesh) takes precedence over Sabbath” (Yoma 8sa). “Whoever is overzealous in fasting should be regarded as a sinner” (Ta'an. 11a). It was also decreed that when treating the sick or a woman in childbirth, even though no danger to life was involved, the sanctity of the Sabbath could be profaned.

**Status of the Physician**

The Talmud does not regard calling upon a physician for medical aid as a failure to rely upon God to restore health: “Whoever is in pain, let him go to the physician” (BK 46b). The profession of physician – as an instrument of God – was held in high esteem: “Honor the physician before need of him. Him also hath God apportioned…. The skill of a physician shall lift up his head; and he shall stand before nobles . . .” (Ecclus. 38). The Talmud enumerated ten things that must be in a city where a scholar lives, and these include a physician and a surgeon. From this statement it may also be concluded that the number of practicing physicians was relatively great.

Specialists as known in Egypt did not exist. However, the Talmud names two types of physician, rofe and rofe umman (“skilled physician” and “surgeon”). Patients visited the physician in his home and not, as in Greece, in the marketplace. A special regulation was therefore enacted which required anyone renting premises to a physician to obtain the prior agreement of his neighbors, since the cries and noise of visiting patients might disturb them (BB 21a). *Hospitals were apparently nonexistent in this period, although certain temple halls, and later on, parts of the poorhouses and synagogues, were set aside for the sick. However, mention is made of operation rooms, which had to be walled with marble for cleanliness – “battei shayish.” There were communal or district physicians, whose duties included assessing the character and extent of any physical disability sustained in cases of injury in order to determine damages (Sanh. 78a). They were also required to judge the degree of physical endurance of a person sentenced to corporal punishment (Mak. 22b). “The victim of an assault could refuse to be treated by a physician coming from a distance since he would not be sufficiently concerned with the welfare of his patient” (BK 85a).

A physician had to receive adequate fees, and free medical service was not approved because “a physician who takes nothing is worth nothing” (BK 85a). At the same time, Jewish physicians had special consideration for the poor and needy – a tradition which was maintained throughout the centuries. Abba Umana (fourth century C.E.) was reputed as a physician and a charitable man. In order not to discourage needy patients he would hang a box on the wall where anyone could put in, unnoticed, the fee he thought he could afford for medical treatment. Abba Umana refused to take fees from poor students and would return them their money so that they could use it for convalescence (Ta'an. 21b). If, in spite of every care, a licensed physician injured a patient or caused his death, he was not – as among many other peoples – held guilty (Sanh. 84b). Jewish physicians were apparently organized in some type of guild which had as its insignia the harut – the branch of a palm or a balsam bush (Jews at that time regarded balsam as the best remedy for wounds; cf. Pliny, Hist. Nat., 12:54).

Jewish doctors had an excellent reputation and practiced throughout the then-known civilized world. A physician Theudas is mentioned in Bekhorot (4:4) as a famous doctor from Alexandria. Aulus Cornelius *Celsus, writing in the first century C.E., refers to salves compounded by skilled Jewish physicians. “Galen reports on the Jewish physician Rufus Samaritanus in Rome in the first-second centuries C.E. Similar
references are made by Marcellus Empiricus, Aetius of Amida, and Paulus of Aegina. Pliny (Hist. Nat., 37.60.10) mentions a "Babylonian physician – Zechariah," undoubtedly a Jew, who dedicated his medical book to King Mithridates. The emperor Antoninus Pius (86–161 C.E.) requested R. Judah ha-Nasi to supply him with a physician for his house slaves from among his circle of students. The personal physician of St. Basil (c. 300 C.E.) was the Jew, Ephraim. The bishop Gelasius refers to his Jewish physician Telesinus as his "trusted friend." At the same time, numerous restrictions against Jewish doctors were already being promulgated by Christian bishops and emperors. These only serve to show how large the number of practicing Jewish physicians was at the time.

The study of medicine was included in the curriculum of talmudic schools and many talmudic scholars were themselves physicians. Among them were R. Ishmael, R. Hanina b. Dosa, R. Hananiah b. Hama, Joseph ha-Rofe of Gamla, Tobiah ha-Rofe of Modi’in, and Minjomi (Benjamin). The most distinguished of them was "Samuel b. Abba ha-Kohen, also called Mar Samuel Yarihna‘ah (165–257), to whom many remedies and much anatomical knowledge is attributed. He was also the personal physician of the Persian king, Sapur. In addition, the Talmud mentions askan bi-devarim, which might be described as a research scientist, who occupied himself more with the study of animal and human anatomy and physiology than with the actual practice of medicine.

Talmudic Anatomy
The preoccupation with regulations concerning ritually unclean meat, the physical qualifications for priesthood, rules concerning menstruous women, defilement, etc., accounts for the extraordinary anatomical knowledge of talmudic scholars. For full details see ‘Anatomy.

Talmudic Embryology
A great deal of material on this subject can be found in the Talmud and in the Midrashim, some of it of an imaginary or legendary character but most of it surprisingly accurate. Abba Saul describes the development of an embryo in its sixth week (Nid. 25b). Simlai describes the parts, posture, and nourishment of an embryo in the womb. Scholars accepted the opinion that the embryo is a living organism from the time of conception (Sanh. 91b). In contrast to Aristotle, who regarded the seed as a mosaic of individual creative factors corresponding to each of the parts of the human body and assumed that each limb is derived from the parallel limb of the father, the talmudic scholars regarded the seed as one single summary of all the creative forces of the organism and did not acknowledge the individual influence of one limb on the embryo. "The seed is mixed, otherwise blind would beget blind and one-limbed a one-limbed" (Hul. 69a). The Talmud also accepts the equal share of the male and female in forming the organism.

Pathology and Etiology
In examining the ritual fitness of animals and the cleanliness and purity of members of the community, talmudic scholars had numerous opportunities of observing and diagnosing diseases. They described various pathological conditions of the lungs and knew the existence of pulmonary infections (Hul. 47b). Disturbances of the circulatory system were recognized by the paleness or flush of the body (Yev. 64b). The diagnosis of certain skin diseases was determined according to the form, temperature, and secretion of the wound and the color of the hair round it. The observation of such a wound could last up to three weeks (Neg. 10). Scholars were able to recognize maula of the cornea, keratitis, and detached retina (Bekh. 38a). R. Ishmael describes diphtheria as an epidemic disease which causes painful death through strangulation. The pathology of hemophilia as a lack of viscosity in the blood preventing coagulation is described, and the circumcision of an infant in a hemophiliac family was forbidden. It was also recognized that the female is the transmitter of this disease (Yev. 64a; Hul. 47b). A large number of lung, liver, kidney, and stomach diseases were described as being caused by worms (Hul. 48a; Shab. 109b; Git. 70a). Lack of fluids was thought to lead to digestive disturbances (Shab. 41a). It was recognized that fear accelerates the pulse and causes heartbeats (Sanh. 100b); that falling from a great height may cause fatal internal injury (Hul. 42a); that injury to the spinal cord causes paralysis (Hul. 51a); and that restraint of the gall causes jaundice. Fevers and colds were thought to be caused by negligence (BM 107b). According to R. Eleazar the gall (humor) and according to Mar Samuel the air (pneuma) could cause disease. It was generally accepted that blood is the chief cause of disease (BB 58b). Overeating, excessive drinking of intoxicants, and sexual excesses were also thought to cause disease. It was realized that animals and insects, in particular flies, are carriers and transmitters of infectious diseases (Ket. 77a), and that contaminated water may also cause illness (Av. Zar. 30a).

Remedies, Treatments, and Surgery
The medicines mentioned in the Talmud include powders, medicated drinks, juices, balsams, bandages, compresses, and incense. Meat and eggs were considered to be the most nourishing foods (Ber. 44b); fried food or food containing fat was regarded as difficult to digest (57b). The eating of vegetables throughout the year and the drinking of fresh water at every meal were recommended (ibid. 57b; 40a). Baths and mineral waters were regarded as general strengthening tonics and as therapeutics for certain skin diseases (Shab. 40a; 109a; Ket. 77b). Herbs were used for constipation and purges were recommended in serious cases, except for pregnant women (Pes. 42b). The use of opium as an analgetic and hypnotic drug was known, and warning was given against overdosing (11, Av. Zar. 2:2, 40d). Anything useful for healing purposes was permitted at any time, even on the Sabbath (Hul. 77b). Surgeons operated in special halls – battei shayish (see above). “Sleeping drugs” – sammei de-shinta – were used as anesthetics. From descriptions of operations we learn of trepannations, amputations, and removal of the spleen (cf. Sanh. 21b; Hul. 57a; Git. 56a). A cesarean was also performed, but it is not clear whether
the operation was done on a living or on an already dead body. In general, the life of the mother had priority and therefore the killing of a fetus during a difficult birth was allowed (Tosef., Yev. 9:4). Wound edges were cut in order to ensure complete and clean healing (Hul. 54a). Surgeons wore special operation aprons (Kelim 26:5).

Hygiene and Prophylaxis
The main contribution of talmudic medicine lies not so much in the treatment of illness but rather, as in the Bible, in the prevention of disease and the care of community health. The hygienic measures advocated were of a practical as well as of a religious, ethical nature. A principle which recurs a number of times is that “bodily cleanliness leads to spiritual cleanliness” (Av. Zar. 20b; Tj, Shab. 13, 3b). Hygienic regulations applied among other things to town planning, climatic conditions, social community life, family life, and care of the body. Mention is made of a disinfectant composed of seven ingredients used for cleansing infected clothing (Zev. 95a). A town was required to have a physician and a bathhouse. Clothing had to be changed before eating. Mar Samuel declared that diseases may be carried by caravans from land to land (Ta’an. 21b). Members of a family with a sick person among them were to be avoided. The digging of wells in the neighborhood of cemeteries or refuse dumps was forbidden (Tosef., B.B 1:10). It was forbidden to drink uncovered water for fear of snake venom (Av. Zar. 30a). Food had to be fresh and served in clean dishes. Kissing on the mouth was discouraged, and kissing only on the back of the hand was recommended in order to prevent contagion. During epidemics, the population was advised to avoid crowding in narrow alleyways because of the danger of contagion in the air. For body care, the Talmud recommends physical exercises, massage, sunlight, employment, and above all cleanliness. Mar Samuel states: “The washing of hands and feet in the morning is more effective than any remedy in the world” (Shab. 108b). Excesses of any kind were regarded as harmful. The Talmud also concerned itself with the health of future generations and forbade marriage to epileptics or the mentally retarded (Yev. 64b; 112b). Surprisingly enough, talmudic pathology had very little influence on medieval medicine, not even on such outstanding physicians as Maimonides and Isaac *Israeli, who were certainly well versed in the Talmud. The medical authority of Galen was so preeminent that all other medical theories and practice were regarded as banalities or even heresies. Scholars warned against the unselective use of talmudic remedies because they are not equally effective in all countries and at all times. Nonetheless, the hygienic laws and regulations of the Talmud, as well as many of its anatomical and pathological findings, appear in the light of modern knowledge to have enduring validity.

THE MIDDLE PERIOD
The medieval period of Jewish history does not coincide exactly with the common historical definition of the Middle Ages in Western civilization, but may be said to extend from the second-third centuries c.e. until the 19th century when, in most Western countries, Jews were granted full emancipation.

The large variety of climates, environments, and customs to which the Jewish people were exposed during their migrations in exile naturally had a profound influence on the development of their medical thought and knowledge. Thus, for example, there is a description of diabetes mellitus in the writings of Maimonides. According to him, this was a disease quite common in the warm Mediterranean countries with which he was acquainted but practically unknown in Northern Europe. Talmudic scholars give a precise description of ratan (“filariasis”) and its treatment – a malady unknown in Europe. Similarly, the prevalence of eye diseases in the Orient greatly encouraged the development of ophthalmology and, when Jewish eye doctors migrated to Europe, they quickly acquired an excellent reputation among their Christian colleagues.

However, the merit of Jewish doctors of that period lay not only in their individual achievements as physicians, but in their work as translators and transmitters of Greek medicine to the Arabs and later on of Arab medicine to Europe. Jewish scholars, and among them physicians, had command of the three most important scholastic languages of the time – Latin, Arabic, and Hebrew – and, in some cases, Greek. This enabled them to translate most of the Arab and Greek medical works into Hebrew and Latin or vice versa. Knowledge of Hebrew was considered extremely important in the study of medicine. The English scholar Roger *Bacon (c. 1220–c. 1292) declared that Christian physicians were ignorant in comparison with their Jewish colleagues because they lacked knowledge of the Hebrew and Arabic in which most of the medical works were written. Vesalius, the great 16th-century anatomist, made a point of learning Hebrew to facilitate his studies, and gives Hebrew terms together with their Greek equivalents in his work Fabrica (see also *Fridgeis, Lazaro De). Mosellanus, in his rectorial address at the University of Leipzig in 1518, urged Christian medical students to learn Hebrew so that they might study the medical lore “hidden in the libraries of the Jews.” The close religious and family ties linking the various Jewish communities also helped to spread medical knowledge and facilitate rapid communication. As merchants and travelers the Jews met the best minds of their period and became acquainted with drugs, plants, and remedies from many parts of the world.

Nevertheless, although Jewish physicians were frequently held in great esteem by their non-Jewish colleagues as well as by kings and bishops, they suffered from persecution and restrictions, especially in the Christian world. From the fourth century c.e. onward there were innumerable regulations, papal bulls, and royal ordinances forbidding Jewish physicians to practice among non-Jews, to hold official positions and, later on, to study at universities. The fact that, despite these threats and restrictions, Jewish physicians continued in their profession and even held high positions at the courts of the very authorities who preached against them, attests to the es-
teem with which they were regarded for their medical skill. In this respect the Muslims were much more tolerant: although persecutions of Jews erupted from time to time in Muslim territories, physicians were not singled out, and consulting them was not forbidden.

The large number of Jewish physicians during these centuries may also be explained by the fact that Jews still regarded the medical profession as a spiritual vocation compatible with the career of a rabbi. Many scholars took up the medical profession as an honorable way of earning a living. This was made comparatively easy because the curriculum of talmudic schools often included the philosophies and sciences of ancient and contemporary times. Very often, therefore, medieval Jewish physicians were simultaneously rabbis, scholars, scientists, translators, grammarians, or poets, and as men of wide general knowledge they frequently attained high official positions in the countries in which they lived.

**The Byzantine Era**

While Greek science and culture declined in the Byzantine Empire and the Jews living there suffered under oppression, Jewish, as well as Nestorian and Jacobite, physicians and scholars sought to save what they could of Hellenistic science. The Babylonian talmudic centers of Sura and Pumbedita flourished at this period. Although the teaching languages of the period were Hebrew, Syrio-Aramaic, and Persian, it was Greek medicine which was taught, strongly influenced by Hebrew, Babylonian, Persian, and Indian traditions. This becomes apparent from the medical work left by Asaph b. Berechiah, called *Asaph ha-Rofe or Asaph Judaeus, who lived about the sixth century C.E. somewhere in the Middle East. Together with Johanan b. Zavda, Judah ha-Yarhoni, and other Jewish scholars, he founded a medical school. His work, the oldest known medical book written in Hebrew, encompasses all the then-known wisdom of Greek, Babylonian, Egyptian, and Persian medicine, as well as something of Indian medicine. His medical technique is based on old Hebrew traditions. No Arab influence is apparent, which points to the fact that the book was composed before the seventh century. Most of the remedies mentioned were known in the Middle East generally. The book includes chapters on anatomy, embryology, physiology, hygiene, fever and pulse lore, urology, and a rich antidotarium. The oldest known Hebrew translation of the *Aphorisms* of Hippocrates, as well as chapters of Dioscorides and Galen, are also to be found in it. The book contains a “physician's oath,” modeled on Hippocrates but far surpassing it in ethical content. The book of Asaph is not only significant to modern historians: it had considerable influence on medical history, particularly as far as Hebrew medical terms are concerned.

**The Arab Period in the East**

Following the Arab conquest of the Middle East and Spain, Jewish communities and centers of learning started to flourish at Faiyum in Egypt, Kairouan in Tunisia, and Cordova in Spain. Studies often included ethics, philosophy, sciences, and medicine. Students acquired experience in medicine by assisting practicing physicians. About a hundred years after the Arab conquest of the Middle East, the name of the Jewish physician Māsarjuwayh of Basra is mentioned as the first of a long list of men who translated a great number of Greek and Syrian works into Arabic. Unfortunately all his works have been lost, and he only appears as a frequent reference. Rabbān al-Tabari (Sahl), a Jew converted to Islam who lived in Persia at the beginning of the ninth century, was a noted physician, mathematician, and astronomer. He was the first to translate *Ptolemy's Almagest* into Arabic. His son Ali al-Tabari Abu al-Hasan, also a convert, served as court physician to caliphs from 833 to 861, and was renowned as an ophthalmologist. His *Paradise of Wisdom* dealt with medicine, embryology, astronomy, and zoology and was one of the first original Arabic medical textbooks. He is best known as the teacher of the Arab physician Rhazes. One of the most outstanding medical personalities of the period was Isaac Judaeus (Isaac Israel). He is believed to have been the first medical author in Arabic whose works were brought to Europe, and his books on fever, diet, uroscopy, and the ethical conduct of physicians were regarded as classics for several hundred years. His outstanding pupils were Abu al-Jazzār (a non-Jew) and *Dunash b. Tamim. It was said of him that he “lived a hundred years, was unmarried, shunned riches, and wrote important books more precious than silver or gold” (Saʿid b. Ahmad, tenth-century Arab scholar). Israelī’s books were first translated into Latin by the monk Constantinus Africanus (1020–1087) and were all printed in Lyons in 1515.

Jewish physicians also flourished in Europe during this period. Among them was Zedekias (d. 880), the first registered Jewish doctor in Franco-Germany. He was personal physician to Louis the Pious and to his son Charles the Bald, and was known as the “wonderful physician” (Muenz).

**The School of Salerno**

From the ninth to the 12th century a medical study center existed in Salerno in southern Italy uninfluenced, either deliberately or by accident, by the Arab culture which penetrated into Southern Europe. The beginnings of the School of Salerno are associated with the name of the distinguished Jewish physician Shabbetai *Donnolo, of Oria, Calabria. His most famous medical work, Sefer ha-Yakar, lists 120 different remedies and their composition. Greek medicine is often referred to and Hebrew terms such as those used by Asaph ha-Rofe are frequently found in it. There is, however, no evidence that the author knew or accepted Arab medical wisdom, even though by that time many Arabic medical works had reached southern Italy by way of the Saracens of Sicily. It is interesting to note that Sefer ha-Yakar was also the first Hebrew prose written on European soil. References to other Jewish physicians practicing in Salerno and to Hebrew as a language of instruction are to be found in various records of the time. Benjamin of Tudela (12th century) refers to the physician Elijah whom he met when visiting Salerno. On the whole, however, the Jews
who transmitted Arab philosophy and medical science had little influence on the School of Salerno, which endeavored to uphold the Greek medical tradition.

The Arab-Spanish Period
The Jews played an influential part in the cultural history of the period, starting with the Arab conquest of Spain in the eighth century and ending with their final expulsion from Granada in the 15th century. As statesmen, physicians, mathematicians, philosophers, and poets they attained high positions at the courts of both Moorish and Christian princes. At the Caliphate of Cordova (tenth century) was *Hasdai ibn Shaprut who, together with a monk, translated Dioscorides from Greek into Arabic. About a century later, Ḥaḥam b. al-Zafran served as physician to the caliph of Egypt. Zafran was a renowned author and bibliophile and left a library of over 20,000 books. Another famous Jewish physician of the 11th century was Salama ibn Ramhamun who lived in Cairo and whose works include a treatise on the causes of scant rainfall in Egypt and another discussing why Egyptian women grow stout early in life. *Judah Halevi (end of 11th century), the famous Spanish poet-physician, exerted great influence on his contemporaries and on later generations. Jonah ibn Bikhlarish (11th century) of Andalusia, court physician to the sultan of Saragossa, was one of the first Jewish scholars to learn Latin. In about 1080 he compiled a dictionary of drugs in Syriac, Persian, Greek, Latin, and Spanish which is believed to be the earliest work of its kind. Sheshet b. Isaac *Benveniste, who served as court physician to the king of Barcelona, was the author of a famous gynecological treatise in Arabic. The most important Jewish physician-philosopher of the period was Maimonides. Born in Cordova, he fled with his family to North Africa and soon attained a worldwide reputation as a religious legislator, philosopher, and physician. In 1170 he became personal physician to the family of Sultan Saladin of Egypt and continued to serve them until his death. Maimonides wrote ten medical works, of which the most important ones were Pirkei Moshe ("Aphorisms of Moshe") and Regimen Sanitatis. Maimonides' whole concept of medicine is based on the conviction that a healthy body is the prerequisite for a healthy soul. This enables a man to develop his intellectual and moral capabilities and leads him toward the knowledge of God and thus to a more ethical life. He regards healing as the art of repairing both the defects of the body and the turmoil of the mind. A physician must therefore have not only the technical knowledge of his profession, but also the intuition and skill to understand the patient's personality and environment. Maimonides divides medicine into three main fields: preventive medicine – the care of the healthy; the curing of the sick; and the care and treatment of the convalescent, including the aged. Though leaning heavily on the medical teachings of the ancient Greeks, Maimonides warns against blind belief in so-called authorities and upholds the value of clear thought and experiments. His medical observations, diagnoses, and methods of healing mentioned in his works on asthma, poisons, his medical re-

 sponsa, and commentaries on the Aphorisms of Hippocrates contain innovations in their day and many of them are still valid. Maimonides wrote his medical books in Arabic: most of them were soon translated into Hebrew and Latin.

Southern France
At the end of the 12th and the beginning of the 13th century, Jewish centers of learning were established in southern France – in Avignon, Lunel, Montpellier, Béziers, and Carcassonne. Conditions for Jews in these regions were generally somewhat better than those in Spain, although they did not escape restrictions, expulsion, and persecution. For a period of two to three hundred years, papal bulls and Synod decrees alternated in forbidding and then allowing Jewish physicians to practice their profession. The principal service rendered by Jewish scholars of southern France, many of whom had emigrated from Spain and Portugal, was the translation of Arabic works into Hebrew and Latin. Since some of the original Arabic works had been lost, it was only through their Hebrew translations that they were preserved. The important early 11th-century medical work, the Canon of *Avicenna, was translated into Latin and Hebrew a number of times. The work of translation was accompanied by great scholarly activity. The medical school of Montpellier owed its foundation largely to Jewish scholars, and various records mention “private” schools in which Hebrew law, science, and medicine were taught for a stipulated fee. During the 15th and 16th centuries, when certain universities were closed to Jews, Hebrew translations of Arabic and Greek medical works were made specifically for Jewish medical students.

The most notable of the long list of distinguished translators was the *Tibbon family (Judah b. Saul, Samuel, Moses), who during the 12th and 13th centuries translated most of the well-known scientific and philosophic works, including those of Maimonides, from Arabic into Hebrew. Other eminent translators of the period were Jacob b. Makhir (Prophatius Judaeus), a member of the Tibbon family; Zerahiah ibn Shealtiel Ḥen; and Jacob ha-Katan, translator into Hebrew of Nicolai’s antidotarium and of Averroes’ treatise on diarrhoea. Of special interest is Abraham Shem Tov of Tortosa, who practiced in Marseilles toward the end of the 13th century. His works, especially his translation of Abu al-Qāsim al-Zahrāwī’s al-Tāzīrīf, are of particular importance because he introduced a new Hebrew terminology based mainly on terms used in the Talmud. In other works he deals with the necessity of studying basic sciences with apprenticeships in hospitals, and with the behavior required of the physician when visiting patients, especially poor ones. Another distinguished translator-physician was Moses Farrachi b. Salem (Ferragut) of the 13th century. He studied medicine at Salerno, and at the request of the king of Naples translated Rhazes’ Continens and other Arabic medical works into Latin.

Jewish influence was so strong that in Montpellier, portraits of Jews were included in the marble plaques commemorating the early masters of the university. Apparently there
was also a Jewish school of medicine in Lunel, which did not, however, attain the eminence of the University of Montpel-
lier. A large part of the information on the early history of
the latter and its relations with Jewish scholars is to be found
in the history written by one of its graduates, Jean *Astruc
(1684–1766), a man of Spanish-Jewish descent, later profes-
sor of medicine there and subsequently physician to Louis xv.
The Saporta family, also of Marrano descent, has a prominent
place in the history of Montpellier during the 16th century.
Louis I Saporta came from Lerida, was appointed city phy-
sician in Marseilles in 1490, and from 1506 to 1539 served as
professor at Montpellier University. His son Louis (II) studied
medicine there, and his grandson Antoine became success-
ively royal professor, dean, and chancellor of the university
(1560). His great-grandson Jean became professor in 1577 and
vice chancellor in 1603. The family then immigrated to the
French colonies of America and the name does not appear in
the later history of Montpellier. The Sanchez family, already
well-known in Portugal and Spain, also became prominent in
medicine in southern France. The most distinguished member
was Francisco *Sanchez (1562–1632), who was appointed pro-
fessor of medicine and philosophy at Montpellier and later at
Toulouse, and published many medical treatises. Jean Baptiste
Silva (1682–1742), a native of Bordeaux who graduated in med-
icine from Montpellier, became physician to the grand duke of
Bavaria, Prince Luis Henry of Conde, and Voltaire.

Benvenutus Grapheus, from Jerusalem, one of the most
famous eye doctors of the Middle Ages, lived in the 12th cen-
tury. He taught and practiced in Southern Europe and prob-
ably also in Salerno. His observations of and recommended
cures for eye diseases prevailing in Southern Europe and other
Mediterranean countries are of extraordinary accuracy and his
works, which were translated into many European languages,
were the most popular textbooks on ophthalmology of the
period. There were also Jewish women physicians practicing
at this time. Among them was Sarah La Migresse, who lived
and practiced in Paris toward the end of the 13th century. In
Marseilles a record has been found of an agreement signed
in 1326 between Sara de Saint Gilles, widow of Abraham, and
Salvet de Bourgneuf, whereby the former undertook to teach
the latter “Artem medicine et physice,” and to clothe and care
for him for a period of seven months. In return, Salvet agreed
to turn over to his teacher all his fees as physician during that
period. Sarah of Wuerzburg received a license from Arch-
bishop Johann II in 1419 and developed a lucrative medical
practice. Rebekah Zerlin of Frankfurt (c. 1430) became fa-
mous as an oculist.

Christian Spain and Portugal
During the major part of the 13th and 14th centuries Jewish
physicians in Catholic Spain enjoyed the protection and sup-
port of the reigning monarchs though toward the end of that
period the Inquisition became more active. The list of promi-
inent physicians of that period is a long one and only a few can
be mentioned here. One of the most important was al-Fakhār
(d. 1235), who received the title of nasi (“prince”) at the court
of Ferdinand I in Toledo. Another, Nathan b. Joel *Fal-
quera (second half of 13th century), wrote a medical book in
Hebrew on the theory and practice of medicine, therapeutics,
herbs and drugs, and hygiene. He used medical and botani-
cal terms found in the Talmud. Abraham b. David Caslari
of Narbonne and Béziers was the author of Aleh Refu’ah (“The
Leaf of Healing,” 1326), a treatise on fevers, divided into five
books, to be used as a vademecum on these matters, and of a
treatise on pestilential and other fevers, written in 1349 when
the Black Death depressed the population of Provence, Cata-
lonia, and Aragon. In 1360, Meir b. Isaac *Aldabi, a native of
Toledo who went to Jerusalem in the middle of the 14th
century, completed his comprehensive Shevilei Emanu’ah, a collec-
tion of philosophic, mystic, and talmudic teachings including
chapters on human embryology, anatomy, physiology, pathol-
ogy, and rules of health.

After the Expulsion. At the end of the 15th century the
Jews were expelled from Spain and Portugal. Even before that
many eminent physicians had immigrated to North Africa,
Turkey, Greece, Italy, and Holland. Many were forced con-
verts and some continued to practice in Spain and Portugal
until the 18th century, despite their precarious position in those
countries, where they were under constant threat of persecu-
tion. It is a historical fact that the Marranos and their descend-
ants were leaders and pioneers in medicine in Europe and
Asia for several centuries, from the Renaissance until modern
times. Many of them distinguished themselves particularly in
medical literature. The 16th century was a time of immense ex-
ploration, discovery, and progress. During this period – the
beginning of the medical renaissance – many distinguished
Jewish physicians, fleeing the Iberian Peninsula, won a world-
wide reputation in other lands. Among them was *Amatus
Lusitanus, who studied and practiced in Salamanca, Lisbon,
Antwerp, Italy, and Greece and whose life was a saga of ad-
venturous flights from one country to another. His principal
works were Centuria, the description of 700 cases of disease,
and a translation of and commentary on Dioscorides. He is
also famous for his unrelenting battle against superstition and
medical quackery.

Some Distinguished Families. Abraham b. Samuel
*Zacuto, called Diego Roderigo, was born in the Spanish
city of Salamanca in 1452 and immigrated to Portugal and Tunis,
where he became famous as a physician and astronomer. His
great grandson, *Zacutus Lusitanus, born in Lisbon in 1575,
became a physician in Salamanca and later fled to Amster-
dam, where he became one of the foremost critics of his time.
He wrote a history of medicine in 12 volumes, De medicorum
Principum, and was also known for his code of ethics for phy-
sicians, Introitus medi ci ad praxim.

Dionysus Brudus (1470–1540), a physician at the Por-
tuguese court who later lived in Antwerp, wrote important
works on Galenism and on phlebotomy. His son Manuel Bru-
Physicians were also among the East India pioneers. Foremost among them was Garcia de *Orta, born in Portugal. In 1534 he went to India and there studied and collected Oriental plants and drugs. His *Colloquios dos simples Drogas e cosas medicinas de India, which appeared in 1563 in the form of dialogues, is not only the first but also the most important contribution on this subject to European medicine of that time. Twelve years after his death his body was exhumed and burnt by the Inquisition as a suspected Jew. To this same group belongs Cristoval d’*Acosta (1515–1580), a Marrano physician and botanist born in Mozambique, who lived and traveled in India and in the Middle East. He completed and enlarged the work of de Orta.

Italy
Numerous Italian Jewish physicians were also rabbis and leaders of their communities, especially in Rome, Ferrara, Mantua, and Genoa. The Italian universities, notably those of Padua and Perugia, were among the few that allowed Jews to enter the medical faculties at a time when most other European universities were closed to them. The Jewish communities of Italy were also enriched by the influx of Jewish and Marrano scholars and physicians fleeing the persecution of the Inquisition in other countries. At various periods Jews acted as personal physicians to popes, cardinals, bishops, and dukes. Thus Pope Nicholas IV (1287–92) had at his court the physician Isaac b. Mordecai, better known as Maestro Gajota. In 1592 Boniface IX made Angelo, son of Manuele the Jew, his physician and familiar. Immanuel b. Solomon, known as *Immanuel of Rome, was a practicing physician of note, who wrote on various physical and psychic ailments. *Hillel b. Samuel of Verona, who practiced in Ferrara, was a physician and translator of distinction. Another famous physician and translator was *Kalonymus b. Kalonymus, a native of Arles in southern France who later moved to Rome. He translated some of Galen’s writings from Arabic into Hebrew and became famous for his accuracy and literary style. Special privileges and tax exemptions usually accompanied the appointment of court physicians. However, the periods of leniency to Jews were usually followed by periods of restriction and persecution. It has been suggested that the popularity of Jewish physicians in Italy in spite of the innumerable restrictions, the bitter attacks, and the calumnies was due to the superstitious belief of Christians in the “magic” arts of the Jews. They also admired Jewish doctors for their unselfish devotion to their calling, and it is not irrelevant that there was a scarcity of Christian physicians, especially during times of epidemic.

The 15th and 16th Centuries. A number of distinguished Italian Jews appeared in the field of medicine during the 15th and 16th centuries. Saladino Ferro d’Ascoli (15th–16th century) was acknowledged as the leading pharmacist of his time, and his work on pharmacology was the basic textbook for all pharmacists until the 18th century. Bonet de *Lattes (d. 1515), a native of Provence, became physician to Popes Alexander vi and Leo x. He also served as judge of the highest Italian court in medicine.

The family of de *Castro produced many distinguished physicians. The most famous was Roderigo de Castro (c. 1550–1627), author of a gynecological work, *Universa Millelibrum Medicina, and physician to the king of Denmark and various German dukes and princes. His son Benedict de Castro (b. 1597) started practicing in Hamburg and later became physician to the queen of Sweden. He was the author of *Apologia, a medico-historical work which described the achievements of Jewish doctors and defended them against antisemitic charges. Orobio de Castro fled the Inquisition and settled in Amsterdam, where he became a famous physician and leader of the Jewish community. Jacob de Castro Sarmento (1692–1762), born in Portugal, settled in England and was admitted as a fellow of the Royal Society in 1730. His work *Agua de Inglaterra reveals a profound knowledge of the therapeutic properties of quinine. The 18th-century Jacob Rodrigues *Pereira was a pioneer in the education of deaf-mutes. Born in Spain, of Marrano parents, he escaped the Inquisition, settled in Bordeaux, and embraced Judaism. At the age of 19 he started his campaign for improving the status of the deaf-mute, and continued in his chosen task for 46 years, showing great ability in teaching speech to the congenital deaf-mute. He invented a sign language for the deaf and dumb. The fate of Antonio Ribeira Sanchez illustrates how far-reaching was the influence of Jewish physicians at that period. A Portuguese Marrano, he fled from the Inquisition to Holland at the beginning of the 18th century and became the pupil of the famous Dutch physician, Boerhaven. In 1740 he went to Russia as personal physician to the czarinas Elizabeth and Catherine II. However, when his Jewish origin became known he was threatened with death and with great difficulty escaped to Paris, where he became an eminent physician and introduced sublimation into the therapy of syphilis.

A large number of Jewish physicians also settled in Turkey, where private citizens as well as sultans, viziers, and pashas valued their skill and medical knowledge and their high standard of ethics. In the 15th century Joseph *Hamon, a Granada physician, went at an advanced age to Constantinople, where he became court physician. For almost a century some member of the Hamon family held the position of court physician and exercised great public influence. Marrano physicians were also among the East India pioneers.
of appeal and rabbit to the Jewish community of Rome. Philo-
theus Eliajus Montalto (d. 1616) fled to Italy from the Portugu-
ese Inquisition. In 1606 he became physician to the Grand
Duke Ferdinand of Florence and in 1611 personal physician
to Queen Marie de Medici of France. By order of the queen
he was buried in a Jewish cemetery in Amsterdam. His work
Archipathologia, dealing with diseases of the nervous system
and mental disturbances, was widely used in his time and of-
ten referred to by later medical writers. Roderigo de Fonseca
in the 17th century earned his reputation by his clear diagno-
ses and descriptions of internal diseases, fevers, surgery, and
pharmacology. Benjamin *Mussafia distinguished himself as
physician, philologist, scholar, and rabbi. He served as per-
sonal physician to the Danish king Christian IV. One of the
most outstanding personalities of the time was Rabbi Jacob
*Zahalon, born in Rome and later physician in Ferrara. In his
book Ozar ha-Hayyim he described contemporary hygienic
measures as well as the bubonic plague in Rome in 1656. He
used numerous new Hebrew medical terms and redefined the
moral obligations of the Jewish physician to his profession.
Joseph Solomon *Delmedigo studied medicine in Padua and
was a pupil of Galileo. After many years of study and travel
he settled in Poland and became personal physician to Prince
Radziwill. He is famous as a rabbi, physician, philosopher, and
mathematician. During the 17th and 18th centuries the family
of Conegliano became prominent as physicians and medical
teachers in Venice. David de Pomis (1525–1593) of Spoleto
became physician to Pope Pius IV. Apart from various medi-
cal treatises, he wrote the famous De Medico Hebreo Enar-
ratio Apologica, a scholarly defense of the Jewish physician.
The Jewish community in Italy, however, declined during the
second half of the 17th and the 18th centuries. Only with the
French Revolution and the conquest of Italy by Napoleon did
the Jews of Italy come into their own again.

The Northern Countries
In the northern countries – Germany, Poland, Russia – there
were Jewish physicians of note only from the middle of the
17th century onward, many of them refugees from the coun-
tries of the Inquisition. However, as early as the 11th century
a medical book had been written in Hebrew by R. Saadiah
of Worms. Gradually, the universities of the Polish states
opened their doors to Jews. Around the middle of the 17th cen-
tury the grand duke of Brandenburg permitted Jews to enter
the University of Frankfurt on the Oder. One of the first to
study there was Tobias b. Moses *Cohn of Metz. However, he
was unable to obtain his degree and therefore went to Padua
to receive his M.D. He practiced in Poland and later became
physician to five successive sultans in Constantinople. His Ma-
âaseh Toviyyah is almost an encyclopedia and includes med-
icine, sciences, philosophy, and part of a dictionary. From
the beginning of the 18th century the number of practicing Jew-
ish physicians in Germany, Czechoslovakia, England, and
Poland increased. Jewish physicians of that period include
Marcus Eliezer *Bloch, a famous general practitioner in Ber-
lin during the mid-18th century; Gumperz (Georg) Levison,
who distinguished himself as a practitioner, medical author,
and organizer in England and in Sweden during the second
half of the 18th century; Elias Henschel, a pioneer in modern
obstetrics; and Marcus *Herz, an outstanding philosopher,
teacher, and physician.

[Suesmann Munther]

THE MODERN ERA

19th Century
When Joseph II of Austria proclaimed the Act of Tolerance
in 1782 and when, shortly thereafter, the French Revolution
brought in its wake emancipation to Jews throughout Western
Europe, the gates of European medical schools were thrown
open to Jewish students. The importance of the contribu-
tion made by Jewish doctors to subsequent medical progress
is enormous. The quality and quantity of this contribution is
reflected in rosters of Nobel laureates and winners of other
awards, dictionaries of eponymic syndromes and diseases,
and lists of medical authors and investigators. Spanning
nearly two centuries and extending over many lands, Jewish
participation in modern medicine defies rigid categoriza-
tion within frameworks of countries and centuries. Frequent
demographic changes have occurred as a result of global
events which did not always coincide with the "turn" of a
century. In fact, a future historian might choose the 1930s as
the watershed decade, during which the mainstream of Jew-
ish medical activity became diverted from Europe to Amer-
ica, coinciding with the rise of American medicine vis-à-vis
that of Europe.

The geographic distribution of Jews practicing medicine
in the 19th century reflected the incongruity between the size
of Jewish communities and their number of medical prac-
titioners and scientists. Because of restrictions practiced by
Russian medical schools, the youth of the world’s largest Jew-
ish community went abroad to pursue their medical studies.
Those who returned had to pass special examinations in or-
der to obtain a license. Not until 1861 were they admitted to
the army and civil service, and only in 1879 were they granted
permission to live beyond the *Pale of Settlement. Even when
Jewish physicians successfully overcame the main restrictions
and hardships, they were rarely permitted to participate fully
in university-centered medical activities.

On the other hand, Jewish doctors were extensively in-
volved in the academic-scientific life of Central and Western
Europe. In Austria and Germany, this involvement did not,
however, come about suddenly. Although the gates of the un-
iversities were open for admission, the inner doors to academic
recognition remained partially closed during the first half of
the century. At best, a Jew could hope to become a privatdo-
cent or a "titular" professor. And even after the struggle for
academic recognition had been won, Jews were not welcome
in "establishment"-controlled specialties, such as surgery. As
a result they tended to cultivate fields that did not attract their
non-Jewish colleagues.
An outstanding example of this trend is dermatology-venereology. When Ferdinand von Hebra took over the Kranz-Klinik in Vienna, he was able to recruit only Jewish assistants, some of whom – Moritz *Kaposi, Isidor Neumann (1832–1906), and Heinrich Auspitz (1835–1886) – became world famous. In Germany, where dermatology was often referred to disdainfully as "Judenhaut," Paul *Unna, Oskar *Lassar, and Josef *Jadassohn established reputations as pathfinders in their specialty. In Switzerland Bruno Bloch (1878–1933) made Zurich an international teaching center. The predilection for neglected fields may also account for Jewish preeminence in biochemistry, immunology, *psychiatry, and in hematology, histology, and microscopic pathology – sciences which were collectively referred to at the time as "microscopy." The microscope attracted Jewish physicians, many of whom combined the study of microscopy with the practice and teaching of clinical medicine. Outstanding among these men were Ludwig *Traube, a great teacher and pioneer of experimental pathology, anatomy, and neurohistology; Robert *Remak, a pathfinder in embryology, neurohistology, and electro-therapy; Moritz *Romberg, the founder of neuropathology; and the surgeon Benedict *Still, whose discovery of nerve nuclei was a turning point in basic neurology. These investigators laid the foundation of modern neurology, which numbered among its great names Leopold *Auerbach, Ludwig *Edinger, and Herman *Oppenheim – discoverers of many neurologic disorders now bearing their names.

Microscopy was also pursued by investigators who were exclusively devoted to basic science. To this category belong the histologist-anatomist Jacob *Henle, who anticipated the germ theory of infection; Gabriel *Valentin, who enriched every branch of basic science; the histologist-pathologist Julius *Cohnheim, who proved that pus cells are derived from the blood; the physiologists Hugo *Kronecker, Rudolf *Heidenhain, Nathan Zuntz, and Hermann *Munk, who were trailblazers in this field; and Carl *Weigert, whose novel concepts and staining techniques advanced many sciences, particularly bacteriology. Jewish contributions to bacteriology date back to the botanist Ferdinand Cohn (1828–1898), who established the vegetable nature of bacteria (1853). These contributions increased during the latter part of the century when bacteriology and the allied science of immunology became integral parts of medicine. Jews became conspicuous in the discovery of bacteria and the development of immunologic methods for diagnosing and preventing bacterial infection. Prominent in this field were Ferdinand *Widal, who devised a test for typhoid fever and for its prevention; Mordecai Waldemar *Haffkine, who prepared vaccines against cholera and plague; August von *Wasserman, who researched anti-toxins and antisera; and Nobel laureate Paul *Ehrlich, the father of hematology, chemotherapy, and theoretical immunology.

At the same time, clinical medicine was also receiving Jewish contributions. Among the outstanding internists were Heinrich von *Bamberger, for his contributions to cardiology; Hermann *Senator, for his work on the kidney; and Ottomar Rosenbach (1851–1907), for his researches in functional disease and psychotherapy. Outstanding pediatricians were Edward Henoch (1820–1910) who described a bleeding disease named after him; Adolf *Baginsky who investigated nutrition and infectious diseases; and Max Kassowitz (1842–1913) who shed light on congenital syphilis and rickets. Jews were also prominent in otorhinolaryngology, a specialty founded by Adam *Politzer, and in ophthalmology, with the contributions extending from 1810, when George Gerson (1788–1844) investigated astigmatism, to the close of the century, when Karl *Koller began to use local anesthesia in the treatment of eye diseases. Obstetrics and gynecology owe much to Samuel *Kristeller, Wilhelm Freund (1833–1917), and Leopold *Landau for new concepts, observations, and operative techniques. X-ray therapy was founded in 1897 by Leopold Freund (1868–1944). Even surgery, a specialty not too accessible to Jews, numbered many notables. Anton Wolfier (1850–1917) performed the first gastrotomectomy in 1881, James Israel (1848–1926) pioneered urologic surgery, and Leopold Von Dittel (1815–1898) devised new surgical techniques and instruments. Jewish doctors also contributed to the history of medicine. Noted historians were August *Hirsch, Judah *Katzenelson, and Julius *Pagel.

It is apparent from some of the aforementioned names that Jewish contributions to medicine were not confined to German-speaking countries. In France, many Jewish doctors attained eminence. Julius Sichel (1802–1868) established the first eye clinic in Paris in 1830; Michel Levy (1809–1872) introduced new concepts in the field of public health; Georges Hayem (1841–1902) pioneered hematology; and Fernand Widal made a world impact with his work on the detection and prevention of typhoid fever. In Denmark the great anatomist Ludvig *Jacobson and the pioneer in occupational diseases, Adolph *Hannover, were active during the first half of the century; and the epidemiologists Carl *Salomonsen and "the father of pediatrics in Denmark," Harold Hirschprung (1830–1916), during the second. Holland was the home of the physiologist Van Deen (1804–1869); Italy of the anatomist-physiologist-psychiatrist, Cesare *Lombroso, whose views on criminology have now been discredited; and Poland, of the anatomist Ludwig *Hirsfeld, the neurologist Samuel Goldflam (1852–1930), and the ophthalmologist Ludwig *Zamenhof, the creator of Esperanto. England knighted its greatest laryngologist Sir Felix *Semon. Even restrictive Russia honored the distinguished ophthalmologist Max *Mandelstamm with the title "Privatdocent" and the physiologist, Elie de-*Cyon, with a professorship (1872).

In America, where the Jewish community was small and medical science was not yet advanced, Jewish contributions to medicine were modest, and as often related to organization, administration, and the foundation of hospitals as to scientific pursuits. The ophthalmic surgeon Isaac Hays (1796–1879) was editor of the influential American Journal of Medical Sciences (1827) and one of the founders of the American Medical Association. Jacob da Silva *Solis-Cohen, a pioneer in laryngology who performed the first laryngectomy for laryngeal cancer
(1867), was the acknowledged “father” of organized instruction in his specialty. Another “father” — that of American pediatrics — Abraham Jacobi was the founder of the American Pediatric Society and in his later years (1910), the president of the American Medical Association. Jewish doctors were also active in establishing and staffing Jewish hospitals that provided training for Jewish interns and residents. In time these hospitals became important research centers affiliated with medical schools that absorbed many Jewish students.

Challenges to Jewish Medical Scientists and Clinicians

Medicine has undergone profound changes since the start of the 20th century. Advances in medical science have gradually transformed clinical practice from a largely pragmatic skill based on anecdotal experience into a discipline underwritten by verified laboratory and clinical observations. The increasing pace of scientific discovery continues to offer therapeutic possibilities of unprecedented complexity and expense. Medical teaching has changed from apprenticeship to individual teachers with varying degrees of skill and knowledge to organized instruction in universities with courses and teachers with appropriate academic credentials. Before the 1950s patients were rarely given explanations for their illnesses and treatment. Patients now have ready access to medical knowledge and expect to be involved in decisions about their clinical management. They also have increasing expectations in terms of the standards of medical care. Change in attitude and technical advances have made ethics an integral part of clinical practice. In general, an overview of the Jewish contribution to medicine in modern times must consider advances in scientific knowledge, the application of this knowledge to clinical practice, medical education, the organization of medical practice, and the proper education and participation of patients.

Medicine in the Jewish world must take account of four special factors. Firstly, clinical decisions are often influenced by Jewish ethics that differ in varying degree from the constraints related to other forms of religious adherence. Second, antisemitism culminating in the Holocaust profoundly affected the lives of Jewish medical scientists and doctors. Thirdly, there is a strong incentive to apply research and clinical skills to diseases to which Jews are genetically predisposed (see *Hereditary Diseases). Finally, the establishment of the State of Israel created the need for sophisticated medical research, teaching, and services in a region of initially endemic infectious diseases in the face of massive immigration, wars, and continuing terrorism.

Contributions to Medical Science

Advances in clinical medicine have followed progress in the biomedical sciences and the development of novel technologies. Biomedical research in the last quarter of the 20th and the beginning of the 21st centuries is characterized by better understanding of the molecular and pathological processes, the deciphering of the human genome, and the elucidation of complex intra-cellular processes. These have led to the engineering of disease-specific and targeted therapies and the development of non-invasive technologies. Jewish researchers and clinicians have made significant contributions to these advances.

Jewish contributions to the advances in basic science that have transformed medical practice are considered in the entry *Life Sciences. Often the implications of these discoveries for medicine are not initially apparent. There are additional areas of scientific research that are from the outset more clearly relevant to medicine to which Jews have made important contributions. However in medical as in scientific research it has become increasingly difficult to single out specifically Jewish contributors to a global enterprise that is for the most part now carried out by large, interdisciplinary teams, often working in different institutes.

Infectious Diseases. At the beginning of the 20th century infections were the major causes of human morbidity and mortality. Increased understanding of immunity and natural resistance to infection lead to diagnostic and eventually therapeutic advances. August von *Wasserman introduced the first diagnostic test for syphilis (1906).

Bela *Schick devised a diagnostic test for detecting exposure to C. diphtheriae, the cause of diphtheria. Michael *Heidelberger’s work on antibody structure and function laid the basis for protection against and treatment of infections with preformed antibody (passive immunization). Developments in vaccine production (active immunization) made it possible for Jonas *Salk and Albert *Sabin to produce vaccines with the potential ability to eliminate poliomyelitis.

Advances in drug production also reduced the threat of infection. *Ehrlich’s dream of a “magic bullet,” which would selectively destroy bacteria as salvarsan does spirochetes, has been partially realized by the discovery of sulfonamides and antibiotics. In 1940 Sir Ernst Boris *Chain isolated penicillin, the first naturally occurring antibiotic to be discovered. Streptomycin was isolated in 1944 and neomycin in 1948 by Selman *Waksman of Rutgers University. Harry Eagle (1905–1992) and Maxwell Finland (1902–1987) made important contributions to progress in antibiotic therapy by devising accurate methods for measuring the potency, anti-bacterial specificity, and safety of antibiotics. Unfortunately, microbial resistance to antibiotics threatens to reverse the relative security achieved in the golden age of drug treatment. Stanley Farber discovered one important mechanism in the development of antibiotic resistance, namely the ability of gene fragments called plasmids to confer resistance on previously susceptible bacteria. Combatting infection also depends on the efforts of scientists who understand the biology and epidemiology of infection, as exemplified by the research of Baruch *Blumberg and Barry Bloom. Astute clinical observation is also part of the process of controlling infections, as illustrated by Saul Krugman’s elucidation of the many causes of “infectious hepatitis.”

Cell Biology and Cancer. The links between cell biology and cancer research are prime examples of the contributions of basic research to medicine. For example the formation of new
blood vessels (angiogenesis) is essential for tumor growth and metastasis. Judah *Folman's discoveries in this field point the way to new forms of treatment that may interdict this process. The application of basic genetics to the biology of malignant cells has illuminated many areas of cancer research where inherited or acquired mutations are fundamentally important. A pertinent example is the work of Bert Vogelstein (1949–) in understanding the molecular basis of colo-rectal cancer. Long-held hopes of manipulating patients' immune system to reject cancer have been greatly encouraged by the innovative work of George *Klein.

BLOOD DISORDERS. Advances in immunology have improved our understanding of many hematological diseases and have also influenced clinical practice. Gerald *Edelman's research on immunoglobulin structure clarified the nature of myeloma and other neoplastic diseases characterized by abnormal immunoglobulin production. The discovery and classification of blood groups by Karl *Landsteiner, and his associates Philip *Levine and Alexander Wiener (1907–1976), rationalized the hitherto haphazard and dangerous practice of blood transfusion. Their findings also revealed the nature of blood disorders resulting from immune attacks on blood group antigens, notably hemolytic disease of the newborn. Jewish investigators have contributed to the solution of other hematological problems. William *Damashek was responsible for the logical classification of many immune-mediated and neoplastic blood diseases and was also an innovator in treating leukemia with anti-proliferative drugs. Robert B. Epstein (1928–) collaborated with E.D. Thomas in the first successful bone marrow transplantation. Louis Klein *Diamond made major advances in classifying and characterizing many blood disorders of infancy and childhood. Ernest Jaffe (1925–) contributed to the understanding of hemoglobin synthesis. Ernest Beutler (1928–) elucidated many facets of iron metabolism in red cell formation and proposed a means of tracing the cellular origin of many bone marrow-derived diseases. Maxwell *Wintrobe developed hematology as a laboratory and clinical discipline.

IMMUNOLOGICAL DISEASES. Jewish scientists have made outstanding contributions to understanding the molecular basis and clinical manifestations of disordered immunity, a field that has assumed increasing importance in allergy, transplantation medicine, and auto-immunity. Alexander *Besredka of the Pasteur Institute in Paris was a pioneer in allergy research. Current understanding of the pharmacological basis of allergic disorders owed much to the findings of Baruj *Benacerraf. Ernest Witebsky (1901–1969) and Felix Milgrom (1919–) made important observations on immune mechanisms underlying auto-immune diseases. Robert Schwarz (1928–) introduced new experimental and therapeutic strategies based on the concept that the immune system in auto-immunity loses the ability to distinguish between self and non-self, a defect termed "loss of tolerance." Peter *Lachmann helped delineate the role of a disturbed complement system in these diseases. Fred *Rosen (1930–2005) was a world authority on the management of inherited immunodeficiency diseases in childhood. The availability of monoclonal antibodies arising from Cesar *Milstein's work has provided immense benefits for research and clinical practice in many fields.

NUTRITIONAL DISEASES. Casimir *Funk introduced the idea of vitamin (which he called "vitamines") deficiency to nutrition and medicine. He recognized that beriberi is caused by nutritional deficiency and he also isolated nicotinic acid, a member of the vitamin B complex. Joseph *Goldberger deduced that pellagra is a disease resulting from vitamin deficiency. In the 1920s Alfred Hess, working in parallel with Harry Steenbock, started the important field delineating the relationship between vitamin D deficiencies, rickets, and other bone disorders.

METABOLIC DISEASES. Progress in understanding metabolic diseases went through many transformations of approach and technique in the 20th century to which Jewish scientists and physicians made crucially important contributions. Mapping biochemical pathways in health and disease has depended on laboratory discoveries in experimental animals, the introduction of ethically acceptable methods of investigation in humans, improved techniques of laboratory analysis, and the adaptation of molecular genetics to this field.

The high prevalence rate of many metabolic diseases in Jewish populations makes this an area of special Jewish interest. Diabetes mellitus, now recognized as occurring in two main forms, is a compelling example. In 1899, Oskar Minkowski (1855–1931) demonstrated the association of diabetes with the pancreas, and in 1920 Moses Barron (1883–1961) described observations of the pancreas that suggested the experimental approach that led to Banting and Best's momentous discovery of insulin. Rachmiel Levine (1910–1998) showed that insulin promotes the transport of glucose from blood to cells, a process termed "the Levine effect." Progress in other fields was helped by observations by Jewish biochemists such as Seymour Reichlin and more fundamentally by the description of major metabolic pathways by Max *Meyerhof and Hans *Krebs and many others. A key example of the interrelationship between genetic predisposition to metabolic problems such as type II diabetes, disorders of lipid metabolism, and obesity is provided by the observations of Jeffrey Friedman, Sir Philip *Cohen, and other investigators.

ENDOCRINE DISEASES. Endocrine diseases illustrate the need to draw together many disciplinary themes in order to understand disease mechanisms and predisposition to these diseases. Jewish medical scientists have contributed to the genetic, metabolic, pharmacological, and immunological studies needed to explore the basis of endocrine diseases such as diabetes and thyroid disease. However, central to advances in this field was the development of precise methods for measuring hormone levels for research and clinical purposes. Rosalyn Sussman *Yalow and Andrew *Schally were
largely responsible for the assay techniques that made these measurements possible and which also accelerated research in many other fields.

GASTROENTEROLOGY. At the turn of the 20th century, Max Einhorn (1862–1953) and Samuel Weiss (1885–?) were amongst the first clinicians to develop gastroenterology as a medical specialty. In 1931 Burrill *Crohn described the inflammatory bowel disease named after him and Heinrich Necheles (1897–1979), Joseph Kirsner (1909–?), and Leon Schiff (1901–?) extended our understanding of the pathophysiology and therapy of many gastrointestinal and liver diseases. Increasing knowledge produced a need to establish departments devoted to research and treatment of patients with these disorders of the kind set up by Henry *Janowitz at Mount Sinai Hospital, New York.

NEUROLOGY. Progress in clinical neurology is largely dependent on increased understanding of brain structure and function. Jewish scientists have participated in this problem from the early days of Joseph *Erlanger’s research on nerve conduction to Richard *Axel’s dissection of the pathways relevant to olfactory function. Among the clinical neurologists who made the first attempts to correlate disease and basic pathology were Bernard Alpers, who studied neuro-syphilis and vascular degenerative diseases; Benjamin Boshes, who investigated Parkinson’s disease; and Leo Alexander who investigated multiple sclerosis. Israel *Wechsler compiled one of the first systematic textbooks on clinical neurology (1927) which became a standard work.

DERMATOLOGY. The longstanding interest of Jewish physicians in skin diseases might traditionally be said to have begun with the Bible. Marion Sulzberger (1895–1983), a pupil of Bruno Bloch of Zurich, Stephen Rothman (1894–1963), Herman Pinkus (1905–1985), and Louis Forman were amongst the first dermatologists to appreciate the need to underpin merely descriptive diagnosis with systematic observations of pathological changes readily observed in this most accessible of human organs. Edmund Klein (1922–1999) was an early winner of the Lasker Award for Clinical Medical Research in recognition of his pioneering treatment of skin diseases, and especially pre-malignant diseases.

RHEUMATOLOGY. Rheumatology is a relatively young but important clinical specialty because of the high incidence of debilitating joint diseases especially in the elderly. The prospects for controlling rheumatoid arthritis have been greatly increased by the successful application of monoclonal antibody techniques. Morris *Ziff was influential worldwide in establishing the essential links between basic science and clinical practice in this discipline.

PEDIATRICS. The demanding technical and psychological challenges of health care in infancy and childhood have intrigued many Jewish scientists and clinicians. In the early stages of its development, Abraham Jacobi (1830–1919) was largely responsible for the emergence of pediatrics in the U.S. Isaac A. *Abt and Julius Hess (1876–1995) were pioneers in child nutrition and care of the premature infant. Henry *Koplik added to knowledge of infectious diseases in children, and Louis *Diamond contributed to pediatric hematology. Sidney Farber (1903–1973) transformed the outlook for childhood leukemia by introducing new anti-proliferative drugs and a regime of comprehensive management. The universally known Dana-Farber Cancer Institute commemorates his achievements. In addition, Alexander Nadas (1913–2000) was a pioneer in pediatric cardiology and Henry Shwachman (1910–1986) was among the first clinical scientists to appreciate the complexities of cystic fibrosis.

SURGERY, OBSTETRICS, AND GYNECOLOGY. Jewish doctors have made many contributions to the rapidly developing scope of surgery, obstetrics, and gynecology. Charles Elsberg (1871–1948) introduced new methods in the treatment of spinal-cord tumors. Markus *Hajek of Vienna devised new techniques in nasal and laryngeal surgery. A pioneer in thoracic surgery, Max Thorek (1880–1960) founded the International College of Surgeons, and Irving Cooper (1922–1985) introduced an operative procedure for the treatment of Parkinson’s disease. In obstetrics, Joseph de Lee (1869–1942) contributed an authoritative textbook and original papers and was an outstanding teacher and clinician. Isidor S. Rubin (1883–1958) made many important contributions to gynecology, including the test for fallopian tube patency when investigating sterility. Lord Robert *Winston’s achievements include a worldwide reputation for his contributions to solving the problems of female infertility.

RADIOLOGY. U.S. Jewish radiologists have enriched every branch of their specialty. Outstanding contributions have been
made by Hymer Friedell (1911– ) to radiation biology, by Harold G. Jacobson (1912–2001) to neuroradiology, and Leo Rigler (1896–1979), who was president of the American Radiologic Society, to the radiology of the chest and abdomen. Gustav *Bucky invented the X-ray diaphragm that bears his name.

**Drugs and Therapeutics.** Advances in pharmacological knowledge and drug design, testing, and production have transformed the management of virtually every acute and chronic disease. In addition to the development of anti-microbial agents, this is an area to which Jewish scientists and clinicians have made so many contributions that selected examples must suffice. Isidor Ravdin (1894–1972) was a pioneer in anti-cancer chemotherapy. Gertrude *Elion developed the immunosuppressive drug azathioprine, the first anti-viral drug acyclovir, and allopurinol used to treat gout. Ralph Alexander *Raphael's imaginative interpretation of "connective tissue diseases" of a similar nature. Paul *Klemperer's imaginative interpretation of the damage inflicted by "connective tissue diseases" laid the basis for what are now known as multi-system autoimmune diseases.

**Pathology.** Jewish pathologists made important contributions at the stage when pathology was developing from an observational skill into one demanding more widely based scientific insight and knowledge. The efforts of Hans Popper (1905–1988) and Fenton Schaffner (1920–2000) clarified the pathology of liver disease. David Spain (1913– ) in cardiac pathology and Averill Liebow (1911–1978) in pulmonary pathology performed a similar service. Benjamin Castleman (1906–1982) described the pathology of the parathyroid glands and a proliferative disease of the immune system which bears his name and is a paradigm for many, more common diseases of a similar nature. Paul *Klemperer's imaginative interpretation of the damage inflicted by "connective tissue diseases" laid the basis for what are now known as multi-system autoimmune diseases.

**Public Health.** Jews helped to lay the foundations of public health and hygiene in the U.S. and elsewhere. Sigmund Goldwater (1873–1942) founded the first occupational disease clinic in New York in 1915. His contemporary Milton J. Rosenau (1869–1946) promoted important measures for preventing epidemics of infectious diseases in the Americas and elsewhere. Jeremiah Stamler (1919– ) was one of the first investigators to conduct epidemiologic studies on environmental factors influencing coronary heart disease.

**History of Medicine.** While many Jewish doctors were making history, some were writing it. Outstanding historians were Max Neuberger (1868–1955) in Austria, Charles *Singer in England, Arturo Castiglioni (1874–1933) in Italy, and Harry *Friedenwald, Victor Robinson (1886–1947), and Saul Jarcho (1906–2000) in the U.S.

**Education and Publication.** Jews have played a prominent part in the interrelated fields of medical education and publication. Abraham *Flexner is still remembered for his "Flexner Report" (1906), which charted the subsequent course of medical education in the United States. After World War II a steadily increasing number of Jews have joined the teaching staffs of medical schools. Many have also contributed to teaching as textbook authors and by editing medical journals. The well-known medical editor, Morris *Fishbein, edited the *Journal of the American Medical Association* (1924–49) and played a leading role in shaping American healthcare policies. Alexander Gutman (1902–1973) edited the *American Journal of Medicine* and Alfred Soffer (1922– ) was editor of *Chest*. Subsequently there has been an at least commensurate increase in the numbers of Jewish medical scientists and teachers needed to meet the enormous demand for journals, books, and education at all levels.

Advances in research and education have also created a demand for medical scientists with the rare combination of the research expertise and administrative skills needed to run vast institutions of unprecedented complexity. Jewish scientists with these capabilities include Arnold Levine at the Rockefeller, Walter *Bodmer, Sir Gustav *Nossal, Harold *Varmus, and Philip Fialkow at the University of Seattle.

**Jewish Medicine in the Diaspora**

**United States.** The early years of the 20th century witnessed a continued immigration to the U.S. that changed the "ethnic" and cultural pattern of American Jewry and its medical representation. The first Jewish doctors in the U.S. were of Sephardi origin. During the second part of the 19th century Jewish immigrants from Germany assumed leading roles in communal affairs and medicine. Russian Jews, who began emigrating after the pogroms of the 1880s, added a third element, which was destined to grow in numbers and influence. Later, the U.S. gained new immigrants from the Jewish population that had moved to East European countries when these broke away from the Russian and Austro-Hungarian empires after World War I. These Jews were again unsettled by unfavorable economic and political conditions.
who found refuge in America arrived at a propitious time. The 1930s and 1940s marked the beginning of the current golden age of scientific medicine, ushered in by the discovery of antibiotics and cortisone and advances in molecular biology and medical technology. With the decline of traditional European centers, the United States became the new world center of scientific and medical activity with Jewish immigrants joining the country’s extraordinarily creative universities and institutes. Rid of vestiges of intolerance and receptive to new talent, the country’s medical establishment and public welcomed the newcomers. Jewish hospitals, such as Mount Sinai in New York and Michael Reese and Mount Sinai in Chicago, as well as non-Jewish hospitals, research foundations, and universities absorbed many of them into the mainstream of medical progress. By the 1980s Jewish physicians in the United States greatly outnumbered those in other countries. In the State of New York alone there were 7,500 practicing Jewish doctors compared with 5,500 in Israel and 3,000 in France. Overall 9% of U.S. physicians were Jewish, compared with a 3% representation in the general population. More than 17,000 of the approximately 27,000 U.S. Jewish physicians in private practice resided in the thickly populated states of New York, California, Illinois, Pennsylvania, New Jersey, and Massachusetts. Of these, approximately 4,700 were general practitioners, 6,300 specialists in general medicine and its branches, 3,000 in surgery, 2,900 in obstetrics and gynecology, 1,000 in ophthalmology, 800 in radiology, 650 in dermatology, and 600 in otolaryngology. However the distribution among medical specialties was uneven. Whereas only 5% of doctors in occupational medicine were Jewish, they comprised 20% of general physicians and more than 30% of psychiatrists. This predominance in numerical terms is likely to have persisted but is difficult to quantify and compare with earlier periods. There has been increasing specialization marking the virtual demise of the “general internist” and the current Jewish population is less homogeneous compared with the initial immigrant Jewish population. However, the Jewish contribution to U.S. and thereby to medicine worldwide should not be assessed simply in terms of the numbers of practicing physicians but should also take account of Jewish contributions to medical science and education.

Canada. Jewish doctors and medical scientists in Canada also benefited from the opportunities available in the U.S. to improve the provision of medical services and education. Their numbers included the pediatrician Alton Goldbloom (1890–1962) and Arthur Vineberg (1903–1988), who developed techniques for improving blood circulation to diseased heart muscle.

Western Europe. The countries of Western Europe other than Germany and Austria had long settled Jewish communities whose numbers were increased by refugees from Russia at the beginning of the 20th century and from Nazi persecution in the 1930s. Jewish doctors are well represented in clinical practice and in academic centers. Their contributions to medicine and medical science in the United Kingdom are reflected by the high national honors accorded to Sir Ludwig *Guttmann for his work on rehabilitation, and to Lord *Cohen, Lord Rosenheim, Lord Turnberg, Sir Raymond Holfenburg, and Sir George Alberti for their achievements in clinical medicine, teaching, and research. French scientists made important contributions to the formative stages of molecular biology and the contributions of Jewish medical scientists in France are illustrated by the achievements of Jean Hamburger (1909–1992) in renal transplantation. Switzerland’s Jewish community of indigenous and refugee medical scientists has included Tadeus *Reichstein, who isolated cortisone, and Pierre Rentchnick (1923– ), the foremost authority on public health and hygiene in a country which traditionally takes these subjects very seriously. Sweden sheltered the Nobel Prize winner Robert *Barany and is now the home of the cancer research specialist George *Klein and of the endocrinologist Carl Luft, well-known for his research on diabetes. The Jewish medical academic communities of Germany and Austria were extinguished by the Nazis and the preeminence of these countries in research and practice thereby passed to the countries where Jewish refugees settled.

Russia and the Former Soviet Union. World War I, the Russian Revolution, and the *Balfour declaration had demographic and political consequences that profoundly influenced Jewish participation in medicine. Many Russian Jews moved to large university centers, where they had been forbidden to reside. As a result of this movement and of the new policy of open university admissions, the number of Jewish doctors greatly increased. Unofficial admission quotas reappeared during the later years of Stalin’s rule. However, neither their number nor their achievements can be readily determined because of the isolation of Russian Jewry from the Western world.

Poland and Eastern Europe. Despite poor economic conditions, Jews in pre-Hitler Poland maintained 40 hospitals where many of the country’s 3,500 Jewish doctors provided services. Poverty, backward technology, and a hostile academic environment prevented Jewish scientists from attaining the achievements reached by their colleagues in Western Europe. Still, their contributions were far from negligible. Edward Platau, the doyen of Polish neurologists, researched meningitis and brain tumors. Adolf Beck investigated nerve physiology and Henry K. Higier explored the autonomic nervous system. Samuel Goldflam studied reflexes and the diseases myasthenia gravis and periodic paralysis. Zygmunt Bychowski investigated traumatic epilepsy and multiple sclerosis. Anataszy Landau was prominent in metabolic research, Stanislaus Klein in hematology, Seweryn Sterling in social medicine, and Gerszon Lewin in tuberculosis. Aron Solowiecowski, who was killed during the Warsaw ghetto rising, was prominent in surgical research. But the scientific potential of Jewish doctors in Poland was not destined to develop. During the German occupation, Jewish doctors devoted their ener-
gies to caring for people doomed to starvation, torture, and death. Many distinguished themselves by acts of dedication and heroism, and over 2,800 were killed. The tragic events in Poland were paralleled by similar developments in other German-occupied territories.

**SOUTH AMERICA AND MEXICO.** In the early part of the 20th century, geographic remoteness meant that Jewish contributions to medicine in Latin America received less recognition abroad than they deserved. Nevertheless, the large communities in South America were reinforced by immigration from Europe ensuring that Jewish medical scholarship thrived, even if not to the extent enjoyed by colleagues in North America. Since World War II the opportunities to contribute to advances in medical research have suffered from political instability and periods of economic decline. In Argentina, where Jewish immigration began in 1889, the figure of the pioneer physician Noah Yarchi is still remembered and revered. The doctors who followed in his footsteps helped sustain the health and morale of the colonists and the early settlers in the cities. With the establishment of the Ezra Hospital in Buenos Aires in 1921, a center was provided for medical activity; it grew in importance as the Jewish population increased. Jews have been prominent in every phase of the professional and academic life of the country: Professor Quiraga was president of the Academy of Medicine of Buenos Aires and Ricardo Rodriguez dean of the Medical Faculty of La Plata. Jewish physicians published the *Journal Archivos de Medicina Argentina-Israel*.

For a long period the Jewish population in Brazil was 140,000, and much lower in other Latin American countries. Jewish participation in medicine increased significantly after the arrival in the 1930s and 1940s of refugee doctors who brought the sophisticated approach of European medicine. Many Jewish physicians rose to eminence. Victor Soriano of Montevideo, Uruguay, was the editor of the *World Journal of Neurology*. Mexico had 120 Jewish doctors in 1970, many of whom attained professional distinction. Characteristic of the medical pioneers’ sense of Jewish identity was their publication of the medical journal *Ars Medici* early in the century, when their numbers were very small.

**SOUTH AFRICA.** At the peak of communal activity South Africa had about 750 Jewish doctors who made major contributions to medical research, education, and practice. Among these were Philip Tobias, president of the Royal Society of South Africa, Maurice Shapiro, the immuno-hematologist who became head of the country’s transfusion services, the gynecologist S. Joel Cohen, the physician M.M. Sussman, the cardiologist Valva Shirir, and the surgeon Jack Wolfowitz. The plastic surgeon Jack Penn (1909–1996) carried out many facial reconstruction operations on Israeli soldiers wounded in the War of Independence and subsequently became honorary visiting professor of plastic surgery at the Hebrew University of Jerusalem. During the period of political uncertainty before the country achieved independence many doctors immigrated to the United Kingdom, the U.S., and Israel. Those achieving distinction include Israel Chanarin, the hematologist and expert on megaloblastic anemias, and Anthony Segal, the authority on the white blood cells called neutrophils.

**Medical Science and Practice in Israel**

Sussman *Muntner, Joshua O. *Leibowitz (1895–1993), who was professor of medical history in the Hebrew University of Jerusalem, and David Margalit have fully described the history of medicine in Palestine under the Mandate and in the early years of the State of Israel. At the beginning of the 20th century infectious diseases were rampant in Palestine. Clinics established by European Jewish communities provided medical care for the Jewish population of Jerusalem. These clinics became hospitals that expanded to meet the needs of a modern city, notably Bikkur Holim, established in 1843, and Sháarei Zedek, established in 1902. Fortunately for the needs of the Jewish population, physicians were prominent in the Zionist movement since its inception. The first Jewish physician in Palestine, Simon Frænkell, was sent to Jerusalem in 1843 by Moses Montefiore. Menahem Stein was the first Jewish doctor in Jaffa (1882), Hillel Joffe the first in Haifa (1890), and Bathsheba Yunis (1880–1947) the first in Tel Aviv. Leib Pashkovsky was the first surgeon to settle in Palestine (1906). In 1912, the year a medical association was founded in Tel Aviv, there were 35 Jewish doctors in the country, the majority specially trained in ophthalmology, dermatology, and parasitology in order to cope with the country’s most prevalent diseases. Prominent among the early specialists were the ophthalmologist Aryeh *Feigenbaum, the dermatologist Aryeh Dostrovsky (d. 1975), and the bacteriologist and founder of the Pasteur Institute in Jerusalem (1913), Israel J. Kligler. Other notable doctors were Aryeh Boehm, who was responsible for many improvements in public health, and the otorhinolaryngologist Moshe Sherman, founding president of the country’s first Medical Association. Although public health remained a major preoccupation, increased control of malaria, rabies, trachoma, and other infectious diseases allowed more scope for other specialties to develop.

After the Balfour Declaration, the number of Jewish physicians in Palestine increased sharply and their pace of immigration accelerated with each wave of persecution in Europe. Health services improved under the Mandate with an expanded network of clinics and public health measures including an immunization program. Thus a medical infrastructure was in place when the State was established which could cope with the added demands of immigration and the War of Independence. With subsequent expansion, Israel had approximately 27,000 physicians in the early 21st century, so that the ratio of doctors to population has become one of the most favorable in the world. The country had some 47,000 nurses, of whom 50% were registered. As a result Israel had a very low infant mortality rate (7.5 per 1,000 live births) and long life expectancy (79.1 years on the average for women and 75.3 years for men). Medical care is provided by a network of hospitals and clinics, many affiliated to the health funds, the
Ministry of Health, or other organizations like *Hadassah and *Magen David Adom. The hospitals and medical services are also geared to deal with the emergencies arising from wars or terrorist attacks.

Mental health, rehabilitation, and social support services are also highly developed.

Advanced methods of treatment developed elsewhere in the world have also been promptly introduced into Israeli clinical practice. The Hadassah Hospital carried out its first successful in vitro fertilization ("test-tube baby") in 1982 and heart transplantation in 1983.

The Israel Medical Association, founded in 1929, helped to raise the standards of the profession and to improve service to the public during the difficult years of economic hardship and political and military tension. The Association's official organ, Harefuah, founded in 1913, has maintained a high scientific and journalistic standard. The Non-Resident Fellow Project of the Association has helped forge close links with Jewish doctors in the Diaspora. There is also an extensive network of academic exchanges and collaboration between institutes and individuals in Israel and other countries.

Medical research and education have had a consistently high priority, even before the establishment of the State. Moshe Prywes (d. 1999), editor of the Israel Journal of Medical Sciences, founded in 1965, contributed to medical education, and Hanoch Midwidsky to the promotion of postgraduate studies. Most medical research is now carried out at the country's four medical schools, namely the *Hebrew University of Jerusalem (founded in 1949), *Tel Aviv University (founded in 1965), *Ben-Gurion University (founded in 1974), the *Haifa Technion (founded in 1969), and their affiliated hospitals.

Biomedical science is performed in the relevant faculties of these universities, at *Bar-Ilan University, which does not have a medical school, and at the *Weizmann Institute of Science.

The first research priority was the control of infectious diseases. Saul *Adler, a world authority on parasitology and tropical medicine, directed research on amebiasis, leishmaniasis, and relapsing fever. Zvi *Saliternik was responsible for the elimination of malaria and the parasitic disease schistosomiasis. Subsequently attention could be turned to the disorders prevalent in the developed world and to genetic disorders prevalent in various Israeli populations. Clinical research was linked to improving teaching and patient care in all branches of medicine.

Chaim Sheba, surgeon-general of the Israeli army, oversaw the rise in medical standards. Bernhard and Hermann *Zondek continued their endocrinologic research, interrupted by the European upheaval, and Moshe *Rachmilewitz, professor of medicine at Hadassah Hospital Medical School, carried out much-cited studies of folate and vitamin B12 deficiency and metabolism. Bracha *Ramot organized a modern hematological service at the Tel Hashomer (Sheba) Hospital and undertook a systematic program of investigation of the prevalence and management of inherited disorders of hemoglobin synthesis. Andre de Vries (1911–1996) was a distinguished physician and hematologist at the Beilinson (Rabin) Hospital. Karl Braun initiated research programs in cardiology and Lipman *Halpern in neurology. Under the leadership of Bruno Lunenfeld (1927–), the Tel Hashomer (Sheba) Hospital became a world center in research and treatment for female infertility. In the same institute Baruch Padeh had laid the foundations for clinical genetics in the country. David Erlick in Haifa improved techniques of renal transplantation. Isaac Michaelson developed ophthalmological services at Hadassah Hospital and used his expertise to treat patients with trachoma and other sight-threatening diseases in Africa. Michaelson was thereby amongst the first who initiated Israel's continuing medical collaboration with disadvantaged countries. He was also amongst the first clinical scientists to realize the importance of angiogenesis (new blood vessel formation) in retinal disease; an international medal and series of conferences have been named in his memory.

Latterly the pace of research has quickened and there is room to mention only a few of the outstanding contributors. Rina *Zaizov (1932–2005) organized a national center for pediatric oncology. Marcel *Eliakim of Hadassah Hospital has made important advances in the field of liver diseases. Yehezieli *Stein of the same hospital is an international authority on lipids and atherosclerosis (vascular degeneration). Mordechai Pras of Tel Hashomer Hospital is an international expert on amyloidosis and Rami *Rahamimoff's work on nerve transmission in health and disease is also universally respected. The advances in basic immunology made by Michael *Sela and Ruth *Arnon at the Weizmann Institute have been adapted to many promising strategies for treating multiple sclerosis and auto-immune diseases. Michel *Revel's research on the antiviral interferon system also has important clinical implications. Irwin Cohen's immunological studies at the Weizmann Institute on experimental and clinical auto-immune diseases and novel ideas on treating these diseases have attracted continued international attention. Stem cell research is an active area of research carried out in a fully coordinated program involving the country's major academic research centers and biotechnology companies. Sophisticated medical bioengineering is also an area of intense research activity.

The current organization of medical departments in acute care hospitals in Israel has changed from the classical European model with its fully autonomous medical wards to broader-based departments in which all medical sub-specialties are represented, providing comprehensive, multi-disciplinary medical care. In parallel with the remarkable developments in new therapeutic approaches a more realistic view has grown of scientific medicine's limitations and an understanding of the patient's rights. This has introduced a new field in medicine that includes palliative care, safeguarding the quality of life of patients and their families, and their right to be involved in decisions affecting medical management and the end of life. This progressive approach is now being adopted by the Israeli public and medical community with appropriate legal backing. There has also been striking progress in the
provision of medical teams able to participate in disaster relief anywhere in the world.

[Samuel Vaisrub / Michael A. Denman, Yaakov Naparstek, and Dan Gilon (2nd ed.)]

INTRODUCTION
The issues involved in medicine and halakhah are basic concerns, discussed and debated in every society today. Their analysis and resolution encompass many issues, related to law and values, justice and ethics, philosophy, and way of life. This is true of every society which examines its path and strives to shape its own identity.

The subjects involved in medical halakhah are a living, vital element in Jewish law and in the life of the Jewish people – “living” and “vital” in the most literal sense, pertaining to the content of life and its very being. The worlds of halakhah and of medicine are interconnected with one another. For generations many of the greatest rabbis, posekim, and Jewish thinkers have been physicians by profession.

Moreover, the questions, principles, and proposed solutions in the fields of medicine and healing touch upon the life of every single person. Hence, the discussion and debate concerning them and the questions involved in their application and their resolution are the concern of the public at large. This being so, a good portion of the subjects of medicine and therapy, the difficulties inherent in them, and the solutions proposed, are not merely a matter for theoretical discussion, restricted to the world of experts and professionals, but are matters of concern to the entire society, collectively and individually. It follows that analysis of these matters is greatly influenced by various commonly held worldviews, which influence the thinking of everyone in society, both collectively and individually. As a result, analysis of medical practice and therapy, of what is permitted and prohibited, as well as the pursuit of solutions that are correct and appropriate according to both halakhic and human criteria – are all highly influential in educating the public and forming the attitudes of the individual. These are issues of immediate relevance,
with which our society is constantly concerned, studying them and analyzing them. It is therefore proper that the matters written and spoken on these matters be intended not only for professionals, but for the general interested public as well, as this material is of the utmost importance for anyone seeking an understanding of the ways of the Creator, the greatness of His Torah, and the depths of faith, and who wishes to understand the meaning of Torah, of faith, and of Judaism.

**Judicial Decision – A Value Determination**

Any concrete issue in the area of law and medicine that reaches the courts and thus requires a judicial decision, must of necessity require establishing a position regarding morals and values. Most issues of law and medicine that come before the court do not involve monetary obligations or financial rights, nor do they touch upon rights of ownership or criminal liability in terms of an offense against an explicit or implicit provision or section of the law. Rather, their aim is generally to establish a duty, right, or permit which is fundamentally rooted in value or moral judgments, which have been infused with a legal definition. This is particularly true of those cases in which the judicial decision involves not only law and medicine, but also involves the special realm of the family unit, the relationship between parent and child, and the relationship between spouses.

These questions have been explicitly addressed in the literature dealing with these issues, and in the decisions of Justice Menachem Elon in the Israeli Supreme Court. In the introductory comments of his decision in the case of the minor Yael Shefer (CA 506/88, *Yael Shefer, Minor by way of her mother v. State of Israel*, 48 (1) PD 87, 96–97), which will be discussed below, Justice Elon wrote the following:

The subject at hand is a very difficult one. It reaches the depths of human values and ethics and the heights of the philosophical thinking of generations past and present. The issue touches upon the cultural and spiritual make-up of our society. Indeed, we have postponed giving our opinion in this case so that we might fully examine the nature and essence of these values, thereby fulfilling the command: “Be moderate in judgment.” [...] “Against your will you are created, and against your will you are born; against your will you live, and against your will you pass on.” Such was stated in the teachings of the Sages. [...] “Against our will” we sit to decide the case before us. The angel of judgment stands above us and commands: “Decide!” The judge is required to adjudicate even such controversial matters so that the physician may know what his profession forbids, permits, and requires him to do, and so that all those who assist the patient – to whatever extent – may understand their rights and obligations. “Against our will” we adjudicate all these matters, for we are not at all confident that we have fully mastered all these fundamental issues, or that we are equipped with all of the information and knowledge that we need to decide our case. Nevertheless, we cannot abdicate our judicial responsibility, and we must probe, weigh, and state our opinion.

Further on we will examine a number of general principles, as expressed in the Knesset legislation and case-law, especially in the rulings of the Israeli Supreme Court.

**The Values of a Jewish and Democratic State.** When dealing with the subject of medicine and law we confront the inherent tension of the fact of Israel being a Jewish state and its being a democratic state (for expansion on this point see: “Values of Jewish and Democratic State”). In the *Shefer* case (pp. 106–107) Justice Elon defined the values of the Jewish state:

The interpretation of the values of the State of Israel as a Jewish state is thus determined by the values of the Jewish tradition and the legacy of Judaism – that is, the conclusion reached through a study of the basic values contained in the sources of the Jewish tradition and Judaism's legacy. In carrying out this interpretative endeavor we will be fulfilling the wishes of the legislator in defining the values of the State of Israel as a Jewish state [...] by giving the appropriate interpretation of the values of the State of Israel as a Jewish state [...].

Regarding the synthesis between the values of Judaism and those of democracy, especially in the sensitive realm of medicine and law, Justice Elon contended that in a situation of conflict between the Jewish component and the democratic component, priority should be given to the Jewish component. Hence he wrote (*ibid.,* 167–70):

As instructed by the legislature in the Basic Law: Human Dignity and Freedom, we have examined the values of a Jewish state and those of a democratic state in the vast and multifaceted areas of medicine, halakhah, and law. As required, we have analyzed the sources of both systems in detail, and have examined the meta-principles of each system and the basic rules derived from these principles – both expansive and restrictive. And conducting this analysis, we are instructed to arrive at a synthesis that will achieve the dual-value goal of the Basic Law: Human Dignity and Freedom – to anchor in the laws of the State of Israel its values as a Jewish and democratic state. The natural way of achieving this synthesis is to find the common ground between the Jewish and democratic systems – the principles that they share, or at least those that can be used to integrate the two systems [...], since active euthanasia negates the essence of the State of Israel as a Jewish state, as we observed above, the synthesis between the two norms – “the values of a Jewish and democratic state” – requires us to give preference to conclusion that would be reached by applying the values of a Jewish state, and to *use these values* to interpret the phrase “the values of a… democratic state.” [...]

The values of a Jewish state, whose roots are planted in the basic concepts of the dignity of the human being created in the image of God, the sanctity of life, and the prevention of pain and suffering, concepts which have stood the test of generations and which have nurtured and sustained the entire world – are the true guidelines for arriving at the correct synthesis between the values of a Jewish and democratic state.

**In the Image of God**

A person's fundamental right to physical and mental well-being and integrity bears a special character in Jewish law, stemming from its basic conception of the source of a man's right to his life, body, and dignity. In this respect Justice Elon wrote
the following in *EA* 2/84 Neiman v. Chairman, Central Elections Committee; Avneri v. Chairman, Central Elections Committee, 39 (2) PD 225, 298:

The foundation of the worldview of Judaism is the concept of the creation of man in the image of God (Genesis 1:27). This is how the Torah begins, and from it the halakhah derives fundamental principles concerning the worth of every human being, whoever he may be, and the right of every person to equal and loving treatment. He [R. Akiva] would say: "Beloved is man, for he was created in the image [of God]; but it was an act of greater love that it was made known to him that he was created in the image [of God], in that it is stated (Genesis 9:6): ‘In His image did God make man.’"

Jewish law generally, and especially over the last few generations with the tremendous advances in medicine and its needs, has encountered a plethora of problems that emerge as a result of the conflict between the value of the sanctity of life and the value of prevention of pain and suffering and other considerations. However, the point of departure and the basic foundation for this confrontation was always, and has remained, the meta-value of the sanctity of life, and the combination of the right and duty to preserve the image of God. In the Shefer case, Justice Elon elaborated on the principle of Man’s creation in the Image as the guiding conception in the subjects related to medicine and law, writing inter alia (pp. 115–116):

The basic right to bodily integrity and mental well-being has a special meaning in Jewish law, which stems from its basic philosophical outlook regarding the source of one’s right to life, bodily integrity, and dignity [...] The creation of man in the image of God is the basis of the value of each person’s life. “Therefore the creation of humankind started with the creation of a single individual, to teach that whoever removes a single soul from this world is regarded as if he had caused the whole world to perish; and whoever keeps one single soul alive in this world is regarded as having preserved the whole world” (Mishnah, Sanh. 37a, as cited in Yad, Sanhedrin 123; see also Menachem Elon, *Ha-Mishpat ha-Ivri* (1988), p.1426, and n. 303). As we stated elsewhere (L.A 184/87, 151, 184, *Attorney General v. Anon.*, 42 (2) PD 661, 676): “the fundamental principle that must guide the court is that we are not authorized or allowed to make any distinction based on the ‘worth’ of an individual – whether poor or rich, physically healthy or disabled, psychologically strong or mentally ill. All human beings, created in the image of God, are equal in value.” The creation of man in the image of God is the underlying foundation of the supreme value of each person’s life, and it is the source of the fundamental rights of human dignity and freedom. (See. Cr. A. 2145/92, *State of Israel v. Guetta*, 46 (5) PD 704, 723–724.) The principle that “In His image did God make man” – every man, no matter who he is – whose source is as stated, is in the world of Judaism, has been accepted by many varied cultures and legal systems, as the foundation for the supreme value placed on human life. The only exceptions are those cultures which historically have discriminated between one man and another, between the physically healthy and the disabled, psychologically strong and mentally ill (such as in the philosophy of Plato or the Greek city of Sparta; see infra par. 59 [...]).

“In His image did God make man” is the philosophical and analytical basis for the unique approach of Jewish law regarding the supreme value of the sanctity of human life – the sanctity of the divine image in which man was created – and the many consequences that follow in various areas of the law, including the important areas with which we dealt in the instant case. As we shall see, Jewish law has grappled, especially in recent times, with the tremendous advances in medicine, and with the many problems that have arisen as a result of the clash between, inter alia, the value and sanctity of life and the value of preventing pain and suffering. Yet the lodestar is and has been the supreme value of the sanctity of human life, and the right and obligation to protect the divine image of humankind.

**Physician’s Duties and Patients’ Rights**

Initially, during the tannaitic era, it was established that it is permitted for a physician to heal. The Talmud derives this from the verse (Exod. 21:19): “He shall cause him to be thoroughly healed – This teaches that the physician is given permission to heal” (Bava Kamma 85a). This implied rejection of the approach prevalent in various philosophies and religions at that time, and later as well, even in some statements by Jewish thinkers, that one should not heal a person whom God has made ill, because there should be no intervention in what Heaven has decreed (Rashi, at *bk* 85a, s.v. *Nitta reshut; Kitvei Ramban*, Chavell ed. (Jerusalem 1964), vol. 2: *Torat ha-Adam*, at 42). Other tannaitic halakhic rules established that an expert physician who inadvertently caused damage is exempt, as a matter of public policy (Tosefta, Git. 4:6, Zukerman ed.), for otherwise physicians would be unwilling to perform their duties (Resp. *Tashbez*, vol. 3 no. 82).

During the period of the *rishonim* the view was articulated that the physician’s work is not only permitted, but is an obligation and constitutes the fulfillment of a commandment. Maimonides held that this is based on the duty to save life found in Jewish law whereby a person is obliged to save his fellow man who is in danger, “with his body, his money, or his knowledge” (Yad, Nedirim 7:8). According to Nahmanides, “any physician who is knowledgeable is obligated to heal, and if he refused to do so he is considered to have shed blood” (*Sefer Torat ha-Adam, Kitvei ha-Ramban*, ed. Chavel, 2:41–42). Thus, the permission given the physician to heal also has the status of a commandment (*mitzvah*), intended to dispel the physician’s hesitation at the prospect of healing others due to his fear of erring and injuring others (see Resp. *Daat Kohen*, no. 140). Another principle operating in the context of the physician and treatment in Jewish law is based on the verse “Love your fellow as yourself.” In *Sharon v. Levi* (CA 548/78, *Sharon v. Levi*, 35 (1) PD 735, at 755) Justice Elon wrote as follows:

> It is instructive to observe how this basic right was viewed in Jewish law. “One who strikes a blow causing damage less than a *perutah* (i.e., that did not cause any real injury) transgresses a negative commandment (Sanh. 85a; Yad, Hovel u-Mazik 51–3). Even if the victim consents to being struck, his consent has no validity (*bb* 92a; *Sh. Ar.*, *hm* 420:1ff.; *Shulhan Arukh Ha-Rav*...)

It is further instructive to observe how this basic right was viewed in English law. The physician’s duty is to treat the patient (i.e., to heal or to alleviate pain). In *Hunt v. Mew* (1870), *141 Eng. R. 877, 970, 971*) the House of Lords stated that the physician’s duty is to treat the patient and that by performing the operation the patient had consented to the treatment. Indeed, the patient was treated with the consent of all the doctors and the patient’s family. In *Shefer* the physician’s duty to heal was confirmed by the courts. It is instructive to observe how this basic right was viewed in Jewish law. “One who strikes a blow causing damage less than a *perutah* (i.e., that did not cause any real injury) transgresses a negative commandment (Sanh. 85a; Yad, Hovel u-Mazik 51–3). Even if the victim consents to being struck, his consent has no validity (*bb* 92a; *Sh. Ar.*, *hm* 420:1ff.; *Shulhan Arukh Ha-Rav*...).
The philosophic-halakhic basis for permission to wound a sick person in order to cure him as deriving from the fundamental Biblical command “Love your fellow as yourself” is cited by Nahmanides as a guiding accepted principle in the context of the physician and medicine in the world of halakhah: “The person who wounds another to cure him (for medical treatment) is exempt, and it constitutes the performance of a positive precept, as it states ‘Love your fellow as yourself’” (Torat ha-Adam, ibid., p. 43).

Rabbi Eliezer Waldenberg, a leading contemporary authority in the area of halakhic-medical law, wrote the following comment on these words of Nahmanides:

We require that the commandment to heal be inferred from the verse (“Love your fellow as yourself”), and it is insufficient to rely on the principle that “nothing stands in the way of saving a life” to justify the physician’s privilege to wound in order to heal (referred to by Nahmanides, and cited by the Tur and Shulhan Arukh), because the inference from “Love your fellow as yourself” teaches that there is an obligation to heal even when there is clearly no danger to life, but only pain or danger to a limb.

The Physician and the Judge

Both Nahmanides and Rabbi Kook (Torat ha-Adam, ibid., p. 41–42; Resp. Daat Kohen, no. 140 (Rabbi Abraham Isaac Kook – the first chief rabbi of Israel)) drew an illuminating analogy between the physician treating a patient and a judge presiding over a court. The judge’s duty to judge the people in each generation and in all matters is portrayed in the Talmud as giving rise to a soul-searching dilemma, phrased as follows (Sanh. 6b):

The judges should know whom they are judging, before Whom they are judging, and Who will exact punishment from them, for it is stated: “God stands amidst the community of God, in the midst of judges (elohim) He will judge” (Psalms 82:1). Similarly, regarding Jehoshaphat it is stated: “He charged the judges: Consider what you are doing, for you judge not on behalf of man, but on behalf of the Lord” (11 Chronicles 19:6). Perhaps the judge will say, “Why do I need this anguish?” Therefore it is stated, “And He [God] is with you when you pass judgment” (Chronicles, ad loc.; Rashi, Sanh. 6b – “For He is with your hearts, as your hearts incline as to the matter”). A judge can only rule in accordance with what his eyes see. (Rashi adds, Sanhedrin, ad loc., “If he attempts to render a just true judgment, he will not be punished.”)

Similarly, the work of a physician imposes great responsibilities and corresponding demands on his conscience, accompanied by much anguish. For this reason, Nahmanides concludes that the laws pertaining to a physician who is as careful as he should be when dealing with life-and-death situations are the same as those applicable to a judge who seeks to render a just and true judgment. If they are unaware that they have made a mistake, they are both exempt, by both human and divine law.

Yet in one fundamental respect – which goes to the root of the matter – the physician’s responsibility is greater than that of the judge. If an authorized judge (one who judges “with the permission of the court”) becomes aware of his inadvertent mistake, he remains exempt even by divine law. By contrast, if a physician becomes aware of his unintentional mistake, while he remains exempt by human law, he is nevertheless liable by divine law. Indeed, if his mistake caused someone’s death, he is subject to the penalty of exile [to a city of refuge]. The physician and the judge are partners to the heartbreak and ethical dilemmas inherent in their work. Each of them attempts to ease these agonizing dilemmas by following his conscience, based on “what his eyes see” or, as formulated by R. Menahem ha-“Meiri, by acting according to “what his eyes see, his ears hear, and his heart understands” (Bet ha-Behirah, Ketubbot 51b). See also Maimonides (Guide 3:34), who writes that the judge adjudicates in accordance with a general norm, whereas the physician treats each patient in accordance with his own specific condition and sickness. This is the essence of the physician’s duty which obligates him to cure the specific ailment that confronts him, according to the particular circumstances and condition of the patient.

Regarding the analogy between the physician and the patient, Justice Elon made the following comments in the Shefei case (ibid., pp. 108–9):

It should be noted that the principles governing the professional behavior of the physician intertwine law and ethics, compliance with the strict law and going beyond the law (lifnim mi-shurat ha-din), the nature of the halakhah, and the nature of the world. Following the example set by Nahmanides’ Torat ha-Adam, these principles appear in separate sections in the later halakhic codes – Arba’ah ha-Turim of Jacob b. Asher and the Shulhan Arukh of Joseph Caro (19, beginning of sec. 315ff.). Incidentally, it bears mention that Maimonides’ Mishneh Torah does not contain any codification of the laws relating to the physician. Maimonides comments on this matter in the fourth chapter of Hilkhot De’ot, but only to deal with the proper regimen required to maintain a healthy body. It is certainly instructive that these codifiers, who as a general rule do not include in their codes those laws that have no practical relevance, and hence do not codify such laws as those relating to the exile of an unintentional murderer to a city of refuge, nevertheless include the rule that a physician who causes death and then becomes aware that he has erred should be exiled (Tur and Sh. Ar., ḤM 435:1). They do so in order to demonstrate the
deep responsibility born by the physician, in that even when there is no legal sanction, he is liable, in cases of negligence, to be exiled to a city of refuge, to grieve and to give an accounting of his life. This dilemma of medical practice – where, on the one hand, there is the commandment not to refrain from healing others while, on the other hand, there is the sense of “why do I need this trouble?” – has become greater and more pronounced as a result of the tremendous advances in modern medicine and in light of contemporary legal and philosophical thinking concerning fundamental rights and meta-principles. Today – even more so than previously – both the judge and the physician continue to be partners to this dilemma. Both carry the responsibility and both seek to do justice in their profession, each in his own field – the judge to reach a truly correct decision and the physician to achieve true healing. This guideline of searching out the essential truth – the full meaning of which will be explained below – serves as a road-map – complex and difficult, yet indispensable – for resolving the important, grave, and complex questions that lie at the doorstep of the physician and judge alike. As is generally the case with regard to such basic questions, there are fundamentally different approaches that create a profound sense of awe as one proceeds to grapple with and apply them.

The Patient’s Obligation to be Healed and his Right to Choose Medical Treatment

In the world of Judaism, just as the physician is obligated to heal, so too, as may be seen from our above discussion, the patient is obligated to be healed. Moreover, one who refrains from being healed violates the Scriptural verses “You shall guard yourselves well” (Deut. 4:15) and “For your own life-blood I will require a reckoning” (Gen. 9:5). The obligation of a person to be healed from a life-threatening illness takes precedence over almost all of the commandments of the Torah. When a physician determines that to become cured one must desecrate the Sabbath, a patient who refuses to accept treatment involving the desecration of the Sabbath “is considered to be a pious fool; …we compel him to do [what the physician has ordered]” (Resp. Radbaz, vol. 4, no. 1339; Sh. Ar., OH 328:10, and commentaries ad loc.). In such circumstances, prevailing observance of the commandment over medical treatment is considered “a commandment performed through sin” (Resp. Mahari Asad, OH no. 160). The patient’s wishes are to be followed, however, when he seeks to improve the medical care he is receiving, but the physicians disagree with him. This is based on the verse “The heart knows its own bitterness” (Prov. 14:10; Yoma 82a–83a; Sh. Ar. OH 618:3; A. Steinberg (ed.), Enziklopedyah Refu’it Hilkhahit, vol. 2, pp. 24–26, 443–45).

According to Jewish law, the patient is not only obligated to seek a cure, he also has a basic right to receive treatment from a physician of his choice whom he trusts. This rule is derived from the teachings of the Sages, and became established halakhat in the Shulhan Arukh, which rules that “If Reuben vowed not to benefit Simeon, and Simeon fell ill, Reuben may treat him… even with his own hand, even if there is another physician who can treat him” (Sh. Ar., YD 221:1).

In relation to this ruling, Justice Elon wrote the following in the Tamir case (APP 4/82 Cr. App. 904/82, State of Israel v. Tamir, 57 (3) 205–206:)

It is well-established law, based on the principle of the personal liberty of every person created in the image of God, that no person’s bodily integrity may be infringed without his consent […]. This basic right includes the right to select the physician to whom his treatment will be entrusted; making such a choice is integral to his fundamental right to maintain his bodily integrity and mental well-being and not to be “harmed” thereby except with his consent […] An instructive expression of this principle may be found in the teachings of our Sages. The Mishnah states (Nedarim 4:4): “If one was forbidden to derive benefit from another person… he may [nevertheless] be cured by him,” i.e., when one person vowed not to benefit from another person, or his fellow man vowed not to benefit him, he may nevertheless benefit from the medical services of the other person, for the duty to heal and the right to be healed in body and soul “is a commandment” (Yad, Nedarim 6:8). The Jerusalem Talmud states that this rule not only applies where there is only one physician available – i.e., the fellow from whom he has vowed not to receive benefit – but even if another physician is available, and he may avail himself of the medical treatment of the other physician, the patient may nevertheless choose to consult the doctor from whom he vowed not to receive any benefit, for “not every person is able to cure him” (Ninnukei Yosef to Rif, Nedarim 41a). This is in accordance with the codified rule that “If Reuben vowed not to benefit Simeon, and Simeon fell ill, Reuben may treat him … even with his own hands, even if there is another physician who can treat him.” In medical treatment, the personal trust between the patient and the physician of his choice is extremely important, for which reason “even if there is another physician who can treat him, that physician [i.e., the one from whom he vowed not to benefit], if qualified, is under a duty to treat him, for the saving of life is sacred” (Ritba, to Rif, Ned. 41b).

OBLIGATION AND REFUSAL TO RECEIVE MEDICAL TREATMENT. The fundamental rule of Jewish law regarding the physician’s duty to treat, and the patient’s obligation to be cured, is subject to a number of qualifications, which have proliferated in our generations and which limit the possibility of treating a patient against his will. R. Jacob Emden, one of the leading halakhic authorities of the 18th century (Mor u-Ketzah, OH 322), laid down the following conditions under which the patient is obligated to seek a cure and under which “he is not listened to, if he rejects suffering and chooses death over life.” Accordingly, the duty only applies where the physician is familiar with the sickness “in absolute and clear certainty,” the case concerns a patient who at that time was referred to as “a patient with a clear sickness and obvious wound”; the treatment that the physician wishes to use was “definitively checked and certain”; and the patient’s life is in danger. In the event that these conditions do not exist, the patient’s consent is required for medical treatment, and he is permitted to refuse medical treatment. In contemporary times, many posekim have dealt with these cases, enumerating additional cases in which the patient’s consent is required. R. Moshe Feinstein, one of the great halakhic decisors of our generation (see re-
Euthanasia

In recent years a number of factors have combined to bring the subject of "euthanasia to the forefront of discourse in the world of medicine and halakhah. The awesome advancement in science and medicine resulting from technological progress has facilitated the prolongation of human life in its final stages. However, this prolongation has not always led to improvement in the quality of life, and on occasion even sentences people to grave physical and mental pain. Doctor-patient relations have also undergone a metamorphosis, from the paternalistic approach whereby the doctor decides what is best for the patient, to an approach based on patient autonomy, whereby the competent patient can decide for himself, and his informed consent is therefore required for any medical proceeding. A large number of people are involved in the treatment of a terminally ill patient, of different cultural backgrounds and outlooks, and consequently bringing with them varied opinions as to how to treat the terminally ill patient. The general public today is also far more concerned with moral problems pertaining to medicine in general, and specifically those relating to the terminally ill. Limited medical resources do not always suffice to provide all possible medical options for all those requiring it, and occasionally these, too, are considerations in the decision making process in relation to these patients.

We shall now present the sources underlying the halakhic approach to this subject, and the manner in which the halakhah relates to the subject in modern times in general, and in the State of Israel in particular. In the Shefer case (Shefer v. State of Israel 48 (1) PD 87, 131–132), Justice Elon wrote the following:

There have always been serious and complex moral problems regarding the end of one's stay on this earth. Jewish law includes various rules dealing with the medical care to be given, as well as other issues of civil and religious law, concerning the person who is terminally ill or dying (ע"ה גוזה). Jewish law distinguishes between these states, but there are disagreements as to their precise definitions and halakhic consequences. In any event, this is not the place to elaborate…. Regarding this terminal state, Jewish law emphasizes the importance of even ephemeral or brief life (อายיות שלוח), so long as "the candle flickers..." This is also true in non-Jewish cultures, evidence of which we find as early as the Hippocratic oath, which states, inter alia: "I will not give poison to any person, even if he requests it; and I will not offer it." Some cultures, however, did not have this approach...

These medical-legal problems, involving fundamental questions of values, have grown more complex and difficult in recent years, provoking much discussion and dispute in the medical and legal communities, as well as among philosophers, clergymen, and the general public. On the one hand, the awesome advance in science and medicine resulting from technological progress has allowed the prolongation of life, by preventing the spread of disease and by various artificial means; on the other hand, the prolongation of life has not always led to improvement of its quality. At times, prolongation of life brings with it physical and mental pain, and the disruption of day-to-day life. In addition, a patient in such circumstances today may find himself in a hospital or other institution, attached to various machines which keep him alive, and not – as in the past – within the walls of his own home, with his family and loved ones in the natural environment in which he lived and flourished. Those who must deal with these problems are primarily the patient himself and his family, in addition to physicians, legal scholars, clergymen, and philosophers. The problems that arise involve grave and fundamental moral, religious, and ethical questions. The basic question is: who understands all of these factors sufficiently to be competent to decide what is the proper life span of a person and whether to shorten or to refrain from prolonging it.

The Bible

The prohibition on taking a human life is one of the gravest offenses in the Torah, and mankind as a whole was admonished against this offense at the dawn of its history: “Whoever sheds the blood of man, by man shall his blood be shed, for in His image did God make man” (Gen. 9:6; see at length in “Homicide, and “Noahide Law”). The Bible records a case which serves as a proof text for the view that killing a man even where it is clear that there is no chance that he will continue to live is nevertheless murder. At the end of the war between the Israelites and the Philistines during the days of Saul, Saul understood that the Philistines were about to kill him, and therefore decided to kill himself with his own sword. Scripture relates that Saul only injured himself after this attempted suicide, and then asked an Amalekite youth to complete the act. Saul’s condition at that stage was analogous to that of a terminally ill patient, who clearly and lucidly requested the hastening of his death in order to redeem him from his suffering. The Amalekite youth complied with his wishes and killed him. Nevertheless, David subsequently ruled that the Amalekite youth was liable for the death penalty as a murderer (1 Sam. 31:3–4; 11 Samuel 1 and 16; see Radak and Rablag, ad loc.) From this Biblical story it emerges that that the active killing of a person who is dying is forbidden, even under those conditions, and even if the patient requested it (Rablag, ibid., Sefer Hasidim, ch. 315; Rablag and Radak fur-
ther suggested interpreting that in fact the youth did not actually kill Saul, but rather just said that in order to find favor in David’s eyes).

In Talmudic Literature
As a rule, so long as the person’s soul has not departed he is regarded as alive. The treatment of the terminally ill is dealt with directly in tractate Semahot, which stipulates those actions that may be performed on a dead person, and which are forbidden with respect to a living person: “A goes is considered a living person in all respects… One may not bind his jaws… one may not move him… one may not close the eyes of the dying [patient]. Whoever touches or moves him sheds blood….” (Semahot 1:1–4; Shab. 15b).

The Mishnah in Tractate Yoma (8:6) states that “Any chance of saving a life takes precedence over the Sabbath.” Accordingly, in the event of a landslide, where there is a chance that a person is trapped beneath the debris, the debris should be removed until it is certain that no living person is trapped thereunder. Tractate Yoma 85a adds that, even if the person found under the debris was mortally wounded, and it is clear that he will soon die, one continues to desecrate the Sabbath to save him by removing the debris. Thus, this source indicates that even short-term life is considered life. The halakhic decisors of the present generation disputed whether this source implies that everything possible should be done to prolong life, even if only temporary, or whether the laws of the Sabbath do not necessarily provide a basis for the duty to prolong life (Resp. Zitz Eliézer, 5; Kintres Ramat Rahel, 28; Resp. Minhat Shelomo, 91:24).

Regarding a person about to die and experiencing intense suffering, the aggadic sources adopt a different attitude. The Talmud (Av. Zar. 18a) relates the story of R. Hanina b. Teradyon (second century C.E.) who was taken to be executed by the Romans as punishment for publicly teaching Torah. In order to ensure that the execution would be protracted and particularly cruel, the Romans soaked pads of wool in water and placed them over his heart “to delay the departure of his soul.” When the executioner offered to stoke the flame and hasten his death by removing the pads, R. Hanina agreed, and swore that by that act the executioner had secured his place in the World to Come. The halakhic decisors offer a variety of explanations for the positive attitude taken by the Talmud to this act, but the story itself indicates that when a person is about to die and experiencing intense suffering, it is permitted to hasten his death even by way of a positive action – e.g., increasing the flame, and even by an act of “removing the impediment” – here, taking away the sponges.

Another case cited by the Babylonian Talmud (Ket. 104a) describes the death of R. Judah ha-Nasi, who towards his death was in unbearable pain. His students succeeded in preventing his death by their incessant prayers for Heavenly mercy. His handmaid, noting the intensity of his suffering, threw a jar on the ground, thereby momentarily causing them to cease praying, and at that moment Rabbi Judah died. This story has been cited as proof that it is permitted to avoid prolonging the life of a terminally ill patient (Iggerot Moshe, ḤM, vol. 2 no. 73:1).

Halakhic Rulings
The halakhic rulings sharply distinguish between the active hastening of death, which is forbidden, and the removal of a life-prolonging impediment, which is permitted under certain conditions.

The various acts cited above as being prohibited in respect of the goes are enjoined because they are liable to actively hasten the death of the terminally ill (see Sh. Ar., YD 339:1; S.V. "goes; Talmud Encyclopaedia (Heb.), 5, 391ff.").

Actively hastening death is forbidden even in cases where the patient is suffering acutely: “It is forbidden to hasten his death, even if he is dying and both he and his relatives are suffering intensely” (Hokkmat Adam, 91.14), “and even if we see that he is suffering intensely, and that it is better for him to die, we are prohibited from performing any act to hasten his death” (Arukh ha-Shulḥan, YD 339:1; Nishmat Avraham, YD 339:4).

This prohibition applies even where the patient himself requests it, an analogy being drawn from Maimonides’ ruling that one may not take ransom from a murderer in order to exempt him from the death penalty, even if the blood avenger (i.e., the victim’s relative who may exact the murderer’s life as retribution for the murder) agrees, because “the life of the victim is not the property of the blood avenger,” but rather belongs to God” (Yad, Rozēḥah u-Shemirat ha-Nelesh 1:4).

On the other hand, the prohibition on passive euthanasia is not absolute and the halakḥah distinguishes between various forms of passive euthanasia, the prevention of suffering to the patient being a paramount consideration. R. Judah ha-Hasid (Ashkenaz, 12th century; Sefer Hasidim, ch. 723 (ed. Mossad ha-Rav Kook)) addresses the issue and rules that, even though it is forbidden to perform any action that hastens death, there is no place for actions that delay a natural death. “We do not act to delay a person’s death. For example, if a person is dying and there is a man chopping wood near his house so that the soul cannot depart, we remove the woodcutter from there. Moreover, we do not place salt on his tongue to prevent his death. But if he is dying and he says that he cannot die until he is placed somewhere else, he is not to be moved from there (i.e., from where he is).”

According to this view, artificially delaying the soul’s departure causes unnecessary pain and suffering to the goes: “Do not feed the goes, for he is unable to swallow, but water should be put into his mouth… and one does not shout at the time of the soul’s departure, so that the soul does not return and suffer unbearable pain…” (Ibid., 234).

Joshua Boaz ben Simon Baruch (Italy, 16th century) in his glosses on Alfasi, MK 26b, in Shiltei ha-Gibborim, in explaining this passage in Sefer Hasidim states that it is permitted to discontinue an external act which prolongs the life of the goes, but it is forbidden to move him from his place and place him elsewhere, or to do any other action in order to hasten his
death (ibid., 234). This opinion was codified and incorporated into the ruling of the Rema, at Sh. Ar., YD 339:1.

The life-preserving measures dealt with in these sources essentially reflect popular beliefs prevalent in those days. The task facing contemporary authorities was to translate and apply these examples to the life-preserving measures utilized by modern medicine. In that context, it was held that an artificial respiration machine or other artificial life-support mechanisms are analogous to the “grain of salt”; thus it was held that they can be removed in order to discontinue the artificial prolonging of the dying patient’s life. Therefore, “once the physicians have determined that he cannot be cured (i.e., it is clear that he will not recover), it is clearly permissible to disconnect the patient from the machine to which he is connected.” Furthermore, it was even held that “not only is it permitted to disconnect the respirator, but there is an obligation to do so. For man’s soul is the property of God and has not God already taken the soul from this person, for as soon as the machine is removed he will die. And quite the opposite, by using the artificial respirator we leave his soul inside him and cause it (the soul, not the dying person) pain due to its inability to depart from the body and arrive at its resting place” (Rabbi H.D. Halevi, bibliography). A similar ruling was given by R. Eliyzer Waldenberg (Resp. Zig Eliyzer, vol. 13, no. 89; cf. R. Solomon Zalman Auerbach, Resp. Minhat Shelomo, 91:24).

R. Ovadia Hadayah (Resp. Yashil Avdi, YD, vol. 7, no. 40) held that a goses is “any patient regarding who all the physicians have given up hope and have determined that he will not recover from his sickness.”

In other responsa, Rabbi Moses Feinstein (Resp. Iggerot Moshe, YD, vol. 2, no. 74, 73:1, 74:1) and Rabbi Auerbach (Resp. Nishmat Avraham, Yad Vashem, 245) make additional distinctions relating to this question, such as the distinction between medical assistance that actually alleviates the patient’s suffering (such as oxygen), which it is mandatory to administer to him, and administering other medicines, and the distinction between standard medical treatment, which the doctors are duty bound to continue administering to the patient, and non-standard medical treatment.

Summing up the position of Jewish law on this subject, Justice Elon wrote in the Shefer case:

In Jewish thought, various overarching principles and values operate within the context of this momentous and complex labyrinth of halakhah and medicine. Such principles include the sanctity of human life, based on the meta-principle of man’s creation in the image of God; the fundamental precept to “love your fellow as yourself”; the alleviation of pain and suffering; the obligation of the physician to cure and of the patient to be healed; the right of the patient to refuse medical treatment; the decision-making approach of “her ways are pleasant ways”; the requirement that “the laws of our Torah must accord with reason and logic”; as well as other principles discussed above.

The point of departure in the extensive, difficult, and complex area of law and medicine is the supreme value of the sanctity of life. This supreme value is based, as stated, on the meta-principle of man being created in the image of God, with all that implies. Therefore, the standard of the worthiness of a person does not exist, nor could it exist. The law for a physically or mentally handicapped person is the same as that for a healthy person; we do not measure the degree of health of the body or mind. Similarly, no standard exists with respect to the length of a person’s life. The same rules apply to a person who has only a short period to live and one who is expected to live a long life: the flickering candle still burns and illuminates. Therefore, actively hastening death, or acting to shorten life – even if termed “mercy killing” – is absolutely forbidden, even at the behest of the patient. The obligation, in such situations, is to ameliorate the patient’s pain and suffering in every possible way.

The situation is different with regard to passive euthanasia, the non-prolongation of life, known in Jewish law as the “removal of the impediment.” Passive euthanasia is permitted and, according to some authorities, even mandatory in certain cases, after taking into account such factors as the fundamental principle of minimizing the patient’s physical and mental pain and suffering, the wishes of the patient, the negative consequences of treating the patient against his will, and the various types of treatment – ordinary or extraordinary, natural or artificial, etc.

Similar considerations apply when considering the necessity for consent by the patient. In principle, the obligation of treatment is incumbent upon both the physician and the patient, especially when the treatment is necessary to save the person’s life. However, apart from those cases involving immediate danger to life, this principle has been progressively limited, and in various situations the patient… may not be treated against his will. The consideration of individual autonomy in the decisions of the halakhic authorities came about largely as a consequence of momentous developments in our generation in the field of medicine and the struggle of the halakhic authorities to deal with them. At times, what is determinative is not the opinion of the physician… but rather that of the patient himself, for it is forbidden to “actively cause him to suffer.” Great significance is accorded to the adverse effect that undesired treatment may have on the patient: “The very fact that he is compelled [to undergo the operation] will further endanger him.” This illustrates the methodology of the halakhah – it develops and creates itself through the process of case-by-case decision making.

All these and similar questions dealt with by a growing body of contemporary halakhic responsa attest to the diversity of halakhic views on these difficult, tragic questions pertaining to the relationship between the sanctity of life and prevention of pain and suffering, both mental and physical, with all their implications.

In the State of Israel

The question of shortening, or failing to prolong, the life of a terminal patient has engaged many scholars and writers in the realms of halakhah, medicine, philosophy, and law. Over the past few years, with the development of new technological and diagnostic measures at the disposal of the medical system, the courts are often required to decide on these questions. Section 309 of the Israeli Penal Law criminalizes active euthanasia – i.e., an act that causes the shortening of a patient’s life – classifying it as murder. The Israel Supreme Court addressed the issue of the scope and essence of this offense in the Shefer case (CA 506/98 Yael Shefer v. State of Israel, 48 (1) 87), giving
a leading judgment on the subject. The case concerned a little girl suffering from Tay-Sachs, an incurable genetic disease, and it was undisputed that her days were numbered. Her request (filed by her mother as her guardian) was that in the event of her condition deteriorating, the hospital should refrain from administering life-prolonging treatment. Justice Menachem Elon dealt at length with the aforementioned sources and analyzed the problem from the perspective of the need to strike a balance between the Jewish values of the State of Israel and its democratic values. The court held that, in that case, the mother’s request to allow discontinuation of treatment could not be granted, because on the basis of the medical testimony presented to the court, the child was not suffering, her dignity was preserved and, as such, the sanctity of her life, even in its state of being terminally ill, was the sole and determinant value, and any interference and harm to life contravened the values of a Jewish, democratic state.

For additional judgments dealing with this subject, see: OM 528/96 Bipes v. Tel Aviv-Jaffa Municipality (Tel Aviv District Court); OM 2242/95 A.A. v. Kuppat Holim Kolalit, 2 PDM, 1995, 235; OM 1030/95 Gilad v. Soroka (Beersheba District Court).

In order to discuss and formulate a bill regulating policy in this area, the Ministry of Health appointed a committee, headed by Prof. Abraham Steinberg (referred to as the Steinberg Committee). In 2002, the Asher Committee published conclusions. The report discussed the moral, religious, medical, psychological, social, and legal aspects of the problem, and formulated a draft bill. This bill deals with the various categories of dying patients, including those who are legally competent and those who are not, the different forms of treatment, the status of professional caregivers and of the family, and establishes frameworks for the solution of individual problems, as well as for adoption and review of decisions. The draft bill on the subject conformed with the approach of Jewish law to this subject, and was adopted by the Israeli Legislature as binding law in December 2005.

The section defining the purpose of the Terminally Ill Patient Law, 5766 – 2005 (Section 1) stipulates as follows:

(a) The purpose of this law is to regulate the medical treatment of a patient regarding whom it was determined that he is terminally ill, pursuant to the principles set forth in this Law, based on an appropriate balance between the value of the sanctity of life and the value of individual autonomy and the importance of quality of life.

(b) This law is based on the values of the State of Israel as a Jewish and democratic state, and fundamental principles in the realm of morality, ethics and religion.

Basic Principle of the Law (Section 2):

In prescribing the medical treatment for a terminally ill patient, his medical condition, his will, and the degree of his suffering are the exclusive considerations.

The law provides the following definition of a terminally ill patient (Section 6):

(a) An authorized physician may determine that a patient is terminally ill, if satisfied that the patient is suffering from an incurable illness, and that his life expectancy, even upon receiving medical treatment, does not exceed six months.

(b) An authorized physician may determine that a terminally ill patient is dying if satisfied that his medical condition is such that a number of vital systems in his body have ceased to function, and that his life expectancy, even upon receiving medical treatment, does not exceed two weeks.

The law explicitly prohibits active euthanasia, or assisted suicide, or discontinuation of ongoing medical treatment:

12. Nothing in the provisions of this law shall permit any act, even if constituting medical treatment, that is intended to kill, or which will almost certainly result in death, irrespective of whether or not it was motivated by kindness and compassion, and irrespective of whether or not it was at the request of the terminally ill patient, or of any other person.

13. Nothing in the provisions of this law shall permit any act, even one constituting medical treatment, that contributes to assisted suicide, irrespective of whether or not it was motivated by kindness and compassion, and irrespective of whether or not it was at the request of the terminally ill patient, or any other person.

14. Nothing in the provisions of this law shall permit the discontinuation of the medical treatment of the terminally ill, which is liable to cause his death, irrespective of whether or not he is legally competent […]

Nevertheless, the law does allow the physician to refrain from providing medical treatment to a terminally ill patient ($8) or to refrain from the renewal of medical treatment ($14):

8 (a). Where a legally competent terminally ill patient does not want his life prolonged, his will should be honored and medical treatment withheld […]

14. […] However, it is permitted to refrain from the renewal of medical treatment, which was disrupted inadvertently or not in contravention of the provisions of any law, and it is similarly permitted to refrain from the renewal of periodic medical treatment […]

The law also regulates the treatment of a terminally ill minor (§§19–21), and of a terminally protected person. Moreover, the law regulates the methods whereby a terminally ill patient can give advance living notice of his wishes concerning the medical treatment that he wishes to receive (ch. 5 of the law). The law further appoints an institutional committee, comprising inter alia a clergyman of the same religion as the patient, to rule on doubtful situations pertaining to the treatment of the terminally ill patient.

ORGAN TRANSPLANTATION

Organ transplantation is a new medical technology for the replacement of organs, parts of organs, or tissues that have reached terminal failure, by organs, parts of organs, and tissues that are functional. The transplanted organ may be taken from one part of the person to another, from one person to another, or from an animal to a human being. The transplanted organs
may be artificial or natural, complete (e.g., kidney, heart, liver, etc.), or partial (e.g., heart valves, skin, bone, etc.).

The basic issues involved in organ transplant in Jewish law depend upon the classification of organ being transplanted, being divided into four categories: (a) whether transfer of an organ from the body of the deceased is permitted – a question that arises primarily with respect to cornea and heart transplants; (b) determining the moment of the donor’s death – an important issue in the context of heart transplants; (c) whether or not a person is permitted to endanger himself to save his fellow-man – a question that arises in the context of kidney transplant and other transplants involving a donation from a living person; and, if it is permitted, is he obligated to do so; (d) whether a child or person who is otherwise legally incompetent may serve as a donor.

**Cornea Transplants**
The questions raised by cornea transplants are common to all forms of transplant in which the transplanted organ is taken from the dead donor. Under what circumstances may an organ removed from a dead person’s body serve for the recuperation of another person (see “Medical Experimentation”)?

The *posekim* discuss whether the removal of an organ from a dead person violates the prohibition of deriving benefit from the dead person, the majority opinion being that it does not (Resp. Radbaz, vol. 2, no. 648; *ibid.*, vol. 3, no. 648 (1009); Resp. *Shevet Yehudah*, pp. 313–22). It was further ruled that there was no prohibition of postponing burial entailed in transplants from a dead person to a living person (see: Deut. 21:22–23; Sanh. 44b, and other sources), nor is it considered as neglect of the positive precept of burying the dead organ, because the organ is restored to functionality by the act of being transplanted into a live body, and is hence not classified as “flesh of the dead” (*Resp. Shevet Yehudah*, *ibid.*; *Resp. Seridei Esh*, vol. 2, no. 120; *Resp. Yabi’a Omer*, vol. 3, YD no. 22). The *posekim* also discussed whether the removal of an organ from the dead person’s body transgresses the prohibition of mutilating the dead body. According to one view, in order to avoid this prohibition there is a need for a prior living consent to the act (*Resp. Shevet Yehudah*, *ibid.*), and according to another view, it is permitted to remove the organ even without prior living consent in cases of great need, even if it does not involve the saving of a life (H.D. Halevi, in: *Astor*, 4 (1983), 251–59).

Most contemporary halakhic decisors take the view that, if, confronted by a patient requiring a transplant, his condition is defined as life threatening (*pikkutah nefesh*), and if the donor agreed while still alive to have his organs taken, it is permitted to remove his organs after his death to transplant them into a live person; there are those who even rule that this is a *mitzvah* – i.e., a religious duty. The family must, however, consent to the removal of an organ from their deceased relative, for purposes of a transplant (*Resp. Iggerot Moshe*, YD 174:4).

**Heart and Liver Transplants**
The central issue involved in the context of heart and liver transplants is determination of the moment of death. Today, both the heart and the liver can only be transplanted if the donor’s circulatory system is still functional. From the moment the heart stops beating, the blood stops circulating and it is no longer possible to transplant that heart. Thus, in order to successfully transplant a heart, the state of death must be determined prior to the cessation of heartbeat in the donor’s body. The question then arises as to whether a person suffering from irreversible brain damage or from actual brain death, but whose heart continues to beat, is considered halakhically alive or dead. Accordingly, the question of whether heart or liver transplants can be permitted touches on the question of determination of the moment of death according to the *halakhah*. In any event, the life of a terminally ill or dying patient cannot be artificially prolonged solely to enable use of his organs for transplanting purposes, because one life may not be set aside to ensure another life (*ein dohin nefesh mipnei nefesh*), and the life of the dying person may not be set aside for the sake of the healthy person’s life (*Minhat Yitzhak*).

According to certain authorities, it is absolutely forbidden to remove an organ from a person defined as brain dead (*Resp. Ziq Eli’èzer*, vol. 10, nos. 25, 85, and 86; *Iggerot Moshe*, YD 2:174), while others permit it (Israeli Chief Rabbinate; see *Tehumin*, 7 (1986), 187–92).

**Kidney Transplants**
A kidney transplant is performed, inter alia, by a healthy person donating one of his kidneys to another person whose kidneys are non-functional. The question that arises here is whether the donor is permitted to place himself in danger in order to save another. Since, as stated, the donation is from a living person, an additional question sometimes arises – whether a kidney may be taken from a person who is unable to express his consent, such as a child or a mentally incompetent individual and, if so, who is entitled to consent on his behalf?

An important principle in Jewish law is that “whoever could have rescued, but failed to do so, transgresses the commandment, ‘Do not stand idly by the blood of your fellow’” (Lev. 19:16; see Sanh. 73a; Yad, Roze’ah u-Shemirat ha-Nefesh 1:14–16; Tur, *HM* 426). Maimonides stated that this prohibition is “one of the most severe, because whoever destroys one single soul... is regarded as if he had destroyed the entire world, and whoever preserves a single soul... is regarded as having preserved the entire world” (*Yad, ibid.*; regarding the halakhic duty to save life in a similar context, see the comments of Justice Beiski, Cr. App. 527/85 *Kurtam v. State of Israel*, 40 (3) PD 673, at 696–97).

When there is no danger to the rescuer, his obligation is absolute. The difficult question is: To what extent is a person required, or perhaps, allowed, to endanger his own life to save another’s? This question has troubled the halakhic authorities.
Some hold that a person must expose himself to a possible danger, when necessary to rescue his fellow from a danger that is certain (Beit Yosef to Tur, ḤM 426); but many disagree (Sefer to Sh. Ar., ḤM 426, par. 2). A recent halakhic authority aptly summarized the law as follows: “It all depends on the circumstances. One should weigh the situation carefully and not be overly self-protective … Whoever saves a single person is regarded as if he saved an entire world” (Arakh ha-Shalhan, ḤM 426:4). For sources discussing this difference of opinion, see: R. Ovadia Yosef, “Teshuvah be-Heter Hashatalat Kilyah,” in: Dinei Erets, 7 (1976), 25–43; idem, “Be-Din Terumat Kilyah,” in: Halakhah u-Refu’ah, 3:61–63; idem, Resp. Yeheve Da’at, vol. 3, no. 84).

The removal of an organ from a person’s body in order to save another person’s life is discussed by the halakhic authorities in the context of danger to the donor. But this discussion entails a further inquiry: Is there any basis at all for obligating a person to donate an organ to save someone else? The following answer was given by the outstanding halakhic authority, David ibn Zimra (Radbaz), a 16th-century rabbi of Egypt and Israel, against the tragic-heroic background of the Diaspora, and the government’s treatment of its Jewish minority (Resp. Radbaz, vol. 3, no. 1052): “You have asked me… [what should one do] if the government says to a Jew: ‘Allow us to sever one of your limbs, which will not cause your death, or we will kill your fellow Jew!’”

Radbaz answered that, even if it is certain that the amputation is not life-threatening, there is no obligation to allow it. One is permitted to allow the amputation, and it would be an act of great piety to do so. Radbaz’s summary is instructive: “and furthermore, it is written ‘Her ways are pleasant ways’ (Proverbs 3:17). [This means that] the laws of our Torah must accord with reason and logic. How then can we suggest that a person should allow his eye to be blinded or his arm or leg amputated in order that someone should not be killed? Therefore, I do not see such an act as a legal obligation, but as one of pious behavior. Happy is the lot of anyone who can bring himself to do such a thing. [But] if there is any possible danger to his life, he would be a pious fool, because his doubt has priority over the certainty of his fellow.” (Regarding the principle of “Her ways are pleasant ways” in the determination of halakhah, see: Menachem Elon, Ha-Mishpat ha-Iveri (1988), 3:23 ff.; idem, Mafteiḥ ha-Shē’elot ve-ha-Teshuvot shel HaKhmei Sefarad u-Zefon Afrikah, Mafteiḥ ha-Mekorot (vol. 1, 1981), Introduction, p. 25.)

The removal of a person’s organ in order to save his fellow, even if not involving danger to the donor, cannot be compelled, because it violates the principle that the ways of the Torah are pleasant, and “the laws of our Torah must accord with reason and logic.” Based on this, it is inconceivable that a person could be compelled to donate an organ from his body to save another person, although such behavior would be considered an act of piety, on a voluntary basis, and it is desirable that a person do so, beyond the letter of the law (see also Resp. Radbaz, vol. 5 of LeShonot ha-Rambam, no. 212 (1682), and the attempt to reconcile these two responsa, which goes beyond the scope of this article).

This responsum of Radbaz is one of the central texts in the discussion among contemporary halakhic authorities regarding a kidney donation for transplantation in the body of another person. The issues considered include that of potential risk to the donor, whether an individual may wound himself, and similar halakhic questions. Opinions differ. Some forbid kidney donation (Resp. Ziz Eliezer, vol. 9, no. 45; vol 10, nos. 25, 7, 28; and cf. Weiss, Resp. Minhāt Yiẓḥak, vol. 6, no. 103), but most authorities hold that, although one is not obligated to donate, it is an act of great piety when there is no risk to the donor (M. Feinstein, Resp. Iggerot Moshe, YD, vol. 2, no. 174:4; responsum of R. Solomon Zalman Auerbach, quoted in Nishmat Avraham, YD 157:4, at 66–67 (1985); responsa of R. Ovadia Yosef, sources cited above; Rabbi H.D. Halevi, in: Assia, 4 (1983), 251–59; Rabbi Y. Silberstein, in: Halakhah ve-Refu’ah, 4 (1985), 156–57; Rabbi S. Dikhovsky, Néot Desheh, 2:154–155). In our generation those who ruled that it was forbidden for a living person to donate a kidney claimed that it may be dangerous, and it is forbidden to a person to put himself in a state of danger (Ziz Eliezer; Resp. Minhah Yiẓḥak). There were those who permitted a living person to donate his kidney, regarding it as an act of piety, but there is no obligation to do so (Resp. Iggerot Moshe, YD, vol. 2, no. 174:4). And among those who permit it there were those who ruled that the donation of a kidney from a living person is not only permitted, but it constitutes a mitzvah, and failure to fulfill it violates the prohibition of “Do not stand idly by the blood of your fellow,” because the risk is minimal and the chance of the remaining kidney being damaged in the future is sufficiently remote so as not to be regarded as even being remotely dangerous (see Rabbi Ovadia Yosef, in: Dinei Yisrael, 7 (1976), 25–43; Resp. Yeheveh Da’at, vol. 3, no. 84).

Legally Incompetent Person

In certain cases the most appropriate donor in terms of tissue classification is a legally incompetent person. There is no halakhic permission for the removal of a kidney from a legally incompetent person for the purpose of a transplant. This is the case when dealing with one who is mentally incompetent. This prohibition applies unless it is clear that the legally incompetent person derives clear benefit from the donation, and it is performed exclusively for his benefit, and provided that there are no other means of ensuring that benefit (Justice Elon, ICA 184/87, 698/86 Anon. v. Anon. 42 (2) PD 661. See also: Rabbi M. Meiselman, Halakhah ve-Refu’ah, 2 (1981), 114, who wrote that if the majority of sons or brothers donate kidneys to their relatives, there is a presumption based on common sense that the legally incompetent person would also have given his consent. Justice Elon rejected this view).

Regarding blood and bone marrow donations, it was ruled that these are permitted since they do not involve any danger, and the material regenerates. It is therefore a mitzvah for members of a family to volunteer to do so when required in
order to save a life, and in such cases lenient rulings are given even with respect to the legally incompetent person (Nishmat Avraham, YD 349:3). If the donor refuses, according to some authorities he cannot be compelled, the donation being considered as an act of piety, while according to other authorities, he can be compelled (Resp. Shevet Halevi, vol. 5, no. 219).

In the famous case of Anon. v. Anon. (LCA 184/87, 698/86 Anon. v. Anon. 42 (2) PD 661), Justice Elon discussed the issue of whether it is permitted to remove the kidney from a mentally disabled adult to be transplanted in his father-guardian's body and, if so, who has the authority to grant such permission, and under what conditions and circumstances. In keeping with his judicial practice, Justice Elon relied on precedents from Jewish law (as shown above) and on the legal sources and practices of other democratic states, attempting to synthesize between them. Justice Elon concluded his judgment in this case as follows (ibid., 689–90):

The general rule is that the sole criterion for allowing the removal of a kidney from the protected person's body for transplantation is whether the removal benefits the protected person. The court must weigh up and balance, in accordance with the conditions detailed above, the extent of the benefit to be gained by the protected person as a result of the transplant into the donee's body, against the damage that may be caused to him by the removal of the kidney and the fact that he will be left with only one kidney. The balancing process must be based on the specific circumstances of the protected person, in his current condition, as it may be in each particular case that comes before the court. The court will allow the transplant only if the result of this balancing definitively establishes that the transplant will clearly and substantially benefit the protected person [...].

How can the court perform this balancing? One can point to a number of tests, which are not exclusive, but will be applicable in most situations.

(a) Factors in Assessing the Benefit to the Protected Person
1. The extent of the protected person's dependence on the support of the donee;
2. The existence of alternatives to assure the support and necessary care of the protected person at a level comparable to that which he would receive as a result of donating the kidney. These include other possible donors, whether dialysis is a sufficient remedy, and whether there are sources of support, without the donee;
3. The likelihood – both relative to the alternatives and absolutely – that the transplant will be successful and, if so, the extent to which it will increase the donee's life expectancy, and the significance of that increase for supporting the protected person;
4. The life expectancy of the protected person and the number of years during which he will need support and, in particular cases, his interest in helping his family members or in avoiding guilt feelings, when this interest is clearly proved. This interest must exist at the time of the transplant, if only to a limited extent, and must be expected to increase progressively.

(b) Factors in Assessing Harm to the Protected Person
1. Physical damage and side effects
(a) due to the surgery;
(b) due to being left with one kidney.

2. Mental damage to the protected donor
(a) as a result of the surgery and hospitalization;
(b) as a result of the removal of the kidney without his understanding or consent.
3. Limitation on his future actions as a result of being left with one kidney, taking into account his situation as a mentally disabled individual, both from the point of view of protecting his health and considering the fact that he will not be preferred for dialysis or transplant should he ever need it.

In light of the circumstances of the particular case, the Supreme Court ruled against the transplanting of the kidney of the mentally disabled son into his father. Justice Elon concluded his opinion with the following observations (ibid., 700–1):

The question before us is difficult and painful. We have a father, devoted to his son, who removed him from an institution and cared for him with love and dedication. We have no doubt that the father's request for the kidney was made because he was told that his son would not be hurt and because he was convinced that it was in the son's best interest that his father enjoy a long life and continue to care for him. But we, as a court, are instructed, by law and morality, to look at the total picture in this situation. We must keep in mind that at issue is the invasion of a person's body and the removal of one of his vital organs – an organ which does not regenerate and for which there is no substitute. Moreover, the donor does not understand what is happening to him and what is being taken from him. How disingenuous and possibly even cynical it is to use the term “donation” to describe the taking of a kidney under these circumstances.

Scholars and thinkers have discussed the social, familial, and psychological pressures operating when an individual needs to decide whether or not to donate a kidney to a family member. Indeed, even when referring to a totally healthy person, it is doubtful that the proper term is “donation,” since a donation is essentially linked to the idea of “if his heart so moves him” (Exodus 25:2). A fortiori, there is certainly doubt in our case, under the aforementioned circumstances. Not only is there no donation here made out of generosity, but this is a prime example of coercion. This is a serious matter that could severely damage the cultural and spiritual fabric of our society. As a court, we are the “father” of the legal incompetents, of those who do not understand and cannot consent or decide on their own, and we must protect those unfortunates to maintain their dignity as human beings. As such, we are not superior to the father before us, who sired the child and cared for him his whole life. We would never think that. But we are appointed by law to weigh all the considerations – legal, halakhic, and ethical – that arise in these situations, and in this respect, and only in this, do we take precedence over the father. By examining all the considerations and balancing them, we have concluded that we should not allow the removal of the kidney from the son for the father. We again urge that all efforts be made to obtain a transplant for the father from a cadaver so that he can continue caring for his son.

Trafficking in Organs
Commerce and organ donation are contradictory concepts; “doing business” with human organs conflicts with fundamental spiritual and ethical values. Recently, learned schol-
ars, halakhists, philosophers, and ethicists have discussed the reasons for prohibiting the sale of human organs. For example, it is customary to pay for the donation of blood to a blood bank, because the body replenishes the blood, and the donation does not endanger the donor. The same is true for donations of bone marrow. But giving up a kidney in exchange for money raises grave doubts and difficulties. The essential question here is: Where will the “slippery slope” end? Societal, psychological, and economic pressures may bring us to an “organ market” of “spare parts,” and to a situation where the bodies of the poor become “supply depots” for the rich. The actuality is that the rich will not sell any of their bodily organs but the poor – even when they have no relationship with the donee – are likely to sell their organs to rescue themselves from poverty and need. This is an ominous prospect from the perspective of human dignity and value. Therefore, as a general rule, we should avoid setting foot on this slippery slope, and any allegedly exceptional circumstances should be evaluated case by case and with great care (Elon, ibid.).

In the year 2003 Knesset Member Zahava Gal-On presented a draft bill to prevent trafficking in organs, known as the “Bill to Outlaw Trafficking in Organs.”

The Legal Position in Israel. The Anatomy and Pathology Law, 5713 – 1953 defines the ways in which organs may be removed from a cadaver for transplant purposes:

6. Anatomical-pathological operations

(a) A physician may operate on a body in order to ascertain the cause of death or to use a part thereof for the curative treatment of a person if it has been confirmed by a certificate signed by three physicians authorized on that behalf in accordance with the regulations that the operation serves one of the said purposes.

(b) (1) The body of a deceased shall not be dissected before the expiration of five hours after notice of the death is given to a relative. Sabbaths and Jewish holidays or, in the case of a non-Jewish relative, the Sabbaths and holidays of his community, shall not be included in the count of the said five hours.

(2) Notwithstanding the provisions of paragraph (1), where the dissection is required in order to use a part of the body for the curative treatment of a person, reasonable notice to such effect shall be given to a relative before the dissection.

(c) (1) Where the need to use a part of the body of a deceased person to save a person’s life becomes apparent, the period referred to in subsection (b) shall be replaced by the period up to the latest time at which it is possible to remove the part from the body for use as aforesaid. If notice under subsection (b) cannot be given by the said time, owing to the impossibility of locating a relative, a dissection under this subsection may be performed provided that a reasonable attempt to give notice has been made.

(2) Without prejudice to the generality of the provisions of paragraph (1), the use of the cornea of a deceased person for a transplant to save a person from blindness, the use of a part of the body of a deceased person to prevent a defect of vision or hearing, and the use of a kidney or of skin tissues of a deceased person for a transplant to save a person’s life are uses of parts of a body for the saving of a life.

6A. Restrictions

(a) Where a deceased person has left any relatives, his body shall not be dissected under section 6 – except under circumstances referred to in section 6(c) – unless the following two requirements are also met:

(1) the spouse or, in the absence of a spouse, the children or, in the absence of children, the parents or, in the absence of parents, a brother or sister of the deceased has or have consented;

(2) no relative of the same degree of relationship as a consenting relative, and no relative of the degree which, in the circumstances of the case, is next in the order of degrees appearing in paragraph (1), have objected in writing.

(b) Where the person in his lifetime objected in writing to his body being dissected, then, notwithstanding the provisions of section 6 or any consent of a relative under subsection (a), the dissection shall not be performed.

(c) Where the person consented to his body being dissected, it may be dissected notwithstanding any objection by a relative.

(d) In the circumstances referred to in section 6(c), a body may be dissected unless the person in his lifetime objected in writing to his body being dissected or unless his spouse or one of his parents or children objects thereto in writing.

(e) Where the person has left no relatives, his body shall not be dissected unless he consented thereto in his lifetime.

(f) The provisions of this section shall be in addition to those of section 6.

The law provides (§6D), that “the provisions of section 6A shall not apply in wartime or at the time of a large scale terrorist act or an accident or disaster causing numerous casualties.” Furthermore, Section 6A established a penalty of three years’ imprisonment for a person transgressing the provisions of the law.

An additional aspect of organ transplants from a dead body dealt with in Israeli case law is the determination of the moment of death. The question of the moment of death was dealt with by the Israeli courts in the context of criminal law. In one of the cases the court was required to determine responsibility for the death of a person who was shot in the head, mortally wounded, and rushed to hospital, where the doctors succeeded in saving his life by connecting him up to the life-support machines. With his family’s consent, the victim was subsequently disconnected from these devices. The question arises: Who was responsible for his death – the gunman or the doctor? Did the victim’s disconnection from the life-support system sever the causal connection between the victim’s death and the murderer’s act?

Another case in which the same question arose was the Belker case. In 1986 an indictment was submitted against Yehezkel Belker for attacking his wife, throwing her out of the window of their fourth floor apartment, and causing her mortal injury. The woman was rushed to hospital, and when efforts to save her had all failed, her death was established on the basis of brain death. The deceased remained connected to the life-support machines until her family living abroad con-
sented to the donation of her organs. When her husband was indicted for murder, he claimed that the woman’s death was not the result of his attack, but rather, was the direct result of her being disconnected from the respiratory machine by the medical staff. Ruling on this claim required the court to address the question of the moment of death, and to decide as to whether the medical determination of brain death should also be regarded as a legal determination. The District Court ruled that brain death is death for all intents and purposes, on which basis it convicted him of murder. The husband appealed to the Supreme Court (Cr. A. 341/82) 42 (1) Nathan b. Yehezkel Belker v. State of Israel PD 1) which ruled (per Justice Beiski) that, in accordance with the accepted rules for determination of death (as established by the Harvard Committee), and provided that the determination of death was made by an independent medical team not belonging to the team performing the transplant and/or the team actually treating the patient, a determination of brain death is considered as death for all intents and purposes. In such a case a death certificate may be issued and medical treatment terminated. Such a determination of death is in turn valid for all other legal or social purposes, including an indictment for murder. The Court recommended that the issue of determination of death be regulated by legislation. In this context, Justice Strasbourg-Cohen’s comments bear mention. She ruled that, even had the trial court adopted the previous version of cardiac death, the doctor’s action in disconnecting the life-support machines would not have severed the causal connection between the act of the accused and the death of the deceased. Absent the actions of the accused, the final result would not have occurred, and had the doctors not interfered, the death would have occurred immediately following the attack.

The Ministry of Health issued a Director-General circular, updated several times, stipulating provisions for the determination of brain death. The circular was published in 1996 (Director-General Circular 10/96; the most recent as of 2005), the first section of which cites portions of the Supreme Court judgment with respect to the validity of brain death determination. The second section provides guidelines for the categories of examinations to be conducted for diagnosing death. The circular stipulates a series of preconditions, necessary conditions, and auxiliary tests for determining brain death.

ARTIFICIAL INSEMINATION

Artificial insemination is the medical procedure whereby sperm is injected into the vagina or womb of the woman without the act of sexual intercourse. A distinction is made between three categories of artificial insemination, in accordance with the source of the sperm: (1) husband insemination – where the husband contributes the sperm; (2) donor insemination – where a man who is not the wife’s husband is the donor or where the sperm is taken from a sperm bank; and (3) mixed insemination, using a mixture of the husband’s sperm with that of a donor. The processes of fertilization in the woman’s womb, pregnancy, and birth, continue naturally after the artificial insemination, as in any normal impregnation. Artificial insemination can only take place under conditions in which there is no defect in the woman’s fertility, either anatomically or physiologically (see below: fertilization outside the body – In Vitro Fertilization). Rabbi Eliezer Waldenberg begins his lengthy responsum on this topic with the following comments:

Physicians have recently invented a new method by which a woman can become pregnant via artificial means, without sexual intercourse. Sperm is obtained from a donor, and when a woman desires to become pregnant without intercourse she is inseminated artificially, becomes pregnant, and gives birth. This method is most often used when a married couple is unable to have children due to an impediment on the part of the husband. While they do not wish to get divorced, the wife desires to have a child. In these circumstances, some physicians perform artificial insemination so that the wife may become pregnant and give birth. The question asked is whether such a procedure is permissible under Jewish law, and what is the status of the resulting child.

In considering the procedure of artificial insemination, modern halakhists refer to aggadic precedents indicating that the talmudic and mishnaic Sages were aware of the possibilities of impregnation other than by way of natural means. Inter alia they cite the aggadah of the birth of Ben-Sira from Jeremiah’s daughter, who conceived from her father’s seed that remained in the bath in which she bathed (see: Helkat Mehohek, EH 1:8; Mishneh la-Melekh on Yad, Ishut 15:4; Hidda, Birkei Yosef (vol. 2, 1989), EH 1:14; Rabbi D. Bardugo, Resp. Mishpatim Yesharim (1891), vol. 1, no. 396).

Moral and Halakhic Considerations

We already mentioned above that issues of halakhah and medicine generally pose a plethora of moral and halakhic questions, particularly where they involve technological innovations. For this reason, halakhic discussion of these issues is not confined to conceptual issues alone, but also encompass policy considerations. One such consideration relates to the uncertainty surrounding the issue of the lineage (yihus), of the child born as a result of using donor sperm. This uncertainty conflicts with the basic halakhic aspiration for certainty in matters of lineage, i.e., certainty regarding the family they belong to (see Rashi, Yevamot 42a, s.v. u-le-zarakha aḥarekha). There are also several other general policy issues, transcending the problematics of lineage. The morally-based questions and fears that have typified the dialogue on these questions throughout the world are of equal concern to modern halakhists. They too are apprehensive about the danger of crossing of traditional borders, coming in the wake of scientific progress. For example, it has been stated that bringing children into the world should be the result of spousal relations involving marital love and intimacy, and not of mechanical laboratory techniques (see P. Shifman, Dinei Mishpahah be-Yisra‘el, 2 (1989), 105; E. Jacobovitz, Ha-Refu‘ah ve-ha-Yahadut (1966), 235). In this context, the following comments of Rabbi E. Waldenberg are germane:
And especially when we have already read that the final result of test-tube fertilization is that sooner or later it will lead to the creation of a test-tube baby, i.e., the entire pregnancy will take place and terminate outside the woman's body, in the test tube itself, by way of simulating the conditions inside the womb; and then, by means of an astonishing procedure known as cloning, human beings will be produced by the implantation or transposition of the nucleus from a mature cell into an enucleated human egg, after which the reproductive process of the regular cell operates and continues to develop into an embryo, and this is the name that they give to a complete biological creation, in accordance with certain previously determined parameters to reproduce the specific characteristics desired by its creators. And if this happens – can such infants be called "offspring," with full lineage to their progenitors who wish them to be considered their genetic offspring? For in addition to the abnormal form of production and bringing children into the world, it also causes the destruction and loss of the human image, and chaos will reign with respect to the whole field of procreation, which will become a laboratory devoid of any humaneness. This problem has already been predicted by scientists, who have expressed their deep anxiety over the anticipated scenarios – a new generation will emerge and all those witnessing it will exclaim "new ones have come, who were unimagined by their forefathers, [so that we] see creatures of this kind, almost without free choice, and human form."

**Artificial Husband Insemination.** Various posekim take the view that the husband is forbidden to emit semen for the purpose of inseminating his wife, due to the prohibition of "destruction of seed," because at the time of masturbating for the purpose of ejaculating the semen, its emission is in vain, and the fact that the physician subsequently uses the semen for fertilizing the woman is to no avail. Furthermore, there is a possibility that the woman will not be fertilized by that semen, and as a result the semen will retroactively transpire to have been emitted in vein. However, the predominant halachic opinion is that the procedure does not involve "destruction of seed" when emitted by the husband for purposes of fertilization, because the procedure is a remedial one, for purposes of a mitzvah, and it does not matter whether the end is attained by natural means or otherwise. At the same time, a number of limitations were imposed: the permission is limited to parties who have been childless for a period of ten years, and who in the absence of fertilization are liable to divorce. Two physicians must decide that the procedure is effective, i.e., that the woman does not suffer from any fertility problem and that there is a reasonable chance that the husband's sperm will succeed in impregnating the wife; the doctors must take special care not to exchange the husband's sperm for another person's sperm. In the event that fertilization is prevented due to early ovulation of the woman, as a result of which she is unable to purify herself from her niddah status at the appropriate time to allow fertilization by natural means, there are opinions that permit husband artificial insemination. The posekim also debated the question of whether the husband fulfills the commandment of procreation in the case of artificial insemination. The accepted view is that the husband does so, because the commandment is not dependent on the act of intercourse, but rather on the result of the birth of a live fetus.

**Non-Jewish Donor Insemination.** A different set of problems arises in Jewish law regarding artificial insemination from a donor other than the husband. The central question is whether artificial insemination is permitted at all with the sperm of a man other than the husband, and if not, are there any circumstances in which it is permitted, and subject to what limitations. Is the woman thereafter permitted or forbidden to her husband, as in the case of an adulterous wife, and what is the lineage and the status of the child?

**Non-Jewish Donor.** While all posekim agree that de jure there should be no insemination even from a non-Jewish donor, there are nevertheless those who permit it in the case of sad, despairing parents who yearn for a child. A child born under these circumstances is a Jew for all intents and purposes.

**Jewish Donor Insemination.** There is broad halachic consensus that artificial insemination of a woman from the sperm of a Jewish donor is prohibited. A variety of reasons are given for this prohibition: some moralistic, based on the classic model of the family in the Jewish philosophy, and others halakhic, related to the uncertainty of the identity of the donor-father. At the same time, the halakhists dispute whether a married woman impregnated by a Jewish donor is prohibited to her husband. One view is that a woman artificially impregnated by semen of a donor is not prohibited to her husband, because there was no act of forbidden intercourse involved, and Torah law only forbids a woman to her husband and to her lover if an act of forbidden sexual relations was involved. Among the supporters of this view were the Sephardi chief rabbi, Rabbi Ouziel (Resp. Mishpeiti Uziel, EH 19); Rabbi M. Feinstein (Resp. Iggerot Moshe, EH, nos. 10, 11, 71); Rabbi Y. Breisch (Resp. Hekhat Yaakov, vol. 1, no. 24); Rabbi E.Y. Waldenberg (Resp. Zitz Elizer, vol. 3, no. 24); Rabbi Y.Y. Weinberg (Resp. Seridei Esh, 6), and other leading ahamronim. The position prohibiting the wife to her husband is based on the interpretation of the biblical verse, “you shall not lie carnally with your neighbor’s wife,” as extending to any implantation of semen in the woman’s womb. Among the proponents of this view are R. Jonathan Eybeschutz (Benei Ahuvah, Ishut, 15); Rabbi J.L. Zirelson (Resp. Ma’arkei Lev, 73); and the rabbi of Satmar, R. Yoel Teitelbaum (“Teshuva bi-devar Hazra’ah Melakhutit be-Zera Ish Acher,” in: Ha-Ma‘or, 16:9–10 (Sept.–Oct. 1964), and others. The posekim also disputed the question as to whether the child was regarded as the child of the sperm donor, in which case he would be prohibited against marrying members of the sperm donor’s family, he would be the donor’s heir, and the donor would be regarded as having fulfilled the commandment of procreation. Some ruled that the child would be regarded as his real son, while others argued that this ruling only applied for purposes of stringency and not for leniency, i.e., that the child was forbidden from marrying, for example, the
daughter of the sperm donor, but does not inherit him. The posekim were divided over whether, in the event of his marrying the daughter of the donor, his offspring would in turn be considered a mamzer.

Anonymous donor. Where the donor's identity is unknown – e.g., when taken from a sperm bank – it has been suggested that, even according to the view that the offspring of artificial insemination is not a mamzer, in such a case he would be classified as a shetuki ("undisclosed"); see: *Mamzer/ Shetuki*). Some posekim wrote that, in the case where the sperm comes from outside of Israel, where there is a non-Jewish majority, it may be presumed that the sperm belongs to a non-Jew and therefore the offspring is legitimate.

Where the sperm is mixed with that of the husband, the posekim wrote that it should be regarded as if it was exclusively the outside donor's sperm, because the husband's sperm is inactive and the mixture is intended to placate the husband psychologically. In such a case, the husband is also regarded as having transgressed the prohibition of "destruction of seed."

Artificial Insemination in Israeli Law

The Israeli legislator enacted the Public Health (Sperm Bank) Regulations, 5739 – 1979, under which “No person shall manage a sperm bank, or be engaged therein, unless that sperm bank was recognized by the director, and in accordance with the conditions of recognition. The director shall not recognize a sperm bank unless it is managed in a hospital and as a part thereof. For purposes of the regulation, “manager” has the same definition as in section 1 of the Public Health Regulations, viz. the director general of the Ministry of Health, or person empowered by the director to enact these regulations.” Following Supreme Court consideration of the matter, a clause limiting the rights of unmarried women to receive treatment for in vitro insemination treatment was repealed, so that today, subject to certain conditions, an unmarried woman is entitled to receive a sperm donation.

Artificial Insemination in Halakhic Case Law

The first decision on this subject was given by the Jerusalem Rabbinical Court on November 6, 1975, and published by the av bet din, Rabbi Eliezer Waldenberg (presiding with Rabbis Y. Cohen and Y. Attiah) in his book *Ziz Eliezer*, vol. 3, no. 97. The litigants in the regional rabbinical court were a childless couple. Without her husband's knowledge, the wife had been treated by a doctor who performed an artificial insemination procedure from a sperm bank. The treatment led to positive results, and the woman became pregnant from foreign donor sperm. Upon becoming aware of this, the husband filed for divorce. The woman conceded the truth of his claims, but claimed in her defense that a medical examination had confirmed that the husband was sterile, and unable to father a child. She had requested that her husband agree to adoption, but had received a negative answer. Wanting a child of her own, she had taken a path that enabled her to become pregnant. The Bet Din was confronted with the legal question as to whether the woman's consent to be artificially inseminated from donor sperm without her husband's knowledge provided grounds for divorce, even though it had not yet ruled on the question of whether the wife was forbidden to her husband, having become impregnated in that manner. Another question to be decided was the legal import of the husband's refusal to adopt, against the background of his infertility. The Bet Din Court accepted the husband's claim, compelled the wife to receive a get, and further ruled that the woman had forfeited her kettubah. Following is an excerpt from the judgment:

In consenting to the sperm of another man to be injected into her, the woman betrayed both her husband and God, and she is therefore obligated to receive a get from her husband. She cannot stipulate any financial conditions prior to the giving of the get, nor request that her husband transfer the apartment currently under both of their names into her name alone.

In explaining the reasons for its decision, the head of the Rabbinical Court (av bet din), presented a comprehensive excursus on the issue of artificial insemination and its halakhic ramifications, concluding that there could be no greater abomination. Notwithstanding the opinion that the wife was not forbidden to her husband when she resorted to this method with her husband's consent, it was not disputed that the wife was obliged to receive a get when the treatment and the pregnancy were without his knowledge. The upshot of this ruling was that the wife had no recourse to the defense plea that her husband had refused her request to adopt despite his proven infertility. Because: “if she required a solution to the problem then she had the opportunity of coming to the Rabbinical Court and making that claim, and to request that her husband be compelled to give her a get pitturin, and she would have found an attentive ear.” The Rabbinical Court thus took a positive view of the defendant's desire for a child of her own, to the extent of being willing to compel her husband to divorce her, had she so requested. But, “there is a vast chasm between this, and the commission of an act that undermines the very foundations of the family unit between her and her husband, and which the halakhic authorities had unanimously condemned.” According to the Bet Din the wife's yearning for children did not ameliorate the gravity of her action, which was all the more severe in that she had concealed it from her husband. Regarding that point, it added the following remarks in its decision:

At all events, should the husband desire to give her a get for that reason – namely, that she had undergone artificial insemination without his knowledge, even though she had not become pregnant thereby – the wife should be compelled to receive a get pitturin, both because of the halakhic dispute in this matter as stated, and furthermore, because the actual commission of this abomination in her body without her husband's knowledge places her in the category of a woman who has transgressed Mosiach law and Jewish practice, and the law applying to her should therefore be the same… Moreover, there is also a view that the act itself makes her prohibited to her husband, and the husband can therefore claim, “I choose to abide by that opinion,” and he cannot be forced to give a kettubah.
The last (as of 2005) Rabbinical Court decision on the matter was also given in the Regional Rabbinical Court of Haifa, on 6th Av, 5737 – 1977. The parties were a husband and wife with a four-year-old mentally retarded child, diagnosed as having a particularly low intelligence level. The child was born following the woman undergoing artificial insemination from donor sperm. The husband consented to this treatment due to the fact, not denied by the parties, that he was unable to fertilize the wife. Both parties petitioned the Bet Din. The wife requested the Bet Din to order the husband to pay maintenance for herself and the child, asking for a high sum, in accordance with the rule olah ino (lit., “she goes up with him”) – i.e. that her maintenance increases by reason of his high earnings, and by reason of the treatment of the retarded child who required special equipment. The husband filed for a get, claiming that his wife’s act was a ground for divorce, because the artificial insemination from the sperm of a donor was tantamount to an act of sexual license, making the wife forbidden to her husband. As such, there were grounds for exempting him from her maintenance, and he was therefore also exempt from the obligation of child support. The Bet Din was requested to rule on the question of whether the defendant could be compelled to pay child support when it was not disputed that the plaintiff’s (wife) child was not the defendant’s (father) child. The question arose: What is the legal significance of the defendant’s consent to this medical procedure? The Bet Din in the first instance dismissed the husband’s divorce suit, obligating him to pay maintenance for the wife and child support for the child, whose treatment necessitated huge expenses. Explaining the reasons for its decision, the Bet Din expressed its opinion:

...in support of the opinion that denies even a shadow of illicit sex in the act of artificial insemination, which might have provided a ground for divorce or even the forfeiture of maintenance. And as the foremost decisors of our generation have ruled [...] the exemption from maintenance applies – when the insemination was performed in defiance of the husband’s will and without his being aware of it. From this it may be inferred quite simply that, if it was done with his consent, and he was aware of it – he is liable to support the child born from that insemination.

Regarding the wife’s claim for maintenance, the Bet Din added another reason:

Since he agreed to this procedure, he assumes all of the obligations arising therefrom, according to the law of a guarantor, and there is no doubt that under these circumstances expression is given to all of the conditions that would compel a guarantor (even though it could be claimed that he assumed an undertaking for normal offspring, and that his undertaking was limited to those circumstances, but since he did not limit his undertaking he should also be liable for irregular expenses which are occasioned by the offspring).

Does this decision support the conclusion that, in the Bet Din’s opinion, artificial insemination from a donor with the husband’s consent does not constitute illicit sexual relations which would prohibit the wife to her husband and obligate her to receive a get? This would seem to be the reasonable conclusion, subject to some degree of reservation based on the fact that the decision does not indicate whether the Bet Din in principle negates the very act of artificial insemination, or whether under the special circumstances of the case, in which the husband consented to the treatment, it is removed from the category of illicit sexual relations or, in the words of the Bet Din “denies even a shadow of illicit sex in the act of artificial insemination.” At all events, in our opinion, the Bet Din does not view the aforementioned act as constituting grounds for divorce, because the wife was not prohibited to her husband as is a woman who is unfaithful to the husband while married to him. However, since the Bet Din did not see how it could oblige the defendant to support a child who was not his own, based on the law of child support, it was forced to oblige him by force of the law of a guarantor. It therefore emerges that the husband’s consent has practical significance with respect to maintenance. In other words, his consent is tantamount to an implicit assumption of liability for all of the financial consequences of the act of insemination.

An interesting comparison may be drawn between the aforementioned rulings of the rabbinical courts and the ruling of the Israeli Supreme Court. In the sole decision given to date in a civil court concerning the issue of artificial insemination from the sperm of a donor the husband’s consent to the treatment was one of the main foundations. The litigants were a married couple that had remained childless after several years of marriage, due to a defect in the husband’s ability to produce functional sperm cells, and a disturbance in the woman’s ovulation process. With the husband’s consent, the woman underwent artificial insemination, which was successful, and the woman gave birth to a daughter. About one year later disputes erupted between the spouses and, after failing to reconcile their differences, the woman filed a maintenance action against her husband, on behalf of herself and for her daughter. In the course of the trial, the couple was divorced, and the court was thus left to adjudicate the daughter’s child support suit against her father. The District Court obliged the father to pay child support, and the father appealed the decision to the Supreme Court (CA Salma v. Salma, 448/79, 34 (2) PD 778). President Y. Kahn wrote the judgment, in which he accepted the “additional reason” invoked by the District Court, and which was the basis of the judge’s decision to obligate the father to pay child support. He wrote as follows:

By agreeing to his wife undergoing artificial fertilization, the defendant agreed to the addition of another person to his family... the defendant’s consent should be regarded as including an implicit undertaking to support the minor that would be born as a result of the fertilization... When a person agrees to his wife being fertilized by way of artificial fertilization, he agrees and undertakes by implication both to his wife and for the benefit of the child to be born, to support and feed the minor to be born from that fertilization.

Two things may be inferred from this decision: (a) When the husband consents to his wife’s fertilization by artificial insemi-
nation from the sperm of a donor, he undertakes to bear all of the consequent costs – financial and otherwise – with respect to the child to be born from that act; (2) The husband's undertaking to his wife for child support, which flows from his consent to this form of treatment, is unrelated to the legal connection that existed at the time of the suit, or thereafter, between the child's mother and the defendant.

In a recent ruling handed down by the Israeli Supreme Court (HC 243/81 Mishpahah Hadashah v. Committee for Approving Surrogate Agreements) on the topic of in vitro fertilization (see below), Justice Englard referred to the position of Jewish law regarding this issue:

When dealing with a case of a donor to a married woman, importance attaches to the donor's identity [and the] the distinction between a Jewish donor and a non-Jewish donor. According to all opinions, it is halakhically prohibited to use, de jure, the sperm of another Jew. In principle, sperm insemination of a Jewish donor who is not the husband of the married woman is regarded as disgraceful and an abomination. See Rabbi E.Y. Waldenberg, Resp. Ziq Eli'zer, vol. 3, no. 27; Rabbi Y. Breisch, Resp. Hilkat Yaakov (1992), EH 12; Rabbi Y.Y. Weinberg, Resp. Seridei Eish (1999), vol. 1, no. 79. Halakhically speaking, certain posekim take the view that the offspring from donor sperm is a mamzer for all intents and purposes. Others rule that he is of doubtful mamzer status. There are also those who rule that, in the absence of intimate relations, i.e., without prohibited intercourse, the offspring is categorically not a mamzer. For a discussion of the opinions of the first view, see, e.g., Rabbi E.Y. Waldenberg, Resp. Ziq Eli'zer (1967), vol. 9, no. 51; Resp. Yaskil Avdi, ibid. For the second view, see Rabbi S.Z. Auerbach, "Hazra'ah Melakhutti," in: Noam, 1 (1958), 145, 165. For the third view, see Rabbi Moses Feinstein, Resp. Iggerot Moshe (1961), EH, vol. 1, no. 61; Resp. Hilkat Yaakov, ibid. For additional sources, see Rabbi D.M. Kroizer, "Hazra'ah Melakhutti," in: Noam, 1 (1958), pp. 111, 119f.

There are authorities who hold that, where the donor is unknown, the offspring is a "shetuki" regarding whom there is also a doubt regarding mamzerut. See Resp. Seridei Eish, ibid.; Resp. Hilkat Yaakov, ibid., notes to EH, 20, n. 11.

Another grave concern regarding the anonymous donor pertains to the possibility of a future marriage of a brother and sister. See Resp. Iggerot Moshe, ibid.; Resp. Seridei Eish, vol. 1, no. 69; Resp. Ziq Eli'zer (1951), vol. 3, no. 27.

Regarding a non-Jewish anonymous donor: All of the posekim agree that ex ante his sperm should not be used, for the act is disgraceful. Nevertheless, in this case there is no halakhic fear of mamzerut or marriage of a brother and sister. Consequently, the procedure of artificial insemination was permitted for cases in which the parents are in a state of acute distress and greatly desire a child. For this view, see the aforementioned article Resp. Iggerot Moshe, ibid., and the article cited of Rabbi S.Z. Auerbach. For the view that prohibits this treatment under all circumstances, see: Resp. Hilkat Yaakov, ibid., EH, no. 14; Rabbi Y.Y. Weiss, Resp. Minhat Yishbak (1939), vol. 4, no. 5; cf. Resp. Seridei Esh (1966), vol. 3, no. 5. In the case of an unmarried woman, while there is no fear of mamzerut, there is still the fear of a sister and brother marrying, and the offspring being a shetuki. A compilation of the various problems raised in the letters of the posekim appears in A. Steinberg, Enziklopedyah Hilkhatit Refu’iit (1988), entry: Hazra'ah Melakhutti, pp. 148–61.

**In Vitro Fertilization (Surrogate Motherhood)**

In vitro fertilization is the act of fertilizing the woman's eggs outside the woman's body by means of sperm cells and, after fertilization, returning the fertilized embryo to the woman's womb, or freezing the embryo for the purpose of returning it at a later stage. The offspring of that procedure is popularly known as a "test-tube" baby, referring to the initial stage of fertilization in the test-tube. A woman carrying an embryo for another woman, with the intention of giving her the child born to that woman, is called a surrogate or host mother. All of the scientific, halakhic, moral, and legal issues pertaining to husband or donor sperm required for fertilizing an egg in a Petri dish are identical to those arising in the context of artificial insemination (see above Artificial Insemination). This entry discusses those unique aspects of in vitro fertilization that do not exist in artificial insemination.

The halakhic discussion in the entry on in vitro fertilization is introduced by Prof. Rabbi Abraham Steinberg with the following statement:

Notwithstanding the immense medical-technological progress in the field of in vitro fertilization, as in the field of genetic engineering, none of this contradicts the basic foundations of Judaism, and the belief in the creation of the world and of human-kind exclusively by the Almighty. In all these procedures, the creation involves making "something from something," and there is no possibility of creating "something from nothing." …The Jewish outlook does not accept the conception that demands the preservation of the law of nature, and therefore eschews human and technological interference in natural processes. To the contrary, humankind is a partner to the Almighty in the improvement of the world in all realms.

**In Vitro Fertilization Between Husband and Wife**

Several halakhic authorities permit in vitro fertilization between a husband and wife provided that all precautions are taken to prevent the mixing of the husband's sperm with alien sperm, and provided that the couple have no other possibility of building their family. According to the permitting authorities (see inter alia, Nishmat Avraham, EH, i.e. 3) a "test-tube" baby for all intents and purposes continues his parents' lineage, and halakhically this procedure is deemed identical to artificial insemination. Accordingly, those who permit artificial insemination between husband and wife also permit in vitro fertilization. However, certain halakhic authorities prohibited this procedure, based on moral considerations: for example, the fear that it would create reproductive-societal havoc, and the fear of mixing up sperm and the consequent defiling of the sanctity and purity of lineage in the Jewish people. There are also those who prohibited it on halakhic grounds, even between a husband and wife. One explanation for the distinction between in vitro fertilization and artificial insemination is that in the latter the sperm is injected directly into the woman's womb, so that the procedure does not involve destruction of seed should the procedure be unsuccessful, whereas in the case of in vitro fertilization the seed is placed...
in a Petri dish, so that if the fertilization is unsuccessful, it is considered as seed destruction. A second explanation is that the need for artificial insemination is generally the result of the husband’s infertility and according to certain views, the prohibition of destruction of seed does not apply to a sterile male. In in vitro fertilization, the problem is generally the woman’s, and therefore the prohibition on seed destruction is valid regarding the husband. Those authorities permitting it claim that the prohibition of seed destruction does not apply when performed for the purpose of bringing a child into the world, and that even in natural intercourse some of the sperm is spilt and lost. Therefore, in in vitro fertilization, since it is intended to bring a child into the world it is not considered as being a vain emission of sperm.

**In Vitro Fertilization by Egg Donation**

The very act of in vitro fertilization using a donor egg involves several prohibitions, the gravest of which is the fear of social havoc, confusion of lineage, and the possibility of incest between the egg-donor’s children. Certain stringent authorities also wrote that the prohibition is not on the act per se, but that it is seen as one that ought to be avoided ab initio. In any event, every effort must be made to ascertain the identity of the donor, and to enact whatever regulations are required to avoid any mishapas in this regard.

Where the woman donated the egg, which was subsequently fertilized in a test tube, the fertilized embryo then being implanted in the womb of another woman, the question of the definition of maternity arises. Whom does the halakhah view as the child’s mother: the biological mother (egg donor) or the host mother, in whose womb the embryo develops?

Some posekim take the view that the genetic mother has the status of mother in terms of halakhah (see I. Warhaftig, “Kevuat Imahut – be-Shulei ha-Devarim,” in: Tehumin, 5 (1984), 268). Nevertheless, the majority view is that halakhically, the host mother is considered as the mother (see Rabbi Z.N. Goldenberg, “Yihus Imahut be-Hashtalat Ubar be-Rehem shel Aheryet, ibid., 248; Zie Eliezer (1992), vol. 19, no. 40). Finally, there are some authorities who contend that both women are seen as related to the progeny, specifically for purposes of definition of incestuous relations (see Z. Lev, “Tinok Mavhenah – Malamad ha-Em ha-Pandekait,” in: Emek Halakham, 2 (1989), 163, 169).

The view of most posekim, that the surrogate mother is also considered the mother from a halakhic perspective, relies inter alia on an ancient aggadic tradition that this kind of situation occurred between the matriarchs Rachel and Leah in their respective pregnancies with Dinah and Joseph. According to the tradition, in her final pregnancy, Jacob’s wife Leah was carrying a son in her womb. At that time Jacob had already fathered ten sons: six from Leah’s womb, two from Bilhah, and two from Zilpah. This meant that, had she given birth to the son in her womb, he would have been the 11th son of Jacob (who was predestined to have a total of 12 sons), and Rachel would only have been able to give birth to one son. Leah did not want Rachel to have only one son, which would have reduced her stature to below that of the handmaids, who had two each, so she prayed that she not give birth to the son, so that Rachel would be able to give birth to the two sons who were still to be born. According to one version of the aggadah, the embryo in Leah’s womb turned into a girl (Ber. 60a), while according to another version, the switch of gender was attained by another method. After praying that she not be the one to give birth to the male child in her womb, the sisters’ embryos were switched: the male in Leah’s womb going into Rachel’s womb, and the female in Rachel’s womb to Leah (see Midrash Sekhel Tov (ed. Buber), Gen. 30, s.v. ve-ahar yaledah).

**In Vitro Fertilization in Israeli Legislation**

In 1987 special regulations concerning in vitro fertilization were enacted – The National Health (In Vitro Fertilization) Law 5727 – 1987. In 1996 the State of Israel enacted the Agreements Relating to the Carrying of Embryos (Approval of the Agreements and Status of Offspring) Law, regulating the subject of surrogacy. The Israel Supreme Court (11c 2458/01 Mishpahah Hadasha v. the Approvals Committee for Surrogacy Agreements) (not yet published), addressed the question of whether these legislative arrangements for carrying embryos, which prima facie do not apply to a woman without a male spouse, are not discriminatory. The court did not rule on the matter, referring it back to the Legislature.

The Israeli Supreme Court delivered two long and detailed rulings on the subject of in vitro fertilization in general, and specifically, on the right of parenthood (CA 5587/93 Daniel Nahmani v. Ruthy Nahmani et al., 50 (4) 661). After a number of years of childless marriage, and after Ruthy Nahmani had undergone a total hysterectomy, rendering her unable to become pregnant by natural means, the couple decided to bring a child into the world by way of in vitro fertilization. The eggs taken from Ruthy’s womb were fertilized by the sperm of her husband, Danny, and frozen in the hospital. The couple contracted with an American institution for the purpose of locating a surrogate mother who would carry their child. However, prior to reaching that stage, Danny left their domestic home, went to live with another woman, created a new family, and fathered a daughter while still legally married to Ruthy, who refused to accept a divorce. Ruthy turned to the hospital with the request to be given the fertilized eggs in order to continue the surrogacy proceeding. When the hospital refused her request, she applied to the Haifa District Court, which granted her request. In its first adjudication on the appeal against the decision, the Israeli Supreme Court accepted Danny Nahmani’s appeal in a majority decision. In a further hearing (CFH 2401/95 Danny Nahmani v. Danny Nahmani et al., 50 (4) 661) the previous decision was reversed and Ruthy Nahmani’s appeal was accepted in a majority decision.

Regarding the issue of abortion in Jewish law, see separate entry “Abortion.”

Noteh Lamut (Jewish Law Association Studies 15; 2005).

MEDINA

(Menachem Elon (2nd ed.))

[Zeev A. Maghen (2nd ed.)]
MEDINA, AVIHU (1948–), lyricist and composer. Medina was born in Tel Aviv to Yemenite parents. His mother’s family arrived in the country in 1906 and settled in Jerusalem; his father, who came from Yemen in 1939, was a hazzan. Avihu graduated from Kibbutz Kassifim High School. After his military service (1970), he began writing lyrics and composing their melodies. His first song, "Al Tira Yisrael," won the third prize in the first festival of Oriental communities’ songs held under the auspices of Israel’s state radio in 1971. For the next ten years he was to receive first prize in a number of festivals. Among the songs he wrote are "La-Ner ve-la-Besamim" ("For the Candle and the Perfumes"), "Kinnor David, Barekhenu" ("Bless Us"), "Peraḥ be-Ganni" ("Flower in My Garden"), "Al Tishlikheni" ("Don’t Cast Me Away"), "Shabbelih Yerushalayim" ("Praise Thee Jerusalem"), "Bein ha-Tov la-Ra" ("Between Good and Evil"). His songs were performed by some of Israel’s best artists, such as Shimi Tavori, Zohar *Argov, Boaz Sharabi, Ofra *Haza, Eyal Golan, Deklon, and many others.

In 1991 Avihu began singing his own songs. In 1994 Omanut La-’am awarded him the "Silver Cylinder," which is the crowning prize for the most popular artist. In 1995 he received the Writers and Composers Prize for lifetime achievements in the field of light music. Avihu Medina has released nine albums – the ninth, Ein Li Manolah, in 2004 – and a book of songs, Simanim shel Derekh.

Medina, a leading figure in the period of Ethnicity, devoted much of his time to the promotion of “Mediterranean Israeli music.” He believes that “it is a style born of traditional and cultural Jewish roots and of the Israeli experience in all its forms.”

He is the chairman of the Israeli song department on the Committee for Art and Culture.

MEDINA, SAMUEL BEN MOSES DE (known by the acronym Maharshad; 1506–1589), rabbi, halakhic authority, and communal leader of “Salonika. Medina was descended from a distinguished family of scholars which originated from Spain. He was one of the three outstanding "posekim of Salonika of the 16th century, the others being Joseph ibn *Lev and Solomon b. Abraham ha-Kohen. Medina was dogged by misfortune throughout his life. Orphaned in his childhood, his sister and two of his sons-in-law died in his lifetime and the burden of the maintenance of his widowed daughters and their many children fell upon him. The death of his elder brother, a man of means who had educated him and supported him financially, added to these burdens. The death of his eldest son left a permanent mark on him and affected his health. He was obliged from time to time to undertake journeys, in all probability in order to improve his financial position. Until his position in Salonika was established, he devoted himself completely to study, finding in it consolation for his sorrows.

Medina founded a yeshivah in Salonika in which he introduced the system of teaching of the great Spanish talmudic scholars from the time of Isaac *Campanton and his succes-
halakhah as he saw it. Where that custom differed from that in force in Spain, he justified the latter on halakhic grounds and encouraged its gradual adoption, whether in the liturgical usage or in matters of shehitah, etc. Unlike his predecessors his consistency in this matter did not meet with great opposition. Medina’s decisions with regard to *anusim are important and are stamped with the same original approach as he showed in other matters for which there was no legal precedent. He regarded the community of Salonika and especially its educational institutions as being in a unique position, and as a result demanded a greater financial support for them than for the institutions in Ereẓ Israel.

Side by side with his intensive halakhic activity Medina filled certain communal offices. He was the rabbi of the most important and largest congregations of Iberian communities in Salonika among them those of “Gerush” (i.e., of the exiles) and Lisbon, and went to Constantinople on missions on behalf of Salonika. He was called on to decide in the serious disputes which arose in Salonika and other communities, and succeeded in preventing schisms. His authority is seen in the fact that his signature appears on the majority of the communal regulations (haskamot) which have come down. Unlike many of his contemporaries of Spanish provenance Medina did not engage in Kabbalah, nor did he enter deeply into philosophy and secular studies. He was the man of *halakhah and the communal leader par excellence. Despite his often unsatisfactory financial position he refused to take advantage of the exemption from taxes granted to scholars. Toward the end of his life legends were woven about him.

Medina’s responsa were published during his lifetime in two volumes (Salonika, 1583–87) and an improved edition in three volumes (Salonika, 1594–98). A considerable number also appear in the works of other scholars, while others are still in manuscript. Thirty of his sermons were published in Ben Shemu'el (Mantua, 1622) and his novellae on a number of tractates of the Talmud are still in manuscript.

Medina’s son Moses was a man of means and a scholar. He was responsible for the founding of a Hebrew printing press in Salonika in 1594 and published his father’s responsa. He succeeded his father as rabbi of the Portugal community in Salonika.

Moses had two sons, Judah and Shemaiah. The former, a *dayyan in Salonika, was murdered by an assassin hired by a Jew because of a verdict given against him. This tragedy caused his brother, who was also a scholar and communal leader of Salonika, to move to Venice where he became one of its scholars. He published his grandfather’s Ben Shemu’el, and some of his poems were published in Haddashim la-Bekarim (Mantua, 1622).

**MEDINA, SIR SOLOMON DE** (c. 1650–1720), army contractor and the first professing Jew in England to receive a knighthood. He was born in Bordeaux as Diego de Medina, but lived in Holland until William of Orange’s invasion of England in 1688, which he helped to finance. An English example of the *Court Jew, he was principal army contractor to the duke of Marlborough during the War of the Spanish Succession (1701–14), supplying money, provisions, and particularly intelligence. These transactions ultimately contributed to the duke’s downfall. Medina was active in and contributed generously to the London Sephardi community but died abroad in poverty. He is wrongly identified with the Jew whose bankruptcy was blamed by *Voltaire for his financial difficulties.

**MEDINACELI, town in Castile, N. Spain, near Sigüenza. A Jewish community existed there as early as the 12th century. The fuero (“municipal charter”) of Medinaceli gave the Jews a status equal to that of the Christians and Moors in legal matters. In the 13th century the community numbered 20 to 30 families. Jewish occupations included agriculture, viticulture, commerce, and crafts. In 1280 Abraham of Medinaceli made an agreement, valid for four years, with the bishop of Sigüenza to open and exploit salt mines (see *Salt Trade). The bishop was to supply Abraham with the necessary equipment, finance the project, and provide him with lodging. In 1290 the communities of Medinaceli and Sigüenza together paid annual taxes and services amounting to 34,217 maravedis, which indicates considerable prosperity. The community continued to exist throughout the 15th century. It was taxed 91 castellanos in 1485 as a contribution to the war against Granada. The synagogue, which passed to the Church after the expulsion of the Jews from Spain in 1492, was restored by the government.

**BIBLIOGRAPHY:** Baer, Spain, 1 (1961), 192, 200; Baer, Urkunden, index; B. Pavón Maldonado, in: Sefarad, 38 (1978), 309–17.

**MEDINA DEL CAMPO,** town in N. Castile, between *Olmedo and Rueda. The Jewish community was particularly prosperous during the 13th century: in 1290 its annual tax amounted to 44,000 maravedis. By the 14th century the community consisted of between 50 and 100 householders. In 1313 the regulations on Jewish affairs of the regional council of *Zamora were applied to Medina del Campo. They covered...
the employment of Christians in Jewish homes, the distinctive badge to be worn by the Jews, the prohibition on practicing medicine, interest rates, and the dismissal of Jews from public functions. Nothing is known of how the community fared during the persecutions of 1391, but afterward a *Converso community existed there. In 1459 Medina del Campo was the center of the activities of the monk *Alonso de Espina against Conversos suspected of practicing Judaism. During that year he found 30 Conversos who had undergone circumcision. Some of the Conversos prepared to depart for North Africa. One of them, the physician Magister Franciscus, circumcised himself and immigrated to Ereẓ Israel. Therefore, like *Huesca and Ciudad Real, in the 1450s and 1460s Medina del Campo was a center for the return to Judaism. After the edict of expulsion (1492), those who left the town presumably crossed the borders of the kingdoms of Navarre and Portugal. The last rabbi of the community was Isaac Uzziel, who probably settled in Salonika after the expulsion.

[Haim Beinart]

**MEDINA DE POMAR,** town in Castile, N. Spain. The Jewish settlement here was one of the flourishing communities in 13th-century Castile. Like other Jews in the area, Jewish residents of Medina de Pomar owned vineyards and lands and engaged in commerce and crafts. Joseph Nasi and Abraham *Benveniste de Soria, both of Medina, supplied grain and money to the army stationed on the border in 1429–30. On March 12, 1475, two Jewish cloth merchants, Josi Leal and Moses Sasson, complained that the authorities had prohibited visiting Jews from trading and buying goods in Medina. Conversely in 1490 the Jews of Medina complained to the crown that the Birbaco municipal council had banned visiting Jews from staying there overnight and that they had therefore been unable to attend the fair at Medina del Campo. After the edict of expulsion of the Jews from Spain in 1492, the Jews of Medina de Pomar asked the crown for redress because the Christians had refused to pay their debts. Ferdinand and Isabella ordered the municipal authorities to deal with the matter expeditiously to enable the Jews to leave on time.

[Haim Beinart]

**MEDINAH.** In Hebrew writings emanating from the Muslim-influenced areas, *medinah* is used to mean city. In Ashkenazi culture, especially in the later Middle Ages and early modern times, *medina* denotes a region embracing several or many communities organized as a territorial unit for the purpose of *autonomy and leadership.

MEDITATION (Heb. Hitbonenut), a term which first appears in kabbalistic literature, from the middle of the 13th century, referring to protracted concentration of thought on supernal lights of the divine world and of the spiritual worlds in general. Many sources, however, in this connection use the terms “kavanah, or “devekut (“cleaving”) of thought to a particular subject, and of “contemplation of the mind.” The kabbalists did not distinguish between the terms meditation and contemplation – a distinction prevalent in Christian mysticism. In the kabbalistic view, contemplation was both the concentrated delving to the depths of a particular subject in the attempt to comprehend it from all its aspects, and also the arresting of thought in order to remain on the subject. The arresting and delving in spiritual contemplation do not serve, therefore, to encourage the contemplating intellect to advance and pass on to higher levels, but first of all to gauge to the maximum its given situation; only after having tarried in it for a protracted period does the intellect move on to a higher step. This, then, is contemplation by the intellect, whose objects are neither images nor visions, but non-sensual matters such as words, names, or thoughts.

In the history of the Kabbalah a different contemplation preceded this one: the contemplative vision of the “Merkabah, for which the ancient Merkabah mystics of the tannaitic and amoraic period strove, and which was described in the Heikhalot Rabbati of the heikhalot literature. Here the reference is to an actual vision of the world of the chariot which reveals itself before the eyes of the visionary. Therefore the term histakkelut is used here in the exact sense of the Latin term contemplatio or the Greek theoria. The contemplation of the Merkabah mystics, in the first period of Jewish mysticism, provided the key, in their opinion, to a correct understanding of the heavenly beings in the heavenly chariot. This contemplation could also be achieved by way of preparatory stages which would train those who “descend to the Merkabah” to grasp the vision and pass on from one thing to another without being endangered by the audacity of their assault on the higher world. Even at this stage, the vision of the Merkabah of the kabbalists which, apart from some general rules, is not bound up with visions, but is solely a matter for the intellect prepared to ascend from level to level and to meditate on the qualities unique to each level. If meditation activates at first the faculty of imagination, it continues by activating the faculty of the intellect. The Sefirot themselves are conceived of as intellectual lights which can only be perceived by meditation. The Spanish kabbalists in the 13th century knew of two types of meditation: one which produces visions similar in kind if not in detail to the visions of the Merkabah mystics, and the second which leads to the communion of the meditating mind with its higher sources in the world of emanation itself. “Moses b. Shem Tov de Leon describes in one of his books how an intuition of the third Sefirot (Binah) flashes up in the mind through meditation. He compares this to the light which flashes up when the rays of the sun play on the surface of a bowl of water (MGWJ, 1927, 119).

The instructions on the methods to be employed in performing meditation form part of the hidden and secret teachings of the kabbalists which, apart from some general rules, were not made public. The kabbalists of Gerona mention it in connection with the description of the mystic kavanah in prayer, which is described as a meditation concentrating upon each word of the prayer in order to open a way to the inner lights which illuminate every word. Prayer, according to this idea of meditation, is not just a recitation of words or even concentration on the contents of the words according to their simple meaning; it is the adherence of man’s mind to the spiritual lights and the mind’s advancement in these worlds. The worships uses the fixed words of the prayer as a banister during his meditation which he grasps on his road of ascension so that he should not be confused or distracted. Such meditation results in the joining of human thought to the divine thought or the divine will – an attachment which itself comes to an end, or is “negated.” The hour of prayer is, more than any other time, suitable for meditation. “Azriel of Gerona said: “The thought expands and ascends to its origin, so that when it reaches it, it ends and cannot ascend any further … therefore the pious men of old raised their thought to its origin while pronouncing the precepts and words of prayer. As a result of this procedure and the state of adhesion which their thought attained, their words became blessed, multiplied, full of [divine] influx from the stage called the ‘nothingness of thought,’ just as the waters of a pool flow on every side when a man sets them free” (Perush ha-Aggadot, 1943, 39–40). In such meditation, which progresses from one stage to another, there was also a certain magic element, as can clearly be deduced from the detailed description in another piece by Azriel called Sha’ar ha-Kavanah la-Mekabbalim ha-Rishonim. Meditation does not only ponder and penetrate its object; it has the power to bring about changes in its object and likely to cause transformations as it reaches the common root of opposing extremes. In most descriptions of the methods of meditation which were preserved from the golden era of Spanish Kabbalah, however, this magic element was concealed or completely glossed over in silence.

A detailed elaboration of the doctrine of meditation is to be found particularly in the teachings of Abraham “Abulafia. The whole of his Hokhmat ha-Zeruf was designed, he believed, to teach a lasting and safe approach to meditation. It consists principally of instruction concerning meditation on the Holy Names of God and, in a wider sense, meditation on the mysteries of the Hebrew alphabet. This meditation, which
is not dependent on prayer, was described in his more important manuals as a separate activity of the mind to which man devotes himself in seclusion at given hours and with regular guidance by an initiate teacher. Here again the point of departure is the mortification of the activity of the senses and the effacement of the natural images which cling to the soul. Meditation on the holy letters and names engenders pure rational forms in the soul, as a result of which man is able to comprehend the exalted truths. At certain stages of this meditation, there appear actual visions, such as are described in the work Ḥayyei ha-ʿOlam ha-ʿBa for instance, but these are only intermediate stages on the road to pure contemplation of the mind. Abulafia negates from its very start the magical element which was originally attributed to such meditation.

The difference between the Christian and the kabbalistic doctrines of meditation resides in the fact that in Christian mysticism a pictorial and concrete subject, such as the suffering of Christ and all that pertains to it, is given to the meditator, while in Kabbalah, the subject given is abstract and cannot be visualized, such as the Tetragrammaton and its combinations.

Instruction in the methods of meditation were widespread in the works of early kabbalists and these methods continue to be found after the expulsion from Spain among several kabbalists who were influenced by Abulafia. An anonymous disciple of Abulafia has left (in Shaʿarei Ẓedek, written in 1295) an impressive description of his experiences in the study of this meditation. The works Berit Menuhah (14th century) and Ṣulłam ha-ʿAliyyah by Judah *Albotini, one of the exiles from Spain who settled in Jerusalem, were also written in the same spirit.

The most detailed textbook on meditation into the mystery of the Sefirot is Even ha-Šoham by Joseph ibn Sayah of Damascus, written in Jerusalem in 1538 (Ms. National and University Library, Jerusalem; see G. Scholem, Kīṭvei Yad be-Kabbaḥah (1930), 90–91). The kabbalists of Safed paid particular attention to meditation, as is evident from Sefer Haredim (Venice, 1601) of Eleazar ʿAzikri, from chapter 30 in Moses ʿCoredoero ʿSardes Rimmonim (Cracow, 1592), and the Shaʿarei Kedushaḥ of Hayyim ʿVital, part 3, chapters 5–8, propounds his doctrine on the subject. Here the magic aspect attached to meditation is once more emphasized, even though the author explains it in a restricted sense. The last steps in the ascension of the meditating mind which seeks to bring down the influx of the supernal lights to earth require meditative activities of a magic nature, which are known as Yihudim (“Unifications”). The practical importance of these doctrines, whose influence can be recognized throughout the whole of late kabbalistic literature, should not be underrated. The doctrines of adhesion and meditation in 18th-century Hasidism are also definitely based on the form given to them in Safed. This doctrine was not written down in its entirety in the writings of Isaac ʿLuria’s disciples and its major part was preserved orally. In Jerusalem’s kabbalistic yeshivah Bet El practical guidance on meditation was handed down orally for about 200 years and the initiates of this form of Kabbalah refused to make the details of their practice public knowledge.

[Geršhom Scholem]

MEDNICK, MARTHA TAMARA SCHUCH (1929– ), U.S. psychologist and pioneer in the psychology of women. Mednick was born in New York City to working-class immigrant parents from Eastern Europe. She received B.A. and M.A. degrees from the City College of New York. In 1952 she joined her husband, Sarnoff Mednick, as a graduate student at Northwestern University, receiving a Ph.D. in clinical psychology in 1955. Mednick made a number of moves based on her husband’s career, had two daughters, and did some collaborative work with him, first on a personality test and later on a measure of creative thinking. By the time of their divorce in 1964, Mednick was affiliated with the Institute for Social Research at the University of Michigan. Shortly afterward, she became a member of the psychology department at Howard University, was appointed a full professor in 1971, and remained there until her retirement in 1995.

Mednick was very important as a mentor and a pioneer in the psychology of women. In 1972, she co-edited with Sandra Schwartz Tangri a special issue of the Journal of Social Issues entitled “New Perspectives on Women,” which she later expanded into the book Women and Achievement (1975). She helped establish and served as president of the psychology of women division of the American Psychological Association (1976–77) and was also president of the Society for the Psychological Study of Social Issues (1980–82). Her research focused on race, class, and sex issues in the psychology of achievement. Many of her studies were published with students from Howard University and a list of these students reads like a Who’s Who of African American women psychologists. Mednick received the Carolyn Wood Sherif Award from the Division of the Psychology of Women in 1988 for her teaching, mentoring, and scholarship in this field.

Mednick was also important in facilitating contact between American and Israeli feminist psychologists. With Marilyn Safir, a psychologist at the University of Haifa, and Dafna Izraeli, a sociologist on the faculty of Bar-Ilan University, Mednick organized the first international interdisciplinary congress on women held at Haifa University in 1981. The collection of papers from the first conference, entitled Women’s Worlds (1985), highlighted research by Americans, Jewish Israelis, Palestinians, and Arab women.

[Rhoda K. Unger (2nd ed.)]

[Mivian Felsen (2nd ed.)]

MEDVED, MICHAEL (1948– ), author, radio personality. Medved was born to physicist David Bernard and chemist Renate Medved (née Hirsch) in Philadelphia, Penn. At the age of six, he moved with his family to San Diego, California, where David worked as a defense contractor for Convair. The family later moved to Los Angeles, where Medved attended Palisades High School. Medved began his undergraduate work at Yale University at 16 and graduated with a Bachelor of Arts degree in U.S. history from Yale University in 1969. He attended Yale Law School from 1969 to 1970 and taught at a Hebrew day school in New Haven, Conn. Medved worked as a creative director and advertising copywriter for Anrick, Inc. in Oakland, Calif., from 1972 to 1974. Ten years after his graduation from high school, Medved and his fellow Palisades alumna David Wallechinsky interviewed their fellow classmates for the bestseller What Really Happened to the Class of ’65? (1976). Medved moved to Los Angeles to write NBC’s adaptation of his book. In 1978, he co-wrote the book The 50 Worst Films of All Time with his brother Harry Medved, which led to the sequels The Golden Turkey Awards: The Worst Achievements in Hollywood History (1980), The Hollywood Hall of Shame: The Most Expensive Flops in Movie History (1984), and The Son of Golden Turkey Awards (1986). In 1979, Medved published The Shadow Presidents: The Secret History of the Chief Executives and Their Top Aids (1979). In 1980, Medved dropped his affiliation with the Democratic Party and joined the GOP. Medved became CNN’s film critic from 1981 to 1983. He spent a year with a hospital staff and published Hospital: The Hidden Lives of a Medical Center Staff (1983), a bestseller that detailed the emotional problems of doctors and nurses. Medved and his second wife, Diane Elvenstar, a clinical psychologist and writer, were active in Pacific Jewish Center, a Traditional Jewish congregation in Venice, Calif., that Medved co-founded to attract unaffiliated Jews. In 1985, Medved served as co-host with Jeffrey Lyons of the Public Broadcasting Service program Sneak Previews, a position he held for 12 years. In 1993, Medved became chief film critic for the New York Post and Hollywood correspondent for London’s Sunday Times. Medved’s criticism of Hollywood earned him guest spots on the conservative radio program hosted by Rush Limbaugh. Soon after Medved accepted an offer from a Seattle talk radio program to host his own daily three-hour show and moved to Washington state in 1996. By March 1998, Medved was broadcasting nationally to 40 stations, and by October 1999 his show was heard on 100 stations.

[Adam Wills (2nd ed.)]

MEDVEDEV, MIKHAIL (Meier Yefimovich Bernstein; 1852–1925), tenor. The son of a rabbi, he appeared as a boy meshorer and was encouraged by Shalom Aleichem to study singing. While still a pupil at the Moscow Conservatory, he was chosen by Tchaikovsky and Nicolai Rubinstein for the first performance of the role of Lensky in Eugene Onegin (1879). He was a soloist at the Kiev Opera from 1881, at the Bolshoi Theater in Moscow from 1891 to 1892, and then at the Petersburgh Imperial Opera. He toured the United States (1898–1900) and taught at Moscow, Kiev, and Saratov. Medvedev was admired both for his voice control and for his dramatic interpretations.

MEDZIBEZH (Medzhibozh; Pol. Miedzyborz; Yid. Mezhibezh), small town in Khmelnitsky district (former Kamenets-Podolski district), Ukraine; until 1793 in Poland and then under Russia, until 1917 in the province of Podolia. Large fairs were held there which attracted many Jewish merchants. The Jewish community of Medzibezh is one of the oldest in the Ukraine – Jews are mentioned there in 1518 – and until the Chmielnicki persecutions of 1648 one of the largest in Podolia. During the first half of the 17th century, Joel Sirkes officiated as rabbi. The community suffered severely at the hands of the Cossacks in 1651, 1664, and again at the beginning of the 18th century. In 1765 there were 2,039 Jews registered in the community of Medzibezh and the nearby villages. The founder of Hasidism, *Israel b. Eliezer Báal Shem Tov, made the town his seat from about 1740 until his death in 1760 and was buried there. The zadikim *Baruch b. Jehiel, Israel’s grandson, and R. *Abraham Joshua Heschel of Apta also lived and were buried there. From 1815 to 1827 a printing press published hasidic and kabbalistic works in Medzibezh. From 1,719 in 1847 the number of Jews grew to 6,040 (73.9% of the total population) in 1897, then fell to 4,614 (58.2%) in 1926. In 1892 there existed a Jewish Council, a Yiddish newspaper was published, and a Jewish kolkhoz was founded. In 1939 the number of Jewish population dropped to 2,347 (52% of the total population). The town was occupied by the Germans on July 8, 1941. Later a ghetto was established, and on September 22, 1942 (Yom Kippur), 2,588 Jews were murdered by the Germans and Ukrainians. The murders continued until October 31, when the last Jews were killed.

[Yehuda Slutsky / Shmuel Spector (2nd ed.)]
MEED, BENJAMIN  (1918– ), leader of Holocaust survivors in the United States. Meed was born Benjamin Miedzyrzecki in Warsaw, Poland, and at the age of 16, he joined the Jewish Labor Bund. After the creation of the Warsaw Ghetto, he obtained false papers and escaped to the Aryan side where he lived posing as a Pole. His parents survived hiding in a hut on an old cemetery. At one point Meed intended to go to the Hotel Polski for its promise of emigration but his brother pleaded with him to take his place. Meed consented and his brother was never heard from again. Around this time, he married Feyge (Vladka) Peltel (see *Meed, Vladka), also a member of the Bund and an important courier and arms purchaser for the resistance. After the Warsaw Ghetto Uprising, he continued to work with the Bund helping provide hiding spaces for other Jews.

The couple immigrated to the United States in 1946, where Meed became a businessman and importer. In 1966, he helped form and became president of the Warsaw Ghetto Resistance Organization (WAGRO) and devoted the remaining years of his life to representing the survivors. He organized the annual Yom Hashoah ceremony in New York City, the largest such gathering in the United States, that brought American presidents and Israeli prime ministers to Temple Emmanu El. When the survivors wanted to organize their first gathering in Jerusalem in 1981, Meed helped organize the “American Gathering of Jewish Holocaust Survivors, which brought together nearly 5,000 survivors and their children. Meed also pioneered the Registry of Holocaust Survivors, which facilitated the reunion between survivors long thought to be lost to each other. The Registry now contains more than 100,000 entries organized by name – original and maiden as well as current – city of birth, camps of incarceration, and cities of postwar habitation.

In 1983 a gathering was held in Washington, DC, where 20,000 survivors assembled. Meed hosted President Ronald Reagan, Vice President George H.W. Bush, and the Senate and House leaders, who addressed the survivors in front of the Capitol and on the National Mall. Subsequent gatherings were in Philadelphia, New York, and Miami, and again in Washington, to celebrate the 10th anniversary of the *United States Holocaust Memorial Museum. Meed was instrumental in creating the Museum; first serving on the Advisory Council of the President’s Commission on the Holocaust and later on the United States Holocaust Memorial Council where he chaired the Days of Remembrance Committee and the pivotal Content Committee that assured the presence and participation of Holocaust survivors, most especially after Elie Wiesel resigned as chairman in 1986. His role became more central as there was fear that without Wiesel the neshamah, the soul, of the Museum, would flounder. Under Meed’s leadership, the Committee brought together scholars and survivors, communal leaders and Council members to assure the intellectual, aesthetic, historical, and spiritual content of the Permanent Exhibition.

MEED, VLADKA  (1921– ), World War II resistance fighter and educator. Born Feyge Pelte in Praga (Warsaw district), Poland, she joined the youth arm of the Jewish Labor Bund at age 14 and was thereafter active in its activities through the time of the creation of the Warsaw Ghetto. She then joined the ZOB (Jewish Fighting Organization) when it was formed after the great deportations of the summer of 1942, when more than 265,000 Jews were shipped from Warsaw to Treblinka. Because of her flawless Polish and red hair, Meed could pass as non-Jewish. She worked as a courier, smuggling arms into the ghetto and helping children escape out of it.

Meed’s mother and brother were among those who were deported. She recalled: “There was very little left to fear … I was depressed and apathetic.” However, despair gave way to fierce determination after she heard Abrasha Blum, a member of the Jewish Coordinating Committee that sought to unite the diverse political factions of the ghetto, give a rousing speech calling for armed resistance. As a courier she used the name Vladka, a name she kept even in freedom. Among her most important missions was to smuggle a map of the death camp of Treblinka out of the ghetto in the hope that solid information about the killing would spur a serious response in the West. She brought dynamite into the ghetto, which required not only courage, but also money to “grease” the path in and out. After the Ghetto Uprising she continued supplying money and papers for Jews in hiding.

In her writings she alludes to the loneliness and pressure of her double life only in passing: “You can be my friend,” she said to Benjamin Miedzyrzecki (Meed), who was also passing as an Aryan and who would later become her husband, “because if I don’t come back, I want someone to care that I am missing.” She married Benjamin Meed in 1943 and was the only member of her family to survive the Shoah.

Immediately upon arrival in the United States in 1946, Meed traveled extensively as a living eyewitness to the Uprising. In 1948 she published “On Both Sides of the Wall,” in Yiddish, one of the earliest accounts of the Ghetto Uprising and still one of the most compelling.

When her husband, Benjamin Meed, assumed leadership of the survivor community, Vladka Meed organized a teacher training program, co-sponsored by the *Jewish Labor Committee and the *American Gathering of Jewish Holocaust Survivors, one of the earliest such programs that took American teachers from the public school system and brought them to Poland and Israel to experience a Seminar on the Holocaust and Resistance. For almost 20 years, she unfailingly led the mission, which was suspended during the Intifada and resumed in 2005. Meed helped produce a dedicated and informed cadre of teachers throughout the United States. Central to this program were the direct testimonies of survivors, none more impressive than Vladka Meed’s.

[Michael Berenbaum (2nd ed.)]
Born in Nikolayev, south Russia, Meerovitch graduated from a government institute as an agronomist. After the 1881 pogroms in south Russia, he participated in the establishment of the first *Hibbat Zion association in Warsaw and joined the Bilu society. At the end of 1882 he went to Constantinople and took part in the activities of Bilu’s political bureau, which was trying to obtain Turkish consent to Jewish agricultural settlement in Erez Israel. He then joined his comrades at *Rishon le-Zion and was active in the settlement’s public life.

Meerovitch, who used the pen name Mi-Ziknei ha-Yishuv, wrote letters and articles on life in Erez Israel that were published in the Russian Jewish press, the Yiddish- and German-language Zionist press, and Hebrew papers. He was one of the first to discuss practical agricultural problems and, in 1893/94, edited the first agricultural paper in the country, Ha-Ikkar (“The Farmer”). In his Russian book Opisanije Yevreyeskikh Koloniy v Palestine (“A Description of the Jewish Settlements in Palestine,” 1900), he summarized the achievements of Erez Israel agriculture in its first 25 years.

Meerovitch was active in the work of the Hibbat Zion association in Jaffa and headed it from 1903 to 1904. He was among the founders of Aguddat ha-Koremim (Vintners Association) in 1903 and of the Judean Settlement Association in 1913. During World War I he participated in the Jewish community’s representative body to the Turkish authorities. From 1918 to 1920 Meerovitch was a member of the Vaad Le’ummi. His articles and memoirs are of great importance to the historian of Jewish settlement in Erez Israel. Some were collected in book form during his later years: Hevlet Teshiyah (“Pangs of Resurrection,” 1930; Me-ha-Shevil el ha-Derekh (“From the Path to the Road,” 1935, with an annotated list including an index of his articles); Minhat Erev (“Evening Rest,” 1940; Mi-Bilu ad va-Ya’apilu (“From Bilu to Immigration,” 1947). The moshav Talmei Menasheh in the Coastal Plain is named after him.

“MEGASTHENES (c. 350–290 B.C.E.), ambassador of Seleucus Nicator at the court of the Indian king, Chandragupta. Megasthenes wrote a work on India idealizing the Indians. He apparently included in this work idealized descriptions of the Jews, whom he probably knew firsthand while at the court of Seleucus, to judge from his statement that both the Jews and Brahmins had already taught everything concerning nature that was taught by the ancient Greek philosophers."

MEGGED, AHARON (1920– ) , Israeli writer. Born in Wloclawek, Poland, his family immigrated to Palestine in 1926. He joined kibbutz Sedot Yam and worked at the port of Haifa. Megged left the kibbutz in 1950 and settled in Tel Aviv where he edited the journal Ba-Sha’ar. Together with a number of friends, he founded the biweekly literary magazine Massa, which became the weekly literary supplement of the daily La-Merhav. From 1960 to 1971 he served as Israel’s cultural attache in London.

In his prose, which often has strong autobiographical elements, Megged moved from the realism of his early works to surrealism and back to realism. His first short story collection, Ru’ah Yamim (“Sea Winds,” 1950), was inspired by life in Sedot Yam. Ḥedväv va-Añi (“Ḥedvaḥ and I,” 1964), a realistic novel, tells of the misfortunes of a kibbutz member who had to leave the kibbutz, much against his will, at the insistence of his wife. The protagonist is the first example of Megged’s antihero, so typical of his later writings. Lonely, tortured by thoughts of his shortcomings, fearing above all ridicule and abasement, the antihero is always the outsider in an otherwise congenial and united society. In Mikhre ha-Kesiš (1960; Fortunes of a Fool, 1962), he is the only “good man” who fails to join the “society of the wicked.” Megged’s most ambitious work, the novel Ha-Hai al-ha-Met (1965; The Living on the Dead, 1970), describes in unflattering terms modern Israeli society, and makes the accusation that the great expectations of the first pioneers have not been fulfilled by their successors. One of the most prolific and popular Hebrew writers, Megged mirrors the changes in Israeli society, highlighting moral standards and appealing for tolerance. Masa be-Av (“A Journey in the Month of Av,” 1980) reflects on the Yom Kippur War and its repercussions; Ga’agu’im le-Olga (“Longings for Olga,” 1994) depicts the unique relationship between a clerk with literary ambitions and a young Russian woman who becomes his muse; while Duda’am mi ha-Areg ha-Kedoshah (“Love-Flowers from the Holy Land,” 1998) is the story of a devout Protestant who arrives in Palestine in 1906 in order to paint pictures of flowers mentioned in the Bible and gets entangled in local Arab-Jewish affairs. In Foigelman (1987; Foigelman, 2003), Megged portrays the fate of a Yiddish poet who hopes to find a new home and a sympathetic readership in Israel and encounters instead a total lack of interest in Yiddish as well as in the Diaspora past. Some of Megged’s novels deal with authors and writing, describing with a fine sense of humor, often satirically, the literary milieu. Thus, for instance, the novel Ha-Gamal ha-Mcofef ve-Dabbeshet ha-Zahav (“The Flying Camel and the Golden Hump,” 1982; German translation, 1991) which focuses on the animosity between an Israeli writer and his neighbor, a literary critic, or Nikmat Yotam (“Yotam’s Vengeance,” 2003), which tells the story of a frustrated translator of Greek classics into Hebrew. Like many of Megged’s novels, Yarhei ha-Devasḥ shel Profesor Lunẓ (“The Honeymoons of Professor Lunz,” 2004) is a satire on Israeli society, relating the story of a bizarre marriage between an aged scholar of ancient Eastern studies and his second wife, Ayala, a student 50 years his junior.

Megged, a member of the Academy of Hebrew Language, was president of the Israel Center of PEN (1980–87). He received the Bialik Prize, the Brenner Prize, and the Agnon Prize and in 2003 was honored with the Israel Prize for literature. His stories and novels have been translated into several languages and his plays, including Genesis, Hannah Szemes, and

His brother Matti (Matityahu) Megged (1923–2003), poet and literary critic, wrote a number of works that made their mark on the modern Hebrew literary scene. Ha-Migdal ha-Lavan (stories, 1949) and Or ha-Soreg (novel, 1953) are among his best-known fictional works; Ha-Drama ha-Moderne (1966), a collection of essays on drama, and Dostoievski, Kafka, Beckett are critical works. He lectured on Hebrew literature at the University of Haifa.

Aharon Megged’s wife, EDA ZORITTE-MEGGED (1926–), began publishing essays in 1955. She published her first novel, Periḥah Afelah (“Somber Blossoming”), in 1966. Four novels followed, including a novel about Herzl’s wife (Isho ha-Menu dah, 1997; German translation, 2001) and Ahavat Hayyim (2000). Zoritte also wrote a monograph on Nathan Alter (1997; German translation, 2001) and biographies of the poets Amir Gilboa and Avot Yeshurun.

Aharon Megged’s son EYAL MEGGED (1948–), poet and novelist, was born in New York and grew up in Tel Aviv. He studied philosophy and art history and published his first collection of poems in 1972. This was followed by further poems, stories, and five novels, including Barbarossa (1973), Hesed Ne’urayikh (“Early Grace,” 1999; German, 2005), and Hayyei Olam (“Everlasting Life,” 2001).

[Gitta (Askenazy) Avinor / Anat Feinberg (2nd ed.)]
According to biblical tradition, Megiddo did not fall to Joshua, although its king was defeated (Josh. 12:21; cf. Josh. 17:11–13; Judg. 1:27–28). Solomon built the city (I Kings 9:15) and included it in his fifth district (I Kings 4:12). According to archaeologist Yigael Yadin, the Iron Age gate with three guardrooms is identical in plan with the gates at Hazor and Gezer and therefore should be related to the biblical testimony on the building activities of King Solomon. Two palaces built of well-hewn ashlar masonry and probably adorned with proto-Aeolic capitals were also associated by Yadin with King Solomon. Other scholars date the Megiddo gate to the ninth or eighth century and the two palaces to the ninth century. According to this view they should be associated with the Northern Kingdom of Israel. The next city at Megiddo was largely occupied by two units of five rectangular stables and one unit of two stables, with feeding troughs between pillars and a supposed capacity of 450 horses. Yadin attributes these stables to the time of King Ahab, who rallied 2,000 chariots against Shalmaneser III at the Battle of Karkar. Other scholars date them to the days of Jeroboam II, in the first half of the eighth century. A rock-cut water installation, probably built in the days of this city, consists of a shaft 81 ft. (25 m.) deep, with stairs leading to a horizontal tunnel 224 ft. (70 m.) long and to a spring in the slope of the hill, which was thus connected with the city inside the walls. The Israelite city perished in 732 B.C.E. with the conquest of Tiglath Pileser III. The Assyrian king made Megiddo the capital of a province, which included Galilee and the Jezreel Valley. Stratum III features the remains of the Assyrian city. It was rebuilt on a uniform plan, with two large public buildings in the Assyrian style. Stratum II probably dates to the second half of the seventh century B.C.E. King Josiah of Judah was killed by Pharaoh Necho at Megiddo. To this event can be attributed the association of war with the Megiddo Valley in Zechariah 12:11 and with *Armageddon in Revelation 16:16. The last settlement at Megiddo was a small city of the Persian period. Field Marshal *Allenby defeated the Turks at Megiddo in 1918. On his visit to Israel in 1964 Pope Paul VI was received by President Shazar at Tell Megiddo. In 2005 Megiddo was registered as a World Heritage Site.

[Michael Avi-Yonah / Israel Finkelstein and David Ussishkin (2nd ed.)]
MEGILLAH (Heb. מגילה; “scroll”), designation of each of the five scrolls of the Bible (ʿRuth, ʿSong of Songs, ʿLamentations, ʿEcclesiastes, ʿEsther). When the scroll is not specifically named, the term Megillah most commonly refers to the scroll of Esther which is read on ʿPurim.

See Scroll of ʿEsther; Scrolls, Five.

MEGILLAH (“Scroll”), tenth tractate in the order Moed, in the Mishnah, Tosefta, and Babylonian and Jerusalem Talmuds. Megillah, in four chapters, deals with liturgical readings from the Bible, especially with the reading of the “Scroll of Esther on ʿPurim to which the word megillah particularly refers, and with related subjects. The regulations concerning the reading of the Scroll of Esther on Purim are largely dealt with in the first two chapters of the tractate. Chapter 1 is primarily concerned with determining on which day of Adar the megillah is to be read, there being a difference between walled cities on the one hand and open towns and villages on the other. Only the first half of this chapter (mishnayot 1–4) deals with the megillah, while the remainder (5–11) is a collection of various halakhot, which were included because they are all introduced by the same formula (“The only difference between A and B is …”). According to J.N. Epstein (Tanna’im, 257) this group belongs to the Mishnah of R. Akiva (Tosef. 17–21, gives a similar but longer group of such halakhot). Chapter 2 first discusses the appropriate way of reading the megillah, e.g., whether reciting by heart and reading in a language other than Hebrew are valid. It goes on to deal with the technicalities of writing a megillah to be used for public reading, e.g., whether it must be written on parchment, or whether paper may be used. Among other questions discussed is the qualification of the reader, and whether women or minors are fit to read it. There is also much extraneous matter in this chapter. Chapter 3 starts with a discussion on the sanctity of the synagogue and its appurtenances, but its main contents are the public readings from the Pentateuch and haftarah. Chapter 4 continues with the main subject but deals with other liturgical questions (e.g., public reading of the Shema, priestly blessings, etc.). The sequence of the chapters as set out above is the one found in current editions of the Mishnah, Jerusalem Talmud, and Tosefta, but in the Babylonian Talmud the order of the last two chapters is reversed. The reason is that since the first Mishnah of chapter 4 opens with the words “He who reads the megillah,” it was thought appropriate that this chapter follow the first two, which deal mainly with the megillah.

Various strata can be detected in the Mishnah. In addition to the above-mentioned groups from the Mishnah of R. Akiva, R. Johanan attributes Mishnah 1:1 to Akiva (Meg. 2a). According to Epstein, Mishnah 2:6 belongs to Eleazar b. Simeon (cf. Men. 72a), Mishnah 3:1 is from the mishnayot of Menahem b. Yeose, and Mishnah 3:6 from that of Judah b. Ilai; according to the Gemara (9b) the second part of 1:9 is Meir’s, while its first part is of unknown origin. The order of the paragraphs in the Tosefta to Megillah usually corresponds to that in the Mishnah. It includes a vivid description of gatherings in Jerusalem for the performance of mitzvot (4 (3):15). There is a great deal of aggadah in the Babylonian Talmud. Deserving of particular mention are geographical notes (5b–6b), the observations on the origin of the Targums (3a) and of the Septuagint (8b–9b), the extensive aggadic Midrash to Esther, which is practically a complete Midrash to the Book of Esther (10a–17a), and the arrangement of the “Amidah (17b–18a). Of linguistic interest is the reference to the confusion of the letter alef with ayin in certain places, and the problem of correct pronunciation of the letters he and het. There is less aggadic material in the Jerusalem Talmud than in the Babylonian. Unlike the latter, the Jerusalem Talmud does not give any aggadot about the story of Purim. It does, however, deal with the problem of the inclusion of the Book of Esther in the canon (1:7, 70d), and also has lengthy discussions on the laws of writing Torah scrolls and on the divine names (1:11, 71b–72a). It also gives the list of dates included in “Megillat Taitanit (16, 70c).

[Arnost Zvi Ehrman]

MEGILLAT SETARIM (Heb. מגילת סתרים, lit. “concealed scroll”). On two occasions (Shab. 6b; BM 92a), “Rav mentions that he found a Megillat Setarim in the academy of R. Hiyya containing laws in the name of Isi b. Judah. The first is that there are 39 principal categories of work (avot melakhah) forbidden on the Sabbath, but culpability is incurred only on account of one (this is the actual statement quoted, although the Talmud finds it inconceivable and emends it to “there is one for which culpability is not incurred”). In the second he states that the law in Deuteronomy 23:25, “When thou comest into thy neighbor’s vineyard, then thou mayest eat grapes until thou have enough at thine own pleasure,” applies to anyone entering the vineyard, and not only to a laborer employed there, on which Rava commented, “Isi would make it impossible to live,” since a man would soon have his vineyard stripped, and there also the statement is then qualified as a result.

Rashi (ad. loc.) explains that the scroll was concealed because it was forbidden in general to commit the Oral Law to writing but since these laws were not generally taught, they were written down to save them from oblivion. I.H. Weiss is of the opinion that they contained views which Judah ha-Nasi rejected, and they were kept concealed out of respect for him, but this view is most improbable. All the beraitot were excluded from the Mishnah, and they contained many views that he had rejected, yet there is no suggestion that they were suppressed. Kaplan maintains that these scrolls were kept concealed because their contents were unsuitable for publication, and in addition he suggests that “concealed” means that they were written in a cryptic manner to conceal their meaning. However, there is nothing particularly cryptic in the language of the passages quoted. Nevertheless, it certainly would have been dangerous to make these laws widely known, and that would also explain why these are the only laws mentioned.
MEGILLAT TA'ANIT (Heb. lit. “scroll of fasting” but see below), a list of 36 days on which there were significant victories and happy events in the history of the Jews during the Second Temple, as a result of which the rabbis forbade fasting on them, as well as, in some cases, the delivery of memorial addresses for the dead (hespedim). The title should therefore be taken as meaning “the scroll of (the days of prohibited) fasting.” The work received its present form close to the time of the destruction of the Second Temple or at the latest during the Bar Kokhba era. It is written in Aramaic and with extreme brevity. According to a tannaitic source (Shab. 15b), it was compiled by “Hananiah b. Hezekiah (b. Garon) and his company,” but the appendix to the megillah gives the author as Eliezer, the son of this Hananah, one of the leading rebels against the Romans (Jos., Wars, 2:409). S. Zeitlin regards it as a literary remnant of the rebel party. If this is accepted, the purpose of the list of victories was to strengthen the spirit of heroism and faith in the success of the revolt. The value of the megillah for historical research lies in the parallels it provides to the facts and dates mentioned in Josephus. In the period following the conclusion of the Talmud a scholium was appended to the megillah, written in mishnaic Hebrew and based upon the Hebrew original of 1 Maccabees, the talmudic literature, and various oral traditions unknown from any other source. The historical value of this appendix is limited. In the course of time copyists and editors added notes and explanations, taken in particular from the Babylonian Talmud, so that two versions evolved, a Sephardi and an Italian.

The dates included in the megillah from before the Hasmonean era are the second Passover (14th Iyar) and Purim. Those from the Hasmonean era are the 23rd of Iyyar when the defenders of the ‘Acra left Jerusalem, an event mentioned in 1 Maccabees 13:49–53; the 14th of Sivan, “the seizure of the citadel Zur,” identified by Graetz with Beth-Zur conquered by Simeon the Hasmonean (see 1 Macc. 11:65–66; 14:33); the 15th and 16th of Sivan, in memory of the conquest of Beth-Shean and the valley (of Jezreel) by the sons of John Hycranus (see Jos., Ant., 13:280; Jos., Wars, 1:66); the 23rd of Marheshvan when they removed the sereg from the Temple (according to the appendix, it meant a place “which the gentiles built, on which they stationed harlots”); the 25th of Marheshvan, in memory of the capture of Samaria by John Hycranus and his sons (see Jos., Wars, 1:64; Jos., Ant., 13:275–81); the 21st of Kislev, “the day of Mt. Gerizim,” in memory of the destruction of the Samaritan temple by John Hycranus (see Jos., Ant., 13:255/6); the 25th of Kislev, Hanukkah, for which festival the appendix mentions several reasons, including that when the Hasmoneans were victorious and found all the temple vessels ritually unclean, “they brought seven iron spits, covered them with white metal, and commenced the lighting”; the 28th of Shevat, when King Antiochus was driven out of Jerusalem (according to the appendix, the reference is to Antiochus IV (Epiphanes), but it is probable that it actually refers to Antiochus V (Sidetes) of the time of John Hycranus; see Jos., Ant., 13:245); and the 13th of Adar, the day of Nicanor, in memory of the defeat of this Syrian commander (see 1 Macc. 7 and 11 Macc. 15). The dates from the period of Roman rule over Judea include the third of Kislev, when the “emblems” (the images of the Emperor) were removed from the Temple court, apparently in the time of Pontius Pilate (see Jos., Wars, 2:169), and the 22nd of Shevat, when the edict of Gaius Caligula ordering the erection of a statue of him in the Temple was rescinded (see Jos., Wars, 2:195–203). From the period of the Jewish war with Rome are the 23rd of Sivan, when the tax collectors were removed from Judea and Jerusalem, apparently a reference to the suspension of the tax payment to the emperor in 66 c.e., a matter mentioned in the long speech of King Agrippa (Wars, 2:345–401); and the 17th of Elul, when the Romans departed from Jerusalem, although it is not known to what incident this refers.

A number of dates appear to allude to victories of the Pharisees over the Sadducees, but the details are not clear, and apart from two days, the 12th of Adar, “the day of Trajan,” which some connect with the emperor Trajan, and the 28th of Adar, which the appendix attributes to the abrogation of Hadrian’s edicts, the megillah contains no events after 67 c.e. These memorial days were observed until the third century, but later “Megillat Ta’anit was rescinded” (7 Taan. 213, 66a; RH 18b). A 13th-century manuscript of the work is extant in the Palatine library in Parma (De Rossi collection no. 117). Megillat Ta’anit was first published in Mantua in 1513. A critical edition, with an introduction and commentary, was published by H. Lichtenstein (see bibl.). A new critical edition, Megillat Ta’anit – Version, Interpretation, History, was published by Vered Noam in 2003.

[Nahum N. Glatzer]

MEGILLAT YUHASIN (Heb. יִעָחַס, “genealogical scroll”), a work mentioned by tannaim and amoraim as having been found in Jerusalem and containing genealogical information on traditions of importance in halakah and in aggadah. Simeon b. Azza (the tanna living at the beginning of the second century c.e.) relates that he found a Megillat Yuhasin “in Jerusalem in which was written: so and so is a *mamzer from a married woman” (Mishnah Yev. 4:13). A baraita in the Babylonian Talmud (Yev. 49b) adds in his name that this Megillat Yuhasin also included the following two traditions: “the Mishnah [teaching] of Eliezer b. Jacob is little but well sifted; [King] Manasses killed [the prophet] Isaiah” (Yev. 49b). Similarly Levi (the amora of the end of the third century) states that he found in the Megillat Yuhasin in Jeru-
Mehilah

The renunciation, repudiation, abandonment, or surrender of some claim, right, or privilege. Mehilah may be the waiver of a present right or lien or the waiver of the right to a future increment; in the latter case, it is usually referred to as silluk (ת").

Range of Applicability

Mehilah cancels any debt, lien, or obligation regardless of origin. Thus, debts arising out of loans, sale, leasing and hiring, labor, partnership, and surety; liens on property put up as collateral; obligations originating in contract or tort—all are effectively cancelled by mehilah on the part of the creditor. Nor is the effectiveness of mehilah curtailed by the form of the obligation; it applies with equal vigor whether the obligation is an oral or written one, whether it is attested to by witnesses or not (Gulak, Yesodei, 2 (1922), 111–4, 162f.).

Silluk, i.e., the waiving of future accretions, however, is only of limited effectiveness. This is due to the general reluctance of Jewish law to grant effective control over things that have as yet not come into existence (davar she-lo ba-la-olam; see Contract). Thus, if, on the one hand, a person possesses a present right, claim, or lien, silluk cannot dissolve it; only mehilah can do so. If, on the other hand, the future right, claim, or lien is so remote as to have no specific relationship to this particular person, his silluk is equally ineffective since it pertains to davar she-lo ba-la-olam. However, if the future right, claim, or lien, although not in existence, has by the operation of circumstances at least achieved a likelihood of accruing to a specific person, then his silluk is effective. Thus, the ability of a man to waive the rights of usucrupt in his wife’s property depends upon the status of his relationship with her; if he has already married her (nissu’in), his claim on her usufruct is a present one; hence his waiver must be in the form of mehilah, and his silluk is no longer effective. If he has not entered into the first stage of marriage (erusin), the usufruct in her property has as yet not come into existence (it is a davar she-lo ba-la-olam); hence it is sufficiently remote as to vitiate the effectiveness of either form of waiver, that of mehilah and that of silluk. If, however, he has entered into the first stage of marriage (erusin) but has not yet consummated the marriage (nissu’in), the right of usufruct, although not yet in existence, has achieved sufficient likelihood of accruing to him as to have endowed him with the power, not of mehilah, but of silluk (Ket. 83a–84a, and codes).

The effectiveness of silluk with regard to obligations (i.e., rabbinic origin; see Mishpat Ivi) that have as yet not come into existence is undisputed among the early authorities (rishonim; see Authority, Rabbinical). Its effectiveness with regard to obligations which are mi-de-oraita (i.e., biblical origin; see Mishpat Ivi) that have as yet not come into existence presented these scholars with two major difficulties:

1. it is an established rule of law that conditions contrary to biblical law are void (B.M. 71a).

2. The Talmud rules that biblical rights of succession, which are mi-de-oraita, such as those of a son to inherit his father’s estate (in contradistinction to the right of a husband to inherit his wife, which is mi-de-rabbanan), cannot be waived (cf. Ket. 83a). The first difficulty was overcome by the limitation of the rule to non-monetary conditions on the one hand, and by the limitation of the power of waiver to monetary obligations on the other. The second limitation was overcome by construing mi-de-oraita rights of inheritance as being unique in that they inhere in the heirs even before the death of the owner of the estate; hence silluk, as the waiver of future rights, is impossible (Kezot ha-Hoshen 209 n. 11).

Waiver is limited to rights; it is ineffective as a mode of transfer of real property or of chattel (Rema, B.M. 241:2).

Legal Analysis

It has been pointed out that in the realm of rights, where it is effective, waiver does not constitute a transfer; rather it is mere withdrawal. A creditor who waives his claim does not transfer his right to the debtor and thereby extinguish the claim; on the contrary, he withdraws his right or removes his lien from the debtor and his estate. The effectiveness of mehilah, therefore, is independent of the wishes of the debtor. Thus, if a creditor waives the debt due to him and the debtor refuses to avail himself of the waiver, the waiver nevertheless takes effect. Had mehilah been viewed as a kind of transfer, it would have failed to take effect inasmuch as the debtor, as transferee, had declined (cf. Herzog, Instit., 2 (1939), 239). The juridical basis of waiver is the insistence of the law that the obligatory nature of monetary obligations is always dependent upon the will of the party to whom the obligation is due; the suspension of this will, e.g., by waiver, automatically extinguishes the obligation (Maimonides, nov., B.B. 126b).
**Formal Requirements**

Mehilah requires no formal mode (mehilah einah zerikah kinyan; Yad, Mekhirah 5:11 and Ishut 17:19; Tosf to Sanh. 6a, s.v. zerikah). It is effective by parole alone. Some authorities, however, do require a formal kinyan to validate the waiver of a creditor who retains possession of the debtor’s promissory note (cf. commentaries to Sh. Ar., H.M 12:8; see also “Acquisition”). There is no formal requirement that witnesses validate a waiver of indebtedness. The function of witnesses is evidentiary, preventing the creditor from subsequently denying his act of waiver or from alleging that the act was made in jest. For this purpose, the witnesses need not have been formally appointed; their mere presence suffices (Sh. Ar., H.M 81:29).

**Implied Waiver**

Waiver may be express or implied. Thus, the mere declaration of the creditor that the debtor owes him nothing absolves the latter of all obligation; for although he knows that the creditor’s statement is incorrect, it is nevertheless construed as an implied waiver (Sh. Ar., H.M 75:11; Rema, H.M 40:1; but cf. Siftei Kohen, H.M 81, n. 72). Asher Gulak has pointed out the similarity between this waiver implied in the creditor’s denial of the debtor’s indebtedness with the acceptilatio in Roman law. This was an oral form of dissolving obligations by having the debtor ask the creditor, “What have I promised you, have you received it (habesne acceptum)?” and the creditor answering, “I have (habeo).” The effectiveness of the Roman acceptilatio was limited, however, to the dissolution of obligations created by verbal contracts (verbis); it was ineffective in dissolving obligations created by real (re) and written (litteris) contracts. This limitation does not exist in Jewish law where the creditor’s declaration of receipt of payment dissolves all obligations, regardless of origin (cf. Gulak, Yesodei, 2 (1922), 112f.). Implied waiver serves as the operational rationale of a number of legal rules. Thus, the rule that monetary conditions contrary to law, even if made by minors and, presumably, by “deaf-mutes and mentally incompetents (bam 22b). The effectiveness of mehilah is disputed in cases where the creditor retains possession of the debtor’s promissory note or his “pledge, some authorities requiring a formal kinyan to supplement the waiver by parole (Sh. Ar., H.M 12:8; 241:2, and commentaries).

**Legal Rules Limiting its Effectiveness**

Some of the legal rules governing waiver may be summarized as follows:

1. The power of waiver applies to claims estimable in money (manona ityahir li-mehilah); it is thus inapplicable to modes of effectuating marriage and divorce (Kid. 7a; Git. 64a).

2. Waiver need not be made in the presence of the debtor, but the debt does not lapse until the waiver has come to his knowledge (Arruk ha-Shalhan, H.M 241:4; but cf. Herzog, Instit, 2 (1939), 231f).

3. If co-debtors are named in one promissory note and the creditor waives the obligation of one of them, the other's obligation remains intact and is actionable (opinion of Sh. Ar., H.M 77:6; disputed by *Rema, ad loc.). If the debtors are cor-real, however, i.e., where each is bound severally to discharge the entire liability, the creditor’s waiver of the obligation to one of them cancels the liability of all (ibid.).

4. A waiver of the lien on an obligation, retaining, however, the obligation itself, must be accomplished by a kinyan in order to be effective (Derishah, H.M 111, n. 10).

5. A creditor may effectively waive part of the obligation, or he may postpone the date of payment by waiving the time stipulated in the “shetar (Sh. Ar., H.M 66:24, and Siftei Kohen, ibid., n. 83).

6. A waiver, in order to be effective, must be related to an object that is definite or to a quantity that is fixed: obligations that are vague, limitless, or unknown are unaffected by mehilah (Yad, Mekhirah 13:3; Sh. Ar., H.M 232:7).

7. Waiver is ineffective if made through error (see “Mistake, Tos. to BM 66b, s.v. batam; cf. Herzog, Instit, 2 (1939), 299); if made under duress (see *Ones, Tos. to BB 48a, s.v. amar); if made in jest (Yad, Mekhirah 5:13 and Ishut 17:19); and if made by minors and, presumably, by “deaf-mutes and mentally incompetents (BM 22b).

8. The effectiveness of mehilah is disputed in cases where the creditor retains possession of the debtor’s promissory note or his “pledge, some authorities requiring a formal kinyan to supplement the waiver by parole (Sh. Ar., H.M 12:8; 241:2, and commentaries).

Aaron Kirschenbaum

**MEHIZAH**

(Heb. מְחִיצָה; “partition”), designation of the partition screen in synagogues between the space reserved for men and that, generally in the rear or upstairs, for women. The origin of the mehizah derives from the talmudic description of the festivities (Simhat Beit ha-Sho’evah) held on the second evening of the feast of Tabernacles in the court of women of the Temple (Suk. 52a; Mid. 2:5). The Talmud states that men and women were allotted separate space (Suk. 51b–52a; Tosf., Suk. 41a). Further sources for the separation of the sexes, as practiced in traditional synagogues, are to be found in midrashic literature like Pirke de-Rabbi Eliezer 41, where it is stated in the name of R. Pinhas that men and women stood separately when the Israelites assembled at Mount Sinai to receive the Ten Commandments (see also Pake 23). Remains of galleries discovered in ancient Palestine synagogues have been taken as belonging to the women’s sections.
Most European synagogues of the Middle Ages had a separate women’s gallery called Webershul fenced off by an iron grille or a non-transparent curtain. In synagogues where there was no balcony, the mehizah was made of lattice work serving as a partition between the seats of the men in front and those of the women in the rear. References to the custom of mehizah in the Middle Ages can be found in the responsa literature of that period such as “Mordecai b. Hillel’s commentary to Shab. 3, note no. 311, where it is stated “We are permitted to erect on Sabbath the partition-curtain between men and women during the time of the sermon” (see also Sefer ha-Maharil of Jacob Moellin (ed. Cremona (1665), 38a, 50b, 59b). The abolition of the mehizah by the Reform movement in Europe in the early part of the 19th century was strongly opposed by the leading rabbinc authorities in Hungary and Poland, such as Moses *Sofer, Moses *Schick, and Elijah *Guttmacher, who regarded this innovation as an illicit change and, consequently, ruled that any synagogue without mehizah is unfit for prayer.

In most Conservative synagogues in the United States, the mehizah has been abolished and men and women sit together, or, in some cases, one side of the synagogue is reserved for the men and the other for the women, without an actual partition. In Reform synagogues the segregation of men and women has been entirely abolished based on the fact that the Bible nowhere commands the separation of men and women during public worship or assemblies (see Deut. 31:12; Neh. 8:2–3). These modern trends met with vigorous opposition in the 1950s on the part of Orthodox Jewry in the United States, which has come to regard the retention of the mehizah as a cardinal principle and as a mark of the preservation of the Orthodox character of the synagogue. In several congregations the Orthodox minority turned to the courts for legal redress and were granted relief by court orders enjoining the synagogue board from changing the status quo, as in the case of congregation Beth Tefilas Moses of Mount Clemens, Michigan (Court Order of Sept. 21, 1959). Similar litigations were dealt with by the state courts in New Orleans, Louisiana and by the Superior Court of Pennsylvania (no. 178, October Term, 1954), all of which ruled in favor of the party demanding the retention of the mehizah.

MEHLSACK, ELIAKIM BEN JUDAH HA-MILZAHGI
(c. 1780–1854), Polish talmudist. "Milzahgi" is a derivation of Mehlsack, the German name for Samila in Poland where Eliakim was born. He settled in Galicia and lived his last years in Lvov and Brody under the patronage of Isaac Berish Blumenfeld of Brody, devoting his life to Jewish scholarship. In 1837 he published Sefer Ravyahu (= Rabbi Eliakim b. Judah ha-Milzahgi), a criticism of the Gottesdienstliche Vortrage of Zunz and the Toledot of Solomon Judah "Rapoport. Unlike Zunz, who conceded the correctness of some of Mehlsack’s remarks, Rapoport took umbrage at them and replied scathingly in Kerem Hemed (6 (1841), 96–109). Although he wrote almost 70 books, only Sefer Ravyahu was published. Mehlsack also published an attack against the forgeries of A. *Firkovich in the German-Jewish press. Most of his works were about Talmud and Kabbalah, but Mirkevet Esh ("Train of Fire") argues that one is permitted to travel by train on the Sabbath. The manuscript was sent to S. *Holdheim, the leading Reform rabbi, who reproduced parts of it in a German-Jewish periodical. According to Gershom Scholem, Mehlsack’s unpublished study of the Zohar, Zohorei Ravyahu, at the Hebrew National and University Library is the most significant book written on the Zohar during the 19th century. Extant also is his commentary on the Book of *Raziel (London, Jews College MS. 347). His treatise on the principle of the Kabbalah and a commentary on the Pesikta de-Rav Kahana have not survived.

MEHRING, WALTER (1896–1918), German poet and author. The son of the well-known journalist Sigmar Mehring (1866–1905), Walter Mehring was born and raised in Berlin. He studied art history in Berlin and Munich. A friend of Kurt *Tucholsky, he joined the Berlin branch of the Dada movement, wrote political cabaret pieces, and published his early expressionist poems in Herwarth *Walden’s Sturm from 1916. They were collected in his first books, Das politische Cabaret (1919) and Ketzerbrevier (1921), which revealed his writing to be "heretical", meaning critical and provocative. During the Weimar Republic Mehring, who became a brilliantly witty spokesman of the moderate left, worked on the staff of the Weltbühne as its correspondent in Paris, where he lived from 1922 to 1928. His satirical light verse followed the tradition developed by Wedekind, Ringelnatz, and Brecht, and his chansons dealt with the life of the vagabond, symbolizing the disillusionment of his age. Mehring’s best-known collection of poems is Die Gedichte, Lieder und Chansons des Walter Mehring (1929), notable for its sarcastic criticism of contemporary society. In his comedy Der Kaufmann von Berlin (1929), which was staged by Erwin Piscator and outraged the Nazis, Mehring took on the subject of Shylock to describe the pogroms against the East European Jews in the Berlin Scheunenviertel in 1923. Confronting the beginning of persecution, he wrote Arche Noah s.o.s. (1931). On their accession to power in 1933, the Nazis planned to arrest Mehring, who, having been warned, managed to escape to Paris, and from there to Vienna in 1934 and after the “Anschluss” in 1938 back to Paris. In 1941 Meh-
MEHTA, Zubin (1936– ), conductor. Mehta, the son of the conductor Mehli Mehta, was born in Bombay. He received training in violin and piano as a child and formed an ambition to conduct. He started his professional career in Vienna and England. Mehta was then music director of the Montreal Symphony Orchestra (1962–67) and chief conductor of the Los Angeles Philharmonic Orchestra (1962–68). He was the youngest person to hold such an appointment with a leading orchestra in the U.S. and the first in North America to share a joint appointment with two major orchestras. Mehta made his debut at the Metropolitan Opera in 1965 (Aida) and his London opera debut with Otello in 1977. He was musical director of the New York Philharmonic Orchestra (1978–91), and from 1998 of the Bavarian Staatsoper in Munich. He also served as music director of the Maggio Musicale Fiorentino. Though non-Jewish, Mehta played an important role in the musical life of Israel. He first appeared with the Israel Philharmonic Orchestra in 1961 and the close contact between him and the orchestra was maintained ever since. The IPO appointed Mehta music advisor in 1969, music director in 1977, and music director for life in 1981. He conducts the orchestra in subscription concerts, special concerts, and major national events, and in concerts in development towns, kibbutzim, and army camps. During both the Six-Day War and the Yom Kippur War he canceled all engagements and hastened to Israel to conduct special concerts and to generally identify himself with Israel. He also conducted the IPO on worldwide tours of Europe, North and South America, and the Far East. Mehta realized a longtime ambition in 1994, when he brought the IPO to India. He won countless awards and distinctions in many countries. In Israel he was awarded honorary doctorates and the Hebrew University also named a wing of the Musicology Department after him and his father. Mehta was also awarded a special prize at the Israel Prize presentations for 1991 and he was the recipient of the Wolf Foundation Prize for Music (1995–96). He was an Honorary Citizen of Tel Aviv-Yafo.

Mehta conducted an encore from Tristan and Isolde with the Israel Philharmonic in 1981, but a Holocaust survivor interrupted his performance. Mehta halted the performance and since then has never included Wagner’s music in his performances in Israel. His numerous recordings range from a cycle of Mahler symphonies and operas by Verdi and Puccini to works by contemporary American composers. Mehta’s performances generally favored romantic warmth of expression and voluptuous sonority, combined with bold attack and rhythmic vigor and reinforced by boundless self-confidence.

MEI AMMI (Heb. מֵי אָמִּי), kibbutz in central Israel, in the Iron Hills of Samaria, affiliated with Ha-No’ar ha-Ziyoni, founded in 1963 as a *Nahal outpost on the pre-1967 Jordanian border. In August 1967 a civilian group took over the village, whose construction – including the reclamation of its hilly land – was aided by the Jewish community of Miami, Florida. Accordingly, the name chosen, meaning “Water of My People,” is similar in sound to Miami. In the mid-1990s, the population was approximately 185, increasing to 208 in 2002.

MEIDNER, Ludwig (1884–1966), German painter. Meidner was born in Bernstadt, in Silesia. At 19, he went to Breslau to study art. For a time he eked out a living in Berlin, sketching for fashion magazines, but in 1906–08 studied in Paris. In 1908 he returned to Berlin where in 1912, with Jakob Steinhardt and Richard Janthur, Meidner founded the group Die Pathetiker.

Though an ardent pacifist, Meidner was drafted into the German army, and served throughout World War I. In January 1918 he was given furlough to attend his one-man show of prewar paintings in Berlin. One of its major features was the oil, “I and the City,” in which he presented himself as a large, tortured, brooding figure, with exploding streets, factories, and tenements in the background. The show caused a great stir and Meidner suddenly became one of the foremost representatives of expressionism in Central Europe. After the war, Meidner was prominent in the Novembergruppe, an association of artists and intellectuals eager to bridge the gap between the public and the nation’s creative minds.

Meidner was deeply attached to Judaism, and for a time during the early Nazi period taught drawing at the Jewish Yawne secondary school in Cologne. In 1939 he escaped to England. During the air raids on London he served as night watchman in a morgue. Here, for a few pounds each, he painted portraits of deceased people from photographs. In 1952 he returned to Germany, and for a time lived in the Jewish Old Age Home in Frankfurt. A portrait commission by
MEIER, JULIUS (1874–1937), U.S. governor. Meier was born in Portland, Oregon. He became president and general manager of his family’s mercantile firm, Meier and Frank Company in Portland. Meier developed the Columbia River highway system. During World War I, he was northwest regional director of the Council of National Defense. When his former law partner, the Progressive Republican candidate for governor in 1930, died during the campaign, Meier reluctantly agreed to run as an Independent against a regular Republican and a Democrat and won. During his term as governor (1931–35), he fostered conservation of the state’s natural resources, for- mation of the state police system, and establishment of a non-political judiciary, and he demanded rigid economies in state expenditures. While governor, he served as president of Congregation Beth Israel in Portland (1933–35), which his father had helped to found.

[Robert E. Levinson]

MEIER, RICHARD (1934– ), U.S. architect. Meier was born in Newark, N.J. Fifty years later in 1984, he became the youngest winner of the Pritzker architecture prize, one of the most heralded awards for architects. The road to this award and to many important architectural commissions began after Meier graduated from Cornell University in 1957. He worked for the firms of Skidmore, Owings and Merrill and Marcel Breuer before establishing his own firm in 1963.

Meier made his early mark with the designs for private residences, which recall the light and geometric designs of the Bauhaus, especially the form established by Mies van der Rohe as well as the Constructivists. Japanese architecture from the 19th century was also important in formulating Meier’s aesthetic. The architect has suggested the strong influence of Le Corbusier in his work. Meier’s early important commissions were for the Smith House in Darien, Conn., built between 1965 and 1967, followed by the Douglas House at Harbor Springs, Mich. in 1973, and the Shamberg residence, planned for two people, at Chappaqua, N.Y., from 1972 to 1974. He converted the Bell Telephone laboratories in Manhattan to 383 apartments and went on to design the Athenaeum in New Harmony, Ind., 1975 to 1979, to much acclaim. In museum design, Meier has created striking designs in the Museum of Decorative Arts in Frankfurt (1981–84), the High Museum of Art in Atlanta (1981), the Museum of Contemporary Art in Barcelona (1992–95), and the Getty Museum in Los Angeles (1997).

Meier emphasizes white as an essential color in his design, which accentuates the power of the visual form. Meier’s buildings are striking, especially against a simple grass landscape, as in the case with the Athenaeum, the Des Moines Art Center extension, or the High Museum, where the whiteness and architectonic characteristics of the form are juxtaposed to the green landscape, resulting in a powerful but restful aesthetic. All of Meier’s works stand as sculptural forms as well as functional buildings.

Meier’s most contested building is the Getty Museum in Los Angeles. Sitting on the hillside that overlooks both Los Angeles and Santa Monica, the Getty is a series of buildings that seeks to bring together a huge and eclectic art collection. Driven by the immense resources of the Getty Foundation and the size of the collection, the museum space, comprised of six buildings, has been compared to an acropolis. To some, the scale of the project served to limit the architect’s powers of invention. The uniformity of Meier’s usual white exterior was compromised in part by a beige travertine.

[Stephen C. Feinstein (2nd ed.)]

MEIJER, JACOB ("Jaap"; 1912–1993), Dutch-Jewish historian. Born into an impucuens provincial Jewish family, Meijer received a stipend to attend the Ashkenazi Teachers and Rabbinical Seminary in Amsterdam from the age of 13. He later studied at the University of Amsterdam, and in 1941, one of the last Jewish students allowed to do so, took his Ph.D. with a thesis on the 19th-century Amsterdam Sephardi author and poet Isaac da “Costa. He survived two years in Bergen-Belsen concentration camp (1943–45). From 1945 on he taught history at municipal high schools, including a number of years in Paramaribo, Dutch Guyana, and in Haarlem.

MEINHOLD, JOHANNES FRIEDRICH

MEIJERS, EDUARD MAURITS (1880–1954), Dutch jurist who as professor of law at Leiden University from 1910 to 1950 influenced several generations of Dutch lawyers. Born in Den Helder, Meijers was admitted to the bar in 1903. He practiced law in Amsterdam until 1910, when he was made professor of civil and private international law at Leiden University. He served this university both as dean and rector. After 1928 he served this university both as dean and rector. After 1928 he was substitute counselor in the High Court of Justice at The Hague. Meijers’ numerous books were largely devoted to the history of civil law. His work The Labor Contract (1908) became a standard treatise on the subject and was followed by Legal Decisions Regarding the Law on Labor Contracts (1909). His textbook on succession, Le droit ligurien de succession en Europe occidentale (1928), and his L’Histoire des principes fondamentaux du droit international privé à partir du Moyen Age (1934) brought him further distinction. Following the Nazi invasion of Holland, Meijers was dismissed from his post and was sent to the “Westerbork and “Theresienstadt camps for the duration of the war. His arrest led to a public demonstration by students at Leiden. The dean, Professor R.P. Cleveringa, gave a famous address, protesting against Meijers’ arrest. Cleveringa himself was imprisoned for this speech. After World War II, Meijers was commissioned to draft a new civil code for Holland, but died before its completion. He was chairman of the Royal Dutch Academy of Sciences from 1945 until 1949.

[Moshe Rossetti]

“MEINERTZHAGEN, RICHARD HENRY (1878–1967), British soldier, administrator, and supporter of Zionism. Meinertzhagen was the son of a successful non-Jewish German merchant in London; his mother was the sister of Beatrice Webb, the famous socialist. He was educated at Harrow and became an army officer. During World War I he served on the East African front and was on the staff of General Allenby’s army, which conquered Palestine. He was chief political officer in Palestine and Syria in the postwar military administration, and in a dispatch to the Foreign Office (1919), accused the military administration of hostility to the principles of the *Balfour Declaration, expressing the view that Arab opposition to Zionism would not last once it was known that the British government was determined to carry through its pledge of a national home to the Jewish people. He joined Herbert Samuel’s staff when the latter was appointed high commissioner of Palestine. Meinertzhagen was also attached to the British delegation to the Paris Peace Conference as an advisor (1919–20), and from 1921 to 1924 he was military advisor to the Middle Eastern Department of the Colonial Office. He remained a firm friend of Zionism, and his Middle East Diary 1917–1956, published in 1959, is a valuable record as well as source for correcting the misinterpretations of history related to the Balfour Declaration and the subsequent period. He was also an enthusiastic ornithologist, and his book Birds of Arabia (1954) threw much light on the bird life of Palestine.

[Henriette Boas]

ME’ILAH (Heb. מְעִילָה; “sacrilege”), eighth tractate in the Mishnah, Tosefta, and Babylonian Talmud order Kodashim. Me’ilah contains six chapters and deals with the unlawful use and enjoyment of hekdesk (i.e., things consecrated to the Temple, especially sacrifices). The scriptural basis is Leviticus 5:15–16, which lays down that a person inadvertently committing a trespass “in holy things” shall bring a guilt offering, make restitution for the loss caused, and pay an additional fine. Chapters 1 and 2 discuss the various offerings and sacrificial portions to which the law of me’ilah applies, and define the moment from which an offering is considered hekdesk for the purpose of this law. Chapter 3 is concerned with exceptional instances of illicit enjoyment of hekdesk, which are not affected by the law of me’ilah. Chapters 4 and 5 include the problem of determining the minimal value of misappropriation to which the law applies, and especially whether illicit enjoyment that causes no loss to hekdesk constitutes me’ilah. Chapter 6 deals with trespass by proxy. The Tosefta is divided into three chapters. The Babylonian Gemara enlarges on the teaching of the Mishnah but, with the exception of the remarkable “Ben Temalyon story (17b), there are no aggadic digressions. Me’ilah was translated into English in the Soncino edition of the Talmud (1948).

[Arnost Zvi Ehrman]
MEININGEN, city in Germany. The medieval Jewish community suffered persecutions in 1243 because of a blood libel, in 1298 during the Rindfleisch disturbances, and during the Black Death massacres in 1349 when it was destroyed. The synagogue was transformed into a chapel in 1384. Jews continued to live in nearby villages, which in 1803 were incorporated into the newly created duchy of Saxe-Meiningen. The duchy's Jewry law of 1811 laid down disabilities regarding residence, marriage permits, and economic pursuits. Only a few Jews were allowed to live in Meiningen itself; after the "Hep! Hep! riots (1819) only one family remained. By 1844, only 29 persons lived there. At that time 1,500 Jews lived in the duchy; the seat of the rabbinate was in the nearby village of Walddorf, where 550 Jews lived (35% of the total population) in 1844, when the ducal authorities approved the Saxe-Meiningen synagogue regulations stressing religious reforms. The Saxe-Meiningen Jewry law of 1856 granted citizenship to Jews owning substantial business, and that of 1868 to all the duchy's Jews. By 1870, some 470 Jews lived in Meiningen; 490 in 1898; 359 in 1913 (2.08% of the total); 293 in 1925 (1.6%); and 192 in June 1933. In 1871 the rabbinate was transferred to Meiningen, a cemetery was acquired in 1874, a synagogue was consecrated in 1883, and a hevra kaddisha was founded in 1885. In 1856 Jewish and Christian financiers founded the Central-German Credit Bank in Meiningen. The banks of B.M. Strupp (formerly a merchandise firm) and D. Mannheimer (founded in 1871) were important in industrial financing far beyond the duchy's limits. Gustav Strupp (1851–1918) was chairman of both the Chamber of Commerce and the Jewish community, and was a member of the Landtag (1903–18). From the 1870s Jews were admitted to the bar, and some were appointed judges. Antisemitism was strong in Meiningen: the antisemitic vote in 1898 and the Nazi vote in 1932 far exceeded the national average. The synagogue was burnt in 1938, and by the end of that year only a few Jewish families remained, with 16 children attending the Jewish school. Records on deportations are missing. No Jews returned to Meiningen after 1945. The Jewish cemetery, which had been damaged by the Nazis in 1938, was restored by the municipality of Meiningen. In 1988 a memorial was consecrated to commemorate the destroyed synagogue.

[1014: T. Oelsner / Larissa Daemmig (2nd ed.)]
these two other sages, which Meir and Nathan took as a personal affront. Nathan and Meir engaged in a conspiracy to discredit Simeon b. Gamaliel and to remove him from office. Their plan was foiled and Simeon in turn attempted, unsuccessfully, to have them removed from the bet ha-midrash. Nevertheless, as a punishment for their opposition to the nasi, it was decreed that all subsequent statements made by Meir and Nathan should be introduced anonymously, the former being quoted merely as “others say,” and the latter as “some say” (Hor. 13b–14a). While some scholars have held that this story accurately reflects the forms of communal leadership practiced during the late tannaitic period, and have also accepted it as evidence for a power struggle between these well-known historical figures, Goodblatt has shown quite convincingly that this story is in fact a late Babylonian elaboration and embellishment of certain earlier Palestinian traditions (cf. YMK 3:1, 81c), and has little or no historical value.

The Talmud ascribes to R. Johanan the statement that “an anonymous mishnah represents the view of Meir following that of Akiva” (Sanh. 86a), but the authenticity of this statement is doubtful and its proper interpretation remains somewhat unclear (cf. TJ, Yev. 4:11, 6b). According to tradition, Meir frequently spoke in praise of living in Erez Israel: “Whoever lives permanently in Israel and speaks the holy language ... he is assured of a share in the world to come” (TJ, Shek., 3:4, 47c). Meir died in Asia (probably Ezion-Geber). Before his death he ordered that his body be taken to Erez Israel, and requested that until then his bier be put on the shore in order that it may be lapped by the sea that washes the shores of Erez Israel (TJ, Kil., 9:4, 32c). His extreme attitude in demanding study of Torah emerges clearly in the saying: “Whoever forgets one word of the Torah is accounted by Scripture as if he had forfeited his life” (Avot 3:8), and the Talmud ascribes to him the statement that a gentile who occupies himself with the Torah is the equal of a high priest (bk 38a; Av. Zarah 3a), and also states that he required that one should not be satisfied with acquiring knowledge of the Torah, but should also teach it to others (Sanh. 99a). Three hundred fox fables are ascribed to Meir, of which three are given (Sanh. 38b). In connection with the definition of the concept of am ha-arez, Meir takes a more stringent view than his colleagues. According to Meir anyone not eating ordinary food in ritual purity belongs to the category of the am ha-arez while his colleagues apply the term only to someone who disregards the duty of giving tithes. On the other hand the words ascribed to him in the Talmud, “Whosoever marries his daughter to an am ha-arez as though he bound her and laid her in front of a lion” (Pes. 49b), are almost certainly pseudoepigraphic, and do not represent the views of the historical Meir (Wald). Together with the study of Torah, Meir stresses the importance of labor: “A blessing rests only upon labor” (Tosef., Ber. 7:8); “A man should always teach his son a clean craft” (Kid. 4:14). He similarly stresses the importance of prayer: “And it came to pass as she prayed long” [1 Sam. 1:12], this implies that whoever prays long is answered” (TJ, Ber. 4:17c; et al.). According to the Talmud his contemporary, Yose b. Halafta, called him: “A great man, a holy man, a modest man” (TJ, Ber. 2:7, 5b), while Simeon b. Lakish called him “holy mouth” (Sanh. 23a).

According to the aggadot of the Babylonian Talmud, Meir was married to *Beruryah, the daughter of the martyred Hananiah b. Teradyon. After the Bar Kokhba War her sister was taken to a brothel from where Meir rescued her (Av. Zarah 18a). According to a legend quoted by Rashi (Av. Zarah 18b), Beruryah herself was seduced by one of the scholars. None of these traditions, however, seem to have any historical basis (see *Beruryah). According to another late aggadic tradition (Midrash Proverbs 31) his two sons died simultaneously while he was busy in the college.

[Ahron Oppenheimer / Stephen G. Wald (2nd ed.)]

**MEIR** *(Myerson, née Mabovitch), GOLDA* (1898–1978), Mapai leader and Israeli prime minister in 1969–74; member of the First to Eighth Knessets. Meir was born in Kiev, Russia, where her father was a skilled carpenter. In 1906 the family migrated to the United States and settled in Milwaukee, where she graduated from high school and enrolled in the Milwaukee Normal School for Teachers. In 1915, as a youth, she joined *Po'alei Zion. In 1921 Meir settled in Palestine with her husband, Morris Myerson, and the two joined kibbutz Merhavia, where they remained until 1924. Meir soon became involved in political and social activities within the *Histadrut. In 1928 she became the executive secretary of Moetzet ha-Po'alei Zion (Women Workers Council), and was sent as an emissary to the Pioneer Women's Organization in the United States from 1932 to 1934.

Upon her return to Palestine in 1934, she was invited to join the executive committee of the Histadrut, and in 1936 became head of its Political Department. Simultaneously with her work within the Histadrut Meir was active in Mapai. When Moshe *Sharett was arrested by the British on Black Saturday in June 1946, Meir was appointed to serve as acting head of the Political Department of the Jewish Agency. After Sharett was released, he was sent to the United States to take charge of the struggle for the partition plan at the UN, and Meir remained as the head of the Political Department in Jerusalem, in which capacity she served until the establishment of the State in May 1948.

In January 1948, she went to the United States to enlist the help of American Jewry in the struggle against the Arabs. Four days before the proclamation of Independence, on May
10, 1948, she met secretly with King Abdullah in Transjordan, in an effort to come to an agreement with him on the partition of Palestine between his kingdom and the Jewish state and to keep the Arab Legion out of the approaching military attack on the new state. After the establishment of the state she was appointed Israel's first diplomatic representative to Moscow, a post she held until April 1949. Her presence at the Great Synagogue of Moscow on the High Holidays in September/October 1948 caused great excitement among Soviet Jews.

After the elections to the First Knesset in 1949, to which she was elected on the Mapai list, Meir was appointed minister of labor, in which capacity she was responsible for the initiation of very large-scale public works to offer rudimentary employment to masses of new immigrants. In 1956, after Moshe Sharett resigned from the post of minister for foreign affairs that he had held since 1948, Meir assumed the post, which she held until 1965. As foreign minister she attended the annual opening sessions of the United Nations, and defended Israel's participation in the *Sinai Campaign. She played an active role in establishing friendly relations with the newly independent black African states, extending technical assistance to them and visiting several of them. After the elections to the Sixth Knesset in 1965 Meir was appointed secretary general of Mapai. In this capacity she played an active role in establishing the *Israel Labor Party in 1968 through the union of Mapai, *Rafi, and *Ahdut ha-Avodah, becoming the first secretary general of the new party. After the death of Levi *Eshkol in February 1969, and despite the fact that she suffered from blood cancer, Meir was chosen as Israel's fourth prime minister. Soon after becoming prime minister Meir visited President Richard Nixon in Washington, and subsequently led the Labor Alignment to an impressive victory in the elections to the Seventh Knesset. Though she once again formed a National Unity Government with Gahal, a year later Gahal left the coalition owing to its objection to her willingness to consider the Rogers Plan, which proposed a settlement between Egypt and Israel based on an Israeli withdrawal from territories it had occupied in 1967. However, in later years Meir was accused of missing an opportunity to reach a settlement with Egyptian President Anwar Sadat, and thus of avoiding the *Yom Kippur War. During her premiership, and despite the fact that Israel did not have diplomatic relations with the Soviet Union, Meir played an active role in the struggle to get the latter to open its gates to Jewish immigration to Israel – a struggle that was partially successful for several years. At the same time she did not demonstrate any sympathy toward the social protest movement of the Israeli "Black Panthers," who were protesting the discrimination against Israel's citizens of Oriental origin, characterizing their leaders as "not nice." Her failure to take the distress of this part of the Israeli population seriously was to have devastating political consequence for the Labor Party in later years. In 1972 Meir was elected deputy chairman of the Socialist International, in which capacity she served for two years.

The Yom Kippur War, which took the Israeli leadership by surprise, signaled the beginning of the end of Labor hegemony in Israeli politics in general, and of Meir's political career in particular. Though the Labor Party was not defeated in the elections for the Eighth Knesset held on December 31, 1973, and Meir succeeded, after lengthy and difficult negotiations, in forming a new government with the *National Religious Party and the *Independent Liberal Party, one month after the new government was approved by the Knesset, she resigned. The immediate background to her resignation was the Interim Report of the Agranat Commission of Inquiry concerning the causes of the outbreak of the Yom Kippur War. Though the report put the blame for the lack of preparedness on the military leadership, there was growing public dissatisfaction with the political leaders, and Meir submitted her resignation as prime minister on April 11, 1974, and in June resigned her seat in the Knesset. In 1975 Meir was awarded the Israel Prize for special service to the state and society. Though after her resignation she assumed the status of "elder statesman" until her death four years later, her departure, together with the fact that neither Moshe *Dayan nor Abba *Eban were given ministerial positions in the government formed by Yitzhak *Rabin in June, marked the end of an era. However, before Rabin formed his government, Israel with the mediation of U.S. Secretary of State Henry *Kissinger and under Meir's leadership, had signed Interim Agreements with Egypt (January 18, 1974) and Syria (May 31, 1974), both involving Israeli withdrawal from territories in return for new security arrangements – the first implementation of the "territories for peace" principle, that three and a half years later was to lead to the Peace Treaty between Israel and Egypt. At a meeting with Egyptian President Anwar Sadat on his historic visit to the Knesset on November 20, 1977, Meir joked with him about his having referred to her as "the old lady." Meir passed away on December 8, 1978. In her will she requested that no eulogies be delivered at her funeral and no institutions be named after her. Nevertheless, a year after her death, the city of New York named a broadway street after her. A year before she passed away a two-act play called Golda, by William Gibson, appeared on Broadway, and in 2003 a one-woman play, titled Golda's Balcony, by the same playwright, turned into a hit and ran in several cities in the u.s.

Her writings appeared in H. Cristman (ed.), This Is Our Strength: Selected Papers of Golda Meir (1962); Israel Shenker and Mary Shenker (eds.), As Good As Golda: The Warmth and Wisdom of Israel's Prime Minister (1970); Beit Avi (Hebrew, 1972); Marie Syrkin (ed.), Golda Meir Speaks Out (1973); and an autobiography, My Life (1974).

MEIR, JACOB (1856–1939), Sephardi chief rabbi of Ereẓ Israel. Born in Jerusalem, the son of a well-to-do merchant, Caleb Mercado, Meir studied Talmud under Menahem Bekhor Isaac and Kabbalah under Aaron Azriel. In 1882 he was sent to Bukhara, as the first emissary to visit that country. Meir, enthusiastically welcomed, was instrumental in encouraging the immigration of Bukhara Jews to Ereẓ Israel. In 1885, 1888, and 1900 he visited Tunisia and Algeria as an emissary. In 1888–99 he was a member of the bet din of R. Jacob Saul ʿElyashar in Jerusalem. Meir was one of the promoters of the revival of spoken Hebrew in Palestine. Under Turkish rule, he often interceded with the authorities on behalf of the Jewish community; he also encouraged the construction of new Jewish quarters of Jerusalem. In 1899 he was appointed deputy head of the bet din of R. Raphael Isaac Israel. In 1906 he was a candidate for the chief rabbinate of Jerusalem, in succession to ʿElyashar, but his opponents, supported by the hakham bashi in Turkey, prevented his election. In 1908 he was elected chief rabbi of Salonika, where he remained until 1919. He was elected chief rabbi of Jerusalem in 1911, but the Jews of Salonika prevented him from assuming the office. When in 1921 the chief rabbinate was established in Palestine, Meir was elected (together with Rabbi A.I. Kook) as chief rabbi of Palestine with the title of rishon le-Zion. He was decorated by the sultan of Turkey, and by the kings of Greece and England, and was awarded the French Legion of Honor. Meir even received decorations from Hussein, king of the Hejaz. Two manuscripts of his were lost in a fire in Salonika. To celebrate his 80th birthday, his friends put together a Meir Baʿal ha-Nes box for him in honor.

GEULAH BAT YEHUDA (RAPHAEL)

MEIR BAʿAL HA-NEʾS, TOMB OF, a building on the shores of Lake Kinneret. According to R. Moses ʿBasola “people gathered there for prayer morning and night, stating that it was the tomb of one called R. Meir who took a vow that he would not lie down until the Messiah came, and was buried there in an upright position.” At present it is a large building consisting of two battei midrash (one for Ashkenazim and one for Sephardim) covering the tomb. Some scholars connect the grave with the tanna ʿMeir, who established his school in Tiberias (TJ, Hag. 2:1) and has a miracle related about him (Av. Zar. 18a/b). There are however different traditions about his place of burial, as he died in Eṣa, an area near Ezion Geber, close to Eilat, and said “Place my bier (ʿarsi) on the sea shore” (TJ, Kil. 9:4, 32c). In the 13th century the tomb was connected with R. Meir ʿAzari, or Meir b. Jacob who immigrated to Ereẓ Israel with Jehiel of Paris (see Vilna in bibl.). The name of Meir b. Isaac, author of Akdamut for Shavuot, has also been connected with it (Ozar Yisrael). It is customary to arrange a great celebration at his grave on the 14th of Iyyar (Second Passover) which is comparable to the one in ʿMeron on Lag ba-omer. These celebrations began in 1867. The tomb was exceptionally well publicized in the Diaspora by the emissaries of Ereẓ Israel, as well as in their emissarial jgerot (letters). Beginning with the 18th century a Meir Baʿal ha-Nes box was found in almost every Jewish home, and housewives dropped small change into it just before kindling the Sabbath lights. Due to the miraculous deeds connected with the tomb, it was customary to contribute money, candles, or oil for lighting as a specific protection against all kinds of ailments and dangers; it was also done in the hope of finding something lost, of having children, or of driving away evil thoughts. It is clear, however, that the box also symbolized the longing for Ereẓ Israel (for the way in which the money was distributed, see Vilna in bibl.). Craftsmen created art objects connected with Meir Baʿal ha-Nes. In spite of the opposition on the part of both rabbis and maskilim to the celebration and the boxes, the practice still continues.

[Meir Havazelet]

MEIR BEN BARUCH HA-LEVI (d. 1404), German scholar; colleague of Abraham ʿKlausner. Meir came from Fulda. His chronology is obscure, but it is now generally held that his first rabbinic post was in Erfurt, where Hillel ʿHa-Zaken of Erfurt was his pupil, and that he subsequently became rabbi of Frankfurt, moving to Nuremberg in 1383, and returning two years later to Frankfurt. In 1391 he was imprisoned as a result of a false accusation and upon his release in 1392 became rabbi of Vienna, where he appears to have remained until his death. Meir is frequently mentioned in the works of the leading scholars of his own and the following generation, among them Jacob ʿMoellin, Judah ʿMinz, Israel ʿIsserlein, and Israel ʿBruna, who cite his customs and rulings (under the name Maharam Segal or Maharam Sal) regarding them as authoritative. Meir’s central role in Jewish life of the 14th century is reflected by the part he played in the celebrated dispute about 1393 between Johanan ʿTreves and Isaiah b. Abba Mari, the pupil of Johanan’s father, Mattathias Treves. When Johanan was appointed to succeed his father as chief rabbi of France, Meir conferred upon Isaiah – who was apparently the greater scholar – the title morenu, which authorized him to assume the chief rabbinate in place of Johanan. This inter-
vention of Meir, a German, in the affairs of the French community, aroused the opposition of many leading scholars, including *Isaac b. Sheshet, who nevertheless refers to Meir with extraordinary respect. This incident has led some scholars to believe that it was Meir who reinstated ordination in Germany, but the view is now regarded as very doubtful.

[Israel Moses Ta-Shma]

MEIR BEN BARUCH OF ROTHENBURG (c. 1215–1293), teacher, scholar, tosafist, and supreme arbiter in ritual, legal, and community matters in Germany. He was born in Worms into a family of scholars, many members of which were important leaders in the communities of Germany. In his responsa he mentions two uncles and 12 other relatives bearing the title Ha-Rav, a title reserved, in this period, for talmudic scholars of high standing, mainly for heads of yeshivot. Meir often quotes their opinions and legal decisions in order to bolster his own views; hence they must have been well-known and highly esteemed scholars. Meir’s father Baruch was an outstanding member of this scholarly family. He was credited with a wide knowledge of talmudic lore, was a member of the bet din of the community of Worms, and was often chosen to act as judge. He also bore the honorific title Ha-Rav; several halakhic decisions were recorded in his name; and his epitaph, preserved to this day, was written in highly laudatory terms. His teaching and guidance contributed greatly to the intellectual growth of his son. At the age of 12 Meir joined the well-known school of R. Isaac b. Moses, the author of the Or Zarrua, in Wuerzburg, where he studied for about six years. While in that city Meir also studied under R. Samuel b. Menahem, in whose name, in later years, he quoted important decisions in law and ritual. Subsequently Meir moved to Mainz, where he studied under his relative R. Judah b. Moses ha-Kohen. Finally, he went to France and studied under the great tosafists *Samuel b. Solomon of Falaise, also known as Sir Morel of Falaise, and *Je-hiel of Paris, known as Sir Vivo. Meir was in France in 1240 when these two teachers took part in the famous disputation with Nicolas *Donin over the Talmud. He was still there two years later, in 1242, when he witnessed the public burning of the Talmud, on which occasion he wrote his famous elegy Shalili Serufah ba-Esh, “Inquire, oh thou who art burned by fire, about the welfare of those who mourn for thee…,” which is included to this day in the Kinot of the Ninth of *Av according to the Ashkenazi rite.

After this occurrence Meir returned to Germany and within a few years settled in Rothenburg, where he remained for more than 40 years, until 1286. Students flocked to his school from all the communities of Germany and its neighboring countries. Occasionally he would visit other towns for private or community business, but his home and his famous school remained in Rothenburg. His fame as a great talmudic authority spread rapidly even to other countries. In 1249, when a serious dispute arose between the communities of Bohemia and those of Moravia regarding the payment of taxes by these communities, the matter was referred to Meir for final settlement. Apparently at this early period he was already reputed to be the greatest scholar of his generation. For nearly half a century Meir acted as the supreme court of appeals for Germany and its surrounding countries. Rabbis, judges, and members of courts of arbitration sent him their questions regarding law and ritual. Individual complaints that the local courts decided contrary to talmudic law were also sent to him. He was the arbiter between communities and their members, between settlements and new settlers, and between various communities in their mutual relationships. They turned to him during their greatest crises. About a thousand of his responsa have survived, more than the combined number which have been preserved from all the other tosafists. Meir is unique among the tosafists and other great scholars of his time in his preserving a record of his responsa. The careful preservation of legal decisions leaves little room for modification or debate. Meir was motivated in this regard by the tumultuous times he lived in.

Meir sent his responsa to the communities of Germany, Austria, Bohemia, Italy, France, and even to Solomon b. Abra-ham Adret of Spain. In his lucid style and terse language he gave short, clear, and unequivocal answers to the inquirers. Sometimes he complained of the large number of responsa he is forced to write, apologizes for abbreviating the introductory greetings, is impatient with long and drawn-out questions, occasionally displays genuine anger when a case is repeatedly brought up before him because of persistent litigants, flares up in spirited temper when a litigant threatens to apply to the secular courts, and allows his passion to rise to a crescendo when confronted with serious crime. Sometimes he complained that those who addressed their queries to him overestimated his prerogatives as a talmudic scholar, and asked him to decide matters over which he had no jurisdiction. He was often unwilling to answer queries dealing with taxation, since the laws of taxation depended principally on local custom and procedures. He was very careful not to become involved in disputes and quarrels of the communities. Nevertheless, his opinion was often earnestly sought in matters involving community rights and taxes “in order to avoid the outbreak of a great quarrel.”

The type of question sent to Meir speaks eloquently of the position he held in the esteem of his contemporaries. The great majority of Meir’s responsa deal with business transactions, real estate, inheritance, marriage contracts, partnerships, agents, sureties, trustees, community government, community property, settling rights, and taxation. The preponderance of queries regarding civil cases and their abundance are eloquent proof of his importance as a communal leader of the first rank. Nevertheless, the opinion of many modern historians to the contrary notwithstanding, Meir held no official position as
Meir's responsa reveal a great deal about the various hardships Jews of his time had to endure. One particularly poignant question came from a Jew from Koblenz who admitted to killing his entire family to prevent them from falling into the hands of a Christian mob. Just before taking his own life, he was saved. His question was how he could do penance for his horrendous act. Meir responded that many scholars had acted similarly during the First Crusade. To require special penance would defame them and the permission they granted their students to act in a similar manner.

It is very difficult to determine if Meir was strict or lenient overall in his legal decisions. Whenever possible, he tried to combine the opposing sides of the argument into one harmonious ruling. This did not mean compromise. Rather, both opinions were upheld and merged. For example, there was a controversy surrounding the question as to whether Rosh Ha-Shanah was two separate days or one “long” day. Meir ruled that the sheheheyanu blessing should be recited on both nights according to the opinion that each day of Rosh Ha-Shanah is separate and distinct. However, Meir required that a new garment be worn or a new fruit be eaten on the second night, thus providing an alternative reason for reciting the sheheheyanu blessing, in accordance with the opinion that both days of Rosh Ha-Shanah are one.

As business became increasingly sophisticated in the Middle Ages, the primary Talmudic precedents became less and less relevant. While Meir and his contemporaries continued to rely on halvudic law and precedent for their rulings, Meir in particular realized that he had to be flexible in his strict application of talmudic law if the Jews were going to survive in the new economic environment. To do otherwise would have forced Jewish business to separate their commercial lives from their religious and communal lives, with potentially disastrous results.

Many of Meir’s responsa deal with the relations between Jews and Christians. These rulings deal with a very wide range of subjects, including eating food cooked by a gentile; yayin nesekh, wine produced by gentiles; the halakhic status of the Catholic Church and Christian religious items; charging gentiles interest; relations with Jews who converted to Christianity; and the problems of Jewish life in a Christian society, such as business partnerships with gentiles. A good example of such responsa is the question of a woman whose husband died leaving her in a situation normally requiring the halizah rite necessary for the cancellation of a levirate marriage. The difficulty arose from the fact that her brother-in-law was a devoted convert to Christianity. Meir released her from the obligation of the halizah rite.

Meir was highly honored and in many cases his word was law. He enjoyed this authority, however, on account of his scholarship; because many leaders of the German communities had been his students who owed him respect and even obedience; and because the Talmud was the “constitution” of community government, and Meir, the greatest scholar of the land, was its best and most authoritative interpreter. His authority was based on his knowledge of talmudic law and on his intellectual attainments, both of which enabled him to arrive at a correct decision in questions of law or ritual. Thus he once wrote to the leaders of the Rhine communities in high-spirited defiance: “You, the aforementioned community leaders, probably delude yourselves with the idea that since your permission is required before a person may divorce his wife, no scholar is permitted to render decisions in ritual law unless he receives your authorization. No, this is not true, for the Torah is free to anyone who is capable of arriving at a correct decision” (I.A. Agus (ed.), Teshuvot Ba’alei ha-Tosafot (1954), 143). In the community of Rothenburg, however, Meir probably did hold an official position as judge, cantor, and head of the yeshivah. His house in Rothenburg was probably provided for him by the community since it contained 21 rooms, including a bet midrash and rooms for his students. He did not depend on his salary for a livelihood, engaging in business. The major part of his time, however, was devoted to his studies, his students, and his correspondence with the leaders of the communities.

Meir’s role in the final formulation and fixing of the law and the ritual of Ashkenazi Jewry can hardly be overestimated. His numerous responsa – collected, copied, and seriously studied for generations – greatly influenced the work of codifiers of the subsequent centuries and thus helped standardize legal procedure and civil law. He introduced certain modifications in the ritual of prayer and religious “minhag in the synagogue and at home, and instituted many customs which later became standard practice throughout Germany and Eastern Europe. His impact on the life, the organization, and the behavior of subsequent generations was exercised mainly through the work of his students, who followed him everywhere – at home, in school, in the synagogue, and even in prison. They studied his behavior, customs, and ceremonies, and later recorded their observations in their halakhic works together with Meir’s decisions on law and ritual. One
Meir Ben Baruch of Rothenburg

student in particular, R. Samson b. Zadok, was a veritable Boswell. In his Tashbez, he described in great detail Meir’s customs and practices from the moment he rose in the morning until he went to bed at night, on weekdays, Sabbaths, and festivals. This book became popular in Germany, Austria, Bohemia, and Poland, and its details were eventually incorporated in the codes.

Meir’s influence, therefore, was exerted along three main channels:

1. His students became the leaders of a number of communities in Germany, Austria, and Bohemia, and imprinted his views upon the life of the members of these communities and the surrounding territories;

2. He had a profound influence on his most eminent student, Asher b. Jehiel, and on the latter’s son Jacob, the author of the Arba’ah Turim, and thus directly affected the final halakhah incorporated in the Shulhan Arukh;

3. The Mordekhai, Agudah, Haggahot Maimuniyyot, Shaarei Dura, and Tashbez, classical works compiled by his students mainly on the basis of his decisions, responsa, and customs, were thoroughly studied by the scholars of succeeding generations and thus became the foundation for the work of R. Moses *Isserles, who incorporated the Ashkenazi usage in the Shulhan Arukh. By far the greatest number of the views and decisions of Isserles incorporated in the above-named code stem directly or indirectly from the work and practices of Meir.

In the more than 80 of his responsa dealing with public law and community government, Meir gave the clearest and most incisive expression and explanation of the ideas of human freedom, government by consent, limitation of the power of the majority, and group responsibility – that formed part of Jewish law on the highest level of comprehension – of any other Jewish scholar before him or since. The principles of Jewish public law that man is absolutely free, that the legitimacy of government is derived solely from the free and uncoerced consent of the governed, and that the legislative power of the majority is limited to certain areas only and cannot encroach upon the private and inalienable rights of the individual were most forcefully and most clearly explained in his responsa. He thus greatly strengthened the democratic form of government of the communities – a form they derived traditionally from the forefathers of Franco-German Jewry – and it was eventually copied by the municipal governments and the guilds of the burgher class that arose in close contiguity with these Jewish communities. Thus in the 15th century, in the legislation intended for the benefit of the whole group the principle “majority rules” was applied, while particular legislative acts that encroached upon the rights and the immunities of the individual, such as taxes, did not become law unless unanimous agreement by the membership of the group was achieved (Otto v. Gierke, Das deutsche Genossenschaftsrecht, vol. 2, pp. 230–2, and 478–9). This division of legislation into two categories and the requirement of unanimity in the second category, which paralleled in practically every detail the form of community legislation, so clearly described by Rabbi Meir, could only have been the result of direct copying by the burghers and town communes of the community system of government that antedated their own by several centuries. Meir’s peaceful life as a scholar and teacher was rudely interrupted by the turbulent political events that followed the termination of the interregnum and the election of Rudolph 1 of Hapsburg as emperor of Germany. In order to reestablish the right of the emperor to tax the Jews, which during the interregnum of 1254–73 had been claimed by the local dukes, Rudolph 1 began to press the claim that the term servi camerae (“serfs of the treasury”) – which in the 13th century began to gain ascendancy as the legal description of the political status of the Jews – really meant that the Jews were the slaves of the treasury of the empire, that their persons and their possessions were therefore the property of the treasury of the empire, and that the emperor therefore possessed the right to tax the Jews over and above the taxes they paid to the local rulers; and in 1286 he did impose such a tax on them. As a result thousands of Jews decided to leave Germany. Meir, especially outraged at this attempt to enslave the Jews, became the leader of the widespread exodus. In the spring of 1286, he “set out to go across the sea together with his family, his daughters, and his sons-in-law.” However, while he was waiting for his followers in Lombardy, he was recognized by an apostate who informed against him, with the result that the ruler of that town, Count Meinhardt of Goerz, arrested Meir and delivered him to Rudolph 1. The emperor put him in prison, first in Wasserburg and then in Ensisheim, until the day of his death. His imprisonment was actually a singular form of house arrest. In jail, Meir had access to his books and his students were frequent visitors. Indeed, he continued to issue responsa while imprisoned, although he complained that he often did not have the requisite texts at hand to fully research a particular issue. The Jews made great efforts to effect the release of their beloved teacher – at one time agreeing to pay 23,000 pounds of silver to the emperor, but stipulating that the money was a payment of ransom and not of taxes – but without success. Rudolph 1 determined to use the great devotion of the Jews to their teacher to force them to admit the right of the emperor to tax them. However, since a payment of taxes would be an admission that they were slaves, the Jews found it impossible to agree. Meir, therefore, remained in prison, and even after his death in 1293, his body was not delivered to the Jews until 1307 when it was redeemed by Alexander b. Salomo Wimpfen for a large sum of money and buried in Worms.

Rabbi Meir, the last of the tosafists, wrote tosafot and novellae to 18 tractates of the Talmud – the tosafot to Yoma, in the printed text of the Talmud, are from his pen; commentaries to the two orders of the Mishnah Zera’im and Tohorot; compendia of laws for special purposes, such as Hilkhot Eruvin, Halakhah Pesukot, Hilkhot Berakhot, Hilkhot Semahot, Hilkhot Shehitah, Hilkhot Hatmanah; a collection of customs connected with the marriage ceremony and with the wording of the ketubbah; and, most important, nearly 1,000 responsa
found in the following collections which differ to a great extent in content: Cremona, 1557; Prague, 1608 (reprinted in Sudilovk, 1835, and in Budapest, 1895); Lemberg, 1860; and Berlin, 1891–92; aside from those incorporated in the works of his students. Some of his responsa were published from manuscripts by I.Z. Kahana (Jerusalem, 1943) and by I.A. Agus (see bibl.). Meir also composed liturgical poems (in addition to the above-mentioned “Inquire thou who art burnt by fire...”) and a collection of masoretic explanations (in I.Z. Kahana’s *Teshuvot, Pesakim u-Minhagim*, 1 [1957], 3–41).

**MEIR BEN ELIJAH** (early 19th century), author of the ethical and educational work, *Naḥalat Avot* (“The Inheritance of the Fathers”), Vilna, 1835. Although written in the form of an *ethical will* – the author seemingly directing his teachings toward his own sons – the book is intended for the ethical betterment of the general public. Meir’s principal concern is demonstrating the way to achieve reverence toward God, but he also deals with man’s struggle against his own evil inclination, the best methods by which to educate one’s children, proper behavior at home and in the synagogue, and social and religious ethics. The book is prefaced by a *piyyut*, with the *notarikon* of the author’s name, and two opening statements, one encouraging sinners to repent, and the other insisting on repeated study of ethical literature. Among his major sources are the *Zohar* and *Hasidim*, which he quotes frequently; the *Shenei Luhot ha-Barit* by R. Isaiah ha-Levi Horowitz; and a more contemporary source – *Nefesh ha-Ḥayyim* by R. Ḥayyim of “Volozhin. In addition, Meir mentions *Ma’alot ha-Torah*, a work composed by his grandfather. Meir also wrote a commentary on the tractate *Avot*, *Derekh Avot*, printed in Vilna, 1836.

**MEIR BEN ELIJAH OF NORWICH** (13th century; also called *Meir of England*), liturgical poet and *ḥazzan*. Meir’s family came from France, and his father was apparently a *dayyan*. Meir lived in Norwich and was among those exiled from England in 1290. His *piyyut Oveyi bi-Mec’arah Tikkov* (“Thou wilt curse mine enemy with execration”) was composed on this exile, as its heading states: “For the severity of the exile and the killings, the imprisonment, and the destruction of property.” A great Torah scholar, Meir was the only known English *paytan*. His *piyyutim* contain some elements of the Ashkenazi *piyyut* and some of the Spanish. Strong phrases on the suffering of the nation find their expression through his poetry. His *piyyut* for Passover, *Mishnas be-Maram al Keruvo* (“Uplifted on High upon His Cherub” called by him “Who is like Thee”), is one of the longest acrostics in the Hebrew *piyyut*. Besides the alphabet, autobiographical information is also contained in the acrostic. Meir’s secular poems, which he called *haruzot* ("stanzas") – 16 in all, with an additional poem explaining the form and the construction of the poems – are written in the meter of the Spanish-Hebrew poetry, but do not have its glitter and originality. Sent to one of his friends, the poems were arranged in an order unknown in the poetry of others, namely in four parts ("banim") following the letters of his name Meir (*Benei M-ehm), Benei A-(*lef*), etc., i.e., poems whose stanzas begin with the letters mem, alef, etc.). The first two letters of each stanza are also repeated at the end of the stanza.

**ADD. BIBLIOGRAPHY:** E. Fleischer, *The Yoseḥ (Hebrew, 1884), 590. [Abraham Meir Habermann]

**MEIR (Moses Meir) BEN EPHRAIM OF PADUA** (d. 1583), scribe, printer, and teacher in Mantua. Meir was presumably born in Padua but lived in Mantua, where he served in various communal capacities. Meir’s exceptional talent and his skill as a scribe were attested to by his disciple, Abraham *Portaleone. Meir noted down detailed descriptions of all 43 Torah scrolls written by him. Questions addressed to his close friend, Moses b. Abraham *Provencal, the rabbi of Mantua, indicate Meir’s rabbinical scholarship, as does his treatise on the diacritical marks of the Torah, *Rimzei ha-Tagim*. In 1556 Meir founded a printing establishment at Mantua, in collaboration with Jacob b. Naphtali of Garolo (d. c. 1570), and his considerable contribution to the printing of Hebrew books included the first edition of the *Zohar* (1558–60).

**MEIR BEN HIYYA ROFE** (1610?–1690?), scholar and emissary of Hebron, Palestine. Born in Safed, the son of *Hyya Rofe, Meir was orphaned in boyhood. He studied in Hebron, leaving about 1648 as an emissary to Italy, Holland, and Germany. On his return journey, he stayed for two years in Italy to publish *Malaseḥ Hyya* (Venice, 1652), his father’s talmudic novellae and responsa. In Amsterdam he had influenced the wealthy Abraham Pereira to found a yeshivah in Hebron to be called Ḥesed le-Avraham, of which Meir himself became a lead...
scholar. Meir was in Gaza in 1665 when *Nathan of Gaza began to prophesy on the messianism of *Shabbetai Zevi. In a subsequent letter to Amsterdam, to Abraham Pereira, he wrote that “Nathan of Gaza is a wise man fit for the divine presence to rest upon him,” and urged Pereira to come to Gaza. Pereira reached Venice, but returned to Holland. Meir maintained his belief even after Shabbetai Zevi’s conversion in 1666. In 1672 Meir left, again as an emissary of Hebron, for Turkey. He stayed for a time in Adrianople, where he was in contact with Shabbetai Zevi. On Shabbetai’s exile to Albania in 1673, Meir returned to Gaza where he stayed with Nathan and even copied his writings for his own use. He then traveled again to Italy, and from 1675 to 1678 resided in the home of the Shabbatean Abraham "Rovigo. Throughout his stay in Italy Meir did much to encourage those who were in Shabbetai Zevi and spread the writings of Nathan of Gaza. During the last ten years of his life he was recognized as the outstanding scholar of Hebron.

### MEIR BEN ISAAC OF TRINQUETAILLE (12th century)
Provençal scholar. Knowledge of Meir is largely derived from Menahem b. Solomon *Meir’s introduction to his commentary on Avot. Born in Carcassonne, the young Meir b. Isaac was brought by his father to Posquières to study under *Abraham b. David, and after many years Meir became his pupil-colleague. Meir’s retort to his teacher, when the latter attempted to force his opinion upon him in a halakhic matter, has become well known: “Do not make light of my honor. For if you are unique among teachers, I am unique among pupils.” From Posquières Meir apparently went to Trinquetaille, near Arles. In Meir’s comprehensive work (*Sefer ha-Ezer*), written in defense of the *halakhot* of Isaac *Alfasi against the *hassagot* of *Zerahiah b. Isaac ha-Levi (the author of *Ha-Ma’or*), the influence of Meir’s great teacher who wrote a similar book is clearly recognizable. Although the book has not been preserved, it is quoted by the *rishonim*—among them *Manoah b. Jacob (who also mentions Meir’s *Hibbur ha-Mukzeh*) and *Ezra* ha-Parhi, Meir’s great-grandson. Menahem b. Solomon Meiri also claims family connection with him. Meir’s son, NATHAN OF TRINQUETAILLE, was a well-known scholar and a disciple of the eminent tosafist *Isaac b. Abraham. He later became the teacher of *Nahmanides, Samuel b. Isaac ha-*Sardi, and Meir b. Simeon ha-Parhi. Nahmanides, Sardi, and Ezri ha-Parhi in particular, quote Nathan frequently. From their quotations it is clear that Nathan wrote a comprehensive work on civil law which was divided into *shelaim* (“gates”) as well as a commentary on the *Torah. Nathan’s commentary on tractate Shevuot is always mentioned.

**BIBLIOGRAPHY:** Gross, Gal Jud., 246f.; idem, in: MGWI, 27 (1878), 378ff.; L. Twersky, Rabud of Posquières (1962), 245f. [Israel Moses Ta-Shma]

### MEIR BEN ISAAC SHELL’AH ZIBBUR (also called Nehorai; d. before 1096), preacher and liturgical poet of Worms. Meir was considered authoritative in the sphere of liturgy and custom among the Franco-German communities. He appears also to have compiled a customal for the whole year. Many of the great scholars of Germany and France in his own and in the following generations frequently mention him with esteem and cite his words: Rashi in his prayer book and in his commentary to Scripture, the *tosafists, Simhah of Vitry in the *Mahzor Vitry, *Abraham b. Azriel in his *Arugat ha-Bosem, *Jacob *Moellin in his customal, and others. Several legends were created about him. Meir compiled *piyyutim* and *selihot in Hebrew and Aramaic, more than 50 of which are extant. A number of his *piyyutim* for the festivals were accepted by the Franco-German and Polish communities and were published innumerable times in *mahzorim* and among *selihot*. The best known of his *piyyutim* is the Aramaic *Ahdamut Millin*, which is customarily said to the present day in Ashkenazi communities during Shavuot after the reading of the first verse of the Torah reading (Ex. 19:1); a number of scholars, however, introduced the custom of saying it before the reading of the Torah. It was translated into Hebrew by Gabriel *Polack (Literaturblatt des Orients* 2 (1850), 554–5 and *Ben Gorin* 1851, 52–55), and by others as well. It has also been translated into other languages (into English by Joseph Marcus in *Mahzor*, United Synagogue of America, 1927). *Me- nahem b. Helbo wrote commentaries on Meir’s *piyyutim*. Two of his sons – Jacob and Isaac – are known; the latter perished in the pogroms of 1096.

### MEIR BEN SAMUEL OF RAMERUPT (c. 1060–c. 1135), one of the first tosafists of northern France. Meir’s teachers were the scholars of Lorraine, Isaac ha-Levi of Worms, *Eliezer of Mainz, and *Rashi, whose daughter, Jochebed, he married. Of his sons, three, who were also his pupils, are especially known — “Samuel b. Meir (Rashbam),” *Isaac b. Meir, and Jacob b. Meir “Tam. His son-in-law was Samuel of Vitry, father-in-law of the tosafist *Isaac b. Samuel ha-Zaken. For a certain period Meir apparently dwelt with his father-in-law in Troyes, but he moved to Ramerupt during Rashī’s lifetime, founding a bet ha-midrash there. He is sometimes designated ha-yashish (“the venerable”) or “the father of the rabbis.” Meir wrote commentaries to the Talmud, similar to those of his father-in-law and of his son Samuel. One extant section of his commentaries was incorporated in the commentary of Rashī to the Talmud and some of his tosafot are included in the tosafot of the standard Talmud editions. Halakic statements by him are quoted in the *Sefer ha-Yashar* of his son Jacob Tam,
in the Or Zaru’a, in the Sefer ha-Ittur, and elsewhere. Biblical comments by him are quoted by his son Samuel in his commentary to the Pentateuch. These are permeated by a spirit of literal exegesis and it is probable that the son was influenced in this by the father. The present text of *Kol Nidrei is the result of amendments introduced by him into the original formula. There are extant responsa written to him by Rashi, and also a responsa written by them jointly. Meir also composed a selihah, Avo Lefanekha (“I come before Thee”).

BIBLIOGRAPHY: Urbach, Tosafof, 38–42, and index.

[Zvi Kaplan]

MEIR BEN SAMUEL OF SCHICHERBRESHIN (Pol. Szczczerzeszyn; mid-17th century), paytan and chronicler who lived in a small town near Lublin, Poland. His known writings consist of Shir Mizmor le-Yom ha-Shabbat (“Psalm for the Sabbath,” Venice, 1639) and a rhymed account in Hebrew of the “Chmielnicki persecutions of 1649–49, written during the summer of 1650, and which is to be read “at all times, but especially during the three weeks of mourning between the 17th of Tammuz and the Ninth of Av and on the 29th of Sivan,” the latter being the fast day in commemoration of the persecutions. The work was published during the same summer in Cracow, under the title Zok ha-Ittim (“Sufferings of the Times”). In the spirit of the accounts of the sufferings during the First Crusade (1096), the author describes the persecutions of his own day as related to him by fugitives and, in part, as he witnessed them himself in Zamosc and the surrounding region in the summer of 1649. Zok ha-Ittim is of greater historical importance than the other Jewish chronicles of these persecutions, which were mostly written and published some time after the events by refugees in distant places who could not, for various reasons, give all the details.

[Israel Halpern]

MEIR BEN SIMEON HA-ME’ILI (first half of 13th century), Provencal talmudist and communal leader. Meir’s main center of activity was *Narbonne, and he cites many of its customs in his works. His principal teacher was his uncle, *Meshullam b. Moses, and Meir frequently cites him and his customs. He also studied under Nathan b. Meir of Trinquetaille. There are references to his connections with Nahmanides, another pupil of Nathan b. Meir. Among his other activities, Meir engaged in disputations with Christian ecclesiastics and was one of the chief speakers in a delegation of the Jewish leaders of Narbonne and Capestang who interceded with the cardinal of Narbonne concerning discriminating laws which it was proposed to issue against the Jews. He was spokesman of the community at the court of the emperor, and before ministers and church leaders. According to Gross and Schollem, his work Milhemet Mitzvah (Ms. Parma, cat. De Rossi (1803) no. 155, only part of which was published; see below) was written between 1230 and 1240. The work itself, however, gives the date 1245, and it seems to contain matters of a still later date (see Gross in: MGWJ 30 (1881), 296). The work contains an account of his disputation with the bishop of Narbonne, a defense of Judaism against the allegations of Christians, explanations of biblical verses dealing with the coming of the Messiah, and a commentary on the *Shema and the 13 divine attributes. Meir also appears in this work as a vehement opponent of a certain circle of kabbalists, to whom he attributes heretical views. Questioning the authenticity of Sefer ha-Bahir, he sharply criticizes its contents, together with other kabbalistic works. These criticisms were included in an “epistle” sent to “our rabbis in every town.” His work was also directed against the ideas of some kabbalists based on works which, according to Meir, were forgeries attributed to well-known scholars. At the end of this epistle he gives Meshullam’s commendation to his activity.

Only latterly have his works begun to be published, under the title Sefer ha-Me’orot: novellae to (1) tractates Berakhot and Pesahim (1964); (2) to Shabbat (1964); (3) Moed Katan and Hullin (1964); (4) Eruvin (1967); (5) Yoma, Sukkah, Bezah, Rosh ha-Shanah, Ta’anit, and Megillah, and the minor tractates (1967). His commentary on the *hoshanot was published in Sefer ha-Mikhtam, edited by A. Sofer (1959). The Milhemet Mitzvah contains five sections (504 columns) and a fragment of it was published by G. Schollem (bibi.) and the end of section four with part of section five in Sefer ha-Me’orot, volume one. Also known are his novellae to the order Kodashim (mentioned by Bezalel Askenazi in Kelalei ha-Talmud no. 37; A. Marx, in: Festschrift … D. Hoffmann (1914), Heb. pt. 181); Meir Torah, a commentary on the weekly portions of the Pentateuch; sermons (for Passover, the New Year, and Tabernacles in the manner of the sermons of Abraham b. David and Nahmanides); and a pamphlet called Meshiv Nefesh defending Maimonides’ Hilkhot Yesodei ha-Torah in his Mishneh Torah against his critics.

[Shlomoh Zalman Havlin]
Meiri, Menahem ben Solomon

Carcassonne and Narbonne. Few biographical details are known of Meiri. In his youth he was orphaned of his father, and his children were taken captive while he was still young (Introduction to Kirtat Sefer), but no details of this personal tragedy are known. Meiri’s principal teacher was “Reuben b. Hayyim. His reference to “Jonah Gerondi as “my teacher” does not necessarily mean that he studied under him; it may merely mean that he studied his works. Among the contemporary scholars with whom he maintained close ties was Solomon b. Abraham *Adret; they exchanged many responsa and Adret’s teachings assisted him in the writing of his monumental work. Meiri was one of the participants in Adret’s polemic against Maimonides which ended in Adret’s excommunicating any person who read philosophical works in his youth. In a letter to Abba Mari b. Moses Joseph, who handled the entire affair and collected the relevant correspondence, Meiri disassociated himself from the attitude of Adret and his colleagues, upholding freedom of thought for the scholars of each country, and freedom from intervention by outside scholars. Extracts from Meiri’s letter (republished by D. Kaufmann along with the reply by Joseph b. Simeon in the name of Abba Mari under the title Ḥoshen Mishpat in the Jubelschrift… L. Zunz, 1884; Heb. sec. 142–74), reveal his great interest in philosophy and other secular sciences, and reflect his pride in the local scholars who had acquired proficiency in them.

Meiri occupies a central position in the sphere of the talmudic creativity of Provence, not only due to his extraordinary literary fecundity and the comprehensive scope of his works, but also because he summarizes the teachings of his predecessors during the previous three centuries. In effect he puts the seal upon the literary efforts in this area of Jewish culture. His literary activity covered halakhic rulings, talmudic exposition, biblical exegesis, customs, ethics, and philosophy. The vast majority of Meiri’s works remained in manuscript until very recently, probably on account of their exceptional length, which made it practically impossible to copy them in full. A small number of his books were published in the second half of the 18th century and the majority of them – from the beginning of the 20th century up to the present day. A great contribution to this project was by A. Sofer (Schreiber). An exception is his commentary to the Book of Proverbs which was first published in Portugal in 1492, and then included in the Kehillot Moshe edition of Mikrāot Gedolot (Amsterdam, 1724).

Meiri’s chief work is the gigantic Beit ha-Beḥirah on the Talmud, in which he was engaged from 1287 to 1300. In it he summarizes the subject matter of the Talmud, giving both the meaning and the halakhah derived from it. It follows the order of the Mishnah. The work covers the orders of Mōšē, Nashim, and Nizzkin, and the tractates, Berakhot, Hallah, Hullin, Niddah, Tamid, Middot, and Mikvāṭ. Beit ha-Beḥirah has been republished almost in its entirety in recent years from a single complete manuscript (Parma). Of particular interest is the introduction to his commentary on Avot, in which he gives the names of all the people who form the chain of tradition of Torah study from Moses to his own time. It contains valuable material for the knowledge of the history of Torah study in Spain and Provence, and was copied out in full and completed (updated) to his own time by Isaac *Lattes in his Shalarei Ziyyon (ed. by S. Buber, 1885). In 1995, the introduction to Avot was updated from manuscript and published with the title, Seder ha-Šabbalah. This edition includes the commentary of Hayim Falagi.

Meiri follows an original method of exposition. He develops his theme from its origin and for this reason he assigns a separate section to the Mishnah and explains it before turning to the later development and discussions in the later literature. Each tractate and its individual chapters are preceded by a short preface outlining the subject in general terms. The discussion begins with a presentation of the fundamental principles involved and proceeds with an explanation of the opinions of each of the amoraim. The author in conclusion sums up and collates these opinions, giving the relevant halakhah as he sees it. An abundance of comments handed down by German, Provençal, and Spanish scholars with their different interpretations are incorporated, but each one is given separately to prevent confusion on the part of the reader. Meiri was one of the few rabbis of his time to make extensive use of the Jerusalem Talmud in order to clarify the parallel discussions in the Babylonian Talmud, and his works are therefore of added importance for research on the Jerusalem Talmud and its variant readings. Meiri’s style contributes much to the lucidity of his presentation. His Hebrew is accurate, precise, and simple. In addition, he succeeded in finding the golden mean between the generally contradictory aims of expository comprehensiveness and halakhic definitiveness. These features endeared the Beit ha-Beḥirah to scholars and its volumes are now repeatedly republished in spite of their great length.

Meiri adopted the unusual practice of designating his predecessors by epithet rather than by name, e.g., “the greatest of authors” (Maimonides), “the greatest of poskim” (Afasī), “the early scholars of Narbonne,” “the former scholars of Catalonia,” and “the great scholars of Provence.” As a result it is difficult now to determine to whom he is referring, especially as he often employs the same epithet for many scholars who, in his opinion, belong to the same “genre.” Contrary to the common conception of the Meiri’s commentary as purely anthropological, similar to the later work Shitah Mekubbezet by Bezalel Ashkenazi, the Meiri quotes only those opinions that are germane to the discussions, either to refute them or to bolster his own ideas. His admirable style makes it impossible to detect the verbatim quotations which no doubt he gives from the sources, since it became one harmonious whole. He employed this method only in Beit ha-Beḥirah.

In addition to Beit ha-Beḥirah, Meiri wrote commentaries on the Talmud which were expository rather than halakhic in orientation. Although the manuscripts in this group of a number of tractates are still extant, none has been published, except for the commentary to Avot and the Beit ha-Beḥirah to the tractate Beẓah (ed. by I.S. Lang and K. Schlesinger, 1956), which apparently belong to this group.
Meiri wrote several other important works. His first, written in his youth, was *Hibbur ha-Teshuvah* devoted entirely to ethics and repentance. It clearly reveals the influence of the *Malmad ha-Talmidim* of Jacob *Anatoli, the first Provençal scholar to stimulate interest in the meaning of the precepts as distinct from their observance. It may be assumed that toward the end of his life Meiri revised the work, which in its present form, bears a character of a well constructed sermon book. Extracts from it were published in various places; it was published in its entirety for the first time in 1950.

Meiri's commentary to Proverbs, and even more, his commentary to Psalms (1936), reveals all his exegetical and stylistic characteristics as well as his love for explicit meaning, *peshat*. In them he draws upon the Midrashim and the accepted ethical and wisdom literature of the Middle Ages, such as *Ben ha-Melekh ve-ha-Nazir* and *Museret ha-Filosofim*, and also makes frequent use of the works of the great grammarians, such as Abraham *Ibn Ezra, Jonah *Ibn Janah, and the *Kimhi family. Corrections to the text of the commentary to Psalms were published in Koveẓ al Jød, New Series, 4 (1946), 229–40. Another of his works, *Kiryat Sefer* (1863–81), contains the laws of writing the *Sefer Torah*, including lists of those words written *plene* and those written defectively, and of the "open" and "closed" sections of the Torah. *Kiryat Sefer*, composed in 1306, was considered for many years as one of the three basic works on the laws of writing a *Sefer Torah* – all the great *posekim* and masoretes making use of it. *Kiryat Sefer* was based upon Provençal and Spanish traditions as well as upon a copy of a *Sefer Torah* written by Meir *Abulafia for his own use. However, 150 years after Meiri's death, more and more of Abulafia's manuscripts of *Maseoret Seyag la-Torah* were circulated, which did not correspond with the *Sefer Torah* Meiri had written and as a result the reliability of *Kiryat Sefer* began to be called into question. Meiri wrote *Magen Avot* (ed. by I. Last, 1909) to uphold the customs of Provence in general and Perpignan in particular, against Spain, particularly Gerona, held by *Nahmanides and brought by his discipless to Provence after its annexation to Spain during the reign of John 1 (1213–76). In its 24 chapters, each devoted to the discussion of a different custom, Meiri asserts the value and superiority of these local traditions as against the great authority of Nahmanides.

The Meiri subscribed to the Maimonidean philosophical tradition that views intellectual achievement as the highest human goal. The pinnacle of this achievement is the ability to discriminate between truth and falsehood. The intellectual understanding must be coupled with a religious sense of ultimate redemption. The most fundamental religious concepts – fear of God, love of God and *devakut*, cleaving to Him – are all inexorably linked to the processes of awareness and understanding. In his commentary to Proverbs, the Meiri gives expression to just those ideas (Meshi Zahav edition, Jerusalem, 1969, p. 25). The Maimonidean tradition greatly influenced other aspects of the Meiri's thought, including the nature of God and of the World to Come.

The Meiri rejected the opinion of many of the disciples of Maimonides, who felt that the publication of his *Mishneh Torah* made Talmud study superfluous. He viewed Talmud study as an integral aspect of Jewish religious study. This is evidenced by his monumental commentary on the Talmud. He did agree, though, that the essence of Talmud study was to derive applicable Jewish law. Nevertheless, the Meiri was one of a small group of medieval sages who dealt extensively with the non-legal, agadic portions of the Talmud. Here, too, the Meiri's explanations were rational and logical, just like his halakhic discussions.

Modern scholars disagree as to the significance of the Meiri's attitude towards non-Jews that differed from almost all other medieval sages. E.E. Urbach argues that the limited legal application made by the Meiri limits the idea's significance (Urbach, in: *Perakim be-Toledot ha-Hevrah ha-Yehudit bi-Ymei ha-Beinayim u-ve-Et ha-Hadashah*, 1998, 34–44); J. Katz (*Zion*, 46:2 (1981), 243–6); and G. Bliststein (*Binah*, 3 (1994), 119–33) argue that the Meiri's idea was a totally new way of viewing the gentiles of his day: The Meiri differentiated between idolaters and gentiles who were religious people, *gedurim be-darkhei ha-datot*, "restricted" by ways of religion. This concept recognizes that the medieval Christians were not idol worshippers, but people who believed in God, observed religious practices (albeit far from those of Judaism) and were therefore *gedurim*, "disciplined" by moral values. This concept was used in Jewish polemics and debates with the Christians before the Meiri's time. However, his contribution was to apply it sparingly to those laws meant to prevent close contact between idolaters and Jews. Thus, while the Talmud does not obligate a Jew to return a lost item to a non-Jew, the Meiri claims that this only applies to idolaters. When dealing with gentiles who are not idolaters, there is actually an obligation to return the lost item (Meiri, Bava Kama, p. 330).

The Meiri's view of gentiles stemmed, in part, from his view of history as a progression away from idolatry to morality. He applied this same idea to women. Contrary to Asher ben Jehiel, who viewed women as basically wanton, the Meiri thought them to be moral and even more sin-fearing than men. As a result, he deemed as irrelevant various Talmudic dicta predicated on the immorality of women. The Meiri's comments on the *Berakha no. 3 of Sheva Berakhot* (Meiri, Ketubbot, p. 38) reveal that women were created with the same *zelem Elohim* as men. He is the only medieval thinker to explicitly state this. Contrary to almost all of the other medieval and renaissance rabbinic scholars, the Meiri calls women *hasidot* (pious ones; Meiri, Tannit 30b) and is of the opinion that they share in God's providence, equally with all of God's creatures (Meiri, Sotah, p. 46–47). Meiri also permits women to recite the blessings for *mitzvot* that they are not obligated to perform (Meiri, Haggigah, p. 31–32). He also permits women to don *tefillin*. The Meiri valued the desire of women to advance toward perfection through the fulfillment of *mitzvot*. Indeed, there was no other medieval rabbinic sage that had such a high opinion of women's potential, both morally and
intellectually. This attitude was successfully translated by the Meiri into all of his halakhic decisions regarding all the legal issues involving women.

In recent years many collections of extracts from Meiri's works, arranged according to subject, have been published, including a commentary to the Passover Haggadah (1965; ed. by M.M. Meshi-Zahav); Sefer ha-Middot (idem, ed.), 1966, a guide to proper conduct; and an anthology of his hibburei halakhic positions (1957), by J.I. Gad. Meiri stands out as the embodiment of the highest qualities which characterized Provençal Jewry; greatness in Torah combined with a leaning toward tradition, and an appreciation of, philosophy, secular erudition, and the sciences in general; unswerving attachment to custom and tradition coupled with a high-minded tolerance of gentile society; and brilliant Torah creativity, brought to expression in fluent, even poetic Hebrew. Meiri was also the last Provençal scholar to embody this synthesis.

[Israel Moses Ta-Shema / David Derovan (2nd ed.)]
Russian Jewry in its relations with the government. During World War I most of the Dvinsk community fled, and only a few of the poorest inhabitants remained. Meir Simhah stayed with them, declaring that as long as there were nine Jews in the city, he would be the tenth.

In his work on the Pentateuch, Meshekh Hoshmah (1927), he drew freely on his vast knowledge of the two Talmuds and of the halakhic and aggadic Midrashim, giving new and profound interpretations. The book, which contains original reflections, attained wide popularity. Zera Avraham (1929) by Abraham Luftvir consists of an exchange of correspondence between Luftvir and Menahem *Zemba, and also includes some fine specimens of Meir Simhah's responsa to him.

**MEISEL (Meisl, Meysl, Miška, Akhbar, Maušel, Konir), MORDECAI (Marcus, Marx)** BEN SAMUEL (1528–1601), Prague financier, philanthropist, and head of the Jewish community. He was considered by *Graetz the “first Jewish capitalist in Germany.” Although the source of his fabulous wealth is not known, it enabled him to finance large transactions in support of *Rudolph II, to whom he was appointed counselor, during the Turkish wars. His business was based on the special privilege granted him to loan money not only against pledges but also against promissory notes and real estate. (The illegality of such practices according to Bohemian law was one of the pretexts for confiscating Meisel's estate, which amounted to over half a million florins, after his death.) He also acted as purveyor of luxuries and art objects. Meisel is first mentioned in business relations with his father-in-law, Isaac Rofe (Léka), in 1569. Another of his business associates was Veit (Haya'im) Vokaty. He used his wealth for philanthropic activities of all kinds; the epitaph on his tombstone records: "None of his contemporaries was truly his equal in deeds of charity." With the support of his first wife, Eve, he built the Meisel Synagogue in 1597, for which Rudolph II granted him tax immunity and the right to display in it the "flag of David." Rudolph further decreed that the synagogue might not be entered by officers of the law. It remained Meisel's property until his death, when it was taken over by the community. (From 1963 it housed the synagogue silver collection of the Jewish State Museum.)

Meisel purchased land for the expansion of the Jewish cemetery and the construction of a bet tohorah (where the dead were prepared for burial). He financed the building of a hospital, a bet midrash, a mikveh, and a Klaus. The tradition that he also built the Jewish town hall cannot be proved. He had the streets of the Jewish quarter paved and donated large sums to all other charities, especially for the ransom of captives. He also sent money to Jerusalem and granted considerable loans to the Cracow and Poznan (Posen) communities (possibly because of their connections with *Judah Loew b. Bezalel).

About Meisel's second wife, Frumet (d. 1625), there is diverse information. On one hand, she is said to have supported him in his philanthropic activities, and on the other hand, she is reported to have refused Meisel's dying request to give to Judah Loew a large sum for his charities. That she was Meisel's wife is not mentioned on her gravestone. When Meisel died, childless, he willed his property to his two nephews, both named Samuel. Although the emperor was represented at Meisel's funeral, all Meisel's property was seized in the name of the emperor, his heirs tortured to make them disclose any "concealed" assets, and Meisel's will itself declared void. A lawsuit was initiated, to which the entire community became a party, claiming the right to part of the inheritance because it had been forced to pay interest on it. In the course of this lawsuit, the herem was pronounced on the impoverished Meisel family and one of them was refused burial. Although the main part of the estate burned down in the conflagration of 1689, an agreement between the community and the family was not reached until 1699.

**MEISEL, MOSES BEN MORDECAI** (c. 1758–c. 1838), Torah scholar and maskil; born in Vilna. In his youth Meisel was one of the disciples closest to the Vilna Gaon *Elijah b. Solomon Zalman. He was familiar with German literature and became deeply interested in the writings of Moses *Mendelssohn. However, he was also in secret contact with R. *Shneur Zalman of Lyady, the founder of the *Chabad movement, and when this became known, he fled to Germany, fearing persecution by the Vilna religious establishment. During the Napoleon Wars he conferred with the representatives of the French government on several occasions. After acceding to R. Shneur Zalman's request to stop these talks with people close to Napoleon, he was suspected of collaborating with the Russian army and was compelled to flee. He went to Ereẓ Israel but returned to Lithuania after the French defeat. During the early 1820s he went once more to Ereẓ Israel and in his last years was closely associated with Sir Moses *Montefiore. He wrote Shirat Moshe (Shklov, 1788), on the 613 precepts. Meisel died in Hebron.

**MEISEL, NOAH** (1891–1956), Latvian politician, born in Nesvizh, Belarus. From his student days Meisel was a member of the *Bund. In World War I he served in the Russian army as a medical officer. After Latvia became independent (1918), he
was appointed municipal health officer in Daugavpils (Dvinsk) and also served as a member of the city council and the Jewish community council. Later, he was elected to the Latvian parliament, where he represented the Bund. After the Fascist takeover (1934) he was arrested together with other Socialist deputies and spent some time in prison. He visited the United States, but did not stay there, returning to Latvia. In 1940, when the Soviet forces overran Latvia, Meisel was arrested – as were other Socialist and democratic leaders – and deported to the far north of the U.S.S.R., where he eventually died.

[Joseph Gar]

**MEISELS, DAVID DOV** (1814–1876), Polish rabbi. Meisels was the son of Aryeh Judah Jacob who served as av bet din of Piotrkow and Kilatow. He was known in his youth as a prodigy (illui). He was appointed av bet din of Dobra at the age of 18 and later served in the same capacity at Nasielsk. Since 1851 until his death he was rabbi of Lask. He was regarded as one of the outstanding talmudists of his generation and gained the deep respect of the hasidic rabbi of Gur, Isaac Meir, author of the Hiddushei ha-Rim. Meisels’ important works, published by his sons, are Ahavat David, on the laws of invalid witnesses (1884); Hiddushei ha-Radad, novellae on tractate Pesahim (1891); Shelehot u-Teshuvot ha-Radad, responsa on Orah Hayyim and Even ha-Ezer (1903); and Binyan David, on the Book of Lamentations (1913). Of his sons, Jacob, author of the Toledot Yaakov, succeeded his father as rabbi of Lask; Phinehas Eliahu served as rabbi of Rakov and Ze’ev Wolf was a distinguished Hasid at Tarnow.

[Arthur Cygieldman]

**MEISELS, DOV BERUSH** (1798–1870), rabbi and Polish patriot. Scion of one of the most ancient families of Cracow, he was a descendant of Moses *Isserles. He studied under his father Isaac, who was rabbi of Kamenets-Podolsk, Ukraine. After his marriage to the daughter of the wealthy Solomon Borenstein, he settled in Cracow, where he opened a bank in partnership with Horowitz, the bank bearing the names of both partners. In 1832, after a difficult struggle against R. Saul Landa, Meisels was elected rabbi of the town. R. Saul Landa and his followers did not recognize this election and they established their own bet din. The divergences of opinion between the two bettei din were tremendous; what one of them permitted the other prohibited. Both rabbis vigorously fought the emergence of the Haskalah in Cracow and they were violently attacked by the maskilim in the pages of their Algemeine Tsaytung. During the period of his rabbinate in Cracow, and even before then, Meisels played a central role in the communal life of the Jews of Cracow. Being extremely wealthy, he distributed the whole of his rabbinical salary to charitable institutions, thus gaining the esteem of the masses. Many of the inhabitants of Cracow, which was then under Austrian rule, joined the Polish Revolt which broke out in Warsaw in 1830 against Russian rule. Meisels supported the rebels and he personally financed the purchase of arms and the expenses of the rebels. In general, Meisels was an enthusiastic Polish patriot and he proved it on several occasions.

During the revolution of 1844, Meisels again supported the rebels. At a central prayer service held in the synagogue, Meisels called upon the congregation to join the rebels and to support them, even taking part in mass demonstrations in the street. In 1846 he was elected to the Senate of the Cracow Republic (the Free City of Cracow) and in 1848 was a member of the Polish delegation to the Austrian emperor which appealed for the liberation of the political prisoners. In the elections to the Austrian parliament which were held on December 31, 1848, Meisels was elected as the first Jew, obtaining a large majority over the other Jewish candidates. During the same year, he was also elected as one of the 40 councilors of the municipality of Cracow. In 1851, Meisels lent his assistance to projects for Jewish agricultural settlement, but these did not materialize. In parliament, Meisels joined forces with the Radicals. His sharp reply of: “Juden haben keine Rechte” – “Jews have no Right(s)” – to the speaker of parliament who had asked him why he sat with the Leftists has become renowned. In 1854 his great rival, R. Saul Land, died and two years later, Meisels became chief rabbi of Warsaw. He was received with much enthusiasm by all circles, though his election followed upon a violent dispute. In Warsaw, he also fought together with the Poles, joining their demonstration and assisting the Polish patriots.

In November 1861, he was arrested for closing the synagogue of Warsaw in defiance of the czarist authorities and was compelled to leave the town after a lengthy imprisonment. London and Amsterdam offered him their rabbinical seats, but in 1862 he was authorized to return to Warsaw, which he preferred. He was again expelled and deported to Cracow, but he was pardoned and returned to Warsaw – but from then he engaged exclusively in study. When he died in Warsaw, the whole population attended the funeral, as a manifestation of the desire for Polish independence; the Russians prohibited the publication of obituaries on him, in revenge for his political activities against them. Meisels published Hiddushei Maharadom (Warsaw, 1870), consisting of novellae on the Sefer ha-Mitzvot of Maimonides. His son, Israel, was dayyan in Cracow and rabbi in Shedletz (Polish: Siedlce) from 1858–67. He then returned to Cracow, where he died in 1875. His second son, Solomon, lived in Vienna.

[Itzhak Alfassi]
MEISELS, SAUL (1911–1990), hazzan. Meisels was born in Galicia where his father was a hasidic hazzan. Meisels immigrated to the United States in his youth and sang as a child in cantorial choirs. He studied music with the well-known synagogue composer Max Helfman, and received his vocal training at Juilliard. For 37 years he was the hazzan of Temple on the Heights in Cleveland. He was president of the Cantors Assembly and in 1965 organized the first International Conference of Musicians and Cantors, which was held in Israel. Meisels specialized in renditions of Yiddish folk songs and appeared in numerous concerts of hazzanut, and sang Yiddish folk songs, songs from the Jewish theater, and modern Israeli songs. In his performances he was accompanied by his wife, Ida Ruth, a well-known arranger of Yiddish folk songs. Meisels made recordings of cantorial works composed by Sholom Secunda, and was a recording artist for RCA Victor and Tikvah Records.

[Akiva Zimmerman / Raymond Goldstein (2nd ed.)]

MEISELS, UZZIEL BEN ZEVI HIRSCH (1743–1785 or 1786), hasidic rabbi in Poland. Meisels was a member of an old rabbincic family in Poland, and a descendant of Moses *Isserles whom he calls “my grandfather” in his works. He served as av bet din in Rychwal (Bogatynia), Ostrowiec, and Nowy Dwor. Attracted to Hasidism he became a disciple of *Dov Baer, the Maggid of Mezhirech, and with his brother Isaac became one of the propagators of Hasidism in Poland. A considerable portion of his teachings in the yeshivah has been lost. His works include Ez ha-Da’at Tov, novelae on tractates Ketubbot (1863) and Shabbat (1866); Menorah ha-Tehorah (1883/84), on Tur, Orah Hayyim, Hilkhot Shabbat; and Tiferet Zevi (1803), on tractate Beẓah. The two were published posthumously by his grandchildren in Tiferet Uzziel. This work includes selections on the Bible and moralistic hasidic sermons, combined with kabbalistic themes, though even these reflect the style of the halakhist, and contains many sayings of the founders of Hasidism. Meisels was called *ve’ed ("Servant of the Lord"), ever being the initial letters of Uzziel ben Dreizel (his mother’s name).

[Pinia Meislish]

MEISL, JOSEPH (1883–1958), historian and archivist. Born in Brno, he became an official of the Berlin Jewish community in 1908, rising to general secretary, and was later librarian of the community's important library. After the Nazis seized power, Meisl settled in Jerusalem. There he founded (and to 1957 directed) the *General Archives for the History of the Jewish People (see *Archives). Before and after World War II he was able to transfer valuable archival material from Central and Eastern Europe to the archives.

Writing mainly in German, Meisl made considerable contributions to Jewish historiography. His works include Geschichte der Juden in Polen und Russland (3 vols., 1921–25); Haskalah, Geschichte der Aufklärungsbewegung unter den Juden in Russland (1919), a history of the Haskalah movement in Russia; and Die Juden im Zartum Polen (1916). He also wrote studies on well-known Jewish historians: H. *Graetz (1917), S. *Dubnow (1930), and his father-in-law S.P. *Rabinowit (Heb., 1943). In 1939 he published his study of Sir Moses *Montefiore’s (abortive) endeavors to raise the educational and economic standards of Jerusalem Jewry, while his important edition of the minute books of the Berlin Jewish community, 1723–1854 (Pinkas Kehillat Berlin) was published posthumously in 1962 by Shaul Esh. Meisel was a coeditor of the Festschrift zu S. Dubnows siebzigstem Geburtstag (1930).

[Getzel Kressel]

MEISSEN, former margravate in Saxony, city near Dresden, Germany. Jews are mentioned as resident in the margravate of Meissen in the first decade of the 11th century. An organized community in the city of Meissen dates only from the 12th century, when a synagogue and a cemetery were maintained. The Jews lived at first in a Judendorf outside the city walls near the “Jewish gate.” In 1265 Duke Henry the Illustrious enacted a liberal decree securing the Jewish community undisturbed participation in the city’s life for some 80 years. During this period they made their living as pawnbrokers and moneylenders. Their communal life flourished, and they established the first Jewish school in Saxony. In 1330 Emperor Louis IV transferred the protection of the Jews in Meissen to Frederick the Grave of Thuringia. During the *Black Death persecutions of 1349 the community was destroyed. Although it was never reestablished within the city itself during medieval times, Jewish moneylenders and tradesmen remained as taxpayers within the margravate. A partial expulsion took place in 1411, but the decree was rescinded in 1415. In 1425 Frederick the Warlike granted them protection for a yearly fee; however, during the course of the Hussite Wars (see *Hussites), Frederick the Mild ordered the expulsion of all Jews from Meissen and Thuringia in 1430. They were not permitted entry into Saxony as a whole until the end of the 18th century. The modern community in the city of Meissen was founded in the 19th century, but it never achieved the status of its medieval counterpart. The city had a population of 32 Jews in 1890 that remained stable until 1904, but by 1933 all of them had been absorbed by *Dresden.

[Alexander Shapiro]

MEITAR (Heb. מיטר), urban settlement located in southern Israel, near Beersheba. It received municipal council status in 1987. In 2002 its population was 6,100, occupying an area of 6.5 sq. mi. (17 sq. km.).

[Shaked Gilboa (2nd ed.)]

MEITNER, LISE (1878–1968), physicist and one of the small group responsible for the discovery of atomic fission. Born in Vienna, she moved to Berlin in 1917 and there joined the distinguished chemist Otto Hahn, with whom she worked in collaboration, researching into radioactive substances. Lise Meitner was one of the first women to become a professor at the University of Berlin (1926). From 1917 she was for over 20 years head of the physics department in the Kaiser Wilhelm Institute for chemistry in Berlin.

After the Anschluss in 1938, she left Germany and settled in Stockholm, working on the staff of the Nobel Institute. There she received a letter from Hahn describing his discovery with Fritz Strassmann that, when a uranium atom was disintegrated by a neutron, an atom of barium was thereby produced. While holidaying near Gothenburg in December 1938, she discussed this with her nephew, Otto *Frisch, who was working in Denmark with Niels *Bohr. The two physicists immediately realized the significance of Hahn's work, which meant that the uranium atom was split into roughly equal parts, accompanied by a tremendous release of energy. Frisch called this "fission," a term borrowed from biology. Lise Meitner visited the United States after 1945, but returned to Sweden and became a citizen in 1949. Both before and after World War II she received many honors. She eventually retired to Cambridge, England, where she died.

MEITUS, ELIAHU (1892–1979), Hebrew poet, writer, and translator. Born in Kishinev, Meitus studied at the Sorbonne but during World War I returned to Russia. After the war he served as headmaster of a Hebrew gymnasium in Bessarabia, and later taught in the teachers' seminary in Jassy (Romania). In 1935 he settled in Palestine, where he taught literature in secondary schools. His first poem appeared in Ha-Shiloah (1910), when he was studying in Odessa. He came to the attention of Bialik, then the literary editor of that periodical, and became a member of the "Odessa group" of Hebrew writers. Subsequently, Meitus published poems and articles in the Hebrew press in Russia, Romania, and elsewhere. After he settled in Palestine, Meitus' writings appeared regularly in the newspapers, particularly in the daily Al ha-Mishmar. He translated extensively (from French, Romanian, Russian, and Yiddish), mainly works of fiction, but also poetry and nonfiction. Four collections of his poetry have appeared, including Shirim (1943), Balladot mi-Nof ha-Yaldut (1954), and Bi-Kezeh ha-Gesher ha-Sheni (1967, sonnets). He also compiled an anthology of modern Hebrew poetry, Shiratenu ha-Hadashah (1938).

MEKHILTA DEUTERONOMY (MD) is a halakhic Midrash of the school of R. Ishmael, the exact scope of which has not been determined, since the greater part of this Midrash is not extant. One of the Genizah fragments of MD indicates that its first unit ended with Deut. 1:30, and its second unit began with Deut. 3:23, as does Sifre Deuteronomy (SD). This might indicate that its other sections, as well, were essentially parallel to those of SD. In four Genizah fragments MD is divided into "parashot," each of which includes an average of four to five verses. In a later fragment, that originated in Yemen, the Midrash is divided into verses ("דַּעְתָּהּ דַּעְתָּהּ" – end of verse), but this was probably not an original division, and was influenced by the common division of SD that was prevalent in Yemen.

Hoffmann was the first scholar to methodically demonstrate that R. David ha-Adani used MD in his composition of Midrash ha-Gadol, and, following this premise, also began to reconstruct the former. Schechter then published four Genizah leaves of MD, Re'eh, which he identified in Oxford and in Cambridge. On the basis of these leaves, and a reexamination of Midrash ha-Gadol, Hoffmann began a second reconstruction of MD in his book Midrash Tanaim, which was published in two volumes (Berlin, 1908–09).

In this edition, still used by scholars to the present day, Hoffmann printed in one font all the passages from Midrash ha-Gadol that differ in a pronounced manner from SD, and used a second font for all the Midrash ha-Gadol passages that resemble SD, and whose identification as MD he regarded as doubtful. Several times during the course of his edition, however, Hoffmann changed the fonts marking the similar or varying passages (on pp. 1–24, 63–180, large type = a passage different from SD, small type = a passage similar to Sif. Deut.; on the other hand, on pp. 24–62, 180–252, large type = a passage similar to SD, small type = a passage different from SD).

There are many drawbacks to this edition. As has been proven from the Genizah fragments, a large portion of MD was not quoted in Midrash ha-Gadol, and the part that was cited was on occasion reworked by Adani, or was corrupted by the copyist of the only manuscript of Midrash ha-Gadol that was available to Hoffmann. Hoffmann often included in his edition Midrashim that the author of Midrash ha-Gadol had undoubtedly copied from SD, BT, Mishnat R. Eliezer, the Mishneh Torah of Maimonides, and other sources. Hoffmann generally voices his doubts concerning the authenticity of such passages, but the reader must conduct his own examination of each passage with this issue in mind.

Several additional passages from MD came to light after the publication of Midrash Tanaim. Schechter published a Genizah fragment consisting of two leaves from MD, Re'eh. Kahana later succeeded in identifying two additional fragments, each of two leaves, from MD, Devarim-Va-Etanan and Ha'alizinu-Be-Zot ha-Berakhah, along with a lengthy quotation from MD, Ekev and Ha'alizinu, that appears in an early collection in the Genizah. The second fragment that Schechter published from the Cambridge Genizah collection was the subject of a second, and more exacting, edition by Epstein,
and new editions of Midrash ha-Gadol on Deuteronomy have been published, based on several manuscripts. These editions, and other manuscripts of Midrash ha-Gadol, enable us to correct many of the corruptions that entered Midrash Tanaim. A considerable number of expositions from MD were inserted in the Western textual versions of SD, and others are preserved in quotations by medieval sages that have been discovered in recent years. It would seem, however, that the circulation of MD was already quite limited in the medieval period.

The direct passages from MD discovered to the present contain only some five percent of the Midrash, a fact that severely hinders its research. The most detailed description of MD and its nature as a Midrash from the school of R. Ishmael was written by Hoffmann, after he completed his edition of Midrash Tanaim, and Epstein engaged in a concise discussion of MD following the new edition of one of its passages. It should be mentioned that the halakhic material in the three fragments that were published by Schechter is notable for its lengthy and detailed expositions. The aggadic material of MD also is characterized by a certain degree of lengthiness, in comparison to the parallel material in SD. At times the version of the aggadic exegeses in MD is superior in its language, style, and content to that of the parallel expositions in SD, which occasionally suffer from nonuniformity of style, vague expositions that lack inner logic, and a number of corruptions shared by all the manuscripts. Some of the differences between MD and SD apparently are a consequence of the varying worldviews of the redactors of these Midrashim (see, e.g., the outline of the differing attitude by the redactors of these Midrashim to the non-Jewish peoples).

Menahem I. Kahana (2nd ed.)

MEKHILTA OF R. ISHMAEL (Aram. מחקילה של רבי יישמעאל) halakhic Midrash on Exodus.

Mekhilta de-Rabbi Yishmael (MY) is a Midrash from the school of R. Ishmael to the Book of Exodus. The word "mekhilta" means "a measure," and its attribution to R. Ishmael was initially by R. Samuel ben Hophni and R. Nissim Gaon (the attribution of MY to the midrashic school of R. Ishmael is an innovation solely by scholars in recent generations; and it is only by chance that this notion corresponds with the name given the Midrash by several rishonim). MY does not contain an exposition for the entire narrative section of Ex. 1–11; it rather opens with the first laws of the Book of Exodus in 12:1, and continues with the uninterrupted exegesis of the halakhic and aggadic passages until 23:19, before ending with the exposition of two short halakhic passages on the Sabbath in Ex. 31 and 35. All this indicates a close association between MY and the halakhic material in Exodus, although the precise criteria for determining which material in Exodus will be the subject of an exposition and which will be passed over are unclear, since it also includes Midrashim on lengthy aggadic sections, while, on the other hand, it skips a number of halakhic passages.

MY is divided into nine masekhot: Pasha (Ex. 12:1–13:16); Va-Yehi Be-Shalah (13:17–14:31); Shirta (15:1–21); Va-Yassa (15:22–17:7); Amalek (17:8–18:27); Ba-Hodesh or Debari (19:1–20:26); Nezikin (21:1–22:23); Kaspa (22:24–29); Shabbatta (31:12–17; 35:1–3). Each masekhta is divided into a number of parashot, each of which is in turn divided into halakhot, numbered with the letters of the alef-bet. Each parashah ends with a summation of the number of halakhot contained in it, the masekhta concludes by mentioning and summing up the parashot, as well, and the entire Midrash ends with a summation of the masekhet. These summations are presented by means of allusions to each parashah in Aramaic, which is also the language of the division into masekhet, parashot, and halakhot (the division is preserved in its entirety only in the Genizah fragments).

Two critical editions of MY, that do not refer to each other, have been published: the edition by H.S. Horovitz, which was posthumously edited and completed by I.A. Rabin (Frankfurt, 1931); and the edition by J.Z. Lauterbach, which was published in three volumes (Philadelphia, 1934–35). These editions rightly received favorable reviews by E.Z. Melamed, who reviewed the Horovitz edition, and by S. Lieberman, who evaluated the Lauterbach edition.

Horovitz chose the printed version as the basic text for his edition, at times emending and completing it in accordance with other textual versions. He provided a detailed listing of the textual variants found in the two complete manuscripts of MY, Oxford 151 and Munich 117; in the Leghorn 1801 edition, which is based, inter alia, on the emendations by Solomon Ohana; in the many quotations in Yalkut Shimonai and in Midrash Hakhaim, which include most of MY; and in other indirect testimonies, primarily the Midrashim Lekah Tov, Sekhel Tov, Tanhuma, and Sefer ve-Hizhir. Horovitz also
added a concise but thorough critical commentary, with references to the parallels.

The Lauterbach edition is more eclectic. The editor generally preferred the common version of the two manuscripts in his determination of the text. In addition to the textual versions that were available to Horowitz, Lauterbach used a few pages from the Genizah, ms. Rome Casanatensia H 2736 on Masekhta de-Shirta, and ms. Oxford 2657 on Yalkut Shimoni. The variant readings were recorded in an extremely selective manner, and the references to the parallels are listed separately.

Both editions suffer from the absence of a prior methodological discussion regarding the character of the various textual versions and the mutual relations between them. Consequently, the editors were unaware of the direct dependence of the printed Venice 1545 edition on the printed Constantinople 1515 (?) edition, that was indicated by Melamed; the common source of the Western mss., as was concluded by Finkelstein; and, mainly, the relative superiority of ms. Oxford to the other texts that they possessed, as was first noted by Lieberman. The lack of a comprehensive evaluation of the character of the textual versions is also apparent in the tendency of the editors to base the text of M1, especially its difficult passages, on the adapted and emended versions of Midrash Hakhhamim, which, as its name implies, is a "Midrash" by an Italian sage from the 15th century who relied in great measure upon the Mi, but not a direct textual version.

Additional versions of M1 came to light after the publication of these two editions. Especially noteworthy among these are ms. Vatican 299, which preserves about half of the Mekhilta, and some 80 pages from the Cairo Genizah. The importance of the latter lies in the Eastern and early textual tradition that is reflected in the majority of them, and that is generally superior to the later Western textual tradition that is presented in the direct Mi texts on which the two critical editions were based. In many instances, the original version is preserved only in the Genizah fragments, and in other places the Eastern Genizah version confirms the shared reading of the Western manuscripts, also for very difficult versions, that might possibly attest to intentional intervention in the original traditions of the Mi by its later redactors or the earlier copists.

M1 was interpreted during the medieval period by several rishonim, but only one of these commentaries is extant, and only partially, in ms. Mantua 36. The publication of M1 was followed by a number of short emendations and commentaries written with the aid of manuscripts, and a number of lengthy commentaries by aharonim that were based solely on the printed version, along with quotations appearing in Yalkut Shimoni. The most important of the latter are Shevet Yehudah by R. Judah Najar and Berurei ha-Middot by R. Isaac Elijah Landau, which were closely followed by two scholarly commentaries: Middot Soferim by Isaac Hirsch Weiss, and Me’ir Ayin by Meir Friedmann (Ish Shalom). Friedmann’s work laid the groundwork for the editions by Horowitz and Lauterbach, who were greatly aided by it. After the publication of the two editions, Masekhta de-Shirta was the subject of a new commentary by Goldin, and Kahana published a new edition of Purashat Amalek that included a detailed discussion that sought to prove the originality of the aggadic material preserved in M1, relative to the secondary material in ms (Mekhilta of R. Simeon ben Yoḥai).

The general nature of M1 and its sources has been examined and described by scholars of halakhic Midrashim, and has been the subject of numerous monographs examining its diverse sources, its attitude toward the Mishnah and to ms, its narrative traditions, its conceptual worlds, and other topics.

MEKHILTA OF R. SIMEON BEN YOHAİ

מ didSetה (MS), a halakhic Midrash on Exodus from the school of R. Akiva, which is attributed to R. Simeon ben Yoḥai because of his exposition at the beginning of the book. Several rishonim knew this Midrash by other names, such as “Mekhilta de-Sanya”; “Mekhilta”; “Sifri”; “Sifri de-Vei Ray” and others. This Midrash was subsequently lost, and only portions were found by modern scholars. Meir Freidmann (Ish Shalom) was the first to collect the quotations from MS that were known in his time, and his list was augmented by a number of items by Hoffmann in his pioneering study of the tannaic Midrashim. Israel Lewy then discovered that large portions of the Midrash had been cited by R. David ha-Adani in Midrash ha-Gadol on Exodus, and Schechter published a few fragments from MS itself that he uncovered in the Cairo Genizah. The first edition of MS was published by Hoffmann (Frankfurt, 1905), based on Midrash ha-Gadol and a small number of Genizah fragments identified by Schechter. The next edition, published by Epstein and Melamed in 1955, is based on 95 MS leaves or fragments of leaves discovered in the Genizah. The rest of the Midrash (approximately one third) was reconstructed using four manuscripts of Midrash ha-Gadol. A few additional MS fragments were subsequently published, transcriptions of all the new Genizah fragments which came to light, and also a new edition of Parshat Amalek of MS based on new manuscripts.

The introduction to the Epstein-Melamed edition contains a description of the MS manuscripts and their main distinguishing features, but the principles guiding the editors were not presented, nor did the editors include a focused and orderly treatment of the signs and symbols used in the edition. The manuscripts were generally copied in this edition in an admirably accurate manner, and only in rare instances should the transcription, which was based on photographs, be corrected on the basis of the original manuscripts. It should be noted, however, that the largest copy of MS, on the basis of which some 65 pages were published, is not an excellent manuscript, being only of second-rate quality, and written in the 13th century in Spain. About another 15 pages are not from direct MS manuscripts, but are fragments that survived from two copies of abridged midrashic collections from MS. Consequently, the textual tradition of MS set forth in the major portion of the edition is not an especially reliable one, and is plagued by many copyist’s corruptions and mistakes.

The editors correctly noted the striking disparity between the certain MS fragments that were discovered in the Genizah and the doubtful passages, that they printed in smaller type. Most of the doubtful reconstructions, that encompass about one third of the edition, were based on Midrash ha-Gadol, and the editors were forced to complete the rest based on the parallel material in Mekhilta de-Rabbi Ishmael (Mi), Sifra, Midrash Tanaim, and other Midrashim. Obviously, error could hardly be avoided in such a complex labor of reconstruction, and in his review of the edition, Margaliot referred to a few passages that were incorporated within the text on the basis of Midrash ha-Gadol, but that do not originate in MS, but in Mishnat Rabbi Eliezer, Avot de-Rabbi Natan, or the Babylonian Talmud. A similar situation holds for the completion of missing passages in the Genizah fragments on the basis of Midrash ha-Gadol (which were printed within brackets, in normal type), whose origin in MS is extremely doubtful. On the other hand, the Epstein-Melamed edition omitted several other passages from Midrash ha-Gadol whose origin in MS has now been proven from new quotations from MS cited by several rishonim, such as R. Hafez ben Yaẓliḥaḥ and the Karaites Jeshua ben Judah.

MS begins with a lengthy exposition concerned with a single topic: the choosing of Moses as the agent who shall redeem Israel, and Moses’ response to this selection. This midrashic exposition is composed of two developed literary units (pp. 1–4/3; 4/3–7/9), each of which is focused on the first verse of the weekly Torah reading (seder) according to the custom of the Land of Israel with which it opens: Ex. 3:1; Ex. 6:2, that are the only two lemmas in these units. The phenomenon of constructing an entire Midrash around the opening verses of the weekly seder as practiced in the Land of Israel appears only very rarely in the tannaic Midrashim, but is a frequent occurrence in the amoraic Midrashim and in the versions of Tanhuma. The deficient extant documentation hinders our determining if MS included additional hermeneutical units on chapters 6–11 of Exodus. At any rate, Midrash ha-Gadol preserved midrashic interpretations that apparently originated in MS, beginning with the halakhic subjects in Ex. 12:1 and starting with verse 3 in this chapter. MS is documented in a Genizah fragment published by Abramson. MS continues to expound the verses, in order, at least until Ex. 23:19, after which the exact scope of the Midrash is unclear. Based on Midrash ha-Gadol, Melamed reconstructed MS on Ex. 23:20–24:10, and selected verses from chaps. 30, 31, 34, and 35 of Exodus in his edition, but several of these quotations clearly do not originate in MS; this issue requires further study.

The Epstein-Melamed edition does not include a commentary, and the parallels, as well, were listed only in a partial fashion. Many interpretations of the Midrashim of MS appear in the edition by Hoffmann and in Kashar’s glosses in Torah Shelemah, but these cannot fill the need for an orderly and detailed critical commentary of MS in its entirety. As regards the research of MS, see the introduction to the edition, in which Melamed published Epstein’s general essay on the MS, which paid special attention to the question of its redactors. Melamed added his own discussion concerning the terminology and vocabulary of MS, the names of the rabbis it cites, its method of quoting sources, and its characteristic hermeneutical methods. The second edition contained an additional

[Menahem I. Kahana (2nd ed.)]
short chapter on “Mishnah and Baraita Quotations in Mekhilta de-Rabbi Simeon b. Yoḥai,” and the appendices to the edition included various subject indices that aid in the further study of this Midrash.

Most scholars concur that the halakhic portion of MS was redacted fairly late. This opinion was first expressed by Epstein, who wrote at the end of his Introduction: “The MS is from the school of R. Akiva, and is later than all halakhic Midrashim (ḥm) (making much verbatim use of Sifra, Sifrei, and Tosefta), and many halakhot are incidentally connected in the Midrash. All this points to a late date.” Based on an orderly study of the section of the Hebrew slave in the two Mekhilot, Judah concluded that MS was redacted after M1. De Vries took this premise a step further, and asserted that MS contains a reworking of baraitot from M1, and not parallels or a common source. Levine examined several halakhic topics in MS, and reached an even more far-reaching conclusion, that the activity by the redactor of MS closely resembles that of the amoraim in the area of interpretations of the Mishnah. He, like them, clarifies the halakhic concepts in the Mishnah, expands it, draws parallels to it, and examines the relationship between one mishnah and another by the use of certain interpretations of mishnayot or baraitot. On the basis of this analysis, Levine wrote that, apparently, the redactor of MS was himself an amora, while emphasizing that further study is required as to whether conclusions could be drawn regarding MS as a whole on the basis of an examination of these specific details. An investigation of Levine’s proofs shows that almost all were based on extremely tenuous speculation, and not on solid evidence, on the basis of which we could determine the text of the sources available to the redactor of MS, on the one hand, and the nature of their reworking, on the other. Objections could also be raised concerning the quality of De Vries’ proofs of the use by MS of M1. An examination of the singular character of MS therefore requires further study, that would have to include a new and consistent examination of its terminology, the names of the rabbis it mentions, and its prevalent hermeneutical methods that at (albeit extremely rare) times seem also to include several elements seemingly characteristic of the other school, that of R. *Ishmael.

The aggadic material in MS fundamentally resembles the parallel material in M1. An orderly examination of the parallel aggadic material of Parshat Amalek demonstrates the primacy of the tradition in M1, in comparison with that of MS, which apparently was fashioned by redactors who sought to inform the midrashic expositions with a more developed literary and ideational nature, somewhat freed from their rigid linkage to the verses. Along with the ideational development of several of the Midrashim in this section in MS, the latter occasionally exhibits stylistic hyperbole, exegetical diffusion, a tendency to relate unattributed interpretations to specific rabbis, and possibly even an attempt to artificially rewrite disagreements. Some of the Midrashim in MS exhibit a simplification of content that borders on popularization, and the accentuation of motifs that concentrate on elementary principles of the religious experience, such as emphasizing the importance of obedience to the word of God, sermonizing about the observance of the commandments and avoiding sin, reinforcing the standing of prayer, and promising the good end that awaits Israel, along with the tribulations that shall befall its enemies.

A comprehensive characterization of the aggadic material of the two Mekhilot would require a detailed examination, which has not been conducted to date. Nonetheless, a partial examination of other parashot in the MS reveals findings similar to those in evidence in Parshat Amalek. The literary nature of the firstaggadic unit that appears only in MS, and not in M1, which resembles in a certain sense the genre of Tanhuma, also reflects the literary adaptation that is characteristic of the aggadic material of MS and the relatively late time of its fashioning. The same is true for some of the aggadic material that is incorporated within the halakhic sections, and for a portion of the halakhic material that is included in the aggadic passages.

A geonic response (probably by R. *Sherira and R. *Hai) attributes a quotation from MS to the rabbinic teaching that appears in the “other sifrei de-vei Rav [all ḤM, except for Sifra],” “and thus all the tannaim learned, without exception,” and compares it with a citation from M1, which they termed “Mekhilta de-Erez Israel.” This led scholars to conclude that MS was the primary Mekhilta that the “tannaim” (i.e., the teachers of baraitot) taught at the time in Babylonia, while M1 was more widespread in the Land of Israel; it was not studied in Babylonia (at least not in the yeshivah of Pumbedita), and the geonim cited it from a written book. This could possibly be related to the manner in which MS was transmitted, and, in fact, the TБ frequently quotes Midrashim similar or identical to MS. In either event, the history of the transmission of MS is to be separated from the question of the venue of its redaction, and there is no reason to move the latter from Erez Israel to Babylonia.

MEKLENBURG, JACOB ZEVI
(1889–1953), Soviet army officer. Born in Odessa, Mekhlib was conscripted into the czarist army and during World War I served in an artillery regiment. He joined the Red Army in 1919 and served through the civil war of 1918–21, becoming military commissar of a brigade, a division, and an army group in the Ukraine. In 1930 he graduated from the Institute of Red Professors. For several years Mekhlib was an official of the Communist party central committee and after 1930 worked on the newspaper Pravda. He was head of the Red Army’s political administration from 1937 to 1940 when he became U.S.S.R. people’s commissar of state control. Following the outbreak of World War II, Mekhlib served in the Red Army in 1941–42, again as head of political administration of the army, vice commissar of defense, and from July 1942 to 1945 as member of various front war councils. He was promoted to lieutenant-general on December 6, 1942, and to colonel-general on July 29, 1944. His many decorations included the award of four Lenin medals. After the war he served for a short period as U.S.S.R. minister of state control. He died on February 13, 1953, and his body was interred in the Kremlin wall.

MEKIZE NIRDAMIM (Heb. פתחי נידמה; “rousers of those who slumber”), the first society for the publication of medieval Hebrew literature in every branch of intellectual activity, in scholarly editions. The aim of the society was both to propagate a knowledge of Jewish scholarship and to establish personal contact between scholars. The structure of the society—which still continues—provided for a board of directors, consisting of the best qualified scholars in their field, and annual subscriptions from members. The Mekize Nirdamim was founded in 1862 by E.L. Silbermann in Lyck, founder-editor of the first Hebrew weekly *Ha-Maggid, with the cooperation of Chief Rabbi Nathan M. *Adler (London), M. *Sachs (Berlin), and S.D. *Luzzatto. There was a certain amount of opposition—for a variety of reasons—which included a lack of faith in the possibility of the renaissance of Jewish culture, an opposition to the publication of non-rabbinic texts, and an opposition in principle to the exclusive use of Hebrew, which was established as a rule by the society, and/or an opposition to its founders by such scholars as A. *Geiger and M. *Stein-schneider. Support was found, however, among Polish and Russian scholars and even in rabbis such as Samuel and Mattityahu *Straschun, S. *Ganzfried, and M.L. *Malbim, and by 1839 the number of subscribers, from a great many countries, stood at 1,200. In the same year the first four publications were issued, among them the first installment of S.D. Luzzatto’s edition of Judah Halevi’s *Diwan. The adherenee of Moses *Montefiore in 1865 brought with it the support of many who had been aloof. After a decade’s activity, there was a pause until, in 1885, the society resumed its work in Berlin, guided by A. *Berliner, A. *Harkavy, and others. It was then that the series *Kobez al Jad was initiated (26 volumes by 1970), devoted to the publication of smaller manuscripts and documents. In 1934 the seat of the Mekize Nirdamim was transferred to Jerusalem. By 1970, 110 works had been issued. S.Y. *Agnon served as president of the society (1954–70), and was succeeded by Gershom *Scholem. Very distinguished scholars, such as Y. Baer, H. Schirrmann, E. Urbach, etc., served as members of the executive committee. Sh. Abramson and E. Fleischer continued the publication of important books on Hebrew medieval literature in the last decades of the 20th century and the beginning of the 21st with such books as Eleazar ha-Bavli’s *Diwan (ed. H. Brody, 1971), *Responsa and Decisions of the Sages of Germany and France (ed. E. Kupfer, 1973); Moses Ibn Ezra’s *Kitab al-Muhaddara wa-Mudhakara (ed. A.S. Halkin, 1975), Midrash Bereshit Rabbati (ed. Ch. Albeck, 1984), Rabbi Judah ben Abraham ben Benjamin Carimina Cuncta (ed. Sh. Elizur, 1988), Teshuvot ha-Rambam (ed. J. Blau, 1989), *Pinkas Kobez Shnaitakh (ed. M. Hildshaimer, 1992), Perush Kadum le-Midrash Va-Yikra Rabbah (ed. M.B. Lerner, 1995), and Ma’aseh Nisim: Perush la-Torah (ed. H. Kraisel, 2000).

[Israel Moses Ta-Shma]

MEKLENBURG, JACOB ZEVI (1785–1865), rabbi and bibli- cal commentator. Meklenburg was born in Inowroclaw, Poz- nania. Unwilling to enter the rabbinate, he engaged in business, but in 1831, after his business had failed, he accepted an invitation from the community of Koenigsberg to serve as their rabbi, and he remained there until his death. An opponent of religious reforms, he fought against the reformist ideas advocated in his community by Joseph Lewin Saalschuetz.

Meklenburg’s major work was a commentary on the Pentateuch, *Ha-Ketav ve-ha-Rabbalah, in which he sought to demonstrate the conformity between the oral tradition and the written law. His commentary, which contains numerous original interpretations, was first published in Leipzig in 1839. It was reprinted twice during his lifetime, with his additions and included a German translation of the text of the Pentateuch based on Meklenburg’s commentary, by Jonah Kossmann. A fourth printing was begun some time before Meklenburg’s death, but was interrupted because of differences between the publisher and the printers. In 1880, Abra-
ham Berliner published a new edition with additional material from manuscripts left by the author. Meklenburg was also the author of a commentary on the prayer book, Iyyun Tefillah, first published in 1857 with the siddur of R. Jacob "Lorbeerbaum of Lissa; it, too, was reprinted several times. A number of rabbinic works carry introductory notes or approbations by Meklenburg.

**MEKNÈS,** town in *Morocco.* Jews settled in the region of Meknès before the advent of *Islam.* A Hebrew inscription has been found and the remains of a synagogue were uncovered in the excavations of Volubilis, which is near Meknès. A *kinah of Abraham* Ibn Ezra mentions Meknès among the communities which suffered at the hands of the *Almohads.* A chronological note testifies that such persecutions occurred in 1140, and adds that in 1247, during the wars of the *Merinids,* many Jews lost their lives or were forcibly converted to Islam, while in the earthquake of 1340 "several courtyards caved in, as well as the synagogue and the bet ha-midrash of R. Jacob." According to traditions preserved in writing, the "Mahrit" synagogue, still existing in Meknès, was first built in the 13th century, destroyed in the earthquake of 1630, and rebuilt in 1646 by the "Toledanos upon their arrival in Meknès. It is similarly stated that the "Tobi" synagogue was built in 1540. It would therefore seem that Jews already at that time lived in the present mellah area as well as in the Medina in which an "Aaron Street" is, according to tradition, named after the then-leader of the community. The sharif Mulay Ismaïl (1672–1727), the real founder of the *Alawid dynasty, moved his capital to Meknès and granted the Jews additional land for construction of buildings. The *nagid* Abraham Maymerân and other wealthy Jews then built luxurious houses. Christian emissaries from Europe who stayed in them were astonished by their beauty. Near the mellah, Ismaïl built a beautiful quarter for his officials and servants.

From then until the 19th century the community of Meknès was one of the best developed and organized in Morocco. It was a city of *hakhamim* and authors, as well as merchants and men of action who frequently visited *Tetuán, Salé, Rabat,* and *Fez on* their affairs. The community was organized and its institutions functioned accordingly. The tax on meat, wine, and other products constituted a source of income for the community, which with the addition of local donations, was able to supply the minimal requirements of the needy and those engaged in studies. The community maintained regular relations with Erez Israel, whose emissaries returned home with considerable funds. The education of the children was entrusted to many teachers; at a more advanced age the youths were employed in the crafts or commerce, while the more talented pursued their studies in yeshivot.

As capital of the country and residence of the sharifs (rulers) Meknès was also the center of Jewish activities at the court. The leaders of the Meknès community acted as *negidim* (see *Nagid*) of Moroccan Jewry and agents of the sharifs. Among them were members of the *Maymerân family* (Joseph and his son Abraham), as well as the *Toledanos,* the Ibn Atars, the Ben Mâmans, the Ben Quïquis, and others. The most prominent rabbinic scholars and *dayanim* in Meknès during the 18th–20th centuries come from the Berdugo and Toledano families, many of whom wrote responsa. From 1790 and during the 19th century Meknès lost its importance as the capital and the Jewish community suffered pogroms frequently. There was an important change for the better in the situation of the Jews with the formal establishment of the French Protectorate in 1912. From then on the Jews enjoyed relative security and economic stability, as well as elementary human rights. There were also changes in the field of religious education with the arrival of R. Zéev Halperin, a Russian scholar who came from Britain in 1912. He introduced reforms in the system of study of the yeshivot and gathered the young men of the town, for whom he founded a *kolel avrekhim* (advanced yeshivah), the first of its kind in Meknès and probably the whole of Morocco. He founded an *Ez Hayyim* society for laymen which organized regular studies and whose members supported the young men of the Bet El yeshivah with their contributions. As a result of this activity the yeshivah produced a nucleus of *hakhamim* who later officiated as rabbis in Meknès and other communities. The fame of Meknès yeshivot spread far and they attracted students from many parts of the country. After World War II, a Chabad yeshivah was founded (in conjunction with *Ozar ha-Torah*).

The government allocated new areas near the mellah for the Jews to live in, and a new quarter, known as the "new mellah," was built. The construction was modern, being scattered and not surrounded by a wall. Many beautiful synagogues were also built, including the "Toledano" and Joseph Mrejen synagogues, as well as a large Jewish school, *Em ha-Banim,* in which all the children of the community studied (the needy were exempted from the payment of tuition fees). Its expenses and the salaries of the teachers were provided from community funds. In 1947 approximately 1,200 pupils attended this school. The *Alliance Israelite Universelle* built two large schools, one for boys and another for girls, which were attended by about 1,500 boys and girls in 1950. According to the 1947 census the Jewish community numbered 15,482 (about 3,000 others were not included in the census for various reasons). Most of the Jews of Meknès immigrated to Israel after the establishment of the state and both the old and the new mellahs are now inhabited for the most part by Muslims.

*Haim Bentov*

**Contemporary Period**

The Jewish population of Meknès, which numbered 12,445 in the 1951 census report, dropped in 1966 to 10,894 (according to the census of that year), and in 1968, after the large-scale emigration of Moroccan Jewry, to about 2,000–3,000. During the 1950s the Jewish schools had 3,182 pupils, but the number
dropped off in the 1960s. Most of the charitable and social welfare organizations, which included branches of WIZO and the World Jewish Congress, were closed. In 1970 the Meknès community, although reduced, was one of the more vital of the Moroccan provincial communities. A considerable Jewish petite bourgeoisie lived there with communal life centering on the two main synagogues. Only a few dozen Jews remained in the old mellah, and most lived in the modern Jewish neighborhood. More than three decades later, the Jewish community numbered no more than 120 Jews. In September 2003 radical Islamists, apparently belonging to the pro-al-Qa’ida association Salafiyya Jihādiyya, responsible for the suicide terrorist attacks in Casablanca several months earlier, stabbed to death 75-year-old Elie Afriat in Meknès. Since then members of the local community have lived in fear of further Islamist actions against them.

[Haim J. Cohen / Michael M. Laskier (2nd ed.)]

MEKOROT (Heb. “Sources”) WATER COMPANY, company established in 1937 as a joint undertaking of the *Histadrut, the *Jewish Agency, and the *Jewish National Fund, to develop a water supply project in the western part of the Valley of Jezreel. Its first managing director was Levi *Eshkol. After World War II, Mekorot extended its operations to a regional project in the Negev and a smaller project in central Israel. During the *War of Independence (1948) it constructed an emergency water supply system for Jerusalem and, after the war, embarked upon a major development program encompassing the entire country. In 1962 Mekorot officially became Israel’s National Water Supply Agency.

In the early 1950s the projects executed were mainly connected with ground and spring water. In the mid-1950s further major regional projects were carried out. In the later 1950s and early 1960s the main emphasis was upon the National Water Carrier (Jordan Project), and subsequently systems utilizing flood runoff and reclaimed sewage were constructed. From the early 1960s the company also operated abroad, mainly in the construction of water supplies in developing countries. In 1967 it opened the Shapdan, the sewage system for all Gush Dan (Tel Aviv area). In 1989 it opened a third water line to the Negev, which transported filtered water from the Shapdan. In 1995 it opened a fourth water line to Jerusalem, and in 1997 it opened the desalination plant in Elath supplying 80% of the city’s water. Subsequently it opened other desalination plants in various locations.

The Israel government was a shareholder in the company from 1948 and held one-third of the shares in 1967. Another third was held by the Histadrut, and the rest equally by the Jewish Agency and the Jewish National Fund. The company operates as a government firm, meaning that it operates as an independent business enterprise under the supervision of the Governmental Companies Authority. In 2000 the company’s budget was NIS 5.6 billion. It supplies 90% of the country’s drinking water and 70% of all water (1.3 billion cu. m.). The company operates over 800 pumping stations, with over 2,400 pumps, over 1,200 wells, and 10,500 kms. of large-diameter pipes. It employs 2,100 workers all over Israel. Company salaries are known to be among the highest in the public sector.

Mekorot owns shm – Electrical Mechanic Services, operating water infrastructure projects. It also advances various projects with private firms. The government had declared its intention to privatize Mekorot but met with opposition from both the workers and others.

[Aaron Wiener / Shaked Gilboa (2nd ed.)]
The history of the mapping of the Holy Land epitomizes the history of cartography. Evincing the longest unbroken sequence of mapping in the world, the Holy Land has been the focus of intense interest for countless generations of cartographers under its various names—Canaan, The Promised Land, Palestine, or Terra Sancta.

Two principal cartographic traditions dominate this fascinating history: the religious, based on the Bible and its exegeses; and the classical, based on Ptolemy’s work, which laid the foundations for modern cartography.
